September 30, 2025

PPL Electric Utilities Corporation
Statement of Reasons
For the Proposed Rate Increase
Docket No. R-2025-3057164

I. INTRODUCTION

In this filing, PPL Electric Utilities Corporation ("PPL Electric" or the "Company") requests that the Pennsylvania Public Utility Commission ("PUC" or the "Commission") approve an overall annual increase in base distribution revenues of approximately $356.3 million, based on a fully projected future test year ending June 30, 2027. If granted by the Commission as filed, this request would produce a system average increase in distribution revenues of approximately 33.42%.

The principal reasons for the filing are: (1) accelerated capital investment to maintain and improve system reliability and to reduce service outages, especially during major storms; (2) investments in our customer service offerings to meet or exceed customer expectations including improved payment options, easier customer service interactions, and increased service levels; (3) upgrading the Company's aging IT infrastructure to improve cybersecurity, customer interactions, and employee facing systems; (4) flat residential and commercial sales as a result of a slow economic growth and increased levels of distributed generation from alternative energy systems/net metering; and (5) setting rates based on cost of service.

PPL Electric has not filed for a distribution base rate case in a decade. Over that period, the Company has been able to absorb the impacts of supply chain concerns, weather, inflation, changes in legislative direction across different administrations, and a

global pandemic by focusing on operation and maintenance ("O&M") efficiencies in a targeted way across the enterprise. This decade-long focus on making smart investments and using technology and innovation to drive operational efficiencies, has been formalized through the Company's Transformation Management Office ("TMO"). The TMO takes a bottoms-up approach where employees identify areas for improvement that are evaluated against the Company's goals and objectives, then considered across the enterprise. This model means that we are (1) identifying and incorporating best practices across all PPL companies, (2) evaluating the application and adoption of these best practices across PPL companies, (3) transitioning to common systems and platforms as described more fully in the discussion of information technology ("IT") upgrades, (4) maximizing the benefits of centralized shared services, and (5) adopting a common electric transmission and distribution operating model. The benefit to PPL Electric customers has been, and is expected to be, enhanced reliability and resiliency through strategic investments in infrastructure and IT, while preserving affordability for our customers. PPL Electric is proud to have extracted significant value for customers from this effort and is currently at an inflection point where it must do more to meet customer and Commission expectations regarding reliability and customer experience.

Further, the Company has been, and continues to be, a valuable community partner for more than a century, giving back to its communities and neighbors in powerful ways. PPL Electric and its parent company, PPL Corporation, are both headquartered in Allentown, and make substantial financial contributions to our 29 counties throughout central and eastern Pennsylvania. A breakdown of these efforts is provided below:

- **Volunteerism and board service:** PPL employees continually show up in the community spending more than 15,000 hours volunteering in the communities where they live and work in 2024. Our Pennsylvania employees support non-profit organizations by contributing their skills and expertise through service on local and statewide boards.
- **PPL Foundation Grants:** The PPL Foundation is an independent nonprofit funded by PPL Corporation. In 2025, the Foundation expects to award over $1 million in grants and scholarships in Pennsylvania. Since 2015, the Foundation has contributed more than $32 million to communities served by PPL Electric.
- **Employee-led Charitable Giving Campaign:** Pennsylvania employees and retirees of PPL, along with matching contributions from the PPL Foundation, contributed nearly $6.5 million in 2025 through an annual giving campaign which supports nonprofits throughout our Company's service territory.
- **Good Neighbor Energy Fund and Operation HELP:** The PPL Foundation increased its annual donation to the Good Neighbor Energy Fund to $400,000 in 2025, which assists low-income families in central and eastern Pennsylvania with their energy bills. In addition, PPL Electric also annually contributes approximately $600,000 a year for Operation HELP, which provides assistance to eligible customers struggling with their electric bills. This million-dollar annual financial commitment is just one of the ways that we are making a difference for our customers in need.
- **Education Improvement Tax Credit Funding:** In addition to grants funded by the PPL Foundation, PPL Electric also supports additional funding opportunities for

eligible organizations. Education Improvement Tax Credit ("EITC") grants allow the Company to invest in projects that improve and enhance educational opportunities for Education Improvement and Pre-K organizations. In 2024, $750,000 in grants were awarded to over 200 organizations across 19 of our 29 counties.

- **NPP Contributions:** PPL Electric also supports its communities through the Pennsylvania Department of Economic Development's Neighborhood Partnership Program ("NPP"). Since 2015, PPL Electric has contributed over $4 million to community development programs in Allentown, Bethlehem, Lancaster, Scranton, and Wilkes-Barre. These contributions support nonprofit agencies' affordable housing, crime prevention, job training, and other neighborhood assistance programs. PPL Electric contributes $400,000 annually to NPP partners.
- **Brighter Future Scholarships:** PPL Foundation partners with a network of schools in Pennsylvania to provide scholarships to students who are passionate about clean energy, sustainability, decarbonization, and grid reliability. Starting in 2024, PPL Foundation provides a total of $60,000 annually to four local institutions (Northampton Community College, Thaddeus Stevens College of Technology, Cedar Crest College, and Penn State Harrisburg). Scholarship winners are selected by a network of partner schools.

Lastly, PPL Electric continues to look for ways to support our communities even more. As part of this rate case request, the Company has proposed the Opportunity Pennsylvania Program, which will provide direct reimbursement funding to local governments and non-profit economic development organizations to support site studies,

due diligence, and infrastructure improvements. These grants would serve as private sector match funding, which is an important criterion for PA SITES competitiveness.

Each of the principal reasons is discussed in more detail in Section II. As explained therein, the requested increase is essential to the Company's continued ability to attract capital on reasonable terms and provide safe and reliable service to customers. Section III addresses the Company's rate design and cost allocation among customer classes.

II. REASONS FOR THE REQUESTED RATE INCREASE

A. Increased Capital Investment to Improve Reliability and Storm Performance

Over the past ten years, PPL Electric has invested $5 billion of capital to provide a reliable distribution system and meet the needs of customers. The Company intends to invest an additional $4 billion in capital in the distribution system from 2025-2029. The additional investment will continue to include advanced technologies that will provide new monitoring and control capabilities. Such investment will also include additional storm hardening measures to strengthen the distribution system, protect against increasing weather-related outages, and improve the customer experience.

While the Company has demonstrated strong performance against IEEE benchmarks, there remain challenges to maintaining and improving reliability. The Commission's 2024 Pennsylvania Electric Reliability Report, dated August 2025, notes PPL Electric's success in achieving the 3-year average PUC benchmarks for System Average Interruption Duration Index ("SAIDI") and System Average Interruption

Frequency Index (“SAIFI”) and its recent failure to meet the rolling 12-month benchmarks on Customer Average Interruption Duration Index (“CAIDI”), SAIDI, and SAIFI.

The Company has recently experienced its worst storm restoration and SAIFI performance in history with a record number of storms in 2024. While the Commission’s 2024 Pennsylvania Electric Reliability Report recognizes this fact and hopes 2024 was an anomalous year, 2025 is trending towards a record highest storm count in any single year. Through September 14, 2025, the Company has experienced 39 total storms (30 non-reportable); the most ever by this time of year.

Although the Company invests in resiliency projects to improve its storm performance, there have been a considerable number of both reportable and non-reportable storm events. The Company also is experiencing not only an increase in the number of storm events but also an increase in the frequency and intensity of storm events. In 2024, PPL Electric had 11 storms of 600 cases or higher, including 6 storms over 1,000 cases. Two events were extraordinary as defined in its Storm Damage Expense Rider (“SDER”) (February 2024 and November 2024). The Company’s SDER mechanism reached its cap for the 2025 rate period and is expected to reach its cap for the 2026 rate period. PPL Electric has over $11 million of SDER-eligible costs in excess of the cap recorded in a regulatory asset. The Company has also experienced a significant number of non-reportable storm events. Further, the Company experienced 20 non-reportable storm events compared to its historic prior 10-year average of 17. The Commission noted in its 2024 Pennsylvania Electric Reliability Report that “if the level of storm activity does not lessen, PPL will need to undertake measures to storm harden and increase resiliency to match any ‘new normal’ level of weather.” Based on its data, PPL

Electric anticipates these weather trends to continue and, as such, intends to invest significantly in storm hardening its distribution system.

This level of investment will require the Company to raise substantial capital in the marketplace. Access to capital at reasonable borrowing rates is extremely important to the Company and, ultimately, to its customers. For these reasons, it is critical that the financial community view PPL Electric as an attractive investment.

PPL Electric's current credit rating is A from Standard & Poor's Corporation and A3 from Moody's. The Company forecasts that its return on common equity for the distribution business will fall to approximately 3.92% by June 30, 2027, based on current rates. This return is inadequate by any standard. In this filing, the Company is requesting an allowed return on equity of 11.30%, along with a capital structure of approximately 56% common equity and 44% long-term debt, which PPL Electric believes is necessary to successfully raise capital on reasonable terms under today's financial market conditions.

Finally, and relatedly, the authorization of the DSIC by the Pennsylvania Legislature and implementation by the Commission has provided substantial assistance to the Company in obtaining timely recovery of costs associated with critical investment to replace aging infrastructure to maintain and improve service/reliability and has allowed the Company to delay the need for base rate relief. PPL Electric recently sought and received approval for a DSIC Cap Waiver to increase the cap on DSIC to 7.5%. In the Company's April 1, 2025 DSIC filing, PPL Electric adjusted its DSIC rate to the 7.5% cap, and the rate has remained there. In this rate case, the Company proposes to roll the

DSIC revenue and investment into base rates and re-establish a new DSIC surcharge rate once plant investment levels exceed those reflected in this case.

B. Customer Experience

PPL Electric is committed to providing the highest quality, safe, and affordable service to its customers. As part of the Company's vision to be the best utility in the United States, it seeks to achieve 1st quartile customer satisfaction. While it has won numerous awards over the last several years, the Company cannot do this without consideration of continually improving the customer experience. This philosophy of seeking continuous improvement is deeply engrained in the Company's culture. In early 2025, the Company formally rolled out its Go Beyond program. The Go Beyond program encourages every employee to Go Beyond the obvious when interacting with customers. Specifically, Go Beyond reminds employees to consider (1) Who is the customer that will be impacted? (2) How will this impact the customer? (3) How do I want our customer to feel when the work is done? (4) What can I do to make this a positive experience for the customer? and (5) How does my decision fit into the rest of the customer service process? At PPL Electric, the customer experience is the combination of customer satisfaction (measurements), customer service (actions), and any interaction a customer has with the Company providing service. PPL Electric strives to provide a positive customer experience whether that be when they are calling our contact center, seeing our crews doing storm restoration work, or seeing us volunteering in the community.

The Company also wants to help customers manage their bills. Through proactive outreach to customers and community partners, it has provided $7.8 million in the most

recent LIHEAP season and is on pace to meet its 2025 OnTrack participation goal of 77,500 customers. PPL Electric also hosts an annual golf tournament which raised nearly $300 thousand for the Company's Operation Help assistance program. The Company has been able to support more than 117,000 customers with over $38 million in grants since Operation HELP was established in 1983. Helping customers manage and pay their bills results in reduced accounts receivable and overdue due dollars.

With this customer focus in mind, we are also partnering with customers to enable their growth by supporting economic development and expanding and improving self-service and payment options. Specifically, PPL Electric proposes to include the cost of payment transaction fees in base rates. This proposal is intended to make it easier for customers to use the payment option of their choice, whether it be using a debit or credit card, or other digital options such as PayPal and Venmo. Additionally, the Company is seeking to implement an Artificial Intelligence ("AI") Digital Assistant that will allow customers to seamlessly switch between phone, web, or the Company's new mobile app when interacting with the Company. This work will also include updates to the Company's current interactive voice response ("IVR") system. These are all examples of the Company's efforts to Go Beyond in providing customers the best experience possible when interacting with PPL Electric.

C. IT Upgrades

The Company is embarking on significant investments to upgrade its IT infrastructure. Since its last rate case in 2015, the utility and technology industries have seen significant change. PPL Electric has adapted to many of these new realities and

found opportunities to implement operating efficiencies, such as the use of file sharing systems and other mainstream workflow software. However, to face the complexities that result from the rapid growth of new technologies associated with demand side management ("DSM") programs and increasingly complex behind-the-meter generation operations, the Company must upgrade its current systems and invest in its IT infrastructure to enable real-time access to information, to respond to evolving customer needs, and to keep its operations secure.

As a result, PPL Electric has developed a five-year plan to overhaul its IT infrastructure as part of an overall PPL Corporation effort to consolidate platforms across its jurisdictional utilities. PPL Electric's plan includes investing in IT infrastructure that will impact all parts of its business. These planned upgrades will touch the areas of field operations, grid management, cybersecurity, enterprise resource planning ("ERP"), customer information systems ("CIS"), customer experience, and content management. Specifically, these investments, including upgrades to its Meter Data Management System ("MDMS") anticipated to be completed in 2026, will allow the Company to implement cloud-based CIS and ERP platforms that will enhance billing, customer self-service, advanced metering infrastructure ("AMI") and smart grid integration, and regulatory reporting functions. These investments are expected to not only provide long-term security and stability to the Company's IT infrastructure, but also to enhance the customer experience through the offering of improved self-service options. These updated systems will also enable PPL Electric to modernize field operations and examine opportunities to use new and emerging technologies to enhance its vegetation management, weather modeling, and asset inspections. Additionally, the Company will

evaluate opportunities to utilize AI to more efficiently use existing resources. Finally, the Company's plan prioritizes cybersecurity through the implementation of consolidated systems which mitigates the risk of managing disparate cybersecurity platforms. Through these efforts PPL Electric will be able to identify opportunities to strengthen its cybersecurity infrastructure.

D. Flat Sales

PPL Electric has experienced and is expected to continue experiencing little or no growth in customers or sales due to slow economic growth and increased distributed generation. In 2024, Pennsylvania's GDP grew by 2.415% as compared to 2.796% nationally. Sales and revenues have been further eroded by increased interconnections of distributed generation and customer-generator net metering. This new distributed generation totals an additional 477 MW of capacity on PPL Electric's system since the Company's last base distribution rate case took effect in early 2016.

PPL Electric anticipates only marginal customer growth for customers taking distribution service below 69 kV (0.44% per year from 2025-2027 for residential customers). This is a slight decline from the 0.51% annual growth that the Company has seen from 2016 to 2024. In terms of total sales, the Company has seen only a 0.24% Total Compound Annual Growth Rate ("CAGR") across residential, small, and larger commercial and industrial customers, excluding new large load interconnections. With respect to the residential customer group, sales growth has been offset by distributed generation and energy efficiency, with the net effect being essentially flat growth over the next 5 years with a CAGR of only 0.45%.

While PPL Electric is anticipating more than doubling its system peak load over the next several years due to data center growth, not all load growth is created equally. In fact, data centers are not a significant contributor to distribution sales (demand or energy usage). A data center would take service from PPL Electric as a Large Commercial and Industrial customer under Rate Scheule LP-5. PPL Electric defines its distribution system as facilities operating below 69 kV. Because of this, LP-5 customers are primarily served by the Company's transmission system. This is why LP-5 customers only pay a monthly customer charge covering certain fixed costs to provide retail electric service under Cost of Service principles. Therefore, while the Company is projecting significant systemwide load growth from large load customers, these new large load customers do not contribute to higher demand or energy usage on the distribution system and, therefore, do not contribute to the Company's distribution revenue beyond the monthly customer charge.

This consumption growth data has serious implications for PPL Electric's annual revenue and is a factor in the Company's request for rate relief in this proceeding.

III. RATE DESIGN AND COST ALLOCATION

The Company has designed its proposed rate adjustments by first and foremost analyzing the cost of service to serve specific customer classes. In 2004, the Commonwealth Court issued its decision in *Lloyd v. Pa. PUC*, 904 A.2d 1010 (Pa. Cmwlth. 2006), establishing cost of service as the "polestar" of revenue allocation and rate design in rate proceedings. On remand, the Company and the parties entered into

a settlement agreement, which, *inter alia*, established a goal of moving class rates of return to at or near full cost of service over the course of three rate proceedings, while avoiding “rate shock” by phasing in rates or closing rate differentials over a longer period of time. In this case, as a result of adjustments to its cost of service study and eliminating or resetting certain rider mechanisms, the Company is proposing rates that readjust all major rate classes to or very near to the cost of service consistent with the goals set forth in its 2004 base rate case and in the *Lloyd* decision.

The Company is proposing to allocate the proposed revenue requirement to all customer classes based on the results of a class cost of service study and is proposing to move the rate of return for each customer class to at or very near the system average return. This will continue to adhere to the intent of the *Lloyd* decision and will result in rates updated to be based more fully on cost of service.

In order to achieve this goal, the Company has proposed rate increases to Rate Schedules RS (residential service), Rate GS-1 (SC&I), Rate Schedules GS-3 (SC&I), and Rate Schedule LP-4 (LC&I). Rate decreases are proposed for Rate Schedules LP-5 (LC&I) and the street lighting rate schedule.

With respect to rate design, PPL Electric is proposing to continue movement toward distribution rates that are more demand- and customer-based, and less usage-based. This change results in rates that are more reflective of how costs are incurred by an electric distribution company. Additional details regarding the specific rate design for each of the customer classes is provided in the Direct Testimony of Steve Wishart, PPL Electric Statement No. 8.

In accordance with prior Commission orders and utility practice and precedent, the Company is proposing to roll-in revenues collected under its Tax Cuts and Jobs Act Rider ("TCJA"), Smart Meter Rider 2 ("SMR-2"), and Distribution System Improvement Charge ("DSIC") mechanisms. It is also proposing to eliminate its Competitive Enhancement Rider ("CER") mechanism and is requesting recovery of eligible SDER costs in excess of the cap.

Finally, as part of this filing, the Company is proposing a new Original Tariff to provide further clarity and consistency to its tariff rules, riders, and rate schedules. Included in the filing as Exhibit GEO-1are black line and clean versions of the tariff reflecting these changes.

IV. CONCLUSION

PPL Electric is proposing a distribution rate increase that is appropriate for the business environment the Company currently faces. Particularly to address its need to make significant capital investments to help ensure that its reliability performance remains strong for customers today and in the future. The increase will move PPL Electric's inadequate return on equity from an estimated 3.92% for the period of July 1, 2026, through June 30, 2027, to an allowed 11.30%. This return is the minimum required for the Company to attract capital on reasonable terms, provide safe and reliable service to its customers and fully fund the various innovative programs described above. The return on equity proposed in this filing is particularly appropriate in light of PPL Electric's management effectiveness and the wide variety of efforts and initiatives undertaken to improve service to customers while at the same time maintaining distribution rates which

are below the average of comparable companies. For all of these reasons, PPL Electric's proposed distribution rate increase is just and reasonable and should be approved by the Commission.

PPL Electric Utilities Corporation

Working Capital Required for Operation and Maintenance Expenses
As of June 30, 2027
(Thousands of Dollars)

The Company bills its customers every month. On this basis, there is a considerable span of days between the time electricity is furnished to a customer and the time the customer pays for such electricity.

In many instances, the Company must pay its bills for payroll and other O&M expenses prior to the time it is able to collect the amount due for the service which requires the incurrance of such expenses. Thus, the Company has examined its records to determine, as to the major categories of expense, the average span of days which exists between the time an expense is incurred and the time it must be paid. Schedule C-4, page 2, of Exhibit Historic 1 sets forth the individual components which result in the days lag between payment of expenses and receipt of the related revenues used in the determination of the working capital required for the pro forma O&M expense for the test year ending June 30, 2025.

Line No.	Description		Amount
1	Net pro forma O&M expense (a)		486,455
2	O&M expense per day (line 1 divided by 365 days)		1,333
3	Average lag in days between payment of O&M expenses and receipt of revenue (b)		5.2
4	Working capital requirement (line 2 x line 3)	$	6,930

(a)	Total pro forma operation and maintenance expense (D-1 col. 5 lines 2-4)	$	995,182
	Less: Non-cash items		
	Uncollectible accounts expense		14,735
	Deferred Storm Outage Costs (D-9)		3,779
	Deferred IIJA Costs (D-10)		211
	Depreciation (D-1 col. 5 line 3)		490,002
	Net pro forma O&M expense	$	486,455

(b) See Exhibit Historic 1, Schedule C-4, page 2.

PPL ELECTRIC UTILITIES CORPORATION

PPL ELECTRIC UTILITIES CORPORATION

Accrued Taxes
Year Ended June 30, 2027
(Thousands of Dollars)

Line No.	Description	Amount	12-Month Accrued Factor (a)	Accrued Taxes
1	Federal income tax (D-1, line 6, col. 5)	14,884	-11.62%	($1,730)
2	PA income tax (D-1, line 7, col. 5)	(3,527)	-9.54%	336
3	PA gross receipts tax (D-16, page 3)	55,873	27.96%	15,622
4	PA capital stock tax (D-16, page 2)	0	0.00%	0
5	PA public utility reality tax (D-16, page 4)	3,110	7.13%	222
6	Total accrued taxes			$14,450

(a) The 12-month average factor represents, in the case of Federal and State income tax and capital stock tax, the portion of the tax liability which is available to the Company for the payment of other costs. This situation exists because revenue is available from customers prior to payment dates of the tax. The factors for the other Pennsylvania taxes represent the portions of those tax liabilities which must be provided by the Company due to payment of the taxes before the revenue is available from customers. Exhibit Historic 1, Schedule C-4, pages 6 through 11 reflect the computation of such factors.

Note 1: Base distribution revenue increase includes roll-in of SMR, CER, DSIC, and TCJA as shown on D-3 Page 2.
Note 2: This reflects the elimination of the RTS and GH-2 rate schedules.

PPL ELECTRIC UTILITIES CORPORATION

Adjustment to Operating Revenues for Unbilled Revenue
Year Ended June 30, 2027
(Thousands of Dollars)

This adjustment was made to normalize distribution operating revenue for the test period by eliminating unbilled revenue shown on Schedule D-3, page 1.

Line No.	Description	Amount
1	Unbilled revenue- distribution	$ (210)
2	Net decrease in distribution operating revenue	$ (210)

PPL ELECTRIC UTILITIES CORPORATION

Adjustment to Wages and Benefits
Year Ended June 30, 2027
(Thousands of Dollars, except wages per employee)

This adjustment was made to reflect the average number of transmission and distribution-related employees and the level of wages and benefits in effect at the end of the year.

Line No.	Description	Amount
1	Average monthly T & D-related wages to expense per employee	$ 5,019
2	T & D-related personnel employed at the end of the year	1,477
3	Annualized T & D-related total wages to expense(line 1 x line 2 x 12 months)	88,964
4	Less: Actual T & D-related wages to expense for the year ended June 30, 2027	89,386
5	Decrease in wages to expense (line 3 - line 4)	(422)
6	Decrease in benefits expense (line 5 x 22.8%)	(96)
7	Decrease in payroll taxes (line 5 x 8.5%)	(36)
8	Total decrease in T&D-related wages, taxes and benefits expenses (line 5 + line 6 + line 7)	$ (554)

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Rate Case Expense
12 Months Ended June 30, 2027
(Thousands of Dollars)

Rate case expenditures are charged to expense when incurred. The Company's claim for 2025/2026 distribution rate case expense is based on a normalized amount as shown below.

Line No.	Description	Amount
1	2025 distribution rate case expense	$ 2,222
2	Normalized amount (line 1 / 3 years)	$ 741
3	2025 distribution rate case expense per budget	$ 8
4	Net increase/(decrease) in distribution operating expense	$ 733

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Economic Development Proposal
12 Months Ended June 30, 2027
(Thousands of Dollars)

This adjustment was made to reflect the expenses associated with the Company's economic development proposal - Opportunity Pennsylvania Program. See PPL Electric Direct Testimony Statement No. 21.

Line No.	Description	Amount
1	Economic development proposal expense	$ 400
2	Economic development expense per budget	$ -
3	Net increase in distribution operating expense	$ 400

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Competitive Enhancement Rider Roll-in to Base Rates
12 Months Ended June 30, 2027
(Thousands of Dollars)

This adjustment is made to roll the Competitive Enhancement Rider (CER) costs into base rates. Costs eligible for the CER include the eligible customer list which is updated every 5 years in accordance with Commission Order dated March 13, 2025 at Docket No. M-2010-2183412.

Line No.	Description	Amount
1	FPFTY Competitive Enhancement Charge Expense	$ 500
2	Normalized amount (line 1 / 5 years)	$ 100
3	Less: Amount per books	$ -
4	Net increase in distribution operating expense	$ 100

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Deferred Storm Outage Costs
12 Months Ended June 30, 2027
(Thousands of Dollars)

On April 3, 2014, the PUC approved PPL Electric's Storm Damage Expense Rider (SDER) to be used for recovery of storm damage expenses exceeding the $14.7 million in base rates, at Docket No. R-2012-2290597. The Order caps the amount to be recovered through SDER at 3% of the Company's total intrastate operating revenues billed to customers, permits the Company to establish a regulatory asset for eligible storm costs in excess of the 3% cap, allows the Company to request recovery of those excess expenses in its next base rate case. In accordance with Generally Accepted Accounting Principles (GAAP), the Company established a regulatory asset of $11,336,169 for the portion of the costs that would be recoverable from customers in its next base rate case.

Line No.	Description	Amount
1	Total net deferral amount for storm outage costs	$ 11,336
2	Normalized amount (line 1 / 3 years)	$ 3,779
3	Less: Amount per books	$ -
4	Net increase in distribution operating expense	$ 3,779

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Deferred IIJA-Related Incremental Expenditures
12 Months Ended June 30, 2027
(Thousands of Dollars)

Pursuant to the Pennsylvania Public Utility Commission's Order issued on July 13, 2023 at Docket No. P-2022-3032929, PPL Electric submitted notice that the Company established a regulatory asset for certain Infrastructure Investment and Jobs Act ("IIJA")-related incremental expenditures for costs incurred in order to prepare, apply, administer, and otherwise execute on IIJA funding opportunities.

Line No.	Description	Amount
1	Total net deferral amount for IIJA-Related Incremental Expenditures	$ 633
2	Normalized Amount (line 1 / 3 years)	211
3	Less: Amount per budget	$ -
4	Net increase in distribution operating expense	$ 211

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Universal Service Rider (USR) Salaries
12 Months Ended June 30, 2027
(Thousands of Dollars)

This adjustment was made to reflect the removal of USR salaries from distribution base rates. USR salaries are proposed to be recovered through the USR. See PPL Electric's Direct Testimony Statement No. 18 - Lisa Norden

Line No.	Description	Amount
1	FPFTY USR salaries per budget	$ 1,400
2	Net decrease in distribution operating expense	$ (1,400)

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Interest Expense on Customer Security Deposits
Year Ended June 30, 2027
(Thousands of Dollars)

The Commission, in its Final Order at Docket No. R-80031114, determined that it was appropriate to include the interest expense on customer deposits in PPL Electric's operation and maintenance expense when the deposits are used as a reduction to rate base. The interest on customer security deposits is computed at an interest rate calculated in accordance with 66 Pa. C.S. § 1404 (c) (6) and the Company's Tariff - Electric Pa. P.U.C. No. 201.

Line No.	Description		Amount
1	Residential customer security deposits	$	1,803
2	Residential interest rate		7.000%
3	Residential interest	$	126
4	Non-residential customer security deposits	$	4,158
5	Non-residential interest rate		4.19%
6	Non-residential interest	$	174
7	Total increase in transmission and distribution expense (line 3 + line 6)	$	300

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Company Use Generation Supply Purchases
For the Period Ending June 30, 2027
(Thousands of Dollars)

This adjustment was made to reflect the distribution operating expense associated with PPL Electric's purchase of generation supply for the facilities that it owns, i.e., Company Use.

Line No.	Description		Amount
1	Kilowatt-hour usage for the period July 1, 2026 - June 30, 2027	68,525,582	
2	Generation supply purchase price per kilowatt-hour	$ 0.09114	
3	Total estimated generation supply expense July 1, 2026 - June 30, 2027 (line 1 x line 2)		$ 6,245
4	Less: Actual amount per books		$ 4,752
5	Net generation supply expense (line 3 - line 4)		$ 1,493
6	Portion assigned to PPL Electric		91.1%
7	Net increase in distribution operating expense (line 5 x line 6)		$ 1,359

PPL ELECTRIC UTILITIES CORPORATION

Adjustment for Certain IT Expenditures Requested to be treated as Capital
12 Months Ended June 30, 2027
(Thousands of Dollars)

Pursuant to the prior practice and precedent, PPL Electric is requesting capital treatment of certain IT costs. This reflects the adjustments to Operating Expenses and Depreciation Expense should capital treatment be approved and should the regulatory asset be reclassified to capital/plant-in-service in the fully projected future test year.

Line No.	Description		Amount
1	Proforma to Adjust for IT Capital Request: Reclassification of Regulatory Asset Amortization in O&M Expense Budget to Depreciation Expense - Reduction of O&M Expense		0
2	Less: Amount per budget	$	1,826
3	Net decrease in distribution operating expense	$	(1,826)
4	Proforma to Adjust for IT Capital Request: Reclassification of Regulatory Asset Amortization in O&M Budget to Depreciation Expense - Increase to Depreciation Expense	$	1,826
5	Less: Amount per budget	$	-
6	Net increase in depreciation expense	$	1,826

PPL ELECTRIC UTILITIES CORPORATION

Adjustment to Annual Depreciation Expense
Year Ended June 30, 2027
(Thousands of Dollars)

Line No.	Depreciation - Electric Plant In Service	Amount
1	Intangible Plant	$ -
2	Transmission Plant	199,912
3	Distribution Plant	228,441
4	General Plant	59,822
6	Total	488,176
7	Less: Depreciation expense per books	468,275
8	Net increase in depreciation expense	$ 19,901

PPL ELECTRIC UTILITIES CORPORATION

Adjustment to Taxes Other Than Income
Twelve Months Ended June 30, 2027
(Thousands of Dollars)

Line No.	Description	Amount
	PA Gross Receipts Tax	
	Adjustment to provide for gross receipts tax on pro forma revenue at present rates	
1	Gross receipts tax recoverable through base rates (D-16, page 2)	$ 55,873

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 1

Direct Testimony of Christine M. Martin

Topics: **Overview of Rate Case Filing**
Principal Reasons for Rate Case Filing

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Christine M. Martin. My business address is 827 Hausman Road, Allentown, PA 18104.

Q. By whom are you employed and in what capacity?

A. I am employed as the President of PPL Electric Utilities Corporation ("PPL Electric"), a subsidiary of PPL Corporation.

Q. What are your responsibilities as President of PPL Electric?

A. I am responsible for overseeing all aspects of the Company's strategy, financial performance and provision of electric service to approximately 1.5 million customers in eastern and central Pennsylvania through electric distribution and transmission facilities spanning approximately 10,000 square miles and serving a population of more than 3 million people.

Q. What is your educational background?

A. I have a Bachelor of Arts in Political Science/International Studies with minors in Economics and French from Indiana University of Pennsylvania and a Master of Public Administration from The Pennsylvania State University.

Q. Please describe your professional experience.

A. My career with PPL Corporation spans more than two decades with a focus on public affairs, energy and regulatory policy, and strategy. Before becoming President of PPL Electric in September 2023, I was PPL Corporation's Senior Vice President–Public Affairs and Chief Sustainability Officer, overseeing the corporation's advocacy and policy development, corporate communications and sustainability efforts across the enterprise. I also held the position of VP-State Government Relations, leading PPL Corporation's government relations and energy policy for multiple states with a primary focus in Pennsylvania.

Before coming to PPL, I was the deputy secretary for water management in Pennsylvania's Department of Environmental Protection ("DEP"). In that role, I was responsible for statewide water resources management and policy. I also served as senior policy manager for environmental, infrastructure, energy and regulatory issues for Governors Tom Ridge and Mark Schweiker.

Q. What is the purpose of your testimony?

A. I will provide an overall summary of the rate case filing as well as the principal reasons for this filing. I will also explain how PPL Electric continues to provide excellent value for the service we offer to our customers. I will share my perspective on significant changes in the energy industry and the Company's unwavering commitment to serving all customers at reasonable rates.

Q. Are you sponsoring any exhibits or schedules in this proceeding?

A. Yes, I am sponsoring Schedules A-1 in Exhibits Historic 1, Future 1, Fully Projected Future 1.

II. OVERVIEW OF RATE CASE FILING & PRINCIPAL REASONS FOR RATE CASE FILING

Q. Before providing an overview of the Company's rate case filing, could you please describe PPL Electric's overall strategy and goals?

A. PPL Electric continually strives to provide adequate, efficient, safe, reliable, and reasonable electric transmission and distribution service to approximately 1.5 million customers at reasonable rates, while offering programs and resources to support customers in saving energy and managing their bills. To that end, the Company works diligently to be efficient in its capital investments and operation and maintenance ("O&M") expenses, recognizing the impact of those costs on customers' rates as well as the importance of those expenditures in maintaining and improving its electric service. This focus on efficiency and affordability has enabled the Company to stay out of a base rate case filing for 10 years and has kept PPL Electric's distribution rates among some of the lowest in Pennsylvania. Most notable is the Company's focus on automation, which has eliminated outages and reduced the need to roll trucks.

However, as explained later in my testimony, PPL Electric must increase its distribution rates to continue to serve customers safely and reliably. Many factors were considered in this decision, including changing weather patterns and the increased frequency and intensity of storms, the need for continued reliability investments, electric

demand and forecasted load changes, and the need for tariff changes or updates. These factors are significant enough to warrant a rate case to support PPL Electric's continued efforts to strengthen the grid against future storms and incorporate advanced technology that allows the Company to work smarter and more efficiently while delivering a better experience for PPL Electric's customers.

Q. What focus do you and the Company place on its commitment to the community it serves?

A. The Company has been, and continues to be, a valuable community partner for more than a century, giving back to its communities and neighbors in powerful ways. PPL Electric and its parent company, PPL Corporation, are both headquartered in Allentown, and make substantial financial contributions to the 29 counties served by PPL Electric throughout central and eastern Pennsylvania. A breakdown of these efforts is provided in the Statement of Reasons and reproduced below:

- **Volunteerism and board service:** PPL employees continually show up in the community spending more than 15,000 hours volunteering in the communities where they live and work in 2024. Our Pennsylvania employees support non-profit organizations by contributing their skills and expertise through service on local and statewide boards.
- **PPL Foundation Grants:** The PPL Foundation is an independent nonprofit funded by PPL Corporation. In 2025, the Foundation expects to award over $1 million in grants and scholarships in Pennsylvania. Since 2015, the Foundation has contributed more than $32 million to communities served by PPL Electric.

- **Employee-led Charitable Giving Campaign:** Pennsylvania employees and retirees of PPL, along with matching contributions from the PPL Foundation, contributed nearly $6.5 million in 2025 through an annual giving campaign which supports nonprofits throughout our Company's service territory.
- **Good Neighbor Energy Fund and Operation HELP:** The PPL Foundation increased its annual donation to the Good Neighbor Energy Fund to $400,000 in 2025, which assists low-income families in central and eastern Pennsylvania with their energy bills. In addition, PPL Electric also annually contributes approximately $600,000 a year for Operation HELP, which provides assistance to eligible customers struggling with their electric bills. This million-dollar annual financial commitment is just one of the ways that we are making a difference for our customers in need.
- **Education Improvement Tax Credit Funding:** In addition to grants funded by the PPL Foundation, PPL Electric also supports additional funding opportunities for eligible organizations. Education Improvement Tax Credit ("EITC") grants allow the Company to invest in projects that improve and enhance educational opportunities for Education Improvement and Pre-K organizations. In 2024, $750,000 in grants were awarded to over 200 organizations across 19 of our 29 counties.
- **NPP Contributions:** PPL Electric also supports its communities through the Pennsylvania Department of Economic Development's Neighborhood Partnership Program ("NPP"). Since 2015, PPL Electric has contributed over $4 million to community development programs in Allentown, Bethlehem,

Lancaster, Scranton, and Wilkes-Barre. These contributions support nonprofit agencies' affordable housing, crime prevention, job training, and other neighborhood assistance programs. PPL Electric contributes $400,000 annually to NPP partners.

- **Brighter Future Scholarships:** PPL Foundation partners with a network of schools in Pennsylvania to provide scholarships to students who are passionate about clean energy, sustainability, decarbonization, and grid reliability. Starting in 2024, PPL Foundation provides a total of $60,000 annually to four local institutions (Northampton Community College, Thaddeus Stevens College of Technology, Cedar Crest College, and Penn State Harrisburg). Scholarship winners are selected by a network of partner schools.

Q. How are economic development and load growth in the state impacting the Company's business?

A. Not all economic development is created equal as it pertains to the Company's distribution business. As explained in the Company's Statement of Reasons, PPL Electric has experienced and is expected to continue experiencing little or no growth in customers or sales due to slow economic growth and increased distributed generation. In 2024, Pennsylvania's GDP grew by 2.415% as compared to 2.796% nationally. Sales and revenues have been further eroded by increased interconnections of distributed generation and customer-generator net metering. This new distributed generation totals an additional 477 MW of capacity on PPL Electric's system since the Company's last base distribution rate case took effect in early 2016.

In addition, PPL Electric anticipates only marginal customer growth for customers taking distribution service below 69 kV (0.44% per year from 2025-2027 for residential customers). This is a slight decline from the 0.51% annual growth that the Company has seen from 2016 to 2024. In terms of total sales, the Company has seen only a 0.24% Total Compound Annual Growth Rate ("CAGR") across residential, small, and larger commercial and industrial customers, excluding new large load interconnections. With respect to the residential customer group, sales growth has been offset by distributed generation and energy efficiency, with the net effect being essentially flat growth over the next 5 years with a CAGR of only 0.45%.

While PPL Electric is anticipating more than doubling its system peak load over the next several years due to data center growth, not all load growth is created equally. In fact, data centers are not a significant contributor to distribution sales (demand or energy usage). A data center would take service from PPL Electric as a Large Commercial and Industrial customer under Rate Scheule LP-5. PPL Electric defines its distribution system as facilities operating below 69 kV. Because of this, LP-5 customers are primarily served by the Company's transmission system. This is why LP-5 customers only pay a monthly customer charge covering certain fixed costs to provide retail electric service under cost of service principles. Therefore, although the Company is projecting significant systemwide load growth from large load customers, these new large load customers do not contribute to higher demand or energy usage on the distribution system and, therefore, do not contribute to the Company's distribution revenue beyond the monthly customer charge. However, as discussed in the testimony of PPL Electric witness Joseph Lookup (PPL Electric St. No. 16), load growth from

large load customers will result in significant reductions in customers' transmission rates. Nevertheless, this consumption growth data for the Company's distribution system has serious implications for PPL Electric's annual revenue and is a factor in the Company's request for rate relief in this proceeding.

Q. Please summarize the Company's filing for a distribution rate increase.

A. The filing requests Pennsylvania Public Utility Commission ("PUC" or the "Commission") approval of an approximately $356.3 million distribution rate increase, which would produce a system average increase in distribution revenues of approximately 33.42%, effective for service rendered on or after December 1, 2025. Assuming the standard seven-month suspension period for investigation and review, we anticipate an effective date of July 1, 2026, for the implementation of new rates. This level of rate relief is designed to provide the Company with an opportunity to earn an 8.56% overall rate of return on rate base, including a 11.30% return on common equity, on a claimed rate base of $5.818 billion.

Without the distribution rate increase requested in this filing, PPL Electric projects that in 2027 its return on common equity for the distribution business will fall to approximately 4.43%. Such a return clearly is deficient under any reasonable standard and would preclude the Company from obtaining capital on reasonable terms to finance infrastructure improvements needed to maintain reliable service to customers. The requested rate relief will allow the Company to continue its capital replacement strategy from a position of financial strength, which will result in continued reliability and in lower costs to customers over the long term.

This filing deals only with distribution base rates. Rates impacting default service and transmission service are not part of this proceeding. The revenues and expenses associated with these services are recovered through the Generation Supply Charge ("GSC") and Transmission Service Charge ("TSC"), respectively. In addition, all revenues and expenses from the Company's other automatic adjustment clauses, with the exception of the Distribution System Improvement Charge ("DSIC"), have been removed from the calculation of the requested revenue requirement. In accordance with prior Commission orders, the Company proposes to roll-in revenues collected under its DSIC mechanism and to reset the DSIC to zero.

Q. Could you please provide an overview of the witnesses submitting testimony on behalf of the Company and the subject matters of their testimony?

A. Yes. Below I have provided a list of the Company's other witnesses and the subject matters of their direct testimony. Collectively, the Company's testimony and exhibits fully support Commission approval of PPL Electric's proposed increase in distribution base rates and its other proposals in this proceeding.

- PPL Electric St. No. 2 – Dennis A. Urban, Jr. (Senior Director, Finance Transformation of PPL Services Corporation). Mr. Urban describes the current financial condition of the Company, the actual results of operations from July 1, 2024, through June 30, 2025, and the capital and operating budgets for the period of July 2025 through June 2026 and July 2026 through June 2027. Mr. Urban also addresses Act 40 of 2016.
- PPL Electric St. No. 3 – Christopher Garrett (Vice President – Financial Strategy and Chief Risk Officer for PPL Services Corporation). Mr. Garrett describes and supports

the calculation of support group costs and employee benefit costs developed by PPL Services and included in PPL Electric's 2025, 2026 and 2027 budgets. He also testifies about the Company's request to capitalize certain Information Technology ("IT") software implementation costs.

- PPL Electric St. No. 4 – Charles R. Schram (Vice President, Energy Supply and Analysis for Louisville Gas and Electric Company ("LG&E") and Kentucky Utilities Company ("KU")). Mr. Schram explains the development of the Company's forecast of sales, customers, and billed demands in addition to the annualization of sales and revenues.
- PPL Electric St. No. 5 – Bethany L. Johnson (Senior Director of Regulatory of PPL Services Corporation). Ms. Johnson provides an overview of the Company's revenue requirement increase proposed in this proceeding, the cost of service study utilized to allocate that increase to the customer classes, and PPL Electric's proposed design of distribution rates to recover that allocated revenue increase.
- PPL Electric St. No. 6 – Daniel S. Dane (President of Concentric Energy Advisors, Inc.). Mr. Dane presents and supports the revenue requirement model that developed the proposed revenue requirement for the Fully Projected Future Test Year ("FPFTY"), including a detailed description of the revenue requirement, the determination of rate base, the breakdown of revenues and expenses in and excluded from the calculations, adjustments made to such revenues and operating expenses, and compliances and regulatory considerations.
- PPL Electric St. No. 7 – Bickey Rimal (Vice President of Concentric Energy Advisors, Inc.). Mr. Rimal addresses the Company's cost of service studies in this proceeding,

including the purpose of an allocated cost of service study ("ACOSS"), the model used to conduct the Company's cost of service studies, the various principles of cost allocation, the factors that influence the cost allocation framework, the cost allocation methodology and basis used in the Company's cost of service studies, the studies of relative costs and other analyses used to assign costs, the class-by-class rate of return results and corresponding revenue surpluses or deficiencies from the ACOSS, and the method used to apportion the Company's revenue deficiency to the various rate classes.

- PPL Electric St. No. 8 – Jennifer E. Nelson (Vice President of Concentric Energy Advisors, Inc.). Ms. Nelson presents evidence and provides a recommendation for PPL Electric's return on equity ("ROE"). She also discusses the Company's capital structure in comparison to the proxy group companies supporting her analysis.
- PPL Electric St. No. 9 – Julissa Burgos (Assistant Treasurer of PPL Services Corporation). Ms. Burgos testifies about PPL Electric's capital structure, cost of long-term debt and credit ratings in this proceeding. She also addresses how the Company's cost of long-term debt is calculated and how credit ratings affect the Company's cost of long-term debt and ultimately its cost of capital.
- PPL Electric St. No. 10 – Steven W. Wishart (Assistant Vice President of Concentric Energy Advisors, Inc.). Mr. Wishart describes and supports PPL Electric's proposed rate design in this proceeding. He explains how the Company has applied well-established ratemaking principles – cost causation, gradualism, customer understanding, and administrative feasibility – to design fair, reasonable, and understandable rates for all customer classes. He also testifies about how the results of the ACOSS inform the proposed rates, provides the required proof of revenues and bill impact analyses, and

presents the Company's proposals for updates to residential, general service, lighting, and standby tariffs.

- PPL Electric St. No. 11 – John J. Spanos (President of Gannett Fleming Valuation and Rate Consultants, LLC). Mr. Spanos testifies about the depreciation studies conducted under his direction and supervision for the utility plant of PPL Electric.
- PPL Electric St. No. 12 – Andrew W. Elmore (Vice President – Tax of PPL Corporation). Mr. Elmore's testimony and accompanying exhibits describe and support PPL Electric's calculation of certain tax-related ratemaking adjustments to the retail rate base and operating expenses contained in the Historic Test Year ("HTY"), Future Test Year ("FTY"), and FPFTY retail rate base and operating expenses. In addition, his testimony describes the impacts to PPL Electric of significant federal tax legislation that has been enacted since the filing of the last rate proceeding.
- PPL Electric St. No. 13 – Katelyn Arnold (Manager – Regulatory Strategy & Rates of PPL Services Corporation). Ms. Arnold testifies about the Company's cash working capital, the roll-in of various riders into base rates (including the revenues and plant associated with the Distribution System Improvement Charge ("DSIC")), the elimination of the Company's Competitive Enhancement Rider ("CER"), the Company's uncollectible accounts (including their relation to the Purchase of Receivables ("POR") Program and Merchant Function Charge ("MFC")), the Company's modifications to its Storm Damage Expense Rider ("SDER"), and the Company's revenue forecast.
- PPL Electric St. No. 14 – Gregory Olsen (Supervisor – Distribution Interconnection & Tariff Rules of PPL Electric). Mr. Olsen sponsors and supports the Company's

proposed retail tariff and testifies about the Company's Street Light Replacement Program.

- PPL Electric St. No. 15 – Andrew Castanaro (Energy Procurement Manager of PPL Services Corporation). Mr. Castanaro testifies about the Company's proposal to assign default supply customers on the Generation Supply Charge ("GSC") to Rate GSC-1 and Rate GSC-2 based on their maximum registered peak load, as defined by the Company's proposed retail tariff submitted in this proceeding.
- PPL Electric St. No. 16 – Joseph Lookup (Vice President – Transmission and Distribution Panning and Asset Management of PPL Services Corporation). Mr. Lookup explains the Company's reliability performance, describes proposals aimed at improving reliability performance, discusses trends that the Company is seeing with respect to storms, and describes how PPL Electric is meeting the challenges associated with interconnecting new large load customers.
- PPL Electric St. No. 17 – Nicole Howell (Manager – Vegetation Management & Program Management of PPL Electric). Ms. Howell describes the Company's current vegetation management program and proposed enhancements to that program.
- PPL Electric St. No. 18 – Lisa Norden (Vice President Customer Services of PPL Electric). Ms. Norden addresses the Company's customer service performance and planned initiatives to maintain and improve that level of performance. She also discusses changes to the Company's customer services IT investments to improve the Customer Information System ("CIS") and Customer Experience ("CX") systems. Additionally, she testifies about PPL Electric's proposals to include the cost of payment transaction fees in base rates, include the internal universal service employee salaries

and wages to the universal service program rider, and eliminate the Customer Assistance Program ("CAP") cost recovery offset. Finally, she describes the Company's proposed changes to its supplier tariff, which include charging suppliers for the cost of electronic data interchange ("EDI") costs incurred to support them and adjusting the POR write off discount.

- PPL Electric St. No. 19 – Daniel Johnson (Senior Vice President, Chief Information Officer of PPL Services Corporation). Mr. Johnson explains the current state of the Company's IT infrastructure and discusses the need for upgrades to modernize and streamline this infrastructure. He also will report on the state of the Company's customer-facing, business-facing, operations, and cybersecurity IT systems, as well as the Company's multi-year assessment of the operational risks of the current systems. He also will address why investment in upgrades to IT systems is necessary to secure critical infrastructure, streamline customer service and billing processes, ensure cost efficiency across all systems, and better evaluate and leverage new technologies in the future.
- PPL Electric St. No. 20 – James Conrad (Senior Director of T&D Smart Grid & Automation of PPL Services Corporation). Mr. Conrad describes the Company's proposed Electric Vehicle ("EV") Time-of-Use ("TOU") Charging Rebate Program, which is designed to help ensure that the distribution system is prepared to handle the challenges presented by EV charging.
- PPL Electric St. No. 21 – Jason Hunt (Manager of Business and Economic Development of PPL Services Corporation). Mr. Hunt testifies about the Company's economic

development proposal, which will help support communities and spur economic development in PPL Electric's service territory.

- PPL Electric St. No. 22 – Sharon Leskowsky (Assistant Controller of PPL Corporation). Ms. Leskowsky testifies about how she is sponsoring or co-sponsoring certain of the Company's filing requirements and exhibits in this case, particularly those concerning PPL Electric's accounting and financial records and the Company's pro forma adjustments for interest on certain amounts, such as customer deposits.

Q. What are the principal reasons that led to this rate filing?

A. As explained in more detail in the Statement of Reasons, the filing, to a very large degree, reflects the current business environment faced by the Company, particularly to address its need to make significant capital investments to help ensure that its reliability performance remains strong for customers today and in the future. The Company's principal reasons for filing the base rate case include: (1) little to no growth in customers or sales due to slow economic growth and increased distributed generation; (2) increased capital investment that is necessary to maintain and improve system reliability, such as an additional $4 billion in capital investments in the distribution system from 2025-2029 that will include additional storm hardening measures to strengthen the distribution system, protect against increasing weather-related outages, and improve customer experience; (3) the Company's commitment to providing the highest quality, safe, and affordable service to its customers; (4) the Company's significant Information Technology ("IT") infrastructure investments that are designed to, among other things, provide long-term security and stability to PPL Electric's IT infrastructure and enhance

customer experience; and (5) the need to set rates based on the full class cost of service. Each of these issues is discussed in detail in the Statement of Reasons.

In addition, the Company forecasts that its return on common equity for the distribution business will fall to approximately 4.43% in 2027 based on current rates. This return is inadequate by any standard. In light of the business environment described above, PPL Electric believes that its requested return on equity is the minimum required to attract needed capital under reasonable terms. Such access to the capital markets will allow the Company to continue its capital replacement strategy, which will result in continued reliability and in lower costs to customers over the long term. Further, the requested rate relief also will permit the Company to pursue efforts to improve its bond ratings, which, if achieved, would further lower the cost to serve customers.[1]

Q. Does this conclude your direct testimony?

A. Yes, it does.

[1] As explained in Ms. Burgos's direct testimony (PPL Electric St. No. 9), PPL Electric's credit ratings have improved since the last rate case in 2015.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 2

Direct Testimony of Dennis A. Urban, Jr.

Topics: **Current Financial Condition**
July 1, 2024 through June 30, 2025 Actual Results of Operations
July 2025-June 2026 & July 2026-June 2027 Capital and Operating Budgets
Act 40 of 2016

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Dennis A. Urban, Jr., and my business address is 645 Hamilton Street, Suite 9, Allentown, PA 18101.

Q. By whom are you employed and in what capacity?

A. I am employed by PPL Services Corporation ("PPL Services"), a subsidiary of PPL Corporation and an affiliate of PPL Electric Utilities Corporation ("PPL Electric" or the "Company"). I hold the position of Senior Director, Finance Transformation.

Q. What are your responsibilities as Senior Director, Finance Transformation?

A. I am responsible for the financial planning and analysis and budgeting functions for PPL Corporation's utility operating companies. In addition, I am responsible for the ongoing activities of the Transformation Management Office**.**

Q. What is your educational background?

A. I have an Associate degree in Electrical Technology from the Dean Institute of Technology, a Bachelor of Science degree in Accounting from Point Park University, and a Master of Business Administration degree from Robert Morris University.

Q. Please describe your professional experience.

A. In 1982, I began my career with Duquesne Light Company ("Duquesne"), a Pittsburgh, PA based electric utility. Through 1996, I held various bargaining unit operations and

maintenance positions, including as a journeyman lineworker. In 1997, I moved into a management role in the accounting department where I held the position of Senior Accountant until May 1999. From June 1999 to October 2001, I held the position of Manager of Financial Reporting where I had responsibility for all internal and external financial reporting requirements. In November of 2001, I was transferred to Duquesne's parent company, DQE, Inc., as the Manager of Corporate Development where I had responsibility for the development and recommendation of strategic alternatives. In May of 2004, I was promoted to Director of Corporate Development with the additional responsibility for the development of a strategic energy sourcing strategy to fulfill Duquesne's default service obligation. In June 2007, after Duquesne was purchased by a group of private equity investors, I became Manager, Financial Planning and Risk Analysis where I had responsibility for Duquesne's budgeting, planning and financial forecasting functions as well as its risk management functions including internal audit and corporate insurance programs. I joined PPL Electric in November 2008 as Manager, Energy Acquisition where I had responsibility for the development and implementation of the functional requirements to fulfill its default service obligation. In November 2010, I assumed the role of Senior Director, Rates and Regulatory Affairs. In January 2013, I was promoted to Vice President, Finance and Regulatory Affairs. In November 2015, I joined National Grid as Chief Financial Officer of its New England and Federal Energy Regulatory Commission ("FERC") jurisdictional operations. I subsequently rejoined PPL Services in February 2023 in my current role.

Q. Have you previously testified as a witness in other Pennsylvania Public Utility Commission ("Commission" or "PUC") proceedings or any other jurisdiction's proceedings?

A. Yes. I have testified before this Commission in PPL Electric's 2015 Distribution Rate case on topics similar to the purpose of this testimony.

Q. What is the purpose of your testimony?

A. My testimony will describe the current financial condition of the Company, the actual results of operations from July 1, 2024 through June 30, 2025, and the capital and operating budgets for the period of July 2025 through June 2026 and July 2026 through June 2027. I also will address the requirements of Act 40 of 2016.

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes. I am sponsoring PPL Electric Exhibits DAU-1 and DAU-2 and portions of Parts I, II, V, and VI of the filing requirements as noted on their indexes.

II. CURRENT FINANCIAL CONDITIONS, ACTUAL RESULTS OF OPERATIONS, AND CAPITAL AND OPERATING BUDGETS

Q. PPL Electric is requesting an increase in electric distribution rates of approximately $356 million annually. Is this requested increase supported by data for a future or experienced test year?

A. The revenue requirement requested in this distribution base rate case is based primarily on data for a Fully Projected Future Test Year ("FPFTY") ending June 30, 2027, which is included in Exhibit Fully Projected Future 1. The Commission's regulations require

that a public utility that uses a Future Test Year ("FTY") also must submit data for a Historic Test Year ("HTY"), consisting of the twelve months immediately preceding the FTY. As a result, PPL Electric has also submitted data for the FTY ending June 30, 2026 (Exhibit Future 1), and data for the HTY ended June 30, 2025 (Exhibit Historic 1).

Q. You have stated that the data in the HTY are for the 12 months ending June 30, 2025. What is the source for the data contained in Exhibit Historic 1?

A. The basic data in the HTY was derived from PPL Electric's actual general ledger for the 12 months ending June 30, 2025. These financial statements are prepared in accordance with generally accepted accounting principles ("GAAP"). They are audited annually by an independent certified public accounting firm. In addition, the FERC and PUC audit staffs conduct periodic audits via an independent third party.

Q. You have stated that the data in Exhibit Future 1 are for the 12 months ending June 30, 2026. What is the source for the data contained in Exhibit Future 1?

A. The basic data in Exhibit Future 1 was derived from PPL Electric's budget and forecast figures for the 12 months ending June 30, 2026. I will explain the procedures followed in preparing the Capital and Operating Budgets later in my testimony. In effect, the budget figures take the place of PPL Electric's actual book figures which serve as the basis for the June 30, 2025 data in Exhibit Historic 1.

Q. You have stated that the data in Exhibit Fully Projected Future 1 are for the 12 months ending June 30, 2027. What is the source for the data contained in Exhibit Fully Projected Future 1?

A. The basic data in Exhibit Fully Projected Future 1 was derived from PPL Electric's budget and forecast figures for the 12 months ending June 30, 2027. I will explain the procedures followed in preparing the Capital and Operating Budgets later in my testimony.

Q. Are you sponsoring any schedules in Exhibits Historic 1, Future 1 and Fully Projected Future 1?

A. Yes. I am sponsoring or co-sponsoring the following: Schedules B-1 through B-4, C-5, D-4, D-5, and D-12 of Exhibits Future 1 and Fully Projected Future 1. I note that PPL Electric witness Leskowsky is sponsoring or co-sponsoring those same schedules in Exhibit Historic 1, among other schedules.

Q. Mr. Urban, would you describe the material presented on Schedules B-1 through B-4 of Exhibits Historic 1, Future 1, and Fully Projected Future 1?

A. Schedules B-1 show the balance sheet of PPL Electric, excluding all its non-regulated subsidiaries, at June 30, 2025, June 30, 2026, and June 30, 2027, which includes the assets and liabilities related to the electric utility operations and investments in non-utility property.

Schedules B-2 contain a statement of electric utility operations showing the operating revenues and expenses and income for the years ended June 30, 2025, June

30, 2026, and June 30, 2027. Electric operating revenues shown on these schedules are set forth by source in Schedules B-3.

Schedules B-4 provide the operation and maintenance expenses of the electric utility operations by detailed accounts, including the major categories of expense: power production, transmission, regional market, distribution, customer accounts, customer service and informational, sales, and administrative and general. The expenses in the power production category represent the cost of purchased power and include, among other items, generation supply purchases to meet default service requirements and purchases from non-utility generation companies. Power production costs are not germane to the determination of the distribution revenue requirement in this filing.

All the data shown in Schedules B-1 through B-4 were taken from the books and records of PPL Electric, excluding all its non-regulated subsidiaries, for the 12 months ended June 30, 2025, or were derived from its operating and capital budget data for the 12 months ending June 30, 2026, and June 30, 2027.

Q. Please describe the source and method used to establish the book cost of plant shown in the accounts of PPL Electric.

A. The accounts of PPL Electric are kept in accordance with the Uniform System of Accounts prescribed by FERC, and adopted by this Commission, for Electric Utilities and Licensees. In several orders issued at Docket No. E.O.C. 34, the last dated December 30, 1947, the Commission determined the original cost of PPL Electric's plant as of November 30, 1947. Since that time, PPL Electric has recorded its plant

transactions in accordance with the Commission's required system of accounts. PPL Electric's books, therefore, reflect the original cost of its plant at June 30, 2025.

Q. Are these accounts audited?

A. Yes. They are audited annually by an independent certified public accounting firm. In addition, FERC conducts periodic audits, and the PUC audit staffs conduct ongoing audits of PPL Electric's 1307 automatic adjustment clauses and performs Management Audits and Management Efficiency Investigations as required by regulation.

Q. How do you determine that all property reflected in Account 101, Plant in Service, as shown on page 1 of Schedule B-1, is actually in service?

A. The Asset Management Section of PPL Services maintains Fixed Asset Records for PPL Electric in an Asset Management System, which sets forth the detail of all property in service. The total dollar value of the Continuing Property Records in the Asset Management System is reconciled monthly to the balance in Account 101.

The Uniform System of Accounts requires that utilities record all construction and retirements of electric plant by means of work orders or job orders. In addition, the work order system must show the nature of each addition to, or retirement from, electric plant, the total cost thereof, and the plant account or accounts affected.

PPL Electric has maintained such a work order system since the establishment of its Continuing Property Records system. Under this system, an authorized capital work order is used for all work performed.

When any unit of property is taken out of service permanently, PPL Electric personnel record the removal under a work order and transmit that information to the Asset Management Section, where the necessary retirement accounting entry is made. Because many retirements can occur in connection with capital improvement projects, the retirement work is part of a construction authorization.

Costs of new construction are reported by work order number, and the Asset Management System accumulates, by work order, all costs associated with a specific job, as well as the appropriate retirement unit and utility account. At the completion of the job, PPL Electric personnel update the work order status to indicate the work order is in-service. This status change also is reflected in the Asset Management System. Based on this information and the costs accumulated under the work order, the property constructed is recorded in appropriate detail on PPL Electric's Continuing Property Records. With this system and its supporting detail, the costs comprising the total value of any item recorded as Plant in Service can be fully supported and verified.

Q. Mr. Urban, would you explain Schedules C-2, Electric Plant in Service – Original Cost in Exhibits Historic 1, Future 1, and Fully Projected Future 1?

A. Schedule C-2 of Exhibit Historic 1 represents electric plant in service and the accumulated reserve for depreciation at June 30, 2025, which were taken from PPL Electric's fixed asset records. Schedule C-2 of Exhibit Future 1 represents the projected electric plant in service and the accumulated reserve for depreciation at June 30, 2026. Schedule C-2 of Exhibit Fully Projected Future 1 represents the projected electric plant in service and the accumulated reserve for depreciation at June 30, 2027. The projected

electric plant in service at June 30, 2026, is determined by adjusting the June 30, 2025 actual book balance for projects expected to be placed in service and projected retirements during the period of July 1, 2025, to June 30, 2026. The projected electric plant in service at June 30, 2027, is determined by adjusting the June 30, 2025 actual book balance for projects expected to be placed in service and projected retirements during the period of July 1, 2025, to June 30, 2027. The accumulated reserve for depreciation at June 30, 2026, was determined by adjusting the June 30, 2025 actual book balance for the provision for depreciation and amortization and the projected retirements for the period of July 1, 2025 to June 30, 2026. The accumulated reserve for depreciation at June 30, 2027, was determined by adjusting the June 30, 2025 actual book balance for the provisions for depreciation and amortization and the projected retirements for the period of July 1, 2025, to June 30, 2027.

Q. Mr. Urban, can you provide any background on how the FTY and FPFTY financial statements were prepared?

A. The FTY and FPFTY financial statements and data are based on information that PPL Electric used to prepare its 2025, 2026, and 2027 Operating and Capital Budgets and the Company's reforecasts of those budgets in the second quarter of 2025.

Q. Has PPL Electric's forecasting and budgeting processes been reviewed by the Commission?

A. Yes. The Commission conducted a Focused Management and Operations Audit of PPL Electric in 2015 with recommendations and findings reported in October 2016 at Docket

No. D-2016-2576052. With regard to PPL Electric's forecasting and budgeting processes, the Commission indicated that based on its review PPL Electric's processes are performed efficiently and effectively, and the audit report had no specific findings or recommendations for changes. The Commission also conducted a Management and Operations Audit of PPL Electric in 2023 with recommendations and findings reported in June 2024 at Docket No. D-2023-3039488. This report did not identify any specific recommendations or findings related to PPL Electric's forecasting and budgeting processes.

Q. Would you please explain how the capital budget process is carried out by PPL Electric?

A. Yes. PPL Electric's annual capital budgeting process is managed and governed by the Company's Finance group ("EU Finance"). The capital budget is reviewed throughout the year with the planning, evaluation, and prioritization of projects conducted by PPL Electric's Distribution planning team and Asset Management engineers. Prioritization occurs every month using a structured benefit-to-cost evaluation methodology. It considers prior year circuit performance, re-evaluation of prior plans, and proposed new projects to improve future circuit capacity and reliability performance. Some specific categories of capital, such as new customer connections (termed Provide Electric Service or "PES") and emergency response (termed Respond To Customers or "RTC") are not prioritized against other reliability and capacity projects, rather they are budgeted based on the forecasted demand for those services. The prioritized and budgeted portfolio of projects then is reviewed by PPL Electric's Asset Management

and project management teams and subsequently submitted to EU Finance to enter the general budgeting process. Operations and Maintenance ("O&M") expenses related to capital also are estimated (certain capital projects require a component of O&M to implement under FERC accounting rules), and the capital budget is entered into the corporate budget system. This tentative capital budget is reviewed with EU Finance, PPL Electric's executive management, and the Company's President, including review of key operational (reliability and system performance) and financial indicators. Subsequently, the capital budget, like the O&M budget as described below, is reviewed by PPL Services' Financial Planning and PPL Corporation's executive teams before review and approval by PPL Corporation's Board of Directors. This budget is the key tool used by PPL Electric and its senior management to establish an operating plan for the upcoming year and for measuring actual results against this plan.

Q. Please describe PPL Electric Exhibit DAU-1.

A. PPL Electric Exhibit DAU-1 is a table that summarizes portions of PPL Electric's 2025-2029 Capital Budget which relate to the capital spending needs of the Company. At PPL Corporation, a five-year capital budget is prepared annually to identify the capital requirements of the corporation and to establish a basis for financial and manpower planning. Each of the corporation's business lines is responsible for identifying, evaluating, and approving projects for inclusion in its capital budget, and then forwarding all of that data to PPL Services' Financial Planning Department where the Capital Budget for PPL Corporation is reviewed and consolidated.

Q. Please describe the information listed on PPL Electric Exhibit DAU-1.

A. PPL Electric Exhibit DAU-1 summarizes the capital requirements related to the distribution system (transmission projects are not included in this table) and the capital requirements related to the Company's facilities, such as service centers, crew quarters, and office buildings. It also includes the capital requirements for the Company's Information Technology ("IT") investments. Supporting the annual amounts shown on PPL Electric Exhibit DAU-1 are lists and databases of projects, schedules for projects, and estimates of project costs. Those lists, schedules, and estimates provide the detailed information that is the basis of the estimates of property additions and retirements that appear in the Company's response to Question V-A-3 of Exhibit Regs., § 53.53, Part V-Plant and Depreciation Supporting Data, Including Related Depreciation Study Report ("Question V-A-3").

Q. Please describe the categories of expenditures listed in PPL Electric Exhibit DAU-1 that are specific to the distribution system.

A. The categories listed and a description of each is as follows:

1. "Provide Electric Service" includes projects to install new service for residential, commercial, and industrial customers (including service upgrades for existing customers to serve additional load) and purchases of distribution transformers. Work in this category is a function of customer requests. Also included in this category are funds for relocations due to highway improvements or other rights-of-way interferences. Forecasts of capital requirements for this category are based on recent spending history.

2. "Upgrade System Facilities" includes specific projects required to ensure and enhance system capacity and reliability. Projects are driven by forecasts of load growth and identified as a result of engineering studies that simulate system loadings under a variety of conditions.
3. "Maintain System Reliability" includes funding for the identification and remedy of deteriorated, obsolete, or failed equipment. Work in this category is a function of identifying a need as the result of inspection, testing, scheduled replacement, or failure. Forecasts of capital requirements reflect inspection and testing plans, the age of equipment, and previously observed conditions. This category includes items such as distribution pole replacements and reinforcements, underground cable curing and replacements, and other deteriorated or failed equipment replacements.
4. "Improve System Reliability" includes maintenance, engineering, and technology initiatives and programs to improve system reliability performance based on a variety of metrics or standards. This category consists of programs such as new Vacuum Circuit Reclosers ("VCRs"), distribution animal guarding, Low Tension Network ("LTN") upgrades and specific reliability improvement projects associated with tap fuses, tie lines, voltage regulators, re-conductor lines and relocation of lines from rights-of-way. This category also includes funds for storm hardening initiatives to improve reliability on worst performing circuits.
5. "Asset Optimization Strategy" ("AOS") includes funding to replace infrastructure that has reached the end of its useful life including deteriorated transformers, 12 kV interrupting devices, and equipment protection and control devices. This category also includes funding for Predictive Failure Technology ("PFT") installations to

help identify infrastructure reaching the end of its useful life before failure. AOS funding includes additional resources, beyond the Maintain and Improve System Reliability categories described above, that target aging infrastructure based on equipment condition analysis studies to ensure continued reliability performance for customers.

6. "Information Technologies" includes projects in support of our Value Streams (Customer, Enterprise Technology, Field Ops, Grid), which include our largest strategic initiatives as well as our run-rate work (Cyber, Infrastructure, Data) and the initiatives related to those areas.

7. "Other" reflects small and miscellaneous items such as Independent Power Producer ("IPP") interconnection and upgrade requests, metering requirements, tools and equipment and vehicles.

8. "Respond To Customer" includes small projects to resolve customer concerns related to service outages, voltage complaints, street and area lighting problems, property damage, flickering lights, and other concerns. Also included in this category are funds for work performed during storm response. Forecasts of capital requirements are based on recent history.

9. "Facilities Management" includes projects related to selling, purchasing or construction of buildings, replacement projects for facilities and equipment that are outdated or can no longer be maintained and are required for the continued operation of a building, projects required to provide employees a safe and acceptable work environment, and projects required to meet state and local environmental regulations. Forecasts of capital requirements for Facilities Management are based

both on lists of specifically identified needs and on recent history that is trended as appropriate.

10. "DERMS Capabilities" includes projects to install remote monitoring devices to improve the function and performance of PPL Electric's grid by developing infrastructure to facilitate integration between PPL Electric's Distributed Energy Resource Management System ("DERMS") and customer solar systems for visibility and control of various functions from PPL Electric's command center.
11. Substation Connectivity" includes projects to provide communication paths from substations. This would include VIP Scada installations and upgrades and cell to fiber projects. Forecasts are based on analysis of fiber proximity and communication from substations to other devices to help restoration.

Q. Do the capital requirements set forth in PPL Electric Exhibit DAU-1 and the associated property additions and retirements that appear in the Company's response to Question V-A-3 represent, in your opinion, a necessary investment in facilities by PPL Electric?

A. Yes. The capital requirements set forth in PPL Electric Exhibit DAU-1 and the associated property additions and retirements that appear in the Company's response to Question V-A-3 are the result of careful engineering studies extending over many months, and of inspection and testing programs designed to monitor the condition of equipment, and to anticipate the need to replace or upgrade it. This forecast of capital requirements reflects PPL Electric's best estimate of the facilities needed to continue to provide safe and reliable electric service both now and in the future. This forecast also

considers the need to provide new and upgraded facilities which are necessary to maintain and, where appropriate, improve the efficiency of operating personnel. I believe that this forecast is reasonable and represents a prudent level of investment.

Q. Would you please explain how the operating budget process is carried out by PPL Electric?

A. Yes. In explaining the budget process, I will be referring to PPL Electric Exhibit DAU-2 that supports my direct testimony. During the summer of each year, PPL Services' Financial Planning group and business line teams, including EU Finance, begin preparing a detailed operating budget for the 5-year planning horizon. Information used in compiling PPL Electric's operating budget comes from two primary sources: (1) PPL Electric direct costs; and (2) an assignment or allocation of service company support costs. I will describe the budget process for the first source, PPL Electric direct costs. The second source, service company support costs, is explained in the direct testimony of Christopher Garrett (PPL Electric St. No. 3).

The operating budget for PPL Electric direct costs is composed of two parts: (1) certain specialized costs, such as depreciation and amortization, financing and taxes; and (2) all other costs. The specialized data for the budget is provided by PPL Services' staff groups. For all other costs, data for the 2025, 2026 and 2027 Operating Budgets comes from various PPL Electric responsibility centers in the following four major business areas: President, Finance, Customer Service, and Transmission and Distribution Operations. Each business area is subdivided into functional groups that include organizational units referred to as responsibility centers. Each major business

area has an assigned manager who is responsible for all costs incurred by that area, and each employee is assigned to a specific responsibility center.

Q. What type of data does the responsibility centers provide?

A. Each responsibility center provides a projection of its employee levels for the year that becomes the basis for projecting total wages and salaries. The responsibility centers also provide a budget of their other operating costs.

Q. Could you explain how the budget for wages is determined?

A. Yes. Each spring, PPL Services' Financial Planning department notifies the business line affiliates of the "Date of Estimate," which is the date at which the corporate budget system calculates the wages associated with the number of employees, and their associated wages, in each responsibility center. Any changes from the Date of Estimate starting point, including new hires, decreases due to retirements or work force reductions and changes in salary levels must be identified. Employee levels are reviewed and approved in conjunction with the overall budget review.

The corporate budget system automatically calculates a budget for wages based on the starting level of employees and their actual earnings and the employee changes inputs. The system then applies assumed management and bargaining unit wage changes and the projected cost of employee benefits.

As business units budget for their employee levels, they generally allocate their available manpower by functional activity. As part of this process, the business units designate capital or expense in accordance with GAAP. Wages identified as expense

ultimately appear on Schedule B-2 of Exhibit Future 1 and Exhibit Fully Projected Future 1, PPL Electric's income statement, as an O&M expense.

Q. You mentioned the budget for other operating costs. What costs fall into this category?

A. The corporate budget system requires budgeting by category of expenditure referred to as budget items. The budget items are essentially related to the activity that causes the cost to be incurred.

Q. How are these budget items estimated?

A. Non-payroll requirements, such as rents, materials and contractors, generally are entered by budget item and functional activity, and in the month or months the expenses are anticipated to occur. Budgets for payroll and non-payroll items are summarized by department for review following the process described above.

Q. Please describe the review and approval processes for the PPL Electric's operating budget.

A. Each of PPL Electric's organizations prepares its own O&M budget along with the EU Finance team. As explained above, Mr. Garrett addresses the development of the budgets for the services companies. Once all of the components of the budget are assembled and approvals have been obtained, an integrated operating budget is prepared by the EU Finance team. This budget is reviewed with senior management and the President, including review of key operational and financial indicators. This budget is

the key tool used by PPL Electric and senior management to establish an operating plan for the upcoming year and for measuring actual results against this plan.

Q. As part of the FTY and FPFTY data in the present rate filing, budget expenditures have been provided by FERC account. Do the departments also budget by FERC account?

A. No. Most of the budget is created by category of expenditure and by functional activity. PPL Corporation believes that it is more meaningful to budget and monitor expenditures by category of expense (e.g., payroll, employee expenses, material and supplies) than by FERC accounts. However, to satisfy the requirements for this rate case filing, PPL Electric has allocated expenditures into FERC accounts. This was accomplished by using a historic relationship between the budgeted functional activity and the FERC account to which each activity would be charged. Amounts were then summarized by the designated FERC accounts.

Q. How was the operating budget used in this rate case filing?

A. The operating budget was used as the basis for forecasting PPL Electric's Operating Income for the FTY ending June 30, 2026, and FPFTY ending June 30, 2027. See the response to Question II-E-1 of Exhibit Regs., § 53.53, Part II, Primary Statements of Rate Base and Operating Income ("Question II-E-1"). The forecasted data shown in the response to Question II-E-1 was reformatted to correspond to FERC account classifications and is shown in Schedule B-2 of Exhibits Future 1 and Fully Projected

Future 1 and throughout PPL Electric's responses to the Commission's filing regulations.

Q. Are you aware of the requirement that a comparison of actual to budget data is to be supplied quarterly when a utility utilizes an FTY?

A. Yes. In preparation for complying with this requirement, PPL Electric Exhibit DAU-2 has been provided. This exhibit shows a breakdown of revenues and expenses for electric operations for the FTY into calendar quarters beginning in July of 2025 and ending June of 2026. PPL Electric will provide quarterly comparisons of actual results to the budget as shown in PPL Electric Exhibit DAU-2 as the actual data becomes available.

Q. You have stated that you previously testified in PPL Electric's 2015 distribution base rate case on similar topics. Please provide details on key changes to PPL Electric's investment strategy.

A. As explained in PPL Electric Statement No. 1, PPL Electric has generally maintained a consistent strategy in which it proactively identifies areas where it can most efficiently deploy system expenditures, whether capital or O&M, for maximum long-term reliability benefits, while considering the costs to customers. PPL Electric has utilized all its opportunities to do so, including its request for a DSIC Cap Waiver, which currently operates at the increased cap of 7.5%. Further, the Company has focused on O&M efficiencies since its last rate case. As an example, when PPL Electric submitted its 2015 rate case, PPL Electric's distribution O&M claim in that case was

approximately $404,954,000 versus its claim in this rate case of approximately $434,922,000 (Schedule D-1, Column 8, Row 2 in Exhibit Fully Projected Future 1), an increase of only approximately $30 million or $7.4%, nominally, over a 10 year period. This is far less than even 1% per year. When considering inflation at 3.32% per annum, PPL Electric's current claim of approximately $434,922,000 compares to a 2015 inflation adjusted request of approximately $550,199,000 or approximately $108 million less. Although increases in the Company's O&M expenditures are not driven solely by inflation or affected by the same inflation factor, this comparison is notable given increasing storm events, supply chain challenges, customer expectations, technology changes, and inflation on materials and supplies. Over the time since the last rate case, the Company has largely absorbed O&M increases by using advanced technology and data analytics to drive process efficiencies and inform the strategic deployment of capital investment. This strategy is key to PPL Electric's ability to deliver reliable and affordable service, as discussed throughout this filing.

III. ACT 40 OF 2016

Q. Are you familiar with Section 1301.1 of the Public Utility Code, which is otherwise known as Act 40 of 2016?

A. Yes, I am. The legislation, among other things, eliminated the use of consolidated tax savings adjustments for setting rates for public utilities in Pennsylvania. Subsection (b) of Section 1301.1 requires a utility to demonstrate that it shall use at least 50 percent of what otherwise would have been the revenue requirement associated with a consolidated tax savings adjustment to support reliability or infrastructure related to the rate-base

eligible capital investment and that the other 50 percent shall be used for general corporate purposes. However, it is also my understanding that this subsection (b) "shall no longer apply after December 31, 2025," under its own terms. 66 Pa. C.S. § 1301.1(c)(1). My understanding is predicated in part on the advice of counsel.

Q. Does the Company's rate base claim in this case support the conclusion that it is using at least 50% of that revenue requirement amount (associated with a consolidated tax savings adjustment) to support reliability or infrastructure related capital investments?

A. Yes, as presented on PPL Electric Exhibit DAU-1, PPL Electric's *pro forma* investment in capital additions for reliability or infrastructure projects in 2026 is $771 million and for 2027 is $783 million excluding the categories Information Technologies, Other and Facilities Management. This expenditure level is far greater than $12.76 million, which is 50% of the amount that would have been the consolidated tax savings adjustment under prior ratemaking principles. (*See* PPL Electric Exhibit AE-1, p. 1.)

Q. Does the Company's rate base claim in this case support the conclusion that it is using at least 50% of that revenue requirement amount to support general corporate purposes?

A. Yes. The Company's general corporate purpose expense will also exceed 50% of the tax benefit resulting from elimination of the consolidated tax adjustment. The Company anticipates an operating expense budget of more than $434 million to be used to render

electric distribution service. By comparison, 50% of the consolidated tax adjustment revenue requirement would equate to only $12.76 million.

Q. Is the Company's presentation in this filing consistent with the Commission's and the Commonwealth Court's treatment of Act 40 of 2016?

A. Yes. I am advised by counsel that the Company's presentation in this filing is consistent with the Commission's determination on Act 40 in UGI Utilities, Inc. – Electric Division's 2018 Base Rate Proceeding at Docket No. R-2017-2640058 as well as the Commonwealth Court's order affirming the Commission's order on appeal.

Q. Does this conclude your direct testimony?

A. Yes, it does.

PPL ELECTRIC UTILITIES CORPORATION

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 3

Direct Testimony of Christopher Garrett

Topics: **Support Group Costs**
Employee Benefit Costs
Capital Treatment of Certain Information Technology Costs

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Christopher Garrett. My business address is 2701 Eastpoint Parkway, Louisville, Kentucky 40223.

Q. By whom are you employed and in what capacity?

A. I am employed as Vice President – Financial Strategy and Chief Risk Officer for PPL Services Corporation ("PPL Services"), a subsidiary of PPL Corporation and an affiliate of PPL Electric Utilities Corporation ("PPL Electric" or the "Company").

Q. What are your responsibilities as Vice President – Financial Strategy and Chief Risk Officer?

A. I am responsible for enterprise risk management as the Chief Risk Officer of PPL Corporation. This includes oversight of the financial risk management functions including credit, contract administration and insurance. Additionally, I help lead, develop, and support the financial strategy of PPL Corporation on various regulatory and accounting matters including the implementation of the new Enterprise Resource Planning ("ERP") solution. And lastly, I oversee the payroll function for the Kentucky subsidiaries of PPL Corporation.

Q. What is your educational background and professional experience?

A. A complete statement of my education and professional experience is attached to my direct testimony as Appendix A.

Q. What is the purpose of your testimony?

A. My testimony will describe and support the calculation of support group costs and employee benefit costs developed by PPL Services and included in PPL Electric's 2025, 2026 and 2027 budgets. Also, I will testify about the Company's request to capitalize certain Information Technology ("IT") software implementation costs.

Q. Are you sponsoring any exhibits or schedules in this proceeding?

A. Yes, I am sponsoring Exhibit Regs. II-D-8. I am also co-sponsoring Schedules D-14 in Exhibits Historic 1, Future 1, and Fully Projectetd Future 1.

II. SUPPORT GROUP COSTS

Q. Please describe the support costs you are sponsoring.

A. I am sponsoring the support group costs provided by PPL Services included in Exhibit Regs. II-D-8.

Q. Please describe PPL Services.

A. PPL Services is a Delaware corporation that provides various administrative and general services for PPL Electric and the other affiliates of PPL Corporation pursuant to a Comprehensive Utility Goods and Services Agreement approved by the Pennsylvania Public Utility Commission ("Commission" or "PUC") at Docket No. G-2023-3044914 through a Secretarial Letter issued on April 22, 2024. Under that Agreement, PPL Electric may provide or receive goods and administrative, management, supervisory,

construction, engineering, accounting, legal, financial, operating, or similar services to or from its affiliates, including PPL Services, upon request. The Agreement also allows affiliates to provide other affiliates services by utilizing their personnel, such as executives, accountants, financial advisers, technical advisers, attorneys, and other professional persons with the necessary qualifications. Further descriptions of the services provided by PPL Services to PPL Electric are provided in Exhibit Regs. II-D-8. Also, the Company's filing at Docket No. G-2023-3044914 also included PPL Corporation's Cost Allocation Manual ("CAM"), which sets forth the methods, policies, and cost allocation procedures that all PPL Corporation affiliates follow in providing goods and services for other affiliated companies.

Q. Please describe how PPL Services support costs are determined.

A. In developing service group support costs for PPL Electric, each service group computes the level and expected costs of providing identifiable services (direct costs) to PPL Electric, utilizing cost assignment methods included in the PPL Corporation CAM. The service groups enter these direct support costs into the Corporate Budget System. Additionally, the service groups identify and enter into the Corporate Budget System budgeted costs that are not directly identifiable and chargeable to a specific PPL Corporation subsidiary but instead benefit various PPL Corporation subsidiaries (indirect costs). The Financial Planning Department has developed and incorporated into the Corporate Budget System an allocation methodology to distribute these indirect support costs to PPL Electric and other PPL Corporation subsidiaries. The allocation methodology was recommended by the Commission in its 2002 Management and

Operations Audit and was reaffirmed in its 2009 Management and Operations Audit, 2012 Management Efficiency Implementation Audit, 2015 Management and Operations Audit, and 2023 Management and Operations Audit.[1] The methodology is also set forth in the PPL Corporation CAM. The Corporate Budget System accumulates and incorporates all the direct and indirect support costs into PPL Electric's Operating Budget.

III. EMPLOYEE BENEFIT COSTS

Q. Please describe how employee benefit costs are determined.

A. PPL Services administers PPL Corporation's employee benefits plans. At the beginning of the budget cycle, the appropriate individuals on PPL Services' staff provide a summary of total PPL Corporation benefits and their expected costs to the appropriate staff in PPL Services' Financial Planning Department. The Financial Planning Department develops a corporate benefits loading rate as a percentage of total budgeted corporate payroll costs in each of PPL Corporation's subsidiaries to develop their respective benefits budget. I am supporting the calculation of the loading rates for PPL Electric and PPL Services.

[1] In the Commission's 2023 Management and Operations Audit Report, the Commission noted that PPL Corporation's CAM does not explicitly describe the services that PPL Electric provides to or receives from all affiliates. *See Management and Operations Audit*, Docket No. D-2023-3039488, pp. 26-27 (Report dated June 2024). PPL Electric's Implementation Plan explained that changes to the PPL Corporation CAM must be submitted to the Virginia State Corporation Commission for approval and that the Company will consider whether to include the requested documentation in a future CAM update. *See* Implementation Plan, Docket No. D-2023-3039488, p. 9 (June 2024).

IV. CAPITAL TREATMENT OF CERTAIN INFORMATION TECHNOLOGY COSTS

Q. Please describe the accounting treatment for software implementation costs under U.S. Generally Accepted Accounting Principles ("GAAP") and Federal Energy Regulatory Commission ("FERC") accounting guidance that must be expensed to operations and maintenance ("O&M").

A. Under both U.S. GAAP and FERC accounting guidance, certain software implementation costs must be expensed to O&M regardless of whether the IT system is located on-premises or off-premises via a cloud computing arrangement.[2] These costs include training, data conversion and migration, direct business or functional process reengineering incurred associated with strategic implementations, change management, preliminary project stage, hyper care, and cloud computing such as hosting and other fees during implementation.[3]

[2] See Accounting Standards Update (ASU) No. 2018-15, *Intangibles—Goodwill and Other—Internal-Use Software (Subtopic 350-40): Customer's Accounting for Fees Paid in a Cloud Computing Arrangement* and FERC Docket No. AI 20-1-000, *Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement that is a Service Contract.*

FERC Docket No. AI-20-1-000 "Question: How should jurisdictional entities capitalize implementation costs related to cloud computing arrangements? Response: Implementation costs related to cloud computing arrangements are similar to the costs incurred to develop internal-use software and should be accounted for on the same basis. Jurisdictional entities have historically determined capitalizable internal-use software costs in a manner consistent with the requirements of ASC 350-40, which is an acceptable approach for accounting and financial reporting to the Commission. Accordingly, it is also appropriate for jurisdictional entities to determine capitalized implementation costs related to cloud computing consistent with ASC 350- 40."

[3] ASC 350-40-25-4 Training costs are not internal-use software development costs and, if incurred during this stage, shall be expensed as incurred.

ASC 350-40-25-1 Internal and external costs incurred during the preliminary project stage shall be expensed as they are incurred.

ASC 350-40-25-5 Data conversion costs, except as noted in paragraph 350-40-25-3, shall be expensed as incurred. The process of data conversion from old to new systems may include purging or cleansing of existing data, reconciliation or balancing of the old data and the data in the new system, creation of new or additional data, and conversion of old data to the new system.

In this case, however, the Company is requesting Commission approval to record these costs as long-lived capital assets consistent with National Association of Regulatory Utility Commissioners ("NARUC") and Commission guidance discussed in detail below.

Q. What is the total amount of software implementation costs the Company is seeking to capitalize as part of this proceeding?

A. The total cost of these projects the Company is seeking to capitalize is approximately $53.9 million, inclusive of Allowance for Funds Used During Construction ("AFUDC") through the Fully Projected Future Test Year ("FPFTY"). These software implementation costs are related to shared IT platforms resulting from an organizational consolidation, including: (1) a cloud hosted, customer information system ("CIS"); (2) a cloud-hosted, Enterprise Resource Planning system ("ERP"); (3) consolidated work management systems; (4) an on premises, consolidated advanced distribution management system ("ADMS") platform; (5) a cloud hosted, consolidated geographic information system ("GIS"); and (6) other shared infrastructure services that are discussed in the testimony of PPL Electric witness Daniel Johnson (PPL Electric St. No.

ASC 720-45-25-2, *Other Expenses—Business and Technology Reengineering*, "The following third-party or internally generated costs typically associated with business process reengineering shall be expensed as incurred: c) Process reengineering—the effort to reengineer the entity's business process to increase efficiency and effectiveness. This activity is sometimes called analysis, determining best-in-class, profit and performance improvement development, and developing should-be processes."

ASC 350-40-25-6 Internal and external training costs and maintenance costs during the postimplementation-operation stage shall be expensed as incurred.

19). The $53.9 million discussed in my testimony is in addition to the IT capital investments described in Mr. Johnson's testimony.

Q. Why does the Company believe that these software implementation costs should be capitalized?

A. The Company believes that the costs should be capitalized and depreciated over the life of the systems that remain used and useful for numerous reasons. First, the new IT systems will provide benefits to customers over extended periods of time and not just the period in which the costs are incurred. In that respect, these investments are more akin to long-lasting capital investments as opposed to O&M expenditures. Second, similar implementation costs for non-IT related property, plant and equipment expenditures are eligible for capitalization under FERC accounting guidance.[4] In fact,

[4] Per the FERC Uniform System of Accounts, *Account 183, Preliminary Survey and investigation charges*:
"This account shall be charged with all expenditures for preliminary surveys, plans, investigations, etc., made for the purpose of determining the feasibility of utility projects under contemplation. If construction results, this account shall be credited and the appropriate utility plant account charged."

Electric Plant Instruction 3.A.19 *Training:*
"When it is necessary that employees be trained to operate or maintain plant facilities that are being constructed and such facilities are not conventional in nature, or are new to the company's operations, these costs may be capitalized as a component of construction cost. Once plant is placed in service, the capitalization of training costs shall cease and subsequent training costs shall be expensed."

AI11-1-00 – *Capitalization of Allowance for Funds Used During Construction* defines the construction phase as including "activities that are necessary to get the construction project ready for its intended use are in progress."

Pennsylvania[5] and other state utility commissions[6] have approved capitalization treatment or regulatory asset accounting treatment. Lastly, such treatment is consistent with a resolution by NARUC,[7] in which NARUC encouraged state utility commissions to consider and adopt regulatory treatment for cloud computing arrangements that increased their use in an evolving market.

Q. Has the Company made pro forma adjustments to reflect this capitalization treatment for Pennsylvania ratemaking purposes?

[5] *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Joint Petition for Approval of Settlement of All Issues, Docket No. R-2021-3030218, et al., (Order entered June 24, 2022), *available at* https://www.puc.pa.gov/pcdocs/1749940.pdf ("For purposes of this Settlement, UGI Gas's as-filed capital treatment of certain information technology ('IT') costs is accepted. (See UGI Gas St. No. 3 at 22-23.) UGI Gas will capitalize IT costs that include internal labor, external consulting expenses, and other expenses related to the preparation of the vendor and system integrator requests for proposal. Other capitalizable costs include current state assessments, reengineering business processes to adapt to new systems, data conversion, data cleansing, and migration (including field verification and digitization of asset attributes required for accurate data and facility capture), pre-implementation training costs, cloud computing software implementation, and Hypercare.").

[6] *Electronic Application of Duke Energy Kentucky, Inc. for: 1) An Adjustment of the Natural Gas Rates; 2) Approval of New Tariffs, and 3) All Other Required Approvals, Waivers, and Relief*, Case No. 2021-00190, Order at 11 (Ky. PSC Dec. 28, 2021) ("[T]he Commission finds that Duke Kentucky [*sic*] should be authorized to establish a regulatory asset, for accounting purposes only, for the jurisdictional incremental costs for developmental Customer Connect and retirement CMS O&M expense because the costs are extraordinary expenses that over time will result in a saving that offsets the cost."); *see Alabama Power Company Petition For approval of Accounting Authorization Related to Software Expenditures*, Docket U-5285, Order (Al. PSC Feb. 5, 2019, *available at* https://www.pscpublicaccess.alabama.gov/pscpublicaccess/ViewFile.aspx?Id=d95be406-0cce-4cb1-8c8a-fdba9ca0e07a ("As discussed below, the nature of software expenditures and the corresponding benefits realized from such investments do not align with applicable generally accepted accounting principles ('GAAP), creating uneven expense recognition patterns that do not serve as a benefit to customers. The Company therefore seeks the authority to establish a regulatory asset in which it would capitalize operations and maintenance ('O&M') costs associated with software projects, including cloud-based software solutions, and then amortize such costs for a period that is consistent with the lives of comparable plant-in-service capital assets. For the reasons set forth, the Commission finds that Alabama Power's request is reasonable and well-supported, and thus grants the accounting authorization.").

[7] "Resolution Encouraging State Utility Commissions to Consider Improving the Regulatory Treatment of Cloud Computing Arrangements" – Sponsored by the Committees on Critical Infrastructure, Gas, and Water. Recommended by the NARUC Board of Directors on November 15, 2016. Adopted by the NARUC Committee of the Whole on November 16, 2016.

A. Yes. First, Schedule C-1 in Exhibit Fully Projected Future 1 includes the following adjustments: an approximately $25.9 million[8] addition to Electric plant in service on Line 1a; an approximately $1.8 million addition to Reserve for depreciation on Line 2a; and an approximately $6.1 million addition to Accumulated deferred taxes on income on Line 9a. For budgeting purposes, the Company reflected the associated software implementation costs for which it is seeking capitalization treatment as regulatory assets (included in Other Noncurrent Assets) in accordance with FERC and GAAP accounting requirements. Thus, a pro forma adjustment was needed to reclassify the associated software implementation costs from a regulatory asset to Property, Plant, and Equipment ("PP&E") beginning in the FPFTY for Pennsylvania ratemaking treatment. Second, Schedule D-14 in Exhibit Fully Projected Future 1 reclassifies approximately $1.8 million in O&M expense to depreciation expense as a result of the regulatory asset treatment for budgeting purposes described above. The $1.8 million represents the associated amortization on the IT software implementation costs placed in-service prior to the conclusion of the FPFTY.

Q. Does this conclude your direct testimony?

A. Yes, it does.

[8] An additional approximately $28 million remains in construction work in progress ("CWIP"), bringing the total capital costs to approximately $53.9 million, inclusive of AFUDC through the FPFTY.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 4

Direct Testimony of Charles R. Schram

Topics: **Sales and Load Forecast**
Annualization of Sales and Revenue

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Charles R. Schram, and my business address is 2701 Eastpoint Parkway, Louisville, Kentucky 40223.

Q. By whom are you employed and in what capacity?

A. I am Vice President, Energy Supply and Analysis for LG&E and KU Services Company, which provides services to PPL Electric Utilities Corporation ("PPL Electric" or the "Company"); The Narragansett Electric Company d/b/a Rhode Island Energy ("RIE") in Rhode Island; Louisville Gas and Electric Company ("LG&E") and Kentucky Utilities Company ("KU") in Kentucky; and Old Dominion Power ("ODP") in Virginia. In this position, among other responsibilities, I oversee the preparation of the forecasts of electric sales, customers, and demands for the Company, RIE, LG&E, KU, and ODP, as well as the forecasts of gas sales, customers, and demands for RIE and LG&E. A complete statement of my education and work experience is attached to this testimony as Appendix A.

Q. What are your responsibilities as Vice President, Energy Supply and Analysis?

A. I have five primary areas of responsibility: (1) sales forecasting and market analysis, (2) fuel procurement (coal and natural gas) and coal combustion residual marketing for the LG&E and KU generating stations, (3) real-time dispatch optimization of the generating stations to meet LG&E and KU's native load obligations, (4) wholesale market activities, and (5) generation planning for LG&E and KU. As it pertains to this

proceeding, the Sales Analysis and Forecasting group prepared the electric sales forecast for the Company.

Q. What are the responsibilities of the Sales Analysis and Forecasting group?

A. The primary responsibility of the Sales Analysis and Forecasting team is to support decision-making within the Company through their forecasting and analysis activities. This begins with an understanding of how the Company's customers use electricity, obtained through economic and statistical analysis and research into factors that could change customers' future usage patterns. Though not a comprehensive list, this includes the following tasks:

- Analyzing key factors that influence customers' energy consumption, such as weather, the state of the economy, federal and state regulations, demand-side programs, end-use appliance efficiencies and saturations, distributed generation, electrification, and rates and rate design;
- Analyzing available interval data and aggregated calendar sales for specific rate classes;
- Analyzing sales variances against the forecast;
- Considering additional inputs that could aid or improve analysis or forecasting; and
- Documenting processes.

Q. Have you ever testified before the Pennsylvania Public Utility Commission ("PUC" or "Commission") or any other regulatory body?

A. I have not previously testified before the PUC. However, I have testified before numerous regulatory and legislative bodies. I have provided testimony before the Kentucky Public Service Commission on numerous occasions, including the most recent KU and LG&E Rate Cases (2025-00113 and 2025-00114) as well as Certificate of Public Convenience and Necessity filings in Case Nos. 2022-0402 and 2025-00045 and the LG&E and KU Integrated Resource Plan in Case No. 2024-00326. I have also provided testimony before the Virginia State Corporation Commission in Fuel Factor proceedings involving KU's Old Dominion Power subsidiary.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to explain the development of the Company's forecast of sales, customers, and billed demands in addition to the annualization of sales and revenues.

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes. I am co-sponsoring Exhibit Regs. IV-C and sponsoring following exhibits:

- PPL Electric Exhibit CRS-1, which compares sales, customer counts, and billed demands in the historic test year ("HTY") to sales in the fully projected future test year ("FPFTY").

- PPL Electric Exhibit CRS-2, which details the annualization of sales and revenues for the HTY (July 2024 through June 2025), future test year ("FTY") (July 2025 through June 2026), and FPFTY (July 2026 through June 2027).

II. SALES FORECAST

Q. Please describe the development of the sales forecast set forth in PPL Electric Exhibit CRS-1.

A. The sales forecast is developed for the Residential, Small Commercial and Industrial ("Small C&I"), and Large Commercial and Industrial ("Large C&I") rate groups. These rate group forecasts were developed from models using regression analyses of historical sales data, economic data, end-use efficiency and saturation data, and weather data. Historical and forecasted economic data for the Commonwealth of Pennsylvania is obtained from Moody's Analytics. The weather (and more specifically temperature) data is obtained from the following airports: Lehigh Valley International, Harrisburg (Middletown), Wilkes-Barre/Scranton (Avoca), and Williamsport. Because the Company does not bill customers on a calendar month basis (bills are rendered based upon meter reads throughout the month), the revenue period (also referred to as "revenue month") heating degree days ("HDDs") and cooling degree days ("CDDs") are calculated for each revenue month. Forecasted weather is determined by calculating normal revenue month weather on an HDD and CDD basis for the past 20 years. The models use these inputs to generate a monthly sales forecast for each rate group.

Q. Has PPL Electric materially changed its approach to electric sales forecasting since the Company's 2015 rate case?

A. No. While I was not involved in the 2015 rate case, my understanding of PPL Electric witness Kimberly Golden's testimony (PPL Electric St. No. 3 from the 2015 rate case) is that the Company has a similar approach today as in 2015. The Company continues to look for ways to improve models and the forecast as a whole, but the overall approach to forecasting is consistent with that used in the prior rate case.

Q. How was the sales forecast set forth in PPL Electric Exhibit CRS-1 used in this rate filing?

A. The sales forecast is used to develop the FPFTY sales, which are a key input to the forecast of revenues, as discussed in the direct testimony of PPL Electric witness Katelyn Arnold (PPL Electric St. No. 13). The sales forecast is also part of the calculation of rates once cost allocations are determined.

Q. How are the Company's customer count and electricity sales expected to change in the FPFTY as compared to the HTY?

A. Changes by rate class from the HTY to the FPFTY are detailed in PPL Electric Exhibit CRS-1.

The residential class represents the majority of customer growth that has occurred historically and is projected to occur in the FPFTY, as shown in rows 27 and 37 of PPL Electric Exhibit CRS-1. With an annual growth rate of 0.44% per year from

2025-2027, forecasted customer growth is very similar to the 0.51% annual growth rate the Company has seen from 2016 to 2024.

Electricity sales to customers taking service under the residential service ("RS") and single-phase general service ("GS-1") rate schedules are forecast to be lower in the FPFTY than in the HTY, as shown in rows 28 and 11 of PPL Electric Exhibit CRS-1. This is primarily due to weather differences between the actual weather in the HTY versus the weather-normal based FPFTY as well as end-use appliance efficiency gains and distributed generation adoption that continue to reduce usage per customer.

Sales to non-data center customers taking service under the large general service ("LP-5") rate schedule are forecast to decrease in the FPFTY due to the loss of a few large customers, as shown in row 20 of PPL Electric Exhibit CRS-1. Sales to data center customers taking service under the LP-5 rate schedule are forecast to increase substantially in the FPFTY, as discussed later in my testimony and shown in row 23 of PPL Electric Exhibit CRS-1.

Q. Please identify the difference in weather between the HTY and the FPFTY.

A. Weather, and more specifically temperature, remains the most significant factor that drives the Company's sales variances on a near-term basis and thus is the main difference between the HTY and FPFTY, particularly for the weather-sensitive classes. As described below, actual weather in the HTY resulted in higher sales compared to sales under normal weather conditions.

Q. Please identify the variances in the CDDs and explain what those variances mean for sales projections during the summer.

A. The amount of actual CDDs in the HTY exceed the amount of normal CDDs in the FPFTY. This difference is most notable in July and August, which are typically the highest usage-per-customer months during the summer. This is shown in column G of Table 1 below.

Table 1: HTY and FPFTY Weather Comparison

		HTY		FPFTY		FPFTY vs. HTY			
	Revenue Month	Revenue Month Actual (July 2024 - June 2025)		Revenue Month Forecast (July 2026 - June 2027)		Degree Day Difference		% Difference	
	[A]	[B]	[C]	[D]	[E]	[F]	[G]	[H]	[I]
		HDD	**CDD**	**HDD**	**CDD**	**HDD**	**CDD**	**HDD**	**CDD**
[1]	**July**		317		252		(65)		-21%
[2]	**August**		315		290		(24)		-8%
[3]	**September**		162		181		19		12%
[4]	**October**	149		188		39		26%	
[5]	**November**	410		481		71		17%	
[6]	**December**	768		788		20		3%	
[7]	**January**	1,099		1,006		(93)		-8%	
[8]	**February**	1,075		1,003		(71)		-7%	
[9]	**March**	766		839		73		10%	
[10]	**April**	477		576		100		21%	
[11]	**May**	251		276		25		10%	
[12]	**June**		121		122		1		0%
[13]	**Total**	**4,995**	**915**	**5,158**	**845**	**163**	**(70)**	**3%**	**-8%**

Q. Please identify the variances in the HDDs and explain what those variances mean for sales projections during the winter.

A. The amount of actual HDDs in the HTY is less than the amount of normal HDDs in the FPFTY. However, focusing on the HDD differences in December through March, when usage-per-customer is typically at its highest, results in 71 more HDD in the HTY than in the FPFTY. This means that HTY temperatures in these months resulted in increased sales relative to the normal temperature assumptions in the FPFTY. This information is provided in column F of Table 1 above.

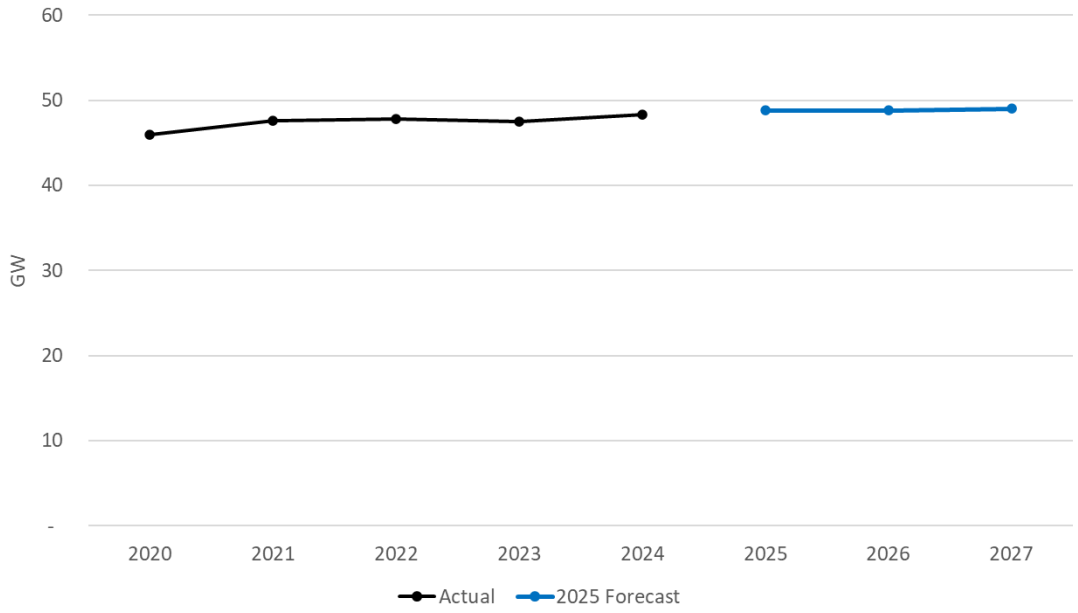
Q. Please provide an overview as to the differences in sales projected for the FPFTY relative to the HTY due to weather.

A. As described in Table 1 and discussed above, the HTY revenue months in which weather-sensitive usage is typically the greatest (January, February, July, and August) showed actual versus normal temperature differences that would suggest higher sales due to weather in the HTY. Overall, the normal temperature assumptions in the FPFTY result in fewer CDDs during the forecasted cooling months than actually experienced in the HTY and fewer HDDs in the January and February forecasted heating months than actually experienced in the HTY.

Q. Why does the Company use a 20-year period to calculate normal weather?

A. A 20-year normal provides an outlook of CDDs and HDDs that are calculated using temperature data from the past 20 years. The use of a 20-year normal results in less volatility from one forecast to the next as compared to a weather normal calculated over

a shorter period, such as 10 years. Additionally, the sales forecasts are developed on a monthly basis, and the sales forecast impact of a normal weather assumption calculated over a shorter period of time would vary depending on the month. Evaluating the historical temperature data, the impact of using a shorter period for normal weather would generally be reduced sales during the heating months and increased sales during the cooling months. Therefore, as a result of this seasonal offsetting, there would be very little change in total annual sales. For example, a 10-year normal weather assumption would reduce annual sales by 0.5% for RS and 0.2% for GS as compared to the same forecast using a 20-year normal.



Q. For the rates that have demands as a billing determinant, how does weather affect demands in the HTY?

A. While monthly sales are highly correlated to changes in monthly degree days, demands are set based on only a 15-minute period in each revenue month, so demands are influenced more by intra-month temperature extremes versus total monthly degree days.

Q. Why is the Company's forecast of billed demands reasonable?

A. The figure below demonstrates that the recent trend in historical billed demands is closely aligned to both last year's forecast and this year's forecast. This year's forecast continues the slightly increasing trend since 2020 in total billed demands.

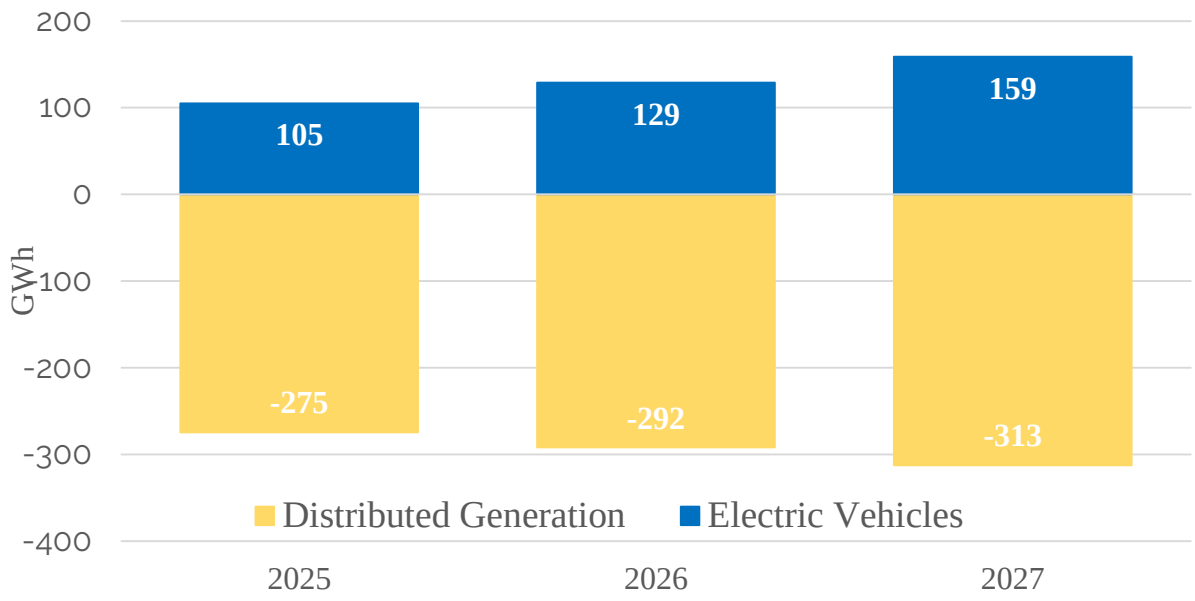


Figure 1: Total Billed Demands (GW)

Q. Does the sales forecast reflect the impact of distributed generation and electric vehicles?

A. Yes. As detailed below in Figure 2, energy produced from distributed generation reduces sales more than energy consumed by EVs increases sales. The net impact of distributed generation and EVs represents roughly 0.5% of total sales, excluding new large load customers, in the HTY and FPFTY.

Figure 2: Annual Sales Impacts of Distributed Generation and EVs

Q. How are new large load customers included in the sales forecast?

A. The Company included large load customers with executed Letters of Agreement ("LOAs") or Electric Service Agreements ("ESAs") with the Company at the time of the development of the sales forecast. The expected impacts of new large load customers are discussed more fully in PPL Electric witness Joseph Lookup's testimony (PPL Electric St. No. 16).

Q. What impact, if any, will new large load customers have on the Company's distribution revenues?

A. The large load customers projected to come online during the FPFTY are data center customers forecasted to take service under the LP-5 rate schedule. These customers are transmission-level customers, so the only distribution revenue impact from LP-5

customers is a customer charge. The LP-5 rate class's projected load growth in the FPFTY due to data center customers is based on input from Mr. Lookup's team and is set forth in PPL Electric Exhibit CRS-1 at rows 21 and 23. As stated above, the expected impacts of new large load customers, and in particular the impacts of these interconnections on system planning, are discussed more fully in Mr. Lookup's testimony.

III. ELECTRIC LOAD FORECAST

Q. Please describe the development of the peak load forecast.

A. Consistent with prior forecasts, the Company relies upon PJM Interconnection LLC ("PJM") for the peak load forecast. This year's peak load forecast comes from the 2025 PJM Load Report, published January 24, 2025, for the PPL Zone.

Q. Was the updated Annual Resource Planning Report ("ARPR") filed on August 8, 2025 based on the same peak forecast?

A. Yes, with the exception of new large load customers. The difference in the peaks is solely related to large load assumptions that were updated between the original filing of the ARPR in May 2025, which used the PJM forecast, and the updated filing of the ARPR in August 2025.

V. ANNUALIZATION OF SALES AND REVENUE

Q. PPL Electric Exhibit CRS-2 reflects annualizations of sales and base rate revenues for the HTY, FTY, and FPFTY. Please explain how those adjustments were developed.

A. The annualization adjustment of sales and base rate revenues for the HTY ended June 30, 2025, has two components. The first component accounts for changes in the number of customers over the year, and the second component accounts for changes in customer usage over the year.

The change in the number of customers from June 30, 2024, to June 30, 2025 was computed for each rate class. One-half of that change for each rate class was multiplied by the average annual kWh usage per customer to obtain the sales adjustment associated with new customers entering the rate class. The average unit base rate for each rate class was applied to the resulting kWh sales levels to obtain the base rate revenue adjustments for distribution due to changes in the number of customers.

The second adjustment recognizes changes in kWh usage levels by existing customers. The average change over the past three years in average annual usage for each class was computed. One-half of the change in average use was multiplied by the year-end number of customers for each rate class to obtain the kWh sales adjustment. The incremental base rate for each rate class was applied to this sales adjustment to obtain the base rate revenue adjustment. Details of the HTY annualization adjustment are shown on page 1 of PPL Electric Exhibit CRS-2.

The annualization of FTY and FPFTY sales and revenues consisted of similar adjustments for changes in the numbers of customers and customer usage. The details

of the FTY annualization adjustment are shown on page 2 of PPL Electric Exhibit CRS-2; the FPFTY annualization adjustment details are shown on page 3 of PPL Electric Exhibit CRS-2.

Q. Please explain the source of the customer load data used to develop the rate class demand allocators employed in the Company's cost allocation studies.

A. PPL Electric collects interval sales data for all customers in the residential and large C&I rate groups, and all FERC jurisdictional customers. For the Small C&I rate group, most customers have interval meters, with the exception of a small number of unmetered customers taking service under the GS-1 and lighting rate schedules. For these unmetered rate schedules, a load profile is used to estimate the interval data. The hourly demands are aggregated to a total rate class level to determine the rate class coincident and non-coincident peaks.

Q. Have you provided the billing determinants used to develop the annual revenue effects for each of the rates?

A. Yes. The Sales Analysis and Forecasting team provided billing determinants to the Rates and Financial Planning teams for input into their calculations. The billing determinants can be found in PPL Electric witness Steven Wishart's testimony (PPL Electric St. No. 8).

Q. Do you believe the forecasted billing determinants for the FPFTY period are a reasonable basis for developing revenue forecasts and setting rates?

A. Yes.

Q. Does this conclude your direct testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 5

Direct Testimony of Bethany L. Johnson

Topics: **Overview of Revenue Requirement,**
Cost of Service, and Rate Design
Rate Case Expenses

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Bethany L. Johnson, and my business address is 827 Hausman Road, Allentown, Pennsylvania, 18104.

Q. By whom are you employed and in what capacity?

A. I am employed by PPL Services Corporation ("PPL Services"), an affiliate of PPL Electric Utilities Corporation ("PPL Electric" or the "Company") which provides services to PPL Electric, as the Senior Director of Regulatory.

Q. What are your responsibilities as Senior Director of Regulatory?

A. I am responsible for PPL Electric's development of revenue forecasting and analysis, distribution rate design and administration, cost of service implementation, as well as transmission Federal Energy Regulatory Commission ("FERC") Formula Rates, development of rate case strategies and processes, and compliance with the regulatory requirements of the Pennsylvania Public Utility Commission ("Commission"), the FERC and other regulatory agencies, as necessary. Additionally, I oversee energy and utility policy and regulatory strategy for PPL Electric. As part of this function, I am responsible for the preparation, review, and technical oversight and guidance of the development, content, and structure of cost allocation and revenue requirement studies. In addition, I am responsible for all aspects of Rhode Island Energy's and PPL Electric's procurement of wholesale generation supply and scheduling and settlement activities with PJM Interconnection, LLC ("PJM") and ISO New England, Inc. I also prepare and

present expert testimony regarding these and other cost-of-service and ratemaking-related issues.

Q. What is your educational background?

A. I graduated from King's College in 1999 with a Bachelor of Science Degree in Finance, and from Moravian College in 2003 with a Master of Business Administration.

Q. Please describe your professional experience.

A. In 2000, I was employed by PPL Global Operations, Inc. ("PPL Global Operations"), where I supported the accounting and financial reporting activities for PPL Global Operations' domestic operations. In 2001, as a result of corporate realignment, I joined PPL Generation, LLC. In this position, my responsibilities included cost control, budgeting, reporting, and management of the forecasting process for large construction projects, as well as the administration of construction and financing contracts. In 2004, I rejoined PPL Global Operations as a Senior Business Analyst with responsibility for maintaining, analyzing, consolidating, and presenting business plans and operational performance results for PPL Global Operations' international affiliates. In 2007, I joined PPL Energy Services Group, LLC as a Business Analyst providing financial modeling and analytical support for evaluations of acquisition, development, and divestiture opportunities. In 2009, I joined PPL Electric as a Project Controls Specialist providing advanced cost analysis for distribution and transmission projects. Later in 2009, I became the Financial Business Planning Specialist in the Regulatory Compliance Department. In August 2012, I was named Manager - Regulatory Compliance for PPL

Electric, and in October 2015, I was named Manager - Regulatory Operations, which included overseeing scheduling and settlement functions with PJM. During my time in this role, I also took responsibility for load and revenue forecasting and reporting as well as energy and utility policy, and company strategy. In September 2020, I was named Director - Regulatory Affairs. In December 2021, my role was transferred to PPL Services Corporation. In June 2023, I was promoted to Senior Director –– Regulatory for PPL Services Corporation.

Q. Have you previously testified as a witness in other Commission proceedings or any other jurisdiction's proceedings?

A. Yes, I have testified before this Commission in several proceedings. A list of the matters in which I have testified is attached as Appendix A.

Q. What is the purpose of your testimony?

A. I will provide an overview of the Company's revenue requirement increase proposed in this proceeding, the cost of service study utilized to allocate that increase to the customer classes, and PPL Electric's proposed design of distribution rates to recover that allocated revenue increase.

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes, I am sponsoring Schedule D-6 in Exhibits Fully Projected Future 1, Future 1, and Historic 1 and portions of Parts I and II of the filing requirements as noted on their indexes.

II. OVERVIEW OF REVENUE REQUIREMENT, COST OF SERVICE, AND RATE DESIGN

Q. Could you please provide an overview of the Company's proposed revenue requirement increase?

A. PPL Electric proposes an increase in distribution base operating revenues of approximately $356 million, as set forth in the direct testimony of Christine Martin (PPL Electric St. No. 1) and Dan Dane (PPL Electric St. No. 6). To help derive this proposed increase in the Company's revenue requirement, PPL Electric retained Concentric Energy Advisors, Inc. ("Concentric"). Under my direction and supervision, PPL Electric's business units provided the necessary data for Concentric to develop the revenue requirement model and calculate the proposed increase of approximately $356 million. Based on my review, the revenue requirement schedules reflect and incorporate the Company's financial data and projections.

Q. Would you please provide an overview of the allocated cost of service study ("ACOSS") utilized by the Company in this proceeding?

A. Bickey Rimal from Concentric was tasked with preparing the ACOSS for this proceeding, which is utilized to allocate the Company's overall cost of service to each rate class in a manner that reflects the class's underlying cost of service. As explained in his direct testimony (PPL Electric St. No. 7), Mr. Rimal used the Concentric Cost of Service Model ("Concentric Model") to prepare the ACOSS based upon data provided by PPL Electric for the Fully Projected Future Test Year ("FPFTY") ending June 30, 2027, including the number of customers, sales, revenues by rate class, rate base items,

operations and maintenance ("O&M") expenses, and taxes. As Mr. Rimal explains, those costs were then functionalized, classified, and allocated to each rate class.

The following Table 1 from Mr. Rimal's direct testimony summarizes the results of the ACOSS, particularly the return at current rates and relative rate of return:

Table 1: Rate of Return at Current Rates

Rate Class	Rate Code	Return at Current Rates	Relative Rate of Return
Residential	RS	4.32%	1.0
Residential-Thermal Storage	RTS	2.27%	0.5
Small General Service - Sec. Voltage	GS-1	4.03%	0.9
Large General Service - Sec. Voltage	GS-3	5.31%	1.2
Large General Service - 12 KV	LP-4	3.53%	0.8
Large General Service - 69 KV or Higher	LP-5	24.01%	5.4
Separate Meter General Space Heating Service	GH-2	4.50%	1.0
Street Lighting/Area Lighting	SL/AL	5.89%	1.3
Total System		**4.43%**	**1.0**

He then relies on these results to develop the proposed revenue allocation for each rate class, noting the goal to move all rate classes to their cost of service while taking into consideration other factors such as affordability and gradualism. In the following table, Mr. Rimal summarizes the revenues at present rates, revenues based on the ACOSS, and the proposed mitigated revenue requirement by rate class.

Table 2: Revenues at Present and Proposed Rates

Rate Class	Rate Code	Revenue at Current Rates	Revenue Requirement based on ACOSS	Mitigated Revenue Requirement	ACOSS Increase (%)	Mitigated Increase (%)
Residential	RS	$718,787,174	$969,168,276	$972,760,160	34.83%	35.33%
Residential-Thermal Storage	RTS	$7,930,469	$13,351,425	$12,071,032	68.36%	52.21%
Small General Service - Sec. Voltage	GS-1	$78,435,579	$107,441,939	$107,788,638	36.98%	37.42%
Large General Service - Sec. Voltage	GS-3	$128,618,149	$169,637,439	$170,381,820	31.89%	32.47%
Large General Service - 12 KV	LP-4	$38,791,942	$63,254,109	$59,045,537	63.06%	52.21%

Large General Service - 69 KV or Higher	LP-5	$1,940,349	$1,325,612	$1,940,349	-31.68%	0.00%
Separate Meter General Space Heating Service	GH-2	$1,301,175	$1,771,840	$1,777,874	36.17%	36.64%
Street Lighting/Area Lighting	SL/AL	$24,366,203	$30,491,845	$30,677,073	25.14%	25.90%
Total System		$1,000,171,041	$1,356,442,484	$1,356,442,484	35.62%	35.62%

Q. Could you please summarize the Company's proposed rate design in this proceeding?

A. The proposed rate design is addressed in detail in Steven Wishart's direct testimony (PPL Electric St. No. 8). As an overview, the Company proposes an increase in Rate Schedule RS's monthly fixed customer charge from $15.58 to $17.00 as well as an increase in Rate Schedule GS-1's monthly fixed customer charge from $22.00 to $30.00. I note that Rate Schedule RS's currently monthly fixed charged of $15.58 includes the Smart Meter Rider 2 ("SMR-2") and the Competitive Enhancement Rider ("CER") that PPL Electric proposes to eliminate as part of this case. I also note that the ACOSS would support increases in these monthly fixed customer charges to $42.96 and $43.05, respectively, given the fixed costs incurred by the Company to provide service to customers in these rate classes. For these reasons, and as further discussed in Mr. Wishart's direct testimony, the Commission should approve the Company's proposed rate design, including the requested increases in the Rate Schedule RS and Rate Schedule GS-1 monthly fixed customer charges.

Q. Is the Company proposing the elimination or restriction of any currently existing Rate Schedules?

A. Yes. The Company is proposing the elimination of two Rate Schedules – Residential Thermal Storage (RTS) and General Space Heating Service (GH-2) which are sub schedules of the Company's Residential (RS) and General Service-1 (GS-1) Rate Schedules, respectively. Mr. Rimal's and Mr. Wishart's analysis indicated that the RTS and GH-2 customers are not aligned with their respective class cost of service allocations and to do so would require a significant increase in rates for both classes, which have few customers. Additionally, Rate Schedule RTS has been restricted since 1995, and Rate Schedule GH-2 has been restricted since 1972. The Company believes that the time is ripe to move all remaining customers in these Rate Schedules to Rate Schedules RS and GS-1, respectively. These proposals are further discussed in the direct testimony of Steven Wishart (PPL Electric St. No. 8) and Gregory Olsen (PPL Electric St. No. 14).

Q. Based on your extensive background and experience with the Company, do you agree with the proposals set forth by Concentric in this case?

A. Yes, I believe that the proposals are reasonable. Concentric has worked closely with PPL Electric in development of the revenue requirement, cost of service, and rate design results. I have reviewed the analyses and support the recommendations, as I believe they align with the Company's position regarding balancing the need for investment, customer affordability, and fairness across customer class with deference to the

Commonwealth Court's decision in *Lloyd v. Pa. PUC*, 904 A.2d 1010 (Pa. Cmwlth. 2006).

Q. Please describe Schedules D-6 in Exhibits Fully Projected Future 1, Future 1, and Historic 1.

A. Schedule D-6 in each of these exhibits provides the Company's claim for rate case expenses, which includes expert witnesses and costs related to rate case preparation. The estimated expenses are adjusted for what has been included in the Company's business plan for each respective period, resulting in the Company's rate case expense claim.

Q. Does this conclude your direct testimony?

A. Yes, it does.

Appendix A

As an employee of PPL Electric, PPL EU Services, or PPL Services Ms. Johnson has offered expert testimony in the following electric utility proceedings before state PUCs.

Rhode Island PUC:

1. Docket No. D-21-29 – Petition of PPL Corporation, PPL Rhode Island Holdings, LLC, National Grid USA, and The Narragansett Electric Company for Authority to Transfer Ownership of The Narragansett Electric Company to PPL Rhode Island Holding, LLC and Related Approvals

2. Docket No. 22-49-EL - The Narragansett Electric Company d/b/a Rhode Island Energy's Advanced Metering Functionality Case

Pennsylvania PUC:

1. Docket No. M-2012-2312472 – PPL Electric Utilities Corporation Final Generation Supply Charge-1 Reconciliation Report for the 12 Month Period May 1, 2011 through April 30, 2012

2. Docket No. C-2013-2367475 – Office of Small Business Advocate v. PPL Electric Utilities Corporation

3. Docket No. P-2013-2325034 – Petition of PPL Electric Utilities Corporation for Approval of a Distribution System Improvement Charge

14. Docket Nos. P-2024-3048732, et al. – Petition of PPL Electric Utilities Corporation for a Waiver of the Distribution System Improvement Charge Cap of 5% of Billed Revenues

15. Docket No. P-2024-3049223 – Petition of PPL Electric Utilities Corporation for Approval of its Second Distributed Energy Resources Management Plan

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 6

Direct Testimony of Daniel S. Dane

Topics: **Revenue Adjustments**
Rate Base Adjustments
Expense Adjustments
Revenue Requirement

Dated: September 30, 2025

I. INTRODUCTION

Q. Mr. Dane, please state your full name and business address.

A. My name is Daniel S. Dane. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752.

Q. By whom are you employed and in what capacity?

A. I am the President of Concentric Energy Advisors, Inc. ("Concentric").

Q. Please describe Concentric and your principal responsibilities in your position.

A. Concentric provides financial and economic advisory services to many and various energy and utility clients across North America. Our regulatory, economic, and market analysis services include utility ratemaking and regulatory advisory services; energy market assessments; market entry and exit analysis; corporate and business unit strategy development; demand forecasting; resource planning; and energy contract negotiations. As President of Concentric, my responsibilities include assisting clients in identifying and addressing business issues. My primary areas of focus have been regulatory, financial, and accounting related issues.

Q. Please describe your educational background and business experience.

A. I have a Master of Business Administration degree from Boston College and a Bachelor of Arts degree in Economics from Colgate University. I am also a certified public accountant. My curriculum vitae is included as Appendix A to this pre-filed direct testimony.

Q. Have you previously testified as a witness on ratemaking-related issues?

A. Yes. My testimony listing is included as Appendix B to this pre-filed direct testimony.

II. PURPOSE OF TESTIMONY

Q. What is the purpose of your direct testimony?

A. My testimony supports the Company's request for an increase in base rates for electric distribution service provided by PPL Electric Utilities Corporation ("PPL Electric"), a subsidiary of PPL Corporation, as calculated in the accompanying revenue requirement model, Exhibit D, and as set forth in the Company's Exhibit Historic 1, Exhibit Future 1, and Exhibit Fully Projected Future 1. In particular, my testimony explains the development of the Company's Pennsylvania-jurisdictional revenue requirement for the Fully Projected Future Test Year ("FPFTY") ending June 30, 2027, in accordance with the Pennsylvania Public Utility Code (66 Pa. C.S. §§ 1301 et seq.) and the regulations and policies of the Pennsylvania Public Utility Commission ("PUC" or the "Commission").

Q. How is your testimony organized?

A. Section I of this testimony provides an introduction and background information. Section II summarizes the purpose of my testimony. Section III discusses the test year period used to calculate the proposed revenue requirement. Section IV summarizes the Company's revenue requirement. Section V provides a detailed description of the computation of the revenue requirement and explains the determination of rate base. Section VI discusses the breakdown of revenues and operating expenses included in and excluded from the calculations, as well as the adjustments made to such revenues and operating expenses.

Section VII addresses compliance and regulatory considerations including the treatment of riders and surcharges within the revenue requirement. Section VIII is the conclusion.

Q. Are you sponsoring any exhibits in conjunction with your testimony?

A. Yes. I am sponsoring PPL Electric Exhibit DSD-1 for the Historic Test Year ("HTY") and Future Test Year ("FTY"), and FPFTY. I am also co-sponsoring Schedules D-4 through D-19 in Exhibit Historic 1, Exhibit Future 1, and Exhibit Fully Projected Future 1.

III. TEST YEAR

Q. What is the test year used to calculate the proposed revenue requirement?

A. The FPFTY used to calculate the proposed revenue requirement is the 12-month period ending June 30, 2027. The analysis reflects the Company's expected financial and operational conditions during that time. The test year was selected in accordance with Act 11 of 2012 and Act 40 of 2017, to align rates with anticipated future expenses and investments. Exhibits for the HTY, FTY, and FPFTY have been prepared using the same format and methodology. When referring to the exhibits, my testimony will focus on the FPFTY.

IV. SUMMARY OF REVENUE REQUIREMENT

Q. What is the basis for the Company's proposed revenue requirement?

A. The Company's filing is based on the cost of providing safe and reliable electric distribution service to Pennsylvania customers, excluding transmission and non-jurisdictional activities. The revenue requirement presents pro forma revenue, expense and

rate base data for the HTY ended June 30, 2025, the FTY ended June 30, 2026, and the FPFTY ended June 30, 2027. Data for the HTY was obtained from the Company's books and records. The FTY and FPFTY reflect the Company's budgeted operating income and expenses, adjusted to reflect the conditions anticipated in those periods. The Company's rate base includes the estimated net utility plant in service as of June 30, 2027.

Q. Please describe the methodology used to calculate the revenue requirement.

A. The revenue requirement reflects the Company's reasonable costs of providing distribution services, including a fair and reasonable return on investment in distribution infrastructure to provide that service. Costs that are recovered through continuing automatic adjustment clause mechanisms and existing non-base rate charges for distribution service and transmission service are excluded from the revenue requirement, while the costs recovered under other automatic adjustment clause mechanisms are being rolled into base rates as explained by PPL Electric witness Katelyn Arnold (PPL Electric St. No. 13).

To present a distribution-only revenue requirement, all transmission plant, expenses, and revenues, as well as costs and revenues associated with existing non-base rate charges, are removed from the revenue requirement, per PUC requirements. PPL Electric Exhibit DSD-1 shows the removal of transmission related rate base, revenues, and expenses from "Total T&D Operations" of Schedule C-1 and the "T&D Pro Forma at Presents Rates" (column 5) of Schedule D-1 and reflect the roll-in of certain automatic adjustment clause mechanisms into base rates in the FPFTY. Costs are assigned to the correct function and class using business units and FERC accounts. The rate base for the FPFTY is developed by quantifying gross distribution plant expected to be in service as of

June 30, 2027, and associated accumulated depreciation. Adjustments are then made for working capital determined through a lead-lag study (see the direct testimony of Katelyn Arnold (PPL Electric St. No. 13)), accumulated deferred income taxes ("ADIT"), contributions in aid of construction ("CIAC"), customer advances, and customer deposits. The weighted average cost-of-capital ("WACC") using the Company's actual capital structure is applied to the resulting rate base to determine a fair return for investors.

Next, the operating revenues at current rates are adjusted for normalization and unbilled revenue. Operating expenses are normalized and adjusted for known and measurable changes. Depreciation and amortization are calculated on the projected plant balances using the depreciation rates as determined in a depreciation study (see the direct testimony of PPL Electric witness John Spanos (PPL Electric St. No. 11)). Lastly, income taxes are determined by using a blended Pennsylvania corporate tax rate (to account for the Pennsylvania corporate income tax phase down) and the federal rate after accounting for normalization, flow through adjustments, and deferred taxes. Income tax expense is then adjusted for excess deferred tax amortizations and investment tax credits amortizations (see the direct testimony of PPL Electric witness Andrew Elmore (PPL Electric St. No. 12)).

Analysis of the above inputs results in the revenue requirement needed to provide distribution service, including a fair and reasonable return on investment in distribution infrastructure to provide that service.

Q. Does the cost of service include costs incurred by PPL Corporation or its affiliates, on behalf of the Company?

A. Yes. PPL Corporation provides administrative functions through its service company subsidiary (i.e., PPL Services Corporation ("PPL Services")), which are allocated to PPL Electric based on the methods, allocations and requirements detailed in the PPL Corporation's Cost Allocation Manual (II-D-8). The cost of service for PPL Electric includes two types of affiliate charges from affiliates: (1) "direct charges" that are billed for costs incurred and work performed by personnel directly related to the Company; and (2) "common costs" that are allocated among the respective subsidiaries benefitting from the service based on the methods, allocations, and requirements detailed in the PPL's Cost Allocation Manual (II-D-8). Therefore, where applicable, costs incurred on behalf of, or allocated to, the Company are included in the HTY, FTY and FPFTY, as adjusted pursuant to the discussion in the direct testimony of PPL Electric witness Dennis Urban (PPL Electric St. No. 2).

Q. How are the costs that PPL Services and other affiliates incurred to perform services for PPL Electric reflected in the Company's cost of service calculations?

A. Those costs are incorporated into the rate base and operations and maintenance ("O&M") expense or other expense categories included in the test year's cost of service. In addition, the Company has included applicable charges from affiliates in the individual normalizing and known and measurable adjustments to the cost of service, to the extent that those adjustments also represent normalizing or known and measurable changes to the HTY, FTY and FPFTY cost of service.

Q. What evidence has the Company provided in this filing to demonstrate that the revenue requirement reflects the cost of serving customers, including capital costs, appropriate staffing levels, and prudent and efficient management?

A. As outlined herein and throughout the direct testimony accompanying the Company's rate case filing, PPL Electric's proposed increase in its operating revenues is necessary to provide the Company with a fair opportunity to earn a just and reasonable return of and on its investments to provide electric distribution service. In particular, the Company has provided evidence regarding the appropriateness and reasonableness of its budgeting process, the Company's policies to achieve cost efficiencies, the steps taken to ensure its staffing levels are appropriate and its compensation is market-based, the Company's approach to achieving operational effectiveness, and that the costs the Company bears are necessary for the provision of safe and reliable electric distribution service to customers. Further discussion on the Company's capital and O&M budgeting process can be found in the direct testimony of PPL Electric witness Dennis Urban (PPL Electric St. No. 2).

Q. What is the Company's proposed cost of service?

A. The Company's proposed operating revenues, including other operating revenues, to recover its cost of service is $1,422,171,692 (Schedule D-1, Column 8, Line 1 in Exhibit Fully Projected Future 1) including a weighted cost of capital of 8.56 percent on rate base of $5,817,887,791, as presented in Schedule C-1 of Exhibit Fully Projected Future 1.[1]

[1] There are negligible rounding differences between the FPFTY values in the revenue requirement model and the FPFTY values in the Allocated Cost of Service Study ("ACOSS") model.

Q. Are the proposed distribution rates designed to recover the Company's revenue requirement?

A. Yes. The Company's proposed distribution rates are designed to recover the Company's FPFTY revenue requirement, net of other operating revenue. A summary of the revenue requirement is provided on Schedule D-1 of Exhibit Fully Projected Future 1. This schedule reflects the required increase of distribution revenue, as well as the proposed rolling into base rates of the Competitive Enhancement Rider ("CER"), the Distribution System Improvement Charge ("DSIC"), the Tax Cuts and Jobs Act Temporary Surcharge ("TCJA"), and the Smart Meter Rider ("SMR") as well as amortization of excess ADIT. The budgeted operating revenue for PPL Electric, net of other operating revenues, before the reflection of the required increase, is $1,005,771,603, as shown on Schedule D-3, Line 6. The base revenue increase required is $356,271,009, as shown on Schedule D-1, Line 1. Thus, the total revenue requirement to be recovered through distribution rates (excluding other operating revenues) is $1,362,042,612, which includes revenues currently being recovered through riders of $53,469,710, for a net customer increase of $302,801,299.

Q. What is the proposed revenue deficiency in this proceeding?

A. Revenue deficiency is the shortfall between the amount of revenue a company currently collects through its rates and the amount it needs to recover its full cost of service, including operating expenses, capital costs, and a reasonable return. The proposed revenue deficiency in this proceeding is the difference between the current base revenue and the revenue requirement calculated by the Company, as summarized in Schedule D-1 of Exhibit Fully

Projected Future 1. The Company is seeking to address a revenue deficiency of $356,271,009 over the level of base revenue generated at current base distribution rates.

Q. Please summarize the other aspects of the Company's proposal.

A. Items that have been recovered through recovery mechanisms outside of base rates are excluded from the Company's HTY and FTY. Those items include the Act 129 Compliance Rider ("ACR"), the CER, the DSIC, Generation Service Charge ("GSC"), Merchant Function Charge ("MFC"), Purchase of Receivables ("POR"), the SMR, State Tax Adjustment Surcharge ("STAS"), Storm Damage Expense Rider ("SDER"), the TCJA, Transmission Service Charge ("TSC"), and Universal Service Rider ("USR"). The adjustment mechanisms for these items will continue to be utilized to recover the designated costs on a current, reconciling basis during the FPFTY, apart from the CER, SMR and TCJA, which the Company is proposing to include in base rates as discussed in the direct testimony of PPL Electric witness Katelyn Arnold (PPL Electric St. No. 13). For the recovery mechanisms that are proposed to be rolled into base rates, the expenses are included in the calculation of operating income at present rates, and any related plant-in-service is included in rate base for the FPFTY. In accordance with statutory requirements, DSIC expenses are factored into the calculation of operating income at present rates, and the corresponding plant-in-service is incorporated into the rate base. Amounts currently recovered under the DSIC mechanism are included in the revenue deficiency in base rates. As of the effective date of new base rates established in this proceeding, the DSIC will be reset to zero.

The Company's revenue requirement is allocated among the rate classes based on the results of an allocated cost of service study ("ACOSS") and other considerations. The proposed distribution rates are designed to collect the proposed amount from each rate class based on test year billing units – such as the number of bills, kilowatts, billing demand, among others – as supported by the direct testimony of PPL Electric witness Bickey Rimal (PPL Electric St. No. 7).

V. COST OF SERVICE AND RATE BASE

Q. Have you prepared an exhibit to support your revenue requirement calculations?

A. Yes. The revenue requirement is supported by a cost-of-service analysis contained in Section D of Exhibit Fully Projected Future 1. This section of the exhibit includes supporting schedules for each component, including the normalizing and known and measurable adjustments to test year data.

Q. Please describe the organization of the supporting schedules contained within Section D.

A. Section D is organized in a series of schedules as follows:

Schedule D-1 – Operating Income Pro Forma at Present and Proposed Rates

Schedule D-2 – Adjustments to Income

Schedule D-3 – Adjustments to Operating Revenue

Schedule D-4 – Adjustment to Operating Revenues for Unbilled Revenue

Schedule D-5 – Adjustment to Wages and Benefits

Schedule D-6 – Adjustment for Rate Case Expense

Schedule D-7 – Adjustment for Economic Development Proposal

Schedule D-8 – Adjustment for Competitive Enhancement Rider Roll-in to Base Rates

Schedule D-9 – Adjustment for Deferred Storm Outage Costs

Schedule D-10 – Adjustment for Deferred IIJA-Related Incremental Expenditures

Schedule D-11 – Adjustment for Universal Service Rider (USR) Salaries

Schedule D-12 – Adjustment for Interest Expense on Customer Security Deposits

Schedule D-13 – Adjustment for Company Use Generation Supply Purchases

Schedule D-14 – Adjustment for Certain IT Expenditures Requested to Be Treated as Capital

Schedule D-15 – Adjustment to Annual Depreciation Expense

Schedule D-16 – Adjustment to Taxes Other Than Income Taxes

Schedule D-17 – Computation of Income Taxes

Schedule D-18 – Adjustment to Deferred Income Taxes

Schedule D-19 – Adjustment to Amortization of Deferred Investment Tax Credit

Q. Please describe Schedule D-1 "Operating Income Pro Forma at Present and Proposed Rates."

A. Schedule D-1 provides the computation of the revenue requirement for the FPFTY at present and proposed rates. The total amount per books in column (1) is determined by the

total transmission and distribution budget for the 12 months ending June 30, 2027, including riders. Column (2) shows the adjustment to the budget to eliminate specified riders. All related expenses that will continue to be recovered through riders, and not rolled into base rates, along with the corresponding operating revenues are removed in column (2), to develop a transmission and distribution operating income schedule, net of riders shown in column (3). The Company then adjusts for pro forma adjustments in column (4) to reflect the normalization of income and the impacts of known and measurable changes for transmission and distribution expenses to arrive at an adjusted transmission and distribution operating income at present rates in column (5). Column (6) presents only the distribution portion of the operating income regulated by the PUC. See PPL Electric Exhibit DSD-1 for the determination of the PUC jurisdictional pro forma revenue at current rates. Column (7) shows the projected revenue deficiency and corresponding increases in O&M expenses, taxes other than income taxes ("TOTI"), and income taxes that will result with the rate increase. The result in Column (8) of that schedule provides the operating income calculation at proposed rates.

As shown on Schedule D-1, the resulting operating revenue deficiency is $356,271,009. The operating revenue deficiency was computed by comparing the earned rate of return of 4.43 percent at current rates to the required rate of return of 8.56 percent and multiplying that difference by the rate base and grossing up that product for income taxes, gross receipts taxes, regulatory commission fees, and uncollectible accounts expense.

Q. Please explain Schedule D-2 "Adjustments to Income."

A. This schedule shows a summary of all the pro forma adjustments related to revenues, expenses, and taxes claimed by the Company. Further detail for each of these adjustments is found in Schedules D-3, Adjustments to Operating Revenue, and D-4, Adjustment for Unbilled Revenue.

Q. Please explain Schedule D-5 "Adjustment to Wages and Benefits."

A. The number of employees that PPL Electric employs can vary throughout any given year. This, in turn, impacts the wages and benefits incurred or projected for that period. Schedule D-5 annualizes transmission and distribution wages, payroll taxes, and benefits based on the number of T&D-related employees to be employed at the end of the test year, and the corresponding average monthly T&D-related wages per employee. The distribution segment receives an allocation of 91.63 percent of labor costs as determined by the allocated cost of service study (see direct testimony of PPL Electric witness Bickey Rimal (PPL Electric St. No. 7).

Q. Please explain Schedule D-6 "Adjustment for Rate Case Expense."

A. The Company has submitted Schedule D-6 to reflect the adjustment needed for expenses related to the filing of the distribution rate case. The adjustment shows the total rate case expense normalized over three years and offset by the amounts included in the budget.

Q. Please explain Schedule D-7 "Adjustment for Economic Development Proposal."

A. The adjustment on Schedule D-7 is made to reflect the expenses associated with the Economic Development Proposal discussed in the direct testimony of PPL Electric witness Jason Hunt (PPL Electric St. No. 21).

Q. Please explain Schedule D-8 "Adjustment for Competitive Enhancement Rider Roll-In to Base Rates."

A. The adjustment on Schedule D-8 is made to reflect the expenses associated with the Company's proposal to eliminate the Competitive Enhancement Charge and recover the expenses through base rates as discussed in the direct testimony of PPL Electric witness Katelyn Arnold (PPL Electric St. No. 13).

Q. Please explain Schedule D-9 "Adjustment for Storm Costs."

A. The adjustment on Schedule D-9 is made to adjust for the amortization of the regulatory asset for storm damage expense incurred over the maximum amount permitted to be recovered through the SDER as discussed in the direct testimony of PPL Electric witness Katelyn Arnold (PPL Electric St. No. 13).

Q. Please explain Schedule D-10 "Adjustment for Deferred IIJA-Related Incremental Expenditures."

A. The adjustment on Schedule D-10 is made to adjust for the amortization of the regulatory asset for incremental expenditures incurred to prepare, apply, administer, and otherwise execute on Infrastructure Investment and Jobs Act ("IIJA") funding opportunities. For

additional information on this adjustment, please see the direct testimony of PPL Electric witness Sharon Leskowsky (PPL Electric St. No. 22).

Q. Please explain Schedule D-11 "Adjustment for Universal Service Rider Salaries."

A. The adjustment on Schedule D-11 is made to reflect the removal of salaries from distribution base rates. USR salaries are proposed to be recovered through the USR as discussed in the direct testimony of PPL Electric witness Lisa Norden (PPL Electric St. No. 18).

Q. Please explain Schedule D-12 "Adjustment for Interest Expense on Customer Deposits."

A. The adjustment on Schedules D-12 shows the adjustment for interest related to customer deposits for projects. For additional information on this adjustment, please see the direct testimony of PPL Electric witness Sharon Leskowsky (PPL Electric St. No. 22).

Q. Please explain Schedule D-13 "Adjustment for Company Use Generation Supply Purchases."

A. Beginning in 2011, PPL Electric began shopping for and purchasing its generation supply service from alternative energy suppliers for the facilities it owns, *i.e.*, offices, service centers, crew quarters, warehouses, etc. This schedule calculates the distribution operating expense for that portion of the generation supply costs that PPL Electric is expected to incur for its own use in the normal course of business.

Q. Please explain Schedule D-14 "Adjustment for Capital Treatment of Certain IT Expenditures."

A. PPL Electric is requesting capital treatment of certain information technology costs. For further discussion of this proposal, please see the direct testimony of Christopher Garrett (PPL Electric St. No. 3), and for additional information on this adjustment, please see the direct testimony of PPL Electric witness Sharon Leskowsky (PPL Electric St. No. 22).

Q. Please explain Schedule D-15 "Adjustment to Annual Depreciation Expense."

A. The Company engaged Gannett Flemming to perform a depreciation analysis, as discussed in the direct testimony of John J. Spanos (PPL Electric St. No. 11). The known and measurable adjustment to depreciation expense reflects the application of depreciation rates determined in the depreciation study to the utility plant in service balances at the end of the FPFTY. For additional information on this adjustment, please see the direct testimony of PPL Electric witness Sharon Leskowsky (PPL Electric St. No. 22).

Q. Please explain Schedule D-16 "Adjustment to Taxes Other Than Income Taxes."

A. The Company adjusted TOTI for known and measurable changes based on pro forma adjustments to the Pennsylvania Gross Receipts Tax ("GRT") and the Public Utility Realty Tax ("PURTA"). The GRT is calculated on tariff revenue including late charges with an adjustment for bad debts. PURTA is calculated on the taxable value of utility real property and is determined by the Commonwealth.

Q. Please explain Schedule D-17 "Computation of Income Taxes."

A. Schedule D-17 shows the Company's requested additional operating revenue from the proposed rate increase as well as an increase in uncollectible accounts, commission fees, and applicable GRT and income taxes related to the proposed rate increase. See the direct testimony of Andrew Elmore (PPL Electric St. No. 12) for a full discussion of income tax calculations in this application.

Q. Please explain Schedule D-18 "Adjustment to Deferred Income Taxes."

A. Schedule D-18 shows the adjustment for the annual provision of deferred income taxes due to accelerated depreciation and plant related basis adjustments.

Q. Please explain Schedule D-19 "Adjustment for Amortization of Deferred Investment Tax Credit."

A. The Company has chosen Option 2, the Cost-of-Service Reduction Method, to provide customers with the direct benefit of investment tax credits in the form of reduced tax expense in the cost of service. This schedule adjusts for the amortization of investment tax credits over the related asset's book life. Under this method, unamortized investment tax credits do not reduce rate base.

Q. How did the Company compute the rate base?

A. The Company's rate base calculation is provided in Schedule C-1. The Company computed its rate base in this proceeding using the balance at the end of the HTY, June 30, 2025, adjusted for certain items, including additions to and retirements from utility plant

(and associated accumulated depreciation and ADIT) relating to estimated plant in service additions through the end of the FPFTY, June 30, 2027, as discussed below.

The rate base amount includes utility plant in service, plus materials and supplies, and a cash working capital allowance. Deductions from rate base include accumulated depreciation, an ADIT liability, an income tax (i.e., "FAS109") regulatory liability, CIAC, customer advances, and customer deposits.

Q. Please discuss the computation of utility plant in service and other assets that are included in rate base.

A. Utility plant in service includes the Company's distribution property in-service, and an allocation of general and intangible plant that supports the distribution segment, as of the end of the HTY, the FTY and the FPFTY. Plant balances in the FTY and FPFTY include estimated plant additions (adjusted for retirements). The Company has excluded $10,170,680,090 of transmission property in-service which includes an allocation of general and intangible plant that supports the transmission segment as shown in PPL Electric Exhibit DSD-1, p. 5, Line 1.

Q. Please discuss the reflection of FTY and FPFTY plant additions in rate base.

A. The Company reflected estimated distribution plant additions and retirements for the FTY and FPFTY in its FPFTY rate base. The impacts of the plant additions and retirements have been reflected in the calculations of accumulated depreciation and ADIT.

Q. What adjustments did the Company make to the FPFTY utility plant in service to which depreciation rates were applied?

A. The Company adjusted utility plant in service by $25,879,855 to reflect the capital treatment of certain investments in information technology, which I mentioned previously.

Q. Please discuss the other materials and supplies balance in rate base.

A. The balance of other materials and supplies is the cost of inventory used in providing service. Rate base reflects the Company's HTY 13-month average of materials and supplies.

Q. What is the cash working capital allowance?

A. The cash working capital allowance of $16,775,207 was developed through a lead-lag study. This study is discussed in more detail in the direct testimony of Katelyn Arnold (PPL Electric St. No. 13).

Q. What are ADIT liability balances?

A. ADIT represents timing differences that arise between when items are recognized for financial accounting purposes and when they are recognized for tax purposes. Because the Company calculates income tax expenses for ratemaking purposes using financial accounting taxable income and statutory tax rates, PPL Electric recognizes those "book/tax" timing differences in rate base. The primary contributor to those timing differences is depreciation expense, which generally is recognized on an accelerated basis

for tax purposes as compared to its recognition for financial accounting purposes, resulting in an ADIT liability that reduces rate base.

Q. What normalizing adjustments did the Company make to ADIT?

A. ADIT was adjusted to reflect the proration of the accumulation of deferred income taxes over the FPFTY, pursuant to IRS normalization requirements. Furthermore, adjustments were made to increase ADIT by the balance in the reserve for uncertain tax positions ("UTP") associated with the book/tax timing differences.

Q. What known and measurable adjustment was made to ADIT?

A. As discussed above, ADIT was adjusted to reflect additional deferred taxes arising from differences in book and tax depreciation for FTY and FPFTY plant additions.

Q. Please discuss CIACs and customer advances.

A. The Company did not have any CIACs or customer advances as of the end of the HTY, therefore there is no reduction to rate base.

Q. Please discuss customer deposits.

A. Customer deposits at the end of the HTY of $6,553,654 are included as a deduction to rate base. Interest credited to customers is included as an operating expense in the computation of the revenue requirement.

VI. REVENUES AND OPERATING EXPENSES

Q. What schedule provides the calculations related to operating revenues?

A. Schedules D-3 and D-4 summarize the FPFTY revenues including adjustments for other normalizing items related to operating revenue and the removal of unbilled revenues.

Q. Please summarize the adjustments to revenue.

A. The Company adjusted book revenue to remove revenue from rider mechanisms from the HTY, FTY, and FPFTY. Further adjustments were made to remove transmission revenue in the HTY, FTY and FPFTY. Lastly, the Company made normalization and annualization adjustments to revenue and removed unbilled revenue to develop the FPFTY operating revenue used to calculate the revenue deficiency. Further discussion of the normalization and annualization adjustments is in the direct testimony of Charles R. Schram (PPL Electric St. No. 4). Unbilled revenue is removed to ensure only revenue billed is included in the analysis.

Q. Were adjustments made to Other Operating Revenue?

A. Yes. Other operating revenue was adjusted to remove other income related to riders and rent and other income related to the transmission segment.

Q. Please provide an overview of the cost-of-service calculations related to expenses.

A. The cost-of-service calculations related to expenses began with the expenses budgeted for the FPFTY. The Company made adjustments to remove expenses related to rider mechanisms in the HTY and FTY. Further adjustments were made to remove expenses that

support the transmission segment from HTY, FTY, and FPFTY. For the FPFTY, rider expenses were removed for riders that will not be recovered in base rates as previously described. Lastly, the Company made known and measurable adjustments to expenses. These adjustments are presented in Schedules D-5 through D-19 as previously described.

Q. What adjustments did the Company make to the FPFTY expenses as a result of the capital treatment of certain investments in information technology?

A. The Company currently records these investments as a regulatory asset that is amortized into O&M expense. To reflect the capital treatment, as proposed in this filing, the Company has reclassified the amortization expense from O&M to depreciation expense. A complete description of this investment is in the direct testimony of Christopher Garrett (PPL Electric St. No. 3).

Q. Please summarize the impact of the known and measurable expense adjustments proposed by the Companies.

A. The adjustment to remove expenses related to cost recovery riders that will remain outside of base rates resulted in a decrease of $1,390,478,283. Other known and measurable adjustments presented in Section D supporting schedules increased adjusted FPFTY operating revenues by $4,723,116 and increased operating expenses by $28,602,000, which net to a $23,878,884 decrease in operating income as shown on Schedule D-2 After these adjustments, $977,436,587 of revenue and $419,635,986 expenses were allocated to the transmission segment as shown on PPL Electric Exhibit DSD-1, thereby decreasing operating income by expenses requested for recovery in this proceeding.

Q. Are there any expenses that the Company is not seeking to recover and are therefore excluded from operating expenses?

A. Yes. The Company does not seek to recover amounts paid for membership dues to social and service organizations, as well as lobbying expenses.

Q. What is the total level of FPFTY operating expenses in the revenue requirement?

A. The total FPFTY level of operating expenses included in the Company's revenue requirement is $808,452,014 at present rates, which is shown on Schedule D-1.

Q. What additional information did you use to compute the revenue increase?

A. In addition to the test year operating expenses, the computation of the revenue deficiency required analyses of rate base, return on rate base, and income tax expense.

Q. Please discuss the income tax calculation presented in Schedule D-17.

A. The income tax calculation involved five steps. First, the Company calculated pre-tax operating income before interest expense for the FPFTY by deducting adjusted FPFTY expenses from adjusted FPFTY revenues. Pre-tax operating income before interest expense under current rates totaled $275,520,023 for the Company. Second, the Company calculated synchronized interest expense by applying the Company's weighted average cost of debt to rate base. That resulted in synchronized interest expense of $129,738,898. Third, the Company deducted synchronized interest expense from pre-tax operating income before interest expense to calculate state pre-tax income of $145,781,125. Fourth,

the Company adjusted for permanent temporary and flow through temporary differences to determine taxable income. Lastly, state and federal income tax expense were calculated by multiplying state pre-tax income by a blended statutory state income tax rate of approximately 7.17 percent for Pennsylvania, and the statutory income tax rate of 21.00 percent for federal income taxes. Further discussion of the tax adjustments made regarding the tax cost of service calculation can be found in the direct testimony of Andrew Elmore (PPL Electric St. No. 12). The resulting total state and federal income tax expenses for the distribution segment amounted to $18,071,354 for the FPFTY at present rates.

Q. Did you compute the return on rate base for revenue at current rates?

A. Yes. The return on rate base at current rates is 4.43 percent for the Company, as shown on Schedule C-1, Line 15 in Exhibit Fully Projected Future 1. Return on rate base equals after-tax net operating income divided by the rate base.

Q. What is the overall rate of return that the Company is requesting to include in the cost of service?

A. As shown on Schedule C-1, Line 17 in Exhibit Fully Projected Future 1, the proposed overall rate of return is 8.56 percent. This overall rate of return is presented in the direct testimony of PPL Electric witness Jennifer E. Nelson (PPL Electric St. No. 10) and is supported by the return on equity set forth in Ms. Nelson's direct testimony along with the cost of long-term debt and capital structure presented in the direct testimony of PPL Electric witness Julissa Burgos (PPL Electric St. No. 9).

Q. How did you compute the needed revenue increase?

A. The first step in computing the revenue increase needed, or revenue deficiency, is to compute the difference between the return on rate base for revenue at current rates, and the Company's cost of capital. The rate of return deficiency is 4.13 percent, which is calculated taking Schedule C-1, Line 17 less Line 15 in Exhibit Fully Projected Future 1. That difference is multiplied by the rate base to compute the net operating income ("NOI") deficiency.

The revenue increase required to produce the additional NOI of $240,562,527 is computed by grossing up the NOI deficiency to reflect income taxes, GRT, Commission expenses, and related uncollectible accounts expense on the additional revenue. The gross-up factor of 1.48 is computed to reflect an allowance for uncollectible accounts expense on the revenue deficiency, as well as income taxes, GRT, and Commission expenses. When multiplied by the NOI deficiency, the revenue deficiency, or required revenue increase, is computed to be $356,271,009.

VII. COMPLIANCE AND REGULATORY CONSIDERATIONS

Q. Are there any other matters that were considered when calculating the revenue requirement?

A. Yes. As part of this case, PPL Electric proposes to roll the following riders into base rates and eliminate or reset them as appropriate. This approach aligns with statutory requirements and regulatory precedents and ensures transparency and long-term rate stability.

Rider	Description
Competitive Enhancement Rider (CER)	Funded retail market enhancements and consumer education. Supported customer choice and competitive market participation. Proposal: Roll into base rates and eliminate the rider.
Distribution System Improvement Charge (DSIC)	Recovered costs for infrastructure improvements between rate cases. Enabled accelerated replacement of aging assets. Proposal: Roll into base rates and reset DSIC to zero, in compliance with Section 1307.
Tax Cuts and Jobs Act (TCJA) Rider	Passed through federal tax savings from the 2017 TCJA via a negative surcharge. Provided bill credits to customers; reconciled annually. Proposal: Roll into base rates and eliminate the rider, per PUC guidance.
Smart Meter Rider (SMR)	Recovers costs for smart meter deployment under Act 129. Funded infrastructure upgrades and customer interface improvements. Proposal: Roll into base rates and eliminate the rider.

Q. Does this conclude your direct testimony?

A. Yes, it does.

DANIEL S. DANE, CPA
PRESIDENT

Daniel S. Dane has more than 20 years of experience in the energy, utility, and financial services industries advising electric, gas, and water utilities, power generators, and natural gas pipelines in the areas of regulation and ratemaking, litigation, mergers and acquisitions, valuation, and regulatory accounting matters. Mr. Dane also provides expert testimony on regulated ratemaking matters and merger approval applications for investor- and provincially-owned utilities, including on multi-year rate plans and earnings sharing mechanisms, corporate finance matters such as the cost of capital and capitalization, merger impacts, revenue requirements, lead-lag studies/cash working capital, and regulatory policy. Mr. Dane has an MBA from Boston College in Chestnut Hill, Massachusetts, and a BA in Economics from Colgate University in Hamilton, New York. Mr. Dane is also a certified public accountant.

- **REPRESENTATIVE PROJECT EXPERIENCE**

Ratemaking and Utility Regulation Assignments

Expert Testimony

Submitted expert testimony on behalf of utilities and other stakeholders in state and provincial administrative rate setting and merger approval proceedings regarding multi-year rate plans and earnings sharing mechanisms, corporate finance matters such as the cost of capital and capitalization, valuation of energy and utility assets, merger impacts, revenue requirements, lead-lag studies/cash working capital, and regulatory policy.

Regulatory Advisory

Provided financial modeling, development of expert reports, and preparation of multiple rounds of testimony on behalf of U.S. and Canadian investor-owned electric, natural gas, and water utilities related to multiple aspects of the ratemaking process, including: performance-based ratemaking; cost of capital; ring fencing; revenue requirements and lead-lag studies/cash working capital; decoupling; prudence and cost recovery; capital tracker tariff mechanisms; cost allocation and shared services; merger approval; securitization and ratemaking policy.

Consulting assignments have included utility clients across the U.S. and Canada.

Financial Advisory Assignments

Competitive Solicitations & Asset Divestitures

Sell-side support for approximately $2 billion in generating asset transactions, including nuclear, natural gas, and coal generating facilities.

Buy-side due diligence support for U.S., Canadian, and international investors in electric and natural gas LDC utility operations, wind generation, natural gas pipeline facilities, and water/wastewater utilities.

Regulatory policy, ring-fencing, and merger impacts advisory services including expert testimony, provided to U.S. and Canadian investor-owned utilities.

Valuation Services

Developed Fairness Opinions issued by CE Capital Advisors, Inc. to Boards of Directors of companies entering into asset purchases and sales. Led valuation modeling on multiple energy-related valuation assignments using the Income Approach, Cost Approach, and Sales Comparison Approach.

Litigation Advisory Assignments

Prepared economic and valuation analyses and expert reports in proceedings related to contract disputes, takings claims, and bankruptcy proceedings. Clients include international diversified energy companies, regulated utilities, and bondholders.

Management and Operations Consulting Assignments

Performed prudence reviews, including contracting strategy reviews and assessments of project controls and oversight for developers of nuclear-generating capacity uprates and new nuclear facilities.

Performed operations and financial performance benchmarking and studies of productivity programs.

PROFESSIONAL HISTORY

Concentric Energy Advisors, Inc. (2004 – Present)

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 7

Direct Testimony of Bickey Rimal

Topics: **Class Revenue Allocation**
Cost Allocation Studies

Dated: September 30, 2025

Direct Testimony of Bickey Rimal

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Bickey Rimal, and my business address is 1300 19th Street, Suite 620, Washington, DC 20036.

Q. By whom are you employed and in what capacity?

A. I am employed by Concentric Energy Advisors, Inc. ("Concentric") as a Vice President.

Q. Please describe your professional background and education.

A. I have over 15 years of experience in the utility industry. I hold a Bachelor of Arts degree from Colgate University. I hold a Masters in International Public Affairs with a focus on Energy Policy from the University of Wisconsin in Madison. I have provided expert testimony on cost allocation issues on multiple occasions for various electric, gas, water, and wastewater utility clients. A summary of my education and experience is provided as Appendix A.

Q. Have you presented expert testimony in other proceedings?

A. Yes. I have testified previously before the Regulatory Commission of Alaska, Arizona Corporation Commission, Connecticut Public Utilities Regulatory Authority, Indiana Utility Regulatory Commission, Maine Public Utilities Commission, Massachusetts Department of Public Utilities, Public Utilities Commission of Nevada, New York State Department of Public Service, and Nova Scotia Utility and Review Board.

Q. On whose behalf are you testifying?

A. I am testifying on behalf of PPL Electric Utilities Corporation ("PPL Electric" or the "Company"), which is a wholly owned subsidiary of PPL Corporation.

Q. What is your assignment in this proceeding?

A. PPL Electric retained Concentric to conduct a fully allocated cost-of-service study ("ACOSS") to determine the embedded costs of serving its various retail electric distribution customers, and propose appropriate assignment of the proposed revenue requirement to each class. In this regard, I am sponsoring the jurisdictional cost of service study ("JCOSS") to allocate total PPL Electric system costs to the Federal and Pennsylvania Public Utility Commission ("PUC" or "Commission") jurisdiction, as well as the ACOSS that allocates the PUC Jurisdiction totals to the retail customer rate classes. Based on the results of these studies, I am also supporting the class revenue increase allocation.

Q. Please summarize the nature and purpose of your testimony.

A. My testimony addresses the Company's cost of service studies. First, I discuss the purpose of an ACOSS and describe the Concentric Cost of Service Model ("Concentric Model") used in conducting PPL Electric's electric cost of service studies.

Second, I discuss the various principles of cost allocation, factors that influence the cost allocation framework, and the underlying methodology and basis used in the Company's electric cost of service studies.

Third, I describe the studies of relative costs and other analyses employed to assign the various categories of plant and operation and maintenance ("O&M") expenses to the respective customer classes.

Fourth, I present the class-by-class rate of return results and corresponding revenue surpluses or deficiencies from PPL Electric's ACOSS. This presentation will include the resulting unit costs by class for customer, demand, and energy-related costs within the ACOSS.

Fifth, I describe the method used to apportion the Company's revenue deficiency to the various rate classes. In particular, I describe the principles and methods used to mitigate the impacts on those classes that would otherwise receive large rate increases if the unmitigated results of the ACOSS were to be used to apportion the revenue requirement and set the rates in this proceeding.

Q. Are you sponsoring any attachments?

A. Yes. I am sponsoring PPL Electric Exhibits BR-1 and BR-2 and portions of Parts II and IV of the filing requirements as noted on their indexes.

Q. Would you briefly describe the contents of PPL Electric Exhibits BR-1 and BR-2?

A. PPL Electric Exhibits BR-1 and BR-2 respond to Question 1 of Exhibit Regs., Part IV, Section E, and present fully distributed Pennsylvania jurisdictional costs of providing retail

distribution service to the various rate classes at both present and proposed rates. PPL Electric Exhibit BR-1 is based on costs and operating conditions for the fully projected future test year ("FPFTY") ending June 30, 2027. This exhibit provides a summary of the results, cost assignment and allocation detail, and a very detailed result of the studies. I have also included additional details regarding the methodology used for the studies. Further, PPL Electric Exhibit BR-2 provides the results of studies used to functionalize and classify certain distribution plant of the Company. These studies are based on distribution plant data as of the historic test year ("HTY") ending June 30, 2025. The results of these studies were applied to distribution plant data for the FPFTY.

II. ALLOCATED COST OF SERVICE STUDY

A. Introduction to ACOSS

Q. Please describe the general approach used to develop the ACOSS.

A. The purpose of the ACOSS in this proceeding is to allocate PPL Electric's PUC Jurisdictional overall revenue requirement to the various classes of service in a manner that reflects the relative costs of providing service to each class. This is accomplished through analyzing costs and assigning each customer or rate class its proportionate share of the utility's total revenues and costs within the test year. The results of these studies can be utilized to determine the relative cost of service for each customer class and help to determine the individual class's revenue responsibility. The results also provide useful guidance in terms of designing rates for each class.

To allocate costs to the various classes, I reviewed PPL Electric's expense and plant accounts and worked with various PPL Electric personnel to develop studies of the relative

costs of providing facilities and services for each rate class and analyzed the key factors that cause the costs to vary.

Q. Please describe the Concentric Model that was used in conducting the ACOSS filed in this proceeding.

A. PPL Electric has selected the Concentric Model to conduct the electric ACOSS in this general rate case. The same model was used in PPL Electric's last rate case at Docket No. R-2015-2469275. Concentric has developed a proprietary model for the purpose of conducting allocated cost of service studies, and Concentric is using that model for purposes of conducting the electric ACOSS in this rate case. A brief description of the Concentric Model is provided with this testimony as Appendix B.

B. Principles of ACOSS Preparation

Q. What is the guiding principle that should be followed when performing an ACOSS?

A. The fundamental principle underlying an ACOSS is that cost allocation should follow cost causation. Cost causation addresses the question of which customer or group of customers causes the utility to incur particular types of costs. To answer this question, it is necessary to establish a relationship between the services used by a utility's customers and the particular costs incurred by the utility in serving those customers.

Q. What are the steps to performing an ACOSS?

A. To establish the cost responsibility of each customer class, a three-step analysis of the utility's total operating costs must be undertaken. The three steps which are the predicate for an ACOSS are: (1) cost functionalization; (2) cost classification; and (3) cost allocation.

Q. Please describe cost functionalization.

A. The first step is cost functionalization, where the plant investment costs and operating expenses are categorized by the operational functions with which they are associated. PPL Electric's primary functional cost categories associated with electric service include Primary Distribution, Secondary Distribution, and Customer Accounts and Services. In addition, various categories of costs within the distribution function are assigned to separate sub-functions to the extent their costs vary in response to different customer class characteristics. Indirect costs that support these functions, such as General and Intangible Plant, and Administrative and General Expenses, are allocated to functions using allocation factors related to plant and/or labor ratios.

Q. Please describe cost classification.

A. The second step, cost classification, further separates the functionalized plant and expenses according to the primary driver of the costs. These factors are: (1) the number of customers; (2) the need to meet the peak demand requirements that customers place on the system; and (3) the amount of electricity consumed by customers. These classification categories have been identified, for purposes of the ACOSS, as (1) Customer Costs, (2) Demand Costs, and (3) Energy Costs, respectively.

Q. How are these three classification categories related to the amount of costs incurred by the Company?

A. *Customer* Costs are incurred to extend service to and attach a customer to the distribution system, meter any electric usage, and maintain the customer's account. Customer Costs are largely a function of the number of customers served and continue to be incurred whether the customer uses any electricity or not. They may include capital costs associated with minimum size distribution systems, services, meters, and customer billing and accounting expenses.

Demand Costs are capacity-related costs associated with plant that is designed, installed, and operated to meet maximum hourly or daily electric usage requirements, such as generating plants, transmission lines and substations, or more localized distribution facilities which are designed to satisfy individual customer maximum demands. Demand costs are fixed in nature and do not vary with the number of customers or the amount of energy that customers consume.

Energy Costs are those costs which vary with the amount of kilowatt hours ("kWh") sold to customers. For example, included in the instant study are costs associated with the administration of the default service program, which are classified as fuel-related and allocated to classes based on the amount energy consumed. However, except for this

specific cost, PPL Electric's costs are fixed with respect to energy usage. As a result, there are no costs classified as energy in the ACOSS.

Q. What is the process followed to appropriately classify costs as Customer, Demand, and Energy?

A. Usually, a determination of the classification of costs can be made simply by knowing the type of activities or assets that reside within a particular FERC account. In these instances, the entire account can be classified into a single category. However, for some FERC account functions, it is beneficial to conduct classification studies to determine which portion of an account is associated with each classification category. Further discussion of the classification studies used in PPL Electric's ACOSS is provided in the section discussing the studies of relative costs below.

Q. Please describe cost allocation.

A. The third and final step, cost allocation, is the allocation of each functionalized and classified cost element to the individual customer or rate class that causes the cost to be incurred. Customers generally are divided into customer classes based on the type and character of services that they require. Costs typically are allocated to these customer classes based on factors related to the number of customers and the amount of energy and capacity demanded by customers. For example, much of the plant and equipment cost depends upon the peak demand of the customers and these costs were allocated based on the peak demands of the rate class. Other portions of the cost depend upon the number of customers on the system, and these costs were allocated on a customer or weighted-

customer basis. In addition, certain variable production costs as well as fuel and purchased power costs primarily depend upon the amount of energy consumed by customers. These costs were allocated based on the amount of energy consumed, adjusted for losses of energy that occur across the transmission and distribution system.

Q. How do you then establish the fully allocated costs related to various utility services?

A. To establish these relationships, one must analyze a utility's electric system design, physical configuration and operations, its accounting records, and its system and customer load data. From the results of those analyses, methods of direct assignment and common cost allocation methodologies can be chosen for each of the utility's plant and expense elements.

Q. Please explain the term "direct assignment."

A. The term "direct assignment" means the assignment of costs to a specific customer or class of customers based on that customer's or class's exclusive identification with the particular plant or expense at issue. Usually, costs that are directly assigned relate to costs incurred exclusively to serve a specific customer or class of customer. Direct assignments best reflect the cost causative characteristics of serving individual customers or classes of customers. Therefore, in performing a cost of service study, one seeks to maximize the amount of plant and expense directly assigned to a particular customer or customer classes to avoid the need to rely upon other more generalized allocation methods. An alternative to direct assignment is an allocation methodology based on an analysis of factors that affect the relative costs of serving particular customer classes.

Q. What prompts the need to perform a study of the relative costs?

A. When direct assignment is not readily apparent from the description of the costs recorded in the various utility plant and expense accounts, further analysis must be conducted to derive an appropriate basis for cost allocation. For example, in evaluating the costs charged to certain operating or administrative expense accounts, it is customary to assess the underlying activities, the related services provided, and for whose benefit the services were performed.

Q. Is it realistic to assume that a large portion of the plant and expenses of a utility can be directly assigned to a specific customer or certain customer classes?

A. No. The nature of utility operations is characterized by the existence of facilities used jointly or commonly by multiple customers and classes. To the extent that a utility's plant and expenses cannot be directly assigned to customer classes, allocation methods based on cost causation must be derived to assign or allocate the remaining costs appropriately to the customer classes. The analyses discussed above facilitate the derivation of reasonable allocation factors based on cost causation for cost allocation purposes.

Q. Please explain the considerations relied upon in determining the cost allocation methodologies that are used to perform an ACOSS.

A. As stated above, to allocate costs within any cost of service study, the factors that cause the costs to be incurred must be identified and understood. The availability of data for use in developing alternative cost allocation factors is also a consideration. In evaluating any

cost allocation methodology, appropriate consideration should be given to whether it provides a sound rationale or theoretical basis, whether the results reflect cost causation and are representative of the costs of serving different types of customers, as well as the stability of the results over time.

III. PPL ELECTRIC'S JCOSS AND ACOSS

A. Sources of the Underlying Data

Q. What is the source of the cost data analyzed in PPL Electric's JCOSS and ACOSS?

A. All cost of service data was obtained from the Company's total cost of service (i.e., the base rate revenue requirement) contained in this general rate case filing for the FPFTY. Where more detailed information was required to perform various analyses related to certain plant and expense elements, the data were derived from the historical books and records of the Company and necessary information provided by relevant Company personnel.

Q. How did you determine PPL Electric's Pennsylvania jurisdictional costs?

A. PPL Electric's Pennsylvania jurisdictional costs were determined based on the JCOSS, which allocates the total cost of the Company between the Federal (transmission) and Pennsylvania (retail distribution) jurisdictions. Since PPL Electric's historic test year per books and its future and fully forecasted future test years per budget are at the combined transmission and distribution ("T&D") level, it is necessary to conduct a study to separate those costs between transmission and distribution. Section V of PPL Electric Exhibit BR-1 provides specific details regarding the assignment and allocation of the combined T&D

costs and the determination of the Pennsylvania jurisdictional distribution service revenue requirements, with a summary provided as Section III of the same exhibit. The method utilized for this jurisdictional study follows the same methods that are employed by PPL Electric when developing its quarterly earnings reports.

Q. How did you allocate PPL Electric's Pennsylvania jurisdictional costs to the individual rate classes?

A. I have used the results of the JCOSS as an input into the ACOSS to assign the Pennsylvania jurisdictional costs to the individual rate classes. Section II of PPL Electric Exhibit BR-1 presents the results of PPL Electric's ACOSS. Section IV of PPL Electric Exhibit BR-1 provides details regarding the assignment and allocation of Pennsylvania jurisdictional costs to the individual rate classes.

B. <u>Functionalization and Classification of Costs</u>

Q. How did you functionalize and classify PPL Electric's costs?

A. The process starts with the assignment of the Company's FERC accounts to a specific function. In some instances, the costs in an account are first split into separate functions or classifications if the costs in the account are incurred to perform more than one function, or the costs in an account can be said to vary significantly with respect to more than one factor. For example, the accounts for distribution system poles, towers and fixtures, and conductors and conduits have been separated into two functions: primary distribution and secondary distribution. In addition, these costs, as well as line transformers have been

further separated into demand and customer classifications. The functionalization and classification studies are provided as Section I of PPL Electric Exhibit BR-2.

Q. Please explain the primary-secondary study.

A. Since the costs associated with distribution facilities are not always identified in the financial accounting records as being Primary Distribution (480 V – 34.5 kV) or Secondary Distribution (< 480 V), the distribution costs in Accounts 364–367 have been assigned to Primary or Secondary distribution functions based on cost-related ratios that were developed from analyses of the distribution plant records.

Distribution poles were sub-functionalized between primary and secondary voltage using the information contained within the accounting system. The accounting system contained information regarding the investment and quantity of poles by voltage, and this information was used to determine the investment and quantity of poles that serve the primary system versus the secondary system. However, similar level detail by voltage was not available for conductors. As a result, special studies were conducted to sub-functionalize conductors between primary and secondary distribution.

Distribution conductors were functionalized between primary and secondary voltages by utilizing length of conductors and the replacement costs of conductors serving primary versus secondary distribution systems. Using PPL Electric's asset management system, the length of conductors carrying primary versus secondary voltage was obtained. For each conductor type, the length of the conductor was multiplied by the replacement cost of that conductor to obtain the total cost of that conductor type. For conductor types that are no longer used, a replacement conductor was identified, and the cost of that

replacement conductor was used in the analysis. Using the total costs of all conductors by voltage, the ratio of primary conductors to secondary conductors was calculated.

Q. Is the classification of certain distribution assets (i.e., poles, conductors, and line transformers) between customer and demand components consistent with past PPL Electric cost studies?

A. Yes. PPL Electric has consistently classified poles, conductors, and line transformers between customer and demand components. Similar to prior cases, I have continued to rely on the "minimum system" method to determine the customer component of these assets.

Plant and O&M costs related to production, transmission and distribution generally can be assigned directly to specific functions, but various indirect costs related to overhead such as intangible plant and general plant, as well as administrative and general expenses are allocated to functions using "internal allocators" that are based on the relative amount of certain costs that have been directly assigned to each function. The specific functionalization allocators used to assign overhead costs have been selected to reflect the type of direct costs that each overhead account generally supports.

Q. Please explain the Minimum System Study.

A. The costs associated with a distribution system are related to both the peak amount of load that the system is designed to deliver and the number of customers and premises that it is designed to serve. Consequently, it is appropriate to allocate a portion of the distribution system costs on a demand-related basis and a portion on a customer-related basis. To

classify a certain portion of the distribution system costs as demand-related or customer-related, a Minimum System Study was conducted which included an analysis for poles and an analysis for conductors. The minimum system analysis compares the cost of a hypothetical minimum system (i.e., a system sized to simply connect customers) to the total cost of the entire system. The minimum system cost represents the customer-related costs, whereas the total costs less the minimum system costs represent the demand-related costs (i.e., total cost is split between the customer component and the demand component).

The Primary and Secondary Analysis for poles described above provided the total cost and total count of primary and secondary poles. This total count of primary poles was multiplied by the embedded cost of a minimum sized primary pole to calculate the minimum system cost of primary poles. This was then compared to the total embedded cost of primary poles to determine the portion of primary poles that is customer-related and demand-related. A similar analysis was conducted for secondary poles.

The Primary and Secondary Analysis for conductors described above provided the total cost and total circuit miles of primary and secondary conductors. A hypothetical minimum system replacement cost was calculated by taking the total circuit feet of conductor associated with the primary system and multiplying it by the replacement cost of the minimum sized primary conductor. The minimum system replacement cost was then compared to the total system replacement costs to arrive at the customer related and

demand related costs for primary conductors. A similar analysis was conducted for secondary conductors.

Q. How were direct costs functionalized?

A. The direct costs of distribution plant and O&M expenses are directly assigned to their proper function and classification. O&M costs that are readily-identified with a specific function are assigned directly to the corresponding function. Distribution Supervision and Engineering expenses (Accounts 580 and 590) are allocated to functions using factors based on direct distribution operation labor and direct distribution maintenance labor. Miscellaneous Distribution Expense (Accounts 588) and Rents (Account 589) are allocated to distribution functions using factors based on total distribution plant.

Q. How did the ACOSS functionalize distribution-related O&M expenses?

A. In general, these expenses were functionalized and allocated based on the cost allocation methods used for the Company's corresponding plant accounts. This is based on the assumption that a utility's distribution-related O&M expenses are generally thought to support the utility's corresponding plant in service accounts. Put differently, the existence of particular plant facilities necessitates the incurrence of operating and maintenance cost (i.e., expenses by the utility to operate and maintain those facilities). Thus, the allocation basis for a particular expense account will be the same basis as that used to allocate the corresponding plant account.

Q. How are overhead costs functionalized?

A. Indirect plant costs are allocated to functions based on ratios derived from direct plant costs. For example, Intangible Plant and General Plant are assigned to functions using the "Direct Labor" allocator.

Administrative and General Expenses were allocated to various functions using two different allocators. First, Salaries, Office Supplies, Administrative Expenses Transferred, Outside Services Employed, Injuries and Damages, Employee Pensions and Benefits, and Maintenance of General Plant were allocated using the direct labor allocation factor. Second, Property Insurance, Regulatory Commission Expense, and General Advertising Expense were allocated using the plant-related ratios associated with each function.

Q. How were taxes other than income taxes assigned to functions?

A. All taxes, except for income taxes, were functionalized in a manner that reflects the specific cost associated with the particular tax expense category. Generally, taxes can be functionalized using the tax assessment method established for each tax category, (e.g., payroll, property, or sales taxes). Depending on the method of assessment, other taxes were assigned or allocated to functions using either: (1) direct labor ratios; or (2) plant ratios.

C. <u>Allocations to Rate Classes</u>

Q. What was the next step in the ACOSS?

A. After functionalizing and classifying the costs, the functionalized and classified costs were allocated to the individual rate codes or classes.

(1) Allocation of Demand-related Costs

Q. How were the demand-related costs allocated in the proposed ACOSS?

A. Consistent with prior PPL Electric rate case filings, I utilized a non-coincident peak demand method to allocate demand-related distribution system costs. "Non-coincident Peak" refers to the highest level of demand that an individual class experienced during the year or month. This non-coincident peak for a given class may coincide with the overall system peak but, generally, it occurs at other times than the system peak.

(2) Allocation of Customer-related Costs

Q. How have the customer-related costs been allocated in the ACOSS?

A. Because a significant portion of the distribution system costs are incurred simply to attach a customer to the system and are the same regardless of the amount of energy that the customer might consume, significant portions of the distribution system costs and customer-related costs are allocated to classes using allocators that are related to the number of customers in the class. However, because there generally is a very wide difference between the customer classes in terms of the level of customer-related costs required per customer, many of the allocations of customer-related costs are weighted to reflect the relative differences in the average cost per customer of providing customer-related facilities or services for particular rate codes or classes. Thus, customer-related costs, such as meters, service lines, and collection costs, are allocated based on the cost-weighted number of customers in each class. The billing and customer records costs are allocated based on the number of customers.

Q. How did you develop the meter allocator?

A. Every customer, except lighting customers, requires a meter, but Commercial and Industrial meters generally cost considerably more and require more equipment compared to Residential meters. For this reason, meter weights were developed for each customer class based on the number and type(s) of meters installed for each rate class and the associated costs of each type of meter. The analysis also accounted for the incremental cost associated with transformer rated meters. The total meter cost along with necessary equipment provided an estimate of the relative cost of providing metering service for each rate class. The relative-weight factor was then multiplied times the number of customers in the class to develop the meter allocation factors for the test year.

Q. How was the services allocator developed?

A. The service allocator is used to allocate the service-related cost contained in FERC Account 369. The service allocator was developed based on a sample of recent service installations. For each rate class, I was able to obtain the length and type of service installed using recent installation data from the Company. I calculate the total cost of service installation for each rate class by multiplying the length of each service installation by the replacement cost of that service type. I then calculated a cost per installation by each class and used this information to develop a weighting factor for each class. This weighting factor was ultimately used to develop the service allocator for the test year.

IV. RESULTS OF PPL ELECTRIC'S ACOSS

Q. Please describe the results of the ACOSS with respect to rate of return under the Company's rate classes.

A. The summary of the results of the ACOSS and the relative rates of return produced by each class for the FPFTY, are presented in PPL Electric Exhibit BR-1 and summarized in Table 1 below. As shown on line 23 on page 7 of this exhibit and table below, at present rates the ACOSS shows a wide variation in the rates of return by rate class.

Table 1: Rate of Return at Current Rates

Rate Class	Rate Code	Return at Current Rates	Relative Rate of Return
Residential	RS	4.32%	1.0
Residential-Thermal Storage	RTS	2.27%	0.5
Small General Service - Sec. Voltage	GS-1	4.03%	0.9
Large General Service - Sec. Voltage	GS-3	5.31%	1.2
Large General Service - 12 KV	LP-4	3.53%	0.8
Large General Service - 69 KV or Higher	LP-5	24.01%	5.4
Separate Meter General Space Heating Service	GH-2	4.50%	1.0
Street Lighting/Area Lighting	SL/AL	5.89%	1.3
Total System		**4.43%**	**1.0**

Q. What is the amount of the rate increase or decrease that each customer class would need in order for each class to produce the system average required rate of return?

A. Line 63 on page 9 of PPL Electric Exhibit BR-1 shows the amount of increase that would be required for each class to pay its fully-allocated cost of service under the proposed revenue requirement.

V. DESCRIPTION OF PROPOSED CLASS REVENUE REQUIREMENTS

Q. Have you examined the percentage rate increases that would be required for each rate class according to the ACOSS?

A. Yes. Line 5 on page 7 of PPL Electric Exhibit BR-1 presents normalized base rate revenues that PPL Electric can expect to recover from each rate class at current rates, while Line 62 on page 9 of that exhibit shows the allocated cost of service for each class. Column F on page 16 shows the percentage increase/decrease in base rates that would be required if unmitigated ACOSS results were to be applied. Even though the goal is to move all rate classes to their cost of service, the Company considered affordability for each of the customer classes and determined that the percentage rate increases experienced by individual rate classes should be mitigated to moderate the impacts on individual rate classes.

A. Mitigation of Class Impacts

Q. How did you go about mitigating the class rate increases?

A. The proposed revenue allocation to each rate class was derived based on discussion with the Company. The criteria used for the proposed revenue allocation are: (1) impose an increase cap of 1.5 times the overall system increase to any rate class; and (2) no rate class receives a rate reduction. I believe that this approach reduces the inter-class subsidies and moves classes closer to their cost of service, while ensuring that impacts on any one particular class is moderated and gradual.

Q. Please describe the results of your mitigation approach.

A. Column P on page 17 of PPL Electric Exhibit BR-1 shows the final mitigated revenue requirement by rate class. The pro forma rates of return that would be generated by each rate class at the proposed mitigated revenue requirements are shown on column Q on page 17 of PPL Electric Exhibit BR-1. The table below summarizes the revenues at present rates, revenues based on ACOSS and proposed mitigated revenue requirement by rate class.

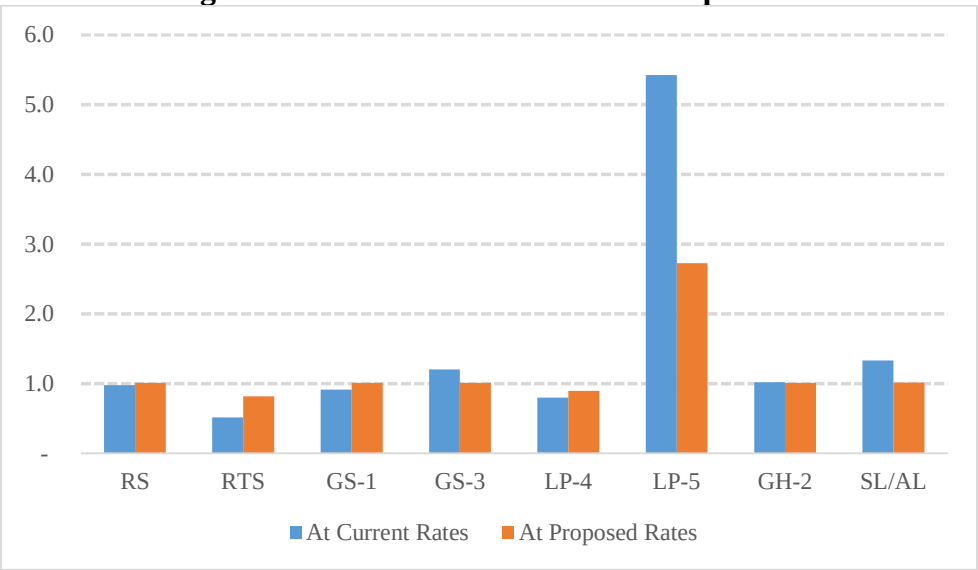

Table 2: Revenues at Present and Proposed Rates

Rate Class	Rate Code	Revenue at Current Rates	Revenue Requirement based on ACOSS	Mitigated Revenue Requirement	ACOSS Increase (%)	Mitigated Increase (%)
Residential	RS	$718,787,174	$969,168,276	$972,760,160	34.83%	35.33%
Residential-Thermal Storage	RTS	$7,930,469	$13,351,425	$12,071,032	68.36%	52.21%
Small General Service - Sec. Voltage	GS-1	$78,435,579	$107,441,939	$107,788,638	36.98%	37.42%
Large General Service - Sec. Voltage	GS-3	$128,618,149	$169,637,439	$170,381,820	31.89%	32.47%
Large General Service - 12 KV	LP-4	$38,791,942	$63,254,109	$59,045,537	63.06%	52.21%
Large General Service - 69 KV or Higher	LP-5	$1,940,349	$1,325,612	$1,940,349	-31.68%	0.00%
Separate Meter General Space Heating Service	GH-2	$1,301,175	$1,771,840	$1,777,874	36.17%	36.64%
Street Lighting/Area Lighting	SL/AL	$24,366,203	$30,491,845	$30,677,073	25.14%	25.90%
Total System		$1,000,171,041	$1,356,442,484	$1,356,442,484	35.62%	35.62%

Q. Does your proposed mitigation improve the relative rate of return from each class?

A. Yes. I compared the index of rate of return by class at present and proposed rates. As the graph below indicates, the index of return improves for each rate class under the proposed mitigated rates as compared to the present rates.

Figure 1: Relative Rate of Return Comparison

VI. SUPPORT FOR RESIDENTIAL CUSTOMER CHARGE

Q. Have you performed any analyses to determine the customer-related costs for the residential and small commercial class?

A. Yes. Using the results of the ACOSS, I have determined the customer-related costs per customer per month. I isolated the costs that were classified as being customer-related for RS and GS-1 customer class and calculated a per unit cost by dividing that total cost by the number of bills in each class. The table below presents the build-up of the customer unit cost by function.

Table 3: Customer Cost Build-up

Function	RS	GS-1
Deposits and Advances	-$78,001	-$60,237
Distribution Primary	$231,718,896	$26,207,249
Distribution Secondary	$70,009,993	$7,918,082
Line Transformers	$22,324,026	$2,524,832
Services	$74,274,570	$8,656,757
Meters	$35,161,156	$6,370,987
Lighting	$0	$0
Meter Reading	$8,767,619	$991,612
Customer Service	$92,367,142	$9,104,365
Billing and Collections	$135,799,807	$14,436,672
Total Customer-Related Costs	**$670,345,209**	**$76,150,319**
Annual Bills (Customer Count * 12)	$15,603,324	$1,769,083
Unit Costs ($/Bill)	**$42.96**	**$43.05**

Q. What level of customer charge is supported by the ACOSS?

A. As shown by the table above, the ACOSS supports customer charges of $42.96 and $43.05 for RS and GS-1 classes, respectively.

Q. Is the Company proposing to recover all customer-related costs in the proposed customer charge?

A. No, as discussed in more detail in PPL Electric witness Steven Wishart's testimony (PPL Electric St. No. 8), the Company is proposing to only recover a portion of the customer-related costs in the customer charges for Rate Schedules RS and GS-1, even though the ACOSS provides justification for higher customer charges.

Q. Does this conclude your direct testimony?

A. Yes, it does.

BICKEY RIMAL
VICE PRESIDENT

Mr. Rimal has over 17 years of progressive experience in the energy and environmental sector. He is a testifying expert on matters related to cost of service and rate design, and has contributed to engagements related to energy market assessments, valuations of energy assets, and utility performance benchmarking. His work often involves financial modeling, statistical analysis, and regulatory research. Mr. Rimal has provided expert testimony on cost allocation issues on multiple occasions on behalf of electric, natural gas, water, and wastewater utilities. He has extensively used Concentric's Excel-based macro-driven Allocated Class Cost-of-Service ("ACCOS") model for various electric, gas, and water utility clients, modifying and updating the model as needed to suit the specific needs of the clients. Mr. Rimal has a Masters in International Public Affairs with a focus on Energy Policy from the University of Wisconsin in Madison. Prior to enrolling in the graduate program, Mr. Rimal worked at a global energy and environmental consulting firm for three years. While there, Mr. Rimal was extensively involved in projects dealing with policy design and implementation, economic impact analysis, regulatory evaluation, and environmental risk assessment.

REPRESENTATIVE PROJECT EXPERIENCE

Regulatory Proceedings and Litigation Support

Mr. Rimal has been involved in projects dealing with all aspects of regulatory ratemaking process. Mr. Rimal has extensively used Concentric's excel-based macro driven Allocated Class Cost-of-Service ("ACCOS") model for various utility clients. He has modified and updated the model as needed to suit the specific needs of the clients.

Representative engagements have included:

- Conducted various cost allocation studies, functional studies, and minimum system studies and filed testimony supporting those studies for a vertically integrated Midwest electric utility.
- Supported the development of an allocated class cost of service study and rate design for another vertically integrated Midwest electric utility. Mr. Rimal was directly involved in conducting special cost allocations and functional studies; developing cost of service studies; designing the rates and calculating the associated bill impacts.
- Supported the development of an allocated class cost of service study and rate design for a distribution only electric utility in Pennsylvania. Mr. Rimal modified Concentric's ACCOS model to incorporate three distinct test years simultaneously and automated the results creation process.
- Responsible for the development of various cost allocation studies for two electric utilities in New York as part of the cost of service study.

- Supported the developed revenue requirement model to comply with a new performance based formula ratemaking process for a Midwest electric utility.
- Supported cash working capital studies on multiple cases by conducting billing lag analysis involving extremely large data sets utilizing SPSS and R software.
- Created model in R to statistically compare hourly load data between two distinct types of meters to assist a utility in its load research program.
- Created an excel based benchmarking model that have been used on multiple occasions to assess performance of several utilities against various peer groups.
- Supported the development of a rate model to calculate the annual cost of service rates as well as a levelized rate for conversion of an oil pipeline into a natural gas pipeline.

Market Assessment and Asset Optimization Review

- Involved on projects, with two different gas utilities in the Northwest, that forecasted the evolution of demand for compressed natural gas and liquefied natural gas in the transportation sector in their respective territories. Mr. Rimal developed models to analyze the market penetration of different transportation fuels under various fuel price spread scenarios and other market dynamics.
- Estimated the impact on electricity prices due to pre-mature closure of certain nuclear facilities using regression analysis. Validated the price impacts by analyzing the generation supply curve for the location in question.
- Annual assessment of asset manager's performance on multiple occasions by conducting asset optimization analysis of client's natural gas portfolio consisting of both transportation and storage assets.

Valuation

- Created a Discounted Cash Flow ("DCF") model to value a generic regulated natural gas local distribution company ("LDC"). The model was customized to create valuation for any LDC covered by SNL Financial by automating the data retrieval process from SNL based on user input. The model had an added functionality of triggering a revenue enhancement when the earned ROE was outside certain pre-established thresholds.
- Created Discounted Cash Flow ("DCF") models to assess the profitability of various generic units operating in the New York Control Area for NYISO.

Capacity Price Forecasting

- Updated and modified Concentric's Capacity model used to forecast capacity prices for various regions within NYISO based on existing and planned generation, planned retirements, transmission constraints, market mitigation rules, gross and net CONE estimates, and other relevant demand curve parameters.

Relevant ICF Experience

- While at ICF, Mr. Rimal was part of a team that assisted the EPA's Clean Air Market Division (CAMD) in analyzing the effect of environmental policies on power generation sector. As a part of this effort, he was significantly involved in executing as well as maintaining and updating the Technology Retrofit and Updating Model (TRUM). The TRUM model simulates the action of the electric utilities industry under a multi-pollutant emissions trading program.
- Assisted in the creation of an excel model that assessed the impacts of GHG mitigation policies on the competitiveness of the US manufacturing industries.
- Provided support to the Hours of Service regulation by analyzing different crash related data to identify main causes of fatigue among drivers by utilizing logistic regression models.

Attributes of the Concentric Class Cost of Service Model

The Concentric Energy Advisors ("Concentric") allocated cost of service model (the "Model") contains many features that promote ease of use, efficiency and adaptability. These include:

- **Information linked, not transferred** – Rather than transferring or copying tables of data between worksheets, the Concentric model uses the linking capabilities of the software to directly reference information in one area that is used later in the cost of service process.

- **Color Coding** – Cells are shaded specific colors to indicate factor related inputs, data related inputs, data transferred from another worksheet, data checking and formulas that shouldn't normally be modified.

- **Expandable customer class specification** – The model is configured to allow up to 19 rate classes. Additional customer classes can be created with minor modifications to the model.

- **Centralized inputs** – Instead of having external input data located throughout the model, inputs have been centralized to three worksheets. This has been done to simplify data entry and to help prevent the user from forgetting to update information in a particular file or worksheet.

- **Automated functionalization, classification, and allocation** – The model automatically changes the allocation percentages whenever the user changes a functionalization, classification, or allocation factor of an account. There is no need to recode the allocation percentages or change cell formulas.

- **Cost tracking** – Costs can be tracked on a functional basis allowing for the calculation of functional revenue requirements and functional unit rates. Additional functional categories can be created with minor modifications to the model.

- **User-friendly buttons for running macros** – Instead of having to remember commands to run the macros to calculate the model and print various pages, the macros run off of clicking buttons in CONTROLS.

Concentric COS: Overview of Important Concepts

A. Worksheet overview

The Model contains 14 worksheets as follows:

1. CONTROLS – Contains buttons to run the macros to calculate the model and print various worksheets.

2. INPUTS – Provides for the user to specify customer classes, functional factors and classification factors.

3. CLASSIFIERS – Contains areas for data input of external classifiers based on user specified classifications on the INPUTS worksheet.

4. EXTERNAL – Contains areas for data input of user specified external allocators.

5. INTERNAL – Provides for the specification of internal allocation factors.

6. ACCOUNTS – Contains sections for the user to specify plant and expense information by account for the test year. The user can assign functions, classification,n and allocation factors to the various cost elements in this sheet.

7. CLASS – Takes line item cost data and factor information from ACCOUNTS and spreads them out over classification factors.

8. FUNCALLOC – Takes cost data from CLASS and spreads it out to functional/allocation factor categories.

9. CLASS ALLOC – Takes the functional/allocated plant and expense totals and spreads them to customer classes.

10. ACCT DETAIL – Shows, by account, the allocation factor used and the resulting allocation of costs by rate class and cost classification.

11. ACCTFAC – Calculates the factors needed for ACCT DETAIL.

12. REV REQ – The REV REQ sheet calculates the income tax as needed for the SUMMARY. Taking specific lines of data from CLASSALLOC and INPUTS, it calculates income taxes based on the fully functionalized, classified, and allocated costs.

13. SUMMARY – Summarizes results of functionalization, classification and allocation of data into total cost of service, functional rate base, functional revenue requirements and unit costs at equalized rates of return.

14. ErrorCheck – Produce a report of error conditions by row from four worksheets.

B. Explanation of functional/allocation factors

One of the ways the revised model has achieved efficiencies while tracking functionalization is through the use of combined functional/allocation factors for grouping costs before spreading to customer classes.

In ACCOUNTS all cost items that are not assigned an internal factor are assigned a functional factor, classification factor, and allocation factor by which the cost will be distributed to the customer classes. Each cost item is carried into CLASS, which separates each cost into the assigned classification categories (e.g., 100% to DEM) and a macro creates the functional/allocation factor combinations for each cost item. These combinations are the name of the functional factor, an underscore, and the name of the allocation factor (e.g., F_PRODU_CP) assigned to that cost item. At the top of FUNCALLOC there are column headings which contain all of the possible functional/allocation factor combinations. Each cost item is then carried into FUNCALLOC and the portion of the costs associated with each functional/allocation factor is entered into the correct column. The rate base and expense totals in each functional/allocation factor column are pulled into CLASSALLOC, where the grouped costs are split into customer classes based on the allocation factor portion of the combined functional/allocator. The functionalization factor portion of the combined functional/allocation factors allows for subtotaling rate base and expenses by function that will be used throughout the rest of the model. Therefore, tracking grouped costs using the functional/allocators allows for calculating functionalized revenue requirements and unit costs.

All external and internal allocation factors must be assigned a name. In addition, each external allocation factor must be assigned a classification. Use of an unnamed allocation factor will cause an error condition which will be flagged in the orange "Check" column and reported on the ErrorCheck worksheet when the user runs the error check macro. Using an allocation factor in a different classification column on ACCOUNTS than that specified for the allocator on EXTERNAL may cause an error condition. To avoid any potential problems do not use allocator for more than one classification. Instead, create a second allocator with a different name. There are no problems that occur if an allocator on EXTERNAL or INTERNAL is not used. However, creating unnecessary allocation factors expands the size of the model.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 8

Direct Testimony of Steven W. Wishart

Topics: **Rate Design**
Standby Service Tariff (Rule 6 and 6A)
Proof of Revenues
Proposed Rates
Bill Impacts

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name, position, and business address.

A. My name is Steven W. Wishart. I am an Assistant Vice President with Concentric Energy Advisors, Inc. ("Concentric"). My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts 01752.

Q. Please describe your educational background and professional experience.

A. I hold a Bachelor of Science in Finance and a Master of Science in Resource Economics from the University of Arizona, and I have completed all coursework toward a Ph.D. in Applied Economics at the University of Minnesota. I have worked in the energy industry for more than 20 years. Prior to joining Concentric in 2023, I worked at Xcel Energy for nearly two decades, where I held leadership roles in Pricing and Regulatory Analytics as well as Resource Planning. In those positions, I was responsible for rate design, cost allocation, forecasting, and resource planning analyses in support of numerous regulatory filings. In my current role at Concentric, I advise utilities and other energy sector clients on rate design, cost allocation, affordability, and related regulatory matters.

Q. Have you previously testified before regulatory commissions?

A. Yes. I have testified in more than 35 proceedings before state commissions and the Federal Energy Regulatory Commission on topics including rate design, class cost of service, affordability, and resource planning.

Q. On whose behalf are you presenting this testimony?

A. I am presenting this testimony on behalf of PPL Electric Utilities Corporation ("PPL Electric" or the "Company").

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to describe and support PPL Electric's proposed rate design in this proceeding. My testimony explains how the Company has applied well-established ratemaking principles—cost causation, gradualism, customer understanding, and administrative feasibility—to design fair, reasonable, and understandable rates for all customer classes. I also explain how the results of the Allocated Cost of Service Study ("ACOSS") inform the proposed rates, provide the required proof of revenues and bill impact analyses, and present the Company's proposals for updates to residential, general service, lighting, and standby tariffs.

Q. How is your testimony organized?

A. Following this introduction, my testimony proceeds as follows:

Section II outlines the principles of rate design, the results of the ACOSS, and the billing determinants for the Fully Projected Future Test Year ("FPFTY").

Section III presents the Company's proposed residential rate design, including changes to the fixed monthly customer charge, energy charges, and protections for low-income customers.

Section IV addresses the proposed rate design for General Service classes, including the treatment of volunteer organizations.

Section V discusses the Company's proposed updates to lighting schedules.

Section VI introduces the proposed Standby Service Tariff, which consolidates existing standby provisions and ensures that customers with on-site generation pay appropriately for the resources they use.

Section VII provides a proof of revenues that demonstrates that the proposed rates result in the total distribution revenue requirement that the Company is proposing.

Through this testimony, I demonstrate that PPL Electric's proposals represent a balanced approach that moves rates toward cost-based levels while respecting gradualism and maintaining customer protections.

Q. Are you sponsoring any exhibits with your testimony?

A. Yes, attached to my testimony as PPL Electric Exhibit SWW-1, which provides detailed average customer bill analysis that demonstrates the overall impact of the Company's proposal, and portions of Part IV of the filing requirements as noted on its index.

II. RATE DESIGN OVERVIEW

Q. What principles did you apply in developing PPL Electric's proposed rate design?

A. In designing PPL Electric's proposed rates, I applied several well-recognized ratemaking principles. First and foremost, rates should reflect cost causation, meaning that customers' rates are based on the cost of service and, therefore, compliant with the *Lloyd* decision by the Commonwealth Court of Pennsylvania.[1] Second, the principle of gradualism recognizes that movement toward cost-based rates should occur in a measured way that

[1] *Lloyd v. Pa. PUC*, 904 A.2d 1010, 1020 (Pa. Cmwlth. 2006) (stating that the "polestar" in designing rates is the "cost of providing service").

avoids abrupt or excessive bill impacts. However, as recognized by the Court in *Lloyd*, gradualism cannot trump all other ratemaking concerns, including cost of service.[2] Third, rates should promote customer understanding, so that customers can see how their usage and demand decisions affect their bills. Finally, rate structures must meet the standard of administrative feasibility—that is, they must be implementable through the Company's billing systems and straightforward to administer.

Q. How have you emphasized these principles in this case?

A. The Company's rate proposals are grounded in cost of service. However, where appropriate, PPL Electric has moderated certain outcomes to respect gradualism and customer impacts. For example, the residential fixed monthly charge supported by the ACOSS and minimum system analysis is more than twice the proposed charge. Recognizing the potential for bill shock, PPL Electric has proposed a more moderate increase that moves toward cost-based recovery without imposing an abrupt shift. Similarly, while the ACOSS indicates higher customer charges for certain general service classes, the Company's proposals temper these increases to avoid disproportionate customer impacts.

Q. How does the ACOSS inform your rate design proposals?

A. The ACOSS, sponsored by PPL Electric witness Bickey Rimal (PPL Electric St. No. 7), establishes the revenue responsibility for each major customer class. My rate design begins with these class revenue requirements. Within each class, I have then designed rates that

[2] *See id.*

move recovery toward the class's cost of service, while balancing the principles of gradualism, customer understanding, and administrative feasibility. In short, the cost of service study tells us *how much* revenue should be collected from each class, and my testimony addresses *how* those revenues should be collected. Table 1 below aligns the major rate schedules in PPL Electric's tariff with the corresponding classes in the ACOSS.

Table 1 – Customer Class to Rate Schedule Mapping[3]

Customer Class	**Rate Schedule**
Residential	RS (Residential Service) RTS (Residential Thermal Storage) *To be eliminated*
Small General Service - Sec. Voltage	GS-1 (Single-Phase General Service) GS-1 (Volunteer Fire, Non-Profit Rescue, etc.) GH-2 (Separate Meter General Space Heating) *To be eliminated*
Large General Service - Sec. Voltage	GS-3 (Three-Phase General Service) GS-3 (Volunteer Fire, Non-Profit Rescue, etc.)
Large General Service - 12 KV	LP-4 (Large General Service – 12 kV)
Large General Service - 69 KV or Higher	LP-5 (Large General Service – 69 kV or higher)
Street Lighting/Area Lighting	SA (Private Area Lighting) SM(R) (Mercury Vapor Street Lighting) SHS (High Pressure Sodium Street Lighting) SLE (LED Street Lighting) SE (Energy Only Street Lighting) TS (Traffic Signal Lighting)

Q. What is the Company proposing with respect to Smart Meter Rider – Phase 2 ("SMR-2"), the Tax Cuts and Jobs Act Rider ("TCJA"), the Distribution System Improvement Charge ("DSIC"), the Competitive Enhancement Rider ("CER"), the

[3] The Company is also proposing to eliminate the Power Service to Electric Propulsion tariff, Rate Schedule LPEP. This change will have no impact as there are currently no customers taking service under that rate schedule.

State Tax Adjustment Surcharge ("STAS"), and the Storm Damage Expense Rider ("SDER")?

A. As explained in PPL Electric witness Katelyn Arnold's direct testimony (PPL Electric St. No. 13), the Company proposes to roll the SMR-2, TCJA, and DSIC rider mechanisms into base rates. Consequently, the DSIC will then be reset to zero in accordance with Section 1358(b)(1) of the Public Utility Code, and the SMR-2 and TCJA will be eliminated. Also, for the CER, the Company is proposing to eliminate it and, instead, to rely on base rates to recover the costs of administering the Eligible Customer List ("ECL"). Further, upon the effective date of new rates, the STAS and SDER will be reset to zero.

Q. Are these proposals reflected in the rates that you have designed in this proceeding?

A. Yes.

Q. What billing determinants did you rely on in preparing your rate design?

A. I relied on billing determinants developed for the fully projected future test year ("FPFTY") ending June 30, 2027. These determinants include customer counts, kilowatt-hour ("kWh") sales, and kilowatt ("kW") billing demands by class. They were developed from the Company's metering data, load research, and forecasting processes, and reflect expected levels of customer usage and demand in the FPFTY. These determinants form the foundation for the proof of revenues at proposed rates and the customer bill impact analyses presented later in my testimony.

Q. Do the Company's proposals comply with the Pennsylvania Public Utility Commission's filing requirements?

A. Yes. The Pennsylvania Public Utility Commission's ("Commission") regulations, specifically 52 Pa. Code § 53.53, require utilities to provide a proof of revenues at present and proposed rates and, bill frequency and bill impact analyses, and tariff sheets in both clean and blackline form. My testimony, together with the accompanying exhibits and workpapers, provides each of these elements. This ensures that the Commission has the information necessary to evaluate both the revenue adequacy of PPL Electric's proposed rates and their effect on customers.

Q. How do the Company's proposals impact customer bills on average?

A. As discussed in more detail later in my testimony, the average customer bill impacts are largely driven by the class revenue allocations from the ACOSS. For most customer classes, base distribution charges increase more significantly than total bills, since distribution charges represent only a portion of a customer's total bill. Table 2 below summarizes the average bill impacts for major rate schedules.

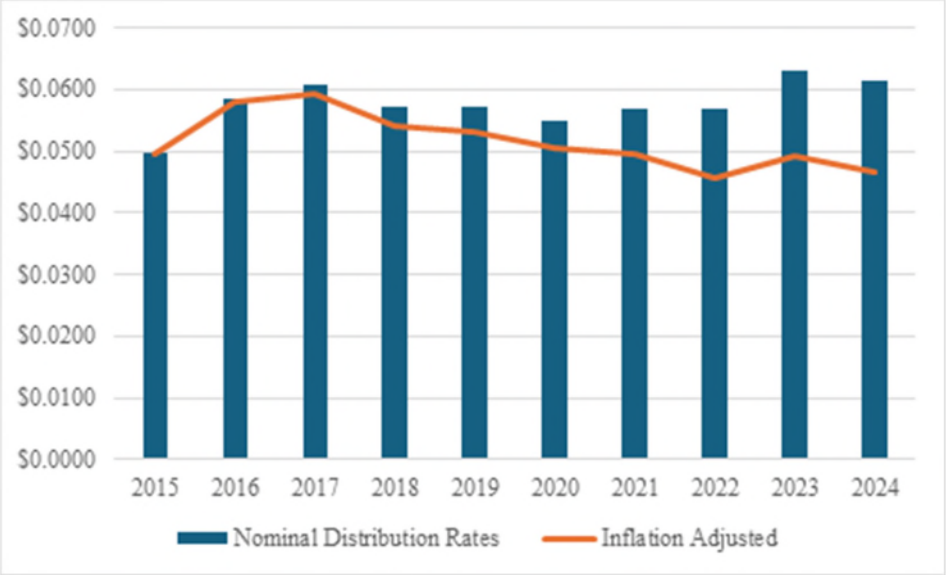

Table 2 – Average Bill Impacts by Rate Schedule

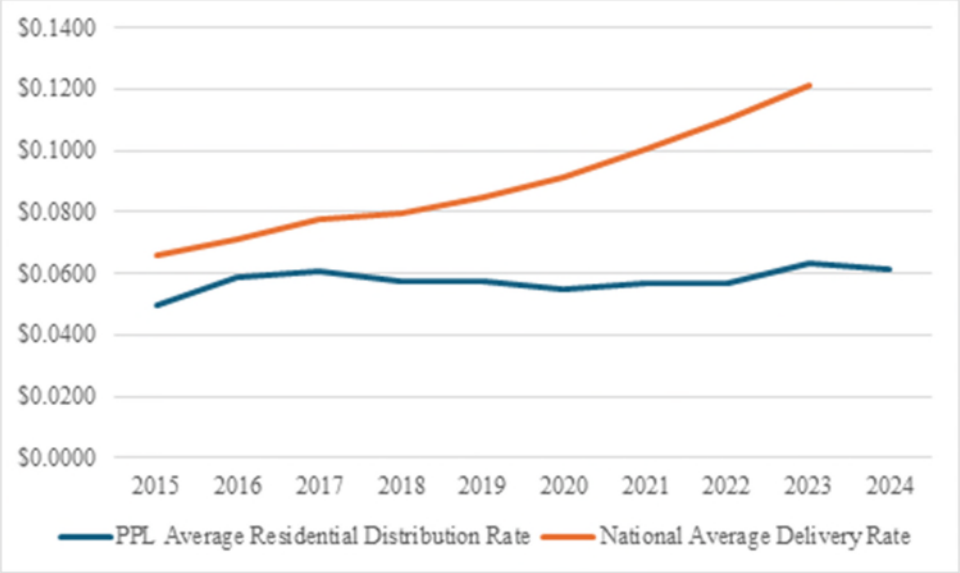
Average Bill Impacts	Base Rates	Total Distribution Rates	Total Bill
Residential	34.5%	19.9%	7.0%
GS-1	35.2%	23.5%	6.8%
GS-3	31.8%	20.9%	2.8%
LP-4	51.5%	28.4%	2.6%
LP-5	-2.1%	-0.7%	0.0%
Lighting	18.4% - 20.4%	19.0%-19.7%	6.5%-18.3%

Q. How have PPL Electric's residential delivery rates trended over the past decade?

A. PPL Electric's residential delivery rates have remained relatively stable over the last 10 years. Based on U.S. Energy Information Administration ("EIA") Form 861 data,[4] PPL Electric's average residential delivery rate increased at an average annual rate of only 0.6 percent over the period 2016 through 2024. Adjusted for inflation, however, PPL Electric's average residential delivery rate actually declined by approximately 19.7 percent over this period. This means that while customers have seen modest nominal increases in their delivery rates, in real terms the cost of delivery service has been falling since the Company's last rate case. Figure 1 illustrates this trend.

Figure 1 – PPL Electric Residential Delivery Rates 2015–2024



[4] EIA Form 861 divides total sales and revenue data between bundled service volumes and unbundled (delivery) volumes. The data reflects revenue from state and local income taxes, energy or demand charges, customer service charges, environmental surcharges, franchise fees, fuel adjustments and other miscellaneous charges applied to end-use customers during normal billing operations.

Q. How do PPL Electric's residential delivery rates compare to the national average?

A. PPL Electric's residential delivery rates are well below the national average and have become increasingly competitive over time. In 2015, PPL Electric's average residential delivery rate was approximately 24.7 percent below the national average. By 2023, the gap had widened to 47.9 percent. This widening differential demonstrates that even with the increases proposed in this proceeding, PPL Electric's residential delivery rates will remain substantially lower than the national average. Figure 2 provides a comparison of PPL Electric's average residential delivery rates to the national average.

Figure 2 – PPL Electric vs. National Average Residential Delivery Rates

III. RESIDENTIAL RATE DESIGN

Q. Is PPL Electric proposing an increase in the residential fixed monthly customer charge?

A. Yes. The Company is proposing a modest increase in the residential customer charge from $15.58 to $17.00. This proposed increase is intended to better align the residential customer charge with the underlying fixed costs of connecting and serving residential

customers. Customer-related costs include the service drop, meter, billing, and customer service functions. These costs do not vary with usage. Instead, they are driven by the number of customers on the system. Under current rates, these fixed costs are not fully recovered through the residential customer charge, which means they are instead recovered through volumetric charge. This design results in a cross-subsidy where higher-use customers bear a disproportionate share of fixed costs, while lower-use customers contribute less than their cost of service. Increasing the fixed charge reduces this subsidy, improves cost alignment, and enhances bill stability and revenue adequacy.

Q. What customer charge is supported by the ACOSS?

A. The ACOSS and the accompanying minimum system study support a residential customer charge of $42.92 per month. However, recognizing the principle of gradualism, the Company has proposed a lower charge of $17.00 per month in this case. This amount represents a reasonable step toward cost-based rates while mitigating customer bill impacts.

Table 3 – Residential Fixed Monthly Customer Charge

Current	$15.58
Proposed	$17.00
Cost Based Charge	$42.92

Q. How does the Company propose to structure residential rates under the new design?

A. Under the proposal, residential customers will see increases in both the fixed customer charge and the per-kWh energy charge. However, the changes to base distribution rates are complicated by the roll-in of SMR-2, TCJA, and DSIC, the elimination of CER, and the resetting of the SDER and STAS to zero, which affects the apparent magnitude of the

increase. Table 4 provides a comparison of current and proposed residential charges, showing the impact of adjustments to the SMR-2, TCJA, DSIC, CER, and STAS.

Table 4 – Residential Rate Comparison: Current vs. Proposed Charges

	Current Rates	Proposed Rates	Change
Customer Charge (without riders)	$14.09/Bill	$17.00/Bill	
TCJA	-8.0%		
SMR 2	$1.50/Bill		
CER	-$0.01/Bill		
DSIC	7.5%		
STAS	-0.28%		
Total Base Customer Charge	$15.49/Bill	$17.00/Bill	9.7%
Energy Charge (without riders)	$0.03534/kWh	$0.04965/kWh	
TCJA	-8.0%		
ACR 4	$0.00220/kWh	$0.00220/kWh	
USR	$0.01111/kWh	$0.01111/kWh	
SDER	$0.00184/kWh		
DSIC	7.5%		
STAS	-0.28%		
Total Base Energy Charge	$0.05109/kWh	$0.06296/kWh	23.2%

Q. What is the impact of these changes on average residential bills?

A. While the Company is proposing to increase base distribution charges, these charges represent a relatively small portion of a customer's total bill. On average, the proposed changes increase residential base rates by 34.5 percent, but total residential bills increase by only 7.0 percent. Table 5 illustrates this impact for an average residential customer using 918 kWh per month.

Table 5 – Average Residential RS Bill Impact

	Current Rates	Proposed Rates	Change
FPFTY Ave. Monthly Use	918 kWh		
Base Rates	$46.52	$62.56	34.5%
Distribution Riders	$15.86	$12.21	-23.0%
Distribution Subtotal	$62.38	$74.78	19.9%
Energy Supply	$114.62	$114.62	0.0%
Total Bill	$177.01	$189.40	7.0%

Q. How does the proposed design balance cost causation and gradualism?

A. By setting the residential customer charge at $17.00 rather than the full cost-based amount of $42.92, PPL Electric is striking a balance between the goal of cost causation and the need for gradualism. This approach reduces cross-subsidies among residential customers while avoiding sudden or excessive bill increases for lower-use households. It also improves bill stability by ensuring that a larger share of fixed costs is recovered through fixed charges, thereby reducing reliance on usage-driven revenues.

Q. What is PPL Electric proposing for the Residential Thermal Storage (RTS) rate schedule?

A. The Company is proposing to eliminate Rate Schedule RTS in this proceeding. RTS has been closed to new customers since December 31, 1995, and the Company currently has 11,509 residential customers taking service through this rate. Customers currently taking service through RTS will be migrated to schedule RS when the new rates established in this proceeding become effective.

Q. What are the expected bill impacts for Rate Schedule RTS customers migrating to Rate Schedule RS?

A. On average, RTS customers will experience an overall increase in total monthly bills of about 12.4 percent. These bill impacts demonstrate that while RTS distribution rates are moving closer to cost-based levels, the overall effect on customer bills remains moderate.

Table 6 – Average Residential Thermal Storage (RTS) Bill Impact

	Current RTS Rates	Proposed RS Rates	Change
FPFTY Average Monthly Use	1,664 kWh		
Base Rates	$57.45	$99.63	73.4%
Distribution Riders	$27.84	$22.15	-20.4%
Distribution Subtotal	$85.29	$121.78	42.8%
Energy Supply	$207.86	$207.86	0.0%
Total Bill	$293.15	$329.64	12.4%

IV. GENERAL SERVICE RATE DESIGN

Q. How did you approach rate design for the General Service rate classes?

A. For the General Service rate schedules, I began with the class revenue responsibilities identified in the ACOSS sponsored by PPL Electric witness Bickey Rimal. Within each rate class, I designed rates that align fixed charges more closely with customer-related costs while ensuring that demand and energy charges recover demand- and energy-related costs, respectively. In doing so, I applied the principles of cost causation, gradualism, and customer understanding. Where the ACOSS supported materially higher customer charges than current levels, I moderated the increases to avoid excessive bill impacts while still moving toward their cost of service.

Q. What is PPL Electric proposing for Rate Schedule GS-1 (Single-Phase General Service)?

A. The customer charge for GS-1 is proposed at $30.00 per month, compared to $43.18 per month supported by the ACOSS. This moderation recognizes the principle of gradualism, while still moving recovery of fixed costs in the right direction. Because the proposed customer charge is below cost-based levels, the associated demand charge has been increased slightly more than proportionately to ensure that class revenues meet the ACOSS target.

Table 7 – Current and Proposed Charges for GS-1

	Current Rates	Current Rates With Roll-In Riders	Proposed Rates	Change	ACOSS Based Results
Customer Charge	$22.00/Bill	$24.93/Bill	$30.00/Bill	20.3%	$43.18/Bill
Demand Charge	$4.361/kW	$4.301/kW	$5.846/kW	35.9%	$3.333/kW

Q. How will the proposed rates for Rate Schedule GS-1 impact customers' bills?

A. Because generation and transmission charges represent a relatively large portion of GS-1 customers' bills, the impact of the Company's proposal on total bills is relatively small. The increase in distribution charges for the average GS-1 customer bill is 23.8%, which translates to only a 6.8% increase in total customer bills.

Table 8 – Average GS-1 Bill Impact

	Current Rates	Proposed Rates	Change
FPFTY Average Monthly Use	5.25kW & 1,051kWh		
Base Rates	$44.88	$60.67	35.2%
Distribution Riders	$5.53	$1.75	-68.4%
Distribution Subtotal	$50.41	$62.41	23.8%
Energy Supply	$127.36	$127.36	0.0%
Total Bill	$177.77	$189.78	6.8%

Q. What is PPL Electric proposing for Rate Schedule GH-2(R) (Separate Meter General Space Heating Service)?

A. Similar to the proposal for RTS, the Company is proposing that Schedule GH-2(R) be eliminated and that any customers taking service under that rate be migrated to Schedule GS-1. About 1,500 customers currently take service through GH-2(R) and their annual energy use represents about 2% of the total load in the GS-1 customer class.

Q. What are the expected bill impacts for Rate Schedule GH-2(R) customers migrating to Rate Schedule GS-1?

A. On average, GH-2(R) customers will have 34.8% higher distribution charges and total bill increases of 8.8%.

Table 9 – Average GH-2(R) Bill Impact

	Current GH-2(R) Rates	Proposed GS-1 Rates	Change
FFTY Average Monthly Use	13.1kW & 1,991kWh		
Base Rates	$73.71	$106.44	44.4%
Distribution Riders	$7.73	$3.30	-57.3%
Distribution Subtotal	$81.44	$109.74	34.8%
Energy Supply	$241.19	$241.19	0.0%
Total Bill	$322.63	$350.93	8.8%

Q. What is PPL Electric proposing for Rate Schedule GS-3 (Three-Phase General Service)?

A. For Rate Schedule GS-3, PPL Electric proposes to set the monthly customer charge at $78, which is slightly higher than the $73 level supported by the ACOSS. This proposal balances the increase to customer and demand charges in Rate Schedule GS-3. As a result, the proposed demand charge increases slightly more than the customer charge, ensuring

that the rate class's revenue responsibility is met in a way that balances cost alignment and customer impacts.

Table 10 – Current and Proposed Charges for GS-3

Rate Design	Current Rates	Current Rates With Roll-In Riders	Proposed Rates	Change	ACOSS Based Results
Customer Charge	$60.00/Bill	$62.41/Bill	$78.00/Bill	25.0%	$72.96/Bill
Demand Charge	$3.985/kW	$3.930/kW	$5.272/kW	34.1%	$5.369/kW
TCJA	-8.0%				
SMR 2	$3.03/Bill				
CER	-$0.01/Bill				
SDER	$0.00092/kWh				
DSIC	7.5%				

Q. How will the proposed rates for Rate Schedule GS-3 impact customer's bills?

A. Because generation and transmission charges represent a relatively large portion of GS-3 customer bills, the impact of the Company's proposal on total bills is relatively small. The increase in distribution charges for the average GS-1 customer bill is 23.8%, which translates to only a 6.8% increase in total customer bills.

Table 11 – Average GS-3 Bill Impact

	Current Rates	Proposed Rates	Change
FPFTY Average Monthly Use	53kW & 17,231 kWh		
Base Rates	$270.22	$356.12	31.8%
Distribution Riders	$47.19	$28.60	-39.4%
Distribution Subtotal	$317.42	$384.72	21.2%
Energy Supply	$2,087.33	$2,087.35	0.0%
Total Bill	$2,404.74	$2,472.07	2.8%

Q. How are rates determined for volunteer organizations, such as Volunteer Fire Companies, Non-Profit Senior Citizen Centers, Non-Profit Rescue Squads, and Non-Profit Ambulance Services?

A. Under PPL Electric's tariff, these organizations may elect to take service under either the GS-1 or GS-3 schedules, but their charges are set equal to the residential rate schedule. Specifically, they pay the same monthly customer charge and per-kWh distribution charge as residential customers. This treatment reflects the public service nature of these organizations and ensures they are billed at levels consistent with residential customers, rather than the peak demand charges applicable to other General Service customers.

Q. What is PPL Electric proposing for Rate Schedule LP-4 (Large General Service – 12,470 volts)?

A. For Rate Schedule LP-4, PPL Electric proposes a customer charge of $235 per month, which is higher than the $209 charge supported by the ACOSS. This adjustment recognizes that even with a higher fixed charge, the demand component remains the predominant driver of LP-4 revenues. In this case, a modestly higher customer charge provides greater revenue stability without materially shifting cost responsibility among customers in the class.

Table 12 – Current and Proposed Charges for LP-4

	Current Rates	Current Rates With Roll-In Riders	Proposed Rates	Change	ACOSS Based Results
Customer Charge	$169.80/Bill	$350.67/Bill	$235.00/Bill	-33.0%	$209.70/Bill
Demand Charge	$2.547/kW	$2.519/kW	$3.881/kW	54.5%	$3.907/kW
TCJA	-8.0%				
SMR 2	$63.12/Bill				
CER	-$0.01/Bill				
SDER	$123.10/Bill				
DSIC	7.5%				
STAS-D	-0.28%				

Q. What is PPL Electric proposing for Rate Schedule LP-5 (Large General Service – 69 kV or higher)?

A. Rate Schedule LP-5 is unique in that its base distribution charges consist entirely of a monthly customer charge. Based on the ACOSS results, the Company is proposing to reduce this charge slightly, from $994 per month under current rates to $973.44 per month. This reduction reflects cost causation and ensures that LP-5 customers pay no more than their allocated cost responsibility.

Table 13 – Current and Proposed Charges for LP-5

	Current Rates	Current Rates With Roll-In Riders	Proposed Rates	Change	ACOSS Based Results
Customer Charge	$994.00/Bill	$1,079.09/Bill	$973.44/Bill	-9.8%	$973.44/Bill
TCJA	-8.0%				
SMR 2	$63.12/Bill				
CER	-$0.01/Bill				
SDER	$101.50/Bill				
DSIC	0.0%				

V. STREET AND AREA LIGHTING RATE DESIGN

Q. Please describe the street and area lighting rate schedules offered by PPL Electric.

A. PPL Electric offers several street and area lighting schedules. These schedules include Schedule SA (Private Area Lighting), Schedule SM(R) (Mercury Vapor Street Lighting), Schedule SHS (High Pressure Sodium Street Lighting), Schedule SLE (Light Emitting Diode Street Lighting), Schedule SE (Energy-Only Street Lighting), and Schedule TS(R) (Traffic Signal Service). In total, there are approximately 80 distinct fixture and service options across these schedules, reflecting different fixture types, wattages, lumen outputs, and maintenance requirements.

Q. How did the Company develop proposed rates for these lighting schedules?

A. In this proceeding, the Company did not conduct a fixture-by-fixture cost analysis to establish separate net book values or unit costs for each of the 80 lighting options. Instead, PPL Electric relied on the class level results of the ACOSS. The ACOSS indicated that overall lighting class revenues should increase by 19.9 percent, inclusive of the distribution riders that are being incorporated into base rates. PPL Electric applied that uniform class-wide increase to existing lighting charges. This approach maintains the current price differentials between various fixture types and schedules, thereby preserving customer expectations and avoiding abrupt changes in the relative costs of different lighting technologies.

Q. Is this approach consistent with the treatment of lighting rates by other Pennsylvania utilities?

A. Yes. For example, in PECO Energy Company's ("PECO") most recent electric base rate case, PECO applied a proportional adjustment to all lighting rates based on the class revenue requirement, rather than attempting a detailed lamp-by-lamp cost study. Similarly, UGI Utilities, Inc. – Electric Division ("UGI Electric") adopted an approach in which the lighting class increase was set based on ACOSS results, without recalculating costs for each individual fixture. These precedents confirm that applying a uniform adjustment at the class level is a reasonable and administratively feasible method for updating lighting rates.

Q. What are the expected bill impacts for lighting customers?

A. I have calculated that the impact of the proposed new lighting rates on total distribution charges will range from 19.0% to 19.7%. The range is due to the application of the various distribution riders. The overall bill impact, including energy supply charges, ranges from 6.5% to 18.3%. This range is larger due to the wide range of energy use by the various lighting types.

VI. STANDBY SERVICE TARIFF (RULE 6 AND 6A)

Q. What is the Company proposing with respect to standby service?

A. The Company is proposing to replace its existing standby service provisions under Rule 6 and Rule 6A with a new consolidated standby service, which is set forth in its proposed retail tariff (PPL Electric Exhibit GEO-1). The new tariff will apply to non-residential

customers with on-site generation facilities greater than 3 MW and to other non-residential customers with on-site generation who do not qualify for net metering service.

Q. Why is the Company proposing this change?

A. The existing standby service provisions are complex and rely on rules that have not been comprehensively updated in many years. The proposed tariff simplifies the structure by consolidating the Company's standby service obligations into a single schedule. More importantly, the new tariff ensures that customers with on-site generation pay appropriately for the system resources they require, including capacity that must be available to serve them when their generation is not operating.

Q. How will the new standby tariff operate?

A. Customers will be required to enter into a Standby Service Contract with the Company specifying three contractual quantities: (1) Supplementary Contract Demand—the portion of the customer's demand expected to exceed their on-site generation capability; (2) Back-Up Contract Demand—the portion of the customer's demand served by their on-site generation, which the Company must stand ready to serve in the event of an unplanned outage; and (3) Total Contract Demand—the sum of supplementary and back-up contract demand.

Supplementary power will be billed at standard tariff rates. Back-up power will be subject to a monthly reservation charge and, when used, to demand charges that vary depending on whether the outage occurs in on-peak or off-peak months. Maintenance

power, available during scheduled outages in off-peak months, will be priced at no additional cost for capacity.

Q. How does the proposed standby service compare to the current provisions under Rules 6 and 6A?

A. The proposed tariff eliminates the duplicative and outdated language in Rules 6 and 6A and replaces it with a clear, modern framework. The Company's proposal more clearly distinguishes between supplementary, back-up, and maintenance power, and provides price signals that encourage customers to schedule maintenance during off-peak periods and minimize reliance on back-up service during peak months.

Q. What is the ratemaking justification for this proposal?

A. The proposed standby service ensures that customers with on-site generation contribute appropriately to the cost of system resources required to serve them, thereby preventing cross-subsidization from other customers. At the same time, the simplified structure will improve customer understanding and administrative feasibility.

VII. PROOF OF REVENUES

Q. What is a proof of revenues, and why is it required in this proceeding?

A. A proof of revenues is a reconciliation required by the Commission's regulations. It demonstrates that the revenues to be collected under proposed rates align with the total distribution revenue requirement established in the ACOSS. The proof of revenues compares expected revenues at present rates with riders rolled into base rates to the

revenues expected under proposed rates in the FPFTY. This comparison provides assurance to the Commission and stakeholders that the Company's proposed rates are designed to recover, but not materially exceed, the required revenue requirement.

Q. Please present the Company's proof of revenues.

A. Table 14 below compares total revenues by rate schedule in the FPFTY under (1) current rates including riders that are proposed to be rolled into base rates and (2) proposed rates. The table also shows the resulting changes in total revenue for each schedule.

Table 14 – Proof of Revenues

	Current Revenue Including Riders to be Rolled Into Base Rates	Total Revenue Under Proposed Rates	Change in Total Revenue	
RS Residential Service	$789,757,365	$984,902,533	$195,145,168	24.71%
GS-1 Single Phase General Service	$86,919,657	$108,369,547	$21,449,890	24.68%
GS-1 Volunteer / Non-Profit	$828,990	$1,064,293	$235,303	28.38%
GS-3 Three Phase General Service	$138,063,109	$170,249,019	$32,185,909	23.31%
GS-3 Volunteer / Non-Profit	$98,908	$128,569	$29,661	29.99%
LP-4 Large General Service at 12,470 Volts	$42,497,721	$59,048,155	$16,550,434	38.94%
LP-5 Large General Service at 69,000 Volts or Higher	$2,069,447	$1,940,352	-$129,095	-6.24%
SA Private Area Lighting Service	$3,796,032	$4,554,830	$758,799	19.99%
SM(R) Mercury Vapor Street Lighting Service	$253,167	$302,887	$49,719	19.64%
SHS High Pressure Sodium Street Lighting Service	$9,771,778	$11,712,519	$1,940,740	19.86%
SLE Light Emitting Diode (LED) Street Lighting Service	$9,695,377	$11,621,686	$1,926,309	19.87%
SE Energy Only Street Lighting Service	$2,045,464	$2,452,776	$407,312	19.91%
TS (R) Municipal Traffic Signal Lighting Service	$31,261	$36,821	$5,560	17.79%
Incremental Revenue BL Borderline Service		$132,981	$132,981	
Total	$1,085,828,276	$1,356,516,966		
ACOSS Total Revenue Requirement		$1,356,442,484		
Difference Due to Rate Rounding		$74,482		

Q. How should the differences across rate schedules be interpreted?

A. The range of revenue changes across the rate schedules primarily reflects how the ACOSS results have changed between this rate case and PPL Electric's last base rate case in 2015. In addition, the differences are partially attributable to changes in how the costs associated with riders such as SMR2, CER, TCJA, and DSIC are allocated when they are rolled into base rates. Moving these costs into base rates can also shift how they are charged to customers, resulting in variations across classes and schedules.

Q. What is the significance of the $74,482 difference between the total revenues at proposed rates and the ACOSS revenue requirement?

A. The total revenue under proposed rates is $1,356,516,966, which is $74,482 higher than the ACOSS revenue requirement of $1,356,442,484. This very small difference is due to necessary rounding conventions in rate design: energy charges are set to five decimal places, demand charges to three decimal places, and customer charges to two decimal places. These rounding rules ensure customer bills are calculable and consistent, while the minor variance does not materially affect recovery.

Q. Does this conclude your direct testimony?

A. Yes.

PPL Electric Utilities Corporation

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 9

Direct Testimony of Julissa Burgos

Topics: **Capital Structure**
Embedded Cost of Capital

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Julissa Burgos. My business address is Two City Center, 645 Hamilton Street, Suite 9, Allentown, PA 18101.

Q. By whom are you employed and in what capacity?

A. I am employed by PPL Services Corporation ("PPL Services"), a subsidiary of PPL Corporation and an affiliate of PPL Electric Utilities Corporation ("PPL Electric" or the "Company"), which provides services to PPL Corporation and its subsidiaries. I hold the position of Assistant Treasurer. I also serve as Assistant Treasurer for PPL Electric.

Q. What are your responsibilities as Assistant Treasurer?

A. I am responsible for overseeing treasury activities including the execution of debt and equity capital market transactions for PPL Corporation and its subsidiaries, as well as maintaining rating agency and banking relationships, managing liquidity, financial risk management and overseeing investments and pensions.

Q. What is your educational background and professional experience?

A. My educational background and professional experience are set forth in my curriculum vitae attached as Appendix A.

Q. What is the purpose of your testimony?

A. I will testify about PPL Electric's capital structure, cost of long-term debt and credit ratings in this proceeding. I will address how the Company's cost of long-term debt is calculated and how credit ratings affect the Company's cost of long-term debt and ultimately its cost of capital.

Q. Are you sponsoring any exhibits or schedules in this proceeding?

A. Yes, I am sponsoring the following exhibits:

- PPL Electric Exhibit JB-1: Moody's Rating Methodology, Regulated Electric and Gas Utilities, dated August 2024
- PPL Electric Exhibit JB-2: S&P General: Corporate Methodology dated January 7, 2024, republished July 7, 2025
- PPL Electric Exhibit JB-3: S&P General: Sector-Specific Corporate Methodology, dated July 7, 2025
- PPL Electric Exhibit JB-4: S&P Group Rating Methodology, dated July 2019, republished August 20, 2025

I am also co-sponsoring Schedules B-6 through B-8 of Exhibits Historic 1, Future 1, and Fully Projected Future 1 and sponsoring or co-sponsoring portions of Parts II and III of the filing requirements as noted on their indexes.

II. <u>CAPITAL STRUCTURE</u>

Q. Please describe the Company's capital structure.

A. PPL Electric targets a capital structure that optimizes the mix of debt and equity financing that balances the appropriate amount of risk and minimizes its weighted cost

of capital, while maintaining credit metrics that support its strong investment-grade credit ratings. The strong investment-grade credit ratings provide the Company with the ability to access capital at more favorable borrowing rates as PPL Electric continues to make investments to strengthen grid reliability and resiliency without compromising affordability. For the fully projected test year ("FPFTY"), PPL Electric's debt-to-capitalization ratio is approximately 44 percent as reflected in Schedule B-7.

III. EMBEDDED COST OF CAPITAL

Q. Please describe PPL Electric's cost of debt.

A. The cost of debt reflects the interest rate payable on PPL Electric's long-term debt. Long-term debt is typically priced using the risk-free rate, a U.S. Treasury Bond for the applicable tenor (i.e., a 10-year bond would price using a 10-U.S. Treasury Bond) plus an applicable credit spread. The credit spread accounts for several market and issuer specific factors, including the issuer's credit rating. It also accounts for the additional return investors demand for investing in a corporate bond compared to the risk-free U.S. Treasury Bond.

The cost of debt for PPL Electric is determined by calculating the weighted average interest rate of the Company's existing long-term debt outstanding, including the discount or premium and amortized fees. For the FPFTY, PPL Electric's weighted average cost of long-term debt is forecasted to be 5.08% as reflected in Schedule B-6.

Q. Do you believe PPL Electric's cost of debt is reasonable?

A. Yes, I believe PPL Electric's cost of debt is reasonable. The Company's cost of debt is impacted by several factors including market conditions, overall investor sentiment at the time of issuance and credit spreads. Macroeconomic market conditions as well as investor sentiment on the bond market and the utility sector play a critical role in the execution of a debt transaction. Investor sentiment can drive demand for the Company's bonds as investors evaluate the different investment alternatives available to them across sectors compared to investing in PPL Electric. While most of these factors are beyond the Company's control, they have a significant impact on PPL Electric's cost of debt. The credit spread is also a major driver of the cost of debt and is the component of the cost that is specific to PPL Electric. As such, the Company aims to maintain strong investment grade credit ratings, which places PPL Electric in the best position to access capital when needed. The Company regularly works with banks to assess the factors that affect the cost of debt. The Company also has the benefit of insight into the cost of debt of its affiliates, along with other utility peers, which helps determine whether its cost of debt is appropriate given PPL Electric's individual attributes. Given the focus on achieving best execution at time of issuance and maintaining high credit quality, I believe that PPL Electric's cost of debt is reasonable.

Q. How do the Company's credit ratings impact the cost of debt?

A. The credit rating is a key consideration in determining the cost at which the Company can access capital. Many investors rely on the assessments done by the major ratings agencies, such as Moody's Investor Service ("Moody's") and S&P Global ("S&P").

The rating agencies evaluate a company's overall financial strength and credit worthiness, which includes an assessment of the company's liquidity, financial metrics, and environmental risks. They monitor key credit metrics with a focus on Cash Flow (Funds) From Operations to Debt (CFO/Debt) as well as Total Debt to Total Capitalization (Debt/Capitalization). In addition, for regulated utilities, the ratings agencies assess the regulatory environment given the critical importance it bears on the utility's financial performance. Companies with strong credit metrics have high credit quality, which typically results in a lower cost of borrowing, all else equal.

Q. Please explain the key considerations the rating agencies use to evaluate a utility's credit quality.

A. Moody's and S&P assess several qualitative factors, financial information and ratios as part of their rating methodologies. Moody's considers four key factors when evaluating regulated utilities: (1) the regulatory framework; (2) the ability to recover costs and earn returns; (3) diversification; and (4) financial strength.

The financial metrics Moody's evaluates in assigning a credit rating include the entity's CFO/Debt and the Debt/Capitalization ratios, amongst others. Moody's states, "High debt levels in comparison to capitalization can indicate higher interest obligations, can limit the ability of a utility to raise additional financing if needed, and can lead to leverage covenant violations in credit facilities or other financing agreements."

S&P evaluates creditworthiness using a top-down approach that considers the Business Risk Profile, which for regulated utilities like PPL Electric, is driven by

regulatory advantage—not competitive position. It includes regulatory stability, tariff-setting procedures, financial stability and regulatory independence

S&P also determines the Financial Risk Profile, which is based on credit ratios such as FFO/Debt and Debt/EBITDA, reflecting the Company's ability to meet financial obligations. They also consider other factors, including capital structure, financial policy, liquidity, and group influence (e.g., support from parent company).

Q. What are PPL Electric's current credit ratings?

A. PPL Electric targets an "A" rating from Moody's and S&P. Presently, Moody's rating is A3 (with the first mortgage bonds rated A1), and S&P's rating is A (with first mortgage bonds rated A+). Short-Term Ratings are A-1 at S&P and P-2 at Moody's.

Q. Have the credit ratings changed since PPL Electric's last rate case? If so, what was the change and why?

A. Yes. In May 2022, S&P upgraded PPL Electric's issuer credit rating from 'A-' to 'A', with secured debt being upgraded to 'A+' from 'A' and short-term debt was upgraded to A1 from A2. The upgrade was the result of PPL Electric's stand-alone financial metrics at or above their respective upgrade threshold and the cumulative value of its insulating measures as prescribed in S&P's insulation assessment, which includes financial performance, funding arrangements, and operational independence.

Q. Do the existing credit ratings allow PPL Electric to compete for attractively priced capital for future investments in facilities to serve customers?

A. The Company maintains certain credit metrics to retain its strong investment-grade credit ratings, providing PPL Electric with greater flexibility to have access to capital. While the strong credit ratings are a critical component of the cost of capital, there may be other factors that may hinder the Company's ability to access capital at lower costs, including macro-economic factors as well investor sentiment on the utility sector at any given time.

IV. RETURN ON COMMON EQUITY

Q. Have you reviewed the testimony of PPL Electric witness Jennifer Nelson regarding return on common equity (PPL Electric St. No. 10)?

A. Yes, I have.

Q. Do you believe Ms. Nelson's proposed return on common equity is reasonable?

A. Yes, I do. I have reviewed her analyses that support her recommendation, and I find Ms. Nelson's proposed return on common equity of 11.3 percent to be fair and reasonable.

Q. Does this conclude your direct testimony?

A. Yes, it does.

PPL Electric Utilities Corporation

Statement No. 10

Direct Testimony of Jennifer E. Nelson

Topics: **Return on Equity**
Capital Structure

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name, affiliation, and business address.

A. My name is Jennifer E. Nelson. I am a Vice President at Concentric Energy Advisors. Concentric is a management consulting and economic advisory firm that specializes in the North American energy and water industries. Based in Marlborough, Massachusetts, Washington, D.C., and Calgary, Alberta, Concentric specializes in regulatory and litigation support, financial advisory services, energy market strategies, market assessments, energy commodity contracting and procurement, economic feasibility studies, and capital market analyses. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts, 01752.

Q. On whose behalf are you testifying?

A. I am submitting this testimony to the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on behalf PPL Electric Utilities Corporation ("PPL Electric", or the "Company"), which is an indirect, wholly owned subsidiary of PPL Corporation.

Q. Please describe your experience in the energy and utility industries and your educational and professional qualifications.

A. I have more than fifteen years of experience in the energy industry, having served as a consultant and energy/regulatory economist for state government agencies. Since 2013, I have provided consulting services to clients on a range of financial and regulatory issues including cost of capital, ratemaking policy, and regulatory strategy issues. Prior to consulting, I was a staff economist at the Massachusetts Department of Public Utilities,

and a petroleum economist for the State of Alaska. I completed utility regulatory training offered by New Mexico State University's Center for Public Utilities and have earned the Certified Rate of Return Analyst designation from the Society of Utility and Regulatory Financial Analysts based on my experience and successful completion of an examination. I hold a Bachelor's degree in Business Economics from Bentley University and a Master's degree in Resource and Applied Economics from the University of Alaska. A summary of my professional and educational background, including a list of my testimony filed before regulatory commissions, is included as PPL Electric Exhibit JEN-1.

Q. Have you previously submitted testimony before the Commission?

A. No, I have not submitted testimony before the Commission. However, I have previously filed testimony before more than 20 state regulatory commissions, as detailed in PPL Electric Exhibit JEN-1. During my time as a consultant, I have supported the development of expert witness testimony and analyses regarding the Return on Equity ("ROE") and capital structure in more than 100 proceedings filed before numerous U.S. state regulatory commissions and the Federal Energy Regulatory Commission.

Q. Are you sponsoring any exhibits in this case?

A. Yes. I am sponsoring portions of Part III of the filing requirements as noted on its index. Also, my analyses and recommendations are supported by the data presented in PPL Electric Exhibits JEN-2 through JEN-9, which have been prepared by me or under my direction. I sponsor the following exhibits:

PPL Electric Exhibit JEN-1 Résumé and Testimony Listing of Jennifer E. Nelson
PPL Electric Exhibit JEN-2 Constant Growth DCF Results

PPL Electric Exhibit JEN-3	Quarterly Growth DCF Results
PPL Electric Exhibit JEN-4	Expected Market Return Calculations
PPL Electric Exhibit JEN-5	CAPM and Empirical CAPM Results
PPL Electric Exhibit JEN-6	Bond Yield Plus Risk Premium Analysis
PPL Electric Exhibit JEN-7	Size Premium Adjustment
PPL Electric Exhibit JEN-8	Flotation Cost Adjustment
PPL Electric Exhibit JEN-9	Capital Structure Analysis

Q. What is the purpose of your testimony?

A. The purpose of my direct testimony is to present evidence and provide a recommendation for PPL Electric's return on equity ("ROE"). My direct testimony also assesses the Company's capital structure in comparison to the proxy group companies supporting my analysis.

II. OVERVIEW AND SUMMARY

Q. Please summarize your recommendation regarding the appropriate cost of equity for PPL Electric.

A. In this proceeding, I recommend the Commission authorize an ROE of 11.30 percent for PPL Electric. To develop my ROE recommendation, I rely on the results of three widely used market-based financial models: (1) the constant growth and quarterly growth forms of the Discounted Cash Flow ("DCF") model, (2) the traditional and empirical forms of the Capital Asset Pricing Model ("CAPM"), and (3) the Bond Yield Plus Risk Premium. These models indicate a cost of equity ranging from approximately 10.30 percent to 12.35 percent. An ROE of 11.30 percent reflects the approximate midpoint of the range of model results. Further, my recommendation is conservative as I do not make an additional

adjustment for PPL Electric's planned capital expenditures, slightly smaller size compared to the proxy group, and flotation costs.

As to the capital structure, I conclude the Company's requested permanent capital structure consisting of 56.00 percent common equity and 44.00 percent long-term debt is reasonable and should be approved because it falls within the range of actual capital structures for the operating companies held by the proxy group companies.

Q. What factors do you consider in determining your ROE recommendation?

A. The cost of equity is an opportunity cost that cannot be precisely quantified. Therefore, it must be estimated through various financial models. Each of the ROE-estimation models is subject to limiting assumptions and each provides a different perspective on investors' return requirements under varying market conditions. The use of multiple financial models, therefore, enables a more robust and comprehensive assessment of the cost of equity instead of relying on one specific estimation model.

After reviewing the model results discussed later in the testimony, I assess the Company's risk profile relative to a group of proxy companies. As explained in more detail throughout my testimony, my recommendation considers: (1) the Company's significant capital investment needs; (2) the regulatory environment in which the Company operates; (3) the Company's smaller size compared to the size of the proxy group companies; (4) the impact of flotation costs; and (5) the current capital market environment. While I do not make any explicit adjustments to my ROE estimates for PPL Electric's business risks, I consider them when determining my ROE recommendation.

The low end of my range, 10.30 percent, is informed by the results of my Constant Growth and Quarterly Growth DCF analysis using mean growth rates and the average Bond

Yield Plus Risk Premium results. Additionally, low end of the range is supported by the CAPM and Empirical CAPM ("ECAPM") results using a long-term average historical market return. The high end of my recommended range, 12.35 percent, is informed by the average of the forward-looking CAPM and ECAPM analysis. Based on those considerations, it is my opinion that an ROE at the approximate midpoint of the range, or 11.30 percent, is a just and reasonable estimate of PPL Electric's cost of equity.

Q. Has the Commission previously acknowledged the importance of considering prevailing market conditions in determining the appropriate ROE?

A. Yes, in its July 2024 Opinion and Order for Pennsylvania American Water Company in Docket No. R-2023-3043189, the Commission considered the prevailing market conditions of increasing inflation, higher interest rates, and capital costs in approving an ROE that reflected the average of the DCF and CAPM results.[1] As explained in my Direct Testimony, these conditions persist, and are expected to persist, going forward.

Q. How is the remainder of your Direct Testimony organized?

A. The remainder of my Direct Testimony is organized as follows:

- Section III – Provides a summary of issues regarding the cost of equity estimation in regulatory proceedings, describes the regulatory guidelines pertinent to the development of the cost of capital, explains my selection of the proxy group used to develop my analytical results, and describes my analyses on which my ROE determination is based;

[1] Pennsylvania American Water Company, Docket No. R-2023-3043189, Opinion and Order, at 194 (July 11, 2024).

- Section IV – Discusses the specific business risks that have a direct bearing on the Company's cost of equity;
- Section V – Reviews the current capital market conditions and the effect on the cost of equity;
- Section VI – Compares the Company's proposed capital structure to the capital structures of the proxy group; and
- Section VII – Summarizes my conclusions and recommendations.

III. COST OF EQUITY ESTIMATION

A. Regulatory Guidelines and Financial Considerations

Q. Before addressing the specific aspects of this proceeding, please explain the connection between the cost of capital and a utility's cost of service.

A. Under the cost-of-service ratemaking paradigm, the development of utility rates begins with determining the utility's total cost to serve customers. This is known as the revenue requirement, since the utility's revenues must be sufficient to recover its costs to serve customers. The revenue requirement consists of four components: (1) operating and maintenance ("O&M") expenses, (2) taxes, (3) the return *of* capital through depreciation expense, and (4) the return *on* capital through the regulated return on rate base. The return on rate base is calculated as the weighted average cost of capital multiplied by the rate base. The return on capital must be sufficient to allow the utility to repay its debt obligations and compensate equity investors for the use of their financial capital. From that important perspective, the return on capital reflects a cost to the utility just as any other component of the revenue requirement.

Q. Please explain the cost of capital conceptually.

A. The cost of capital is the return that investors require to commit capital to a firm. Investors will provide funds to a firm only if the return that they expect is equal to, or greater than, the return that they require to accept the risk of investing capital in the firm. Simply, the cost of capital is the expected rate of return prevailing in the capital markets on alternative investments of similar risk.[2] Conceptually, the cost of capital is: (1) forward looking and reflects an expected rate of return; (2) an opportunity cost; (3) determined in the capital markets, and (4) dependent on, and proportional to, the risk of the investment.[3]

Because the cost of equity is expectational and premised on the principle of opportunity costs, it cannot be precisely quantified. Instead, it must be estimated by applying market data to various financial models that are simplified representations of investor behavior and expectations. Moreover, equity investors have a subordinate claim to cash flows owed to debt investments and other claims; the uncertainty (or risk) associated with those residual cash flows determines the cost of equity. In the end, the cost of equity should reflect the return that investors require considering the subject company's risk profile and the returns available on comparable investments.

Q. How is the Cost of Equity estimated in regulatory proceedings?

A. Regulated utilities primarily use long-term capital (e.g., common stock and long-term debt) to finance their permanent rate base. The rate of return for a regulated utility is calculated

[2] Lawrence A. Kolbe, James A. Read, Jr., and George R. Hall, The Cost of Capital – Estimating the Rate of Return for Public Utilities, The MIT Press, Cambridge, MA, at 13 (1985).

[3] *Id*.

as its weighted average cost of capital, in which the costs of the individual sources of capital are weighted by their respective book values.

The ROE reflects the cost of raising and retaining equity capital and is estimated by using one or more market-based analytical approaches. Although quantitative models are used to estimate the ROE, the cost of equity cannot be precisely quantified through a strict mathematical exercise. As such, a reasonable and appropriate ROE reflects the financial, economic, and regulatory environment in which the estimate is developed, as well as the subject company's risk profile.

Q. Please briefly summarize the guidelines used in establishing the cost of capital for a regulated utility.

A. Public utility regulation is rooted in the principle that utilities receive a fair rate of return sufficient to attract the capital required to provide safe and reliable public utility service for customers at reasonable rates. The U.S. Supreme Court ("Supreme Court") established the guiding principles for establishing a fair return for capital in two seminal cases: (1) *Bluefield Water Works and Improvement Co. v. Public Service Comm'n.* ("*Bluefield*");[4] and (2) *Federal Power Comm'n v. Hope Natural Gas Co.* ("*Hope*").[5] In *Bluefield*, the Court stated:

> A public utility is entitled to such rates as will permit it to earn a return upon the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the

[4] *See Bluefield Water Works and Improvement Co. v. Public Service Comm'n.*, 262 U.S. 679, 692 (1923).
[5] *See Federal Power Comm'n v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944).

> utility and should be adequate, under efficient and economical management, to maintain and support its credit, and enable it to raise the money necessary for the proper discharge of its public duties.[6]

The Supreme Court therefore recognized that: (1) a regulated public utility cannot remain financially sound unless the return it is allowed to earn on its invested capital is at least equal to the cost of capital (the principle relating to the demand for capital); and (2) a regulated public utility will not be able to attract capital if it does not offer investors an opportunity to earn a return on their investment equal to the return they expect to earn on other investments of similar risk (the principle relating to the supply of capital).

In *Hope*, the Supreme Court reiterated the three primary standards for a regulated rate of return:

> [Th]e return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[7]

In summary, the Supreme Court has recognized that the fair return should be: (1) commensurate with returns investors expect to earn on other investments of similar risk (the "comparable return" standard); (2) sufficient to assure confidence in the company's financial integrity (the "financial integrity" standard); and (3) adequate to maintain and support the company's credit and to attract capital (the "capital attraction" standard). Importantly, a fair and reasonable rate of return satisfies all three standards.

---

[6] *Bluefield Water Works and Improvement Co. v. Public Service Comm'n.*, 262 U.S. 679, 692 (1923).
[7] *Federal Power Comm'n v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944).

Q. Has the Commission also applied the *Hope* and *Bluefield* standards as guidance for setting rates?

A. Yes, it has. The Commission upholds the precedents of the *Hope* and *Bluefield* cases and regularly acknowledges that a utility is entitled to a fair and reasonable return. For example, in its November 2015 order approving the settlement in PPL Electric's last filed rate case, the Commission stated, "In determining what constitutes a fair rate of return, the Commission is guided by the criteria set forth in *Bluefield Water Works and Improvement Co. v. Public Service Comm'n of West Virginia,* 262 U.S. 679 (1923) and *Federal Power Comm'n v. Hope Natural Gas Co.*, 320 U.S. 591 (1944)."[8] Based on those standards, the authorized ROE should provide PPL Electric with the *opportunity* (which is not a guarantee) to earn a fair and reasonable return and should enable efficient access to external capital under a variety of market conditions.

Q. Why is it important for a utility to be allowed the opportunity to earn a return adequate to attract capital at reasonable terms?

A. Regulated utilities have a legal obligation to serve regardless of prevailing economic and capital market conditions. Unlike non-regulated firms, a regulated utility cannot decide to whom it provides utility service in its footprint, how much service it delivers, nor when it provides service. Because utilities are one of the most capital-intensive sectors, they must ensure they have access to external financial capital on efficient terms not only during times when markets are well-behaving, but also when markets are volatile or constrained (e.g.,

[8] *Pa. PUC v. PPL Electric Utilities Corp*., Opinion and Order, Docket No. R-2015-2469275, Public Meeting Held November 19, 2015, at 16.

during periods of high inflation and interest rates, global pandemics,[9] changes in government, and economic recessions). A return that is adequate to attract capital at reasonable terms enables the utility to provide safe and reliable service while maintaining its financial integrity. As discussed above, and in keeping with the *Hope* and *Bluefield* standards, that return should be commensurate with the returns expected for investments of similar risk.

The ratemaking process is based on the principle that, for investors and companies to commit the capital needed to provide safe and reliable utility services, the utility must have a reasonable opportunity to recover the return of, and the market-required return on, invested capital. To meet its legal obligation to serve, the allowed ROE should enable the subject utility to maintain its financial integrity in a variety of economic and capital market conditions. To preserve and enhance service reliability, PPL Electric must generate adequate cash flow from operations and have efficient access to external capital needed to undertake its capital investment plan regardless of the economic and capital market conditions at the time.

Further, the financial community carefully monitors utility companies' current and expected financial conditions, as well as the regulatory environment in which those companies operate. In that respect, the regulatory environment is one of the most important factors considered in both debt and equity investors' assessments of risk.[10] That

[9] E.g., the Commission rejected the opposing parties' argument that no rate increase should be granted during the COVID-19 pandemic. See *Pa. PUC v. Columbia Gas of Pennsylvania, Inc*., Opinion and Order, Docket No. R-2020-3018835, at 42.

[10] *See, e.g.*, Moody's Investors Service, Rating Methodology: Regulated Gas and Electric Utilities, at 7 (August 6, 2024).

consideration is especially important during uncertain economic and financial conditions in which the utility may require access to capital markets.

The outcome of the Commission's order in this case, therefore, should provide PPL Electric with the opportunity to earn an ROE that is: (1) adequate to attract capital at reasonable terms, (2) sufficient to ensure its financial integrity, and (3) commensurate with returns on investments in enterprises having corresponding risks. To the extent PPL Electric has a reasonable opportunity to earn its market-based cost of equity, neither customers nor shareholders are disadvantaged. In fact, a return that is adequate to attract capital at reasonable terms enables PPL Electric to provide customers with safe, reliable service while maintaining its financial integrity.

Q. What are your conclusions regarding the regulatory principles pertaining to the cost of capital for a public utility?

A. Congruent to other costs in a utility's cost of service, the regulated return on rate base is a cost that PPL Electric incurs as part of its normal operations, including the need to compensate equity investors for the use of their capital. Under the *Hope* and *Bluefield* standards, the cost of equity authorized for PPL Electric in this proceeding should be: (1) adequate to attract capital at reasonable terms; (2) sufficient to ensure its financial integrity; and (3) commensurate with returns on investments having similar risks.

Because utilities are capital intensive and investors have many investment alternatives, the Company's financial profile must be adequate on a relative basis to ensure its ability to attract capital under a variety of economic and financial market conditions. The Commission's decision regarding the authorized ROE and capital structure in this

proceeding will directly affect the Company's ability to attract the capital needed to maintain and enhance service to customers.

B. Proxy Group Selection

Q. Why is it necessary to select a group of proxy companies to determine the Cost of Equity for PPL Electric?

A. The cost of equity for a given enterprise depends on the attendant risks to the business in which the company is engaged. According to financial theory, the value of a given company is equal to the aggregate market value of its constituent business units. The value of the individual business units reflects the risks and opportunities that are inherent in the business sectors in which those units operate. Because the ROE is a market-based concept estimated by applying market data to various financial models, and PPL Electric is not a standalone, publicly traded entity, it is necessary to establish a group consisting of companies that are both publicly traded and reasonably comparable to the Company in certain fundamental respects to serve as its "proxy" in the ROE estimation process. Even if the Company were a publicly traded entity, short-term events could bias its market value during a given period. A significant benefit of using a proxy group is that it moderates the effects of anomalous, temporary events associated with any one company.

Q. Please provide a summary profile of PPL Electric.

A. PPL Electric is an indirect wholly owned subsidiary of PPL Corporation and provides electric distribution and transmission service to approximately 1.5 million customers in Pennsylvania.[11] The Company's current long-term issuer credit ratings are as follows:

[11] Source: PPL Corporation, Form 10-K: Annual Report, 2024, Page 7.

Figure 1: PPL Electric's Current Long-term Issuer Credit Ratings[12]

Rating Agency	Current Credit Rating	Outlook
S&P Global Ratings	A	Stable
Moody's Investors Service ("Moody's")	A3	Stable

Q. Does the fact that PPL Electric is a subsidiary of PPL Corporation affect its cost of equity?

A. No. The cost of equity depends on the risk of a firm's operations and the assets supporting those operations. In other words, the cost of equity depends on the *use* of capital, not on the *source* of capital. Therefore, the Company's corporate structure, including whether it (or its parent) is privately held or publicly traded, does not affect the analysis. That is, the ROE is not determined by reference to PPL Electric's parent company.

Q. What criteria do you use to select the proxy group?

A. Because estimating the cost of equity is a comparative exercise, it is necessary to develop a proxy group of companies with risk profiles that are reasonably comparable to the subject company. As each company is unique, no two companies will have identical business and financial risk profiles. In selecting a proxy group, my objective is to balance the competing interests of selecting companies that are representative of the risks and prospects faced by PPL Electric, while at the same time ensuring that there is a sufficient number of companies in the proxy group. To develop my proxy group, I began with the domestic companies that *Value Line* classifies as Electric Utilities and applied the following screening criteria:

[12] Source: S&P Global Ratings; Moody's, as of June 30, 2025.

- Because certain of the models used in my analyses assume that earnings and dividends grow over time, I exclude companies that do not consistently pay quarterly cash dividends, or have cut their dividend in the last two years;
- Because certain of the models assume that earnings grow over time, I exclude companies that do not have positive earnings growth rates from at least two sources;
- To ensure that the growth rates used in my analyses are not biased by a single analyst, all the companies in my proxy group are consistently covered by at least two utility industry equity analysts;
- I exclude companies that do not have (or its primary regulated electric utility subsidiary does not have) an investment-grade issuer or senior unsecured bond credit rating from Standard and Poor's ("S&P") and Moody's;
- To incorporate companies that are primarily regulated electric utilities, I first exclude companies that have less than 60 percent of net operating income from regulated operations on average over the three years ended 2024. I then exclude companies within this group that have less than 60 percent of total regulated operating income from regulated electric operations, on average, over the three years ended 2024;
- I eliminate companies that have had recent significant merger activity or transactions or have had a recent significant financial event that could affect their market data or financial condition; and
- To avoid any circularity concerns, I exclude PPL Electric's parent company, PPL Corporation, from my proxy group.

Q. Which companies meet your screening criteria?

A. The criteria discussed above resulted in a proxy group of the following 24 companies:

Figure 2: Proxy Group Screening Results

Company	Ticker
Alliant Energy Corporation	LNT
Ameren Corporation	AEE
American Electric Power Company, Inc.	AEP
Avista Corporation	AVA
CenterPoint Energy, Inc.	CNP
CMS Energy Corporation	CMS
Consolidated Edison, Inc.	ED
Dominion Resources, Inc.	D
DTE Energy Company	DTE
Duke Energy Corporation	DUK
Entergy Corporation	ETR
Eversource Energy	ES
Exelon Corporation	EXC
FirstEnergy Corporation	FE
Evergy, Inc.	EVRG
IDACORP, Inc.	IDA
NextEra Energy, Inc.	NEE
NorthWestern Corporation	NWE
OGE Energy Corporation	OGE
Pinnacle West Capital Corporation	PNW
Portland General Electric Company	POR
Public Service Enterprise Group Inc.	PEG
Southern Company	SO
Xcel Energy Inc.	XEL

The screening criteria results in a group of electric utilities that are comparable (but not identical) to the financial and operational characteristics of PPL Electric. The screening criterion requiring an investment grade credit rating ensures that the proxy companies, like

PPL Electric, are in sound financial condition. Additionally, the criterion screening on the percent of net operating income from regulated electric operations distinguishes between electric utilities that are subject to regulation and those with substantial unregulated operations and are exposed to higher risks. In my opinion, these screens collectively reflect key risk factors that investors consider in making investments in electric utilities.

C. Cost of Equity Models

Q. What analytical approaches do you use to determine the Company's ROE?

A. As noted earlier, I rely on the constant growth and quarterly growth forms of the DCF model, the traditional and empirical forms of the CAPM, and the Bond Yield Plus Risk Premium approach. The models that I apply are commonly used in practice,[13] as well as in regulatory proceedings. Additionally, each model provides a different insight into investors' views of risk and return. Therefore, the use of multiple methods provides a comprehensive and robust perspective on investors' return requirements.

1. Constant Growth Discounted Cash Flow Model

Q. Please describe the Constant Growth DCF approach.

A. The Constant Growth DCF approach is based on the theory that a stock's current price represents the present value of all expected future cash flows. In its simplified form, the Constant Growth DCF model shown in Equation [1] below sets the ROE equal to the expected dividend yield plus the expected long-term annual growth rate in perpetuity:

$$k = \frac{D_0\ (1+g)}{P} + g \qquad [1]$$

where:

k = the required ROE,

[13] See for example., Eugene Brigham, Louis Gapenski, Financial Management: Theory and Practice, 7th Ed., 1994, at 341.

D_0 = the current annualized dividend,

P = the current stock price, and

g = the expected long-term annual growth rate.

Q. What assumptions underlie the Constant Growth DCF model?

A. The Constant Growth DCF model assumes: (1) a constant average annual growth rate for earnings and dividends; (2) dividends are paid annually, and the dividend payout ratio is stable; (3) a constant Price/Earnings multiple; and (4) a discount rate greater than the expected growth rate. The model also assumes that the current cost of equity will remain constant in perpetuity.

Q. What market data do you use to calculate the dividend yield in your Constant Growth DCF model?

A. I calculate the Constant Growth DCF result for each of the proxy companies using the following inputs:

- The average daily closing prices for the 30-, 90-, and 180-trading days ended June 30, 2025, for the term P;
- The current quarterly dividend as of June 30, 2025 multiplied by 4, for the term D_0; and

- Long-term earnings per share ("EPS") growth rate projections as of June 30, 2025, reported by Zacks, S&P Capital IQ,[14] and *Value Line* for the long-term growth rate, g.

Q. Why do you use three averaging periods to calculate an average stock price?

A. I do so to ensure that the model's results are not skewed by anomalous events that may affect stock prices on any given trading day. At the same time, the average period should reasonably reflect the conditions that have defined the financial markets over the recent past. Using 30-, 90-, and 180-trading day averaging periods reasonably balances those concerns.

Q. How do you calculate the expected dividend yield over the coming year?

A. Because utility companies tend to increase their quarterly dividends at different times throughout the year, it is reasonable to assume dividend increases will be evenly distributed over calendar quarters. Therefore, I calculate the expected dividend yield by applying one-half of the long-term growth rate to the current dividend yield. That adjustment ensures that the expected dividend yield is, on average, representative of the coming 12-month period.

[14] In prior testimonies, I have relied on analysts' consensus long-term EPS projections from First Call as reported by Yahoo! Finance. As of November 2024, Yahoo! Finance no longer publishes consensus long-term projected EPS growth rates. Therefore, I now rely on analysts' consensus EPS growth rate projections reported by S&P Capital IQ as a third source.

Q. Why is the projected EPS growth the appropriate measure of long-term growth in the Constant Growth DCF model?

A. In its Constant Growth form, the DCF model (*i.e.*, as presented in Equation [1] above) assumes a single expected growth estimate in perpetuity, which assumes a fixed payout ratio, and the same constant growth rate in EPS, dividends per share, and book value per share. In the long run, dividend growth can only be sustained by earnings growth.

Further, academic studies have clearly and consistently shown that measures of earnings and cash flow are strongly related to returns, and that analysts' forecasts of growth are superior to other measures of growth in predicting stock prices.[15] For example, the research of Vander Weide and Carleton demonstrates that earnings growth projections have a statistically significant relationship to stock valuation levels, while dividend growth rates do not.[16] Those findings suggest that investors form their investment decisions based on expectations of growth in earnings, not dividends.

Lastly, the only forward-looking growth rates that are available on a consensus basis are analysts' EPS growth rates. The fact that earnings growth projections are the only widely available estimates of growth further supports the conclusion that earnings growth is the most meaningful measure of growth among the investment community. For these reasons, earnings growth is the appropriate measure of long-term growth in the DCF model.

---

[15] *See, e.g.*, Andreas C. Christofi, Petros C. Christofi, Marcus Lori and Donald M. Moliver, *Evaluating Common Stocks Using Value Line's Projected Cash Flows and Implied Growth Rate*, Journal of Investing (Spring 1999); Harris and Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management at 21 (Summer 1992); and Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management (Spring 1988); Robert S. Harris, *Using Analysts' Growth Forecasts to Estimate Shareholder Required Rate of Return*, Financial Management (Spring 1986).

[16] *See* Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management (Spring 1988).

Q. What are the results of your constant growth DCF analysis?

A. To provide a spectrum of DCF-based ROE estimates, I calculate the low, mean, and high Constant Growth DCF result for each proxy company using the low, mean, and high EPS growth estimate. The mean result combines the average of the three EPS growth rate estimates with each proxy company's expected dividend yield. The high DCF result adds the maximum EPS growth rate estimate with each proxy company's expected dividend yield. Similarly, the low DCF result adds the minimum EPS growth rate estimate for each proxy company to the expected dividend yield. I then calculate the mean and median low, mean, and high DCF results for the proxy group (*see* PPL Electric Exhibit JEN-2). In developing my ROE recommendation, I rely on the average of the mean and median proxy group Constant Growth DCF results using the mean EPS growth rates (*see* Figure 3 below). By relying on the average of the mean and median proxy group results, I consider the individual DCF results of each proxy company while mitigating the effect of the highest and lowest estimates.

Figure 3: Constant Growth DCF Results Using Mean Growth Rates[17]

	Mean	Median	Average of Mean & Median
30-Day Average	10.26%	10.11%	10.19%
90-Day Average	10.23%	10.05%	10.14%
180-Day Average	10.30%	10.24%	10.27%

2. Quarterly Growth Discounted Cash Flow Model

Q. Please describe the Quarterly Growth DCF model.

A. As noted earlier, the Constant Growth DCF model is based on several limiting assumptions, one of which is that dividends are paid annually. However, most dividend-paying companies, including utilities, pay dividends on a quarterly basis. Although the dividend yield adjustment discussed earlier is intended to reflect that assumption by increasing the observed dividend yield by one-half of the expected growth rate, it does not fully account for the quarterly receipt and reinvestment of dividends. Consequently, the Constant Growth DCF model likely understates the cost of equity. The Quarterly Growth DCF model specifically incorporates the quarterly payment of dividends, and the associated quarterly compounding of those dividends as they are reinvested at the required ROE. As noted by Dr. Roger Morin:

> Clearly, given that dividends are paid quarterly and that the observed stock price reflects the quarterly nature of dividend payments, the market-required return must recognize quarterly compounding, for the investor receives dividend checks and reinvests the proceeds on a quarterly schedule... The annual DCF model inherently understates the investors' true return because it assumes all cash flows received by investors are paid annually.[18]

[17] *See* PPL Electric Exhibit JEN-2.
[18] Roger A. Morin, New Regulatory Finance, at 344 (2006).

Q. How is the dividend yield portion of the Quarterly DCF model calculated?

A. To reflect the timing and compounding of quarterly dividends, the model replaces the "D" component of the Constant Growth DCF model with the following equation:

$$D = d_1 (1 + k)^{0.75} + d_2 (1 + k)^{0.50} + d_3 (1 + k)^{0.25} + d_4 (1 + k)^0 \quad [2]$$

where:

d_1, d_2, d_3, d_4 = expected quarterly dividends over the coming year; and

k = the required Return on Equity.[19]

To calculate the expected dividends over the coming year for the proxy companies (*i.e.*, d_1, d_2, d_3, and d_4), I obtained the last four paid quarterly dividends for each company and multiplied them by one plus the growth rate (*i.e.*, $1 + g$). To provide a spectrum of quarterly growth DCF-based ROE estimates, I calculate the low, mean, and high quarterly growth DCF result for each proxy company using the low, mean, and high EPS growth estimates. For the *P* component of the dividend yield, I used the same average stock prices applied in the Constant Growth DCF analysis for each proxy company.

Q. What are the results of your Quarterly Growth DCF analyses?

A. My Quarterly Growth DCF results are summarized in Figure 4 below (see also PPL Electric Exhibit JEN-3). As with my Constant Growth DCF analysis, I rely on the average of the mean and median proxy group results using the mean EPS growth rates.

[19] Because the required ROE (k) is a variable in the dividend yield calculation, the Quarterly Growth DCF model is solved iteratively.

Figure 4: Quarterly Growth DCF Results Using Mean Growth Rates[20]

	Mean	Median	Average of Mean & Median
30-Day Average	10.46%	10.28%	10.37%
90-Day Average	10.42%	10.22%	10.32%
180-Day Average	10.50%	10.41%	10.46%

3. Capital Asset Pricing Model and Empirical Capital Asset Pricing Model

Q. Please describe the general form of the CAPM.

A. The CAPM is a risk premium method that estimates the cost of equity for a given security as a function of a risk-free return plus a risk premium to compensate investors for the non-diversifiable or "systematic" risk of that security. As shown in Equation [3], the CAPM is defined by four components, each of which theoretically is a forward-looking estimate:

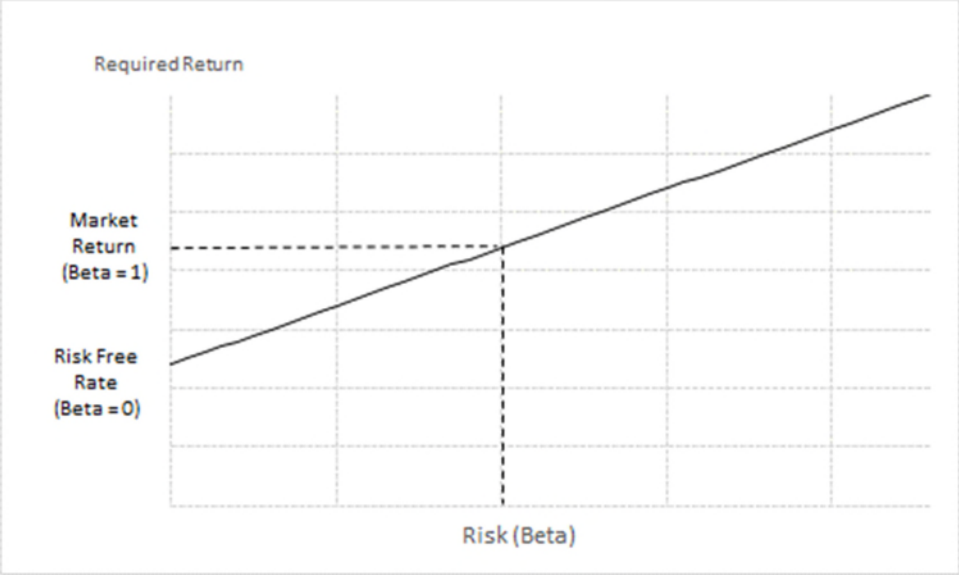
$$K_e = r_f + \beta(r_m - r_f) \qquad [3]$$

where:

K_e = the required market ROE for a security;

β = the Beta coefficient of that security;

r_f = the risk-free rate of return; and



r_m = the required return on the market as a whole.

Equation [3] describes the Security Market Line ("SML"), or the CAPM risk-return relationship, depicted in Figure 5 below. The intercept is the risk-free rate (r_f) which has a Beta coefficient of zero, and the slope is the expected market risk premium ($r_m - r_f$). As shown in Figure 5, the SML is upward sloping, illustrating the principle that investments of higher risk require a higher return. By definition, r_m, the return on the market, has a

[20] *See* PPL Electric Exhibit JEN-3.

Beta coefficient of 1.00. A Beta coefficient of less than 1.00 generally indicates less market risk and a lower required return than the market; conversely, a company with a Beta coefficient greater than 1.00 has higher market risk, thereby warranting a higher required return than the market by investors.

Figure 5: Security Market Line

The CAPM assumes that all non-market (unsystematic) risk can be eliminated through diversification. The risk that cannot be eliminated through diversification is called market, or systematic risk. Systemic (or non-diversifiable) risk is measured by the Beta coefficient, which is defined as:

$$\beta_j = \frac{\sigma_j}{\sigma_m} \text{ x } \rho_{j,m} \quad [4]$$

where σj is the standard deviation of returns for company "j," σm is the standard deviation of returns for the broad market (as measured, for example, by the S&P 500 Index), and $\rho_{j,m}$ is the correlation of returns between company *j* and the broad market.

The Beta coefficient, therefore, represents both relative volatility (*i.e.*, the standard deviation) of returns, and the correlation in returns between the subject company and the overall market.

Q. What risk-free rate assumptions do you include in your CAPM analysis?

A. I apply two different estimates of the risk-free rate: (1) the 30-day average yield on 30-year Treasury bonds as of June 30, 2025 (*i.e.*, 4.92 percent);[21] and (2) a projected 30-year Treasury yield (*i.e.*, 4.52 percent).[22]

Q. Why do you rely on the 30-year Treasury yield in the CAPM analysis?

A. In determining the security most relevant to the application of the CAPM, the term (or maturity) should approximate the life of the underlying investment. Electric utilities are typically long-term duration investments; therefore, the 30-year Treasury yield is most suitable for the risk-free rate applied in the CAPM.

Q. What Beta coefficients do you use in your CAPM model?

A. As shown in PPL Electric Exhibit JEN-5, my CAPM analyses rely on two estimates of the Beta coefficient. First, I use the average five-year Beta coefficients from *Value Line* and Bloomberg for each proxy company as of June 30, 2025. Beta coefficients from both services are calculated using weekly returns over a five-year period, adjusted to reflect the

[21] Source: Bloomberg Professional Services.

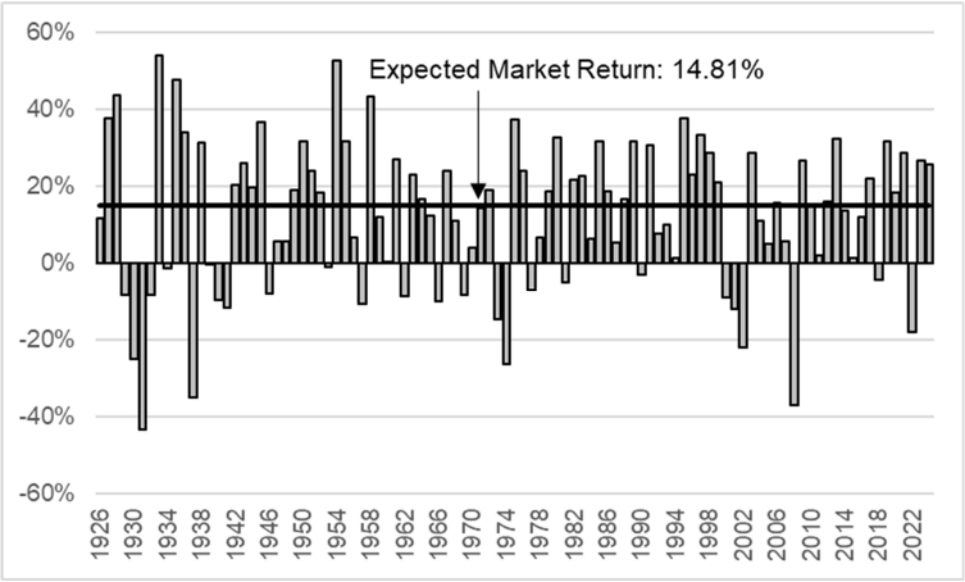
[22] The average of: (1) the average projected 30-year Treasury yield for the six quarters ended Q4 2026; and (2) the average long-term projected 30-year Treasury yield for the years 2027-2031 and 2032-2036 reported by Blue Chip Financial Forecast. *See* Blue Chip Financial Forecast, Vol. 44, No. 7, July 1, 2025, at 2 and Blue Chip Financial Forecast, Vol. 44, No. 6, June 2, 2025, at 14.

tendency of Beta coefficients to regress toward the market mean of 1.00. In addition, I also conduct the CAPM analyses using 10-year adjusted Beta coefficients from Bloomberg.

Q. What estimates of the expected market return do you use to calculate the market risk premium?

A. I consider two estimates of the expected market return. The first estimate calculates a forward-looking market capitalization-weighted ROE of the S&P 500 Index by applying the Constant Growth DCF model to the S&P 500 Index, which results in expected market return estimates of 16.06 percent and 14.81 percent, as I describe further below. The second estimate is the long-run historical arithmetic average market return of 12.17 percent reported by Kroll (formerly Duff & Phelps) for the years 1926 to 2024.[23]

Q. Please further explain your forward-looking DCF approach to estimating the market return.



A. Using the Constant Growth DCF model described earlier, I develop two estimates of the expected market return by applying dividend yields from Bloomberg and projected earnings growth rates from Bloomberg and *Value Line*. I calculate a market capitalization-weighted dividend yield and projected earnings growth rate for the S&P 500 Index and apply those estimates to the Constant Growth DCF formula, using the same half-growth rate assumption described earlier. The expected market returns from Bloomberg and *Value Line* are 16.06 percent and 14.81 percent, respectively (*see* PPL Electric Exhibit JEN-4). To be conservative, I rely on the *Value Line* estimate of 14.81 percent.

[23] Source: Kroll, Cost of Capital Navigator.

Q. Is the market DCF-based estimate of 14.81 percent consistent with actual observed returns on the market?

A. Yes, it is. As shown in Figure 6 below, a market return of 14.81 percent or higher occurred in 50 of the last 99 years (i.e., more than half of the time). Since 2009, the annual market return has averaged 15.58 percent, and equaled or exceeded 14.81 percent in 10 of the last 16 years and 12 of the last 22 years. In other words, an annual market return of 14.81 percent, or higher, has occurred frequently and is not an outlier.

Figure 6: Annual Market Return (1926-2024)[24]

Q. Please explain the historical average return on the market of 12.17 percent as an alternate estimate of the expected market return.

A. I also consider the long-term average historical return on large capitalization stocks between 1926 and 2024 as reported by Kroll (12.17 percent).

[24] Source: Kroll, 2023 SBBI Yearbook, Appendix A-1, A-7 (years 1926-2022); Cost of Capital Navigator (2023-2024 data).

Q. With the risk-free rates and required market return estimates described above, how do you calculate the market risk premium?

A. I apply two estimates of the risk-free rate and two estimates of the expected market return. Combined, those variables produce four estimates of the market risk premium, ranging from 7.25 percent to 10.30 percent as shown below in Figure 7.

Figure 7: Market Risk Premium Estimates

	Current Risk-Free Rate (4.92%)	**Projected Risk-Free Rate (4.52%)**
Forward Looking DCF-based Expected Market Return (14.81%)	9.89%	10.30%
Long-Term Historical Average Market Return (12.17%)	7.25%	7.65%

Q. Do you consider another form of the CAPM?

A. Yes, I also consider the Empirical CAPM ("ECAPM") approach, which calculates the product of the adjusted Beta coefficient and the Market Risk Premium and applies a weight of 75.00 percent to that result. The model then applies a 25.00 percent weight to the Market Risk Premium, without any effect from the Beta coefficient.[25] The results of the two calculations are summed, along with the risk-free rate, to produce the ECAPM result, as expressed in Equation [5] below:

$$k_e = r_f + 0.75\beta(r_m - r_f) + 0.25(r_m - r_f) \quad [5]$$

where:

k_e = the required market ROE;

[25] *See, e.g.*, Roger A. Morin, New Regulatory Finance, at 189-190 (2006).

β = Adjusted Beta coefficient of an individual security;

r_f = the risk-free rate of return; and

r_m = the required return on the market as a whole.

To calculate my ECAPM results, I apply the same market return, Beta coefficients, and risk-free rates described earlier to the ECAPM formula shown in Equation [5].

Q. What is the benefit of the ECAPM approach?

A. The ECAPM corrects the tendency of the CAPM to underestimate the cost of equity for companies, such as regulated utilities, with low Beta coefficients, and to overstate the cost of equity for companies with high Beta coefficients. As discussed below, the ECAPM recognizes academic research that indicates that the risk-return relationship is flatter than the relationship estimated by the CAPM, and that the CAPM underestimates the alpha, or the constant return term.[26]

Numerous tests of the CAPM have measured the extent to which security returns and Beta coefficients are related as predicted by the CAPM. The ECAPM method reflects the finding that the actual SML is not as steeply sloped as the SML predicted by the CAPM formula.[27] Fama and French found that the actual returns on the low Beta coefficient portfolios were higher than the CAPM-predicted returns, and vice versa for the high Beta coefficient portfolios.[28] Similarly, Dr. Morin states:

> With few exceptions, the empirical studies agree that . . . low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted.

---

[26] *Id*. at 191 ("The ECAPM and the use of adjusted betas comprised two separate features of asset pricing. Even if a company's beta is estimated accurately, the CAPM still understates the return for low-beta stocks.").

[27] *Id*. at 175.

[28] Eugene F. Fama & Kenneth R. French, *The Capital Asset Pricing Model: Theory and Evidence*, Journal of Economic Perspectives, Vol. 18, No. 3, Summer 2004, at 33.

***

Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:

$$K = R_F + x\,(R_M - R_F) + (1-x)\beta(R_M - R_F)$$

where x is a fraction to be determined empirically. The value of x that best explains the observed relationship Return = 0.0829 + 0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:

$$K = R_F + 0.25(R_M - R_F) + 0.75\,\beta(R_M - R_F)^{29}$$

Q. Does the application of adjusted Beta coefficients in the ECAPM address the empirical issues with the CAPM?

A. No, it does not. Beta coefficients are adjusted because of their general regression tendency to converge toward 1.00 over time, *i.e.*, over successive calculations. As also noted earlier, numerous studies have determined that at any given point in time, the actual SML is not as steeply sloped as the SML predicted by the CAPM formula. To that point, Dr. Morin explains:

> Some have argued that the use of the ECAPM is inconsistent with the use of adjusted betas, such as those supplied by Value Line and Bloomberg. This is because the reason for using the ECAPM is to allow for the tendency of betas to regress toward the mean value of 1.00 over time, and, since Value Line betas are already adjusted for such trend, an ECAPM analysis results in double-counting. This argument is erroneous. Fundamentally, the ECAPM is not an adjustment, increase or decrease, in beta. This is obvious from the fact that the expected return on high beta securities is actually lower than that produced by the CAPM estimate. The ECAPM is a formal recognition that the observed risk-return tradeoff is flatter than predicted by the CAPM based on myriad empirical evidence. The ECAPM and the use of adjusted betas comprised two separate features of asset pricing. Even if a company's beta is estimated accurately, the CAPM still understates the return for low-beta stocks. Even if the ECAPM is used, the return for low-beta securities is understated if the betas are understated. Referring back to

[29] Roger A. Morin, New Regulatory Finance, at 175, 190 (2006).

Figure 6-1, the ECAPM is a return (vertical axis) adjustment and not a beta (horizontal axis) adjustment. Both adjustments are necessary.[30]

Therefore, it is appropriate to rely on adjusted Beta coefficients in both the CAPM and ECAPM.

Q. Are you aware of academic studies that support the use of the ECAPM for utilities?

A. Yes, I am. In a 2011 study by Stéphane Chrétien and Frank Coggins, the authors studied the CAPM's ability to estimate the risk premium for the utility industry in particular subgroups of utilities.[31] The study considered the traditional CAPM approach, the Fama-French three-factor model, and a model similar to the ECAPM. In the study, the ECAPM relied on adjusted Beta coefficients similar to *Value Line*'s approach. As Chrétien and Coggins found, the ECAPM significantly outperformed the traditional CAPM model at predicting the observed risk premium for the various utility subgroups.

Q. What are the results of your CAPM analyses?

A. As shown in Figure 8, the average CAPM results range from 10.35 percent for the results using the long-term average market return to 12.35 percent for the results using the forward market return.

[30] *Id*. at 191.

[31] Stéphane Chrétien and Frank Coggins, *Cost of Equity for Energy Utilities: Beyond The CAPM*, Energy Studies Review, Vol. 18, No. 2 (2011).

Figure 8: Summary of CAPM and ECAPM Results[32]

	Current 30-Year Treasury Yield (4.92%)	Projected 30-Year Treasury Yield (4.52%)
CAPM Forward Market Return	12.05%	11.94%
ECAPM Forward Market Return	12.74%	12.66%
Average Forward Market Return CAPM	12.35%	
CAPM Historical Market Return	10.15%	10.04%
ECAPM Historical Market Return	10.65%	10.57%
Average Historical Market Return CAPM	10.35%	

4. Bond Yield Plus Risk Premium Approach

Q. Please describe the Bond Yield Plus Risk Premium approach.

A. The Bond Yield Plus Risk Premium approach is based on the basic financial principle of risk and return, which states that equity investors require a premium over the return required as a bondholder to compensate for the residual risk associated with equity ownership. Risk Premium approaches, therefore, estimate the cost of equity as the sum of the equity risk premium and the yield on a particular class of bonds.

Q. Please explain how you perform your Bond Yield Plus Risk Premium analysis.

A. I first define the equity risk premium as the difference between the authorized ROE and the then-prevailing level of long-term (*i.e.*, 30-year) Treasury yield, using the authorized ROE for 1,824 electric utility rate proceedings between January 1, 1980, and June 30, 2025. To reflect the prevailing level of bond yields during the pendency of the proceedings, I

[32] PPL Electric Exhibit JEN-5. Results reflect the average of the proxy group mean and median for both 5-year and 10-year Beta coefficients.

calculate the average 30-year Treasury yield over the average period between the filing of the rate case and the date of the final order (approximately 202 days).

Because the data spans several economic cycles over more than four decades, the analysis incorporates changes in the equity risk premium over time. Prior research, for example, has shown that the equity risk premium is inversely related to the level of bond yields.[33]

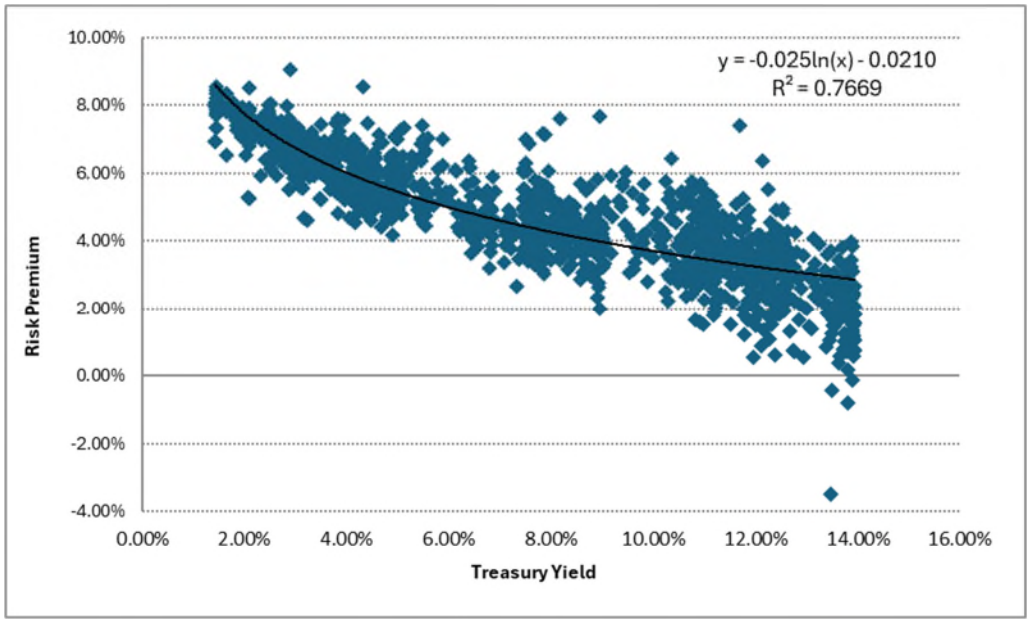
Q. How do you analyze the relationship between bond yields and the Equity Risk Premium?

A. I estimate the relationship between bond yields and the equity risk premium by applying regression analysis, in which the observed equity risk premium described above is the dependent variable, and the 30-year Treasury yield is the independent variable. To account for the variability in bond yields and authorized ROEs over several decades, I used the semi-log regression, in which the equity risk premium is expressed as a function of the natural log of the 30-year Treasury yield:

$$RP = \alpha + \beta\ (\mathrm{LN}(T_{30})) \quad [6]$$

where:

RP = the equity risk premium;



α = the intercept term;

β = the slope term; and

[33] In other words, declines in the 30-year Treasury yield are related to an increase in the Equity Risk Premium and vice versa. *See, e.g.*, Robert S. Harris and Felicia C. Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management, (Summer 1992), at 63-70; Eugene F. Brigham, Dilip K. Shome, and Steve R. Vinson, *The Risk Premium Approach to Measuring a Utility's Cost of Equity*, Financial Management, (Spring 1985), at 33-45; and Farris M. Maddox, Donna T. Pippert, and Rodney N. Sullivan, *An Empirical Study of Ex Ante Risk Premiums for the Electric Utility Industry*, Financial Management, (Autumn 1995), at 89-95.

LN(T_{30}) = the natural log of the 30-year Treasury yield.

Figure 9: Equity Risk Premium[34]

As Figure 9 illustrates, the equity risk premium increases as interest rates fall. The finding that the equity risk premium and interest rates are inversely related is supported by published research. For example, Dr. Roger Morin cites several studies and concludes that, "beginning in 1980, risk premiums varied inversely with the level of interest rates – rising when rates fell and declining when interest rates rose."[35] Applying the regression coefficients in Figure 9 produces ROE estimates of 10.22 percent to 10.41 percent, as can be seen on Figure 10 below (see also PPL Electric Exhibit JEN-6).

[34] *See* Exhibit JEN-6.
[35] Roger A: Morin, Ph.D., New Regulatory Finance, Public Utilities Reports, Inc., at 128 (2006).

Figure 12: Summary of Bond Yield Plus Risk Premium Results[36]

	30-Year Treasury Bond	Risk Premium	Return on Equity
Current 30-Year Treasury	4.92%	5.49%	10.41%
Projected 30-Year Treasury	4.52%	5.71%	10.22%

Q. What are the advantages of the Bond Yield Plus Risk Premium approach?

A. There are several advantages. First, authorized ROEs in other jurisdictions are a significant part of the market information that investors consider when evaluating their investment alternatives. Therefore, they are a direct measure of returns available to other electric utilities, as required under the comparable return standard of the *Hope* and *Bluefield* decisions. The level of authorized ROE also provides a signal to investors about the level of regulatory support that a company can expect regarding its ability to compete for capital and to ensure its financial integrity. An ROE below its peers for a given period may be an impediment to the Company's ability to attract capital and finance the infrastructure required to provide safe, reliable service to its customers.

Second, the use of the Bond Yield Plus Risk Premium model in conjunction with the DCF and CAPM approaches adds diversity to the model results, which enables a more robust and reliable ROE estimate. The fewer models that are relied upon, the more likely it is that model risk biases the ultimate ROE determination. For the same reasons that diversity is a wise and prudent investment strategy, diversity of the models used to estimate the ROE is similarly prudent, as it reduces the risk that the results of any single model may not reasonably reflect investors' return requirements.

[36] *See* PPL Electric Exhibit JEN-6.

A third advantage of the Bond Yield Plus Risk Premium approach is its simplicity and reliance on fewer contentious inputs.

Lastly, the Bond Yield Plus Risk Premium approach adds a measure of stability because it is less vulnerable to changes in market data. As shown in the regression equation in Figure 9, the change in the risk premium (and therefore the ROE estimate) as a result of a change in bond yields is less than one-to-one. For example, as shown in Figure 10 above, a 40-basis point increase in the bond yield (from 4.52 percent to 4.92 percent) results in a 19-basis point change in the ROE from 10.22 percent to 10.41 percent.

IV. BUSINESS AND FINANCIAL RISKS

Q. Are there factors specific to PPL Electric's risk profile that you also considered in developing your ROE recommendation?

A. Yes, there are several additional factors that have a direct bearing on PPL Electric's ability to earn a fair return and on the Company's riskiness relative to the proxy group. Those factors include: (1) the Company's capital expenditure program, the regulatory environment in which it operates, and the need to maintain access to capital; (2) the Company's size compared to the proxy group companies; and (3) the costs associated with issuing equity (or flotation costs). Those factors, which are discussed below, should be considered in terms of their overall effect on PPL Electric's business risk and, therefore, its cost of equity. However, as explained below, I have not made an explicit adjustment to account for these factors.

A. Capital Expenditures, Regulatory Environment, and Capital Access

Q. Do you have any preliminary thoughts on the importance of access to capital for electric utilities such as PPL Electric?

A. Yes, I do. As a capital-intensive enterprise, the authorized ROE should enable PPL Electric to finance capital expenditures and working capital requirements at reasonable costs and maintain its financial integrity in a variety of economic and capital market conditions. A return that is adequate to attract capital at reasonable terms enables the utility to provide safe, reliable service while maintaining its financial soundness to the benefit of customers.

Electric utilities are one of the most capital-intensive market sectors. On average, electric utilities generate less than one-third of the revenue per dollar of assets than the non-utility U.S. companies covered by *Value Line.* To fund the significant capital expenditures needed to maintain, expand, and modernize existing infrastructure, electric utilities require sufficient internally generated cash flow and ongoing access to investor supplied capital. Because electric utilities tend to be cash flow negative (i.e., cash spent on plant investment is more than cash flow received from operations), it is critical that regulation provide predictable, adequate, and achievable allowed returns that support the financial integrity of the utility.

Q. Please discuss PPL Electric's capital expenditure program.

A. The Company plans a major capital investment program over the 2025-2029 period, totaling approximately $4.4 billion of distribution capital expenditures.[37]

[37] PPL Electric's planned capital investment program is described by Company Witness Dennis A. Urban Jr.; see Exhibit DAU-1.

Q. Do credit rating agencies recognize the risks associated with elevated levels of capital expenditures?

A. Yes. From a credit perspective, the additional pressure on cash flows associated with higher levels of capital expenditures exerts corresponding pressure on credit metrics and, therefore, credit ratings. To that point, S&P explains the importance of regulatory support for large capital projects:

> When applicable, a jurisdiction's willingness to support large capital projects with cash during construction is an important aspect of our analysis. This is especially true when the project represents a major addition to rate base and entails long lead times and technological risks that make it susceptible to construction delays. Broad support for all capital spending is the most credit-sustaining. Support for only specific types of capital spending, such as specific environmental projects or system integrity plans, is less so, but still favorable for creditors. Allowance of a cash return on construction work-in-progress or similar ratemaking methods historically were extraordinary measures for use in unusual circumstances, but when construction costs are rising, cash flow support could be crucial to maintain credit quality through the spending program. Even more favorable are those jurisdictions that present an opportunity for a higher return on capital projects as an incentive to investors.[38]

Moody's also notes that growing power demand and the need to improve grid resilience are increasing capital expenditure pressure for utilities, widening cash flow deficits and weakening their financial strength:

> Credit pressure is emerging most acutely for companies with large, complex or multiyear projects or for those that are experiencing a delay in the recovery of investment costs. Unlike exogenous events of recent years – such as severe storms, commodity price spikes and the COVID-19 pandemic, which we viewed as temporary events – capital spending and related financings are core long-term financial policy issues.[39]

[38] S&P Global Ratings, "Assessing U.S. Investor-Owned Utility Regulatory Environments," August 10, 2016, at 7.
[39] Moody's Ratings, "High capital spending will weigh on credit quality without supportive company actions," October 21, 2024.

Regarding PPL Electric's credit profile, the credit rating agencies have identified heightened capital expenditures as a credit challenge for PPL Electric. Moody's notes a credit challenge of "[i]ncreasing leverage to support [sic] robust capital expenditure plan."[40] In noting a key risk, S&P similarly identifies that, in part, PPL Electric's ongoing capital spending will result in "[n]egative discretionary cash flow, leading to external funding needs."[41]

Therefore, to the extent that PPL Electric's rates do not permit the Company an opportunity to recover its full cost of doing business, PPL Electric will face increased recovery risk and thus increased pressure on its credit metrics. Maintaining access to capital markets on favorable terms is especially important for utilities and their customers during periods of significant capital investment.

Q. Please explain how the regulatory framework affects investors' risk assessments.

A. The ratemaking process is premised on the principle that, for investors and companies to commit the capital needed to provide safe and reliable utility services, the utility must have the opportunity to recover invested capital and the market-required return on such capital. Regulatory commissions recognize that, because utility operations are capital intensive, regulatory decisions should enable the utility to attract capital at reasonable terms, thereby balancing the long-term interests of investors and customers. In that respect, the regulatory framework in which a utility operates is one of the most important factors in both debt and equity investors' risk assessments.

[40] Moody's Ratings, "PPL Electric Utilities Corporation Update to credit analysis," June 14, 2024, at 2.
[41] S&P Global Ratings, "PPL Electric Utilities Corp.," June 25, 2024, at 1.

Because investors have many investment alternatives, even within a given market sector, the Company's authorized return must be adequate on a relative basis to ensure its ability to attract capital under a variety of economic and financial market conditions.

Q. Does the regulatory environment influence utilities' access to capital?

A. Yes, it does. The regulatory environment is a key driver of investors' assessment of a utility's risk. Investors and rating agencies understand that a constructive regulatory environment is critical to support utilities' credit ratings and financial integrity, especially during adverse market conditions. Credit rating agencies also recognize the importance of the regulatory environment when assessing a utility's business risk profile.

Q. Please explain how credit rating agencies consider the regulatory framework in establishing a company's credit rating.

A. The overall regulatory framework is one of the most important factors Moody's, S&P, and Fitch consider in establishing credit ratings. Moody's establishes credit ratings based on four key factors:

Figure 113: Moody's Rating Factors[42]

Factor	**Weighting**
Regulatory Framework	25%
Ability to Recover Costs and Earn Returns	25%
Diversification	10%
Financial Strength	40%
Total	**100%**

[42] Moody's Investor Service, Rating Methodology, Regulated Electric and Gas Utilities, August 6, 2024, at 2.

Two of these factors (*i.e.*, regulatory framework and the ability to recover costs and earn returns) relate to the constructiveness of the regulatory environment such that 50 percent of Moody's overall assessment of a utility's business and financial risk depends on the regulatory environment.[43] Similarly, S&P has identified the regulatory environment as an important factor, stating, "we believe the fundamental regulatory environment in the jurisdictions in which a utility operates often influences credit quality the most."[44] Moody's views the Commission's supportive regulatory framework as a "credit strength" for PPL Electric, however, it notes that "[a] rating downgrade could be considered if there is significant deterioration in the credit supportiveness of the regulatory environment."[45] S&P states that regulatory advantage is "of critical importance" because "[i]t defines the environment in which a utility operates and has a significant bearing on a utility's financial performance.[46] S&P explains that it considers four subfactors when assessing a utility's ability to recover all its costs "on time and in full – and to earn a return on the capital it deploys".[47] Those four subfactors are (1) regulatory stability, (2) tariff-setting procedures and design, (3) financial stability, and (4) regulatory independence and insulation.[48] With respect to capital expenditures, S&P notes that a regulatory "framework's ability to attract long-term capital, and the availability of capital support during construction," support a utility's financial stability as they "alleviate funding and cash flow pressure when heavy investment is needed."[49] Thus, predictability and consistency of regulatory actions are

[43] *Id*. at 6.
[44] Standard & Poor's, Assessing U.S. Utility Regulatory Environments, March 11, 2010, at 2.
[45] Moody's Ratings, "PPL Electric Utilities Corporation Update to credit analysis," June 14, 2024, at 2.

[47] *Id*.
[48] *Id*.
[49] *Id*.

among the primary concerns for the rating agencies, as is full and timely cost recovery, including recovery of capital costs.

The ROE determined in this proceeding will have a direct effect on the credit rating agencies' perspective of the Company's risk profile. Given the substantial amount of capital that will be required to serve PPL Electric's customers, it is critical that Pennsylvania's regulatory environment continue to be viewed as balanced, predictable, and constructive.

Q. What are your conclusions regarding the Company's capital expenditure plans, its need to maintain access to capital, and the effect of the regulatory environment on the company's risk profile?

A. The Company's capital expenditure program is substantial and emphasizes the importance of the Commission's decision in this proceeding, which will have a direct bearing on the Company's ability to maintain its financial profile and its access to the capital market at reasonable costs and terms.

PPL Electric will need to rely on external sources for funding critical investments to expand and enhance its assets to support the growing demand. The Company's ability to efficiently access the capital markets at favorable terms will depend on the strength of its balance sheet and financial integrity. For these reasons, it is important that the authorized ROE and capital structure be set at a level that allows PPL Electric to continue to attract both debt and equity under favorable terms under a variety of economic and financial market conditions.

B. Size Effect

Q. Please explain the risk associated with a company's size and scale.

A. Both the financial and academic communities have long accepted the proposition that the cost of equity for small firms is subject to a "size effect."[50] Although empirical evidence of the size effect is often based on studies of industries beyond regulated utilities, utility analysts also have noted the risks associated with small market capitalizations. Specifically, a senior consultant with Ibbotson Associates noted:

> For small utilities, investors face additional obstacles, such as a smaller customer base, limited financial resources, and a lack of diversification across customers, energy sources, and geography. These obstacles imply a higher investor return.[51]

Small size, therefore, leads to two categories of increased risk for investors: (1) liquidity risk (i.e., the risk of not being able to sell one's shares in a timely manner due to the relatively thin market for the securities); and (2) fundamental business risks. As discussed below, relative to the proxy group, PPL Electric's operations are both smaller in size and less diversified.

Q. How does the size and scale of PPL Electric affect its business risks relative to the proxy group?

A. It is important to bear in mind that my ROE recommendation for PPL Electric is developed based on market data applied to a risk-comparable proxy group. Consequently, an evaluation of the Company's risk associated with its size and scale is necessarily based on

[50] *See* Mario Levis, *The Record on Small Companies: A Review of the Evidence*, Journal of Asset Management at 368-397 (Mar. 2002) for a review of literature relating to the size effect.

[51] Michael Annin, *Equity and the Small-Stock Effect*, Public Utilities Fortnightly (Oct. 15, 1995).

a comparison of its size relative to the proxy group, because, all else equal, size has a material bearing on risk.

In general, smaller companies are less able to withstand adverse events that affect their revenues and expenses. Any material changes to expected operations and maintenance expenses can have severe consequences on a company's level of operating leverage. Similarly, capital expenditures for non-revenue producing investments such as system maintenance and replacements will put proportionately greater pressure on customer costs, potentially leading to demand reduction. Taken together, these risks affect the return required by investors for smaller companies. For smaller companies, unpredictable and adverse events may affect revenues or expenses more acutely.

Q. Is there support in the financial community for the use of a small size premium?

A. Yes, there have been several studies that demonstrate the size premium. One of the earliest works in this area found that over a period of 40 years "the common stock of small firms had, on average, higher risk-adjusted returns than the common stock of large firms."[52] The author, who referred to that finding as the "size effect," suggested that the CAPM was mis-specified, in that on average, smaller firms had significantly larger risk-adjusted returns than larger firms. The author also concluded that the size effect was "most pronounced for the smallest firms in the sample."[53] Since then, additional empirical research has focused

[52] R. W. Banz, The Relationship Between Return and Market Value of Common Stocks, Journal of Financial Economics, 9, 1981 at 3-4.

[53] *Id.* at 16.

on explaining the size effect as a function of lower trading volume and other factors, but the proposition that Beta coefficients fail to reflect the risks of smaller firms persists.[54]

In 1994, Fama and French also focused on the issue of whether the CAPM adequately explained security returns and proposed a "three factor" model for expected security returns. Those factors include: (1) the covariance with the market, (2) size, and (3) financial risk as determined by the book/market ratio. As explained by Morningstar, Fama and French "found that the returns on stocks are better explained as a function of size and book-to-market value in addition to the single market factor of the CAPM, with the company's size capturing the size effect and its book to market ratio capturing the financial distress of a firm."[55]

Simply put, investors generally demand greater returns from smaller firms to compensate for less marketability and liquidity of their securities. Duff & Phelps (now Kroll) discusses the nature of the small-size phenomenon, providing an indication of the magnitude of the size premium based on several measures of size. In discussing "Size as a Predictor of Equity Returns," Duff & Phelps states:

> The size effect is based on the empirical observation that companies of smaller size are associated with greater risk and, therefore, have greater cost of capital [sic]. The "size" of a company is one of the most important risk elements to consider when developing cost of equity capital estimates for use in valuing a business simply because size has been shown to be a predictor of equity returns. In other words, there is a significant (negative) relationship between size and historical equity returns - as size decreases, returns tend to increase, and vice versa. (footnote omitted) (emphasis in original)[56]

[55] Morningstar, Ibbotson SBBI 2013 Valuation Yearbook, at 109.

[56] Duff & Phelps Valuation Handbook – U.S. Guide to Cost of Capital, Wiley 2020, at 4-1.

Q. Are you aware of other studies regarding the existence of size premium for regulated utilities?

A. Yes. A 2002 study by Thomas M. Zepp[57] concludes that size premia do exist for smaller utilities. Developed in response to a 1993 study by Annie Wong, the Zepp study focuses specifically on the utility industry and the effect of the size premium in a regulated environment. For example, one study reviewed by Zepp found that smaller water utilities had a cost of equity that, on average, was 99 basis points higher than the average cost of equity for the larger water utilities, and the result was statistically significant at the 90.00 percent level.[58] Zepp concludes that "to the extent water utilities are representative of all utilities, there is support for smaller utilities being more risky than larger ones."[59]

Additionally, a 2011 study by Stéphane Chrétien and Frank Coggins in the article "Cost of Equity for Energy Utilities: Beyond the CAPM" [60] considered the Fama-French three-factor model and a model similar to the Empirical CAPM I described earlier. In the article, the Fama-French three-factor model explicitly included an adjustment to the CAPM for risk associated with size. As Chrétien and Coggins show, the Beta coefficient on the size variable for a group of U.S. natural gas utilities was positive and statistically significant supporting the position that small size risk is relevant for regulated utilities.[61]

[61] *Id*.

Q. Is it appropriate to consider the risk associated with PPL Electric's size even though it is a subsidiary of a larger entity?

A. Yes. The widely accepted "stand-alone" regulatory principle treats each utility subsidiary as its own company. Parent entities, like other investors, have capital constraints and must look at the attractiveness of the expected risk-adjusted return of each investment alternative in their capital budgeting process. The opportunity cost concept applies regardless of the source of the funding. When funding is provided by a parent entity, the return still must be sufficient to provide an incentive to allocate equity capital to the subsidiary or business unit rather than other internal or external investment opportunities. That is, the regulated subsidiary competes for capital with the parent company's affiliates, and with other similarly situated utility companies. In that regard, investors value corporate entities on a sum-of-the-parts basis and expect each division within the parent company to provide an appropriate risk-adjusted return. It therefore is important that the authorized ROE reflects the risks and prospects of the utility's operations and supports the utility's financial integrity from a stand-alone perspective. From that perspective, the fact that PPL Electric is a subsidiary of PPL Corporation is not relevant to the consideration of the risk associated with PPL Electric's small size.

Q. How does PPL Electric compare in size to the proxy companies?

A. PPL Electric is smaller than the average of the proxy companies; as PPL Electric Exhibit JEN-7 shows, PPL Electric's implied market capitalization is approximately $12,941 million, or approximately 48 percent smaller than the proxy group median market

capitalization, and approximately 63 percent smaller than the proxy group mean market capitalization.[62]

Q. How did you estimate the size premium for PPL Electric?

A. In its Cost of Capital Navigator, Kroll presents its calculation of the size premium for deciles of market capitalizations relative to the S&P 500 Index. An additional estimate of the size premium associated with PPL Electric, therefore, is the difference in the Kroll size risk premia for the proxy group median market capitalization relative to the Company's implied market capitalization.

As shown in PPL Electric Exhibit JEN-7, according to recent market data, the median market capitalization of the proxy group is approximately $24,988 million, which corresponds to the second decile of Kroll's market capitalization data. Based on Kroll's analysis, that decile corresponds to a size premium of 0.33 percent (or 33 basis points). As noted above, PPL Electric's implied market capitalization is $12,941 million, which falls within the third decile and corresponds to a size premium of 0.49 percent (or 49 basis points). The difference between those size premia is 16 basis points, as shown in PPL Electric Exhibit JEN-7.

[62] PPL Electric's implied market capitalization is calculated by applying the median Market/Book ratio for the proxy group of 1.90 to PPL Electric's total common equity of approximately $6,800 million as of June 30, 2025. *See* Exhibit JEN-7.

Q. Have you made an explicit adjustment to your ROE recommendation for PPL Electric's comparatively small size?

A. No, I have not. While I quantify the size effect for PPL Electric, I conservatively do not make an explicit adjustment to my ROE recommendation for the Company's size relative to the proxy group.

C. Flotation Cost Adjustment

Q. What are flotation costs, and how do they affect the cost of capital?

A. Flotation costs are the costs associated with the sale of new issues of common stock. These costs include out-of-pocket expenditures for preparation, filing, underwriting, and other costs of issuance of common stock. To the extent that a company is denied the opportunity to recover prudently incurred flotation costs, actual returns will fall short of expected (or required) returns, thereby diminishing the utility's ability to attract adequate capital on reasonable terms. To estimate flotation costs, the DCF calculation is modified to provide a dividend yield that reimburses investors for issuance costs. Based on the proxy group actual issuance costs shown in PPL Electric Exhibit JEN-8, flotation costs for the proxy companies have equaled roughly 2.53 percent of gross equity raised. To properly reflect these issuance costs in my cost of capital estimates, it would be necessary to increase the authorized ROE by 10 basis points for PPL Electric, as shown in PPL Electric Exhibit JEN-8.

Q. Do academic and financial experts recognize the need to consider flotation costs in a utility's cost of equity?

A. Yes. Dr. Roger Morin summarizes:

> The costs of issuing these securities are just as real as operating and maintenance expenses or costs incurred to build utility plants, and fair regulatory treatment must permit recovery of these costs…. The simple fact of the matter is that common equity capital is not free…. [Flotation costs] must be recovered through a rate of return adjustment. [63]

According to Dr. Shannon Pratt, a published expert in cost of capital estimation:

> Flotation costs occur when new issues of stock or debt are sold to the public. The firm usually incurs several kinds of flotation or transaction costs, which reduce the actual proceeds received by the firm. Some of these are direct out-of-pocket outlays, such as fees paid to underwriters, legal expenses, and prospectus preparation costs. Because of this reduction in proceeds, the firm's required returns on these proceeds equate to a higher return to compensate for the additional costs. Flotation costs can be accounted for either by amortizing the cost, thus reducing the cash flow to discount, or by incorporating the cost into the cost of capital. Because flotation costs are not typically applied to operating cash flow, one must incorporate them into the cost of capital.[64]

Q. Has PPL Corporation recently issued common equity?

A. Yes. PPL Corporation issued 4.8 million shares of common equity through an at-the-market placement in March and April 2025.

Q. Do you make an explicit adjustment to your ROE recommendation for flotation cost recovery?

A. No, I do not. While appropriate to do so, in this case, I have conservatively not made an explicit adjustment to my ROE recommendation for flotation cost recovery.

[63] Roger A. Morin, New Regulatory Finance (Public Utility Reports, Inc., 2006), at 321.
[64] Shannon P. Pratt, Cost of Capital Estimation and Applications, Second Edition, at 220-221.

V. CAPITAL MARKET ENVIRONMENT

Q. Do economic conditions influence the required Cost of Capital and required return on common equity?

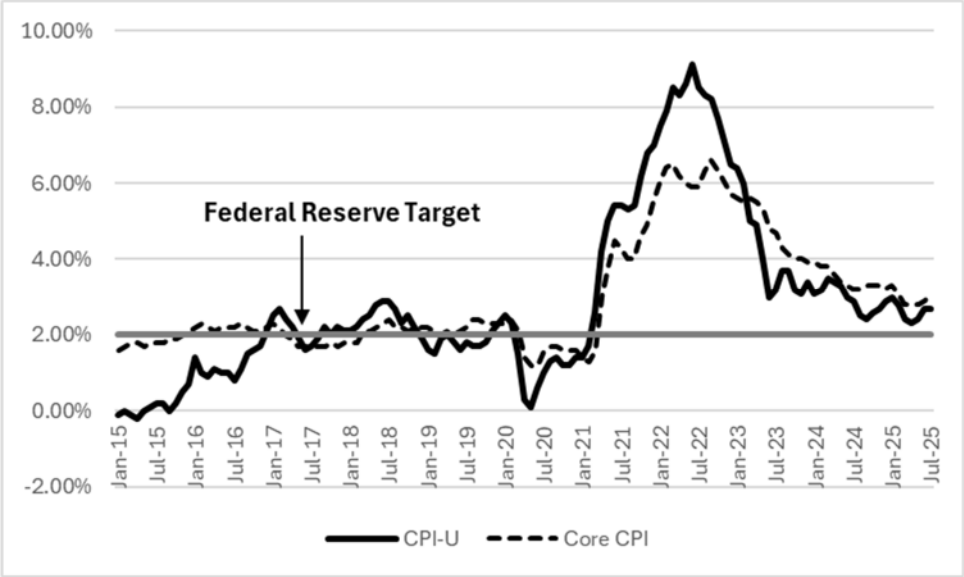
A. Yes. The required cost of capital, including the ROE, is a function of prevailing and expected economic and capital market conditions. Each of the analytical models used to estimate the required ROE is influenced by current and expected capital market conditions. Therefore, an evaluation of current and projected market conditions is integral to any ROE recommendation.

Q. What are the key factors affecting the Cost of Equity for regulated utilities in the current and prospective capital markets?

A. The cost of equity for regulated utilities is currently affected by several key factors including (1) the interest rate environment and central bank monetary policy; (2) inflationary pressure and the longer-term outlook for inflation; and (3) uncertainty in the economic environment because of geopolitical events. As discussed below, although the Federal Reserve reduced the Federal Funds rate three times in 2024 as inflation stabilized and moved closer to the central bank's two percent target, interest rates and inflation are expected to remain above the levels experienced prior to the COVID-19 pandemic. Further, geopolitical events present significant uncertainties with respect to the near-term economic and capital market in which PPL Electric will be raising external capital.

Q. Please summarize the changes in capital market conditions since early 2020.

A. The COVID-19 pandemic had wide ranging impacts on markets, affecting all market sectors, including utilities. At the start of the pandemic, both the S&P 500 Index and the electric utility sector lost more than a third of their value.[65] At the same time, the Chicago Board Options Exchange ("CBOE") Volatility Index ("VIX", a measure of expected market volatility) tripled, from 25.03 on February 24, 2020, to 82.69 on March 16, 2020.[66] Treasury bond yields declined rapidly as the stock market became extremely volatile and investors sought the relative safety of government bonds, combined with the Federal Reserve's reduction in the Federal Funds rate to a target range of 0 percent to 0.25 percent. Because bond yields and bond prices are inversely related, as demand for safer bonds increases, investors bid up the price of bonds and bid down the yields. Since the decline in bond yields was caused by investors' increased aversion to equity market risk, the cost of equity did not decline commensurately with the decline in bond yields.



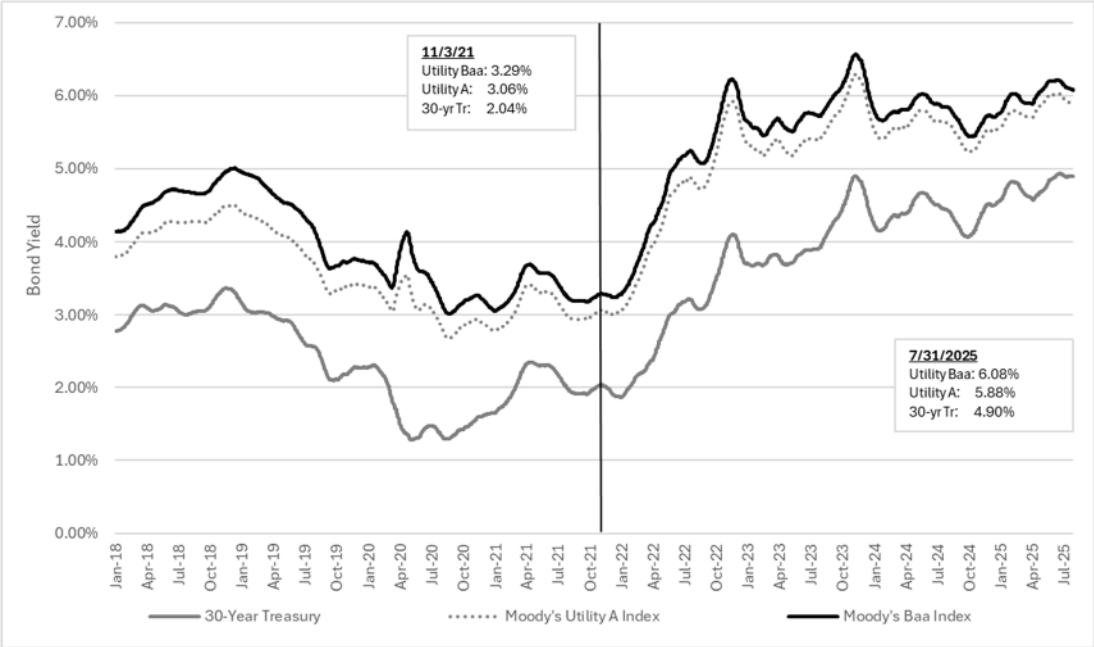
As the U.S. economy opened from the COVID-19 lockdowns, economic activity quickly rebounded, causing inflation to reach the highest levels seen in the previous 40 years. In response, the Federal Reserve tightened monetary policy at the fastest pace since the 1980s by increasing the Federal Funds rate by 525 basis points over the course of 11 consecutive Federal Open Market Committee ("FOMC") meetings between March 2022 and July 2023.

As Figure 12: Consumer 12 below illustrates, although the pace of inflation subsided from its peak reached in 2022, inflation remains above the Federal Reserve's 2.0

[65] Source: S&P Capital IQ. Electric utility sector measured by the S&P 500 Electric Utilities Index.
[66] Source: Federal Reserve Bank of St. Louis FRED Database.

percent target, ticking up to 2.70 percent for all items and 3.10 percent excluding food and energy ("core CPI") as of July 2025.

Figure 12: Consumer Price Index, 12-month Percentage Change[67]



Q. How did government and utility bond yields respond to the Federal Reserve's monetary policy tightening?

A. As the U.S. economy improved in 2021 and the Federal Reserve moved aggressively to tighten monetary policy to fight stubbornly higher inflation, prevailing interest rates rose to their highest levels since 2010.[68] As shown in Figure 13 below, the 30-year Treasury yield has increased 286 basis points since November 3, 2021 when the Federal Reserve signaled it would begin tapering its asset purchases. Utility bond yields have increased by approximately 280 basis points over the same period.

[67] Source: Bureau of Labor Statistics, https://www.bls.gov/charts/consumer-price-index/consumer-price-index-by-category-line-chart.htm.

[68] Source: Federal Reserve Bank of St. Louis, FRED Economic Database.

Figure 13: 30-Year Treasury Bond and Utility Bond Yields (2018-2025)[69]

Q. Please explain how higher bond yields affect the ROE estimates.

A. The 30-year Treasury bond yield is a direct input to both the CAPM and the Risk Premium models because, as explained earlier, the term of the security aligns with the long life of natural gas utility assets. As yields increase, the cost of capital generally increases, and the ROE estimates from those two models also increase, although not on a one-to-one basis. Further, while interest rates are not a direct input to the DCF model, dividend yields on utility stocks must compete with yields on Treasury bonds. As yields on government bonds increase, utilities must offer a higher dividend yield to attract and retain investors, signaling an increase in the cost of equity for utilities. All else equal, higher dividend yields produce higher ROE estimates in the DCF model.

[69] Source: Federal Reserve Bank of St. Louis, FRED Economic Database; Bloomberg Professional.

Q. How have economic and financial market conditions changed in recent months?

A. At the end of 2024, financial markets were optimistic that the Federal Reserve was close to attaining a "soft landing" by taming inflation without a consequential rise in unemployment. Over the past few months, however, federal policy uncertainty has climbed sharply, and financial market volatility has increased. Since the announcement of the Administration's tariff policies in early April, data have shown a vulnerable and slowing economy with consumer and business sentiment declining and growing anticipation of higher inflation.[70]

While inflation has subsided from the elevated levels experienced in the wake of the COVID-19 pandemic, the era of record low interest rates and inflation has likely ended. As noted above, long-term interest rates have increased considerably since the Federal Reserve began tightening monetary policy, and expectations for interest rates are markedly higher than in the five years prior to the pandemic.

Furthermore, even though the pace of inflation has slowed, U.S. consumers continue to expect inflation to remain elevated. As the University of Michigan's Surveys of Consumers Director Joanne Hsu explains regarding consumer sentiment on inflation for July 2025:

> After four months of sharp increases to start 2025, long-run expectations fell for three consecutive months through July. This month's median is below the peak reading from mid-2022, but the three-month-moving average is currently above mid-2022. Expectations exhibit substantial uncertainty, particularly in light of ongoing developments and changes with economic policy and concerns that impacts on inflation are still to come.[71]

[70] *See, e.g.*, Blue Chip Financial Forecasts, Vol. 44, No. 5, May 1, 2025, at 1.

[71] University of Michigan, Survey of Consumers, "July 2025 Update: Current versus Pre-Pandemic Long-Run Inflation Expectations", August 1, 2025, https://www.sca.isr.umich.edu/files/px5web202506.pdf.

Lastly, cuts in 2024 to the Federal Funds rate by the Federal Reserve have had little effect on long-term government and utility bond yields. Long-term bond yields are less sensitive to the Federal Reserve's monetary policy, and as such have not declined as much as short-term yields, even as the Fed has reduced the Federal Funds rate. As shown in Figure 14 below, since the end of June 2024 (prior to the Fed's rate cuts), the 1-year and 2-year Treasury yields declined by 99 and 77 basis points, respectively, whereas the 10-year and 30-year Treasury yields had stayed relatively flat or actually *increased* (i.e., the 30-year Treasury yield increased by 38 basis points), respectively.

Figure 14: U.S. Treasury Yields (June 2024 vs. July 2025)[72]

	1-year Treasury	2-year Treasury	10-year Treasury	30-year Treasury
June 28, 2024	5.09%	4.71%	4.36%	4.51%
July 31, 2025	4.10%	3.94%	4.37%	4.89%
Change	-0.99%	-0.77%	+0.01%	+0.38%

Therefore, current long-term yields have not declined commensurate with reductions in the Federal Funds rate but have stayed relatively flat or increased. Since models used to estimate the just and reasonable ROE rely primarily on long-term yields, the market movement of short-term yields does not influence the ROE model results as the longer-term yields do.

Q. Please discuss recent changes in U.S. trade policy.

A. During the first half of 2025, the Trump administration announced, implemented, or delayed implementation of tariffs on numerous U.S. trade partners. A highlight of this is when, on April 2, 2025, President Trump announced the administration would impose a 10 percent base tariff on all imports from nearly every country plus an additional "reciprocal" tariff customized for each of approximately 60 countries.[73] These reciprocal tariffs were subsequently paused, but significant uncertainty remains around the future course of U.S. trade policy and how it will affect the economy.

This created significant policy and market uncertainty; as can be seen in Figure 15 below, the Federal Reserve Bank of St. Louis' Economic Policy Uncertainty Index (the "Index") spiked to levels not seen since the COVID-19 pandemic. While the Index has partially subsided in recent months (to 372.15 as of July 2025), it is still significantly above the average level (145.23) and the level in November 2015 (55.51), when the Commission approved the settlement in PPL Electric's last filed rate case. This indicates that there is still significant uncertainty related to international trade and the economy. Uncertainty increases risk, which increases the cost of equity, all else equal.

[73] https://www.whitehouse.gov/presidential-actions/2025/04/regulating-imports-with-a-reciprocal-tariff-to-rectify-trade-practices-that-contribute-to-large-and-persistent-annual-united-states-goods-trade-deficits/.

Figure 15: Economic Policy Uncertainty Index January 1, 2019 – July 31, 2025[74]

Q. How might these changes in U.S. trade policy affect inflation and interest rates?

A. Although the effect of these tariffs on the economy remains uncertain, economists generally agree that higher tariffs increase inflation by increasing the cost of consumer goods. The tariffs could lead to higher inflation and reduced overall demand, as well as higher interest rates and a stronger dollar.[75] The Budget Lab at Yale University estimates that these tariffs would raise consumer prices by 1.8 percent before substitution, which would be equivalent to $2,400 in disposable income for the average household.[76]

In a recent article published by S&P Global Market Intelligence, economists noted the "enormous uncertainty" associated with the effect of tariffs on inflation and the economy. The article projected that if President Trump's tariffs are imposed as proposed,

[74] Federal Reserve Bank of St. Louis Economic Database (FRED), Economic Policy Uncertainty Index for United States (USEPUINDXD), https://fred.stlouisfed.org/series/USEPUINDXD.
[75] J.P. Morgan Asset Management, Market Insights "2025 Year-Ahead Investment Outlook," November 21, 2024.
[76] Yale Budget Lab, "State of U.S. Tariffs," August 7, 2025. https://budgetlab.yale.edu/research/state-us-tariffs-august-7-2025

they "would cause the core consumer price index[77] to run at a 6% annual pace on average over the next two years".[78]

Sustained inflation is complicating the Federal Reserve's unwinding of restrictive monetary policies,[79] bolstering long-term bond yields like the 30-year Treasury yield. In an April 16, 2025 speech, Federal Reserve Chair Jerome Powell stated that the Fed faces a "challenging scenario" in balancing the goals of controlling inflation and supporting the labor market, driven primarily by the risk of prolonged inflation and slower economic growth as a result of the tariff policies.[80]

Longer-term bonds like the 30-year Treasury bond are more sensitive to inflation expectations than shorter-term bonds because their value is influenced more by inflation due to their longer maturity holding period and reinvestment rate implications. Thus, as the value (price) of bonds declines due to higher inflation expectations, the yield increases. Because utilities are capital intensive enterprises, higher inflation and interest rates tend to have a negative effect on utility stocks. If realized, higher inflation and interest rates would suggest that the cost of capital for utilities may increase in the future.

Q. What conclusions do you draw from your review of the current capital market environment and its implications on the Company's cost of equity?

A. Over the last five years, the economic and financial market environment has operated under heightened uncertainty associated with the COVID-19 pandemic, the war in Ukraine,

[77] As measured by the Personal Consumption Expenditures ("PCE") price index.
[78] S&P Global Market Intelligence, "Tariffs projected to push US inflation near 2022 highs," April 9, 2025.
[79] *See, e.g.*, S&P Global Market Intelligence, "Tariffs projected to push US inflation near 2022 highs," April 9, 2025.
[80] Chair Powell's speech at the Economic Club of Chicago, Chicago, Illinois, April 16, 2025, https://www.federalreserve.gov/newsevents/speech/files/powell20250416a.pdf

stubborn inflation, uncertainty surrounding the economy and in the timing of the Federal Reserve's monetary policy, and more recently, economic policy uncertainty and geopolitical tensions. Although the Federal Reserve responded to easing inflation by cutting short-term rates in late 2024, it has since paused those cuts to assess how the effects of fluctuating trade policies affect the economy. These factors underscore the importance of using multiple models when determining PPL Electric's cost of equity to gain a comprehensive perspective of the effect of fluid and evolving market conditions on the cost of equity.

VI. CAPITAL STRUCTURE

Q. What is PPL Electric's requested capital structure?

A. As explained by Company Witness Burgos, the Company is requesting a permanent capital structure consisting of 56.00 percent common equity and 44.00 percent long-term debt, consistent with its recent actual capital structure.

Q. Please summarize the approaches to determining the appropriate capital structure for regulated utilities.

A. There are two primary approaches regulators use to determine the appropriate capital structure for ratemaking purposes. The most common approach is to use the subject utility's actual capital structure. This approach is preferred when the subject utility (1) issues its own debt, (2) has its own credit rating, and (3) its actual capital structure is within industry standards and practice.[81] When the subject utility does not issue its own debt and

[81] *See, e.g.*, Parcell, D.C. (2020). *The Cost of Capital: A Practitioner's Guide.* Society of Utility and Regulatory Financial Analysts; 154 FERC ¶ 61,004, Docket No. ER15-945-001, at 15.

have its own credit rating, or when the actual capital structure deviates substantially from industry practice, a hypothetical capital structure may be imputed.

Q. Does PPL Electric issue its own debt and have its own credit rating?

A. Yes. Therefore, the next step is to assess the reasonableness of its actual capital structure within the context of industry practice.

Q. What are the regulatory guidelines for determining whether a utility's capital structure is consistent with sound utility practice?

A. In a 2020 publication titled *A Cost of Capital and Capital Markets Primer for Utility Regulators*, NARUC advises that actual capital structure ratios should be used unless they "greatly diverge" from sound industry practice:

> A utility management must be permitted latitude, discretion, and flexibility in managing capital structure ratios. Since there is no practical methodology to pinpoint theoretically optimal capital structure ratios, targeted ratios can only be broadly conceptualized. Appropriate ratios may shift over time as capital market conditions or business risk characteristics change. Additionally, the timing of upcoming issuances and maturities may influence the capital structure ratios because both the size and frequency of issuances are affected by the relative cost-effectiveness of various issuance increments.
>
> Given these practical considerations, capital structure ratios cannot be deemed to be inappropriate unless the ratios greatly diverge from sound industry practice and cause a lack of financial flexibility that may lead to higher overall costs.
>
> ***
>
> As increasing financial leverage shifts the weight from common equity to lower cost debt, it also increases both the cost of debt and the cost of

common equity. In practice, these offsetting impacts cancel each other out over a wide range of capital structure ratios".[82]

Further, James C. Bonbright explains in his seminal text *Principles of Public Utility Rates* that a hypothetical capital structure should be used only when actual capital structures are "clearly unsound" or "extravagantly conservative," reasoning that using hypothetical capital structures "substitutes an estimate of what the capital cost would be under non-existing conditions for what it actually is or will soon be under prevailing conditions."[83]

Q. How have you assessed whether PPL Electric's capital structure is consistent with industry standards?

A. The proxy group has been selected to reflect comparable companies in terms of business and financial risks. Therefore, it is appropriate to compare the financial capital structures of the proxy group companies to the financial capital structure requested by PPL Electric to assess whether the Company's capital structure is reasonable and consistent with industry standards for companies with commensurate risk. I calculated the average capital structure for each of the proxy group operating companies from 2022 through 2024. PPL Electric Exhibit JEN-9 shows that the Company's proposed common equity ratio of 56.00 percent is within the range of actual common equity ratios of 44.73 percent to 60.60 percent for the operating companies held by the proxy group over this period.

[82] NARUC, *A Cost of Capital and Capital Markets Primer for Utility Regulators* (April 2020), at 12 (emphasis added).

[83] James C. Bonbright, Principles of Public Utility Rates, at 243-44 (1961). Republished with permission by the Regulatory Assistance Project.

Q. Has the Commission previously accepted a utility's capital structure if it has been consistent with industry standards?

A. Yes, it has. For example, in PECO Energy Company – Gas Division's ("PECO Gas") 2021 rate case, the Commission adopted PECO Gas's and the Administrative Law Judge's recommendation to use PECO Gas's actual capital structure, noting that "if a utility's actual capital structure is within the range of a similarly situated proxy group of companies, rates are set based on the utility's actual capital structure."[84]

Q. What is your conclusion regarding the appropriateness of PPL Electric's capital structure in this proceeding?

A. Based on the analysis presented in PPL Electric Exhibit JEN-9, I conclude that the Company's proposed permanent capital structure of 56.00 percent common equity and 44.00 percent long-term debt is consistent with sound industry practice and is consequently reasonable and appropriate, especially given PPL Electric's substantial capital investment requirements and the uncertain economic environment in which it will need to raise capital going forward.

[84] *Pennsylvania Public Utility Commission, Office of Consumer Advocate, Office of Small Business Advocate Philadelphia Area Industrial Energy Users Group v. PECO Energy Company – Gas Division*, Opinion and Order, Docket No. R-2020-3018929, Public Meeting held June 17, 2021, at 144.

VII. CONCLUSIONS AND RECOMMENDATION

Q. What is your recommendation regarding the Company's cost of equity and capital structure in this proceeding?

A. As discussed throughout my Direct Testimony, it is important to consider a variety of quantitative and qualitative information in reviewing analytical results and arriving at ROE determinations. The results from three commonly used analytical approaches applied to a proxy group of 24 comparable electric utilities indicate an ROE in the range of 10.30 percent to 12.35 percent in today's capital market environment. Within that range, I recommend an ROE of 11.30 percent, which is the approximate midpoint of the range. Further, my recommendation does not include additional adjustments for PPL Electric's heightened capital expenditures, smaller size compared to the proxy group, and flotation costs. Lastly, I support PPL Electric's proposed financial capital structure of 56.00 percent common equity and 44.00 percent long-term debt as reasonable relative to the range of actual capital structures for the operating companies held by the proxy group companies.

Q. Does this conclude your direct testimony?

A. Yes, it does.

JENNIFER E. NELSON
VICE PRESIDENT

Ms. Nelson is a Certified Rate of Return Analyst with more than fifteen years of experience in the energy industry. As an expert witness, she has testified to the cost of capital and alternative ratemaking proposals for electric, natural gas, and water utilities. In her time as a consultant, Ms. Nelson has provided consulting services on a variety of utility regulatory matters including ratemaking and regulatory policy, cost of service and revenue requirements, integrated resource planning, renewable power contracts, natural gas pipeline development, utility supply planning issues, and merger and acquisition transactions. Ms. Nelson has extensive experience performing statistical analyses, developing economic and financial models, and providing policy analyses and recommendations.

Prior to joining Concentric, Ms. Nelson was a Director at ScottMadden, Inc., and a managing consultant at Sussex Economic Advisors, LLC. Prior to consulting, she was a staff economist at the Massachusetts Department of Public Utilities and a petroleum economist for the State of Alaska. Ms. Nelson holds a Master of Science degree in Resource and Applied Economics from the University of Alaska and a Bachelor of Science degree in Business Economics from Bentley University.

AREAS OF EXPERTISE

Cost of Capital

- Submitted expert testimony on behalf of electric utilities before regulatory commissions in Arkansas, Michigan, New Hampshire, New Mexico, North Carolina, South Carolina, Texas and Virginia regarding the cost of capital.
- Submitted expert testimony on behalf of natural gas utilities before regulatory commissions in Alaska, Florida, North Carolina, Ohio, Oregon, South Carolina, Utah, West Virginia, and Wyoming regarding the cost of capital.
- Submitted expert testimony on behalf of a water utility before the Kentucky Public Service Commission regarding the appropriate capital structure and cost of debt.
- Supported expert testimony regarding the cost of capital before numerous state utility regulatory commissions and the FERC on behalf of electric and natural gas utilities through research, financial analysis and modeling, and testimony development.

Alternative Ratemaking Mechanisms

- Submitted expert testimony on behalf of electric utilities and a water utility before the Arkansas Public Service Commission regarding the utilities' proposed Formula Rate Plans.
- Submitted expert testimony on behalf of an electric utility before the Oklahoma Corporation Commission regarding the utility's proposed Formula Rate Plan.
- Submitted expert testimony on behalf of an electric and natural gas utility before the Delaware Public Service Commission regarding the utility's proposed performance-based rate plan.

- Submitted expert testimony on behalf of an electric and natural gas utility before the Montana Public Service Commission regarding the utility's proposed alternative rate mechanisms.
- Co-sponsored expert testimony on behalf of a natural gas utility before the Maine Public Utilities Commission regarding the utility's proposed capital investment cost recovery mechanism.
- Supported expert testimony and performed research and analysis on alternative ratemaking frameworks.

Resource and Supply Planning

- Supported expert testimony on the reasonableness of utility resource supply portfolio decisions.
- Assisted in a benchmarking analysis on behalf of a Northeast U.S. natural gas utility regarding its supply planning standards and design day demand forecast process.
- Supported rebuttal testimony filed on behalf of an Alaska natural gas utility regarding the utility's gas supply planning standards.
- Supported the development of a New Hampshire electric utility's Integrated Resource Plan filed with the New Hampshire Public Utility Commission.
- Performed research and financial analysis to evaluate the benefits, costs, and policy options associated with natural gas expansion by Massachusetts natural gas utilities as part of a prepared report for the Massachusetts Department of Energy Resources.
- Developed a dynamic natural gas demand forecast model for in-state use for the State of Alaska, which included forecasting demand from both existing and anticipated natural gas utilities, power consumption, and large commercial operations.
- Conducted research and prepared analyses for a natural gas pipeline Open Season.

Other Regulatory Financial Issues

- Filed expert testimony before the California PUC regarding the benefits of financial flexibility and diversity in sources of financial capital associated with an electric utility's request to lease entitlements as a means of raising capital.
- Supported expert testimony on the appropriate level of remuneration associated with the Massachusetts electric utilities' long-term contracts for wind power through research, financial analysis and modeling, and testimony development.
- Provided research and analytical support estimating financial damages incurred as a result of construction delays for an electric transmission company.
- Prepared a Feasibility Study for an electric cooperative utility supporting a utility-owned solar project.

Mergers & Acquisitions

- Performed buy-side benchmarking and regulatory analysis for utility acquisitions.

[8] Equals Col. [7] - Col. [6]
[9] Equals Col. [6] / Col. [7]

The flotation adjustment is derived by dividing the dividend yield by 1 − F (where F = flotation costs expressed in percentage terms), or by 0.9748, and adding that result to the constant growth rate to determine the cost of equity. Using the formulas shown previously in my testimony, the Constant Growth DCF calculation is modified as follows to accommodate an adjustment for flotation costs:

FLOTATION COST ADJUSTMENT

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 11

Direct Testimony of John J. Spanos

Topics: Depreciation Service Lives

Dated: September 30, 2025

Q. Please state your name and address.

A. My name is John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania, 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania, 17011).

Q. With what firm are you associated?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming").

Q How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since June 1986.

Q. What is your position in the firm?

A. I am President.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie Mellon University and a Master of Business Administration from York College of Pennsylvania.

Q. Are you a member of any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Have you taken the certification examination for depreciation professionals?

A. Yes, I passed the certification examination of the Society of Depreciation Professionals in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

Q. Will you outline your experience in the field of depreciation?

A. I have over 39 years of depreciation experience which includes expert testimony in more than 500 cases before 47 regulatory commissions, including the Pennsylvania Public Utility Commission ("Commission"). These cases have included depreciation studies in the electric, gas, water, wastewater and pipeline industries. In addition to cases where I have submitted testimony, I have supervised over 900 other depreciation or valuation assignments. Please refer to Appendix A for my qualifications statement, which includes further information with respect to my work history, case experience, and leadership in the Society of Depreciation Professionals.

Q. What is the purpose of your testimony?

A. My testimony is in support of the depreciation studies conducted under my direction and supervision for the utility plant of PPL Electric Utilities Corporation ("PPL Electric" or the "Company").

Q. Have you prepared exhibits presenting the results of your studies?

A. Yes. PPL Electric Exhibit JJS-1 presents the results of the depreciation study as of June 30, 2025. PPL Electric Exhibit JJS-2 presents the results of the depreciation study as of June 30, 2026. PPL Electric Exhibit JJS-3 presents the results of the depreciation study as of June 30, 2027. In addition, I am responsible for the responses to the following filing requirements pertaining to depreciation under Section 53.53(a)(1) of the Commission's regulations: V-A-2, V-A-3, V-B-1, V-B-2, V-C-1, V-D-1, V-D-2 and V-E-1 which present summaries of the study results as of the historic test year ("HTY") ending June 30, 2025, future test year ("FTY") ending June 30, 2026 and the fully projected future test year ("FPFTY") ending June 30, 2027.

Q. Please describe Exhibits JJS 1, JJS-2 and JJS-3.

A. PPL Electric Exhibit JJS-1, titled "2025 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of June 30, 2025," includes the results of the depreciation study as related to the original cost as of June 30, 2025. The report also includes the detailed depreciation calculations. PPL Electric Exhibit JJS-2, titled "2026 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of June 30, 2026," includes the results of the depreciation study as

related to the estimated original cost as of June 30, 2026. The report also includes explanatory text, statistics related to the estimation of service life, and the detailed depreciation calculations. PPL Electric Exhibit JJS-3, titled "2027 Depreciation Study – Calculated Annual Depreciation Accruals Related to Electric Plant as of June 30, 2027," includes the results of the depreciation study as related to the estimated original cost as of June 30, 2027.

Q. What was the purpose of your depreciation study?

A. The purpose of the depreciation studies was to estimate the annual depreciation accruals related to utility plant in service for ratemaking purposes and, using Commission-approved procedures, to estimate the Company's book reserve as of June 30, 2025, June 30, 2026, and June 30, 2027.

Q. Is the Company's claim for annual depreciation in the current proceeding based on the same methods of depreciation as were used in its most recent electric base rate proceeding.

A. Yes, it is. For most plant accounts, the current claim for annual depreciation is based on the straight line, remaining life method of depreciation. For Accounts 391.20, 391.40, 393.00, 394.00, 394.20, 394.40, 394.60, 394.80, 395.00, 397.10, 397.20, 397.27, 397.30 and 398.00, the claim is based on the straight line, remaining life method of amortization. The annual amortization is based on amortization accounting which distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account.

Q. What group procedure is being used in this proceeding for depreciable accounts?

A. All depreciable accounts utilize the methods and procedures based on the straight line remaining life method, using remaining lives consistent with the average service life procedure.

Q. Please describe briefly the straight line remaining life method of depreciation that you used for depreciable property.

A. The straight line remaining life method of depreciation allocates the original cost less accumulated depreciation in equal amounts to each year of remaining service life.

Q. Please describe briefly the average service life procedure that you used in conjunction with the straight line remaining life method for plant.

A. In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. Their average remaining life is a directly weighted average derived from the estimated survivor curve.

Q. Is the Company's claim for accrued depreciation in the current proceeding made on the same basis as has been used in its most recent electric base rate proceeding?

A. Yes. The current claim for accrued depreciation is the book reserve brought forward from the book reserve utilized by the Company in its last base rate proceeding and for its prior rate cases.

Q. How was the book reserve used in the calculation of annual depreciation?

A. The book reserve by account was allocated to vintages to determine original cost less accrued depreciation by vintage. The total annual accrual is the sum of the results of dividing the original costs less accrued depreciation by the vintage composite remaining lives.

Q. How was the book reserve as of June 30, 2026, estimated?

A. The book reserve as of June 30, 2026, by account, was projected by adding estimated accruals, salvage and the amortization of net salvage, and subtracting estimated retirements and cost of removal from the book reserve as of June 30, 2026. Annual accruals were estimated using the annual accrual rates calculated as of June 30, 2026. For most accounts, gross salvage and cost of removal were estimated by: (1) expressing actual gross salvage and cost of removal as a percent of retirements by account, for the most recent five-year period; and (2) applying those percents to the projected retirements by account. For the purpose of calculating the annual accruals, the projected book reserve by account was allocated to vintages based on calculated accrued depreciation as of June 30, 2026.

Q. Has a service life study of the Company's electric utility property been performed for this filing?

A. No, but the Company's most recent service life study was performed using data through 2021 because this Commission's regulations only require service life studies to be

prepared every 5 years. That 2021 service life study is the basis for the service lives I used to calculate annual accruals.

Q. Briefly outline the procedure used in performing the service life study.

A. The service life study consisted of assembling and compiling historical data from the records related to the electric utility plant of the Company; statistically analyzing such data to obtain historical trends of survivor characteristics; obtaining supplementary information from management and operating personnel concerning Company practices and plans as they relate to plant operations; and interpreting the above data to form judgments of service life characteristics.

Iowa type survivor curves were used to describe the estimated survivor characteristics of the mass property groups. Individual service lives were used for major individual units of plant, such as large service centers and office buildings within Account 390.20. The life span concept was recognized by coordinating the lives of associated plant installed in subsequent years with the probable retirement date defined by the life estimated for the major unit.

Q. What statistical data were employed in the historical analyses performed for the purpose of estimating service life characteristics?

A. The data consisted of the entries made to record retirements and other transactions related to the electric plant through 2021. These entries were classified by depreciable group, type of transaction, the year in which the transaction took place, and the year in which the plant was installed. Types of transactions included in the data were plant

additions, retirements, transfers, and balances. In the presentation of service life statistics, only the significant exposure points that were utilized in determining survivor curves were plotted. This process is utilized to show my judgment in service life determinations.

Q. What was the source of these data?

A. They were assembled from Company records related to its utility plant in service.

Q. Were the methods used in the service life study the same as those used in other depreciation studies for electric utility plant presented before this Commission?

A. Yes. The methods are the same ones that have been presented previously for PPL Electric before the Commission.

Q. What approach did you use to estimate the lives of significant structures such as substation buildings, office buildings and service centers?

A. I used the life span technique to estimate the lives of significant structures. In this technique, the survivor characteristics of the structures are described by the use of interim survivor curves and estimated probable retirement dates. The interim survivor curve describes the rate of retirement related to the replacement of elements of the structure, such as plumbing, heating, doors, windows, roofs, etc. that occur during the life of the facility. The probable retirement date provides the rate of final retirement for each year of installation for the structure by truncating the interim survivor curve for each installation year at its attained age at the date of probable retirement. The use of

interim survivor curves truncated at the date of probable retirement provides a consistent method for estimating the lives of the several years of installation inasmuch as concurrent retirement of all years of installation will occur when the structure is retired.

Q. Has your firm used this approach in other proceedings before this Commission?

A. Yes, we have used the life span technique on many occasions before the Commission.

Q. What are the bases for the probable retirement years that you have estimated for each structure?

A. The bases for the estimates of probable retirement years are life spans for each structure that are based on judgment and incorporate consideration of the age, use, size, nature of construction, management outlook and typical life spans experienced and used by other electric utilities for similar structures. Most of the life spans result in probable retirement years that are many years in the future. As a result, the retirement of these structures is not yet subject to specific management plans. Such plans would be premature. At the appropriate time, analysis of the economics of rehabilitation and continued use or retirement of the structure will be performed and the results incorporated in the estimation of the structure's life span.

Q. Are the factors considered in your estimates of service life presented in PPL Electric Exhibit JJS-2?

A. Yes. A discussion of the factors considered in the estimation of service lives is presented by account on pages III-3 through III-5 of PPL Electric Exhibit JJS-2.

Q. Please outline the contents of PPL Electric Exhibit JJS-2.

A. PPL Electric Exhibit JJS-2 is presented in eight parts. Part I, Introduction, sets forth the scope and basis of the study. Part II, Estimation of Survivor Curves, includes a description of the Iowa Curves and the formulation of the retirement rate method. Part III, Service Life Considerations, and Part IV, Calculation of Annual and Accrued Depreciation, include a description of the judgment utilized for life parameters and the explanation of depreciation procedures.

Part V, Results of Study, presents a description of the results and summaries of the depreciation calculations. Part VI, Service Life Statistics, presents the graphs and tables which relate to the service life study. Part VII, Detailed Depreciation Calculations, sets forth the detailed depreciation calculations by account. Part VIII, Experienced and Estimated Net Salvage, sets forth the recorded cost of removal and gross salvage for the period 2021 through June 30, 2025, and the estimated amounts for the six months ended December 31, 2025.

Table 1, pages V-4 through V-6, presents the estimated survivor curve, the original cost as of June 30, 2026, and the book reserve and calculated annual depreciation for each account or subaccount of Electric Plant. Table 2, pages V-7 and V-8, presents the bringforward to June 30, 2026, of the book depreciation reserve as of June 30, 2025. Table 3 on pages V-9 and V-10 sets forth the calculation of the annual accruals used in the bringforward. Table 4, page V-11, presents the experienced and estimated net salvage by account during the five-year period, 2021 through 2025.

The section beginning on page VI-1 presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. The section beginning on page VII-2 presents the depreciation calculations related to original cost. The tabulations on pages VII-7 through VII-148 present the calculation of annual depreciation by vintage by account for each depreciable group of utility plant.

Q. Please outline the contents of PPL Electric Exhibit JJS-3.

A. PPL Electric Exhibit JJS-3 includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of June 30, 2027. The descriptions and explanations presented in PPL Electric Exhibit JJS-2 are also applicable to the depreciation calculations presented in PPL Electric Exhibit JJS-3. The graphs and tables related to service life presented in PPL Electric Exhibit JJS-2 also support the service life estimates used in PPL Electric Exhibit JJS-3 inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of June 30, 2027, are organized and presented in the same manner as those as of June 30, 2026.

Q. Please outline the contents of PPL Electric Exhibit JJS-1.

A. PPL Electric Exhibit JJS-1 includes a description of the results, summaries of the depreciation calculations, and the detailed depreciation calculations as of June 30, 2025. The descriptions and explanations presented in PPL Electric Exhibit JJS-2 are also applicable to the depreciation calculations presented in PPL Electric Exhibit JJS-1. The graphs and tables related to service life presented in PPL Electric Exhibit JJS-2 also

support the service life estimates used in PPL Electric Exhibit JJS-1, inasmuch as the estimates are the same for both test years. The summary tables and detailed depreciation calculations as of June 30, 2025, are organized and presented in the same manner as those as of June 30, 2026.

Q. Please use an example to illustrate the manner in which the study is presented in PPL Electric Exhibit JJS-2.

A. I will use Account 364.40, Poles, Towers and Fixtures - Poles, as my example; inasmuch as it is one of the larger depreciable groups and represents approximately 9 percent of the original cost of depreciable utility plant as of June 30, 2026.

The retirement rate method was used to analyze the survivor characteristics of this group. The life table for the 1912-2021 experience band is presented on pages VI-69 through VI-71 of PPL Electric Exhibit JJS-2. The life table, or original survivor curve, is plotted along with the estimated smooth survivor curve, the 55-R0.5, on page VI-68.

The calculation as of June 30, 2026, is presented on pages VII-65 through VII-67 of PPL Electric Exhibit JJS-2 and is based in part on the bringforward of the book reserve. The tabulation in PPL Electric Exhibit JJS-2 sets forth the installation year, the original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual. The totals are brought forward to the table on page V-5 in PPL Electric Exhibit JJS-2.

Q. Do you believe PPL Electric Exhibit JJS-2 reflects the appropriate survivor curves for PPL Electric to be adopted in this proceeding?

A. Yes, I do. The methods and procedures utilized in the development of survivor curves are consistent with past practices for PPL Electric and Pennsylvania ratemaking regulations. The service life study was completed as of December 31, 2021.

Q. Do you believe that the annual depreciation rates and the related depreciation expense claims should be adopted in this proceeding?

A. Yes, I do. The depreciation rates and expense claims are based on appropriate survivor curves, and the depreciation procedures are the same as those utilized by PPL Electric in past filings before this Commission.

Q. In what manner is net salvage incorporated in the depreciation calculations?

A. As stated on page I-5 of PPL Electric Exhibit JJS-2, no adjustment for net salvage was made to the calculated annual depreciation amounts. The total calculated annual depreciation set forth on page I-5 of PPL Electric Exhibit JJS-1, page V-6 of PPL Electric Exhibit JJS-2 and on page I-5 of PPL Electric Exhibit JJS-3 should include an addition for the amortization of negative net salvage in accordance with the practice of this Commission. The amortization is based on experience during the period 2020 through 2024 for the calculation as of June 30, 2025, and on experience during the period 2021 through June 30, 2025, plus estimates for the last six months of 2025 for the calculation as of June 30, 2026.

The amortization for the June 30, 2027 calculation is based on experience during the period 2022 through June 30, 2025, plus estimates for the period July 2025 through December 2026. The amounts of the five-year amortizations are calculated in Table 2 on page I-6 of PPL Electric Exhibit JJS-1, in Table 4 on page V-8 of PPL Electric Exhibit JJS-2 and in Table 4 on page I-7 of PPL Electric Exhibit JJS-3.

Q. Are there new accounts or subaccounts established due to reclassification of assets related to FERC Order 898?

A. Yes. There are newly established subaccounts for Account 351.00, Account 363.00, 387.00 and Account 397.00. The assets in each of the accounts or subaccounts have depreciable lives or amortization periods consistent to what was established before the assets were reclassified to the new FERC Order 898 account numbering which went into effect in early 2025. These accounts are presented in Table 1 of each exhibit.

Q. Does this complete your direct testimony?

A. Yes, it does.

SECTION I
PREFACE

Cost allocation studies are submitted in support of the direct testimony of Bickey Rimal and in response to Question IV-E-1 of Exhibit Regs. § 53.53, Part IV-Rate Structure and Cost Allocation, regarding a fully distributed Cost-of-Service study. Exhibit BR 1 presents results for the fully projected future test year ending June 30, 2027. The Commission's Order at Docket No. R-80031114 provided that PPL Electric's Historical retail rate filings should be on a Pennsylvania jurisdictional basis only.

The study contained herein provides the assignment/allocation of system costs between the Federal and Pennsylvania jurisdictions, and the allocation of the Pennsylvania jurisdictional costs to retail customer rate schedule classes. This preface explains the general methodology utilized in the preparation of PPL Electric's study.

Total cost of providing service, broadly stated, is made up of the following generally recognized and accepted components:

1. Operation and maintenance expenses.
2. Depreciation and amortization expenses associated with the investment in utility facilities.
3. Taxes, including income taxes.
4. Return on net investment in utility facilities, materials and supplies, and other working capital requirements, collectively called measures of value or rate base.

Through a cost allocation study, total Company costs are allocated to residential, commercial, industrial, and other customer classes or groups. Comparing the costs to serve any customer group with that group's rate revenues provides a measure of the return realized from that group. Relating that realized return to the allocated rate base for the group results in the rate of return (expressed as a percentage), which can be compared with the system average rate of return and the rates of return realized from other classes of customers. This allows for a comparison across classes to determine the presence and extent of subsidization (i.e., when one class pays more than the cost to serve them and another pays less than their share of costs).

Overall costs of providing service are allocated to groups of customers on the basis of their distinctive service characteristics. One main service characteristic is the voltage level at which the electric service is rendered. PPL Electric's investment in utility property and the applicable operating costs must be broken down and reassembled into the following functional voltage level component categories:

1. High voltage transmission facilities which are necessary to serve all customer classes;

2. Transmission system (500 kV, 230 kV, 138 kV and 69 kV) facilities from which large power customers (Rate Schedules LP-5) and certain resale customers are directly served, and which also are necessary to serve all other classes at lower voltages;

3. Primary system (23 kV and 12 kV) facilities from which large general service customers (Rate Schedule LP-4) and certain other resale customers are directly served, and which are necessary to serve other classes at lower voltages, but are not required to serve customers at transmission voltage levels; and

4. Secondary distribution system, encompassing the remainder of the system, from which street lighting, general service, commercial space heating, and residential customers are served, but which is not required to serve customers served at higher voltage levels.

PPL Electric's records are kept in accordance with the Federal Energy Regulatory Commission's Uniform System of Accounts ("FERC Accounts"), which has been adopted by this Commission. The FERC Accounts does not identify the costs in precisely the functional category groupings required for cost allocation purposes for all functions. Thus, a rearrangement of book data is required. Major examples of the steps in this process, which are detailed in Exhibit BR-2, are:

1. Separation of distribution facilities between the primary and secondary voltages, and the classification of the customer-related and demand-related components of primary and secondary facilities' investment; and

2. Assignment of operation and maintenance expenses to categories based generally on plant investment assignments.

After reassembling the costs into the appropriate functional components, each customer group is allocated its share of the investment and operating costs of the applicable functional categories. The four basic classification criteria for determining the share of component costs chargeable to particular customer groups are:

1. Relative demand responsibility. A major factor governing the assignment of plant investment is the necessity to provide distribution capacity sufficient to be able to reliably meet the combined demands of all PPL Electric's customers. Investment and other costs considered demand-related are allocated on the basis of the pro rata demand responsibilities of the classes.

2. Customer costs. A substantial portion of system costs is not related to the

amount of service provided. Meter investment and meter reading costs are customer-related, as are customer service and customer accounting costs. In addition, a portion of a utility's investment in poles, line transformers, conductors, etc., must be made irrespective of the customer's demand, or simply because the customer is there to be served. Costs considered customer-related are allocated on the basis of either the number of customers or the weighted number of customers in each class.

3. Direct assignment. In a few cases, the FERC System of Accounts makes a specific identification of costs which permits assignment directly to the rate class or customer group responsible for those costs. An example is the direct assignment of street lighting-related costs to the street lighting customer group.

PPL Electric's primary (12 kV) and secondary voltage level demand -related costs are allocated based on a class's maximum annual non-coincident peak demand. This approach recognizes that distribution facilities are sized to meet local area peaks.

Two steps are required in the assignment/allocation process. The total electric system costs are allocated or directly assigned between FERC jurisdictional customers and Pennsylvania retail service customers. The Pennsylvania jurisdictional values are further allocated among the retail customer classes and related to the present and proposed revenues from those classes to determine the class rates of return on rate base.

PPL ELECTRIC UTILITIES CORPORATION
EXHIBIT JDT-1
FULLY PROJECTED FUTURE TEST YEAR ENDED JUNE 30, 2027

SECTION II
COST ALLOCATION TO PENNSYLVANIA RETAIL SERVICE CUSTOMERS

SUMMARY OF RESULTS

The summaries contained in this section present the results of the detailed allocations of Pennsylvania jurisdictional costs at present and proposed rates for the fully projected future test period. The summaries consist of an array of customer class income statements and the relationships of class operating incomes (or returns) to the respective allocated measures of value or rate base. The relationship of each class rate of return to the total Pennsylvania jurisdictional rate of return is also presented.

PPL Electric views these relationships to be useful because one of the objectives of ratemaking is to have each class producing a rate of return as close to the overall system average rate of return as appropriate. The second part provides details regarding the mitigation approach implemented to limit large increases to certain classes.

The third part provides details by FERC account including taxes and pro forma adjustments for each of these jurisdictions. This section is organized by several sections as listed: Net Plant, Depreciation, Rate Base Adjustments, O&M, Labor (for development of labor allocator), Depreciation Expense, Amortization, Taxes, and Revenues. Further, the account balances that are inputs to this section are directly from the PUC Jurisdiction Distribution columns within the Jurisdictional model as provided in Section III.

The functionalization, classification, and allocation that support the results provided in this section are detailed in Section IV.

FULLY PROJECTED FUTURE TEST YEAR ENDED JUNE 30, 2027

SECTION III
COST ALLOCATION TO JURISDICTIONS AT PRESENT RATES

This section shows the allocation to Federal jurisdictional wholesale services and customers supplied on a system cost basis. There are two parts to this section; the first provides a summary of the resulting allocations including rate base, expenses, taxes and return for (1) transmission and (2) PAPUC Jurisdictional. The second part of this section provides details by FERC account including taxes and pro forma adjustments for each of these jurisdictions. This section is organized by several sections as listed: Total Plant, Accumulated Depreciation, Rate Base Adjustments, O&M, Labor (for development of labor allocator), Depreciation Expense, Amortization, Taxes, and Revenues. Further, the results of this section directly feed the account balances used in the Class Cost of Service Study provided in Section II. The functionalization, classification, and allocation that support the results provided in this section are detailed in Section V.

SECTION IV
RETAIL SERVICE CUSTOMERS – FUNCTIONALIZATION, CLASSIFICATION, AND ALLOCATION

This section shows the functionalization, classification, and allocation factors for each FERC account that ultimately constitutes the total revenue requirements. The second part of this section, after this description, provides details on the functionalization and classification of each account. In this part each account of the revenue requirement and the amount of dollars therein, is shown in the first column of costs. The other columns show the assignment of function, classification, and allocation factors to each cost item. Thus, one can see the amount of a particular account that is primary, secondary, customer, and demand.

Once the costs are functionalized and classified they are then allocated to rate classes. This is shown in the second part of this section and is broken into categories, such as rate base, depreciation, O&M expense, and taxes.

Lastly, a summary of the class allocation factors, both external and internal, that are utilized to allocate the functionalized and classified costs to rate classes is provided.

The primary secondary allocations and minimum system study as well as the allocation factors that support the results presented in this section are provided in Exhibit BE-2.

PPL ELECTRIC UTILITIES CORPORATION
EXHIBIT JDT-1
FULLY PROJECTED FUTURE TEST YEAR ENDED JUNE 30, 2027

SECTION V
JURISDICTIONAL – FUNCTIONALIZATION, CLASSIFICATION, AND ALLOCATION

This section shows the functionalization, classification, and allocation factors for each FERC account that ultimately constitutes the total revenue requirements. The second part of this section, after this description, provides details on the functionalization and classification of each account. In this part each account of the revenue requirement and the amount of dollars therein, is shown in the first column of costs. The other columns show the assignment of function, classification, and allocation factors to each cost item.

Once the costs are functionalized and classified they are then allocated to FERC jurisdictional services and customers and PUC Jurisdictional retail customers. This is shown in the fourth part of this section and is broken into categories, such as rate base, depreciation, O&M expense, and taxes.

Lastly, a summary of the jurisdictional allocation factors, both external and internal, that are utilized to allocate the functions to rate classes is provided.

The primary secondary allocations and minimum system study that support the results presented in this section are provided in Exhibit BR-2.

SECTION I
FUNCTIONAL STUDIES

DISTRIBUTION PRIMARY SECONDARY SPLIT & MINIMUM SYSTEM STUDY

The below exhibit provide the results of special studies used to functionalize and classify PPL Electric's distribution plant.

Distribution plant is functionalized into the following categories:

- Substations
- Poles Towers & Fixtures – Primary and Secondary
- Overhead Lines – Primary and Secondary
- Underground Lines – Primary and Secondary
- Underground Conduits – Primary and Secondary
- Line transformers
- Services
- Meters
- Area Lighting
- Street Lighting

In order to split some accounts between primary and secondary, a primary secondary split study is conducted to sub-functionalize distribution plant between those two voltage categories.

The plant balances for both the primary and secondary system are then classified into demand and customer components based on a "minimum size system" study.

Distribution Plant - Functionalization

Land and Land Rights (Account 360)

Land and Land Rights is functionalized based on the total functionalization of distribution plant.

Structures and Improvements & Substations (Accounts 361 and 362)

The costs associated with Structures and Improvements (361) and Substations (362) are functionalized as primary distribution plant and allocated on a demand basis.

Poles, Towers and Fixtures (Account 364)

Account 364 is segmented into primary and secondary functions based on plant account retirement units. However, there are a few poles and associated attachments that cannot be categorized directly as primary or secondary. For example, there are investments in 40-foot poles that are categorized as "split", which can be assigned to either the primary or secondary function. The assignment for these types of poles is based on the ratio of investment in overhead conductors assigned to the primary and secondary functions. See details regarding the functionalization of Overhead Conductors and Devices (Account 365) for the development of this ratio. The attachments associated with wooden poles are assigned to the primary and secondary functions based on the number of poles assigned to each function. The number of poles used to segment the primary function is doubled to reflect the fact that primary poles require twice the investment in attachments.

The remaining investment in Account 364 (hardware and devices, guys, anchors, etc.) is assigned to the primary and secondary functions based on ratio developed from the steps above.

Overhead Conductors and Devices (Account 365)

Overhead conductors were functionalized between primary and secondary voltages by utilizing length of conductors and the replacement costs of conductors serving primary versus secondary distribution systems. Using PPL Electric's asset management system, the length of conductors carrying primary versus secondary voltage was obtained. For each conductor type, the length of the conductor was multiplied by the replacement cost of that conductor to obtain the total cost of that conductor type. For conductor types that are no longer used, a replacement conductor was identified, and the cost of that replacement conductor was used in the analysis. Using the total costs of all conductors by voltage, the ratio of primary conductors to secondary conductors was calculated.

Underground Conductors and Devices (Account 367)

Similar to Overhead conductors, underground conductors were functionalized between primary and secondary voltages by utilizing length of conductors and the replacement costs of conductors serving primary versus secondary distribution systems.

Underground Conduit (Account 366)

The functionalization of Underground Conduit (Account 366) is based on the

functionalization of underground conductor. Accordingly, the same percentages of primary and secondary was applied to underground conduits.

Line Transformers (Account 368)

The investment in Line Transformers (Account 368) is considered to be a 100% secondary function.

Services (Account 369)

The investment in Services (Account 369) is considered to be a 100% secondary function.

Area Lighting (Account 371)

The investment in area lighting is considered to be a 100% secondary function.

Street Lighting (Account 373)

The investment in street lighting is considered to be a 100% secondary function.

Distribution Plant - Classification Minimum Size System Study

A "minimum size system" study was conducted to determine the demand and customer components of the primary and secondary voltage level distribution plant accounts. The "minimum size" method, which is described in the NARUC Cost Allocation Manual, was used as a guide in the preparation of this study.

The study involved the determination of the current cost of the "minimum size" plant investment (poles, conductors, cables, and line transformers) that is necessary to provide reliable electric service to customers.

Poles, Towers & Fixtures (Account 364)

The Primary and Secondary Analysis for poles described above provided the total cost and total count of primary and secondary poles. This total count of primary poles was multiplied by the embedded cost of a minimum sized primary pole to calculate the minimum system cost of primary poles. This was then compared to the total embedded cost of primary poles to determine the portion of primary poles that is customer related and demand related. A similar analysis was conducted for secondary poles.

Overhead Conductors and Devices (Account 365)

The Primary and Secondary Analysis for overhead conductors described above provided the total cost and total circuit miles of primary and secondary conductors. A hypothetical minimum system replacement cost was calculated by taking the total circuit feet of overhead conductor associated with the primary system and multiplying it by the replacement cost of the minimum sized primary overhead conductor. The minimum system replacement cost was then compared to the total system replacement costs to arrive at the customer related and demand related costs for primary overhead conductors. A similar analysis was conducted for secondary overhead conductors.

Underground Conduit (Account 366)

This account is assigned the same customer/demand ratio as Underground Conductors (Account 367).

Underground Conductors (Account 367)

The Primary and Secondary Analysis for underground conductors described above provided the total cost and total circuit miles of primary and secondary conductors. A hypothetical minimum system replacement cost was calculated by taking the total

circuit feet of underground conductor associated with the primary system and multiplying it by the replacement cost of the minimum sized primary underground conductor. The minimum system replacement cost was then compared to the total system replacement costs to arrive at the customer related and demand related costs for primary underground conductors. A similar analysis was conducted for secondary underground conductors.

Line Transformers (Account 368)

Using PPL Electric's asset management system, the count of line transformer by type (overhead, pad-mounted, sub-surface, etc.) was obtained. For each transformer type, the number of transformers was multiplied by the replacement cost of that transformer type to obtain the total cost associated with that transformer type. For transformer types that are no longer used, a replacement transformer was identified, and the cost of that replacement transformer was used in the analysis. A hypothetical minimum system replacement cost was calculated by multiplying the total count of line transformers by the replacement cost of the minimum sized transformer. The minimum system replacement cost was then compared to the total system replacement costs to arrive at the customer related and demand related costs for line transformers.

Operation & Maintenance Expense

The process of functionalizing distribution operation & maintenance ("O&M") expense begins with the proration of Supervision and Engineering (Accounts 580 and 590) expense to the other distribution O&M accounts based on the ratio of the labor component of each account to the total distribution labor cost. After prorating the Supervision and Engineering expense, the other O&M accounts are functionalized and classified based on the functionalization of the corresponding distribution plant accounts.

The following tables provide details on this process, first showing the split of distribution accounts between primary and secondary and then the development of the minimum system study.

SECTION II
DEVELOPMENT OF ALLOCATORS FOR PENNSYLCANIA RETAIL CUSTOMERS

The first part of this section provides a listing of all the allocators used in the ACOSS. Details are then provided for the development of the allocation of meter costs, transformers and services. A summary of the methods employed to develop these allocators is provided below.

Meters (Account 370)

A meter study was conducted to develop the meters allocator. Meter weights were developed for each customer class based on the number and type(s) of meters installed for each rate class and the associated costs of each type of meter. The analysis also accounted for the incremental cost associated with transformer rated meters. The total meter cost along with necessary equipment provided an estimate of the relative cost of providing metering service for each rate class. The relative-weight factor was then multiplied by the number of customers in the class to develop the meter allocation factors for each test year.

Services (Account 369)

The service allocator is used to allocate the service-related cost contained in FERC Account 369. The service allocator was developed based on a sample of recent service installations. For each rate class, the length and type of service installed using recent installation data was obtained from the Company. The total cost of service installation for each rate class was calculated by multiplying the length of each service installation by the replacement cost of that service type. A cost per installation was calculated by each class and this information was used to develop a weighting factor for each class. This weighting factor was ultimately used to develop the service allocator for each of the three test years.

Demand Allocators

The non-coincident peak (NCP) demand method was utilized to allocate demand-related distribution system costs. NCP refers to the highest level of demand that an individual class experienced during the year or month. The NCP information was based on the AMI meter reading for each customer class for the historical test year. The historical NCP was divided by the number of customers to calculate the NCP per customer for each class. This value was then multiplied by the forecasted number of customers in

FPFTY to estimate the NCP for FPFTY. For the LP-5 class, which is forecasted to have significant growth in load, NCP per MWh was used to estimate the NCP for FPFTY.

An Average and Excess (A&E) demand allocator was also calculated and is provided for reference within this Exhibit.

Other Allocators

This section also provides summary of other allocators used with the study:

- Customer Counts by Class
- Revenue by Class
- Usage by Class
- Uncollectible Expense by Class
- Customer Deposits by Class
- Late Payments by Class
- System Loss Factors

PPL Electric Utilities Corporation

TERRITORY COVERED BY THIS TARIFF

BERKS COUNTY
Boroughs of Morgantown, New Morgan, Robesonia, Shillington, Sinking Spring, Wernersville, West Lawn, Womelsdorf, Wyomissing, and Wyomissing Hills.
Townships of Caernarvon, Cumru, Heidelberg, Lower Heidelberg, South Heidelberg, and Spring.

BUCKS COUNTY
Boroughs of Richlandtown, Sellersville, Silverdale, Telford, and Turmbauersville.
Townships of East Rockhill, Haycock, Hilltown, Milford, Richland, Springfield, and West Rockhill.

CARBON COUNTY
Boroughs of Beaver Meadows, Bowmanstown, East Side, Jim Thorpe, Lansford, Nesquehoning, Palmerton, Parryville, Summit Hill, and Weissport.
Townships of Banks, East Penn, Franklin, Kidder, Lausanne, Lehigh, Lower Towamensing, Mahoning, Packer, Penn Forest, and Towamensing.

CHESTER COUNTY
Boroughs of Atglen, Elverson, and Honey Brook.
Townships of Honey Brook, West Nantmeal, and West Sadsbury.

CLINTON COUNTY
City of Lock Haven.
Boroughs of Avis, Flemington, Loganton, Mill Hall, Renovo, and South Renovo.
Townships of Allison, Bald Eagle, Castanea, Chapman, Colebrook, Crawford, Dunnstable, Gallagher, Greene, Grugan, Logan, Noyes, Pine Creek, Wayne, and Woodward.

COLUMBIA COUNTY
Town of Bloomsburg.
Boroughs of Ashland, Benton, Berwick, Briar Creek, Centralia, Millville, Orangeville, and Stillwater.
Townships of Beaver, Benton, Briar Creek, Catawissa, Cleveland, Conyngham, Fishing Creek, Franklin, Greenwood, Hemlock, Jackson, Locust, Madison, Main, Mifflin, Montour, Mount Pleasant, North Centre, Orange, Pine, Roaring Creek, Scott, South Centre, and Sugarloaf.

CUMBERLAND COUNTY
Boroughs of Camp Hill, Carlisle, Lemoyne, Mechanicsburg, New Cumberland, Newville, Shiremanstown, West Fairview, and Wormleysburg.
Townships of Dickinson, East Pennsboro, Hampden, Lower Allen, Middlesex, Monroe, North Middleton, North Newton, Penn, Silver Spring, South Middleton, South Newton, Upper Allen, and West Pennsboro.

DAUPHIN COUNTY
City of Harrisburg.
Boroughs of Berrysburg, Dauphin, Elizabethville, Gratz, Halifax, Highspire, Hummelstown, Lykens, Millersburg, Paxtang, Penbrook, Pillow, Steelton, and Williamstown.
Townships of Derry, East Hanover, Halifax, Jackson,Jefferson, Lower Paxton, Lower Swatara, Lykens, Middle Paxton, Mifflin, Reed, Rush, South Hanover, Susquehanna, Swatara, Upper Paxton, Washington, Wayne, West Hanover, Wiconisco, and Williams.

JUNIATA COUNTY
Boroughs of Mifflin, Mifflintown, Port Royal, and Thompsontown
Townships of Delaware, Fayette, Fermanagh, Greenwood, Milford, Monroe, Susquehanna, Turbett, and Walker.

LACKAWANNA COUNTY
Cities of Carbondale and Scranton.
Boroughs of Archbald, Blakely (part), Clarks Green, Clarks Summit, Dalton, Dickson City, Dunmore, Jermyn, Jessup, Mayfield, Moosic, Moscow, Old Forge, Olyphant (part), Taylor, Throop, and Vandling.
Townships of Abington, Benton, Carbondale, Clifton, Covington, Elmhurst, Fell, Glenburn, Greenfield, Jefferson, La Plume, Lehigh, Madison, Newton, North Abington, Ransom, Roaring Brook, Scott, South Abington, Spring Brook, and West Abington.

LANCASTER COUNTY
City of Lancaster.
Boroughs of Adamstown, (part), Akron, Christiana, Columbia, Denver, East Petersburg, Elizabethtown, Ephrata (part), Lititz, Manheim, Marietta, Millersville, Mount Joy, Mountville, New Holland, Quarryville, Strasburg, and Terre Hill.
Townships of Bart, Brecknock, Caernarvon, Clay, Colerain, Conestoga, Conoy, Drumore, Earl, East Cocalico, East Donegal, East Drumore, East Earl, East Hempfield, East Lampeter, Eden, Elizabeth, Ephrata, Fulton, Lancaster, Leacock, Little Britain, Manheim, Manor, Martick, Mount Joy, Paradise, Penn, Pequea, Providence, Rapho, Sadsbury, Salisbury, Strasburg, Upper Leacock, Warwick, West Cocalico, West Donegal, West Earl, West Hempfield, and West Lampeter.

LEBANON COUNTY
Borough of Richland.
Townships of Heidelberg and Millcreek.

LEHIGH COUNTY
Cities of Allentown and Bethlehem.
Boroughs of Alburtis, Catasauqua, Coopersburg, Coplay, Emmaus, Fountain Hill, Macungie, and Slatington.
Townships of Hanover, Heidelberg, Lower Macungie, Lower Milford, Lowhill, North Whitehall, Salisbury, South Whitehall, Upper Macungie, Upper Milford, Upper Saucon, Washington, and Whitehall.

LUZERNE COUNTY
Cities of Hazleton, Pittston, and Wilkes-Barre.
Boroughs of Ashley, Avoca, Bear Creek Village, Conyngham, Dupont, Duryea, Exeter, Freeland, Hughestown, Jeddo, Laflin, Laurel Run, Nescopeck, Nuangola, Penn Lake Park, West Hazleton, West Pittston, White Haven, and Yatesville.
Townships of Bear Creek, Black Creek, Buck, Butler, Dennison, Dorrance, Exeter, Fairview, Foster, Hanover, Hazle, Hollenbach, Jenkins, Nescopeck, Pittston, Plains, Rice, Salem, Slocum, Sugarloaf, Wilkes-Barre, and Wright.

PPL Electric Utilities Corporation

TERRITORY COVERED BY THIS TARIFF (CONTINUED)

LYCOMING COUNTY
City of Williamsport.
Boroughs of Duboistown, Hughesville, Jersey Shore, Montgomery, Montoursville, Muncy, Picture Rocks, Salladasburg, and South Williamsport.
Townships of Anthony, Armstrong, Bastress, Brady, Clinton, Eldred, Fairfield, Franklin, Hepburn, Jordan, Limestone, Loyalsock, Lycoming, Mifflin, Mill Creek, Moreland, Muncy, Muncy Creek, Nippenose, Old Lycoming, Penn, Piatt, Porter, Shrewbury, Susquehanna, Upper Fairfield, Washington, Watson, Wolf, and Woodward.

MONROE COUNTY
Boroughs of East Stroudsburg (part), Mount Pocono, and Stroudsburg (part).
Townships of Barrett, Chestnuthill, Coolbaugh, Eldred, Jackson, Paradise, Pocono, Polk, Price, Smithfield, Stroud, Tobyhanna, and Tunkhannock.

MONTGOMERY COUNTY
Boroughs of East Greenville, Pennsburg, Red Hill, Souderton, and Telford.
Townships of Franconia, Hatfield, and Upper Hanover.

MONTOUR COUNTY
Boroughs of Danville and Washingtonville. Townships of Anthony, Cooper, Derry, Liberty, Limestone, Mahoning, Mayberry, Valley and West Hemlock.

NORTHAMPTON COUNTY
City of Bethlehem.
Boroughs of Freemansburg, Hellertown, Nazareth (part), North Catasauqua, Northampton, Pen Argyl (part), Stockerton, Tatamy, and Walnutport.
Townships of Allen, Bethlehem, Bushkill, East Allen, Forks, Hanover, Lehigh, Lower Mount Bethel, Lower Nazareth, Lower Saucon, Moore, Palmer, Plainfield, Upper Nazareth, Washington, and Williams.

NORTHUMBERLAND COUNTY
Cities of Shamokin and Sunbury.
Boroughs of Herndon, Kulpmont, Marion Heights, McEwensvillle, Milton, Mount Carmel, Northumberland, Riverside, Snydertown, and Turbotville.
Townships of Coal, Delaware, East Cameron, East Chillisquaque, Jackson, Jordon, Lewis, Little Mahanoy, Lower Augusta, Lower Mahanoy, Mount Carmel, Point, Ralpho, Rockefeller, Rush, Shamokin, Turbot, Upper Augusta, Upper Mahanoy, Washington, West Cameron, West Chillisquaque, and Zerbe.

PERRY COUNTY
Boroughs of New Bloomfield, Landisburg, Liverpool, Marysville, Millerstown, New Buffalo, and Newport.
Townships of Buffalo, Carroll, Centre, Greenwood, Howe, Juniata, Liverpool, Miller, Northeast Madison, Oliver, Penn, Rye, Saville, Southwest Madison, Spring, Tuscarora, Tyrone, Watts, and Wheatfield.

PIKE COUNTY
Townships of Blooming Grove, Greene, Lackawaxen, Palmyra, Porter, and Shohola.

SCHUYLKILL COUNTY
City of Pottsville.
Boroughs of Ashland, Auburn, Coaldale, Cressona, Deer Lake, Frackville, Gilberton, Girardville, Gordon, Landingville, Mahanoy City, McAdoo, Mechanicsville, Middleport, Minersville, Mount Carbon, New Philadelphia, New Ringgold, Orwigsburg, Palo Alto, Pine Grove, Port Carbon, Port Clinton, Ringtown, Shenandoah, Tamaqua, Tower City, and Tremont.
Townships of Barry, Blythe, Branch, Butler, Cass, Delano, East Brunswick, East Norwegian, East Union, Eldred, Foster, Frailey, Hegins, Hubley, Kline, Mahanoy, New Castle, North Manheim, North Union, Norwegian, Pine Grove, Porter, Reilly, Rush, Ryan, Schuylkill, South Manheim, Tremont, Union, Upper Mahantongo, Walker, Washington, Wayne, West Brunswick, West Mahanoy, and West Penn.

SNYDER COUNTY
Boroughs of Beavertown, Freeburg, McClure, Middleburg, Selinsgrove, and Shamokin Dam.
Townships of Adams, Beaver, Centre, Chapman, Franklin, Jackson, Middlecreek, Monroe, Penn, Perry, Spring, Union, Washington, West Beaver, and West Perry.

SUSQUEHANNA COUNTY
Boroughs of Forest City and Union Dale. Townships of Clifford and Herrick.

UNION COUNTY
Boroughs of Hartleton and New Berlin.
Townships of Gregg, Hartley, Kelly, Lewis, Limestone, Union, West Buffalo and White Deer.

PPL Electric Utilities Corporation

TERRITORY COVERED BY THIS TARIFF (CONTINUED)

WAYNE COUNTY
Boroughs of Bethany, Hawley, Honesdale, Prompton, and Waymart.
Townships of Berlin, Canaan, Cherry Ridge, Clinton, Damascus, Dreher, Dyberry, Lake, Lebanon, Lehigh, Mount Pleasant, Oregon, Palmyra, Paupack, Salem, South Canaan, Sterling, and Texas.

WYOMING COUNTY
Borough of Factoryville.
Townships of Clinton, Nicholson, Overfield, and Tunkhannock.

YORK COUNTY
Boroughs of East Prospect and Wrightsville. Townships of Fairview, Hellam and Lower Windsor.

DEFINITIONS

The following words and terms, when used in this Tariff, have the following meanings:

Alternate Service – An alternative source of electric service furnished by the Company to a premises.

Alternative Energy Credits (AECs) – A tradable instrument that is used to establish, verify, and monitor compliance with this act. A unit of credit shall equal one megawatt hour of electricity from an alternative energy source. The alternative energy credit shall remain the property of the alternative energy system until the alternative energy credit is voluntarily transferred by the alternative energy system. (Def. amended July 17, 2007, P.L. 114, No. 35)

Alternative Energy Portfolio Standards - Standards establishing that a certain amount of energy sold from alternative energy sources is included as part of the sources of electric generation by electric utilities within this Commonwealth.

Application for Service - An application submitted by an applicant requesting the Company to extend and provide electric service. This term is distinct from an Interconnection Application.

Back-up Contract Demand - Maximum amount of Back-up Power to be supplied by the Company specified in the Stand-by Service Contract.

Back-up Power - Electric energy and capacity supplied by the Company to replace the energy and capacity ordinarily generated by the Customers on-site generation which is not available during an unscheduled outage.

CIAC – Contribution in Aid of Construction.

Commission – Pennsylvania Public Utility Commission

Company – PPL Electric Utilities Corporation

Company Facilities - Electric facilities owned and operated by the Company.

Contractor Costs – Costs incurred by a contractor as part of a line extension or relocation of facilities.

Contribution in Aid of Construction - A nonrefundable donation or contribution in cash or properties from an individual, governmental agency, or other entity for construction or property-addition purposes.

Customer Charge - The basic service charge to partially cover costs for billing, meter reading, equipment, and service line maintenance.

Customer-generator - A nonutility owner or operator of a net metered distributed generation system with a nameplate capacity of not greater than 50 kilowatts if installed at a residential service or not larger than 3,000 kilowatts at other customer service locations, except for customers whose systems are above three megawatts and up to five megawatts who make their

DEFINITIONS (CONTINUED)

systems available to operate in parallel with the electric utility during grid emergencies as defined by the regional transmission organization or where a microgrid is in place for the primary or secondary purpose of maintaining critical infrastructure ,such as homeland security assignments, emergency services facilities, hospitals, traffic signals, wastewater treatment plants or telecommunications facilities, provided that technical rules for operating generators interconnected with facilities of an electric distribution company, electric cooperative or municipal electric system have been promulgated by the Institute of Electrical and Electronic Engineers and the Pennsylvania Public Utility Commission.

Default Service Provider - An electric distribution company within its certified service territory or an alternative supplier approved by the commission that provides generation service to retail electric customers who:

(1) contract for electric power, including energy and capacity, and the chosen electric generation supplier does not supply the service; or
(2) do not choose an alternative electric generation supplier.

Default Service – Electric generation supply service provided pursuant to a default service program to a retail electric customer not receiving service from an EGS.

Delivery Service - Service that includes the Distribution component of the applicable rate schedule (including all tariff riders and surcharges).

Development Area - Areas being developed for new construction of residential, commercial, or industrial buildings.

Direct Costs - Equal to the estimated contractor costs, estimated direct labor and estimated material costs, less an amount equal to any estimated maintenance expense avoided as a result of the relocation.

Distribution Charge (Delivery) - Part of the basic service charges on every customer's bill for delivering electricity from the electric distribution company to your home or business. The distribution charge is regulated by the Public Utility Commission. This charge will vary according to how much electricity you use.

Distribution Line Facilities - Company-owned facilities associated with the distribution line that are located upstream of the service line.

Distribution Service - The delivery of electricity to your home or business. This includes local wires, transformers, substations and other equipment used to deliver electricity to end-use consumers from the high-voltage transmission lines.

DEFINITIONS (CONTINUED)

Distribution System – The portion of the of an electric system that is dedicated to delivering electric energy to an end-user. For purposes of this tariff, the distribution system includes all lines energized at voltages less than the nominal 69,000 volts and excludes service extensions and lines energized at voltages of the nominal 69,000 volts or higher. However, this definition does not affect the Company's obligations under the Federal Power Act and/or the Public Utility Code, as applicable, to:

(1) provide safe, reliable, and adequate retail electric service to customer taking service at voltages of 69,000 volts and above; and
(2) provide just and reasonable and non-discriminatory distribution and transmission rates, terms, and conditions of service to such customers.

Dwelling – A living space consisting of at least permanent provisions for shelter, dining, sleeping, and cooking, with provisions for permanent electric, water, and sanitation services.

EDC – Electric Distribution Company

EGS – Electric Generation Supplier

Electric Distribution Company - The public utility providing facilities for the jurisdictional transmission and distribution of electricity to retail customers, except building or facility owners or operators that manage the internal distribution system serving the building or facility and that supply electric power and other related electric power services to occupants of the building or facility.

Electric Generation Supplier - A person or corporation, generator, broker, marketer, aggregator or any other entity licensed by the PUC that sells electricity to customers, using the transmission or distribution facilities of EDC.

Extraordinary Storms - An item that exceeds five percent (5%) of a utility's annual net income. The Company will consider storm damage expense exceeding 5% of the its annual distribution net income as extraordinary for SDER recovery purposes.

Fully Allocated Costs – Costs incurred by the Company, including overhead, that are allocated entirely to the customer at issue, except as may be further provided in this tariff.

GSC – Generation Service Charge

ICAP – Installed Capacity

Installed Capacity - The summer net capability of a generating unit as determined in accordance with PJM manual M-21, Rules and Procedures for Determination of Generation Capability and within the capacity interconnection right limits of the bus to which it is connected.

Interconnection Application - An application submitted by an interconnection applicant seeking to interconnect an alternative energy source with the Company's distribution system.

DEFINITIONS (CONTINUED)

Large C&I – Large Commercial and Industrial. Except as may be further defined in this tariff, Large C&I consists of Rate Schedules LP-4 and LP-5.

Legal Rate of Interest – An interest rate of six (6) percent per annum, or the interest rate defined by 41 P.S. § 202 or its successor.

Line Extension - Any construction of Company-owned electrical facilities and equipment beyond the existing distribution system that are needed to serve a new electric service applicant, including, but not limited to, transformers, and transformer devices.

Line Extension Guarantee - The required amount of distribution revenue that an electric service applicant must guarantee for the Company to construct a line extension, as determined under Rule 3 of the Tariff.

Locational Marginal Price (LMP) - The marginal price for energy at the location where the energy is delivered or received. LMP is a pricing approach that addresses transmission system congestion and loss costs, as well as energy costs.

Maintenance Power - Electric energy and capacity supplied by an electric utility during scheduled outages of the Customer's on-site generation.

Maximum Registered Peak Load - A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. The maximum registered peak load used to assign customers to their applicable rate schedule will be the customer's highest maximum registered peak load (kW) in the most recent 12-month period ending September 30. For new customers without a 12-month billing history, the maximum registered peak load shall be based on the Company's estimate using factors such as, but not limited to, similarly equipped buildings and similarly utilized buildings and square footage. As related to customer-generators, this estimate shall also be inclusive of the nameplate capacity of the generation system.

Multi-tenancy Commercial Building – Any structure which contains or houses three or more separate and distinct residential or commercial units.

MW – Megawatts

Net Energy Output - The difference in energy between the Wholesale Generation Facility's output and Station Power over a monthly period, as determined by the PJM. Net Energy Output is positive when the output exceeds the Station Power and negative when the Station Power exceeds the output, all as measured by an electronic meter acceptable to the Company.

Net Service – The provision of service to a Wholesale Generation Facility under Rule 11.

Non-bypassable – Applicable to the rate schedules without exception.

DEFINITIONS (CONTINUED)

Non-Profit Ambulance Service - A separately metered service location consisting of a building, sirens, a garage for housing vehicular ambulance equipment, or a facility that is qualified by the IRS as non-profit and certified by Pennsylvania Department of Health as a provider of ambulance services. The use of electric service by the customer of record at this location shall be to support the activities of the non-profit ambulance service.

Non-Profit Rescue Squad - A separately metered service location consisting of a building, sirens, a garage for housing vehicular rescue equipment, or a facility that is qualified by the IRS as non-profit and recognized by PEMA and the Departments of Health as a provider of rescue services. The use of electric service by the customer of record at this location shall be to support the activities of the non-profit rescue squad.

Non-Profit Senior Citizen Center - A separately metered service location consisting of a facility for the use of senior citizens coming together as individuals or groups where access to a wide range of service to senior citizens is provided, which is qualified by the Internal Revenue Service (IRS) as non-profit and recognized by the Pennsylvania Department of Aging as an operator of a senior citizen center. The use of electric service by the customer of record at this location shall be to support the activities of the non-profit senior citizen center.

Non-Residential Customer – A customer receiving service under a Small C&I or Large C&I rate schedule.

On-Peak Months – For purposes of Rule 6, the months of December through February and June through September.

Off-Peak Months – For purposes of Rule 6, the months of March, April, May, October, and November.

Pennsylvania Public Utility Commission – The state agency that provides oversight, policy guidance, and direction to public utilities in Pennsylvania.

PJM Reliability Pricing Model - PJM's capacity market design that includes a series of auctions to satisfy the reliability requirements of the region PJM serves for a delivery year.

Point of Delivery – The point designated by the Company where Company’s service conductors are connected to customer’s service entrance conductors, terminals, or bus.

PPL Electric – PPL Electric Utilities Corporation

Price-to-Compare - A line item that appears on a retail customer’s monthly bill for default service. The PTC is equal to the sum of all unbundled generation and transmission related charges to a default service customer for that month of service.

Primary Voltage – Voltage greater than 600 volts.

Prime Rate of Interest – The prime rate for commercial borrowing.

DEFINITIONS (CONTINUED)

PTC – Price-to-Compare

PUC – Pennsylvania Public Utility Commission

QF – Qualifying Facility

Qualifying Facility - A cogeneration facility or a small power production facility which meets the criteria contained in 18 CFR Part 292 (relating to regulations under sections 201 and 210 of the Public Utility Regulatory Policies Act of 1978 with regard to small power producers and cogenerators).

Residential – Customers served under Rate Schedule RS.

REMSI – Rules for Electric Metering and Service Installations

RPM – Reliability Pricing Model

Secondary Voltage – Voltage of 600 volts or less.

Service extension - The extension of the Company's service line and associated facilities downstream from the distribution line to provide service to the customer.

Service Extension Facilities – Company-owned facilities that are located downstream of the distribution line, including the service line, and meter.

Small C&I – Small Commercial and Industrial. Except as may be further defined in this tariff, Small C&I consists or Rate Schedules GS-1, GS-3, BL,SA, SM (R), SHS, SLE, and SE.

Speculative - When, in the Company's opinion, there is doubt as to the initial or continued use of the new facilities by the customer. This may include, but is not limited to separate points of delivery, and service at locations which are relatively inaccessible or remote, or where the customer has less investment than is required by the Company to supply service.

Standby Service Contract - Signed agreement between the customer and the Company that specifies the contractual demand levels for Supplementary Service, Back-Up Service, and Maintenance Service.

Station Power - Energy used for operating the electric equipment on the site of a Wholesale Generation Facility located in the PJM control area or for the heating, lighting, air-conditioning and office equipment needs of buildings on the site of such a Wholesale Generation Facility, which are used solely in the operation, maintenance, or repair of the facility. Station Power does not include any energy used to power synchronous condensers, used for pumping at a pumped storage facility, for restoration-related or black start service or to facilities unrelated to the operation of the Wholesale Generation Facility including, but not limited to buildings or structures on the site of such a Wholesale Generation Facility that are metered separately and served directly from the Company's distribution system.

DEFINITIONS (CONTINUED)

Supplementary Contract Demand - Maximum amount of Supplementary Power to be supplied by the Company specified in the Stand-by Service Contract.

Supplementary Power - Electric energy and capacity supplied by the Company and regularly used in addition to the energy and capacity supplied by the Customer's on-site generation.

Total Contract Demand – The sum of Supplementary Contract Demand and Back-up Contract Demand.

Tenant - An occupant of a multi-tenancy commercial building or parcel where it is expected that tenure shall be for a year or more. For the purpose of this rule, the term multi-tenancy commercial building shall include any structure which contains or houses 3 or more separate and distinct residential or commercial units.

Transmission System - The portion of the electric system that is dedicated to transmitting electric energy. For purposes of this tariff, the transmission system includes all service extensions and lines energized at voltages of nominal 69,000 or higher and excludes all lines energized at voltages less than the nominal 69,000 volts. However, this definition does not affect the Company's obligations under the Federal Power Act and/or the Public Utility Code, as applicable, to: (1) provide safe, reliable, and adequate retail electric service to customers taking service at voltages of 69,000 volts and above; and (2) provide just and reasonable and non-discriminatory distribution and transmission rates, terms, and conditions of service to such customers.

TSC – Transmission Service Charge

Virtual Meter Aggregation - The combination of readings and billing for all meters regardless of rate class on properties owned or leased and operated by a customer-generator by means of the EDC's billing process, rather than through physical rewiring of the customer-generator's property for a physical, single point of contact. Virtual meter aggregation on properties owned or leased and operated by the same customer-generator and located within 2 miles of the boundaries of the customer-generator's property and within a single EDC's service territory shall be eligible for net metering. Service locations to be aggregated must be EDC service location accounts, held by the same individual or legal entity, receiving retail electric service from the same EDC and have measurable electric load independent of the alternative energy system. To be independent of the alternative energy system, the electric load must have a purpose other than to support the operation, maintenance or administration of the alternative energy system.

Volunteer Fire Company - A separately metered service location consisting of a building, sirens, a garage for housing vehicular fire fighting equipment, or a facility certified by the Pennsylvania Emergency Management Agency (PEMA) for fire fighter training. The use of electric service by the customer of record at this location shall be to support the activities of the volunteer fire company.

DEFINITIONS (CONTINUED)

Wholesale Generation Facility - Such equipment owned by a single corporate entity, (a) which is located at a single contiguous site; (b) which is exclusively used to produce electric energy that will be sold at wholesale; (c) which is owned and/or operated by a qualified member of PJM as defined in the PJM Operating Agreement; (d) the Net Energy Output of which is reported on an hourly basis to PJM; and (e) which is interconnected to the Company's facilities. The Company shall have the sole and exclusive right to determine if any particular equipment qualifies as a Wholesale Generation Facility and if the operating characteristics and/or circumstances relating to such equipment are different then described in this definition.

RULES FOR ELECTRIC SERVICE
RULE 1 - ELECTRIC SERVICE TARIFF

A. FILING AND INSPECTION

A copy of this tariff containing rules and rate schedules for all electric service supplied by the Company in the territory covered by this tariff is on file with the Commission. A copy is available upon request consistent with the Commission's regulations. This tariff may be revised, amended, supplemented or otherwise changed from time-to-time in accordance with the Commission's regulations.

B. SUPPLY OF ELECTRIC SERVICE

The supply of electric service includes distribution service and also may include default service.

(1) Default Service

The supply of default service referred to in these rules, rate schedules and in contracts with customers means the readiness and ability of the Company to provide electric capacity, energy, and/or transmission service to:

(a) customers who do not have the opportunity to purchase electric generation supply service from their choice of EGSs;

(b) customers who have the opportunity to purchase electric generation supply service from their choice of EGSs, but do not choose an EGS and continue to purchase default service from the Company, operating as the electric distribution company and default service provider as provided in Section 2807 (E) (3) of the Customer Choice Act;

(c) customers who contract with an EGS for electric generation supply service but who do not receive delivery of such electric generation supply service; and

(d) customers who choose an EGS for electric generation supply service and subsequently purchase default service from the Company, operating as the electric distribution company and default service provider as provided for in Section 2807 (E) (3) of the Customer Choice Act.

Under (c) and (d) above, the Company will provide default service to returning customers pursuant to the Rate Schedule, applicable riders, and agreements under which the customer previously was served, and such service shall not be considered a new application for service for purposes of Rate Schedule applicability.

(2) Distribution Service

The supply of distribution service referred to in these rules, rate schedules, riders, and in contracts with customers means the readiness and ability of the Company to provide distribution of electric capacity and energy at the point of delivery sufficient to meet the needs of all customers on the Company's system.

RULE 1 – ELECTRIC SERVICE TARIFF (CONTINUED)

C. RESPONSIBILITY

Every Company employee is responsible for applying the provisions of this tariff without unlawful preference or advantage to any customer. No Company employee is authorized to modify any provision of this tariff or to bind the Company by any promise or statement contrary thereto. No promise of any Company employee is binding unless made in writing over the signature of a duly authorized representative of the Company. The failure by the Company to enforce any of the provisions of this tariff, or standard practices thereunder, shall not be deemed a waiver of the Company's rights to do so.

RULES FOR ELECTRIC SERVICE

RULE 2 – REQUIREMENTS FOR SERVICE

A. SERVICE BY APPLICATION

The Company may connect service upon request of the applicant. The applicant shall provide notification to the Company of the date that they want service to commence or the date that use of service has already begun. The applicant shall provide information necessary, as determined by the Company, for the Company to properly supply service and apply the provisions of this tariff.

B. CONTRACTS FOR SERVICE

(1) Non-residential applicants for electric service may be required to sign a contract specifying the intended use of service, the applicable rate schedule and other service conditions. A contract between Company and customer is valid only when accepted in writing by a duly authorized Company representative. The customer shall abide by the terms and conditions of the contract and the provisions of this tariff.

(2) Contracts for service are for an initial term of one year except as otherwise specifically provided in this tariff or the contracts for service.

(3) Acceptance or use of service is deemed a request for the supply of such service and constitutes a contract to pay for the service under these rules and the applicable rate schedule. The receipt of electric service makes the receiver a customer of the Company.

(4) Contracts with the Commonwealth of Pennsylvania for service that have an initial contract term extending beyond the end of the current fiscal period for which the Commonwealth may contract, shall specify an initial contract term to the end of said fiscal period with provision for renewal for subsequent full fiscal periods. Contracts for a new installation shall include a provision that should service be discontinued before the end of the initial term specified in the rate schedule, then the Commonwealth shall pay Company's estimated expense due to such discontinuance.

C. SELECTION OF RATE SCHEDULES

(1) When more than one rate schedule is applicable to the service rendered, Company will apply the rate schedule that is most advantageous to the customer, based on customer's advice to Company regarding customer's service conditions.

(2) When customer's requirements change permanently and another rate schedule becomes more advantageous but requires the execution of a contract, Company will, after receiving notice of change in service conditions from the customer, recommend a new contract under the more advantageous rate schedule for an initial term consistent with the provisions of that rate schedule.

RULE 2 – REQUIREMENTS FOR SERVICE (CONTINUED)

(3) When, for any reason, a contract is entered into with a customer on a rate schedule not applicable to the service, Company will transfer the service to the rate schedule applicable for the relevant billing periods, and notify the customer of the adjusted charges for service already supplied.

D. SECURITY DEPOSITS

(1) The Company may require deposits or guarantees satisfactory to the Company as security for the payment of bills for service to be provided by the Company before it commences or continues to supply service. The need for a deposit or guarantee is based on the credit and other risks of the applicant or customer. For residential service, a guarantee may be provided by a third-party guarantor consistent with the Commission's regulations.

(2) The amount of deposit shall not exceed Company's estimate of the average bill for service provided by the Company for one-sixth of the estimated annual bill, with a minimum of $5.00. For residential customers, the interest rate on security deposits will be computed at the simple annual interest rate determined by the Secretary of Revenue for interest on the underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L. 343, No. 176), known as The Fiscal Code. For all other customers, the interest rate will be the average of 1-year Treasury Bills for September, October, and November of the previous calendar year. Interest ceases upon refund of deposit or upon discontinuance or termination of service, whichever occurs first.

(3) Deposits, plus accrued interest, may be held until a timely payment history is established, and will be refunded to a residential customer under the following conditions:

(a) When a customer establishes credit;
(b) When a customer substitutes third-party guarantor (up to the limits of the guarantee);
(c) When a customer is not currently delinquent and has made on time and in full payments for service provided by the Company for 12 consecutive months; or
(d) When a customer is confirmed to be eligible for a customer assistance program.

(4) Deposits, plus accrued interest, will be applied to the outstanding balance on the customer's account for service provided by the Company upon termination or discontinuance of service with any remaining deposit refunded to the customer.

(5) In the event of a termination of service of a customer who has used a third-party guarantor to establish credit, the Company may transfer to the third-party guarantor's account any portion of the unpaid balance of the customer for service provided by the Company.

RULE 2 – REQUIREMENTS FOR SERVICE (CONTINUED)

E. RIGHT-OF-WAY (ROW)

(1) The customer (or property owner) shall provide, without charge to the Company, ROW and access across property owned or controlled by customer (or property owner) and locations and housings which are suitable in the opinion of Company for the construction, reconstruction, maintenance or operation of Company's overhead and underground distribution facilities. Suitable rights and ROW includes, but is not limited to, the right of ingress and egress to and from the electric facilities for any of the purposes aforesaid; and also the right to trim, cut or remove trees, underbrush and other obstructions which in the judgment of Company, may at any time interfere with the construction, reconstruction, maintenance or operation of the electric facilities, and in connection therewith, the right to treat with herbicides approved for the removal and control of trees, brush and under growth.

(2) When restoration of service to the premises is not possible due to an obstruction, the customer, or the owner of the property on which the obstruction is situated is responsible for removing the obstruction.

(3) The Company shall also have all of the aforesaid rights related to its provision of underground service to a customer/property owner, even if Company does not require the customer/property owner to execute a formal ROW document.

F. ACCESS

Company employees, agents, and contractors shall have access to customer's premises, without charge, for the purpose of inspecting installations, installing meters, reading, testing, removing, replacing or otherwise maintaining or disposing of any Company property.

G. CUSTOMER'S INSTALLATION

The customer's service facilities shall be installed and maintained in accordance with Company's REMSI. In residential and commercial complexes and multiple occupancy buildings, the owner is responsible for all service entrance facilities including individual service wiring where separate metering for each tenant is required by the Company. Company is not responsible for customer's wiring or equipment. Company is willing to assist customer with advice on wiring and equipment without incurring responsibility for said wiring and equipment. Company may refuse to commence or continue service when, in Company's opinion, customer's installation is not in proper operating condition, safe, in compliance with applicable building codes, or does not conform to this tariff.

RULES FOR ELECTRIC SERVICE
RULE 3 – EXTENSION OF SERVICE

A. GENERAL PROVISIONS

(1) The Company constructs line extensions and service extensions from the nearest suitable and available distribution line to supply new customers, or to change the supply to existing customers, under Company's standard rate schedules subject to the provisions of this rule. However, the estimated cost of facilities subject to annual charges under Rule 4 or CIAC are not subject to the provisions of this rule.

(2) All provisions of these rules and of the applicable rate schedule, including any provisions relating to net and gross payments, apply to service supplied and charges made under this rule except as specifically provided herein.

(3) The Company requires, before construction of a line extension or service extension, including speculative line extensions and service extensions, that:

(a) Customers supplied from a line extension or service extension, including speculative extensions, for which an annual guarantee is required, sign a contract acceptable to the Company with an initial term of not more than five years. A contract may be canceled at the request of the customer before the end of the initial term by immediately fulfilling all contractual obligations for the remainder of the initial term.

(b) The Company may, at its discretion, file a memorandum of the guarantee in the land records of the customer’s property where service is being provided.

(c) Customers install infrastructure necessary to use the Company's service.

(d) Satisfactory ROW, in accordance with Rule 2, and other necessary permits are granted to Company to construct the line extension or service extension along the route selected by the Company.

(e) Customer agrees to pay to the Company any initial and recurring ROW rental fees in excess of a nominal amount that are incurred by the Company in constructing and maintaining the line extension or service extension.

(f) Customer agrees that when the net distribution service revenues received during the guarantee period from the start of the initial term of the contract to the end of the current year total less than the sum of the customer’s annual guarantee over that period, the difference becomes immediately due and payable.

RULE 3 – EXTENSION OF SERVICE (CONTINUED)

(g) The customer may elect to make a one-time payment to the Company in lieu of annual differential billings during the guarantee period. The payment, which will be equal to the total amount of the guarantee, will be subject to partial refunds each year based upon the actual amount of distribution base rate revenue received from the customer's distribution service billings.

(h) The Company may require, in addition to any deposit necessary to secure payment of service bills, a surety bond or other security acceptable to the Company, to guarantee the fulfillment of the minimum distribution revenue guarantee agreement.

(i) When the accumulated distribution revenue from the start of the initial term of contract equals the total amount to be guaranteed by the customer, service is supplied without the application of the annual guarantee determined under this rule.

(j) Customers supplied from a line extension or service extension for which a minimum distribution revenue guarantee is required will be responsible for the balance of any such minimum distribution revenue guarantee remaining after the guarantee period expires, service is terminated, or service is discontinued, whichever occurs first.

(4) Taxes on Contributions in Aid of Construction and Customer Advances - Any distribution service-related CIAC, customer advance or other like amounts received from the customer which shall constitute taxable income as defined by the Internal Revenue Service will have the income taxes segregated in a deferred account for inclusion in rate base in a future rate case proceeding. Such income taxes associated with a CIAC or customer advance will not be charged to the specific contributor of the capital.

B. LINE EXTENSIONS

(1) The Company requires a minimum distribution revenue guarantee for installation of any length of single phase or multi-phase line extension in excess of 2,500 ft. along the normal route of development of the distribution system. The length of a line extension is the total length of new pole line installed by the Company to the property line of the customers served from that extension, plus the length of any line installed on existing poles where the existing facilities are unsuitable.

(2) Minimum distribution revenue guarantees for single phase extensions are based only on the estimated contractor costs, if any, and the estimated direct labor costs and estimated direct material costs attributable to construction of the line extension beyond 2,500 ft. Guarantees for multi-phase extensions are based on estimated fully allocated costs, and are credited with the equivalent single phase length allowance for up to 2,500 ft. of new pole line along the normal route of development of the distribution system.

RULE 3 – EXTENSION OF SERVICE (CONTINUED)

(3) Any length of line extension on, or through, restricted lands (i.e., Pennsylvania State Game Lands) is excluded from the single-phase length allowance and is subject to a line extension guarantee.

(4) The estimated excess cost of construction, beyond what is normally required for a line extension, must be paid by the customer prior to installation.

(5) Determination of Annual Guarantee

(a) When only one customer is served by the line extension that customer is responsible for the entire minimum distribution revenue guarantee.

(b) The Company reserves the right to determine the guarantee of a customer on the proportionate length of the line extension used in common with other customers plus the additional length required to serve the individual customer.

(c) The total guarantee for a line extension is divided among the customers to be supplied initially from the line extension to determine the total amount to be guaranteed per customer, which is then divided by the number of years in the initial term of the contract to determine the customer's annual guarantee. A customer may assume more than a pro rata share of the guarantee for the line extension.

(d) When additional customers are connected to an existing or additional line extension during the guarantee period, the remaining total amount to be guaranteed for the existing line extension is reapportioned for all customers including the new customers, providing such reapportionment does not increase the guarantees of the existing customers. Otherwise, the additional line extension is considered as a new line extension.

(6) Line Extensions for Development Areas

(a) The Company constructs line extensions to supply service to customers in residential, commercial or industrial developments, and may require annual guarantees determined in accordance with this Rule 3, based on the number of customers which the Company estimates to be served in the development within two years from initial construction. The developer (or property owner) shall provide, without charge to the Company, ROW, in accordance with Rule 2, for lines and equipment which is suitable in the opinion of the Company for the installation of Company facilities throughout the development.

(7) Speculative Line Extensions

(a) A line extension is speculative when, in the Company's judgment, the continued future use of the facilities by any customer is uncertain.

RULE 3 – EXTENSION OF SERVICE (CONTINUED)

(b) The Company requires a minimum distribution revenue guarantee for speculative single-phase and multi-phase line extensions equal to the Company's estimated fully allocated installation and removal costs, less salvage, with no length allowance. Prior to construction, the Company may require from the customer a surety bond, or other security acceptable to Company, in the amount of the guarantee in addition to any deposit required to secure payment of service bills.

(c) Distribution revenue guarantees for speculative line extensions include service extension facilities.

(d) A speculative line extension requires payment of the fully allocated costs of engineering design and survey work to produce a detailed estimate at the time of application.

C. SERVICE EXTENSIONS

(1) All service extensions connecting to the Company’s distribution system to serve individual customers are installed in accordance with the provisions below and consistent with Tariff Rule 4.

(2) The Company extends service facilities from its distribution lines to the customer's point of delivery. The customer pays the estimated cost of service extension length over 500 ft. and the estimated cost of any additional facilities necessary to accommodate the customer’s requests.

(3) Speculative Service Extensions

(a) A service extension is speculative when, in the Company's opinion, there is doubt as to the initial or continued use of the new facilities by the customer. This may include, but is not limited to separate points of delivery, and service at locations which are relatively inaccessible or remote, or where the customer has less investment than is required by the Company to provide service.

(b) When a service extension is speculative, the Company requires a minimum distribution revenue guarantee equal to the Company's estimated fully allocated cost of installation and removal of all facilities less any CIAC by the customer.

(c) A speculative service extension guarantee may be discontinued prior to expiration of the contract whenever, at the Company’s discretion, the service becomes non-speculative in nature.

(d) Where the customer requires a speculative service extension to be disconnected and Company facilities left in place for subsequent reconnection, the service extension shall be treated as temporary service under Tariff Rule 7. In addition, for each reconnection of service the customer pays the cost of connection and disconnection.

RULE 3 – EXTENSION OF SERVICE (CONTINUED)

(e) A speculative service extension requires payment of the fully allocated costs of engineering design and survey work to produce a detailed estimate at the time of application.

RULES FOR ELECTRIC SERVICE
RULE 4 – SUPPLY OF SERVICE

A. CHARACTERISTICS OF SERVICE

(1) The Company's standard service is single or three-phase, sixty Hertz alternating current at standard voltages as specified in REMSI. Standard service includes overhead service, and underground service at new residential developments, at locations where the Company in its discretion has elected to install underground facilities, and at locations where the customer has paid for the incremental cost of installing facilities underground. All non-standard service is in the process of elimination, and no new or additional non-standard service will be supplied.

(2) Company furnishes, where necessary, one standard transformation at the point of delivery from the line voltage to a standard secondary voltage when a rate schedule specifies service at secondary voltage or specifies no particular voltage. Where the rate schedule specifies service at primary voltages, service is supplied from the nearest available line of not less than primary voltage, and customer furnishes all equipment necessary to transform the energy from primary voltage.

(3) The point of delivery is the point designated by Company where Company's service conductors are connected to customer's service entrance conductors, terminals, or bus. Company installs and maintains facilities to the point of delivery and shall not be required to install or maintain any conductors, meter base, equipment or apparatus except any meters, meter accessories, and other Company Facilities beyond that point.

(4) The Company’s standard service supplies energy to only one point of delivery to a premises. The Company may provide a separate point of delivery at the customer's request as a line and/or service extension that is installed pursuant to Tariff Rule 3. The customer pays the fully allocated costs of any primary or secondary facilities needed to serve the additional points of delivery. For application of this rule, services to more than one building or facility located on the same property and owned by the same entity will be considered service to a single premise; each individual building or facility will not be considered a separate premises.

B. METHOD OF SERVICE

(1) The Company furnishes and installs all electric service line facilities extending from its distribution supply lines at or near the customer’s property line to the customer’s point of delivery using construction methods determined by the Company for load conditions according to Company standards, except as follows:

(a) The Company may at its discretion install service facilities beyond those outlined in this tariff at the customer’s request and at the customer’s expense.

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

(b) The customer provides all mechanical facilities on his property, other than poles and guys, which are required to accommodate the installation of the Company's facilities. All facilities installed by the customer on the Company's side of the point of delivery which are not in, on or under buildings shall, after installation, be owned and maintained by the Company and be available for further extension.

(c) At customer's option, the customer may install all service lines and related facilities on customer's property. Such facilities shall be on the customer's side of the point of delivery and shall be owned, operated, and maintained by the customer.

(d) When a customer requests service in the vicinity of Company underground distribution facilities, the Company may require the customer to take underground service under the same terms and conditions which would apply if the Company service was overhead. Customers must pay for any necessary mechanical facilities required for underground service.

(2) The Company may establish an underground system at its sole discretion.

(3) The Company may establish an underground system at the customer's request provided that:

(a) the customer installs the mechanical facilities;

(b) ownership and maintenance of all facilities in the development on Company's side of the point of delivery that are not in or under buildings vest in the Company;

(c) the developer grants the Company, free-of-charge ROW in accordance with Rule 2 including the right to move, maintain, and extend the underground facilities; and

(d) the developer agrees to pay the Company, in advance, the Company's estimated excess cost over normal overhead construction.

(4) Underground Electric Service in New Residential Developments

The Company installs only underground distribution and service facilities in residential developments of five or more adjoining lots for the construction of single-family residences, detached or otherwise, mobile homes, or apartment houses intended for year-round occupancy, when service requires the extension of primary voltage lines. It does not apply to tracts of land which are subdivided, as defined by the Municipalities Planning Code, but not developed into utility-ready lots by a bona fide developer.

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

The developer requesting electric service to a residential development shall conform with the following:

(a) At the developer's cost, provide the Company with a copy of the recorded development plot plan identifying property boundaries, and with easements satisfactory to the Company for occupancy by distribution, service and street-light lines and related facilities.

(b) At the developer's cost, clear the ground in which the lines and related facilities are to be laid of trees, stumps and other obstructions, provide the excavating and backfilling subject to the inspection and approval of the Company, and rough grade it to within six inches of final grade, so that the Company's part of the installation shall consist only of laying of the lines and installing other service-related facilities. Excavating and backfilling performed or provided by the developer shall follow the Company's underground construction standards and specifications set forth by the Company and presented to the developer at the time of application for service and presentation of the recorded plot plan to the Company. If the Company's specifications have not been met by the developer's excavating and backfilling, such excavating and backfilling shall be corrected or redone by the developer or its authorized agent. Failure to comply with the Company's construction standards and specifications permits the Company to refuse service until such standards and specifications are met.

(c) Request electric service at such time that the lines may be installed before curbs, pavements, and sidewalks are laid; carefully coordinate scheduling of the Company's line and facility installation with the general project construction schedule, including coordination with any other utility sharing the same trench; keep the route of lines clear of machinery and other obstructions when the line installation crew is scheduled to appear; and otherwise cooperate with the Company to avoid unnecessary cost and delay.

(d) Pay to the Company any necessary and estimated additional costs incurred by the Company as a result of the following:

1. Installation of underground facilities that deviate from the Company's underground construction standards and specifications if such deviation is requested by the applicant for electric service and is acceptable to the Company.

2. A change in the plot plan by the developer after the Company has completed engineering for the project and/or has commenced installation of its facilities.

3. Physical characteristics such as oversized lots or lots with extreme set-back where under the Company's line and service extension policy contained in its tariff a charge is mandated for overhead service.

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

(e) No charges other than those described in paragraph (d) shall be borne by the developer for service or by another utility sharing the same trench, even if the Company elects to perform its own excavating and backfilling.

C. EXTRAORDINARY SERVICE

The Company may supply service, upon request, in a manner which requires additional facilities or related regulated services to be performed, which are over and above those that the Company would normally install or provide, if the customer agrees to pay the Company at a fair and nondiscriminatory price for those additional facilities or related regulated services. This includes all service at voltages above 69,000 volts.

D. ALTERNATE SERVICE

The Company furnishes one source of service to a single point of delivery to a premises. However, when a customer requests an alternate source of service, the Company will install the additional facilities required, so long as the customer agrees to compensate the Company for the estimated fully allocated costs of the additional facilities maintained for the alternate service and for the future estimated costs of continuing the alternate service.

E. CAPACITY

The Company's facilities have a limited capacity. Therefore, to assure satisfactory operation of customers' equipment and to protect customer, including other customers, and Company facilities against damage, each customer shall notify the Company of any substantial increase in use of service so that additional facilities may be provided in accordance with the applicable provisions in this tariff.

F. CONTINUITY

(1) The Company uses reasonable diligence to preserve continuity of service, but interruption of service and variation in supply characteristics (including, but not limited to, high or low voltage, operation of protection or control devices, single phasing of three phase service, and phase reversal) can occur. The Company does not guarantee continuous, regular, and uninterrupted supply of service. The Company may, without liability, interrupt or limit the supply of service for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public or for the purpose of preventing or limiting any actual or threatened instability or disturbance of the system. The Company is also not liable for any damages due to accident, strike, storm, riot, fire, flood, legal process, state or municipal interference, or any other cause beyond the Company's control. The Company shall not be liable for any injury to person or property arising from the use of electricity by or the supply of electricity to the customer which is not the result of negligence solely on the part of the Company.

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

(2) In no event shall the Company be liable for incidental, indirect, special or consequential damages, including loss of use or profit or loss of business. The liability of the Company to customers or other persons for damages other than incidental, indirect, special or consequential damages, including loss of use or profit or loss of business shall in no event, unless caused by the willful and/or wanton misconduct of the Company, exceed an amount in liquidated damages equivalent to the greater of $500 or two times the charge to the customer for the service affected during the period in which the damages occurred. These limitations shall apply whether the claim is pleaded in contract or in tort, including negligence and strict liability in tort.

(3) The Company makes no warranty as to merchantability or fitness for a particular purpose, express or implied, by operation of law or otherwise. To the extent applicable under the Uniform Commercial Code or on any theory of contract or products liability, the Company limits its liability in accordance with the previous paragraph to any customer or third party for claims involving and including, but not limited to, strict products liability, breach of contract, and breach of actual or implied warranties of merchantability or fitness for an intended purpose.

(4) For the purposes of this Rule, all customer-owned equipment, materials, appliances, and associated materials/equipment on the customer's side of the meter are the property and responsibility of the customer, and in no event shall the Company be liable for any injury to person or property arising therefrom.

(5) The Company may temporarily suspend service for the purpose of making necessary repairs, modifications, and/or to protect public safety and makes every reasonable effort to notify customers in advance, except in cases of emergency.

G. EMERGENCY LOAD CONTROL

(1) A load emergency situation exists whenever:

(a) the demands for power on all or part of the utility's system exceed or threaten to exceed the capacity actually available to supply such demands;

(b) system instability or cascading outages could result from actual or expected transmission and/or distribution system overloads or other contingencies; or

(c) Such conditions exist in the system or another public utility or power pool with which the utility's system is interconnected and cause a reduction in the capacity available to the utility from that source or threaten the integrity of the utility's system.

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

(2) In such case, the utility shall take such reasonable steps as the time available permits to bring the demands within the then-available capacity or to otherwise control load. Such steps shall include but shall not be limited to reduction or interruption of service to one or more customers, in accordance with the utility's procedures for controlling load.

H. EMERGENCY ENERGY CONSERVATION

An emergency energy conservation situation exists whenever events result or, in the judgment of the utility, threaten to result in a restriction of the fuel supplies available to the utility or its energy vendors, such that the amount of electric energy which the utility is able to supply is or will be adversely affected. In the event of an emergency energy conservation situation, the utility shall take such reasonable measures as it believes necessary and proper to conserve available fuel supplies. Such measures may include, but shall not be limited to reduction, interruption or suspension of service to one or more of its customers or classes of customers in accordance with the utility's procedure for emergency energy conservation.

I. RELOCATION OF FACILITIES

(1) The relocation of customer facilities due to moving or rearranging Company's facilities at the direction of either the federal, state or local government is the customer's responsibility and expense.

(2) The relocation of Company facilities, when done at the request of others, is at the requester's expense and payment of the Company's estimated fully allocated costs of the relocation is required in advance of construction. When the request is from an affected property owner and the facilities are on the customer’s property, the charges for relocation of distribution system facilities are limited to estimated direct costs, estimated direct labor, and estimated material costs, less an amount equal to any estimated maintenance expense avoided as a result of the relocation.

J. EMERGENCY ASSISTANCE

The Company may, upon request and/or at the Company’s discretion, assist in emergencies to correct defects in and make temporary repairs to the customer's installation. Any such assistance shall be accepted by the customer without involving responsibility on the part of the Company.

K. CHANGE IN SERVICE CONDITIONS

The Company may, upon request, make a change in service conditions and may require the customer to pay the estimated fully allocated costs to be incurred by the Company.

RULES FOR ELECTRIC SERVICE
RULE 5 - USE OF SERVICE

A. CUSTOMER'S RESPONSIBILITY

The customer assumes full responsibility for the energy and facilities at and beyond the point of delivery. Customer is responsible to purchase and install protective devices and/or install or otherwise provide for alternate power supplies to protect customer's facilities, equipment, and property. The customer's use of service shall not cause damage to Company's equipment, impair service to other customers, and/or impede the Company's ability to provide safe and adequate service. The foregoing provisions do not change the Company's duty and responsibility to provide safe and adequate service to the point of delivery.

B. PURPOSE AND LOCATION

Service shall not be used for any purpose or at any location other than that stipulated in the customer's application, the customer's contract with the Company, or this tariff.

C. PERMANENT CHANGE OF USE

When a customer notifies Company of any permanent change which reduces the capacity that Company is required to have available, and when required, executes a new service contract, the Company will as of the first meter reading date thereafter apply the rate schedule applicable to the changed conditions for subsequent billing.

D. ABNORMAL DEMAND AND USAGE

All metered demands and usage, including abnormal demands and usage which are inconsistent with the customer's normal use pattern, are billed as metered in the billing period in which they occur. This provision may be waived at the Company's option.

E. REDISTRIBUTION OF SERVICE

(1) At the service locations covered hereunder connected after May 21, 1980, each tenant shall be served, metered and billed individually by the Company under the appropriate rate schedule except where the Company has permitted master metering with resale in accordance with the provision of Tariff Rule 5(E)(2). Upon application to the Company, any owner (or their duly authorized representative) of a new multi-tenancy commercial building may seek an exception to Tariff Rule 5(E) by demonstrating that the installation of individual electric meters at each separate unit within the building is neither feasible nor practical from a financial, technical, engineering, and/or any other valid reason. If the Company approves an exception to this Rule, the master meter must be designed so that it will not achieve any notable reduction in the consumption of electricity by the tenants in the building than if the tenant units had individual electric meters within the building with efficient heat controls.

RULE 5 – USE OF SERVICE (CONTINUED)

(2) Company, at its discretion, may permit submetering for both existing and new service locations when the conditions are present:

(a) It is impractical for the Company to separately bill each tenant;

(b) Each tenant has control of the majority of their electric energy use;

(c) Customer is part of a US-HUD funded Housing, Assisted Living, Nursing Home Care Rehabilitation facilities, Student Housing - higher education; Federal/State/County/City/Municipal/Public Housing; and/or

(d) At the Company's discretion, it is not beneficial for the Company to meter individual tenants.

(3) For purposes of third-party owned Electric Vehicle (EV) charging stations, owning and operating an EV charging station shall not be considered redistribution as defined under 66 Pa. C.S. §1313 and §69.3501(b) (relating to section 1313 of the Public Utility Code).

(a) Owner and/or operators of third-party electric vehicle charging services are to notify the Company of a planned installation of the electric vehicle charging facilities in accordance with Rules 2 – Requirements for Service, 3 – Extension of Service, and 4 – Supply of Service. In addition, the Customer, who may be either the owner or host of the third- party owned electric vehicle charging stations, shall notify the Company at least one hundred twenty (120) days in advance of the planned installation date and may be required to install metering for the EV charging stations as determined by the Company.

F. VANDALISM

When Company street light facilities at a location are repeatedly vandalized, the customer shall reimburse the Company for all costs to repair such vandalism after the second recorded incident over a consecutive 24-month period.

RULES FOR ELECTRIC SERVICE
RULE 6 – STAND-BY SERVICE FOR NON-UTILITY GENERATING FACILITIES

A. APPLICATION

(1) For non-residential customers with on-site generation over 3 MW. Also applicable to all other non-residential customers with on-site generation that do not qualify for net metering service, including Qualifying Facilities or Small Power Producers and cogenerators as defined in the Public Utility Regulatory Policies Act.

(2) Service under this Rule is available to customers taking service under Rate Schedule GS-3, LP-4, or LP-5.

(3) Service to customers who have another source of power which can be substituted for Company's service for any of customer's operations. Service is supplied under the terms of this Rule unless such other source of power is maintained solely for use in case of interruption of the Company's service.

(4) Service is supplied only where the Company has available the capacity and facilities adequate for the service and only under a contract for an initial term of one or more years.

(5) Batteries and other energy storage equipment shall not be considered generators for the purposes of this Rule.

(6) The customer’s equipment may not be operated concurrently with the service supplied by the Company except upon written agreement setting forth the conditions of such operation.

(7) The provisions of this Rule 6 do not apply to customers taking Net Service under Rule 11.

B. STAND-BY SERVICE

Stand-by service is intended for customers with firm, dispatchable, on-site generation that provides a substantial portion of their energy needs. This service is not intended for customers with on-site generation that is used for emergency back-up purposes or for customers with intermittent output generation, such as wind and solar.

C. SUPPLEMENTARY SERVICE

(1) All energy and demand consumed by the customer up to the Supplementary Contract Demand level is considered Supplementary Power.

(2) Supplementary Power is charged at standard tariff rates for Rate Schedule GS-3, LP-4, or LP-5 plus all applicable riders.

PPL Electric Utilities Corporation

RULE 6 – STAND-BY SERVICE FOR NON-UTILITY GENERATING FACILITIES
(CONTINUED)

(3) Monthly billed demand for Supplementary Power will be based on the Supplementary Contract Demand.

(4) The level of Supplementary Contract Demand will be initially set based on the estimated amount of the customer's total peak demand that is in excess of the maximum capacity of the on-site generation.

(5) If the customer's on-site generation capacity is equal to or exceeds the customer's estimated total peak demand there will be no Supplementary Contract Demand, and the Back-Up Contract Demand shall equal the estimated customer total peak demand.

(6) Should the Customer's measured total peak demand during scheduled maintenance or during an unplanned outage ever exceed the original estimated total peak demand, the customer's total peak demand will be reset in the contract to a value equal to the new measured total peak demand.

(7) Customers may apply to reduce their Supplemental Contract Demand once every two years and will be required to provide evidence of either reduced total peak demand or increased generation capacity.

D. BACK-UP SERVICE

(1) Under this Rule, the Company will provide Back-Up power in the event that the customer's on-site generation experiences an unplanned outage. To reserve back-up capacity on the Company's system, the customer will pay a discounted monthly reservation fee equal to 30% of the distribution demand charges under Rate Schedule GS-3, LP-4, or LP-5.

	Back-Up Demand Charge
GS-3	$1.05/kW
LP-4	$0.78/kW
LP-5	$0.00/kW

(2) Energy and demand consumed by the customer during an unscheduled outage in excess of the Supplemental Contract Demand level will be defined as Back-Up Power. As used Back-Up Power will be priced at $0/kW during off-peak months and twice the standard distribution charge during on-peak months in order to discourage unscheduled outages during periods of elevated system loads.

PPL Electric Utilities Corporation

RULE 6 – STAND-BY SERVICE FOR NON-UTILITY GENERATING FACILITIES
(CONTINUED)

As Used Back-Up Power Demand Charges			
	GS-3	**LP-4**	**LP-5**
Dec-Feb	$10.54/kW	$7.76/kW	$0.00/kW
March-May	$0.00/kW	$0.00/kW	$0.00/kW
June-Sept	$10.54/kW	$7.76/kW	$0.00/kW
Oct-Nov	$0.00/kW	$0.00/kW	$0.00/kW

E. MAINTENANCE SERVICE

(1) Under this Rule, the Company will provide Maintenance Power to the customer during scheduled outages that occur during Off-Peak Months. Maintenance Power will be priced at $0/kW during Off-Peak Months.

(2) Customer's planned maintenance outages must be coordinated with the Company with at least 90 days' prior notice to ensure sufficient capacity to replace the on-site generation.

F. OTHER CHARGES

(1) The customer is responsible for the TSC charges under this tariff. The TSC charges will be based on the customers actual contribution to the Company's five coincident peaks that are used by PJM for allocation of Network Integration Transmission Service plus 30% of the Customer's Back-up Contract Demand.

(2) The customer is responsible for the applicable GSC-1 or GSC-2 charges under this tariff.

PPL Electric Utilities Corporation

RULES FOR ELECTRIC SERVICE
RULE 7 – TEMPORARY SERVICE

A. TEMPORARY SERVICE

(1)Temporary service is service for less than one year or for a year or more when Company must install facilities that will be used solely for a service that is known to be limited in duration. Service is supplied for not less than one month at the applicable rate schedule subject to the provisions of this rule. Temporary service is not available at voltages above primary service. The Company may require the customer to enter into a contract for temporary service. In no event is service billed for a total period of less than one month. Temporary service also includes seasonal service, which is service for less than one year, for which the Company is requested to leave the facilities in place for subsequent reconnection in following years.

(2)The customer pays, in advance, a non-refundable temporary connection charge equal to the Company's estimated engineering installed cost and net removal cost of all necessary facilities, other than transformer, service drop, and metering, that are required to provide the temporary service. Where it is necessary to install and remove a transformer, service drop and meter, or to energize facilities already in place, the customer also pays a non-refundable connection and disconnection charge representing the cost of performing this work. The Company may require that the customer pay the disconnection charge in advance.

(3)Company has the option to supply service without the application of this rule for prearranged tests or demonstrations.

(4)The Company may remove all facilities used solely to supply temporary service upon discontinuance of service by the customer.

(5)The provisions in this rule for temporary service apply to annually recurring service; however, they do not apply for service to permanent residences on a residential service rate schedule.

RULES FOR ELECTRIC SERVICE
RULE 8 – MEASUREMENT OF SERVICE

A. LOCATION AND METHOD OF MEASUREMENT

(1) The customer provides free of expense to Company, at a location designated by Company, a suitable place for the Company meters and meter-related equipment, in accordance with REMSI, which is readily accessible to Company employees.

(2) The Company installs and maintains the metering equipment, unless otherwise allowed by the Commission. Where energy is metered at a point other than the point of delivery or at a voltage other than the supply voltage, readings of the meters and meter-related equipment are corrected to conform to measurement at the point of delivery and voltage supply.

B. METER INSTALLATIONS

Service at each point of delivery is metered through one or more meters as required by the applicable rate schedules. Measurements from metering equipment for separate points of delivery are never combined for billing purposes except temporarily pending completion of necessary changes in Company's facilities. The Company will relocate a meter upon request from a customer, provided that the customer agrees to pay the fully allocated cost for the relocation.

C. UNMETERED SERVICE

The Company, at its option, may determine kilowatt hours and billing demands by computation instead of by measurement for installations having a fixed load or demand value controlled to operate for a definite number of hours during a billing period. An electric service contract is required for billing this unmetered service.

D. METER TESTING

The testing and adjustment of meters are made in accordance with any applicable law and any regulation. The Company may require customers to pay a fee of $35.00 for a meter test.

E. DETERMINATION OF DEMAND

(1) The fractional part of the demand billing unit specified in the rate schedule in excess of the minimum is taken as a whole when equal to one-half or more, otherwise, the fractional part is disregarded.

(2) Where the rate schedule provides that the demand is determined by quantities supplied during two or more periods of use, not more than one such period is taken from any one day's measurements that apply to such determination.

(3) Where the charges are based on a connected load, the customer's connected load is determined by inspection whenever Company deems necessary. Company will estimate the connected load of any customer who does not permit Company's representative to make such inspection.

RULE 8 – MEASUREMENT OF SERVICE (CONTINUED)

(4) The Company's electric meters record average demand every 15 minutes or hourly and resets the register to zero after each monthly billing cycle. The determination of demand excludes power factor correction.

F. DEMAND INFORMATION

(1) When the customer desires to install electric load control equipment or obtain meter transmitted energy data, the Company will install the appropriate meter and connection tie box (hereinafter called "Demand Information System") at no cost to the customer. REMSI provides the wiring diagram and identifies Company and Customer responsibilities.

(2) The Company will not be held responsible for interruption to the Demand Information System due to blown fuses, failure, or any malfunction of Customer's Equipment. In addition, the Company reserves the right to interrupt the supply of electric demand information to perform meter tests or maintenance procedures and, in so doing, assumes no responsibility for the effects on the Customer's operation or equipment.

(3) If at any time, in the Company's sole judgment, based upon existing facts and circumstances, the supply of electric demand information through the Demand Information System becomes detrimental to reliable metering, the Company shall have the right to disconnect the Demand Information System from its metering facilities immediately upon advance notice to the customer and without liability.

(4) Under no circumstances shall the Customer modify, adjust or interrupt the operation of the Company's facilities. In addition, the Company's billing meter installation shall, in all instances, govern when establishing Customer's energy and demand record for billing purposes.

RULES FOR ELECTRIC SERVICE
RULE 9 – BILLING AND PAYMENT FOR SERVICE

A. BILLING PERIOD

(1) Bills for service supplied during the preceding billing period, other than initial and final bills, are rendered monthly. Normal billing is for a period of 26-35 days and is based on meter readings taken by Company at the end of each period.

(2) When a billing period is more or less than a month, such as for initial or final bills, the monthly rate is prorated.

B. ESTIMATED BILLS

(1) Company may render an appropriately marked estimated bill when a meter reading is not obtained. Company may read meters for longer than monthly intervals and may under such circumstances render estimated interim bills for normal billing periods.

(2) Estimated bills shall be paid in accordance with the provisions of this rule and the applicable rate schedule. If unusual circumstances occur during a period for which an estimated bill has been issued and are brought to the Company's attention, an appropriate adjustment will be made by Company.

(3) Upon request, the Company will supply any customer with a billing schedule and a card from upon which he may record his meter readings at the end of each normal billing period which otherwise would be estimated. If such card is received by the Company by the date specified on the schedule, except where it is apparent to the Company that the information is erroneous, the bill for such period will be computed from the meter reading shown on the card.

(4) The Company will take reasonable measures to obtain meter readings, however, the Company may prepare an estimated bill for any customer if extreme weather conditions, emergencies, equipment failure, work stoppages, or other circumstances prevent actual meter readings or if Company personnel are unable to gain timely access to obtain an actual meter reading.

C. DUE DATE

The due date specified on the bill is not less than 15 days from the date bill is rendered except that for service under, or billed in conjunction with, residential rate schedules the due date is not less than 20 days from the date bill is sent and for service to federal, state or local governments or to any governmental department, institution or authority, the due date is not less than 30 days from the date bill is mailed via the U.S. Postal Service or sent electronically.

RULE 9 – BILLING AND PAYMENT FOR SERVICE (CONTINUED)

D. PAYMENT

(1) Bills are considered as received by customer when delivered via the U.S. Postal Service or rendered electronically to the premises where the service is supplied or an address mutually agreed upon. Delay in the receipt of or failure to receive bill does not extend the due date.

(2) Bills may be paid during business hours at any commercial office or collection agency of the Company authorized to receive payments.

(3) Payment of bills will be accepted as paid on the date of the actual receipt of payment.

(4) Payment of bills after the due date specified on the bill is subject to a late payment charge, as provided for in the applicable rate schedule.

(5) The customer is responsible for payment for use up to discontinuance or termination of service.

(6) In the event of discontinuance or termination of service at a residence or dwelling, the Company may transfer any unpaid balance to any other residential account of the same customer, or in the event of termination, to a third-party guarantor's account.

(7) Payments which are insufficient to pay for both a balance due for prior use and billing for current use are first applied to the balance due for prior use, except when an unpaid bill is a disputed bill.

E. BUDGET BILLING

Budget billing is available upon request for service under residential and general service rate applications except for temporary, seasonal, and speculative service. Budget billing may start in any month, for new or existing customers, and may be discontinued upon request at which time any difference between budget billing and billing based on actual use becomes due and payable. In any month when the amount billed for the previous billing period is overdue, budget billing may be terminated; any difference owed the Company is immediately due, and bills thereafter are rendered based on metered use.

When a residential customer elects budget billing, the Company estimates the bills over a 10-month, 11- month or 12-month period to limit seasonal fluctuations in utility bills. The Company shall review accounts at least three times during the optional billing period. At the conclusion of the budget billing year, a resulting reconciliation amount exceeding $100, but less than $300, shall be, at the request of the customer, amortized over a 6-month period. Reconciliation amounts exceeding $300 shall be amortized over at least a 12-month period, at the request of the customer. Shorter amortization periods are permissible at the request of the customer.

RULE 9 – BILLING AND PAYMENT FOR SERVICE (CONTINUED)

When a general service customer elects budget billing, the Company bills the customer each month an amount equal to one-twelfth of the estimated annual charges under the rate schedule. The monthly charge is adjusted, as required, so that total payments at the end of the budget billing cycle approximately equal actual charges. When billing based on actual use exceeds charges at the end of the twelfth month, the excess is added to regular billing in equal increments over the succeeding four months with no penalty.

Each month, interest at the rate of one-twelfth of the average of 1-year Treasury Bills for the months of September, October, and November of the previous year is applied to funds in the customer's account which are the result of payments for the billed amount in excess of actual charges for service to date. No interest is charged when there is a negative balance.

F. RETURNED CHECK CHARGE

If a check received in payment of a customer's account is returned to the Company unpaid by the customer's bank and cannot be redeposited by the Company for payment on the second attempt, the Company will charge the customer $20.00 for processing the returned check, plus any charges assessed by the bank or other financial institution to the Company.

G. SMALL CREDIT BALANCES ON INACTIVE ACCOUNTS

The Company may, within a maximum period of six months, transfer any customer credit balance less than $5 from a customer's inactive account to the Company's Operation HELP program instead of refunding the credit amount to the customer. This transfer will occur only after the Company has been unsuccessful in its efforts to transfer the credit balance to an active account of the customer, and only if the customer does not request a refund of the credit balance.

H. CREDIT AND APPLICATION PROCEDURES

The Company uses a commercially recognized scoring methodology that is within the range of generally accepted industry practice. The applicant’s or customer’s utility payment history determines the credit score. The Company uses this customer-specific credit score to either request or waive a security deposit. For low-income applicants, PPL Electric will waive the security deposit if an OnTrack agency verifies their household income.

RULES FOR ELECTRIC SERVICE

RULE 10 – DISCONNECTION AND RECONNECTION OF SERVICE

A. CONTRACT CANCELLATION

(1) Contracts are canceled by Company in accordance with the terms and conditions thereof, or upon notification from the customer, as provided in the contract, that service is no longer required at the premises being supplied.

(2) Customers are relieved of their contractual obligations for contract that are terminated prior to the expiration of the initial term when the customer does either of the following:

(a) Satisfies all the remaining obligations under the contract for the initial term; or

(b) Paid all charges for service to the date of discontinuance as calculated under the tariff provisions applicable for the period of service actually supplied less the sum of payments already made. This includes any remaining obligations under Line Extension Guarantee or Service Extension Guarantees. This option applies only when the customer completely ceases operations. Commercial and industrial customers agree that if operations are resumed before the date when the initial term expires, then the initial obligation of contract is considered still in force.

B. TERMINATION

(1) Termination of service does not constitute cancellation of any contract during the initial term thereof except by Company consent.

(2) The Company may terminate the supply of service and remove Company's equipment from customer's premises, upon notice to customer when appropriate, under any of the following conditions:

(a) Nonpayment of an undisputed delinquent account associated with service provided by the Company.

(b) The customer's installation, in Company's judgment, has become dangerous or defective or Company has received notice of such a condition, or the customer's equipment or use thereof may impair the equipment of Company or the service to the other customers.

(c) The Company's property on customer's premises has been interfered with, or evidence is found that the wires, meters, entrance switch or other appurtenances up to and including the point of measurement have been tampered with.

(d) Energy has been used that has not been registered on the meter.

(e) A writ of execution is issued against customer, or the premises at which service is supplied is levied upon, or there is an assignment or act of bankruptcy on the part of customer, and Company has not received any written acceptance of responsibility for continuance of service.

RULE 10 – DISCONNECTION AND RECONNECTION OF SERVICE
(CONTINUED)

(f) The customer violates any of these rules or any of the terms and conditions of the contract or has made misrepresentations to Company with respect to the use of electric service and customer refuses to correct the situation or execute a contract appropriate for such service.

(g) The Company's authorized representatives cannot gain admittance or are refused admittance to the premises for the purpose of reading meters, making repairs, making inspections, or removing Company property, or the customer interferes with Company representatives in the performance of their duties, or the meters or other equipment of the Company are not accessible.

(h) The customer neglects or refuses to reimburse Company for repairs to or loss of Company's property when such repairs are necessitated, or loss occasioned, caused by the customer.

(i) Failure to post a deposit, provide a guarantee, or establish credit associated with service provided by the Company.

(j) Failure to comply with the material terms of a settlement or amortization agreement.

(k) Fraud or material misrepresentation of identity for the purpose of obtaining utility service.

(l) Unauthorized use of the utility service delivered on or about the affected dwelling or other service location.

(m) When ordered by a governmental entity having jurisdiction over housing, building, and/or land use codes or ordinances.

(3) Except in emergencies, service to residential customers will not be terminated: on Saturday or Sunday; on a bank holiday or the day preceding a bank holiday; on a day, or a day preceding a day, when the Company's business offices are closed, excluding Saturdays; or on a holiday or the day preceding a holiday observed by the Pennsylvania Public Utility Commission.

(4) The customer may avoid termination under the above conditions by eliminating the cause for termination and fulfilling the appropriate conditions for reconnection under Rule 10.C hereof prior to termination.

C. RECONNECTION

Whenever a service has been terminated under any of the above provisions, Company will require payment of a $14 disconnection and reconnection charge and will, before reconnection, require customer to eliminate the cause of disconnection and fulfill any of the following conditions associated with service provided by the Company that are reasonably applicable:

(1) Establish credit, make a security deposit, or provide a written guarantee acceptable to Company.

(2) Correct any unsafe or non-standard conditions in customer's service entrance facilities.

RULE 10 – DISCONNECTION AND RECONNECTION OF SERVICE
(CONTINUED)

(3) Make full payment of, or arrange time payments for the charges for energy used but not metered and, all costs of Company's investigation and property damage associated therewith, plus the cost of measures considered necessary by the Company to prevent recurrence. These include but are not limited to: cost of tampering investigations, inspections, billing, and corrective action on unsafe equipment.

(4) Make payment of, or arrange for the payment of, all amounts currently due for services provided by the Company.

RULES FOR ELECTRIC SERVICE

RULE 11 – NET SERVICE FOR GENERATION FACILITIES

A. APPLICATION

(1) The Company will provide Net Service to a Wholesale Generation Facility upon request.

(2) This Rule 11 shall remain available only for as long as the provision in Section 1 of the PJM Operating Agreement, or any successor thereto, allowing the self-supply of station power, remains effective.

(3) In order to be eligible for Net Service, a Wholesale Generation Facility must be subject to an Interconnection Agreement and an Interconnection Service Agreement under the PJM Open Access Transmission Tariff (OATT).

(4) All bills for service hereunder are based on charges specified in the applicable rate schedule for firm service (including applicable riders and surcharges) under which the Customer is eligible to receive service, subject to the additional provisions of this rule.

(5) Customers selecting Net Service do not qualify for either the auxiliary service or stand-by service provisions of Rules 6 and 6A, respectively.

B. RATES FOR NET SERVICE

(1) When the Wholesale Generating Facility's Net Energy Output is positive for the monthly billing period, the monthly minimum charge for Delivery Service is the minimum bill provision in the applicable rate schedule.

(2) When the Wholesale Generation Facility's Net Energy Output is negative for the monthly billing period, the Company shall apply all Delivery Service components of the applicable rate schedule, using the negative Net Energy Output to determine the Billing kWh component and the peak monthly kW usage to determine the Billing kW component. If the Customer is purchasing electricity from the Company, the Company also shall apply all energy, capacity and transmission components of the applicable rate schedule as set forth in this section.

C. DATA REQUIREMENTS

(1) The Wholesale Generation Facility or other parties authorized by the Wholesale Generation Facility Customer will report its hourly generator output and station power use to PJM, pursuant to the requirements in the PJM Operating Agreement.

(2) This Company reserves the right to independently audit the reported generator output and station power use and to seek resolution of any meter corrections through the applicable procedures in the PJM Operating Agreement.

RULES FOR ELECTRIC SERVICE

RULE 12 – DISTRIBUTED ENERGY RESOURCE (DER) INTERCONNECTION SERVICE

A. PURPOSE

The Distributed Energy Resource Interconnection Service (DERIS) shall be applied to all new DER interconnections with the distribution system effective January 1, 2021, and as further provided in this Rule. DERs shall include inverter-based alternative energy sources and systems, as defined in the Alternative Energy Portfolio Standards Act of 2004 (73 P.S. §§ 1648.1 - 1648.8), and storage resources (batteries).

B. APPLICATION

(1) This Rule shall apply to all inverter-based DERs, whose interconnection applications are received on or after January 1, 2021.

(2) This Rule shall apply to all customers who receive Basic Utility Supply Service under Rate Schedules RS, GS-1, GS-3, and LP-4.

C. DEVICE REQUIREMENTS

(1) Renewable Energy Connection Online Portal

This online portal allows customers to apply to interconnect the DER Management Devices with the distribution system. Refer to the REMSI Renewable Energy Connection under PPL Electric's Electric Rates and Rules for additional information. https://www.pplelectric.com/utility/about-us/electric-rates-and-rules.aspx

(2) Smart Inverters

From January 1, 2021, through December 31, 2021, all new inverters connected to the distribution system must meet: (1) UL 1741 Supplement A as amended or supplemented and (2) the communication requirements under IEEE 1547-2018 as tested by or on behalf of the Company. Beginning January 1, 2022, PPL Electric will transition to requiring new inverters that connect to the distribution system to comply with IEEE 1547-2018 and to be certified to UL 1741 Supplement B. During the transition period of January 1, 2022, through December 31, 2022, each new inverter connecting to PPL Electric’s distribution system must either: (1) meet UL 1741 Supplement A (as amended or supplemented) and the communication requirements under IEEE 1547- 2018 (as tested by or on behalf of the Company); or (2) comply with IEEE 1547-2018 and be certified to UL 1741 Supplement B. Beginning January 1, 2023, new inverters connecting to the distribution system must comply with IEEE 1547-2018 and must be certified to UL 1741 Supplement B. The list of smart inverters that meet these requirements will be made publicly available and regularly updated on the Company’s REMSI website.

RULE 12 – DISTRIBUTED ENERGY RESOURCE (DER)
INTERCONNECTION SERVICE (CONTINUED)

(2) Smart Inverters (Continued) -

Notwithstanding the above, if a customer installs a new inverter on an existing DER installation or upgrades an existing DER installation after January 1, 2021, the customer may install a replacement inverter of a similar make and model as the existing inverter, provided that any such inverter meets the Commission's applicable standards and requirements set forth in its regulations.

(3) DER Management Device –

All DERs whether Customer-Owned or Third Party-Owned that are applying to interconnect with PPL Electric's distribution system must install smart inverters as defined in Rule 12(C)(2). Additionally, for the term of the pilot program described in Rule 12(D), a DER Management Device owned, installed, and maintained by the Company will be connected to the data port of the smart inverter for any new DER installation. The DER Management Device may use the Meter Network radios to connect wirelessly to PPL Electric's RF mesh network. These devices shall be installed and maintained in accordance with Company's "Rules for Electric Meter and Service Installations (REMSI)". Refer to the REMSI DER Management Device section as well as the Commission-approved Settlement and the Pilot Implementation Plan filed at Docket No. P-2019-3010128 for additional information.

D. PILOT PROGRAM

Beginning January 1, 2021, the Company will conduct a pilot program to test and evaluate: (1) the costs and benefits to the distribution system operation and design of monitoring DERs through the DER Management Devices as compared to maintaining distribution system status visibility through other means (e.g. automated meter reading equipment, ADMS systems, modeling) and (2) the costs and benefits to the distribution system operation of active management of DERs through DER management devices as compared to the benefits available through the use of inverter autonomous grid support functions.

Two control groups for the pilot program will be established. The first group shall include any DERs connected during the pilot program to the first 75 circuits for which interconnection applications are received by the Company on or after January 1, 2021. The second group shall include the first 1,000 new DERs installed in the Company's service territory on or after January 1, 2021. DERs connected during the pilot program in the first group shall count toward the 1,000 DERs in the second group. After the second group comprises 1,000 DERs, DERs interconnected to the first 75 circuits will still be added to the first group.

RULE 12 – DISTRIBUTED ENERGY RESOURCE (DER)
INTERCONNECTION SERVICE (CONTINUED)

For both control groups, DER inverters will operate under autonomous settings only. While the Company may monitor DER operations in the control group by collecting data through the DER Management Devices, the Company shall not make operational decisions regarding the distribution system based on that information. For DERs that are not part of the control groups, the Company shall be permitted to actively manage the grid support functions of DER inverters using the DER Management Devices and the Company's Distributed Energy Resources Management System (DERMS) and may make operational decisions based on DER operational information obtained through the DER Management Devices.

The pilot program will begin January 1, 2021, and will end three years after the control groups are established. Refer to the Commission-approved Settlement and the Pilot Implementation Plan filed at Docket No. P-2019-3010128 for more information on the details and design of the pilot program.

E. ANNUAL REPORTS

Pursuant to the Commission-approved Settlement and the Pilot Implementation Plan filed at Docket No. P-2019-3010128, the Company shall file annual reports with the Commission providing detailed quantitative information germane to evaluation of the results of the pilot program. The reports shall be publicly available and shall not contain any identifying customer information. The annual reports shall be filed within 30 days following the end of each program year.

PPL Electric Utilities Corporation

RIDERS, SURCHARGE, OPTIONS, AND CHARGES

RIDER MATRIX

Rate Schedule		USR	NM	MBC	ACR	MFC				DSIC	SDER

DSIC = Distribution System Improvement Charge
SDER = Storm Damage Expense Rider

PPL Electric Utilities Corporation

STATE TAX ADJUSTMENT SURCHARGE

STATE TAX ADJUSTMENT SURCHARGE

In addition to the charges and credits provided for in this tariff, a two-part surcharge will be charged for all service rendered on and after the effective date of this provision.

- Part 1 will include Capital Stock Tax, Corporate Income Tax, Public Utility Realty Tax, and Gross Receipts Tax, which will be applied to the Distribution component of the bill. Effective July 1, 2026, this part of the surcharge will be 0.00%.
- Part 2 will include the Gross Receipts Tax, which will be applied to all other components of the bill. Effective January 1, 2024, this part of the surcharge will be a positive 0.001%.

Each part of the State Tax Adjustment Surcharge will be recomputed using the elements prescribed by the Commission in its regulations at 52 Pa. Code §69.51, et seq. and at 52 Pa. Code §54.91, et seq.:

- on December 18, 2023, and each year thereafter until the surcharge is rolled into base rates, and
- whenever the Company experiences a material change in any of the taxes used in calculation of the surcharge due to a change in the applicable tax rates, or in the basis of calculating such tax rates, or due to changes in its state tax liability arising under 66 Pa. C. S. §§ 2806(g), 2809(c) or 2810(c).

The recalculation will be submitted to the Commission within 10 days after the occurrence of the event which occasions such recomputation or as prescribed in the Commission's regulations at 52 Pa. Code § 54.91, et seq. If the recomputed surcharge is less than the one in effect, the utility will, or if the recomputed surcharge is more than the one in effect the utility may, submit with such recomputation a tariff or supplement to reflect such recomputed surcharge. The effective date of such tariff or supplement shall be 10 days after filing or as prescribed in the Commission's regulations at 52 Pa. Code § 54.91, et seq.

TAX INDEMNIFICATION

If the Company becomes liable, under Section 2806(g) or 2809(c) of the Public Utility Code, 66 Pa. C.S. §§ 2806(g) and 2809(c), for any Pennsylvania state taxes not paid by an electric generation supplier, the non-tax-compliant electric generation supplier shall indemnify the Company for the full amount of additional state tax liability imposed upon it by the Pennsylvania Department of Revenue due to the failure of the electric generation supplier to pay, or remit to the Commonwealth, the tax imposed on the electric generation supplier's gross receipts under Section 1101 of the Tax Report Code of 1971 or Chapter 28 of Title 66.

PPL Electric Utilities Corporation

UNIVERSAL SERVICE RIDER

UNIVERSAL SERVICE RIDER

The Universal Service Rider (USR) charge, shall be applied to each kilowatt-hour supplied to customers, who take distribution service under Rate Schedules RS and RTS(R) of this tariff. The USR charge provides for recovery of the costs, including internal administrative costs (i.e., employee salaries, wages, and benefits), associated with universal service programs provided by the Company to residential customers. The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rider.

Beginning January 1, 2025, and continuing through December 31, 2025, the USR charge will be $0.01111/kwh. For subsequent years, the USR charge shall be filed with the Commission by December 21 of the previous year. The USR charge shall become effective for service rendered on or after the following January 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a USR charge, if left unchanged, would result in a material over or under-collection of all USR costs incurred or expected to be incurred during the current 12-month period, the Company may file with the Commission for an interim revision of the USR charge to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

The Company will file with the Pennsylvania Public Utility Commission by December 21 of each year an annual reconciliation of the USR revenue recovery during the immediately preceding application period pursuant to 66 Pa. C.S. §1307. The reconciliation shall become effective for service rendered on and after January 1 and shall remain in effect for a period of one year, or until new USR rates are approved by the Commission. Interest on overcollections and undercollections shall be computed monthly at the appropriate rate, as provided for in Section 1308(d) of the Public Utility Code, from the month the over or undercollection occurs to the effective month that the overcollection is refunded or the undercollection is recouped.

Application of the USR shall be subject to review and audit by the Commission at intervals that it shall determine. The Commission shall review the level of charges produced by the USR charge and the costs included therein.

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS

PURPOSE

This Rider sets forth the eligibility, terms and conditions applicable to Customers with installed qualifying renewable customer-owned, generation facility using a net metering system.

APPLICABILITY

This Rider applies to renewable customer-generators served under Rate Schedules RS, GS-1, GS-3, and LP-4 who install a device or devices which are, in the Company's judgment, subject to Commission review, a bona fide technology for use in generating electricity from qualifying Tier I or Tier II alternative energy sources, pursuant to the Alternative Energy Portfolio Standards Act, 73 P.S. §§ 1648.1 – 1648.8 ("AEPS Act") or Commission regulations, and which will be operated in parallel with the Company's system. Customer-generators seeking to receive service under the provisions of this Rider must submit a written application to the Company demonstrating compliance with the Net Metering Rider provisions and the Company's interconnection standards and quantifying the total AC and DC nameplate capacity of the customer-generator's alternative energy source.

A renewable customer-generator is a non-utility owner or operator of a net metered distributed generation system with a nameplate capacity of not greater than 50 kilowatts, if installed at a residential service (RS), or not larger than 3,000 kilowatts at other customer service locations (Rate Schedules GS-1, GS-3 and LP-4), except for Customers whose systems are above 3 megawatts and up to 5 megawatts who make their systems available to operate in parallel with the Company during grid emergencies, as defined by the regional transmission organization, or where a microgrid is in place for the purpose of maintaining critical infrastructure, such as homeland security assignments, emergency services facilities, hospitals, traffic signals, wastewater treatment plants or telecommunications facilities, provided that technical rules for operating generators interconnected with facilities of the Company have been promulgated by the Institute of Electrical and Electronic Engineers ("IEEE") and the Commission.

The Customer's equipment must, at a minimum, conform to the Commission's Interconnection Standards and Regulations, pursuant to the AEPS Act, and the Company's interconnection standards. This Rider is not applicable when the source of supply is service purchased from a neighboring electric utility under Borderline Service.

Service under this Rider is available upon request to renewable customer-generators on a first-come, first-served accurately completed application basis as long as the total nameplate generating capacity installed by renewable customer-generator facilities does not adversely impact service to other customers and does not compromise the protection scheme(s) employed on the Company's electric distribution system. When the Company determines that upgrades to its distribution system are necessary to interconnect the interconnection applicant's generating facility safely and reliably, the interconnection applicant shall be required to pay a deposit in advance of the Company performing final engineering and construction of the system upgrades. The amount of the deposit is in the discretion of the Company to ensure timely payment of system upgrade costs. If the interconnection applicant fails to pay such deposit within the communicated timeline of the Company's

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS (CONTINUED)

demand for the deposit, the interconnection applicant's project shall be removed from the interconnection queue. Unspent portions of the deposit shall be fully refundable. The interconnection applicant must pay all actual costs of the system upgrades, including but not limited to, the cost of studies, engineering, administering the interconnection request, equipment, and construction costs prior to interconnection of the interconnection applicant's generating facility. Any deposits paid by the interconnecting applicant will be credited towards what is owed to the Company in connection with the interconnection request.

METERING PROVISIONS

A Customer enrolled in net metering under this Rider will be metered under the following terms and conditions.

1. A customer-generator facility used for net metering shall be equipped with a single bi-directional meter that can measure and record the flow of electricity in both directions at the same rate. A dual-meter arrangement may be substituted for a single bi-directional meter at the Company's expense.

2. If the customer-generator's existing electric metering equipment does not meet the requirements under Option (1) above, the Company shall install new metering equipment for the customer- generator at the Company's expense. Any subsequent metering equipment change necessitated by the customer-generator shall be paid for by the customer-generator. The customer-generator has the option of utilizing a qualified meter service provider to install metering equipment for the measurement of generation at the customer-generator's expense.

   Additional metering equipment for the purpose of qualifying alternative energy credits generated by the customer-generator shall be paid for by the customer-generator. The Company shall take title to the alternative energy credits (AECs) produced by a customer-generator

3. Meter aggregation on properties owned, or leased and operated, by a customer-generator shall be allowed for purposes of net metering. Meter aggregation shall be limited to meters located on properties within two (2) miles of the boundaries of the customer-generator's property. Meter aggregation shall only be available for properties located within the Company's service territory. Physical meter aggregation shall be at the customer-generator's expense. The Company shall provide the necessary equipment to complete physical aggregation. If the customer-generator requests virtual meter aggregation, it shall be provided by the Company at the customer-generator's expense. The customer-generator shall be responsible only for any incremental expense incurred by the Company to process the customer-generator's account on a virtual meter aggregation basis.

PPL Electric Utilities Corporation

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS (CONTINUED)

BILLING PROVISIONS:

A customer enrolled in net metering under this Rider will be billed under the following terms and conditions.

Customer-Generator Supplies More Electricity than Delivered by the Company

1. The customer-generator will receive a credit for each kilowatt-hour received by the Company up to the total amount of electricity delivered to the Customer by the Company during the billing period at the full retail rate consistent with Commission regulations. If a customer- generator supplies more electricity to the Company than the Company delivers to the customer-generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the full retail rate. Any excess kilowatt hours will continue to accumulate until the end of the PJM planning period ending May 31 of each year. On an annual basis consistent with the PJM planning period, the Company will compensate the customer-generator for kilowatt-hours received from the customer-generator in excess of the kilowatt hours delivered by Company to the customer-generator during the preceding year at the Company's Price To Compare (PTC) consistent with Commission regulations. Compensation will also occur if the customer changes rate schedules or shopping status. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

Company Delivers More Electricity than Supplied by Customer-Generator

2. If the Company supplies more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the appropriate rate schedule shall be applied to the net kilowatt-hours of electricity that the Company supplied. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

Virtual Meter Aggregations

3. For customer-generators involved in virtual meter aggregation programs, a credit shall be applied first to the meter through which the generating facility supplies electricity to the Company's distribution system, then through the remaining meters (for the customer-generator's account) equally at each meter's designated rate under the applicable Rate Schedule. Virtual meter aggregation is the combination of readings and billing for all meters, regardless of rate class, installed on properties owned, or leased and operated, by a customer-generator by use of the Company's billing process, rather than through physical rewiring of the customer-generator's owned or leased property for a physical, single-point of contact. The customer-generators are responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS (CONTINUED)

NET METERING PROVISIONS FOR SHOPPING CUSTOMERS

1. Customer-generators may take net metering services from EGSs that offer such services.
2. If a net-metering customer takes service from an EGS, the Company will credit the customer for the distribution charge for each kilowatt hour produced by a Tier I or Tier II resource installed on the customer-generator's side of the meter, up to the total amount of kilowatt-hours delivered to the customer by the Company during the billing period. If a customer-generator supplies more electricity to the electric distribution system than the EDC delivers to the customer-generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the Company's distribution rates. Any excess kilowatt hours at the end of the PJM planning period will not carry over to the next year for distribution purposes. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.
3. If the Company delivers more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the applicable rate schedule shall be applied to the net kilowatt-hours of electricity that the Company delivered. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.
4. Pursuant to Commission regulations, the credit or compensation terms for excess electricity produced by customer-generators who are customers of EGSs shall be stated in the service agreement between the customer-generator and the EGS.
5. If a customer-generator switches electricity suppliers, the Company shall treat the end of the service period as if it were the end of the year.

CUSTOMER CHARGE

The Customer Charges under Rate Schedules RS, GS-1, GS-3, and LP-4 apply for installations under this Rider.

RIDERS

Bills rendered by the Company under this Rider shall be subject to the charges stated in any other applicable Rider.

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS (CONTINUED)

The following billing provisions apply to Time-of-Use customer-generators in conjunction with service under applicable Rate Schedules RS, GS-1, GS-3 (<100kW), or LP-4 (<100kW).

1. The customer-generator will receive a credit for each kilowatt-hour received by the Company up to the total amount of electricity delivered to the Customer by the Company during the billing period at the full retail rate consistent with Commission regulations. Excess generation supplied by a customer-generator will be recorded on an hourly basis, maintaining an active record of kilowatt hours produced and consumed at the customer-generators premise. If a customer- generator supplies more electricity to the Company than the Company delivers to the customer- generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the full retail rate. If, in a subsequent billing period, a customer consumes more electricity than produced, kilowatt hours will be pulled from the customers bank on a first in first out basis. Any excess kilowatt hours will continue to accumulate until the end of the PJM planning period ending May 31 of each year. On an annual basis consistent with the PJM planning period, the Company will compensate the customer-generator for all remaining kilowatt-hours in the customer's bank, at the generation portion of the time-of-use rate when the excess generation was put into the bank. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

2. If the Company supplies more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the appropriate rate schedule shall be applied to the net kilowatt-hours of electricity that the Company supplied. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

3. Customer-generators involved in virtual metering programs are not eligible for the TOU Program.

PPL Electric Utilities Corporation

METERING AND BILLING CREDIT RIDER

PURPOSE

This rider provides for Distribution Charge credits when an EGS licensed by the Commission provides metering, meter reading, and/or billing and collection service to a customer in lieu of the Company.

APPLICATION

This rider applies to the Distribution Charges included in each Rate Schedule included in this Tariff.

NET MONTHLY DISTRIBUTION CHARGE CREDIT

Rate Schedule	Metering	Meter Reading	Billing and Collection
RS	$ 1.97	$ 0.17	$ 2.34
Separate Water Heating Service	1.97	0.17	2.34
GS-1	4.08	0.17	2.34

Standby Service - 12,470 Volts	55.57	0.17	2.34
Standby Service - 69,000 Volts or Higher	272.54	0.17	2.34

TRANSMISSION SERVICE CHARGE

The Transmission Service Charge (TSC) shall be applied to charges for electricity supplied to customers who receive default service, as defined in Rule 1B(1), from the Company under this Tariff.

The TSC shall be computed separately for each of the following four customer classes:

(1) Residential: Consisting of Rate Schedule RS,
(2) Small Commercial and Industrial: Consisting of Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, and SE (Small C&I),
(3) Large Commercial and Industrial – Primary: Consisting of Rate Schedule LP-4 (Large C&I – Primary), and
(4) Large Commercial and Industrial – Transmission: Consisting of Rate Schedules LP-5 (Large C&I – Transmission).

The TSC, computed using the formulae described below, shall be applied to the monthly bill of each customer receiving default service from the Company and shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year.

The TSC for the Residential class and the Small C&I class shall be computed using the following formula:

$$TSC = [TCe/S + TCd/S - E/S] \times 1/(1-T)$$

The TSC for the Large C&I – Primary class and the Large C&I – Transmission class shall be computed using the following formulae:

$$TSC = TSCd + TSCe$$

The demand – related portion of the TSC (TSCd) for the Large C&I – Primary class and the Large C&I – Transmission class shall be computed using the following formula:

$$TSCd = [TCd/D] \times 1/(1-T)$$

The other portion of the TSC (TSCe) for the Large C&I – Primary class and the Large C&I – Transmission class shall be computed using the following formula:

$$TSCe = [TCe/S – E/S] \times 1/(1-T)$$

Where:

TCd = The demand-related (kW) portion of the charges that the Company incurs to provide transmission service (including ancillary service charges and all non-market-based transmission service charges) to customers who receive default service from the Company. These charges are all FERC-approved charges imposed by PJM on a kW basis. These charges are allocated to each customer class based upon the contribution of that class to the 5 coincident peaks used by PJM to establish such demand – related charges.

PPL Electric Utilities Corporation

TRANSMISSION SERVICE CHARGE (CONTINUED)

TCe = All other charges not recovered through TCd that the Company incurs to provide transmission service (including ancillary service charges and all non-market-based transmission service charges) to customers who receive default service from the Company. These charges are all FERC-approved charges imposed by PJM on any basis other than a kW basis. These charges are allocated to each customer class based upon the projected kWh usage of that class, including estimated distribution system losses during the computation year.

D = For the Large C&I – Primary customer class, the total of the monthly billing demands for all customers in the class, projected for the computation year. For the Large C&I – Transmission customer class, the total of the monthly contributions of all customers in the class to the Company's 5 coincident peaks used by PJM to establish such demand – related charges.

E = Net over or undercollection of the TCe and TCd charges associated with the acquisition of transmission service as of the end of the 12-month period ending September 30 immediately preceding the computation year, including applicable interest. Reconciliation of the TSC will be conducted separately for each of the four customer classes. Beginning with the reconciliation period ending April 30, 2013, the percentage of demand-related costs assigned to each customer class will change monthly to reflect the class' actual share of default service peak load responsibility in that month. Interest shall be computed monthly from the month the over or undercollection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of overcollections and undercollections shall be calculated at the prime rate for commercial borrowing, not to exceed the legal rate of interest in effect on the last day of the month the over or undercollection occurred, effective April 1, 2016.

S = The Company's total retail KWH sales to customers in each customer class who receive default service under this tariff (including distribution losses) projected for the computation year.

T= The total Pennsylvania gross receipts tax rate (exclusive of Part 2 of the State Tax Adjustment Surcharge (STAS) within this tariff) in effect during the billing period, expressed in decimal form.

The TSC shall be filed with the Pennsylvania Public Utility Commission (Commission) by November 1 of each year. The TSC rate shall become effective for transmission service acquired on behalf of default service customers and rendered to those customers on or after the following December 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's TSC, if left unchanged, would result in a material over or undercollection of all transmission service charges incurred or expected to be incurred, the Company may file with the Commission for an interim revision of the TSC to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

PPL Electric Utilities Corporation

TRANSMISSION SERVICE CHARGE (CONTINUED)

By November 1 of each year the company will file with the Commission the experienced net over or under collection as described above. The reconciliation will include a calculation of the application period over or under recoveries of transmission service costs. The reconciliation of the TSC will be the difference between actual transmission service costs incurred and actual revenue billed for the application period. The reconciliation filed November 1, 2025 will be for a 6-month period to adjust to the new filing period.

Minimum bills shall not be reduced by reason of the TSC, nor shall charges hereunder be a part of the monthly rate schedule minimum. The TSC shall not be subject to any credits or discounts, but Part 2 of the STAS shall apply.

Application of the TSC shall be subject to review and audit by the Commission at intervals it shall determine. The Commission shall review the reasonableness and lawfulness of the level of charges produced by the TSC and the costs included therein.

Charges under the TSC for the period June 1, 2025, through November 30, 2025, as set forth in the applicable Rate Schedules.

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-1

The Generation Supply Charge-1 (GSC-1) shall be applied to each kilowatt-hour supplied to residential customers who take default service from the Company under Rate Schedule RS, small commercial and industrial customers who take Default Service under Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, and SE and standby service for the foregoing rate schedules. The GSC-1 will not apply to those Rate Schedule GS-3 customers who have a Maximum Registered Peak Load of 100 kW or greater, but the GSC-1 will apply to those Rate Schedule LP-4 customers who have a Maximum Registered Peak Load of less than 100 kW. The GSC-1 shall have the options listed below.

FIXED PRICE OPTION – RESIDENTIAL & SMALL COMMERCIAL/INDUSTRIAL

PURPOSE

The Fixed Price Option provides eligible customers in the Residential and Small Commercial & Industrial Customer Class with default service for those customers who have not selected a retail electric generation supplier (EGS) or the Time of Use Program.

PRICING PROVISIONS

The Fixed Price GSC-1, determined in accordance with the formula set forth below, shall be applied to all kilowatt-hours billed for service provided during the billing period:

$$\text{Fixed Price GSC-1} = \left[\left(\frac{GS_{fp}}{S_{fp}} - \left(\frac{E}{S_{fp}}\right)\right)\right] \times \frac{1}{(1-T)}$$

Where:

GSC-1 = The Generation Supply Charge-1, stated in cents per kilowatt hour, shall be calculated separately for each of the following two Customer Classes: (1) residential, and (2) small commercial and industrial as designated above.

GS_{fp} = The total estimated direct and indirect costs incurred by the Company to acquire generation supply from any source on behalf of participating Default Service customers on the Fixed Price Option in the applicable Customer Class. These costs shall be reduced by any revenue received by the Company from the sale of AECs that otherwise would have expired.

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-1 (CONTINUED)

The computation period shall be the six calendar months over which the Fixed Price GSC-1, as computed, will apply. Projections of the Company's costs to acquire

generation supply, adjusted for losses and including AECs, for the computation quarter shall include all direct and indirect costs of generation supply to be acquired by the Company from any source plus any associated generation supply-related procurement and administration costs. Any costs incurred prior to June 1, 2025, shall be amortized ratably over the 48-month period June 1, 2025, through May 31, 2029, and the 6-month amortization amount shall be included in the computation of the GSC-1.

E = Experienced net over or undercollection of costs associated with the acquisition of generation supply for participating default service customers in the applicable Customer Class. These costs will be computed as stated in the GSC-1 reconciliation provisions and will include applicable interest. Interest shall be computed monthly from the month the over- or under collection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of overcollections and undercollections shall be calculated at the prime rate for commercial borrowing, not to exceed the legal rate of interest in effect on the last day of the month the over- or undercollection occurred.

S_{fp} = The Company's total retail KWH sales to participating default service customers on the Fixed Price Option in the applicable Customer Class, projected for the computation quarter.

T = The Pennsylvania gross receipts tax rate (GRT) (exclusive of Part 2 of the State Tax Adjustment Surcharge (STAS) within this tariff) in effect during the billing month, expressed in decimal form.

Minimum bills shall not be reduced by reason of the GSC-1, nor shall GSC-1 charges be a part of the monthly rate schedule minimum. The GSC-1 shall not be subject to any credits or discounts and Part 2 of the STAS shall apply.

The following GSC-1 charges apply for the Fixed Price Option during the period June 1, 2025 through November 30, 2025.

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-1 (CONTINUED)

							20,000	8.583			

GSC – 1 RECONCILIATION PROVISIONS

For the Fixed Price Option, the Company will file with the Commission thirty (30) days prior to each annual period (June 1 through May 31), a reconciliation of GSC-1 actual billed revenues and actual incurred costs for a twelve-month period ending March 31 of each year, pursuant to 66 Ps. C.S. §1307. The reconciliation shall become effective for service rendered during the 2 six-month computation periods.

The reconciliation will be calculated separately for each of the two Customer Classes. The reconciliation will include a calculation of any over/under collection that will be reflected in the GSC-1 charges for the subsequent 2 six-month computation periods. The GSC-1 will be reconciled every twelve months, using over/under collection balance for the twelve-month period ending two months prior to each annual period.

Application of the GSC-1 shall be subject to continuous review and audit by the Commission at intervals it shall determine. The Commission shall review the reasonableness and lawfulness of the level of charges produced by the GSC-1 and the costs included therein.

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-1 (CONTINUED)

TIME OF USE PROGRAM PURPOSE

The Time-of-Use (TOU) Program provides for the voluntary participation of eligible existing and new residential and small commercial & industrial customers in a year-round TOU Program. Eligible customers must meet the application provisions of this TOU Program. The objective of this TOU Program is to provide eligible residential and small commercial & industrial customers with an opportunity to pay a rate lower than the fixed price for usage during off-peak periods and a rate higher than the fixed price for usage during on-peak periods.

APPLICATION PROVISIONS

This TOU Program is available to existing and new residential and small commercial/industrial customers who are served, or qualify to be served, under Rate Schedules RS, GS-1, GS-3 (customers with maximum registered peak loads less than 100 KW), LP-4 (customers with maximum registered peak loads less than 100KW), and BL. This includes Volunteer/Non-Profit organizations (Volunteer Fire Companies, Non-Profit Senior Citizen Centers, Non-Profit Rescue Squads, and Non-Profit Ambulance Services) served under Rate Schedules GS-1 and GS-3 but does not include customers in the Company's OnTrack program. Customers taking service under the above-referenced rate schedules, who also participate in the Company's Net Metering for Renewable Customer Generator programs, are eligible for the TOU Program.

PRICING PROVISIONS

The following Generation Supply Charges apply for service under the TOU Program during the period June 1, 2025 through November 30, 2025. On-Peak hours will be set based on schedule below Monday through Friday, excluding weekends and holidays.

Rate Schedule RS	Winter On-Peak Hours (4:00 PM to 8:00 PM) December 1 to May 31	Summer On-Peak Hours (2:00 PM to 6:00 PM) June 1 to November 30
On-Peak Hours	7.938 cts per kWh	13.333 cts per kWh **(I)**
Off Peak Hours	6.471 cts per kWh	8.243 cts per kWh **(I)**

Rate Schedules GS-1, GS-3 (< 100 kW), LP-4 (<100kW), and BL	Winter On-Peak Hours (4:00 PM to 8:00 PM) December 1 to May 31	Summer On-Peak Hours (2:00 PM to 6:00 PM) June 1 to November 30
On-Peak Hours	8.131 cts per kWh	12.836 cts per kWh **(I)**
Off Peak Hours	6.744 cts per kWh	8.098 cts per kWh **(I)**

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-1 (CONTINUED)

The TOU GSC-1, determined in accordance with the formula set forth below, shall be applied to all kilowatt-hours billed for default service provided during the billing month:

$$\text{Summer On-Peak TOU GSC-1} = \left[\left(\frac{GS_{OFF}}{S} \times GS_M + \left(\frac{GS_{IND} - E}{S} \right) \right) \right] \times \frac{1}{(1-T)}$$

$$\text{Winter On-Peak TOU GSC-1} = \left[\left(\frac{GS_{OFF}}{S} \times GS_M + \left(\frac{GS_{IND} - E}{S} \right) \right) \right] \times \frac{1}{(1-T)}$$

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-1 (CONTINUED)

$$\text{Summer Off-Peak TOU GSC-1} = \left[\left(\frac{GS_{GEN}}{S} \times 0.90\right) + \left(\frac{GS_{IND} - E}{S}\right)\right] \times \frac{1}{(1-T)}$$

$$\text{Winter Off-Peak TOU GSC-1} = \left[\left(\frac{GS_{GEN}}{S} \times 0.90\right) + \left(\frac{GS_{IND} - E}{S}\right)\right] \times \frac{1}{(1-T)}$$

Where:

GSC-1 = The Generation Supply Charge-1, stated in cents per kilowatt hour, shall be calculated separately for each of the following two Customer Classes: (1) residential, and (2) small commercial and industrial (taking service at secondary voltage levels) as designated above.

GS_{GEN} = The total generation component for the respective customer classes' fixed price default service rate.

GS_{OFF} = The total Off-Peak generation component for the respective customer classes' fixed price default service rate.

GS_{IND} = The total estimated indirect costs incurred by the Company to acquire generation supply from any source on behalf of participating Default Service customers in the applicable Customer Class.

E = Experienced net over or undercollection of costs associated with the acquisition of generation supply for participating Default Service customers in the applicable Customer Class. These costs will be computed as stated in the GSC – 1 Reconciliation Provisions and will include applicable interest. Interest shall be computed monthly from the month the over- or undercollection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of overcollections and undercollections shall be calculated at the prime rate for commercial borrowing in effect on the last day of the month the over- or undercollection occurred.

GS_M = Seasonal Multiplier based on historic data.

S = The Company's total retail KWH sales to participating Default Service customers in the applicable Customer Class, projected for the computation period.

T = The Pennsylvania GRT rate in effect during the billing month, expressed in decimal form.

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-1 (CONTINUED)

TERMINATING PARTICIPATION

A customer may leave this TOU Program after providing notice to the Company. The customer, if still receiving default service, will return to the standard Fixed Price GSC-1.

GENERATION SUPPLY CHARGE-2

The Generation Supply Charge-2 (GSC-2) shall be charged to customers in the Large Commercial & Industrial Customer Class who take default service from the Company under Rate Schedules GS-3, LP-4, LP-5, and standby service for the foregoing rate schedules. The GSC-2 will not apply to those Rate Schedule LP-4 customers who have a Maximum Registered Peak Load of less than 100 kW, but the GSC-2 will apply to those Rate Schedule GS-3 customers who have a Maximum Registered Peak Load of 100 kW or greater. The GSC-2 shall have one rate option provision: Hourly Default Service Option.

PURPOSE

The Hourly Default Service Option provides default service to eligible customers in the Large Commercial & Industrial Customer Class who have not selected an EGS.

PRICING PROVISIONS

All of the following charges apply to this rate option.

- GSC-2 Energy Charge per KWH: The product of actual real-time LMPs at the PPL Residual Aggregate Node as reported by PJM for each hour of the billing month expressed in cents per KWH multiplied by the customer's actual energy use, adjusted for losses, during each hour of the billing month.

- GSC-2 Capacity Charge: The product of the RPM price of capacity expressed in dollars per KW-Day, as reported by PJM for the PL Zone, for the applicable billing month times the customer's fixed peak load capacity obligation, as determined by the Company in accordance with the applicable PJM Agreements, multiplied by the number of days in the billing month.

- GSC-2 Administrative Charge per KWH: The product of all administrative charges (both the supplier's charges and PPL Electric's charges) expressed in cents per KWH multiplied by the customer's actual energy use, adjusted for losses, during each hour of the billing month. The supplier's charges shall be the supplier's winning bid in PPL Electric's most recent solicitation for supply of default service to customers in the Large C&I Customer Class. The supplier's charges may include, but are not limited to, the costs of transmission service (other than non-market-based transmission service charges), ancillary services, congestion management costs, and such other services or products that are required to supply hourly default service to customers in the Large C&I Customer Class, including AECs. PPL Electric's charges shall be a monthly pro rata amortization of the actual costs incurred by the Company to acquire generation supply from any source for the Large C&I Customer Class during the most recent 12-month period ended May 31 (as determined by amortizing such costs ratably over a 12-month period) plus the monthly amortization of the cost of administering that program prior to June 1, 2025 (as determined by amortizing such costs ratably over the 48-month period June 1, 2025 through May 31, 2029). In addition, the initial computation period will include any remaining over or undercollection balance related to application of the GSC-2 for the Large Commercial and Industrial Customer Class.

PPL Electric Utilities Corporation

GENERATION SUPPLY CHARGE-2 (CONTINUED)

The following rate components of the GSC-2 shall be filed with the Commission thirty (30) days prior to each application year (June 1 through May 31). The rate components subject to this filing requirement are: (1) the supplier's charges to be included in the GSC-2 Administrative Charge and (2) PPL Electric's charges to be included in the GSC-2 Administrative Charge. The reconciliation of the GSC-2 will be the difference between the actual administration costs incurred and the applicable billed revenue for the computation period. These rate components, as well as any net over or undercollection of these rate components as of the end of the 12-month period ending March 31 immediately preceding the computation period and set forth as a separate E-factor reconciliation component, shall become effective for Default Service rendered on and after the following June 1, and shall remain in effect for a period of one year.

By May 1 of each year, the Company will file with the Commission the experienced net over or undercollection of the GSC-2 associated with the above-identified costs that are incurred to provide generation supply for participating Default Service customers as of the end of the calendar month ending two months prior to the computation period, including applicable interest. Interest shall be computed monthly from the month the over or undercollection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of undercollections shall be calculated at the prime rate of interest. Interest on refunds of overcollections shall be calculated at the prime rate of interest, not to exceed the legal rate of interest.

The Pennsylvania GRT rate (exclusive of Part 2 of the State Tax Adjustment Surcharge (STAS) within the tariff) in effect during the billing month shall apply to charges under the GSC-2.

Minimum bills shall not be reduced by reason of the GSC-2, nor shall GSC-2 charges be a part of the monthly rate schedule minimum. The GSC-2 shall not be subject to any credits or discounts, but Part 2 of the STAS shall apply.

Application of the GSC-2 shall be subject to continuous review and audit by the Commission at intervals it shall determine. The Commission shall review the reasonableness and lawfulness of the level of charges produced by the GSC-2 and the costs included therein.

ACT 129 COMPLIANCE RIDER – PHASE 4

A Phase 4 Act 129 Compliance Rider (ACR 4) shall be applied, on a non-bypassable basis, to charges for electricity supplied to customers who receive distribution service from the Company under this Tariff. The ACR 4 will be implemented beginning June 1, 2021.

The ACR 4 shall be computed separately for each of the following three customer classes:

(1) Residential: Consisting of Rate Schedule RS,
(2) Small Commercial and Industrial (Small C&I): Consisting of Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, and SE, and
(3) Large Commercial and Industrial (Large C&I): Consisting of Rate Schedules LP-4, and LP-5.

The ACR 4 will be computed for each customer receiving distribution service from the Company using the formulae described below. For residential customers, the ACR 4 charge shall be included in the distribution charges on a kWh basis of the monthly bill. For all other customers, the ACR charge shall be listed as a separate charge on the monthly bill. All charges shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the residential rate schedules in this tariff have been adjusted to reflect application of the currently effective ACR 4.

The costs of each EE&C program available to only one customer class will be directly assigned to that customer class. Costs of EE&C programs which cannot be directly assigned to one customer class will be allocated to the customer classes benefiting from those programs using an allocation factor determined by dividing the EE&C costs directly assigned to each customer class by the total of the Company's EE&C Plan costs directly assigned to all customer classes.

The ACR 4 for the Residential class and the Small C&I class shall be computed using the following formula:

ACR 4 = [ACc/S - E/S] X 1 / (1-T)

The ACR 3 for the Large C&I class shall be computed using the following formula:

ACR 4 = [ACc/D - E/D] X 1 / (1-T)

ACT 129 COMPLIANCE RIDER – PHASE 4 (CONTINUED)

Where:

ACc = An annual budget of all costs required for the Company to implement its Commission approved Phase 4 Energy Efficiency and Conservation (EE&C) Plan during a compliance year, which is the 12-month period beginning June 1 of each calendar year and ending May 31 of the following calendar year. The annual project program cost is the sum of all direct and indirect costs (including all deferred design and development costs, general administrative costs, and applicable statewide evaluator costs) required to implement the Company's EE&C Plan divided by the number of months in the Company's EE&C Plan for the given application year. All deferred design and development cost, general administrative costs, and applicable statewide evaluator costs will be amortized over a 60-month period.

D = For the Large C&I customer class, the total of the monthly billing demands for all customers in the class, projected for the computation year. The peak demand will be based on the customer's peak load contribution to the PJM peak load during the prior PJM Planning Year.

E = Net over or undercollection of the ACR 4 charges as of the end of the 12-month period ending March 31 immediately preceding the next compliance year. Reconciliation of the ACR 4 will be conducted separately for each of the three customer classes based upon the actual expenses incurred and actual revenues received for each customer class. No interest shall be computed monthly on over or undercollections. The reconciliation of ACR 3 revenues and expenses shall be adjusted during the 2022-2023 ACR 4 application year to reflect actual data for the months of April and May 2021, as well as any expenses incurred prior to May 31, 2021, but paid after that date.

S = The Company's total billed KWH sales in each customer class who receive distribution service under this tariff (including distribution losses), projected for the computation year.

T = The total Pennsylvania GRT rate in effect during the billing period, expressed in decimal form.

The ACR 4 shall be filed with the Pennsylvania Public Utility Commission (Commission) by May 1 of each year. The ACR 4 charge shall become effective for distribution service provided to all customers on or after the following June 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's ACR 4, if left unchanged, would result in a material over or undercollection of Phase 4 Act 129 Compliance costs incurred or expected to be incurred during the current 12-month period ending May 31, the Company may file with the Commission for an interim revision of the ACR 4 to become effective ten (10) days from the date of filing, unless otherwise ordered by the Commission.

PPL Electric Utilities Corporation

ACT 129 COMPLIANCE RIDER – PHASE 4 (CONTINUED)

At the conclusion of the Phase 3 EE&C Plan on May 31, 2021, collections under the ACR 3 for each customer class will be reconciled to the total cost of the EE&C Plan allowed by the Commission for that customer class. Overcollections or undercollections will be reflected as a separate line item in the E factor calculation and will be refunded or recovered through application of the ACR 4 rate effective June 1, 2021 through May 31, 2022. If any over/under collection balance is expected to remain after March 31, 2022, the collection will be included in the ACR 4 rate going forward.

Minimum bills shall not be reduced by reason of the ACR 4 nor shall charges hereunder be a part of the monthly rate schedule minimum. The ACR 4 shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under this Rider. Charges under ACR 3 and ACR 4 will be combined for billing purposes only.

The Company shall file a report of collections under the ACR 4 within thirty (30) days following the conclusion of each compliance year.

Application of the ACR 4 shall be subject to review and audit by the Commission at intervals it shall determine. The Commission shall review the level of charges produced by the ACR 4 and the costs included therein.

ACT 129 COMPLIANCE RIDER – PHASE 4 CHARGE

Charges under the ACR 4 for the period June 1, 2025 through May 31, 2026, as set forth in the applicable Rate Schedules.

PPL Electric Utilities Corporation

MERCHANT FUNCTION CHARGE RIDER

The Merchant Function Charge (MFC) Rider, stated as a percentage, shall be applied to the generation supply and transmission services charges billed, under the GSC-1 and TSC, respectively, as set forth in this Tariff, to each residential and small commercial & industrial (Small C&I) customer taking default service under these Rate Schedules: RS, GS-1, GS-3, BL, SA, SM (R), SHS, SLE, and SE and stand-by service for the foregoing rate schedules. The MFC will be reflected in the Company's Price To Compare.

The MFC, which will not be subject to reconciliation, is designed to make the Company's Price To Compare (PTC) more comparable to electric supply service prices offered by EGSs by reflecting anticipated generation supply-related uncollectible accounts expense in default service rates. In addition, the MFC will be applied to the TSC to reflect the applicable transmission service-related uncollectible accounts expense previously recovered though PPL Electric's distribution rates. The MFC is calculated by multiplying the generation supply charges billed under the GSC-1, and transmission service charges billed under the TSC, to each customer in the applicable class by the following uncollectible accounts expense percentages.

Residential Customer Class: 1.80%

Small C&I Customer Class: 0.26%

The values provided in the MFC Rider will be in place until changed in a subsequent distribution rate case.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 0.00% will apply consistent with the Commission Order dated May 23, 2013, at Docket No. P-2012-2325034, approving the DSIC. This charge will be effective upon the effective date of new rates established at Docket No. R-2025-3057164.

GENERAL DESCRIPTION

A. Purpose: To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide PPL Electric with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

B. Eligible Property: The DSIC-eligible property will consist of the following:

- Poles and towers (Account 364);
- Overhead conductors (Account 365) and underground conduit and conductors (Accounts 366 and 367);
- Line transformers (account 368) and substation equipment (Account 362);
- Any fixture or device related to eligible property listed above, including insulators, circuit breakers, fuses, reclosers, grounding wires, crossarms and brackets, relays, capacitors, converters and condensers;
- Unreimbursed costs related to highway relocation projects where an electric distribution company must relocate its facilities; and
- Other related capitalized costs.

C. Effective Date: The DSIC will become effective for bills rendered on and after July 1, 2013.

PPL Electric Utilities Corporation

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (CONTINUED)

COMPUTATION OF THE DSIC

A. Calculation: The DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update. Thus, changes in the DSIC rate will occur as follows:

Effective Date of Change	Date to which DSIC-Eligible Plant Additions Reflected
April 1st	December 1st – February 28th
July 1st	March 1st – May 31st
October 1st	June 1st – August 31st
January 1st	September 1st – November 30th

B. Determination of Fixed Costs: The fixed costs of eligible distribution system improvements projects will consist of depreciation and pre-tax return, calculated as follows:

1. Depreciation: The depreciation expense shall be calculated by applying the annual accrual rates employed in PPL Electric's most recent base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded to the original cost of DSIC-eligible property.

2. Pre-tax return: The pre-tax return shall be calculated using the statutory state and federal income tax rates, PPL Electric's actual capital structure and actual cost rates for long-term debt and preferred stock as of the last day for the three-month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in PPL Electric's last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission in the most recent Quarterly Report on the Earnings of Jurisdictional Utilities released by the Commission.

C. Application of DSIC: The DSIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for distribution service under PPL Electric's otherwise applicable rates and charges, excluding amounts billed for the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by PPL Electric's projected revenue for distribution service (including all applicable clauses and riders) for the quarterly period during which the charge will be collected, exclusive of the STAS.

PPL Electric Utilities Corporation

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC) (CONTINUED)

COMPUTATION OF THE DSIC (Continued)

D. Formula: The formula for calculation of the DSIC is as follows:

$$DSIC = \frac{((DSI \times PTRR) + STFT + Dep + e) \times \frac{1}{(1-T)}}{PQR}$$

Where:

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences from the use of accelerated depreciation per Internal Revenue Code, 26 U.S. Code § 168.

PTRR = Pre-tax return rate applicable to DSIC-eligible property.

STFT = (State Tax Flow Through) Pre-tax flow through calculated on book-tax timing differences between accelerated tax depreciation and book depreciation net of federal tax.

Dep = Depreciation expense related to DSIC-eligible property.

e = Amount calculated (+/-) under the annual reconciliation feature or Commission audit, as described below.

PQR = Projected quarterly revenues for distribution service (including all applicable clauses and riders) from appliable customers. The quarterly revenues will be determined on the basis of the summation of projected revenues for the applicable three-month period.

T = Pennsylvania gross receipts tax rate in effect during the billing month, expressed in decimal form.

Minimum bills shall not be reduced by reason of the DSIC, nor shall charges hereunder be a part of the monthly rate schedule minimum. The DSIC shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under the DSIC.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC) (CONTINUED)

CUSTOMER SAFEGUARDS

A. Cap: The DSIC is capped at 5.00% of the amount billed to customers for distribution service (including all applicable clauses and riders) as determined on an annualized basis.

B. Audit/Reconciliation: The DSIC is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1350, et seq., shall be credited to customer accounts. The DSIC is subject to annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or PPL Electric may elect to subject the DSIC to quarterly reconciliation but only upon request and approval by the Commission. The revenue received under the DSIC for the reconciliation period will be compared to PPL Electric's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one -year period commencing on April 1 of each year, or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on over-collections and credits will be calculated at the residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) and will be refunded in the same manner as an over-collection. PPL Electric is not permitted to accrue interest on under collections.

C. New Base Rates: The DSIC will be reset at zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had previously been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in PPL Electric's rates or rate base will be reflected in the quarterly updates of the DSIC.

D. Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change. An explanatory bill insert also shall be included with the first billing.

E. Customer classes: Effective July 1, 2013, the DSIC shall be applied equally to all customer classes except Rate Schedule LP-5, consistent with the Commission Order entered April 9, 2015 at Docket No. P-2012-2325034.

F. Earning Reports: The DSIC also will be reset at zero if, in any quarter, data filed with the Commission in PPL Electric's then most recent Annual or Quarterly Earnings reports (Schedule D-2) show that PPL Electric would earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the DSIC as described in the pre-tax return section. PPL Electric shall file a tariff supplement implementing the reset to zero due to overearning on one-days' notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that PPL Electric has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.

PPL Electric Utilities Corporation

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC) (CONTINUED)

G. Residual E-Factor Recovery Upon Reset to Zero: PPL Electric shall file with the Commission interim rate revisions to resolve the residual over/under collection or E-factor amount after the DSIC rate has been reset to zero. PPL Electric can recoup or refund the residual over/under collection balance when the DSIC rate is reset to zero. PPL Electric shall refund any overcollection to customers and is entitled to recover any undercollections as set forth in Customer Safeguard Section B. The tariff supplement shall be submitted in accordance with the Quarterly Updates section of this tariff.

PPL Electric Utilities Corporation

STORM DAMAGE EXPENSE RIDER

PURPOSE

The Storm Damage Expense Rider (SDER) shall be applied to bills of all customers of the Company. The SDER provides for recovery of qualified storm damage expenses incurred by the Company from storms reportable to the Pennsylvania Public Utility Commission (Commission) that are not otherwise currently recovered through its base rates.

STORM DAMAGE EXPENSES

Storm damages for purposes of this SDER are those resulting from direct physical loss or damage to property from wind, tornado, hurricane, tropical storm, tropical depression, rain, snow, hail, sleet, ice, lightning, flood, fire resulting from any of these perils, and similar causes. Storm damage expenses consist of those expenses incurred to remediate storm damage to the Company's distribution system, including, but not limited to, overtime and premium wages of the Company's employees, costs of outside service providers and mutual aid utilities employed by the Company during storm restoration efforts, materials and supplies used to repair or replace damaged property, overhead charges associated with storm damage expenses, including wages and benefits, transportation, purchasing and stores charges, expediting expenses for the reasonable and extra costs to make temporary repairs and to expedite the permanent repair or replacement of damaged property, and expenses of providing services to customers whose electric service has been interrupted by any of the perils listed above. Straight-time wages and benefits and expenses reimbursed by others will be excluded from the SDER, and capitalized costs of repairing or replacing facilities damaged by the perils listed above, will be excluded from the SDER.

FACTOR DEFINITION

Net storm damage expenses to be recovered in the SDER shall be equal to:

$$SDER = (C – R) + E,$$

Where C equals the Cost factor, R equals the Base Rate factor and E equals the Experience factor.

The C Factor = For purposes of calculating SDER charges, storms will be categorized as reportable or non-reportable storms. Reportable storms are those that cause unscheduled service interruptions in a single event to 2,500 or more customers for 6 or more consecutive hours; non-reportable storms are all other storms. See 52 Pa. Code § 67.1(b).

PPL Electric Utilities Corporation

STORM DAMAGE EXPENSE RIDER (CONTINUED)

FACTOR DEFINITION (CONTINUED)

In order to calculate the C factor for each application year, the Company will include in the SDER all qualifying storm damage expenses caused by reportable storms and non-reportable storms incurred during the 12-month period ending two months prior to the application year, except that all qualifying expenses caused by major storm events, defined as an interruption of electric service resulting from conditions beyond the control of the Company which affects at least 10% of the Company's customers during the course of the event for a duration of 5 minutes each or greater (see 52 Pa. Code §57.192), will be recovered over three years and reflected in SDER rates commencing in the application year after the storm occurred.

The C factor will include interest for major storm events that are subject to amortization, as provided above. Such interest shall be computed monthly at the average rate of interest specified for residential mortgage lending by the Secretary of Banking in accordance with the Act of January 30, 1974 (P.L. 13, No. 6 referred to as the Loan Interest and Protection law, 41 P .S. §§ 101 et seq.), from the month the amortization begins to the effective month that the full amount of the amortization is recovered.

The R Factor = The R factor is the amount of applicable storm damage expense reflected in the Company's base rates. The R factor for July 1, 2026 and thereafter, unless modified by the Commission in a subsequent base rate case, shall equal $42,500,000, consisting of: (1) $32,000,000, which for purposes of this SDER constitutes the amount of expense from reportable storms currently recovered through base rates, excluding previously approved amortization allowances for expenses for extraordinary storms, defined by the Uniform System of Accounts General Instruction 7 as an item that exceeds five percent (5%) of a utility's annual net income, that currently are reflected in the Company's base rates; and (2) $10,500,000, which for purposes of this SDER constitutes the amount of expense from non-reportable storms currently recovered through base rates. The Company will consider storm damage expenses exceeding 5% of its annual distribution net income as extraordinary for SDER recovery purposes.

The E Factor = The E factor is the amount of any under or over collections during the year prior to the application year resulting from differences between actual and projected billing units. Interest shall be computed monthly at the average rate of interest specified for residential mortgage lending by the Secretary of Banking in accordance with the Act of January 30, 1974 (P.L. 13, No. 6 referred to as the Loan Interest and Protection law, 41 P ,S, §§ 101 et seq.), from the month the over or under collection occurs to the effective month that the over or under collection is recouped or refunded.

PPL Electric Utilities Corporation

STORM DAMAGE EXPENSE RIDER (CONTINUED)

PRICING PROVISION

The SDER shall be computed separately for each of the following four customer classes:

(1) Residential: Consisting of Rate Schedule RS,
(2) Small Commercial and Industrial (Small C&I): Consisting Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, and SE,
(3) Large Commercial and Industrial - Primary (Large C&I - Primary): Consisting of Rate Schedule LP-4, and
(4) Large Commercial and Industrial – Transmission (Large C&I – Transmission): Consisting of Rate Schedule LP-5.

Net storm damage expenses to be recovered in each application year (C-R+E) will be allocated among these four customer classes using the method in the cost allocation study approved by the Commission in the Company's most recent base rate proceeding.

The following Allocation Schedule percentages apply for the following four customer classes.

Customer Class	Residential	Small C&I	Large Primary C&I	Large Transmission C&I
Allocation Schedule	72.60% **(I)**	22.90% **(D)**	4.35% **(D)**	0.14% **(D)**

The SDER, as computed using the formula described below, shall be included in the distribution charges of the monthly bill for each customer receiving distribution service from the Company and shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the applicable rate schedules in this tariff have been adjusted to reflect application of the currently effective SDER.

The SDER for the Residential class shall be computed using the following formula:

SDER = [RASDE / D] X 1 / (1-T)

The SDER for the Small C&I class shall be computed using the following formula:

SDER = [SASDE / D] X 1 / (1-T)

The SDER for the Large C&I - Primary class shall be computed using the following formula:

SDER = [LASDEP / N] X 1 / (1-T)

STORM DAMAGE EXPENSE RIDER (CONTINUED)

The SDER for the Large C&I – Transmission class shall be computed using the following formula:

SDER = [LASDET / N] X 1 / (1-T)

Where:

RASDE = Net storm damage expenses allocated to Residential customers

SASDE = Net storm damage expenses allocated to Small C&I customers

LASDEP = Net storm damage expenses allocated to Large C&I - Primary customers LASDET =

Net storm damage expenses allocated to Large C&I – Transmission customers.

D = The Company's total billed kWh sales in each customer class that receives distribution service under this Tariff (including distribution losses), projected for the computation year.

N = Number of Customers per Year

T = The total Pennsylvania gross receipts tax rate in effect during the billing period, expressed in decimal form.

RECOVERY PERIOD

The SDER charges together with supporting data will be filed with the Commission no later than December 1 of the preceding year. The SDER charges shall become effective for service rendered on and after the following January 1.

Upon a determination that an SDER charge, if left unchanged, would result in a material over or under-collection of all SDER expenses incurred or expected to be incurred during the current 12-month application period, the Company may file with the Commission a request for an interim revision of the SDER to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

PPL Electric Utilities Corporation

STORM DAMAGE EXPENSE RIDER (CONTINUED)

ACCOUNTING

The Company will record any qualifying storm damage expenses from reportable storms and non-reportable storms in excess of the $42,500,000 included in base rates, to a regulatory asset for inclusion in the SDER. If the amount of storm damage expense incurred is less than the $42,500,000 included in base rates, the Company will record a regulatory liability for inclusion in the SDER.

CUSTOMER SAFEGUARDS

Cap: Total annual revenues collected under the SDER will be capped at an amount not to exceed 3% of the total intrastate operating revenues billed to customers, exclusive of amounts recovered under the State Tax Adjustment Surcharge. If storm damage expense for recovery exceeds 3%, the excess expenses will be deferred and available for recovery in the Company's next base rate case under Section 1308.

Audit/Reconciliation: The SDER is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1307, *et seq.*, shall be credited to customer accounts. The SDER is subject to annual reconciliation based on a reconciliation period ending October 31 of each year. The revenue received under the SDER for the reconciliation period will be compared to PPL Electric's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period.

STORM DAMAGE EXPENSE RIDER CHARGE

Effective July 1, 2026, the SDER charges will be applied as set forth in the applicable Rate Schedules, unless otherwise ordered by the Commission.

RESIDENTIAL ELECTRIC VEHICLE (EV) TIME OF USE (TOU) CHARGING REBATE PROGRAM

A. PROGRAM DESCRIPTION AND ELIGIBILITY

The Residential EV TOU Charging Rebate Program is available to residential customers with Level 2 EV chargers, subject to a cap of 2,000 customers. A customer can enroll in this program through the Company's website. The program's purpose is to incent participating customers to charge their EVs using their Level 2 chargers during the off-peak hours established for this program by providing a flat rebate to each participating customer who conducts at least 80% of their EV charging using their Level 2 charger during off-peak hours. To be eligible for this program, the customer's EV charging equipment must be on the list of compatible equipment certified by the Company.

B. ON-PEAK AND OFF-PEAK HOURS

For purposes of this program, the On-Peak Hours are 4:00 PM to 7:00 PM in the summer months of June, July, and August and 6:00 AM to 9:00 AM and 6:00 PM to 8:00 PM in the winter months of December, January, and February.

C. REBATE AMOUNT

A participating customer who conducts at least 80% of their EV charging using their Level 2 charger during off-peak hours during the applicable billing period will receive a flat rebate of $10.00.

D. DATA COLLECTION

Customers participating in the program must agree that the Company can conduct EV charging session validation and data collection for their EV charger via approved telematics or EV supply equipment. Data collected by the Company can be used for internal planning and operational purposes.

E. MARKETING

The Company may conduct targeted marketing to customers in areas where EV growth is forecasted to start causing system constraints in the next 5-7 years.

RATE SCHEDULE RS
RESIDENTIAL SERVICE

APPLICATION RATE SCHEDULE RS

This Rate Schedule is for single phase residential service in accordance with the provisions hereof. The Multiple Dwelling Unit Application is restricted to eight or fewer dwelling units for applications after August 26, 1976, and further to buildings converted to multiple dwelling units for applications after June 28, 1980.

NET MONTHLY RATE

Distribution Charge
Effective: October 1, 2024

$17.00 per month (Customer Charge) plus
6.296 cents per KWH (Includes ACR 4, USR, and SDER)

Transmission Service Charge

The Transmission Service Charge included in this Tariff applies to all KW and KWH billed under this Rate Schedule.

Generation Supply Charge -1

The Generation Supply Charge -1 included in this tariff applies to all KWH billed under this rate Schedule.

MINIMUM CHARGE

The Minimum Distribution Charge is the Customer Charge.

BUDGET BILLING

Budget Billing is available at the option of the customer for charges under this Rate Schedule.

MULTIPLE DWELLING UNIT APPLICATION

When multiple dwelling units are supplied through one meter, the per day charge and the KWH block charges of the Distribution Charge rate, plus for customers who receive Default Service from the Company, Generation Supply Charge-1 rates are multiplied by the number of dwelling units in the determination of the net monthly bill under this Rate Schedule. Demand billing does not apply under this provision.

RIDERS

The Riders included in that Tariff apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

RATE SCHEDULE RS (CONTINUED)

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 20 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. After the due date, the Company may initiate collection procedures and a late payment charge of 1.25% per month on the then unpaid and overdue balance is applicable.

APPLICATION PROVISIONS

For the purposes of the application of this Rate Schedule, a dwelling is defined as a living space consisting of at least permanent provisions for shelter, dining, sleeping, and cooking, with provisions for permanent electric, water, and sanitation services.

(1) This Rate Schedule is for single phase electric service for:

(a) A single-family dwelling and detached buildings when the detached buildings are served at the customer's expense through the same meter as the single family dwelling.

(b) A separate dwelling unit in an apartment house.

(c) A single farm dwelling and general farm uses when general farm uses are served at the customer's expense through the same meter as the single farm dwelling.

(d) A building previously wired for single meter service which is converted to not more than 8 separate dwelling units served through one meter.

(2) This Rate Schedule does not apply to:

(a) Residential service that includes more than 2,000 watts of connected load attributable to commercial or professional use exclusive of space heating and air conditioning in common with the residence.

(b) Residential service combined with any commercial or professional use outside the residence or in a section of a multi-use building that is separate from the dwelling unit.

(c) Service which includes common use in excess of 5,500 watts of connected load for halls, basement, or other portions of an apartment building.

(d) Single meter service to multiple dwelling units in buildings constructed after June 28, 1980.

(e) Establishments recognized by name, notice or advertisement, such as hotels, clubs, fraternities, sororities, boarding houses, institutions, orphanages, rest homes, tourist homes and rooming houses with more than 3 rooms available for such use and rectories and convents with accommodations for more than 5 adults.

PPL Electric Utilities Corporation

RATE SCHEDULE RS (CONTINUED)

(f) Residential service locations connected on or after September 28, 1995, which include more than 2,000 watts of general farm load.

(g) Residential service locations with an installed generating system that has a nameplate capacity greater than 50 kilowatts.

(h) Campers, Recreational Vehicles (RV), and construction trailers that are mobile in nature and are not permitted dwellings.

(3) Where any use of service at a residence or on a farm is not eligible for the application of this Rate Schedule, customer has the option to provide separate circuits so that the portion that is applicable can be metered and billed separately hereunder and the remaining portion can be billed under the applicable general service rate schedule. When separate circuits are not provided, the entire service is billed under the applicable general service rate schedule.

(4) Electric water heaters served hereunder must be equipped with thermostatically controlled noninductive heating elements so connected that not more than 5500 watts can be operated at one time. The Company reserves the right to install necessary devices to control the operation of electric water heaters at its option.

RATE SCHEDULE GS-1
SINGLE PHASE GENERAL SERVICE
AT SECONDARY VOLTAGE

APPLICATION RATE SCHEDULE GS-1

This Rate Schedule is for single phase non-residential service at secondary voltage and other applications outside the scope of the Residential Rate Schedule, which would include residential service locations with an installed generating system that has a nameplate greater than 50 kilowatts. New applications with voltage levels higher than the secondary voltage will not be accepted.

NET MONTHLY RATE

Distribution Charge
$30.00 per month (Customer Charge) plus
$5.846 per kilowatt for all Billing KW

Transmission Service Charge

The customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge -1

The customer is responsible for applicable charges under the GSC-1 rate schedule.

MINIMUM CHARGE

The Monthly Minimum Distribution Charge is the Customer Charge.

BILLING KW

The Billing KW for the Distribution component is the average number of kilowatts supplied during the 15-minute period of maximum use during the current billing period.

RATE SCHEDULE GS-1 (CONTINUED)

SERVICE TO VOLUNTEER FIRE COMPANIES, NON-PROFIT SENIOR CITIZEN CENTERS, NON-PROFIT RESCUE SQUADS, AND NON-PROFIT AMBULANCE SERVICES

Upon application and acceptance by the Company, Volunteer Fire Companies, Non-Profit Senior Citizen Centers, Non-Profit Rescue Squads, and Non-profit Ambulance Services may, for a minimum one-year period, elect to have electric service rendered pursuant to the following charges.

Distribution Charge
Effective: October 1, 2024

$17.00 per month (Customer Charge) plus
6.296 cents per KWH (Includes ACR 4, USR, and SDER)

BUDGET BILLING

Budget Billing is available at the option of the customer for charges under this Rate Schedule.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 15 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. When not so paid the gross rate applies which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

MINIMUM SERVICE PERIOD

Service under this Rate Schedule is for no less than one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

RATE SCHEDULE GS-3
THREE PHASE GENERAL SERVICE
AT SECONDARY VOLTAGE

APPLICATION RATE SCHEDULE GS-3

This Rate Schedule is for two phase and three-phase service at secondary voltage. Where necessary, the Company furnishes and maintains one transformation from line voltage to a lower Company standard service voltage. New applications with voltage levels higher than the secondary voltage will not be accepted after January 1, 2005.

General Service customers receiving three-phase service will be served under Rate Schedule GS-3.

NET MONTHLY RATE

Distribution Charge
$ 78.00 per month (Customer Charge) plus
$ 5.272 per kilowatt for all kilowatts of the Billing KW

Transmission Service Charge

The customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge

The customer is responsible for applicable charges under the GSC-1 or GSC-2 rate schedule.

MINIMUM CHARGE

The Monthly Minimum Distribution Charge is the Customer Charge.

BILLING KW

The Billing KW for the Distribution component is the average number of kilowatts supplied during the 15-minute period of maximum use during the current billing period.

PPL Electric Utilities Corporation

RATE SCHEDULE GS-3 (CONTINUED)

SERVICE TO VOLUNTEER FIRE COMPANIES NON-PROFIT SENIOR CITIZEN CENTERS NON-PROFIT RESCUE SQUADS, AND NON-PROFIT AMBULANCE SERVICES

Upon application and acceptance by the Company, Volunteer Fire Companies, Non-Profit Senior Citizen Centers, Non-Profit Rescue Squads, and Non-Profit Ambulance Services may for a minimum one-year period, elect to have electric service rendered pursuant to the following charges.

Distribution Charge
Effective: October 1, 2024

$17.00 per month (Customer Charge) plus
6.296 cents per KWH (Includes ACR 4, USR, and SDER)

BUDGET BILLING

Budget Billing is available at the option of the customer for charges under this Rate Schedule.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 15 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. When not so paid, the gross rate applies, which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

MINIMUM SERVICE PERIOD

Service under this Rate Schedule is for no less than one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

RATE SCHEDULE LP-4
LARGE GENERAL SERVICE AT 12,470 VOLTS

APPLICATION RATE SCHEDULE LP-4

This Rate Schedule is for large general service supplied from available lines of three phase 12,470 volts or single phase 7,200 volts when the customer furnishes and maintains all equipment necessary to transform the energy from line voltage. New applications with voltage levels higher or lower than 12,470 volts will not be accepted.

NET MONTHLY RATE

Distribution Charge

$235.00 per month (Customer Charge) plus

$ 3.881 per kilowatt for all kilowatts of the Billing KW.

Transmission Service Charge

The customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge

The customer is responsible for applicable charges under the GSC-1 or GSC-2 rate schedule.

MINIMUM CHARGE

The Monthly Minimum Distribution Charge is the Customer Charge.

BILLING KW

The Billing KW for the Distribution and the Transmission components is the average number of kilowatts supplied during the 15-minute period of maximum use during the current billing period.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PPL Electric Utilities Corporation

RATE SCHEDULE LP-4 (CONTINUED)

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 15 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. When not so paid, the gross rate applies, which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

MINIMUM SERVICE PERIOD

Service under this Rate Schedule is for no less than one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

RATE SCHEDULE LP-5
LARGE GENERAL SERVICE AT 69,000 VOLTS OR HIGHER

APPLICATION RATE SCHEDULE LP-5

This Rate Schedule is for large general service supplied from available lines of 69,000 volts or higher, with the customer furnishing and maintaining all equipment necessary to transform the energy from the line voltage. It applies to three phase, 60 Hertz service.

NET MONTHLY RATE

Distribution Charge

$973.44 per month (Customer Charge)

Transmission Service Charge

The customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge -2

The customer is responsible for applicable charges under the GSC-2 rate schedule.

MINIMUM CHARGE

The Monthly Minimum Distribution Charge is the Customer Charge.

BILLING KW

The Billing KW for the Transmission component is based on the customer's peak load contribution to the PJM peak load.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 15 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. When not so paid, the gross rate applies, which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

RATE SCHEDULE LP-5 (CONTINUED)

MINIMUM SERVICE PERIOD

Service under this Rate Schedule is for no less than one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

LINE EXTENSIONS AND SERVICE EXTENSIONS

Customer is responsible for paying all costs associated with line extensions and service extensions to take service under this rate schedule, except when, in the Company's discretion, it is determined that certain line extensions will provide reliability or other benefits to the Company's transmission system. The Company shall not charge the customer directly for line extension upgrades that provide benefits to the Company's transmission system, as determined by PPL Electric. For the purposes of this rate schedule, any upgrades to the 230 kV and 500 kV networked bulk electric system may be presumed to provide reliability benefits to the Company's transmission system. Other benefits that would support relieving the customer of the obligation to directly pay for line extension costs include, but not are not limited to, increased capacity, lower system congestion, service to multiple customers, increased resiliency and operational flexibility, and expanded capacity for new generation and interconnections.

The customer shall enter into an agreement providing a revenue guarantee in the amount of all line extension costs that were not directly charged to the customer. The agreement shall include, at a minimum, the following terms:

1) Initial term of not less than five (5) years;

2) Customer shall provide an initial load ramp schedule for the initial five (5) year term;

3) Customer shall provide a revenue guarantee in the amount of the line extension costs that customer was not directly charged;

4) Until the revenue guarantee is satisfied, the customer shall pay applicable rates based on the greater of actual peak demand values, or 80% of the load provided in the load ramp schedule;

5) Customer's revenue guarantee shall be satisfied when the Company has received transmission revenue from the customer equaling the amount of costs for the line extension that was not directly charged to the customer;

6) Customer shall provide security in the form of a letter of credit, surety bond, parent guarantee, or other security instrument acceptable to the Company for the amount of the outstanding revenue guarantee;

7) In the event of default, the Company shall draw on the security instrument in the amount of the outstanding revenue guarantee and apply the funds to the remaining cost of the line extension that was not directly charged to the customer.

PPL Electric Utilities Corporation

RATE SCHEDULE LP-5 (CONTINUED)

To the extent there is any conflict between the line and service extension provisions of this rate schedule and the line and service extension provisions in Rule 3 of this Tariff, the line and service extension provisions of this rate schedule shall control.

CUSTOMER TRANSFORMATION EQUIPMENT

Customers taking service under this rate schedule can request, and the Company can choose to agree at its own discretion, that the Company construct, own, operate, and/or maintain the customer's transformation equipment. The Company shall provide service regarding the customer's transformation equipment upon terms and rates mutually agreeable to the customer and Company. Such terms and rates shall be set forth in the contract for service.

RATE SCHEDULE BL

BORDERLINE SERVICE - ELECTRIC SERVICE

APPLICATION OF RATE SCHEDULE BL

This Rate Schedule is for borderline distribution service to public utility companies for resale in adjacent territory under reciprocal agreements subject to the following conditions:

1. Request is made for each point of supply where service is desired under said agreement.

2. Service is supplied when Company has available capacity in lines, transformers, generating apparatus or other equipment over and above that required to meet the demands, present and prospective, for service in its own territory, of which fact Company's determination is final.

3. When such service is supplied, the potential, phase, and period of service at the desired point of supply shall be mutually agreed upon.

NET MONTHLY RATE

Distribution Charge

6.690 cents per KWH plus 1% on Company's investment in facilities necessary to deliver and meter the service.

Transmission Service Charge

The customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge -1

The customer is responsible for applicable charges under the GSC-1 rate schedule.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

Payment shall be made on or before the due date specified on the bill, which is not less than 15 days from the date bill is mailed via the U.S. Postal Service or mailed electronically.

PPL Electric Utilities Corporation

RATE SCHEDULE BL (CONTINUED)

MINIMUM SERVICE PEROD

Service under this Rate Schedule is for no less than one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

RATE SCHEDULE SA
PRIVATE AREA LIGHTING SERVICE

APPLICATION OF RATE SCHEDULE SA

This Rate Schedule is for the lighting of yards, private roadways, alleys and other areas supplied from existing overhead secondary distribution.

NET MONTHLY RATE

Distribution Charge
$15.872 per fixture for Light Emitting Diode (LED)

Transmission Service Charge

The customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge - 1

The customer is responsible for applicable charges under the GSC-1 rate schedule.

The number of KWH supplied is based upon the average hours use and input wattage of each luminaire.

EQUIPMENT AND SERVICE

Company installs and maintains the bracket, luminaire, lamp and photoelectric control on a Company-owned wood pole. Lamp is lighted from dusk to dawn or for approximately 4,300 hours per annum.

A Light Emitting Diode (LED) of a nominal 4,700 lumens is installed in a luminaire on a 30-inch bracket. Outage notifications will normally be assessed within 1 business week from the time of notification by the customer to the Company. There is no credit for outages. The Company reserves the right to make substitutions when identical materials are not available.

Company installs up to one span of secondary not exceeding 150 feet from an existing secondary voltage supply and one pole for each lamp provided the location of the pole is accessible by a service truck for the installation and maintenance of the lamp and provided the Company is furnished a suitable ROW.

Upon request and at the Company's discretion, the Company may install an area light fixture on a suitable customer-owned support.

Where a secondary supply is not available at the desired lamp location and/or where the distance is more than one span, the Company may furnish the service provided the customer reimburses Company for the Company's estimated added investment required to supply the service in each case.

RATE SCHEDULE SA (CONTINUED)

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 15 days from the date bill is mailed via the U.S. Postal Service or mailed electronically or not less than 20 days when billed in conjunction with a residential rate schedule. When not so paid the gross rate applies which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof except, when billed in conjunction with Rate Schedules RS, RTS, and R TD, in which case a late payment charge of 1.25% per month on the then unpaid and overdue balance is applicable.

Minimum Service Period

Service under this Rate Schedule is for no less than one (1) year for LED fixtures from the date service is first rendered, unless the Company and the customer mutually agree to a different term in a contract for service.

RATE SCHEDULE SM (R)
MERCURY VAPOR STREET LIGHTING SERVICE

The application of this Rate Schedule to all service is limited as indicated in the Application section of this Rate Schedule. No new installations of mercury vapor lamps and fixtures shall be offered after January 1, 2008, in accordance with the Energy Policy Act of 2005. This Rate Schedule is only available until such time prior to the Company transferring customers to Rate Schedule SLE. In the event that the Company cancels a contract under this Rate Schedule the customer's only option to continue street light service is to take service under Rate Schedule SLE.

APPLICATION RATE SCHEDULE SM

This Rate Schedule is for lighting service from overhead or underground facilities on public areas such as streets, highways, bridges and parks, to municipalities, other governmental agencies, or private property customers, when all such service is supplied under Company's standard form of contract in accordance with the various laws applicable thereto.

The application of this Rate Schedule is limited as follows:

(a) 10,500 lumen and 34,000 lumen mercury vapor lamps -- fixtures installed on or before and supplied continuously after June 2, 1973, and also prospective fixtures where a definite rate commitment has been made as of that date as long as service is continuous thereafter, and fixtures previously supplied under Hershey Electric Company SMVO rate.

(b) metal pole overhead -- poles installed on or before and in service continuously after June 2, 1973, and fixtures previously supplied under Hershey Electric Company SMVO and S rates.

(c) customer-owned equipment -- customers served on or before and supplied continuously after August 26, 1976.

(d) 20,000 lumen and 51,000 lumen mercury vapor lamps -- fixtures installed on or before and supplied continuously after August 22, 1983, and additions at locations adjacent to such existing installations.

(e) 3,350 lumen and 6,650 lumen mercury vapor lamps -- fixtures installed on or before and supplied continuously after April 28, 1987, and additions at locations adjacent to or interspersed with such existing installations.

(f) The mercury vapor (MV) lamps which fail will be transitioned to the Light Emitting Diode (LED) (Rate Schedule SLE) nominal lumens equivalent. A nominal lumen/wattage equivalent table is shown below. This is in accordance with the Energy Policy Act of 2005 – Section 135 H.R. 6-39, which states that "Mercury Vapor Lamp ballasts shall not be manufactured or imported after January 1, 2008."

(2) The number of KWH supplied is based upon the average hours use and input wattage of each luminaire.

(3) The Company, at its option, may offer appropriate overhead rates set forth above to customers in recognition of their either installing, owning and/or paying for portions of a street lighting installation.

(4) Whenever customer requests an installation hereunder which requires an investment by the Company greater than five (5) times the estimated annual distribution revenue, the Company, at its option, may install the lamps as requested upon payment by the customer of such estimated excess costs.

STANDARD INSTALLATION AND SERVICE

All necessary street lighting facilities are supplied, installed, operated and maintained by the Company and are connected to the Company's available distribution system. The equipment installed under this Rate Schedule is of the type currently being furnished by the Company at the time service is contracted for.

Wood Pole Overhead Service. Lamps are mounted on Company's wood poles, or other supports not supplied by Company specifically for street lighting purposes, and are supplied by overhead wires. Luminaires are mounted on brackets or mast arms. A standard installation under this Rate Schedule includes one span of secondary conductor per location.

Metal Pole Overhead Service. Lamps are mounted on Company's existing metal poles served by overhead wires. No new overhead supplied metal pole installations will be made under this rate schedule.

Wood Pole Underground Service. Lamps are mounted on Company's wood or fiberglass street lighting poles and are supplied by underground wires. A standard installation under this Rate Schedule includes a maximum of 150 circuit feet of cable and trenching and backfilling.

Low Mounting Underground Service. Lamps are mounted on Company’s low mounting street lighting poles and are supplied by underground cable. A standard installation under this Rate Schedule includes a maximum of 150 circuit feet of cable and trenching and backfilling.

High Mounting Underground Service. Lamps are mounted on Company’s high mounting metal street lighting poles not exceeding 35 feet in height and are supplied by underground cable. A standard installation under this Rate Schedule includes a maximum of 175 circuit feet of cable and trenching and backfilling.

Multiple Unit Service. When practical, each additional lamp after the first mounted on a street lighting pole is billed under the above Multiple Unit rate. A standard installation under this Rate Schedule includes only the luminaire, lamp, photocontrol, bracket or mast arm and wire in the bracket or mast arm.

All lamps are lit from dusk to dawn every night, or for approximately 4,300 hours per annum.

RATE SCHEDULE SLE (CONTINUED)

CONTINUOUS OPERATION

At customer request, individual lamps may be operated continuously 24 hours per day. The net monthly rate for continuous operation shall be 160% of the aforementioned applicable net monthly rates.

SPECIAL INSTALLATIONS

Whenever customer requests an installation that is not in conformity with the aforementioned standard installation and service provisions, Company may, at its option, install the lamps as requested upon payment in advance by the customer of the estimated installed cost of facilities required in excess of that required for standard installation or of the excess investment in special equipment over that of standard equipment. The maintenance of special equipment is cost over standard for each replacement subject to (1) time and ability to obtain replacement, and (2) advance payment of the then excess.

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 30 days from the date bill is mailed via the U.S. Postal Service or mailed electronically for municipalities and other governmental agencies and 15 days for private owner or agencies. When not so paid, the gross rate applies which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

Minimum Service Period

Ten (10) years and thereafter until terminated in accordance with contract provisions.

PPL Electric Utilities Corporation

RATE SCHEDULE SE
ENERGY ONLY STREET LIGHTING SERVICE

APPLICATION OF RATE SCHEDULE SE

This Rate Schedule is available to municipalities, other governmental agencies, and non - municipal customers for the operation of mercury vapor, high pressure sodium, metal halide, induction or Light Emitting Diode (LED) street lighting systems on public areas such as streets, highways, bridges and parks where the municipality, other governmental agency and non-municipal customers provides for the installation, ownership, operation and maintenance of the street lighting equipment.

NET MONTHLY RATE

(1) Lamp Rates

Distribution Charge

Street Lighting Equipment on Company Pole.....12.483 cts. per KWH
Street Lighting Equipment on Customer Pole or Support..... 7.254 cts. per KWH

Transmission Service Charge

The customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge -1

The customer is responsible for applicable charges under the GSC-1 rate schedule.

(2) Service hereunder is unmetered with the number of KWH billed for each size lamp calculated based upon the estimated input wattage of the luminaire and 4,300 burning hours per year.

MINIMUM SYSTEM

Application is limited to mercury vapor, high pressure sodium, metal halide, induction, or Light Emitting Diode (LED) streetlights in systems of a minimum of 5 contiguous lamps of one customer. Customer-owned streetlights served hereunder may not be intermixed with street lights served under the Company's other street lighting rate schedules.

The 5-lamp minimum may, at Company's option, be waived when a customer desires to take service for its entire street lighting requirements hereunder and said total requirement is less than the 5-lamp minimum.

RATE SCHEDULE SE (CONTINUED)

INITIAL SYSTEM AND FUTURE ADDITIONS

The Customer must provide advance written notice to Company (at least 90 days for initial systems or 30 days for additions to existing systems) of its intentions to install customer-owned street lighting hereunder. The notification includes the location, wattage, lumen size, type of equipment, and proposed installation date. In addition, for customer-owned street lighting proposed for installation on Company's poles the customer provides the construction specifications for Company's approval.

STANDARD INSTALLATION AND SERVICE

Street Lighting Equipment on Company Wood Pole: The customer provides, installs, operates and maintains the street lighting luminaire, lamp, control, bracket and the wire from the luminaire to the point of connection with the Company's overhead general distribution system. The Company provides, installs, operates and maintains the wood pole and the overhead secondary wire from Company's general distribution system to the point of connection with customer's wire. Generally, the customer will attach its street lighting system to Company's existing poles; but the Company at its option, may provide, install, operate and maintain a maximum of one wood pole and one span of secondary conductor to new locations requested by the customer. The installation by Company in excess of one wood pole and one span of secondary conductor to serve a customer-owned street light is at the customer's expense.

Street Lighting Equipment on Customer Pole or Support: The customer provides, installs, operates and maintains the street lighting luminaire, lamp, control, bracket, pole or support, foundation and wire between poles or supports. The Company provides, installs, operates and maintains one span of overhead secondary conductor to a group of street lights, as defined by the Company, on customer-owned poles or supports. The installation by Company in excess of one span of overhead secondary to a group of customer-owned streetlights is at customer's expense.

Customer-owned street lighting equipment mounted on poles or supports of other utilities with whom Company has joint-use agreements are billed at the rate for Street Lighting Equipment on Company Poles.

Any non-municipal customer will be required to demonstrate that it has complied with all municipal requirements pertaining to lighting before being eligible for service under Rate Schedule SE. In additional, before street lighting facilities may be energized, the non-municipal customer shall provide the Company an inspector's certification that the street lighting facilities are constructed to applicable electrical code requirements and also provide the Company with as-built drawings certified by engineering seal of the final placement, configuration, and cut sheets for street lighting facilities to be energized.

Customer-owned street lighting installed as multiple units on a Company or other utility pole are billed at the rate for Street Lighting Equipment on customer Pole or Support. Multiple units are defined hereunder as additional lamps installed on a Company or other utility pole already supporting customer-owned street lighting equipment.

RATE SCHEDULE SE (CONTINUED)

STANDARD INSTALLATION AND SERVICE (Continued)

Customer-owned street lighting equipment is installed in accordance with Company and industry safety codes and, where installed on Company poles, in accordance with general Company specifications for similar equipment.

Any rearrangements, replacements or relocations of Company's distribution system required solely for the installation, operation or maintenance of the customer's street lighting equipment are at the customer's expense.

The Company makes all connections of the customer's street lighting system to the Company's available general distribution system. Generally, customer-owned street lighting equipment will be served at 120 volts or 240 volts. However, at Company's option, customer-owned street lighting equipment mounted on customer pole or support may be served at other available secondary voltages.

All luminaires served hereunder are operated at alternating current, 60 hertz, single phase and are controlled by photo control for dusk to dawn operation every night, approximately 4,300 hours per year.

All relocations of customer-owned street lighting equipment are at the customer's expense.

CONTINUOUS OPERATION

When the customer operates individual lamps continuously 24 hours per day, the KWH billed hereunder is doubled for those individual lamps operated continuously.

IDENTIFICATION

Each customer-owned luminaire and support bracket served hereunder must be marked by customer with two adjacent wraps of 2 inch wide, yellow and black diagonal striped, pressure sensitive tape, clearly identifiable at ground level which indicates customer ownership of the equipment.

Company will supply the customer with sufficient tape to mark the equipment and grid coordinate tag. The customer shall affix to each luminaire pole or location, a placard indicating their ownership, the customer's name, and a telephone number to report light outages. In addition, customer shall notify the public and the local municipality of the customer's ownership of and responsibility for the street lighting equipment in the areas served hereunder and shall publish and advertise a customer telephone number for public and municipal use in reporting malfunctioning equipment.

CHANGE IN SIZE AND TYPE OF STREET LIGHTING UNIT

Written notice of any change in size or type of any components of the customer's street lighting system shall be communicated to the Company not more than 14 days after the date of such change.

RATE SCHEDULE SE (CONTINUED)

AUDITING

The Company has the right to periodically audit the number and size of lamps of customer's street lighting system. The customer agrees to cooperate with Company during such audits.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 30 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. When not so paid, the gross rate applies, which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

ATTACHMENT AGREEMENT

Customer shall sign the Company's standard Attachment Agreement for those luminaires mounted by customer on Company's poles. The Attachment Agreement includes the customer's indemnification of Company and provides for the customer's purchase of public liability and property damage insurance.

CONTRACT PERIOD

Service under this Rate Schedule is for an initial term of one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

RATE SCHEDULE TS (R)

MUNICIPAL TRAFFIC SIGNAL LIGHTING SERVICE

This Rate Schedule is in the process of elimination and service hereunder is available only to existing locations continuously supplied hereunder as of August 26, 1976.

APPLICATION OF RATE SCHEDULE TS(R)

This Rate Schedule is for traffic signal lighting service to cities, boroughs, and townships. The minimum under this rate schedule is 50 watts.

NET MONTHLY RATE

Distribution Charge
8.967 cents per watt of connected load

Transmission Service Charge

The Transmission Service Charge included in this Tariff applies to all KW and/or KWH billed under this Rate Schedule. Customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge -1

The Generation Supply Charge -1 included in this Tariff applies to all KWH billed under this Rate Schedule. customer is responsible for applicable charges under the GSC-1 rate schedule.

The number of KWH supplied is based upon the average hours use and size of lamps.

MONTHLY MINIMUMS

The Minimum Billing Demand is 50 KW. The Monthly Minimum Distribution Charge is 50 KW times the demand step of the effective Distribution Charge. The Monthly Minimum Capacity and Energy Charge is 50 Watts times the effective Generation Supply Charge - GSC-1.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PPL Electric Utilities Corporation

RATE SCHEDULE TS (R) (CONTINUED)

PAYMENT

Payment shall be made on or before the due date specified on the bill, which is not less than 30 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. When not so paid the gross rate applies which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

CONTRACT PERIOD

Service under this Rate Schedule is for an initial term of one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

TERRITORY COVERED BY THIS TARIFF

BERKS COUNTY ~~(C)~~
Boroughs of Morgantown, New Morgan, Robesonia, Shillington, Sinking Spring, Wernersville, West Lawn, Womelsdorf, Wyomissing, and Wyomissing Hills.
Townships of Caernarvon, Cumru, Heidelberg, Lower Heidelberg, South Heidelberg, and Spring.

BUCKS COUNTY
Boroughs of Richlandtown, Sellersville, Silverdale, Telford, and Turmbauersville.
Townships of East Rockhill, Haycock, Hilltown,

Milford, Richland, Springfield, and West Rockhill.

CARBON COUNTY
Boroughs of Beaver Meadows, Bowmanstown, East Side, Jim Thorpe, Lansford, Nesquehoning, Palmerton, Parryville, Summit Hill, and Weissport.
Townships of Banks, East Penn, Franklin, Kidder, Lausanne, Lehigh, Lower Towamensing, Mahoning, Packer, Penn Forest, and Towamensing.

CHESTER COUNTY
Boroughs of Atglen, Elverson, and Honey Brook.
Townships of Honey Brook, West Nantmeal, and West Sadsbury.

CLINTON COUNTY
City of Lock Haven.
Boroughs of Avis, Flemington, Loganton, Mill Hall, Renovo, and South Renovo.
Townships of Allison, Bald Eagle, Castanea, Chapman, Colebrook, Crawford, Dunnstable, Gallagher, Greene, Grugan, Logan, Noyes, Pine Creek, Wayne, and Woodward.

COLUMBIA COUNTY
Town of Bloomsburg.
Boroughs of Ashland, Benton, Berwick, Briar Creek, Centralia, Millville, Orangeville, and Stillwater.
Townships of Beaver, Benton, Briar Creek, Catawissa, Cleveland, Conyngham, Fishing Creek, Franklin, Greenwood, Hemlock, Jackson, Locust, Madison, Main, Mifflin, Montour, Mount Pleasant, North Centre, Orange, Pine, Roaring Creek, Scott, South Centre, and Sugarloaf.

CUMBERLAND COUNTY
Boroughs of Camp Hill, Carlisle, Lemoyne, Mechanicsburg, New Cumberland, Newville, Shiremanstown, West Fairview, and Wormleysburg.
Townships of Dickinson, East Pennsboro, Hampden, Lower Allen, Middlesex, Monroe, North Middleton, North Newton, Penn, Silver Spring, South Middleton, South Newton, Upper Allen, and West Pennsboro.

DAUPHIN COUNTY
City of Harrisburg.
Boroughs of Berrysburg, Dauphin, Elizabethville, Gratz, Halifax, Highspire, Hummelstown, Lykens, Millersburg, Paxtang, Penbrook, Pillow, Steelton, and Williamstown.
Townships of Derry, East Hanover, Halifax, Jackson,Jefferson, Lower Paxton, Lower Swatara, Lykens, Middle Paxton, Mifflin, Reed, Rush, South Hanover, Susquehanna, Swatara, Upper Paxton, Washington, Wayne, West Hanover, Wiconisco, and Williams.

JUNIATA COUNTY
Boroughs of Mifflin, Mifflintown, Port Royal, and Thompsontown
Townships of Delaware, Fayette, Fermanagh, Greenwood, Milford, Monroe, Susquehanna, Turbett, and Walker.

LACKAWANNA COUNTY
Cities of Carbondale and Scranton.
Boroughs of Archbald, Blakely (part), Clarks Green, Clarks Summit, Dalton, Dickson City, Dunmore, Jermyn, Jessup, Mayfield, Moosic, Moscow, Old Forge, Olyphant (part), Taylor, Throop, and Vandling.
Townships of Abington, Benton, Carbondale, Clifton, Covington, Elmhurst, Fell, Glenburn, Greenfield, Jefferson, La Plume, Lehigh, Madison, Newton, North Abington, Ransom, Roaring Brook, Scott, South Abington, Spring Brook, and West Abington.

DEFINITIONS

The following words and terms, when used in this Tariff, have the following meanings:

Alternate Service – An alternative source of electric service furnished by the Company to a premises.

Alternative Energy Credits (AECs) – A tradable instrument that is used to establish, verify, and monitor compliance with this act. A unit of credit shall equal one megawatt hour of electricity from an alternative energy source. The alternative energy credit shall remain the property of the alternative energy system until the alternative energy credit is voluntarily transferred by the alternative energy system. (Def. amended July 17, 2007, P.L. 114, No. 35)

Alternative Energy Portfolio Standards - Standards establishing that a certain amount of energy sold from alternative energy sources is included as part of the sources of electric generation by electric utilities within this Commonwealth.

Application for Service - An application submitted by an applicant requesting the Company to extend and provide electric service. This term is distinct from an Interconnection Application.

Back-up Contract Demand - Maximum amount of Back-up Power to be supplied by the Company specified in the Stand-by Service Contract.

Back-up Power - Electric energy and capacity supplied by the Company to replace the energy and capacity ordinarily generated by the Customers on-site generation which is not available during an unscheduled outage.

CIAC – Contribution in Aid of Construction.

Commission – Pennsylvania Public Utility Commission

Company – PPL Electric Utilities Corporation

Company Facilities - Electric facilities owned and operated by the Company.

Contractor Costs – Costs incurred by a contractor as part of a line extension or relocation of facilities.

Contribution in Aid of Construction - A nonrefundable donation or contribution in cash or properties from an individual, governmental agency, or other entity for construction or property-addition purposes.

Customer Charge - The basic service charge to partially cover costs for billing, meter reading, equipment, and service line maintenance.

Customer-generator - A nonutility owner or operator of a net metered distributed generation system with a nameplate capacity of not greater than 50 kilowatts if installed at a residential service or not larger than 3,000 kilowatts at other customer service locations, except for customers whose systems are above three megawatts and up to five megawatts who make their

PPL Electric Utilities Corporation

DEFINITIONS (CONTINUED)

systems available to operate in parallel with the electric utility during grid emergencies as defined by the regional transmission organization or where a microgrid is in place for the primary or secondary purpose of maintaining critical infrastructure ,such as homeland security assignments, emergency services facilities, hospitals, traffic signals, wastewater treatment plants or telecommunications facilities, provided that technical rules for operating generators interconnected with facilities of an electric distribution company, electric cooperative or municipal electric system have been promulgated by the Institute of Electrical and Electronic Engineers and the Pennsylvania Public Utility Commission.

Default Service Provider - An electric distribution company within its certified service territory or an alternative supplier approved by the commission that provides generation service to retail electric customers who:

(1) contract for electric power, including energy and capacity, and the chosen electric generation supplier does not supply the service; or
(2) do not choose an alternative electric generation supplier.

Default Service – Electric generation supply service provided pursuant to a default service program to a retail electric customer not receiving service from an EGS.

Delivery Service - Service that includes the Distribution component of the applicable rate schedule (including all tariff riders and surcharges).

Development Area - Areas being developed for new construction of residential, commercial, or industrial buildings.

Direct Costs - Equal to the estimated contractor costs, estimated direct labor and estimated material costs, less an amount equal to any estimated maintenance expense avoided as a result of the relocation.

Distribution Charge (Delivery) - Part of the basic service charges on every customer's bill for delivering electricity from the electric distribution company to your home or business. The distribution charge is regulated by the Public Utility Commission. This charge will vary according to how much electricity you use.

Distribution Line Facilities - Company-owned facilities associated with the distribution line that are located upstream of the service line.

Distribution Service - The delivery of electricity to your home or business. This includes local wires, transformers, substations and other equipment used to deliver electricity to end-use consumers from the high-voltage transmission lines.

PPL Electric Utilities Corporation

DEFINITIONS (CONTINUED)

Distribution System – The portion of the of an electric system that is dedicated to delivering electric energy to an end-user. For purposes of this tariff, the distribution system includes all lines energized at voltages less than the nominal 69,000 volts and excludes service extensions and lines energized at voltages of the nominal 69,000 volts or higher. However, this definition does not affect the Company's obligations under the Federal Power Act and/or the Public Utility Code, as applicable, to:

(1) provide safe, reliable, and adequate retail electric service to customer taking service at voltages of 69,000 volts and above; and
(2) provide just and reasonable and non-discriminatory distribution and transmission rates, terms, and conditions of service to such customers.

Dwelling – A living space consisting of at least permanent provisions for shelter, dining, sleeping, and cooking, with provisions for permanent electric, water, and sanitation services.

EDC – Electric Distribution Company

EGS – Electric Generation Supplier

Electric Distribution Company - The public utility providing facilities for the jurisdictional transmission and distribution of electricity to retail customers, except building or facility owners or operators that manage the internal distribution system serving the building or facility and that supply electric power and other related electric power services to occupants of the building or facility.

Electric Generation Supplier - A person or corporation, generator, broker, marketer, aggregator or any other entity licensed by the PUC that sells electricity to customers, using the transmission or distribution facilities of EDC.

Extraordinary Storms - An item that exceeds five percent (5%) of a utility's annual net income. The Company will consider storm damage expense exceeding 5% of the its annual distribution net income as extraordinary for SDER recovery purposes.

Fully Allocated Costs – Costs incurred by the Company, including overhead, that are allocated entirely to the customer at issue, except as may be further provided in this tariff.

GSC – Generation Service Charge

ICAP – Installed Capacity

Installed Capacity - The summer net capability of a generating unit as determined in accordance with PJM manual M-21, Rules and Procedures for Determination of Generation Capability and within the capacity interconnection right limits of the bus to which it is connected.

Interconnection Application - An application submitted by an interconnection applicant seeking to interconnect an alternative energy source with the Company's distribution system.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 5C

DEFINITIONS (CONTINUED)

Large C&I – Large Commercial and Industrial. Except as may be further defined in this tariff, Large C&I consists of Rate Schedules LP-4 and LP-5.

Legal Rate of Interest – An interest rate of six (6) percent per annum, or the interest rate defined by 41 P.S. § 202 or its successor.

Line Extension - Any construction of Company-owned electrical facilities and equipment beyond the existing distribution system that are needed to serve a new electric service applicant, including, but not limited to, transformers, and transformer devices.

Line Extension Guarantee - The required amount of distribution revenue that an electric service applicant must guarantee for the Company to construct a line extension, as determined under Rule 3 of the Tariff.

Locational Marginal Price (LMP) - The marginal price for energy at the location where the energy is delivered or received. LMP is a pricing approach that addresses transmission system congestion and loss costs, as well as energy costs.

Maintenance Power - Electric energy and capacity supplied by an electric utility during scheduled outages of the Customer's on-site generation.

Maximum Registered Peak Load - A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. The maximum registered peak load used to assign customers to their applicable rate schedule will be the customer's highest maximum registered peak load (kW) in the most recent 12-month period ending September 30. For new customers without a 12-month billing history, the maximum registered peak load shall be based on the Company's estimate using factors such as, but not limited to, similarly equipped buildings and similarly utilized buildings and square footage. As related to customer-generators, this estimate shall also be inclusive of the nameplate capacity of the generation system.

Multi-tenancy Commercial Building – Any structure which contains or houses three or more separate and distinct residential or commercial units.

MW – Megawatts

Net Energy Output - The difference in energy between the Wholesale Generation Facility's output and Station Power over a monthly period, as determined by the PJM. Net Energy Output is positive when the output exceeds the Station Power and negative when the Station Power exceeds the output, all as measured by an electronic meter acceptable to the Company.

Net Service – The provision of service to a Wholesale Generation Facility under Rule 11.

Non-bypassable – Applicable to the rate schedules without exception.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 5D

DEFINITIONS (CONTINUED)

Non-Profit Ambulance Service - A separately metered service location consisting of a building, sirens, a garage for housing vehicular ambulance equipment, or a facility that is qualified by the IRS as non-profit and certified by Pennsylvania Department of Health as a provider of ambulance services. The use of electric service by the customer of record at this location shall be to support the activities of the non-profit ambulance service.

Non-Profit Rescue Squad - A separately metered service location consisting of a building, sirens, a garage for housing vehicular rescue equipment, or a facility that is qualified by the IRS as non-profit and recognized by PEMA and the Departments of Health as a provider of rescue services. The use of electric service by the customer of record at this location shall be to support the activities of the non-profit rescue squad.

Non-Profit Senior Citizen Center - A separately metered service location consisting of a facility for the use of senior citizens coming together as individuals or groups where access to a wide range of service to senior citizens is provided, which is qualified by the Internal Revenue Service (IRS) as non-profit and recognized by the Pennsylvania Department of Aging as an operator of a senior citizen center. The use of electric service by the customer of record at this location shall be to support the activities of the non-profit senior citizen center.

Non-Residential Customer – A customer receiving service under a Small C&I or Large C&I rate schedule.

On-Peak Months – For purposes of Rule 6, the months of December through February and June through September.

Off-Peak Months – For purposes of Rule 6, the months of March, April, May, October, and November.

Pennsylvania Public Utility Commission – The state agency that provides oversight, policy guidance, and direction to public utilities in Pennsylvania.

PJM Reliability Pricing Model - PJM's capacity market design that includes a series of auctions to satisfy the reliability requirements of the region PJM serves for a delivery year.

Point of Delivery – The point designated by the Company where Company's service conductors are connected to customer's service entrance conductors, terminals, or bus.

PPL Electric – PPL Electric Utilities Corporation

Price-to-Compare - A line item that appears on a retail customer's monthly bill for default service. The PTC is equal to the sum of all unbundled generation and transmission related charges to a default service customer for that month of service.

Primary Voltage – Voltage greater than 600 volts.

Prime Rate of Interest – The prime rate for commercial borrowing.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 5E

DEFINITIONS (CONTINUED)

PTC – Price-to-Compare

PUC – Pennsylvania Public Utility Commission

QF – Qualifying Facility

Qualifying Facility - A cogeneration facility or a small power production facility which meets the criteria contained in 18 CFR Part 292 (relating to regulations under sections 201 and 210 of the Public Utility Regulatory Policies Act of 1978 with regard to small power producers and cogenerators).

Residential – Customers served under Rate Schedule RS.

REMSI – Rules for Electric Metering and Service Installations

RPM – Reliability Pricing Model

Secondary Voltage – Voltage of 600 volts or less.

Service extension - The extension of the Company's service line and associated facilities downstream from the distribution line to provide service to the customer.

Service Extension Facilities – Company-owned facilities that are located downstream of the distribution line, including the service line, and meter.

Small C&I – Small Commercial and Industrial. Except as may be further defined in this tariff, Small C&I consists or Rate Schedules GS-1, GS-3, BL,SA, SM (R), SHS, SLE, and SE.

Speculative - When, in the Company's opinion, there is doubt as to the initial or continued use of the new facilities by the customer. This may include, but is not limited to separate points of delivery, and service at locations which are relatively inaccessible or remote, or where the customer has less investment than is required by the Company to supply service.

Standby Service Contract - Signed agreement between the customer and the Company that specifies the contractual demand levels for Supplementary Service, Back-Up Service, and Maintenance Service.

Station Power - Energy used for operating the electric equipment on the site of a Wholesale Generation Facility located in the PJM control area or for the heating, lighting, air-conditioning and office equipment needs of buildings on the site of such a Wholesale Generation Facility, which are used solely in the operation, maintenance, or repair of the facility. Station Power does not include any energy used to power synchronous condensers, used for pumping at a pumped storage facility, for restoration-related or black start service or to facilities unrelated to the operation of the Wholesale Generation Facility including, but not limited to buildings or structures on the site of such a Wholesale Generation Facility that are metered separately and served directly from the Company's distribution system.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 5E

DEFINITIONS (CONTINUED)

Supplementary Contract Demand - Maximum amount of Supplementary Power to be supplied by the Company specified in the Stand-by Service Contract.

Supplementary Power - Electric energy and capacity supplied by the Company and regularly used in addition to the energy and capacity supplied by the Customer's on-site generation.

Total Contract Demand – The sum of Supplementary Contract Demand and Back-up Contract Demand.

Tenant - An occupant of a multi-tenancy commercial building or parcel where it is expected that tenure shall be for a year or more. For the purpose of this rule, the term multi-tenancy commercial building shall include any structure which contains or houses 3 or more separate and distinct residential or commercial units.

Transmission System - The portion of the electric system that is dedicated to transmitting electric energy. For purposes of this tariff, the transmission system includes all service extensions and lines energized at voltages of nominal 69,000 or higher and excludes all lines energized at voltages less than the nominal 69,000 volts. However, this definition does not affect the Company's obligations under the Federal Power Act and/or the Public Utility Code, as applicable, to: (1) provide safe, reliable, and adequate retail electric service to customers taking service at voltages of 69,000 volts and above; and (2) provide just and reasonable and non-discriminatory distribution and transmission rates, terms, and conditions of service to such customers.

TSC – Transmission Service Charge

Virtual Meter Aggregation - The combination of readings and billing for all meters regardless of rate class on properties owned or leased and operated by a customer-generator by means of the EDC's billing process, rather than through physical rewiring of the customer-generator's property for a physical, single point of contact. Virtual meter aggregation on properties owned or leased and operated by the same customer-generator and located within 2 miles of the boundaries of the customer-generator's property and within a single EDC's service territory shall be eligible for net metering. Service locations to be aggregated must be EDC service location accounts, held by the same individual or legal entity, receiving retail electric service from the same EDC and have measurable electric load independent of the alternative energy system. To be independent of the alternative energy system, the electric load must have a purpose other than to support the operation, maintenance or administration of the alternative energy system.

Volunteer Fire Company - A separately metered service location consisting of a building, sirens, a garage for housing vehicular fire fighting equipment, or a facility certified by the Pennsylvania Emergency Management Agency (PEMA) for fire fighter training. The use of electric service by the customer of record at this location shall be to support the activities of the volunteer fire company.

DEFINITIONS (CONTINUED)

Wholesale Generation Facility - Such equipment owned by a single corporate entity, (a) which is located at a single contiguous site; (b) which is exclusively used to produce electric energy that will be sold at wholesale; (c) which is owned and/or operated by a qualified member of PJM as defined in the PJM Operating Agreement; (d) the Net Energy Output of which is reported on an hourly basis to PJM; and (e) which is interconnected to the Company's facilities. The Company shall have the sole and exclusive right to determine if any particular equipment qualifies as a Wholesale Generation Facility and if the operating characteristics and/or circumstances relating to such equipment are different then described in this definition.

~~(C)~~

RULE 1 - ELECTRIC SERVICE TARIFF

A. FILING AND INSPECTION

~~(C)~~

A copy of this tariff containing rules and rate schedules for all electric service supplied by ~~PPL Electric Utilities Corporation ("PPL Electric" or~~ the "Company~~")~~ in the territory covered by this tariff is on file with the ~~Pennsylvania Public Utility~~ Commission. A copy is available ~~for inspection in each Company office in the territory covered by this tariff where payment for service is received.~~upon request consistent with the Commission's regulations. This tariff may be revised, amended, supplemented or otherwise changed from time-to-time in accordance with the ~~Tariff Regulations of the Pennsylvania Public Utility Commission~~Commission's regulations.

B. SUPPLY OF ELECTRIC SERVICE

The supply of electric service includes distribution service and also may include ~~basic utility supply~~default service.

~~(1) Basic Utility Supply~~

(1) Default Service

The supply of ~~basic utility supply~~default service referred to in these rules, rate schedules and in contracts with customers means the readiness and ability of the Company to provide electric capacity ~~and~~, energy, and/or transmission service to:

(a) customers who do not have the opportunity to purchase electric ~~capacity and energy~~generation supply service from their choice of ~~electric generation suppliers~~EGSs;

(b) customers who have the opportunity to purchase electric ~~capacity and energy~~ generation supply service from their choice of ~~electric generation suppliers~~EGSs, but do not choose an ~~electric generation supplier~~EGS and continue to purchase ~~electric capacity and energy~~default service from the Company, operating as the electric distribution company and ~~supplier of last resort~~default service provider as provided in Section 2807 (E) (3) of the Customer Choice Act;

(c) customers who contract with an ~~electric generation supplier~~EGS for electric ~~capacity and energy,~~ generation supply service but who do not receive delivery of such electric ~~capacity and energy~~generation supply service; and

~~(a)~~ customers who choose an ~~electric generation supplier~~EGS for electric ~~capacity and energy~~generation supply service and subsequently purchase ~~basic utility supply~~default service from the Company,

(d) operating as the electric distribution company and ~~supplier of last resort~~default service provider as provided for in Section 2807 (E) (3) of the Customer Choice Act.

Under (c) and (d) above, the Company will ~~provide capacity and energy~~provide default service to returning customers pursuant to the Rate Schedule, applicable riders, and agreements under which the

customer previously was served, and such service shall not be considered a new application for service for purposes of Rate Schedule applicability.

~~(2)~~

(2) Distribution Service

The supply of distribution service referred to in these rules, rate schedules, riders, and in contracts with customers means the readiness and ability of the Company to provide distribution of electric capacity

and energy at the point of delivery sufficient to meet the needs of all ~~electric generation suppliers'~~ customers on the Company's system.

RULE 1 – ELECTRIC SERVICE TARIFF (~~Continued)~~ (~~C~~CONTINUED)

~~C.~~

C. RESPONSIBILITY

Every Company employee is responsible for applying the provisions of this tariff without unlawful preference or advantage to any customer. No Company employee is ~~aut horized~~authorized to modify any provision of this tariff or to bind the Company by any promise or statement contrary thereto. No promise of any Company employee is binding unless made in writing over the signature of a duly authorized representative of the Company. The failure by the Company to enforce any of the provisions of this tariff, or standard practices thereunder, shall not be deemed a waiver of the Company's rights to do so.

RULES FOR ELECTRIC SERVICE

RULE 2 -– REQUIREMENTS FOR SERVICE

A. ~~A.~~ SERVICE BY APPLICATION

The Company may connect service ~~on~~upon request ~~or~~ of the applicant. The applicant shall provide notification to the Company ~~may, for the convenience of a new customer, leave a service energized at a premises which has become vacant. The customer shall notify Company~~ of the date that they want service ~~is desired~~to commence or the date that use of service has already begun ~~and~~. The applicant shall ~~give~~provide information necessary ~~for~~, as determined by the Company, for the Company to properly supply ~~the~~ service and apply the provisions of this tariff.

~~B. SERVICE~~

B. CONTRACTS FOR SERVICE

~~Every non~~

(1) Non-residential ~~applicant~~applicants for electric service may be required to sign a contract specifying the intended use of service, the applicable rate schedule and other service conditions. A contract between Company and customer is valid only when accepted in writing by a duly authorized Company representative. The customer shall abide by the terms and conditions of the contract and the provisions of this tariff.

~~Service is~~

(2) Contracts for service are for an initial term of one year except as otherwise specifically provided~~.~~ in this tariff or the contracts for service.

~~(2)~~(3)Acceptance or use of service is deemed a request for the supply of such service and constitutes a contract to pay for the service under these rules and the applicable rate schedule. The receipt of electric service makes the receiver a customer of the Company.

~~(1)~~ Contracts with the Commonwealth of Pennsylvania for service ~~under a street lighting service rate schedule which provides for~~that have an initial contract term extending beyond the end of the current

~~(3)~~(4) fiscal period for which the Commonwealth may contract, shall specify an initial contract term to the end of said fiscal period with provision for renewal for subsequent full fiscal periods. Contracts for a new installation shall include a provision that should service be discontinued before the end of the initial term specified in the rate schedule, then the Commonwealth shall pay Company's estimated expense due to such discontinuance.

~~C.~~

C. SELECTION OF RATE SCHEDULES

~~(1)~~ When more than one rate schedule is applicable to ~~a~~the service~~, the~~ rendered, Company ~~applies~~will apply the rate schedule ~~which~~that is most advantageous to the customer, based on customer's advice to Company

(1) regarding customer's ~~anticipated~~ service conditions. ~~However, customer has~~

~~the option of contracting for service under any applicable rate schedule.~~

(2) When customer's requirements change ~~per manently~~permanently and another rate schedule becomes more advantageous but requires the execution of a contract, Company will, after receiving ~~not ice~~notice of change in service conditions from the customer, recommend a new contract under the more ~~favorable~~advantageous rate schedule for an initial term consistent with the provisions of ~~not less than one year from the last meter reading date~~that rate schedule.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 7

RULE 2 – REQUIREMENTS FOR SERVICE (CONTINUED)

(3) When, ~~through~~for any ~~cause~~reason, a contract is entered into with a customer on a rate schedule not applicable to the service, Company will transfer the service to the rate schedule applicable~~, so~~ for the relevant billing periods, and notify the customer ~~and adjust~~of the adjusted charges for service already supplied.

~~D.~~

D. SECURITY DEPOSITS

(1) ~~(1)~~ The Company may require deposits or guarantees satisfactory to the Company as security for the payment of bills for service to be provided by the Company before it commences or continues to supply service. The need for a deposit or guarantee is based on the credit and other risks of the ~~individual.~~applicant or customer. For residential service, a guarantee may be provided by a third ~~-~~party ~~who is a responsible customer~~guarantor consistent with the Commission's regulations.

(2) ~~(2)~~ The amount of deposit shall not exceed Company's estimate of the average bill for service provided by the Company for one-sixth of the estimated annual bill, with a minimum of $5.00. For residential customers, the interest rate on security deposits will be ~~will be~~ computed at the simple annual interest rate determined by the Secretary of Revenue for interest on the underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L. 343, No. 176), known as The Fiscal Code. For all other customers, the interest rate will be the average of 1-year Treasury Bills for September, October, and November of the previous calendar year. Interest ceases upon refund of deposit or upon discontinuance or termination of service, whichever occurs first.

(3) ~~(3) Deposit~~Deposits, plus accrued interest, ~~which~~ may be held until a timely payment history is established, ~~is~~and will be refunded to a residential ~~ratepayer~~customer under the following conditions:

(a) When a ~~ratepayer~~customer establishes credit~~.~~;
(b) When a ~~ratepayer~~customer substitutes third-party guarantor (up to the limits of the guarantee~~).~~);
(c) When a ~~ratepayer~~customer is not currently delinquent and has made on time and in full payments for service provided by the Company for 12 consecutive months~~.~~; or
(d) ~~(4) Deposit~~When a customer is confirmed to be eligible for a customer assistance program.

(4) Deposits, plus accrued interest, ~~is~~will be applied to the outstanding balance on the customer's account for service provided by the Company ~~of any ratepayer~~ upon termination or discontinuance of service ~~and remainder is~~with any remaining deposit refunded to the customer.

(5) ~~(5)~~ In the event of a termination of service of a customer who has used a third-party guarantor to establish credit, the Company may transfer to ~~a t hird~~the third-party guarantor's account any portion of the unpaid balance of the customer for service provided by the Company.

~~E.~~

RULE 2 – REQUIREMENTS FOR SERVICE (CONTINUED)

E. RIGHT-OF-WAY ~~(C)~~ (ROW)

(1) The customer (or property owner) shall provide, without charge to the Company, ~~right-of-way~~ROW and access across property owned or controlled by customer (or property owner) and locations and housings which are suitable in the opinion of Company for the construction, reconstruction, maintenance or operation of Company's overhead and underground distribution facilities. Suitable rights and ~~right-of-way~~ROW includes, but is not limited to, the right of ingress and egress to and from the electric facilities for any of the purposes aforesaid; and also the right to trim, cut or remove trees, underbrush and other obstructions which in the judgment of Company, may at any time interfere with the construction, reconstruction, maintenance or operation of the electric facilities, and in connection therewith, the right to treat with herbicides approved for the removal and control of trees, brush and under growth.

(2) When restoration of service to the premises is not possible due to an obstruction, the customer, or the owner of the property on which the obstruction is situated is responsible for removing the obstruction.

~~(1)~~(3)The Company shall also have all of the aforesaid rights related to its provision of underground service to a customer/property owner, even if Company does not require the customer/property owner to execute a formal ~~right-of-way~~ROW document.

RULES FOR ELECTRIC SERVICE

RULE 3 ~~–~~ EXTENSION OF SERVICE
~~A.~~

A. GENERAL PROVISIONS

~~A line extension is any construction beyond the normal service facilities (which include the service extension to the customer, transformers, transformer devices, service drop and meter) to extend the distribution system along the normal route of development of the distribution system to the point where the extension departs from the norma l route development and is being installed as a service extension solely for the customer. The distribution system is defined, for the purposes of this rule, as including all lines energized at voltages less than the nominal 69,000 volts and excluding service extensions and lines energized at voltages of nominal 69,000 volts or higher. The Company constructs line~~

(1) The Company constructs line extensions and service extensions from the nearest suitable and available distribution line to supply new customers, or to change the supply to existing customers, under Company's standard rate schedules subject to the provisions of this rule. However, the estimated cost of facilities subject to annual charges under Rule 4 or CIAC are not subject to the provisions of this rule.

~~charges under Rule 4 or customer contributions-in-aid-of-construction (CIAC) are not subject to the (C)~~
~~provisions of this rule.~~

(2) All provisions of these rules and of the applicable rate schedule, including any provisions relating to net and gross payments, apply to service supplied and charges made under this rule except as specifically provided herein.

(3) The Company requires, before construction of a line extension or service extension, including speculative line extensions and service extensions, that:

(a) Customers supplied from a line extension or service extension, including speculative extensions, for which an annual guarantee is required, sign a contract acceptable to the Company with an initial term of not more than five years. A contract may be canceled at the request of the customer before the end of the initial term by immediately fulfilling all contractual obligations for the remainder of the initial term.

(b) The Company may, at its discretion, file a memorandum of the guarantee in the land records of the customer's property where service is being provided.

(c) Customers install infrastructure necessary to use the Company's service.

(d) Satisfactory ROW, in accordance with Rule 2, and other necessary permits are granted to Company to construct the line extension or service extension along the route selected by the Company.

(e) Customer agrees to pay to the Company any initial and recurring ROW rental fees in excess of a nominal amount that are incurred by the Company in constructing and maintaining the line extension or service extension.

(f) Customer agrees that when the net distribution service revenues received during the guarantee period from the start of the initial term of the contract to the end of the current year total less than the sum of the customer's annual guarantee over that period, the difference becomes immediately due and payable.

RULE 3 – EXTENSION OF SERVICE (CONTINUED)

(g) The customer may elect to make a one-time payment to the Company in lieu of annual differential billings during the guarantee period. The payment, which will be equal to the total amount of the guarantee, will be subject to partial refunds each year based upon the actual amount of distribution base rate revenue received from the customer's distribution service billings.

(h) The Company may require, in addition to any deposit necessary to secure payment of service bills, a surety bond or other security acceptable to the Company, to guarantee the fulfillment of the minimum distribution revenue guarantee agreement.

(i) When the accumulated distribution revenue from the start of the initial term of contract equals the total amount to be guaranteed by the customer, service is supplied without the application of the annual guarantee determined under this rule.

(j) Customers supplied from a line extension or service extension for which a minimum distribution revenue guarantee is required will be responsible for the balance of any such minimum distribution revenue guarantee remaining after the guarantee period expires, service is terminated, or service is discontinued, whichever occurs first.

(4) Taxes on Contributions in Aid of Construction and Customer Advances - Any distribution service-related CIAC, customer advance or other like amounts received from the customer which shall constitute taxable income as defined by the Internal Revenue Service will have the income taxes segregated in a deferred account for inclusion in rate base in a future rate case proceeding. Such income taxes associated with a CIAC or customer advance will not be charged to the specific contributor of the capital.

B. LINE EXTENSIONS

(1) The Company requires a minimum distribution revenue guarantee for installation of any length of single phase or multi-phase line extension in excess of 2,500 ft. along the normal route of development of the distribution system. The length of a line extension is the total length of new pole line installed by the Company to the property line of the customers served from that extension, plus the length of any line installed on existing poles where the existing facilities are unsuitable.

~~(1) The Company requires, before construction, that:~~

~~(a) Customers supplied from a line extension for which an annual guarantee is required, sign contracts acceptable to the Company with an initial term of not more than five years. A contract may be canceled at the request of the customer before the end of the initial term by immediately fulfilling all contract obligations for the remainder of the initial term.~~

~~(b) Customers install wiring and other facilities necessary to use the Company's service.~~

~~(c) Satisfactory right-of-way and other necessary permits are granted to Company to construct the line extension along the route selected by the Company.~~

~~(d) Customer agrees to pay to the Company any initial and recurring right-of-way rental fees in excess of a nominal amount that are incurred by the Company in constructing and maintaining the line extension.~~

~~B.~~A. ~~B. LINE EXTENSIONS~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 8

~~(1) The Company requires a minimum distribution revenue guarantee for installation of any length of single phase line extension in excess of 2,500 ft. along the normal route of development of the distribution system, and for installation of all multi-phase line extensions. The guarantee period is 5 years or less.~~

~~(Continued)~~

~~(C) Indicates Change~~

~~Issued: December 10, 2007~~ ~~Effective: January 1, 2008~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 8A

~~PPL Electric Utilities Corporation~~

~~Supplement No. 194 Electric Pa. P.U.C. No. 201 Sixth Revised Page No. 7A Canceling Fourth and Fifth Revised Page No. 7A~~

~~RULE 3 - EXTENSION OF SERVICE (CONTINUED)~~ ~~(C)~~

~~B. LINE EXTENSIONS (Continued)~~

(2) Minimum distribution revenue guarantees for single phase extensions are based only on the estimated contractor costs, if any, and the estimated direct labor costs and estimated direct material costs attributable to construction of the line extension beyond 2,500 ft. Guarantees for multi-phase extensions are based on estimated fully allocated costs, and are credited with the equivalent single phase length allowance for up to 2,500 ft. of new pole line along the normal route of development of the distribution system.

RULE 3 – EXTENSION OF SERVICE (CONTINUED)

(3) Any length of line extension on, or through, restricted lands (i.e., Pennsylvania State Game Lands) is excluded from the single-phase length allowance and is subject to a line extension guarantee.

(4) The estimated excess cost of construction ~~other than would~~, beyond what is normally ~~be~~ required for ~~installation of the~~a line extension, ~~is~~must be paid by the customer prior to installation.

(5) Determination of Annual Guarantee

(a) When only one customer is served by the line extension that customer is responsible for the entire minimum distribution revenue guarantee.

(b) The Company reserves the right to determine the guarantee of a customer on the proportionate length of the line extension used in common with other customers plus the additional length required to serve the individual customer.

(c) The total guarantee for a line extension is divided among the customers to be supplied initially from the line extension to determine the total amount to be guaranteed per customer, which is then divided by the number of years in the initial term of the contract to determine the customer's annual guarantee. A customer may assume more than a pro rata share of the guarantee for the line extension.

(d) When additional customers are connected to an existing or additional line extension during the guarantee period, the remaining total amount to be guaranteed for the existing line extension is reapportioned for all customers including the new customers, providing such reapportionment does not increase the guarantees of the existing customers. Otherwise, the additional line extension is considered as a new line extension.

(6) Line Extensions for Development Areas

(a) The Company constructs line extensions to supply service to customers in residential, commercial or industrial developments~~C. SPECULATIVE LINE EXTENSIONS~~, and may require annual guarantees determined in accordance with this Rule 3, based on the number of customers which the Company estimates to be served in the development within two years from initial construction. The developer (or property owner) shall provide, without charge to the Company, ROW, in accordance with Rule 2, for lines and equipment which is suitable in the opinion of the Company for the installation of Company facilities throughout the development.

(7) Speculative Line Extensions

(a) A line extension is speculative when, in the Company's judgment, the

PPL Electric Utilities Corporation

continued future use of the facilities by any customer is uncertain.

RULE 3 – EXTENSION OF SERVICE (CONTINUED)

(b) The Company requires a minimum distribution revenue guarantee for speculative single-phase and multi-phase line extensions equal to the Company's estimated fully allocated installation and removal costs, less salvage, with no length allowance. Prior to construction, the Company may require from the customer a surety bond, or other security acceptable to Company, in the amount of the guarantee in addition to any deposit required to secure payment of service bills.

(c) Distribution revenue guarantees for speculative line extensions include service extension facilities~~, as well as distribution line facilities.~~. ~~D.~~

(d) A speculative line extension requires payment of the fully allocated costs of engineering design and survey work to produce a detailed estimate at the time of application.

C. SERVICE EXTENSIONS ~~FOR INDIVIDUAL SERVICE~~

(1) All service extensions ~~off~~connecting to the Company's distribution system to serve individual customers are installed ~~under~~ in accordance with the provisions below and consistent with Tariff Rule 4.

(2) The Company extends service facilities from its distribution lines to the customer's point of delivery. The customer pays the estimated cost of service extension length over 500 ft. and the estimated cost of any additional facilities necessary to accommodate the customer's requests.

(3) Speculative Service Extensions

(a) A service extension is speculative when, in the Company's opinion, there is doubt as to the initial or continued use of the new facilities by the customer. This may include, but is not limited to separate points of delivery, and service at locations which are relatively inaccessible or remote, or where the customer has less investment than is required by the Company to provide service.

(b) When a service extension is speculative, the Company requires a minimum distribution revenue guarantee equal to the Company's estimated fully allocated cost of installation and removal of all facilities less any CIAC by the customer.

(c) A speculative service extension guarantee may be discontinued prior to expiration of the contract whenever, at the Company's discretion, the service becomes non-speculative in nature.

(d) Where the customer requires a speculative service extension to be disconnected and Company facilities left in place for subsequent reconnection, the service extension shall be treated as temporary service under Tariff Rule 7. In addition, for each reconnection of service the customer pays the cost of connection and disconnection.

~~E. LINE EXTENSIONS FOR DEVELOPMENT AREAS~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 8C

~~The Company constructs line extensions to supply service to customers in residential, commercial or industrial developments in specific areas, with annual guarantees determined in accordance with Section B or C hereof, based on the number of customers which the Company knows are to be served in the development within two years from initial construction. The developer (or property owner) provides, without charge to the Company, right-of-way for lines and equipment which is suitable in the opinion of the Company for the installation of Company facilities throughout the development.~~

~~Suitable right-of-way includes, but is not limited to, providing ground line clearing of trees, brush and other obstructions, rough grading, and access by mechanical construction equipment.~~

~~When restoration of service to the premise is not possible due to an obstruction the customer, or the owner of the property on which the obstruction is situated is responsible for removing the obstruction.~~ ~~(C)~~

~~(Continued)~~

~~(C) Indicates Change~~

~~Issued: December 18, 2015~~ ~~Effective January 1, 2016.~~

RULE 3 – EXTENSION OF SERVICE (CONTINUED) (C)

F. ANNUAL GUARANTEE

(a) The total guarantee for a line extension is divided among the customers to be supplied initially from the line extension to determine the total amount to be guaranteed per customer which is then divided by the number of years in the initial te rm of the contract to determine the customer's annual guarantee. A customer may assume more than a pro rata share of the guarantee for the line extension.

(b)(a) The Company reserves the right to determine the guarantee of a customer on the proportionate length of the line extension used in common with other customers plus the additional length required to serve the individual customer.

Each customer agrees that when the net

(1) A speculative service bills rendered during the period from the start extension requires payment of the initial termfully allocated costs of the contract to the end ofthe current year total less than the sum of the

customer's annual guarantee over that period, then the difference becomes dueengineering design and payable.

(a)(e) The customer may electsurvey work to makeproduce a one-detailed estimate at the time payment to the Company in lieu of annualof application.

differential billings during the period of the guarantee. The payment, which will be equal to the total amount of the guarantee, will be subject to partial refunds each year based upon the actual amount of the customer's distribution service billings.

G. TEMPORARY SERVICE

The Company supplies temporary service in accordance with the provisions of Rule 7. H.

REAPPORTIONMENT AND WAIVER OF LINE EXTENSION GUARANTEE

(1) When additional customers are connected to an existing or additional line extension, the

(c)(a) remaining total amount to be guaranteed for the existing line extension is reapportioned for all customers including the new customers, provid ing such reapportionment does not increase the guarantees of the existing customers. Otherwise, the additional line extension is considered as a new line extension.

(d)(a) When the accumulated distribution revenue from the start of the initial term of contract equals the total amount to be guaranteed by the customer, service is supplied without the application of the annual guarantee determined under this rule.

I. TAXES ON CONTRIBUTIONS IN AID OF CONSTRUCTION AND CUSTOMER ADVANCES (C)

Any distribution service-related CIAC, customer advance or other like amounts received from the customer which shall constitute taxable income as defined by the Internal Revenue Service will have

(2)(1) the income taxes segregated in a deferred account for inclusion in rate base in a future rate case proceeding. Such income taxes associated with a CIAC or customer advance will not be charged to the specific

RULES FOR ELECTRIC SERVICE ~~(C)~~

RULE 4 ~~–~~ SUPPLY OF SERVICE

~~A.~~

A. CHARACTERISTICS OF SERVICE

~~(1)~~ The Company's standard service is single or three-phase, sixty Hertz alternating current at

(1) standard voltages as specified in ~~the Company's "Rules for Electric Meter and Service Installations".~~ REMSI. Standard service includes overhead service, and underground service at new residential developments, at locations where the Company in its discretion has elected to install underground facilities, and at locations where the customer has paid for the incremental cost of installing facilities underground. All non-standard service is in the process of elimination, and no new or additional non-standard service will be supplied.

~~(2) The distribution system is defined, for the purposes of this rule, as including all lines energized at voltages less than the nominal 69,000 volts and excluding service extensions and lines energized at voltages of nominal 69,000 volts or higher. However, this definition does not affect the Company's obligations under the Federal Power Act and/or the Public Utility Code, as applicable: (1) to provide safe, reliable and adequate retail electric service to customers taking service at voltages of 69 kV and above, and (2) to provide just and reasonable and non-discriminatory distribution and transmission rates, terms and conditions of service to such customers.~~

~~When a rate schedule specifies service at secondary voltage or specifies no particular voltage,~~

(2) Company furnishes, where necessary, one standard transformation at the point of delivery from the line voltage to a standard secondary voltage. when a rate schedule specifies service at secondary voltage or specifies no particular voltage. Where the rate schedule specifies service at ~~distribution~~primary voltages, service is supplied from the nearest available line of not less than ~~that~~primary voltage, and customer furnishes all equipment necessary to transform the energy from ~~the line~~primary voltage.

~~(3) The Company extends service facilities from its distribution lines to the customer's point of delivery. The customer pays the estimated cost of service extension length over 500 ft. and the estimated additional cost of facilities other than those which the Company would normally install to meet the customer's load requirements.~~

~~(4) The Customer provides, without charge to the Company, suitable right-of-way across property owned or controlled by the customer (or property owner) including but not limited to: ground line clearing of trees, brush and other obstructions, rough grading, and access by mechanical construction equipment. When restoration of service to the premise is not possible due t o an obstruction, the customer, or the owner of the property on which the obstruction is situated is responsible for removing the obstruction.~~ ~~(C)~~

(3) The point of delivery is the point designated by Company where Company's service conductors are connected to customer's service entrance conductors, terminals, or bus. Company installs and maintains facilities to the point of delivery and shall not be required to install or maintain any conductors, meter base, equipment or apparatus except ~~meter and~~any meters, meter accessories, and other Company Facilities beyond that point.

(4) The ~~Company normally~~ Company's standard service supplies energy to only one point of delivery to a ~~premise~~premises. The Company may provide a separate point of delivery at the customer's request as a line and/or service extension. that is installed pursuant to Tariff Rule 3. The customer pays the fully allocated ~~cost~~costs of any primary or secondary facilities needed to serve the additional points of delivery. For application of this rule, services to more than one building or facility located on the same property and owned by the same

entity will be considered service to a single premise; each individual building or facility will not be considered a separate ~~premise~~premises.

~~(Continued)~~

~~(C) Indicates Change~~

~~Issued: December 18, 2015~~ ~~Effective: January 1, 2016~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
~~Original Page~~ No. 9

~~**PPL Electric Utilities Corporation**~~

~~Supplement No. 194 Electric Pa. P.U.C. No. 201 Tenth Revised Page No. 8A Canceling Eighth and Ninth Revised Page No. 8A~~

~~RULE 4 - SUPPLY OF SERVICE (CONTINUED)~~ ~~(C)~~

~~B. SPECULATIVE SERVICE EXTENSIONS~~

~~A service extension is speculative when, in the Company's opinion, there is doubt as to the initial or continued use of the new facilities by the customer. This may include, but is not limited to separate points of delivery, and service at locations which are relatively inaccessible or remote, or where the customer has less investment than is required by the Company to supply service.~~ ~~(C)~~

~~(1) When a service extension is speculative, the Company requires a minimum distribution revenue guarantee equal to the Company's estimated fully allocated cost of installation and rem oval of all facilities less any contribution in aid of construction by the customer. The guarantee is for a five year period or less.~~

~~(2) Each customer agrees that when the net distribution service bills rendered during the period from the start of the initial term of the contract to the end of the current year total less than the sum of the customer's annual guarantee over that period, then the difference becomes due and payable.~~

~~The customer may elect to make a one -time payment to the Company in lieu of annual differential billings during the period of the guarantee. The payment, which will be equal to the total amount of the guarantee, will be subject to partial refunds each year based upon the actual amount of the customer's distribution service billings.~~

~~(3) The Company may require, in addition to any deposit necessary to secure payment of service bills, a surety bond or other security acceptable to the Company, to guarantee the fulfillment of the agreement.~~

~~(b)(a) Where the customer requires a speculative service extension to be disconnected and Company facilities left in place for subsequent reconnection, the service extension shall be treated as temporary service under Tariff Rule 7. In addition, for each reconnection of service the customer pays the cost of connection and disconnection.~~

~~(4) A speculative service extension guarantee may be discontinued prior to expiration of the contract whenever the service becomes non-speculative in nature.~~

~~(5) A speculative service extension requires an "i n advance of construction" payment of the fully allocated cost of engineering design and survey work to produce a detailed estimate.~~

~~C.~~

B. METHOD OF SERVICE

(1) ~~(1)~~ The Company furnishes and installs all electric service line facilities extending from its distribution supply lines at or near the customer's property line to the customer's point of delivery using ~~normal~~ construction methods determined by the Company for load conditions according to Company standards, except as follows:

(a) The Company may at its discretion install ~~other than normal~~ service facilities beyond those outlined in this tariff at the customer's request and at the customer's expense.

~~**RULE 4 - SUPPLY OF SERVICE (CONTINUED) (C)**~~

~~**C. METHOD OF SERVICE (Continued)**~~

(d) When a customer requests service in the vicinity of Company underground distribution facilities, the Company may require the customer to take underground service under the same terms and conditions which would apply if the Company ~~supply were overhead~~service was overhead. Customers must pay for any necessary mechanical facilities required for underground service.

(2) The Company may establish an underground system at its ~~own option except as provided in (3) below when in the Company's opinion the circumstances justify the investment, and~~ sole discretion.

(3) The Company may establish an underground system at the customer's request ~~on condition~~provided that ~~Company installs the complete electrical system to the point of delivery and~~ :

(a) the customer installs the mechanical facilities;

~~(a)~~(b) ownership and maintenance of all facilities in the development on Company's side of the point of delivery that are not in or under buildings vest in the Company;

(c) ~~buildings shall vest in the Company;~~ the developer grants the Company, free-of-charge ~~by perpetual easement, the sole~~ ROW in accordance with Rule 2 including the right to move, maintain, and extend ~~these~~the underground facilities~~. The~~; and

the developer

~~(b)~~(d) agrees to pay the Company, in advance, the ~~Co mpany's~~Company's estimated excess cost over normal overhead construction.

~~(2)~~(4)Underground Electric Service in New Residential Developments

The Company installs only underground distribution and service facilities in residential developments of five or more adjoining lots for the construction of single-family residences, detached or otherwise, mobile homes, or apartment houses intended for year-round occupancy,

when service requires the extension of primary voltage lines. It does not apply to tracts of land

PPL Electric Utilities Corporation

which are subdivided, as defined by the Municipalities Planning Code, but not developed into utility-ready lots by a bona fide developer.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 9A

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

The ~~applicant for~~ developer requesting electric service to a residential development shall conform with the following:

~~(a)~~ At ~~its own~~the developer's cost, provide the Company with a copy of the recorded development plot plan

(a) identifying property boundaries, and with easements satisfactory to the Company for occupancy by distribution, service and street-light lines and related facilities.

~~(b)~~ At ~~its own~~the developer's cost, clear the ground in which the lines and related facilities are to be laid of trees, stumps and other obstructions, provide the excavating and backfilling subject to the inspection and approval of the Company, and rough grade it to within six inches of final grade, so that the Company's part of the installation shall consist only of laying of the lines and installing other service-related facilities. Excavating and backfilling

(b) performed or provided by the ~~applicant~~ developer shall follow the Company's underground construction standards and specifications set forth by the Company ~~in written form~~ and presented to the ~~applicant~~developer at the time of application for service and presentation of the recorded plot plan to the Company. If the Company's specifications have not been met by the ~~applicant's~~developer's excavating and backfilling, such excavating and backfilling shall be corrected or redone by the ~~applicant~~developer or its authorized agent. Failure to comply with the Company's construction standards and specifications permits the Company to refuse service until such standards and ~~specification~~specifications are met.

(c) Request electric service at such time that the lines may be installed before curbs, pavements, and sidewalks are laid; carefully coordinate scheduling of the Company's line and facility installation with the general project construction schedule, including coordination with any other utility sharing the same trench; keep the route of lines clear of machinery and other obstructions when the line installation crew is scheduled to appear; and otherwise cooperate with the Company to avoid unnecessary cost and delay.

~~(Continued)~~

~~**RULE 4 - SUPPLY OF SERVICE (CONTINUED) (C)**~~

~~**C. METHOD OF SERVICE (Continued)**~~

~~coordination with any other Company sharing the same trench; keep the route of lines clear of machinery and other obstructions when the line installation crew is scheduled to appear; and otherwise cooperate with the Company to avoid unnecessary cost and delay.~~

~~(d)~~

Pay to the Company any necessary and estimated additional costs incurred by the ~~(C)~~

(d) Company as a result of the following:

~~1.~~ Installation of underground facilities that deviate from the Company's underground construction standards and specifications if such deviation is requested by the

1. applicant for electric service and is acceptable to the Company.

2. A change in the plot plan by the ~~applicant for electric service~~developer after the Company has completed engineering for the project and/or has commenced installation of its facilities.

~~2.~~ Physical characteristics such as ~~oversiz ed~~oversized lots or lots with extreme set-back where under the Company's line and service extension policy contained in its tariff a charge is

3. mandated for overhead service.

~~(e)~~

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

~~(c)~~(e) No charges other than those described in paragraph (d) shall be borne by the ~~applicant~~developer for ~~electric~~ service or by another utility sharing the same trench, even if the Company elects to perform its own excavating and backfilling.

~~(4)~~

C. EXTRAORDINARY SERVICE

The Company may supply service, upon request, in a manner which requires additional facilities or related regulated services to be performed, which are over and above those that the Company would normally install or provide, if the customer agrees to pay the Company at a fair and nondiscriminatory price for those additional facilities or related regulated services. This includes all service at voltages above 69,000 volts.

~~D.~~

~~C.~~D. ALTERNATE SERVICE ~~(C)~~

The Company furnishes one source of service to a single point of delivery to a premises.

However, when a customer requests an alternate ~~s ource~~source of service, the Company will install the additional facilities required ~~providing~~, so long as the ~~custom er~~customer agrees to compensate the Company for the estimated ~~cost~~fully allocated costs of the additional facilities maintained for the alternate service and for the future estimated costs of continuing the alternate service.

~~E.~~

E. CAPACITY

The Company's facilities have a limited capacity. Therefore, to assure satisfactory operation of customers' equipment and to protect ~~both customer's~~customer, including other customers, and ~~Company's~~Company facilities against damage,

each customer shall notify the Company of any ~~s ubstantial~~substantial increase in use of service so that additional facilities may be provided in accordance with the applicable provisions in this tariff.

~~**RULE 4 - SUPPLY OF SERVICE (CONTINUED)** (C)~~

~~F.~~
~~D.~~F. CONTINUITY

(1) The Company uses reasonable diligence to preserve continuity of service, but interruption of service and variation in supply characteristics (including, but not limited to, high or low voltage, operation of protection or control devices, single phasing of three phase service, and phase reversal) can occur. The Company does not guarantee continuous, regular, and uninterrupted supply of service. The Company may, without liability, interrupt or limit the supply of service for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public or for the purpose of preventing or limiting any actual or threatened instability or disturbance of the system. The Company is also not liable for any damages due to accident, strike, storm, riot, fire, flood, legal process, state or municipal interference, or any other cause beyond the Company's control. The Company shall not be liable for any injury to person or property arising from the use of electricity by or the supply of electricity to the customer which is not the result of negligence solely on the part of the Company.

~~(1)~~ RULE ~~The Company uses reasonable diligence to preserve continuity of service, but in the event of interruption or curtailment of service, Com pany shall not be subject to any liability, penalty or payment for or on account of any such interruption or curtailment nor shall the application of the rate schedule to the regular billing period be affected.~~

4 – SUPPLY OF SERVICE (CONTINUED)

(2) In no event shall the Company be liable for incidental, indirect, special or consequential damages, including loss of use or profit or loss of business. The liability of the Company to customers or other persons for damages other than incidental, indirect, special or consequential damages, including loss of use or profit or loss of business shall in no event, unless caused by the willful and/or wanton misconduct of the Company, exceed an amount in liquidated damages equivalent to the greater of $500 or two times the charge to the customer for the service affected during the period in which the damages occurred. These limitations shall apply whether the claim is pleaded in contract or in tort, including negligence and strict liability in tort.

(3) The Company makes no warranty as to merchantability or fitness for a particular purpose, express or implied, by operation of law or otherwise. To the extent applicable under the Uniform Commercial Code or on any theory of contract or products liability, the Company limits its liability in accordance with the previous paragraph to any customer or third party for claims involving and including, but not limited to, strict products liability, breach of contract, and breach of actual or implied warranties of merchantability or fitness for an intended purpose.

(4) For the purposes of this Rule, all customer-owned equipment, materials, appliances, and associated materials/equipment on the customer's side of the meter are the property and responsibility of the customer, and in no event shall the Company be liable for any injury to person or property arising therefrom.

~~(2)~~ The Company may temporarily suspend service for the purpose of making necessary ~~(1)~~(5) ~~repairs~~ repairs, modifications, and/or to protect public safety and makes every reasonable effort to notify customers in advance, except in cases of emergency.

~~G.~~
~~E.~~G. EMERGENCY LOAD CONTROL

~~(1)~~

(1) A load emergency situation exists whenever:

(a) the demands for power on all or part of the utility's system exceed or threaten to exceed the capacity ~~then~~ actually available to supply such demands;

(b) system instability or cascading outages could result from actual or

PPL Electric Utilities Corporation

~~.~~ expected transmission and/or distribution system overloads or other contingencies; or

(c) ~~such~~Such conditions exist in the system or another public utility or power pool with which the utility's system is interconnected and cause a reduction in the capacity available to the utility from that source or threaten the integrity of the utility's system.

~~(2)~~

RULE 4 – SUPPLY OF SERVICE (CONTINUED)

In such case, the utility shall take such reasonable steps as the time available permits to bring the demands within the then-available capacity or to otherwise control load. Such steps shall

(2) include but shall not be limited to reduction or interruption of service to one or more customers, in accordance with the utility's procedures for controlling load.

~~H.~~
~~F.~~H. EMERGENCY ENERGY CONSERVATION

An emergency energy conservation situation exists whenever events result or, in the judgment of the utility, threaten to result in a restriction of the fuel supplies available to the utility or its energy vendors, such that the amount of electric energy which the utility is able to supply is or will be adversely affected. In the event of an emergency energy conservation situation, the utility shall take such reasonable measures as it believes necessary and proper to conserve available fuel supplies. Such measures may include, but shall not be limited to reduction, interruption or suspension of service to one or more of its customers or classes of customers in accordance with the utility's procedure for emergency energy conservation.

~~service to one or more of its customers or classes of customers in accordance with the utility's procedure for emergency energy conservation.~~

~~I.~~
~~G.~~I. RELOCATION OF FACILITIES
~~(1)~~

The relocation of ~~customer's~~customer facilities due to moving or rearranging Company's facilities at

(1) the direction of either the federal, state or local government is the customer's responsibility and expense.

RULES FOR ELECTRIC SERVICE

RULE 5 - USE OF SERVICE

A. CUSTOMER'S RESPONSIBILITY
~~(C)~~

The customer assumes full responsibility for the energy and facilities at and beyond the point of delivery. ~~Interruption of service and variation in supply characteristics (including, but not limited to, high or low voltage, operation of protection or control devices, single phasing of three phase service, and phase reversal) can occur. To prevent or lim it damage from such events it~~Customer is ~~Customer's responsibility~~responsible to purchase and install protective devices and/or install or otherwise provide for

alternate power supplies ~~that are available from third parties~~ to protect ~~Customer's~~customer's facilities, equipment, and property. The customer's use of service shall not cause damage to Company's equipment ~~or~~, impair ~~this~~ service to other customers~~.~~, and/or impede the Company's ability to provide safe and adequate service. The ~~foregoi ng~~foregoing provisions do not change the Company's duty and responsibility to provide safe and adequate service to the point of delivery.

B. PURPOSE AND LOCATION

Service shall not be used for any purpose or at any location other than that stipulated in the customer's application, the customer's contract with the Company, or this tariff.

C. PERMANENT CHANGE OF USE

When a customer notifies Company ~~in writi ng~~ of any permanent change which reduces the capacity that Company is required to have ~~availabl e~~available, and when required, executes a new service contract, the Company will as of the first meter reading date thereafter apply the rate schedule applicable to the changed conditions for subsequent billing.

~~A. SERVICE DURING CONSTRUCTION OR EMERGENCY~~

~~(1) The Company suspends the contract term for a period not exceeding six consecutive months--~~

~~(a) following the initial connection of service for gradual installation of equipment or development of customer's operation as contemplated under the contract.~~

~~(b) upon written request from the customer following a forced temporary suspension of a portion of all of customer's operation due to an emergency such as an accident, fire, flood or other act of God, but not due to strike, lockout, seasonal curtailment or other business conditions.~~

~~(2) Bills for service during the suspension period are based on demands and energy supplied~~

~~during such period applying the rates and minimum charges of the applicable rate schedule most advantageous to the customer. When the period in which the suspension starts is less than a normal billing period, bills are prorated. The suspension period ceases with the billing month in which the establishment or restoration of normal service occurs or after six full billing months whichever is the earlier. The initial contract term is extended for an equal period, including any extension guarantee period required thereunder.~~

~~RULES FOR ELECTRIC SERVICE~~ **(C)**

~~RULE~~ 5 - USE OF SERVICE (CONTINUED)

D. ABNORMAL DEMAND AND USAGE

All metered demands and usage, including abnormal demands and usage which are inconsistent with the customer's normal use pattern, are billed as metered in the billing period in which they occur. This provision may be waived at the Company's option.

E. REDISTRIBUTION OF SERVICE

~~Energy purchased from the Company shall not be submetered and resold to another party~~ **(C)**
~~except as permitted under 5F(2), 5F(4), and 5F(5). It is the Company's intent to meter and bill each tenant as an individual customer. Tenant is defined as an occupant of a multi-tenancy commercial building or parcel where it is expected that tenure shall be for a year or more. For the purpose of this rule, the term multi-tenancy commercial building shall include any structure which contains or houses 3 or more separate and distinct residential or commercial units.~~

~~(1) Where installation of electric service was completed by May 21, 1980, electric energy may be redistributed and submetered to tenants provided service to the premises is to one point of delivery through a single meter under the applicable general rate schedule, and charges for electric service to such tenants do not exceed charges as computed under the Company's applicable rate schedule for comparable service.~~

(1) At the service locations covered hereunder connected after May 21, 1980, each tenant shall be served, metered and billed individually by the Company under the appropriate rate schedule except where ~~a definite commitment~~the Company has ~~been made as of that date to permit~~permitted master metering with ~~the~~ resale in accordance with the provision of ~~5F(~~Tariff Rule 5(E)(2). Upon application~~, affidavit, and proof presented~~ to the Company, any owner (or ~~his~~their duly authorized representative) of a new multi-tenancy commercial building may seek an exception to Tariff Rule 5(~~F~~E) by demonstrating that the installation of individual electric meters at each separate unit within the building is neither feasible nor practical from a financial, technical, ~~or~~ engineering ~~point of view or by citing~~ , and/or any other valid reason~~; all of which~~. If the Company approves an exception to this Rule, the master meter must be designed ~~to prove~~so that ~~the installation of individual electric meters within the building~~it will not achieve any notable reduction in the consumption of electricity by the tenants in the building ~~beyond that which would be accomplished through the use of a master metering system~~than if the tenant units had individual electric meters within the building with efficient heat controls.

RULES FOR ELECTRIC SERVICE

RULE 6 ~~- **AUXILIARY**~~ – STAND-BY SERVICE

FOR NON-~~**QUALIFYING**~~UTILITY GENERATING FACILITIES ~~**(C)**~~
~~**A.**~~

A. APPLICATION

(1) For non-residential customers with on-site generation over 3 MW. Also applicable to all other non-residential customers with on-site generation that do not qualify for net metering service, including Qualifying Facilities or Small Power Producers and cogenerators as defined in the Public Utility Regulatory Policies Act.

(2) Service under this Rule is available to customers taking service under Rate Schedule GS-3, LP-4, or LP-5.

~~(1)~~(3) Service to customers who have another source of power which can be substituted for Company's service for any of customer's operations. Service is supplied under the terms of this ~~**rule**~~Rule unless such other source of power is maintained solely for use in case of interruption of the Company's service. ~~**Service to Qualifying Facilities (QFs) is provided for under Rule 6A.**~~

~~(2)~~(4) Service is supplied only where the Company has available the capacity and facilities adequate for the service and only under a contract for an initial term of one or more years ~~**under a general service rate schedule with measured demands. Bills for service are based on charges specified in the rate schedule, subject to a minimum charge as described in this rule**~~.

(5) Batteries and other energy storage equipment shall not be considered generators for the purposes of this Rule.

~~(3)~~(6) The ~~**customer's**~~customer's equipment may not be operated concurrently ~~**by means of**~~with the service supplied by the Company ~~**and by such other source of electric or mechanical power**~~ except upon written agreement setting forth the conditions of such operation.

~~**Customers selecting**~~

~~(4)~~(7) The provisions of this Rule 6 do not ~~**qualify for the**~~ apply to customers taking Net Service ~~**provision of**~~under Rule 11.

B. STAND-BY SERVICE~~**B.**~~

Stand-by service ~~MINIMUM CHARGE~~

~~**The minimum monthly charge**~~ is ~~**the KW demand and K WH**~~intended for customers with firm, dispatchable, on-site generation that provides a substantial portion of their energy ~~**charges in**~~needs. This service is not intended for customers with on-site generation that is used for emergency back-up purposes or for customers with intermittent output generation, such as wind and solar.

C. SUPPLEMENTARY SERVICE

PPL Electric Utilities Corporation

(1) All energy and demand consumed by the customer up to the Supplementary Contract Demand level is considered Supplementary Power.

(2) Supplementary Power is charged at standard tariff rates for Rate Schedule GS-3, LP-4, or LP-5 plus all applicable riders.

RULE 6 – STAND-BY SERVICE FOR NON-UTILITY GENERATING FACILITIES
(CONTINUED)~~rate schedule for 100 hours use of~~

(3) Monthly billed demand for Supplementary Power will be based on the ~~kilowatts~~Supplementary Contract Demand.

~~(1)~~(4) The level of ~~Reserved Capacity, plus~~ Supplementary Contract Demand will be initially set based on the ~~succeeding KW charge in the rate schedule for any kilowatts~~estimated amount of the ~~Billing KW~~customer's total peak demand that is in excess of the ~~kilowatts of Reserved Capacity.~~maximum capacity of the on-site generation.

(5) If the ~~C.~~ customer's on-site generation capacity is equal to or exceeds the customer's estimated total peak demand there will be no Supplementary Contract Demand, and the Back-Up Contract Demand shall equal the estimated customer total peak demand.

(6) Should the Customer's measured total peak demand during scheduled maintenance or during an unplanned outage ever exceed the original estimated total peak demand, the customer's total peak demand will be reset in the contract to a value equal to the new measured total peak demand.

(7) Customers may apply to reduce their Supplemental Contract Demand once every two years and will be required to provide evidence of either reduced total peak demand or increased generation capacity.

D. BACK-UP SERVICE

(1) Under this Rule, the Company will provide Back-Up power in the event that the customer's on-site generation experiences an unplanned outage. To reserve back-up capacity on the Company's system, the customer will pay a discounted monthly reservation fee equal to 30% of the distribution demand charges under Rate Schedule GS-3, LP-4, or LP-5.

~~RESERVED CAPACITY~~

~~(1) When customer's entire power requirements exceed the capacity of such other source of power and no load limiter is installed, the Reserved Capacity is the rated capacity in kilowatts (at unity power factor) of customer's other source of power. I n all other cases the Reserved Capacity is the average kilowatts, supplied during the single 15 minute period of maximum use during the current billing month or any of the preceding 11 months, but not less than the kilowatt setting of a load limiter, or, when no limiter is installed, not less than Company's estimate of the number of kilowatts of customer's entire power requirements as stated in the contract.~~

~~(2) The customer has the option of furnishing, installing, and maintaining a load limiter for service supplied by Company, which shall be approved, set, and sealed by Company. The limiter will be set at approximately the number of kilowatts of Reserved Capacity contracted for by the customer.~~

~~(C)~~

~~(C) Indicates Change~~

~~Issued: December 31, 2012~~ ~~Effective: January 1, 2013~~

~~PPL Electric Utilities Corporation~~	~~Supplement No. 42 Electric Pa. P.U.C. No. 201 Fifth Revised Page No. 10B Canceling Fourth Revised Page No. 10B~~ Back-Up Demand Charge
GS-3	$1.05/kW
LP-4	$0.78/kW
LP-5	$0.00/kW

(2) Energy and demand consumed by the customer during an unscheduled outage in excess of the Supplemental Contract Demand level will be defined as Back-Up Power. As used Back-Up Power will be priced at $0/kW during off-peak months and twice the standard distribution charge during on-peak months in order to discourage unscheduled outages during periods of elevated system loads.

RULE 6 – STAND-BY SERVICE ~~FOR NON-~~UTILITY GENERATING FACILITIES
(CONTINUED)

~~**RULES FOR ELECTRIC SERVICE**~~

~~**RULE 6A - STAND-BY SERVICE**~~
~~**FOR QUALIFYING FACILITIES**~~

~~**A. APPLICATION**~~

~~STAND-BY SERVICE~~

~~(1) The Company will supply Stand-by Basic Utility Supply Service under terms of this Rule to: (a) Qualifying Facilities (QFs) as defined in the Public Utility Regulatory Policies Act of 1978, or (b) a customer that contracts with a QF and that must be served under the requirements of either federal or state law.~~
~~Stand-by Basic Utility Supply Service is provided only where the Company has available capacity and facilities adequate for the service requested and only pursuant to a power purchase or interconnection agreement with the Company.~~

~~(2) Customers selecting Rule 6A do not qualify for the Net Service provision of Rule 11.~~

~~**B. TYPES OF STAND-BY SERVICE AVAILABLE**~~

~~(1) Supplementary Power is electric energy or capacity supplied by the Company and regularly used in addition to that energy or capacity supplied by that QF. All energy or capacity supplied by the Company under this rule shall be Supplementary Power unless it is provided as Back-up Power or Maintenance Power as defined below.~~

~~(2) Back-up Power is electric energy or capacity supplied by the Company to replace~~ (C) ~~energy or capacity regularly supplied by the QF's equipment when such equipment is not available during an outage other than prescheduled maintenance or fuel supply disruptions. An outage is defined as the forced interruption of the QF's entire generation output. Back-up Power shall be limited to 1,314 hours during the most recent consecutive twelve-month billing periods. Any additional power supplied above the 1,314 hour limit shall be billed as Supplementary Power.The QF must provide the Company with a written notification of the use of Back-up Power within seven business days after conclusion of the use. This notification must include the day and time at which the use of Back-up Power began, the reason for the usage, and the actual duration of the use of Back-up Power.~~

~~(3) Maintenance Power is electric energy or capacity supplied by the Company during a prescheduled maintenance outage of the QF's generating equipment. Maintenance Power is available for not more than 70 days per year and must be scheduled during the periods March 16 to May 31, and September 16 to November 30. The QF must confirm with the Company in writing 60 days before receiving such power and indicate the required capacity and proposed duration of Maintenance Power use. The required capacity and proposed duration of Maintenance Power use can be changed after the 60-day notice is given, but before the outage occurs, by mutual written agreement between the Company and the QF. The QF must provide the Company a written notification of the use of Maintenance Power within seven business days after the conclusion of~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 11A

~~the use. This notification must include the day and time at which the use of Maintenance Power began and the actual duration of the use of Maintenance Power.~~

~~C. INTERCONNECTED AND PARALLEL OPERATION~~

~~The QF shall comply with all Company requirements concerning interconnected or parallel operations. These requirements are on file with the Commission as part of the Company's annual PURPA Section 210 filing and/or are contained in power purchase and interconnection agreements between the Company and QFs.~~

A.E. RULE 6A - STAND-BY MAINTENANCE SERVICE
FOR QUALIFYING FACILITIES (CONTINUED) (C)

D. INTERRUPTIBLE OPTION

Back-up Power is available on an Interruptible basis to QFs with generators rated in excess of 500 KW. Interruptible Back-up Power may be interrupted when, in the Company's opinion, any generation, transmission, or distribution capacity limitations exist or during periods of economic load control. Whenever possible, the QF will be notified in advance of a probable interruption and the estimated duration of the interruption. If the QF fails to interrupt, a penalty of $24.95 per KW shall be billed for each KW that has not been interrupted, in addition to applicable Back-up Power charges. The Company will notify the QF by telephone at the conclusion of the interruption. A credit of $0.35/KW for Service at 480 volts or less, $0.30/KW for Service at 12,470 volts, $0.25/KW for Service at 69,000 volts or higher will be applied to the QF's monthly bill for each KW interrupted in any month in which an interruption is requested. N o credits will be applied if the QF fails to interrupt all Back-up Power.

RATES FOR STAND-BY SERVICE

(1) *Supplementary Power* is metered and billed separately under the Company's applicable general service rate schedule.

(2) (a) Back-up Power is billed separately. The billing is based on KW demand and KWH registered on the Company's meters. Where such actual KW demand use exceeds the KW specified under paragraph G, such excess KW and, on a percentage basis, the associated KWH shall be billed as Supplementary Power. When metered KW demand use is not available, the KW demand billed will be based on the KW of Back-up Power specified under paragraph G. When metered KWH use is not available, the KWH energy billed under the Back-up Power rates will be calculated by multiplying the KW of Back-up Power specified under paragraph G by the number of hours of the unscheduled outage.

(b) The QF will pay a Monthly Reservation Charge equal to the KW of Back-up Power specified under paragraph G multiplied by the Back-up Power capacity charge. The monthly minimum bill shall be the greater of the Monthly Reservation Charge or charges for actual Back-up Power usage.

(c) Back-up Power will be billed using the following charges: (C)

	Service at 480 Volts or Less	Service at 12,470 Volts	Service at 69,000 Volts or Higher

RULES FOR ELECTRIC SERVICE ~~(C)~~
RULE 7 ~~–~~ TEMPORARY SERVICE
~~A.~~

A. TEMPORARY SERVICE

(1)Temporary service is service for less than one year or for a year or more when Company ~~(C)~~ must install facilities that will be used solely for a service that is known to be limited in duration. Service is supplied for not less than one month at the applicable rate schedule subject to the provisions of this rule. ~~I n~~Temporary service is not available at voltages above primary service. The Company may require the customer to enter into a contract for temporary service. In no event is service billed for a total period of less than one month. Temporary service also includes seasonal service, which is service for less than one year, for which the Company is requested to leave the facilities in place for subsequent reconnection in following years.

(2)The customer pays, in advance, a non-refundable temporary connection charge equal to the ~~(C)~~ Company's estimated engineering installed cost and net removal cost of all necessary facilities, other than transformer, service drop, and metering, that are required to provide the temporary service. Where it is necessary to install and remove a transformer, service drop and meter, or to energize facilities already in place, the customer also pays a non-refundable connection and disconnection charge representing the cost of performing this work. The Company may require that the customer pay the ~~connection and~~ disconnection charge in advance.

~~(2)~~(3) Company has the option to supply service without the application of this rule for prearranged tests or demonstrations.

~~(3)~~(4) The Company may remove all facilities used solely to supply temporary service upon discontinuance of service by the customer.

~~(4)~~(5) The provisions in this rule for temporary service apply to annually recurring service; however, they do not apply for service to permanent residences on a residential service rate schedule.

RULES FOR ELECTRIC SERVICE ~~(C)~~
RULE 8 – MEASUREMENT OF SERVICE

A. ~~A.~~ LOCATION AND METHOD OF MEASUREMENT

(1) The customer provides free of expense to Company, at a location designated by Company, a suitable place for the Company meters and meter-related equipment, in accordance with REMSI, which is readily accessible to Company employees ~~at all reasonable hours.~~.

~~(1)~~(2) The Company installs and maintains the metering equipment, unless otherwise allowed by the Commission. Where energy is metered at a point other than the point of delivery or at a voltage other than the supply voltage, readings of the meters and meter-related equipment are corrected to conform to measurement at the point of delivery and voltage supply.

~~B.~~
B. METER INSTALLATIONS

Service at each point of delivery is metered through one or more meters as required by the applicable rate schedules. Measurements from metering equipment for separate points of delivery are never combined for billing purposes except temporarily pending completion of necessary changes in Company's facilities. The Company will relocate a meter upon request from a customer, provided that the customer agrees to pay the fully allocated cost for the relocation.

~~In residential and commercial complexes and multiple occupancy buildings connected after May 21, 1980, each independent occupant is separately metered and billed by the Company as an individual customer unless redistribution of service is authorized by the Company. The Company does not provide service to two or more customers through a single meter except as specifically provided for in Tariff Rule 5F or the applicable rate schedule.~~

~~C.~~
C. UNMETERED SERVICE

The Company, at its option, may determine kilowatt hours and billing demands by computation instead of by measurement for installations having a fixed load or demand value controlled to operate for a definite number of hours during a billing period. An electric service contract is required for billing this unmetered service.

~~D.~~
D. METER TESTING ~~(C)~~

The testing and adjustment of meters are made in accordance with any applicable law and any regulation. The ~~company~~Company may require customers to pay a fee of $35.00 for a meter test.

~~E.~~
E. DETERMINATION OF DEMAND

(1) The fractional part of the demand billing unit specified in the rate schedule in excess of the minimum is taken as a whole when equal to one-half or more, otherwise, the fractional part is disregarded.

(2) Where the rate schedule provides that the demand is determined by quantities

supplied during two or more periods of use, not more than one such period is taken from any one day's measurements that apply to such determination.

(3) Where the charges are based on a connected load, the customer's connected load is determined by inspection whenever Company deems necessary. Company will estimate the connected load of any customer who does not permit Company's representative to make such inspection.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 13

RULE 8 – MEASUREMENT OF SERVICE (CONTINUED)

(4) The Company's electric meters record average demand every 15 minutes or hourly and resets ~~(C)~~ the register to zero after each monthly billing cycle. The determination of demand excludes power factor correction.

~~**PPL Electric Utilities Corporation**~~

~~**RULE 8 - MEASUREMENT OF SERVICE (CONTINUED)**~~

~~F.~~
~~B.~~F. DEMAND INFORMATION

(1) When the customer desires to install electric load control equipment or obtain meter transmitted energy data, the Company will install the appropriate meter and connection tie box (hereinafter called "Demand Information System") at no cost to the customer. REMSI ~~Sketch 46~~ provides the wiring diagram and identifies Company and Customer responsibilities.

(2) The Company will not be held responsible for interruption to the Demand Information System due to blown fuses, failure, or any malfunction of Customer's Equipment. In addition, the Company reserves the right to interrupt the supply of electric demand information to perform meter tests or maintenance procedures and, in so doing, assumes no responsibility for the effects on the Customer's operation or equipment.

(3) If at any time, in the Company's sole judgment, based upon existing facts and circumstances, the supply of electric demand information through the Demand Information System becomes detrimental to reliable metering, the Company shall have the right to disconnect the Demand Information System from its metering facilities immediately upon advance notice to the customer and without liability.

(4) Under no circumstances shall the Customer modify, adjust or interrupt the operation of the Company's facilities. In addition, the Company's billing meter installation shall, in all instances, govern when establishing Customer's energy and demand record for billing purposes.

~~**G. AUTOMATIC METER READING FEE** (C)~~

~~**(1) Upon customer request, the Company will secure an in-person meter reading to confirm the accuracy of an automatic meter reading when a customer disconnects service or a new service request is received. The fee is $30 and the Company will include this fee on the customer's or applicant's bill.**~~

RULES FOR ELECTRIC SERVICE ~~(C)~~
RULE 9 ~~–~~ BILLING AND PAYMENT FOR SERVICE
~~A.~~

A. BILLING PERIOD

(1) Bills for service supplied during the preceding billing period, other than initial and final bills, ~~(C)~~ are rendered monthly. Normal billing is for a period of 26-35 days and is based on meter readings taken by Company at the end of each period.

(2) When a billing period is more or less than a month, such as for initial or final bills, the monthly rate is prorated.

~~B.~~
B. ESTIMATED BILLS

~~(3)~~(1) Company may render an appropriately marked estimated bill when a meter reading is not obtained. Company may read meters for longer than monthly intervals and may under such circumstances render estimated interim bills for normal billing periods.

~~(4)~~(2) Estimated bills shall be paid in accordance with the provisions of this rule and the applicable rate schedule. If unusual circumstances occur during a period for which an estimated bill has been issued and are brought to the Company's attention, an appropriate adjustment will be made by Company.

~~(5)~~(3) Upon request, the Company will supply any customer with a billing schedule and a card from upon which he ~~m ay~~may record his meter readings at the end of each normal billing period which otherwise would be estimated. If such card is received by the Company by the date specified on the schedule, except where it is apparent to the Company that the information is erroneous, the bill for such period will be computed from the meter reading shown on the card.

~~(6)~~(4) The Company will take reasonable measures to obtain meter readings, however, the Company may prepare an estimated bill for any customer if extreme weather conditions, emergencies, equipment failure, work stoppages, or other circumstances prevent actual meter readings or if Company personnel are unable to gain timely access to obtain an actual meter reading.

~~C.~~
~~B.~~C. DUE DATE

The due date specified on the bill is not less than 15 days from the date bill is ~~mailed~~rendered except that ~~(C)~~ for service under, or billed in conjunction with, residential rate schedules the due date is not less than 20 days from the date bill is ~~mailed~~sent and for service to federal, state or local governments or to any governmental department, institution or authority, the due date is not less than 30 days from the date bill is mailed via the U.S. Postal Service or sent electronically.

RULE 9 – BILLING AND PAYMENT FOR SERVICE (CONTINUED) ~~(C)~~ ~~D.~~

~~C.~~D. PAYMENT

(1) Bills are considered as received by customer when delivered via the U.S. Postal Service or ~~mailed~~ ~~(C)~~ rendered electronically to the premises where the service is supplied or an address mutually agreed upon. Delay in the receipt of or failure to receive bill does not extend the due date.

~~(1)~~(2) Bills may be paid during business hours at any commercial office or collection agency of the Company authorized to receive payments.

(3) Payment of bills ~~by mail will be accepted as paid when postmarked before midnight on the due date~~ ~~(C)~~ ~~or when received by the Company within five days after the due date. Payments of bills that are electronically transmitted to the Company~~ will be accepted as paid on the date of the actual receipt of payment.

~~(2)~~(4) Payment of bills after the due date specified on the bill is subject to a late payment charge, as provided for in the applicable rate schedule.

~~(3)~~(5) The customer is responsible for payment for use up to discontinuance or termination of service.

~~(4)~~(6) In the event of discontinuance or termination of service at a residence or dwelling, the Company may transfer any unpaid balance to any other residential account of the same ~~ratepayer~~customer, or in the event of termination, to a third-party guarantor's account.

~~(1) Regular employees who are head of a family and mainly responsible for the maintenance of the premises they occupy may secure up t o 50% reduction in their bills for service under Residential Rate Schedule RS in lieu of other benefits available to other employees. This option is in the process of elimination and is limited to employees who are presently receiving such reduction and continue to live and work in the area previously served by the former Tariff Electric Pa. P.U.C. No. 196 (Scranton).~~

~~(5)~~(7) Payments which are insufficient to pay for both a balance due for prior use and billing for current use are first applied to the balance due for prior use, except when an unpaid bill is a disputed bill ~~or when a payment plan for an overdue balance is agreed upon~~.

~~E.~~

E. BUDGET BILLING

Budget billing is available upon request for service under residential and general service rate applications except for temporary, seasonal, and speculative service. Budget billing may start in any month, for new or existing customers, and may be discontinued upon request at which time any difference between budget billing and billing based on actual use becomes due and ~~pay able. I n~~payable. In any month when the amount billed for the previous billing period is overdue, budget billing may be terminated; any difference owed the Company is immediately due, and bills thereafter are rendered based on metered use.

When a residential customer elects budget billing, the Company estimates the bills over a 10-month, 11- month or 12-month period to ~~eliminate, to the extent possible,~~limit seasonal fluctuations

in utility bills. The Company shall review accounts at least three times during the optional billing period. At the conclusion of the budget billing year, a resulting reconciliation amount exceeding $100, but less than $300, shall be, at the request of the customer, amortized over a 6-month period. Reconciliation amounts exceeding $300 shall be amortized over at least a 12-month period, at the request of the customer. Shorter amortization periods are permissible at the request of the customer.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 14A

RULE 9 – BILLING AND PAYMENT FOR SERVICE (CONTINUED)

When a ~~non-residential~~general service customer elects budget billing, the Company bills the customer each month an amount equal to one-twelfth of the estimated annual charges under the rate schedule. The monthly charge is adjusted, as required, so that total payments at the end of the budget billing cycle approximately equal actual charges. When billing based on actual use exceeds charges at the end of the twelfth month, the excess is added to regular billing in equal increments over the succeeding four months with no penalty.

Each month, interest at the rate of one-twelfth of the average of 1-year Treasury Bills for the months of September, October, and November of the previous year is applied to funds in the customer's account which are the result of payments for the billed amount in excess of actual charges for service to date. No interest is charged when there is a negative balance.

~~RULE 9 - BILLING AND PAYMENT FOR SERVICE (CONTINUED)~~ ~~(C)~~

~~D.~~F. RETURNED CHECK CHARGE

If a check received in payment of a customer's account is returned to the Company unpaid by ~~(C)~~ the customer's bank and cannot be redeposited by the Company for payment on the second attempt, the Company will charge the customer $20.00 for processing the returned check, plus any charges assessed by the bank or other financial institution to the Company.

~~E.~~G. SMALL CREDIT BALANCES ON INACTIVE ACCOUNTS ~~(C)~~

The Company may, within a maximum period of six months, transfer any customer credit balance less than $5 from a customer's inactive account to the Company's Operation HELP program instead of refunding the credit amount to the customer. This transfer will occur only after the Company has been unsuccessful in its efforts to transfer the credit balance to an active account of the customer, and only if the customer does not request a refund of the credit balance.

~~F.~~H. CREDIT AND APPLICATION PROCEDURES

The Company uses a commercially recognized ~~credit~~ scoring methodology that is within the range of generally accepted industry practice. The applicant's or customer's utility payment history determines the credit score. The Company uses this customer-specific credit score to either request or waive a security deposit. For low-income applicants, PPL Electric will waive the security deposit if an OnTrack agency verifies their household income.

RULES FOR ELECTRIC SERVICE

RULE 10 – DISCONNECTION AND RECONNECTION OF SERVICE

~~A.~~

A. CONTRACT CANCELLATION

(1) Contracts are canceled by Company ~~after~~in accordance with the ~~expiration of the initial term~~terms and conditions thereof, or upon notification from the customer, as provided in the contract, that service is no longer required at the premises being supplied.

~~Contracts~~

~~(1)~~ Customers are ~~canceled by Company before~~ relieved of their contractual obligations for contract that are terminated prior to the expiration of the initial term ~~thereof, at the~~

(2) ~~request of~~when the customer~~, upon the immediate payment at customer's option of~~ does either of the following:

~~All~~

(a) Satisfies all the remaining obligations under the contract for the initial term~~.~~; or

~~(a) The~~Paid all charges for service to the date of discontinuance as calculated under the tariff provisions applicable for the period of service actually supplied less the sum of

(b) payments already made. This includes any remaining obligations under Line Extension Guarantee or Service Extension Guarantees. This option applies only when the customer completely ceases operations ~~and only when Rule 3, Extension of Service, is not involved~~. Commercial and industrial customers agree that if operations are resumed before the date when the initial term expires, then the initial obligation of contract is considered ~~as~~ still in force.

~~B.~~

B. TERMINATION

(1) Termination of service does not constitute cancellation of any contract during the initial term thereof except by Company consent.

(2) The Company may terminate the supply of ~~electric~~ service and remove Company's equipment from customer's premises, upon notice to customer when appropriate, under any of the following conditions:

(a) Nonpayment of an undisputed delinquent ~~a ccount~~account associated with service provided by the Company.

(b) The customer's installation, in Company's judgment, has become dangerous or defective or Company has received notice of such a condition, or the customer's equipment or use thereof may impair the equipment of Company or the service to the other customers.

(c) The Company's property on customer's ~~pr emises~~premises has been interfered with, or evidence is found that the wires, meters, entrance switch or other appurtenances up to and including the point of measurement have been tampered with.

(d) Energy has been used that has not been registered on the meter.

(e) A writ of execution is issued against customer, or the premises at which service is

supplied is levied upon, or there is an assignment or act of bankruptcy on the part of customer, and Company has not received any written acceptance of responsibility for continuance of service.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 15

RULE 10 – DISCONNECTION AND RECONNECTION OF SERVICE (CONTINUED)

(f) The customer violates any of these rules or any of the terms and conditions of the contract or has made misrepresentations to Company with respect to the use of electric service and customer refuses to correct the situation or execute a contract appropriate for such service.

~~RULE 10 - DISCONNECTION AND RECONNECTION OF SERVICE (CONTINUED) (C)~~

~~B. TERMINATION (Continued)~~

(g) The Company's authorized representatives cannot gain admittance or are refused admittance to the premises for the purpose of reading meters, making repairs, making inspections, or removing Company property, or the customer interferes with Company representatives in the performance of their duties, or the meters or other equipment of the Company are not accessible ~~during reasonable hours~~.

(h) The customer neglects or refuses to reimburse Company for repairs to or loss of Company's property ~~used to supply service~~ when such repairs are necessitated, or loss occasioned, caused by ~~negligence on~~ the ~~part of~~ customer.

(i) Failure to post a deposit, provide a guarantee, or establish credit associated with service provided by the Company.

(j) Failure to comply with the material terms of a settlement or amortization agreement.

(k) Fraud or material misrepresentation of identity for the purpose of obtaining utility service.

(l) Unauthorized use of the utility service delivered on or about the affected dwelling or other service location.

~~(3) The Company shall not terminate, or refuse to restore service to any premises when any occupant residing therein is certified by a physician, physician's assistant or nurse practitioner to be seriously ill or affected with a medical condition which will be aggravated by a cessation of service or failure to restore service.~~

(m) When ordered by a governmental entity having jurisdiction over housing, building, and/or land use codes or ordinances.

(3) Except in emergencies, service to residential customers will not be terminated: on Saturday or Sunday; on a bank holiday or the day preceding a bank holiday; on a day, or a day preceding a day, when the Company's business offices are closed, excluding Saturdays; or on a holiday or the day preceding a holiday observed by the Pennsylvania Public Utility Commission.

(4) The customer may avoid termination under the above conditions by eliminating the cause for termination and fulfilling the appropriate conditions for reconnection under Rule ~~10C~~10.C hereof prior to termination.

C. ~~C.~~ RECONNECTION

Whenever a service has been terminated under any of the above provisions, Company will require payment of a $14 disconnection and reconnection charge and will, before reconnection,

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202

RULES FOR ELECTRIC SERVICE

RULE 11 – NET SERVICE FOR GENERATION FACILITIES (C)

A. DEFINITIONS

(1) *Delivery Service* - Service that includes the Distribution component of the applicable rate schedule (including all tariff riders and surcharges). (C)

(2) Generation Facility – Such equipment owned by a single corporate entity, (a) which is located at a single contiguous site; (b) which is exclusively used to produce electric energy that will be sold at wholesale; (c) which is owned and/or operated by a qualified member of PJM Interconnection, L.L.C. (PJM), as defined in the PJM Operating Agreement; (d) the Net Energy Output of which is reported on an hourly basis to PJM; and (e) which is interconnected to the Company's facilities. The Company shall have the sole and exclusive right to determine if any particular equipment qualifies as a Generation Facility and if the operating characteristics and/or circumstances relating to such equipment are different then described in this definition.

(3) Net Energy Output – The difference in energy between the Generation Facility's output and Station Power over a monthly period, as determined by the PJM. Net Energy Output is positive when the output exceeds the Station Power and negative when the Station Power exceeds the output, all as measured by an electronic meter acceptable to the Company.
Net Service – The provision of service at 69 kV or higher to a Generation Facility under this Rule.

(4) *Station Power* - Energy used for operating the electric equipment on the site of a Generation Facility located in the PJM control are or for the heating, lighting, air-conditioning and office equipment needs of buildings on the site of such a Generation Facility, which are used solely in the operation, maintenance, or repair of the facility. Station Power does not include any energy used to power synchronous condensers, used for pumping at a pumped storage facility, for restoration-related or black start service or to energy that is normally supplied to facilities including, but not limited to buildings or structures on the site of such a Generation Facility that are metered separately and served directly from the Company's distribution system.

B.A. B. APPLICATION

(1) The Company will provide Net Service to a Wholesale Generation Facility upon request.

(2) This Rule 11 shall remain available only for as long as the provision in Section 1.7.10(d) of the PJM Operating Agreement, or any successor thereto, allowing the self-supply of station power, remains effective.

(3) In order to be eligible for Net Service, a Wholesale Generation Facility must be subject to an Interconnection Agreement and an I nterconnectionInterconnection Service Agreement under the PJM Open Access Transmission Tariff. (OATT).

(3)(4) All bills for service hereunder are based on charges specified in the applicable rate schedule for firm service (including applicable riders and surcharges) under which the Customer is eligible to receive service, subject to the additional provisions of this rule.

(4)(5) Customers selecting Net Service do not qualify for either the auxiliary service or stand-by service provisions of Rules 6 and 6A, respectively.

(Continued)

RULES FOR ELECTRIC SERVICE

RULE 11 – NET SERVICE FOR GENERATION FACILITIES (CONTINUED)

C.B. C. RATES FOR NET SERVICE

(1) When the Wholesale Generating Facility's Net Energy Output is positive for the monthly billing period, the monthly minimum charge for Delivery Service is the minimum bill provision in the applicable rate schedule.

(1) When the Wholesale Generation Facility's Net Energy Output is negative for the monthly billing period, the Company shall apply all Delivery Service components of the applicable rate schedule, using the negative Net Energy Output to determine the Billing kWh component and the peak monthly kW usage to determine the Billing kW component. If the Customer is purchasing electricity from the

(2) Company, the Company also shall apply all ener gyenergy, capacity and transmission components of the applicable rate schedule as set forth in this section.

B. DATA REQUIREMENTS

The
C. DATA REQUIREMENTS

(1) The Wholesale Generation Facility or other parties authorized by the Wholesale Generation Facility Customer will report its hourly generator output and station power use to PJM, pursuant to the requirements in the PJM Operating Agreement.

(2) This Company reserves the right to independently audit the Customer's reported generator output and station power use and to seek resolution of any meter corrections through the applicable procedures in the PJM Operating Agreement.

RULES FOR ELECTRIC SERVICE
RULE 12 – DISTRIBUTED ENERGY RESOURCE (DER) INTERCONNECTION SERVICE

A. ~~A.~~ PURPOSE

The Distributed Energy Resource Interconnection Service (DERIS) shall be applied to all new DER interconnections with the distribution system effective January 1, 2021, and as further provided in this Rule. DERs shall include inverter-based alternative energy sources and systems, as defined in the Alternative Energy Portfolio Standards Act of 2004 (73 P.S. §§ 1648.1 - 1648.8), and storage resources (batteries).

B. ~~B.~~ APPLICATION

(1) This Rule shall apply to all inverter-based DERs, whose interconnection applications are received on or after January 1, 2021.

(2) This Rule shall apply to all customers who receive Basic Utility Supply Service under Rate Schedules RS, GS-1, GS-3, and LP-4.

~~C.~~

~~B.~~C. DEVICE REQUIREMENTS

(1) Renewable Energy Connection – Online Portal

~~The~~

This online portal allows customers to apply to interconnect the DER Management Devices with the distribution system. Refer to the REMSI Renewable Energy Connection under PPL Electric's Electric Rates and Rules for additional information. ~~https://www.pplelectric.com/utility/about-us/electric-rates-and-rules.aspx~~ https://www.pplelectric.com/utility/about-us/electric-rates-and-rules.aspx

(2) Smart Inverters –

From January 1, 2021, through December 31, 2021, all new inverters connected to the ~~(C)~~ distribution system must meet: (1) UL 1741 Supplement A as amended or supplemented and (2) the communication requirements under IEEE 1547-2018 as tested by or on behalf of the Company. Beginning January 1, 2022, PPL Electric will transition to requiring new inverters that connect to the distribution system to comply with IEEE 1547-2018 and to be certified to UL 1741 Supplement B. During the transition period of January 1, 2022, through December 31, 2022, each new inverter connecting to PPL Electric's distribution system must either: (1) meet UL 1741 Supplement A (as amended or supplemented) and the communication requirements under IEEE ~~154720181~~1547- 2018 (as tested by or on behalf of the Company); or (2) comply with IEEE 1547-2018 and be certified to UL 1741 Supplement B. Beginning January 1, 2023, new inverters connecting to the distribution system must comply with IEEE 1547-2018 and must be certified to UL 1741 Supplement B. The list of smart

inverters that meet these requirements will be made publicly available and regularly updated on the Company's REMSI website.

~~Original Page 14C-2~~

RULE 12 ~~–~~ DISTRIBUTED ENERGY RESOURCE (DER) ~~INTERCONNECTI ON~~ INTERCONNECTION SERVICE (~~Continued~~CONTINUED)

~~C. DEVICE REQUIREMENTS (Continued)~~

(2) Smart Inverters (Continued) -

Notwithstanding the above, if a customer installs a new inverter on an existing DER installation or upgrades an existing DER installation after January 1, 2021, the customer may install a replacement inverter of a similar make and model as the existing inverter, provided that any such inverter meets the Commission's applicable standards and requirements set forth in its regulations.

(3) DER Management Device –

All DERs whether Customer-Owned or Third Party-Owned that are applying to interconnect with PPL Electric's distribution system must install smart inverters as defined in Rule 12(C)(2). Additionally, for the term of the pilot program described in Rule 12(D), a DER Management Device owned, installed, and maintained by the Company will be connected to the data port of the smart inverter for any new DER installation. The DER Management Device may use the Meter Network radios to connect wirelessly to PPL Electric's RF mesh network. These devices shall be installed and maintained in accordance with Company's "Rules for Electric Meter and Service Installations (REMSI)". Refer to the REMSI DER Management Device section as well as the Commission-approved Settlement and the Pilot Implementation Plan filed at Docket No. P-2019-3010128 for additional information.

D. ~~D.~~ PILOT PROGRAM

Beginning January 1, 2021, the Company will conduct a pilot program to test and evaluate: (1) the costs and benefits to the distribution system operation and design of monitoring DERs through the DER Management Devices as compared to maintaining distribution system status visibility through other means (e.g. automated meter reading equipment, ADMS systems, modeling) and (2) the costs and benefits to the distribution system operation of active management of DERs through DER management devices as compared to the benefits available through the use of inverter autonomous grid support functions.

~~RULE 12 - DISTRIBUTED ENERGY RESOURCE (DER) INTERCONNECTI ON SERVICE (Continued)~~

~~D. PILOT PROGRAM (Continued)~~

Two control groups for the pilot program will be established. The first group shall include any DERs connected during the pilot program to the first 75 circuits for which interconnection applications are received by the Company on or after January 1, 2021. The second group shall include the first 1,000 new DERs installed in the Company's service territory on or after January 1, 2021. DERs connected during the pilot program in the first group shall count toward the 1,000 DERs in the second group. After the second group comprises 1,000 DERs, DERs interconnected to the first 75 circuits will still be added to the first group.

RULE 12 – DISTRIBUTED ENERGY RESOURCE (DER) INTERCONNECTION SERVICE (CONTINUED)

For both control groups, DER inverters will operate under autonomous settings only. While the Company may monitor DER operations in the control group by collecting data through the DER Management Devices, the Company shall not make operational decisions regarding the distribution system based on that information. For DERs that are not part of the control groups, the Company shall be permitted to actively manage the grid support functions of DER inverters using the DER Management Devices and the Company's Distributed Energy Resources Management System (DERMS) and may make operational decisions based on DER operational information obtained through the DER Management Devices.

The pilot program will begin January 1, 2021, and will end three years after the control groups are established. Refer to the Commission-approved Settlement and the Pilot Implementation Plan filed at Docket No. P-2019-3010128 for more information on the details and design of the pilot program.

~~F.~~

E. ANNUAL REPORTS

Pursuant to the Commission-approved Settlement and the Pilot Implementation Plan filed at Docket No. P-2019-3010128, the Company shall file annual reports with the Commission providing detailed quantitative information germane to evaluation of the results of the pilot program. The reports shall be publicly available and shall not contain any identifying customer information. The annual reports shall be filed within 30 days following the end of each program year.

STATE TAX ADJUSTMENT SURCHARGE

STATE TAX ADJUSTMENT SURCHARGE

~~(C)~~

In addition to the charges and credits provided for in this tariff, a two-part surcharge will be charged for all service rendered on and after the effective date of this provision.

- Part 1 will include Capital Stock Tax, Corporate Income Tax, Public Utility Realty Tax, and Gross Receipts Tax, which will be applied to the Distribution component of the bill. Effective July 1, 2026, this part of the surcharge will be 0.00%. ~~January 1, 2025, this part of the surcharge will be a negative 0.280%.~~ ~~(D)~~

~~•~~ Part 2 will include the Gross Receipts Tax, which will be applied to all other components of
- the bill. Effective January 1, ~~2025~~2024, this part of the surcharge will be a positive 0.001%. ~~(C)~~

Each part of the State Tax Adjustment Surcharge will be recomputed using the elements prescribed by the Commission in its regulations at 52 Pa. Code §69.51, et seq. and at 52 Pa. Code ~~§54.91, et seq.~~:
§54.91, et seq.:

- on December ~~17, 2024~~18, 2023, and each year thereafter until the surcharge is rolled into base rates, ~~(C)~~

and

- whenever the Company experiences a material change in any of the taxes used in calculation of the surcharge due to a change in the applicable tax rates, or in the basis of calculating such tax rates, or due to changes in its state tax liability arising under 66 Pa. C. S. §§ 2806-(g), 2809(c) or 2810-(c).

The recalculation will be submitted to the Commission within 10 days after the occurrence of the event which occasions such recomputation or as prescribed in the Commission's regulations at 52 Pa. Code § 54.91, et seq. If the recomputed surcharge is less than the one in effect, the utility will, or if the recomputed surcharge is more than the one in effect the utility may, submit with such recomputation a tariff or supplement to reflect such recomputed surcharge. The effective date of such tariff or supplement shall be 10 days after filing or as prescribed in the Commission's regulations at 52 Pa. Code § 54.91, et seq.

TAX INDEMNIFICATION

If the Company becomes liable, under Section 2806(g) or 2809(c) of the Public Utility Code, 66 Pa. C.S. §§ 2806(g) and 2809(c), for any Pennsylvania state taxes not paid by an electric generation supplier, the non-tax-compliant electric generation supplier shall indemnify the Company for the full amount of additional state tax liability imposed upon it by the Pennsylvania

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 18

Department of Revenue due to the failure of the electric generation supplier to pay, or remit to the Commonwealth, the tax imposed on the electric generation supplier's gross receipts under Section 1101 of the Tax Report Code of 1971 or Chapter 28 of Title 66.

~~PPL Electric Utilities Corporation~~

~~EMERGENCY ENERGY CONSERVATION RIDER (5-22-81) MODIFICATION OF RATE SCHEDULE APPLICATION PURSUANT TO TARIFF RULE 4H~~

~~PURPOSE~~

~~This rider is applicable in conjunction with Tariff Rule 4H, Emergency Energy Conservation.It provides for deviation from and modification to the charges and practices otherwise applicable to certain customers as a result of compliance with or non-compliance with energy conservation curtailment levels ordered by an appropriate governmental authority under emergency energy conservation conditions resulting from actual or potential shortage of fuel for electric generation.~~

~~APPLICABILITY~~

~~Applicable to individual electric customer accounts served under this tariff with recorded use of 10 Million KWH's or higher, in a recent period of 12 months or less prior to the emergency energy conservation condition. Customers designated by the procedures of Rule 4H or by Pennsylvania Public Utility Commission, will be exempt from the provisions of this rider.~~

~~PROVISIONS~~

~~Base Period Energy Use~~

~~The base energy use for a weekly period s hall be determined by the Company for each applicable electric customer account based upon a consideration of the customer's actual past or current electric consumption and the customer's existing operations.~~

~~Curtailment Energy Use Level Target~~

~~The Curtailment Energy Use Level Target for each applicable customer shall be that percentage of base period energy use ordered pursuant to the emergency energy conservation procedures provided by Tariff Rule 4H or as a result of the order of an appropriate governmental authority.~~

~~Current Energy Use~~

~~Current period use will be monitored on a weekly basis commencing one week after the emergency is declared.~~

~~Compliance~~

~~When the energy consumption in any weekly period during the period of the emergency energy conservation condition is equal to or less than the curtailment energy use level target, the customer will be deemed to have complied.~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 19

~~If the curtailment energy use level target is not met, the customer will be deemed to be in non-compliance. In the event of continued non-compliance, the Company, upon notice to the Commission, may discontinue service.~~

~~PPL Electric Utilities Corporation~~

~~EMERGENCY ENERGY CONSERVATION RIDER (5-22-81)~~
~~MODIFICATION OF RATE SCHEDULE APPLICATION~~
~~PURSUANT TO TARIFF RULE 4H (Continued)~~

~~BILLING~~

~~During the emergency, billing for those customers deemed to be in compliance will be based on meter readings especially made to identify the demand established and energy used during the current energy use period. Customers in compliance with conservation orders will be excused from minimum bills and any demands which otherwise might have been imposed, and will be billed instead on the basis of current consumption and demand whenever the normal calculation method would produce a greater bill.~~

~~These customers will be individually notified of this special billing provision prior to the implementation of the emergency energy conservation procedure.~~

UNIVERSAL SERVICE RIDER

~~(C)~~

UNIVERSAL SERVICE RIDER

The Universal Service Rider (USR) charge, shall be applied to each kilowatt-hour supplied to customers, who take distribution service under Rate Schedules RS and RTS(R) of this tariff. The USR charge provides for recovery of the costs, ~~except~~including internal administrative costs (i.e., employee salaries, wages, and benefits), associated with universal service programs provided by the Company to residential customers. The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rider.

Beginning January 1, 2025, and continuing through December 31, 2025, the USR charge will ~~(C)~~ be $0.01111/kwh. For subsequent years, the USR charge shall be filed with the Pennsylvania Public ~~(I)~~ Utility Commission ~~(Commission)~~ by December 21 of the previous year. The USR charge shall become effective for service rendered on or after the following January 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a USR charge, if left unchanged, would result in a material over or under-collection of all USR costs incurred or expected to be incurred during the current 12-month period, the Company may file with the Commission for an interim revision of the USR charge to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

The Company will file with the Pennsylvania Public Utility Commission by December 21 of each year an annual reconciliation of the USR revenue recovery during the immediately preceding application period pursuant to 66 Pa. C.S. §1307. The reconciliation shall become effective for service rendered on and after January 1 and shall remain in effect for a period of one year, or until new USR rates are approved by the Commission. Interest on overcollections and undercollections shall be computed monthly at the appropriate rate, as provided for in Section 1308(d) of the Public Utility Code, from the month the over or undercollection occurs to the effective month that the overcollection is refunded or the undercollection is recouped.

~~The Company shall file a report of collections under the USR within thirty (30) days following the conclusion of each computation-year quarter. These reports will be in a form prescribed by the Commission.~~

Application of the USR shall be subject to review and audit by the Commission at intervals that it shall determine. The Commission shall review the level of charges produced by the USR charge and the costs included therein.

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS

~~(C)~~

PURPOSE
~~PURPOSE~~

This Rider sets forth the eligibility, terms and conditions applicable to Customers with installed qualifying renewable customer-owned, generation facility using a net metering system.

APPLICABILITY
~~(C)~~

This Rider applies to renewable customer-generators served under Rate Schedules RS, GS-1, GS-3, and LP-4 who install a device or devices which are, in the Company's judgment, subject to Commission review, a bona fide technology for use in generating electricity from qualifying Tier I or Tier II alternative energy sources, pursuant to the Alternative Energy Portfolio Standards Act, 73 P.S. §§ 1648.1 – 1648.8 ("AEPS Act") or Commission regulations, and which will be operated in parallel with the Company's system. ~~This Rider is available to installations where any portion of the electricity generated by the renewable energy generating system offsets part or all of the customer-generator's requirements for electricity.~~ Customer-generators seeking to receive service under the provisions of this Rider must submit a written application to the Company demonstrating compliance with the Net Metering Rider provisions and the Company's interconnection standards and quantifying the total AC and DC nameplate capacity of the customer-generator's alternative energy source.

A renewable customer-generator is a non-utility owner or operator of a net metered distributed generation system with a nameplate capacity of not greater than 50 kilowatts, if installed at a residential service (RS), or not larger than 3,000 kilowatts at other customer service locations (Rate Schedules GS-1, GS-3 and LP-4), except for Customers whose systems are above 3 megawatts and up to 5 megawatts who make their systems available to operate in parallel with the Company during grid emergencies, as defined by the regional transmission organization, or where a microgrid is in place for the purpose of maintaining critical infrastructure, such as homeland security assignments, emergency services facilities, hospitals, traffic signals, wastewater treatment plants or telecommunications facilities, provided that technical rules for operating generators interconnected with facilities of the Company have been promulgated by the Institute of Electrical and Electronic Engineers ("IEEE") and the Commission.

~~Qualifying renewable energy installations are limited to Tier I and Tier II alternative energy sources, as defined by the AEPS Act and the Commission's regulations.~~

The Customer's equipment must, at a minimum, conform to the Commission's Interconnection Standards and Regulations, pursuant to the AEPS Act, and the Company's interconnection standards. This Rider is not applicable when the source of supply is service purchased from a neighboring electric utility under Borderline Service.

Service under this Rider is available upon request to renewable customer-generators on a first-come, first-served accurately completed application basis as long as the total ~~rated~~nameplate generating capacity installed by renewable customer-generator facilities does

not adversely impact service to other ~~Customers~~customers and does not compromise the protection scheme(s) employed on the Company's electric distribution system. When the Company determines that upgrades to its distribution system are necessary to interconnect the interconnection applicant's generating facility safely and reliably, the interconnection applicant shall be required to pay a deposit in advance of the Company performing final engineering and construction of the system upgrades. The amount of the deposit is in the discretion of the Company to ensure timely payment of system upgrade costs. If the interconnection applicant fails to pay such deposit within the communicated timeline of the Company's

~~(Continued)~~

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS (~~Continued)~~ ~~(C~~CONTINUED)

demand for the deposit, the interconnection applicant's project shall be removed from the interconnection queue. Unspent portions of the deposit shall be fully refundable. The interconnection applicant must pay all actual costs of the system upgrades, including but not limited to, the cost of studies, engineering, administering the interconnection request, equipment, and construction costs prior to interconnection of the interconnection applicant's generating facility. Any deposits paid by the interconnecting applicant will be credited towards what is owed to the Company in connection with the interconnection request.

METERING PROVISIONS

A Customer ~~may select one of~~enrolled in net metering under this Rider will be metered under the following ~~metering options in conjunction with service under applicable Rate Schedule RS, GS-1, GS-3, or LP-4~~.terms and conditions.

1. A customer-generator facility used for net metering shall be equipped with a single ~~bidirectional~~bi- directional meter that can measure and record the flow of electricity in both directions at the same rate. A dual-meter arrangement may be substituted for a single bi-directional meter at the Company's expense.

~~1.~~ If the customer-generator's existing electric metering equipment does not meet the requirements under Option (1) above, the Company shall install new metering equipment for the customer-

2. generator at the Company's expense. Any subsequent metering equipment change necessitated by the customer-generator shall be paid for by the customer-generator. The customer-generator has the option of utilizing a qualified meter service provider to install metering equipment for the measurement of generation at the customer-generator's expense.

   Additional metering equipment for the purpose of qualifying alternative energy credits ~~owned~~generated by the customer-generator shall be paid for by the customer-generator. The Company shall take title to the alternative energy credits ~~produced by a customer-generator where the customer-generator has expressly rejected title to the credits. In the event that the Company takes title to the alternative energy credits, the Company will pay for and install the necessary metering equipment to qualify the alternative energy credits. The Company shall, prior to taking title to any alternative energy credits, fully inform the customer-generator of the potential value of those credits and options available to the customer-generator for their disposition.~~(AECs) produced by a customer-generator

3. Meter aggregation on properties owned, or leased and operated, by a customer-generator shall be allowed for purposes of net metering. Meter aggregation shall be limited to meters located on properties within two (2) miles of the boundaries of the customer-generator's property. Meter aggregation shall only be available for properties located within the Company's service territory. Physical meter aggregation shall be at the customer-generator's expense. The Company shall provide the

necessary equipment to complete physical aggregation. If the customer-generator requests virtual meter aggregation, it shall be provided by the Company at the customer-generator's expense. The customer-generator shall be responsible only for any incremental expense incurred by the Company to process the customer-generator's account on a virtual meter aggregation basis.

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS
(~~Continued~~CONTINUED)

BILLING PROVISIONS:

~~The following billing provisions apply to default service~~

A customer ~~generators~~ enrolled in ~~conjunction with~~ **~~(C)~~**

~~service~~net metering under ~~applicable Rate Schedules RS, GS-1, GS-3, or LP-4.~~this Rider will be billed under the following terms and conditions.

Customer-Generator Supplies More Electricity than Delivered by the Company

~~1.~~ The customer-generator will receive a credit for each kilowatt-hour received by the Company up to the total amount of electricity delivered to the Customer by the Company during the billing period at the full retail rate consistent with Commission regulations. If a customer-generator supplies more electricity to the Company than the Company delivers to the customer-generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the full retail rate. Any excess kilowatt hours will continue to accumulate until the end of the PJM planning period ending May 31 of each year. On an annual basis consistent with the PJM planning period, the Company will compensate the customer-generator for kilowatt-hours received from the customer-generator in excess of the kilowatt hours delivered by Company to the customer-generator during the preceding year at the Company's ~~Rate Schedule~~ Price To Compare (PTC) consistent with Commission regulations. Compensation will also occur if the customer changes rate schedules or shopping status. ~~The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.~~

1 ~~If the Company supplies more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the appropriate rate schedule shall be applied to the net kilowatt-hours of electricity that the Company supplied.~~ The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

Company Delivers More Electricity than Supplied by Customer-Generator

2. If the Company supplies more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the appropriate rate schedule shall be applied to the net kilowatt-hours of electricity that the Company supplied. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

Virtual Meter Aggregations

~~2~~3. For customer-generators involved in virtual meter aggregation programs, a credit shall be applied first to the meter through which the generating facility supplies electricity to the Company's distribution system, then through the remaining meters (for the customer-generator's account) equally at each meter's designated rate

under the applicable Rate Schedule. Virtual meter aggregation is the combination of readings and billing for all meters, regardless of rate class, installed on properties owned, or leased and operated, by a customer-generator by use of the Company's billing process, rather than through physical rewiring of the customer-generator's owned or leased property for a physical, single-point of contact. The customer-generators are responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS (~~Continued)~~
~~(C~~CONTINUED)

NET METERING PROVISIONS FOR SHOPPING CUSTOMERS

1. Customer-generators may take net metering services from EGSs that offer such services.

~~1.~~ If a net-metering customer takes service from an EGS, the Company will credit the ~~(C)~~ customer for the distribution charge for each kilowatt hour produced by a Tier I or Tier II resource installed on the customer-generator's side of the ~~electric revenue~~ meter, up to the total amount of kilowatt-hours delivered to the customer by the Company during the

2. billing period. If a customer-generator supplies more electricity to the electric distribution system than the EDC delivers to the customer-generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the Company's distribution rates. Any excess kilowatt hours at the end of the PJM planning period will not carry over to the next year for distribution purposes. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

3. If the Company delivers more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the applicable rate schedule shall be applied to the net kilowatt-hours of electricity that the Company delivered. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.

4. Pursuant to Commission regulations, the credit or compensation terms for excess electricity produced by customer-generators who are customers of EGSs shall be stated in the service agreement between the customer-generator and the EGS.

5. If a customer-generator switches electricity suppliers, the Company shall treat the end of the service period as if it were the end of the year.

~~APPLICATION~~

~~Customer-generators seeking to receive service under the provisions of this Rider must submit a written application to the Company demonstrating compliance with the Net Metering Rider provisions and quantifying the total rated generating capacity of the customer-generator facility.~~CUSTOMER
~~MINIMUM~~ CHARGE

The ~~Minimum~~Customer Charges under Rate Schedules RS, GS-1, GS-3, and LP-4 apply for installations under this Rider.

RIDERS

Bills rendered by the Company under this Rider shall be subject to the charges stated in any other applicable Rider.

NET METERING FOR RENEWABLE CUSTOMER-GENERATORS
(~~Continued~~CONTINUED)

The following billing provisions apply to Time-of-Use customer-generators in conjunction with ~~(C)~~ service under applicable Rate Schedules RS, GS-1, GS-3 (<100kW), or LP-4 (<100kW).

1. The customer-generator will receive a credit for each kilowatt-hour received by the Company up to the total amount of electricity delivered to the Customer by the Company during the billing period at the full retail rate consistent with Commission regulations. Excess generation supplied by a customer-generator will be recorded on an hourly basis, maintaining an active record of kilowatt hours produced and consumed at the customer-generators premise. If a customer-generator supplies more electricity to the Company than the Company delivers to the customer-generator in a given billing period, the excess kilowatt hours shall be carried forward and credited against the customer-generator's usage in subsequent billing periods at the full retail rate. If, in a subsequent billing period, a customer consumes more electricity than produced, kilowatt hours will be pulled from the customers bank on a first in first out basis. Any excess kilowatt hours will continue to accumulate until the end of the PJM planning period ending May 31 of each year. On an annual basis consistent with the PJM planning period, the Company will compensate the customer-generator for all remaining kilowatt-hours in the customer's bank, at the generation portion of the time-of-use rate when the excess generation was put into the bank. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.
2. If the Company supplies more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the appropriate rate schedule shall be applied to the net kilowatt-hours of electricity that the Company supplied. The customer-generator is responsible for the customer charge, demand charge and other applicable charges under the applicable Rate Schedule.
3. Customer-generators involved in virtual metering programs are not eligible for the TOU Program.

~~GREEN POWER OPTION~~ (C)

~~AVAILABILITY~~

~~Subject to the limitations described below, service under this voluntary option is available to all~~ (C)

~~customers who receive Basic Utility Supply Service under Rate Schedules RS, RTS(R), GS-1, GS-3, BL, SA, SM(R), SHS, SLE, SE, TS(R), and GH-2(R). Customers who elect to purchase Green Power Credits under this option will be subject to the charges described below.~~

~~DEFINITIONS~~

~~Green Power – Electric energy generated from renewable resources that are located within PJM Interconnection, LLC (PJM) and qualify as Alternative Energy Sources under the Alternative Energy Portfolio Standards (AEPS) Act. For purposes of the Green Power Option, Customers will not be purchasing the capacity and energy generated by the Alternative Energy Sources, but instead, will be purchasing Green Power Credits which will be retired on their behalf.~~

~~Green Power Credits – Alternative Energy Credits, as that term is defined in the AEPS Act, generated by wind and hydroelectric facilities that are located within PJM and qualify as Alternative Energy Sources.~~

~~Green Power Block – The number of Green Power Credits that are produced by the generation of 100 kWh of Green Power.~~

~~APPLICATION~~

~~Customers may elect to purchase any whole number of Green Power Blocks per month, at the rate set forth below.~~

~~The Customer may initiate participation, change the number of Green Power Blocks selected or may terminate participation in the Green Power Option effective as of the Customer's next scheduled meter reading date, provided the Company has received at least sixteen (16) days' prior notice.~~

~~If a Customer fails to pay the Monthly Green Power Charges for two consecutive billing periods, that Customer's participation in the Green Power Option will be terminated and any Green Power Blocks that the Customer selected, but did not pay for, will be returned to the Company.~~

~~If the Customer pays for Green Power Blocks, and the Company is unable to provide those blocks, the Company will refund the Customer's payment in full in the next billing period.~~

~~RATES AND BILLING~~

~~The charge for each Green Power Block is $2.50 per month.~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 21C

~~The Green Power Charge is in addition to all other charges billed under the Customer's applicable Rate Schedule. Customers will be billed for the fixed number of Green Power Blocks that they select regardless of actual energy use during the billing period.~~

~~The Green Power Charge will be set out separately on the Customer's bill.~~

METERING AND BILLING CREDIT RIDER ~~(C)~~

PURPOSE
~~PURPOSE~~

This rider provides for Distribution Charge credits when an ~~Electric Generation Supplier~~EGS licensed by the Commission provides metering, meter reading, and/or billing and collection service to a customer in lieu of the Company.

APPLICATION

This rider applies to the Distribution Charges included in each Rate Schedule included in this Tariff.

NET MONTHLY DISTRIBUTION CHARGE CREDIT ~~(C)~~

TRANSMISSION SERVICE CHARGE ~~(C)~~

The Transmission Service Charge (TSC) shall be applied to charges for electricity supplied to ~~(C)~~ customers who receive ~~Basic Utility Supply Service ("BUSS"),~~ default service, as defined in Rule 1B(1), from the Company under this Tariff.

The TSC shall be computed separately for each of the following four customer classes:

(1) Residential: Consisting of Rate ~~Schedules~~Schedule RS ~~and RTS (R),~~
(2) Small Commercial and Industrial: Consisting of Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, ~~SE, TS (R),~~ and ~~GH-2 (R)~~SE (Small C&I),
(3) Large Commercial and Industrial – Primary: Consisting of Rate Schedule LP-4 (Large C&I – ~~Primary), and~~ Primary), and
(4) Large Commercial and Industrial – Transmission: Consisting of Rate Schedules LP-5 ~~, LPEP and L5S~~ (Large C&I – Transmission).

The TSC, computed using the formulae described below, shall be applied to the monthly bill of each customer receiving ~~BUSS~~default service from the Company and shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year.

The TSC for the Residential class and the Small C&I class shall be computed using the following formula:

TSC = [TCe/S + TCd/S - E/S] X 1/(1-T)

The TSC for the Large C&I – Primary class and the Large C&I – Transmission class shall be computed using the following formulae:

TSC = TSCd + TSCe

The demand – related portion of the TSC (TSCd) for the Large C&I – Primary class and the Large C&I – Transmission class shall be computed using the following formula:

TSCd = [TCd/D] X 1/(1-T)

The other portion of the TSC (TSCe) for the Large C&I – Primary class and the Large C&I – Transmission class shall be computed using the following formula:

TSCe = [TCe/S – E/S] X 1/(1-T)

Where:

TCd = The demand-related (kW) portion of the charges that the Company incurs to provide transmission service (including ancillary service charges and all non-market-based transmission service charges) to customers who receive ~~BUSS~~default service from the Company. These charges are all ~~Federal Energy Regulatory Commission (~~FERC~~)~~ approved

charges imposed by PJM ~~Interconnection, LLC (PJM)~~ on a kW basis. These charges are allocated to each customer class based upon the contribution of that class to the 5 coincident peaks used by PJM to establish such demand – related charges.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 23

TRANSMISSION SERVICE CHARGE (CONTINUED)

TCe = All other charges not recovered through TCd that the Company incurs to provide transmission service (including ancillary service charges and all non-market-based transmission service charges) to customers who receive ~~BUSS~~default service from the Company. These charges are all FERC-approved charges imposed by PJM on any basis other than a kW basis. These charges are allocated to each customer class based upon the projected kWh usage of that class, including estimated distribution system losses during the computation year.

~~TRANSMISSION SERVICE CHARGE (CONTINUED)~~ ~~(C)~~

D = For the Large C&I – Primary customer class, the total of the monthly billing demands for all customers in the class, projected for the computation year. For the Large C&I – Transmission customer class, the total of the monthly contributions of all customers in the class to the Company's 5 coincident peaks used by PJM to establish such demand – related charges.

E = Net over or undercollection of the TCe and TCd charges associated with the acquisition of transmission service as of the end of the 12-month period ending September 30 immediately preceding the computation year, including applicable interest. Reconciliation of the TSC will be conducted separately for each of the four customer classes. Beginning with the reconciliation period ending April 30, 2013, the percentage of demand-related costs assigned to each customer class will change monthly to reflect the class' actual share of default service peak load responsibility in that month. Interest shall be computed monthly from the month the over or undercollection occurs to ~~(C)~~ the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of overcollections and undercollections shall be calculated at the prime rate for commercial borrowing, not to exceed the legal rate of interest~~,~~ in effect on the last day of the month the over or undercollection occurred, effective April 1, 2016.

S = The Company's total retail KWH sales to customers in each customer class who receive ~~BUSS~~default service under this tariff (including distribution losses) projected for the computation year.

T= The total Pennsylvania gross receipts tax rate (exclusive of Part 2 of the State Tax Adjustment Surcharge (STAS) within this tariff) in effect during the billing period, expressed in decimal form.

The TSC shall be filed with the Pennsylvania Public Utility Commission (Commission) by November 1 of each year. The TSC rate shall become effective for transmission service acquired on behalf of ~~BUSS~~default service customers and rendered to those customers on or after the following December 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's TSC, if left unchanged, would result in a material over or undercollection of all transmission service charges incurred or expected to be incurred, the Company may file with the Commission for an interim revision of the TSC to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 23A

TRANSMISSION SERVICE CHARGE (CONTINUED)

By November 1 of each year the company will file with the Commission the experienced net over or under collection as described above. The reconciliation will include a calculation of the application ~~perio~~period over or under recoveries of transmission service costs. The reconciliation of the TSC will be the difference between actual transmission service costs incurred and actual revenue billed for the application period. The reconciliation filed November 1, 2025 will be for a 6-month period to adjust to the new filing period.

Minimum bills shall not be reduced by reason of the TSC, nor shall charges hereunder be a part of the monthly rate schedule minimum. The TSC shall not be subject to any credits or discounts, but Part 2 of the STAS shall apply.

Application of the TSC shall be subject to review and audit by the Commission at intervals it shall determine. The Commission shall review the reasonableness and lawfulness of the level of charges produced by the TSC and the costs included therein.

GENERATION SUPPLY CHARGE-1 (C)

The Generation Supply Charge-1 (GSC-1) shall be applied to each kilowatt-hour supplied to (C)

residential customers who take Basic Utility Supply Service ("BUSS") from the Company under Rate Schedules RS and RTS (R), small commercial and industrial customers who take BUSS service under Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, SE, TS (R) and GH-2 (R), and standby service for the foregoing rate schedules. The GSC-1 will not apply to those Rate Schedule GS-3 customers who have a peak demand of 100 kW or greater, but the GSC-1 will apply to those Rate Schedule LP-4 customers who have a peak demand of less than 100 kW. This peak demand will be based on the customer's ICAP peak load contribution to PJM peak load assigned for the most recent PJM Planning Year. The GSC-1 shall have the options listed below.

FIXED PRICE OPTION – RESIDENTIAL & SMALL COMMERCIAL/INDUSTRIAL

PURPOSE

The Fixed Price Option provides eligible customers in the Residential and Small Commercial & Industrial Customer Class with default electric service for those customers who have not selected a retail electric generation supplier (EGS) or the Time of Use Program.

PRICING PROVISIONS

The Fixed Price GSC-1, determined in accordance with the formula set forth below, shall be applied to all kilowatt-hours billed for service provided during the billing period:

$$\text{Fixed Price GSC-1} = \left| \left[\frac{GS_{fp}}{S_{fp}} \right] - \left[\frac{E}{S_{fp}} \right] \right| \times \frac{1}{(1-T)}$$

Where:

GSC-1 = The Generation Supply Charge-1, stated in cents per kilowatt hour, shall be calculated separately for each of the following two Customer Classes: (1) residential, and (2) small commercial and industrial as designated above.

GS_{fp} = The total estimated direct and indirect costs incurred by the Company to acquire generation supply from any source on behalf of participating BUSS customers on the Fixed Price Option in the applicable Customer Class. These costs shall be reduced by any revenue received by the Company from the sale of Alternative Energy Credits that otherwise would have expired.

The computation period shall be the six calendar months over which the Fixed Price (C)

GSC-1, as computed, will apply. Projections of the Company's costs to acquire generation supply, adjusted for losses and including Alternative Energy Credits, for the computation quarter shall include all direct and indirect costs of generation supply to be acquired by the Company from any source plus any associated generation supply-related procurement and administration costs. Any costs incurred prior to June 1, 2025, shall be amortized ratably over the 48-month period June 1, 2025, through May 31, 2029, and the 6-month amortization amount shall be included in the computation of the GSC-1.

GENERATION SUPPLY CHARGE ~~-~~1 ~~(Continued)~~ **~~(C)~~**

The Generation Supply Charge-1 (GSC-1) shall be applied to each kilowatt-hour supplied to residential customers who take default service from the Company under Rate Schedule RS, small commercial and industrial customers who take Default Service under Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, and SE and standby service for the foregoing rate schedules. The GSC-1 will not apply to those Rate Schedule GS-3 customers who have a Maximum Registered Peak Load of 100 kW or greater, but the GSC-1 will apply to those Rate Schedule LP-4 customers who have a Maximum Registered Peak Load of less than 100 kW. The GSC-1 shall have the options listed below.

FIXED PRICE ~~SERVICE~~OPTION – RESIDENTIAL & SMALL COMMERCIAL/INDUSTRIAL ~~(Continued)~~

PURPOSE

~~E = Experienced net over or undercollection of costs associated with the acquisition of generation supply for participating BUSS customers in the applicable Customer Class. These costs will be computed as stated in the GSC-1 RECONCILIATION PROVISIONS and will include applicable interest. Interest shall be computed monthly from the month the over or undercollection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of overcollections and undercollections shall be calculated at the prime rate for commercial borrowing in effect on the last day of the month the over or undercollection occurred.~~

~~S_{fp} =~~ The ~~Company's total retail KWH sales to participating BUSS customers on the~~ Fixed Price Option provides eligible customers in the Residential and Small Commercial & Industrial Customer Class with default service for those customers who have not selected a retail electric generation supplier (EGS) or the Time of Use Program.

PRICING PROVISIONS

~~in the applicable Customer Class, projected~~

The Fixed Price GSC-1, determined in accordance with the formula set forth below, shall be applied to all kilowatt-hours billed for service provided during the billing period:

$$\text{Fixed Price GSC-1} = \left[\left(\frac{GS_{fp}}{S_{fp}} - \left(\frac{E}{S_{fp}} \right) \right) \right] \times \frac{1}{(1-T)}$$

Where:

GSC-1 = The Generation Supply Charge-1, stated in cents per kilowatt hour, shall be calculated separately for each of the following two Customer Classes: (1) residential, and (2) small commercial and industrial as designated above.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 24

GS_{fp} = The total estimated direct and indirect costs incurred by the Company to acquire generation supply from any source on behalf of participating Default Service customers on the Fixed Price Option in the applicable Customer Class. These costs shall be reduced by any revenue received by the Company from the sale of AECs that otherwise would have expired.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 24A

GENERATION SUPPLY CHARGE-1 (CONTINUED)

The computation period shall be the six calendar months over which the Fixed Price GSC-1, as computed, will apply. Projections of the Company's costs to acquire

generation supply, adjusted for losses and including AECs, for the computation quarter shall include all direct and indirect costs of generation supply to be acquired by the Company from any source plus any associated generation supply-related procurement and administration costs. Any costs incurred prior to June 1, 2025, shall be amortized ratably over the 48-month period June 1, 2025, through May 31, 2029, and the 6-month amortization amount shall be included in the computation of the GSC-1.

~~T = The Pennsylvania gross receipts tax rate (exclusive of Part 2 of the State Tax Adjustment Surcharge (STAS) within this tariff) in effect during the billing month, expressed in decimal form.~~

E = Experienced net over or undercollection of costs associated with the acquisition of generation supply for participating default service customers in the applicable Customer Class. These costs will be computed as stated in the GSC-1 reconciliation provisions and will include applicable interest. Interest shall be computed monthly from the month the over- or under collection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of overcollections and undercollections shall be calculated at the prime rate for commercial borrowing, not to exceed the legal rate of interest in effect on the last day of the month the over- or undercollection occurred.

S_{fp} = The Company's total retail KWH sales to participating default service customers on the Fixed Price Option in the applicable Customer Class, projected for the computation quarter.

T = The Pennsylvania gross receipts tax rate (GRT) (exclusive of Part 2 of the State Tax Adjustment Surcharge (STAS) within this tariff) in effect during the billing month, expressed in decimal form.

Minimum bills shall not be reduced by reason of the GSC-1, nor shall GSC-1 charges be a part of the monthly rate schedule minimum. The GSC-1 shall not be subject to any credits or discounts and Part 2 of the STAS shall apply.

The following GSC-1 charges apply for the Fixed Price Option during the period June 1, 2025 ~~(C)~~ through November 30, 2025.

~~GENERATION SUPPLY CHARGE -1 (Continued)~~

~~FIXED PRICE SERVICE – RESIDENTIAL & SMALL COMMERCIAL/INDUSTRIAL (Continued)~~

GSC – 1 RECONCILIATION PROVISIONS -

For the Fixed Price Option, the Company will file with the Commission thirty (30) days prior ~~(C)~~
to each annual period (June 1 through May 31), a reconciliation of GSC-1 actual billed revenues and actual incurred costs for a twelve-month period ending March 31 of each year, pursuant to 66 Ps. C.S. §1307. The reconciliation shall become effective for service rendered during the 2 six-month computation periods.

The reconciliation will be calculated separately for each of the two Customer Classes. The ~~(C)~~
reconciliation will include a calculation of any over/under collection that will be reflected in the GSC-1 charges for the subsequent 2 six-month computation periods. The GSC-1 will be reconciled every twelve months, using over/under collection balance for the twelve-month period ending two months prior to each annual period.

Application of the GSC-1 shall be subject to continuous review and audit by the Commission at intervals it shall determine. The Commission shall review the reasonableness and lawfulness of the level of charges produced by the GSC-1 and the costs included therein.

GENERATION SUPPLY CHARGE-1 (CONTINUED)

TIME OF USE PROGRAM ~~– RESIDENTIAL AND SMALL COMMERCIAL/INDUSTRIAL~~ **~~(C)~~**

PURPOSE

~~Beginning on June 1, 2019, this~~

The Time-of-Use (TOU) Program provides for the voluntary participation of eligible existing and new residential and small commercial & industrial customers in a year-round TOU Program. Eligible customers must meet the ~~APPLICATION PROVISIONS~~application provisions of this TOU Program. The objective of this TOU Program is to provide eligible residential and small commercial & industrial customers with an opportunity to ~~shift energy~~pay a rate lower than the fixed price for usage ~~away from the on-peak periods, when wholesale electricity demand and prices are high, to~~during off-peak periods~~, when demands and prices are lower~~ and a rate higher than the fixed price for usage during on-peak periods.

GENERATION SUPPLY CHARGE – 1 (Continued)

TIME-OF-USE PROGRAM – RESIDENTIAL AND SMALL COMMERCIAL/INDUSTRIAL **(C)**

(Continued)

Summer Off-Peak TOU GSC-1 = $\left[\left[\frac{GS_{GEN}}{S} \times 0.90\right] + \left[\frac{GS_{IND} - E}{S}\right]\right] \times \frac{1}{}$

Winter Off-Peak TOU GSC-1 = $\left[\left[\frac{GS_{GEN}}{S} \times 0.90\right] + \left[\frac{GS_{IND} - E}{S}\right]\right] \times \frac{1}{}$

Where:

GSC-1 = The Generation Supply Charge-1, stated in cents per kilowatt hour, shall be calculated separately for each of the following two Customer Classes: (1) residential, and (2) small commercial and industrial (taking service at secondary voltage levels) as designated above.

GS_{GEN} = The total generation component for the respective customer classes' fixed price default service rate.

GS_{OFF} = The total Off-Peak generation component for the respective customer classes' fixed price default service rate.

GS_{IND} = The total estimated indirect costs incurred by the Company to acquire generation supply from any source on behalf of participating BUSS customers in the applicable Customer Class.

E = Experienced net over or undercollection of costs associated with the acquisition of generation supply for participating BUSS customers in the applicable Customer Class. These costs will be computed as stated in the GSC – 1 RECONCILIATION PROVISIONS and will include applicable interest. Interest shall be computed monthly from the month the over or undercollection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of overcollections and undercollections shall be calculated at the prime rate for commercial borrowing in effect on the last day of the month the over or undercollection occurred. **(C)**

GS_M = Seasonal Multiplier based on historic data.

S = The Company's total retail KWH sales to participating BUSS customers in the applicable Customer Class, projected for the computation period.

T = The Pennsylvania gross receipts tax rate in effect during the billing month, expressed in decimal form.

APPLICATION PROVISIONS

This TOU Program is available to existing and new residential and small commercial/ ~~**(C)**~~ industrial customers who are served, or qualify to be served, under Rate Schedules RS, ~~RTS(R),~~ GS-1, GS-3 (customers with maximum registered peak ~~demands~~loads less than 100 KW), LP-4 (customers with maximum registered peak ~~demands~~loads less than 100KW), ~~BL~~ and ~~GH-2 (R).~~BL. This includes Volunteer/Non-Profit organizations (Volunteer Fire Companies, Non-Profit Senior Citizen Centers, Non-Profit Rescue Squads, and Non-Profit Ambulance Services) served under Rate Schedules GS-1 and GS-3~~,~~ but does not include customers in the Company's OnTrack program. Customers taking service under the above-referenced rate schedules, who also participate in the Company's Net Metering for Renewable Customer Generator programs, are eligible for the TOU Program.

PRICING PROVISIONS

The following Generation Supply Charges apply for service under the TOU Program during the period June 1, 2025 through November 30, 2025. On-Peak hours will be set based on schedule below Monday through Friday, excluding weekends and holidays.

Rate Schedule RS	Winter On-Peak Hours (4:00 PM to 8:00 PM) December 1 to May 31	Summer On-Peak Hours (2:00 PM to 6:00 PM) June 1 to November 30
On-Peak Hours	7.938 cts per kWh	13.333 cts per kWh **(I)**
Off Peak Hours	6.471 cts per kWh	8.243 cts per kWh **(I)**

Rate Schedules GS-1, GS-3 (< 100 kW), LP-4 (<100kW), and BL	Winter On-Peak Hours (4:00 PM to 8:00 PM) December 1 to May 31	Summer On-Peak Hours (2:00 PM to 6:00 PM) June 1 to November 30
On-Peak Hours	8.131 cts per kWh	12.836 cts per kWh **(I)**
Off Peak Hours	6.744 cts per kWh	8.098 cts per kWh **(I)**

GENERATION SUPPLY CHARGE-2 ~~(C)~~

The Generation Supply Charge-2 (GSC-2) shall be charged to customers in the Large Commercial & Industrial Customer Class who take ~~Basic Utility Supply Service ("BUSS")~~ default service from the Company under Rate Schedules GS-3, LP-4, LP-5, ~~LPEP,~~ and standby service for the foregoing rate schedules. The GSC-2 will not apply to those Rate Schedule LP-4 customers who have a ~~peak demand~~Maximum Registered Peak Load of less than 100 kW, but the GSC-2 will apply to those Rate Schedule GS-3 customers who have a ~~peak demand~~Maximum Registered Peak Load of 100 kW or greater. ~~This peak demand will be based on the customer's ICAP peak load contribution assigned for the most recent PJM Planning Year.~~ The GSC-2 shall have ~~(C)~~ one rate option provision: Hourly Default Service Option.

PURPOSE

The Hourly Default Service Option provides default ~~electric generation~~ service to eligible customers in the Large Commercial & Industrial Customer Class who have not selected an ~~alternative generation supplier~~EGS.

~~PRICING PROVISIONS~~

PRICING PROVISIONS

All of the following charges apply to this rate option.

- ~~GSC-2 Energy Charge per KWH: The product of actual real-time Locational Marginal~~
  - ~~Prices~~LMPs at the PPL Residual Aggregate Node as reported by PJM ~~Interconnection, LLC. (PJM)~~ for each hour of the billing month expressed in cents per KWH ~~times~~multiplied by the customer's actual energy use, adjusted for losses, during each hour of the billing month.

  - GSC-2 Capacity Charge: The product of the ~~PJM Reliability Pricing Model ("~~RPM~~")~~ price of capacity expressed in dollars per KW-Day, as reported by PJM for the PL Zone, for the applicable billing month times the customer's fixed peak load capacity obligation, as determined by the Company in accordance with the applicable PJM Agreements, ~~times~~multiplied by the number of days in the billing month.

- GSC-2 Administrative Charge per KWH: The product of all administrative charges (both the ~~(C)~~ supplier's charges and PPL Electric's charges) expressed in cents per KWH ~~times~~multiplied by the customer's actual energy use, adjusted for losses, during each hour of the billing month. The supplier's charges shall be the supplier's winning bid in PPL Electric's most recent solicitation for supply of default service to customers in the Large C&I Customer Class. The supplier's charges may include, but are not limited to, the costs of transmission service (other than non-market-based transmission service charges), ancillary services, congestion management costs, and such other services or products that are

required to supply hourly default service to customers in the Large C&I Customer Class, including ~~Alternative Energy Credits.~~AECs. PPL Electric's charges shall be a monthly pro rata amortization of the actual costs incurred by the Company to acquire generation supply from any source for the Large C&I Customer Class during the most recent 12-month period ended May 31 (as determined by amortizing such costs ratably over a 12-month period) plus the monthly amortization of the cost of administering that program prior to June 1, 2025 (as determined by amortizing such costs ratably over the 48-month period June 1, 2025 through May 31, 2029). In addition, the initial computation period will include any remaining over or undercollection balance related to application of the GSC-2 for the Large Commercial and Industrial Customer Class.

GENERATION SUPPLY CHARGE-2 (CONTINUED)

The following rate components of the GSC-2 shall be filed with the ~~Pennsylvania Public Utility~~ Commission ~~(Commission)~~ thirty (30) days prior to each application year (June 1 through May 31). The rate components subject to this filing requirement are: (1) the supplier's charges to be included in the GSC-2 Administrative Charge and (2) PPL Electric's charges to be included in the GSC-2 Administrative Charge. The reconciliation of the GSC-2 will be the difference between the actual administration costs incurred and the applicable billed revenue for the computation period. These rate components, as well as any net over or undercollection of these rate components as of the end of the 12-month period ending March 31 immediately preceding the computation period and set forth as a separate E-factor reconciliation component, shall become effective for ~~BUSS~~Default Service rendered on and after the following June 1, and shall remain in effect for a period of one year.

By May 1 of each year, the Company will file with the Commission the experienced net over or undercollection of the GSC-2 associated with the above-identified costs that are incurred to provide generation supply for participating ~~BUSS~~Default Service customers as of the end of the calendar month ending two months prior to the computation period, including applicable interest. Interest shall be computed monthly from the month the over or undercollection occurs to the month in which the overcollection is refunded or the undercollection is recouped. Interest on recoveries of undercollections shall be calculated at the prime rate of interest. Interest on refunds of overcollections shall be calculated at the prime rate of interest, not to exceed the legal rate of ~~(C)~~ interest.

The Pennsylvania ~~gross receipts tax~~GRT rate (exclusive of Part 2 of the State Tax Adjustment Surcharge (STAS) within the tariff) in effect during the billing month shall apply to charges under the GSC-2.

Minimum bills shall not be reduced by reason of the GSC-2, nor shall GSC-2 charges be a part of the monthly rate schedule minimum. The GSC-2 shall not be subject to any credits or discounts, but Part 2 of the STAS shall apply.

Application of the GSC-2 shall be subject to continuous review and audit by the Commission at intervals it shall determine. The Commission shall review the reasonableness and lawfulness of the level of charges produced by the GSC-2 and the costs included therein.

~~Issued: June 2, 2025~~ ~~Effective: June 1, 2025~~

~~Supplement No. 194 Electric Pa. P.U.C. No. 201 Sixth Revised Page No. 19Z.8 Canceling Fourth and Fifth Revised Page No. 19Z.8~~

ACT 129 COMPLIANCE RIDER – PHASE ~~1 (C)~~4

~~The Phase 1 Act 129 Compliance Rider (ACR 1) shall be applied, on a non-bypassable basis, to charges for electricity supplied to customers who receive distribution service from the Company under this Tariff. The Rider will be implemented by applying a charge to bills of customers beginning January 1, 2010.~~

~~The ACR 1 shall be computed separately for each of the following three customer classes: (C)~~

~~(1) Residential: Consisting of Rate Schedules RS and RTS (R),~~
~~(2) Small Commercial and Industrial (Small C&I): Consisting of Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, SE, TS (R), and GH-2 (R), and~~
~~(3) Large Commercial and Industrial (Large C&I): Consisting of Rate Schedules LP-4, LP-5, LPEP, and L5S.~~

~~The ACR 1 will be computed for each customer receiving distribution service from the Company using the formulae described below. For residential customers, the ACR 1 charge shall be included in the distribution charges of the monthly bill. For all other customers, the ACR charge shall be listed as a separate charge on the monthly bill. All charges shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the residential rate schedules in this tariff have been adjusted to reflect application of the currently effective ACR 1.~~

~~The ACR 1 for the Residential class and the Small C&I class shall be computed using the following formula:~~

~~ACR 1 = [ACc/S - E/S] X 1 / (1-T)~~

~~The ACR 1 for the Large C&I class shall be computed using the following formula:~~

~~ACR 1 = [ACc/D - E/D] X 1 / (1-T)~~

~~Where:~~

~~ACc = A levelized annual budget of all costs required for the Company to implement its Commission-approved Phase 1 Energy Efficiency and Conservation (EE&C) Plan during a compliance year. A compliance year is the 12-month period beginning June 1 of each calendar year and ending May 31 of the following calendar year, except the first compliance year which begins on January 1, 2010 and ends on May 31, 2010. The levelized annual budget amount is the sum of all direct and indirect costs (including all deferred design and development costs, general administrative costs, and applicable statewide evaluator costs) required to implement the Company's EE&C Plan divided by the number of months during which the Company's EE&C Plan will be in effect multiplied by the number of months in the compliance year.~~

~~The costs of each EE&C program available to only one customer class will be directly assigned to that customer class. Costs of EE&C programs which cannot be directly assigned to one customer class will be allocated to the customer classes benefiting from those programs using an allocation factor determined by dividing the EE&C costs directly assigned to each customer class by the total of the Company's EE&C Plan costs directly assigned to all customer classes.~~

ACT 129 COMPLIANCE RIDER – PHASE 1 ~~(CONTINUED)~~ (C)

~~D = For the Large C&I customer class, the total of the monthly billing demands for all customers in the class, projected for the computation year. The peak demand will be based on the customer's peak load contribution to the PJM peak load during the prior year of the PJM Planning Year.~~

~~E = Net over or undercollection of the ACR 1 charges as of the end of the 12-month period (C)~~

~~(except in the first reporting year, the 4-month period) ending April 30 immediately preceding the next compliance year. Reconciliation of the ACR 1 will be conducted separately for each of the three customer classes based upon the annual EE&C budget for each customer class. No interest shall be computed monthly on over or undercollections. The reconciliation of ACR 1 revenues and expenses shall be adjusted during the 2013-2014 ACR 1 compliance year to reflect actual data for the month of May 2013, as well as any expenses incurred prior to May 31, 2013, but paid after that date.~~

~~S = The Company's total billed KWH sales in each customer class who receives distribution service under this tariff (including distribution losses), projected for the computation year.~~

~~T = The total Pennsylvania gross receipts tax rate in effect during the billing period, expressed in decimal form.~~

~~The ACR 1 shall be filed with the Pennsylvania Public Utility Commission (Commission) by May 1 (C) of each year. The ACR 1 charge shall become effective for distribution service provided to all customers on or after the following June 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's ACR 1, if left unchanged, would result in a material over or undercollection of Phase 1 Act 129 Compliance costs incurred or expected to be incurred during the compliance year, the Company may file with the Commission for an interim revision of the ACR 1 to become effective ten (10)) days from the date of filing, unless otherwise ordered by the Commission.~~

~~At the conclusion of the Phase 1 EE&C Plan on May 31, 2013, collections under the ACR 1 for (C) each customer class will be reconciled to the total cost of the EE&C Plan allowed by the Commission for that customer class. Overcollections or undercollections will be reflected in the E factor, defined above, and will be refunded or recovered through application of the ACR 1 E factor through May 31, 2014. If any over/under collection balance remains after May 31, 2014, the collection period may be extended beyond May 31, 2014 to ensure the balance is eliminated.~~

~~Minimum bills shall not be reduced by reason of the ACR 1, nor shall charges hereunder be a part of the monthly rate schedule minimum. The ACR 1 shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under this Rider. Charges under ACR 1 and ACR 2 will be combined for billing purposes only.~~

~~The Company shall file a report of collections under the ACR 1 within thirty (30) days following the (C) conclusion of each compliance-year quarter. These reports will be in a form prescribed by the Commission. The third-quarter report shall be accompanied by a preliminary forecast of the ACR 1 for the next compliance year.~~

~~*Application* of the ACR 1 shall be subject to review and audit by the Commission at intervals it shall determine. The Commission shall review the level of charges produced by the ACR 1 and the costs included therein.~~

~~ACT 129 COMPLIANCE RIDER – PHASE 2 (C)~~

A Phase ~~2~~4 Act 129 Compliance Rider (ACR ~~2~~4) shall be applied, on a non-bypassable basis, to charges for electricity supplied to customers who receive distribution service from the Company under this Tariff. The ~~Rider~~ACR 4 will be implemented beginning June 1, ~~2013; however, the ACR 2 charge to the bills of customers will be applied beginning July 1, 2013~~2021.

The ACR ~~2~~4 shall be computed separately for each of the following three customer classes: ~~(C)~~

(1) Residential: Consisting of Rate ~~Schedules~~Schedule RS ~~and RTS (R),~~
(2) Small Commercial and Industrial (Small C&I): Consisting of Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, and SE, ~~TS (R),~~ and ~~GH-2 (R), and~~
~~(2)~~(3) Large Commercial and Industrial (Large C&I): Consisting of Rate Schedules LP-4, and LP-5~~, LPEP, and L5S~~.

~~The ACR 2 will be computed for each customer receiving distribution service from the Company using the formulae described below. For residential customers, the ACR 2 charge shall be included in the distribution charges of the monthly bill. For all other customers, the ACR charge shall be listed as a separate charge on the monthly bill. All charges shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the residential rate schedules in this tariff have been adjusted to reflect application of the currently effective ACR 2.~~

~~The ACR 2 for the Residential class and the Small C&I class shall be computed using the following formula:~~

~~ACR 2 = [ACc/S - E/S] X 1 / (1-T)~~

~~The ACR 2 for the Large C&I class shall be computed using the following formula:~~

~~ACR 2 = [ACc/D - E/D] X 1 / (1-T)~~

~~Where:~~

~~ACc = A levelized annual budget of all costs required for the Company to implement its Commission-approved Phase 2 Energy Efficiency and Conservation (EE&C) Plan during a compliance year. A compliance year is the 12-month period beginning June 1 of each calendar year and ending May 31 of the following calendar year. The levelized annual budget amount is the sum of all direct and indirect costs (including all deferred design and development costs, general administrative costs, and applicable statewide evaluator costs) required to implement the Company's EE&C Plan divided by the number of months during which the Company's EE&C Plan will be in effect multiplied by the number of months in the compliance year.~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 25A

~~The costs of each EE&C program available to only one customer class will be directly assigned to that customer class. Costs of EE&C programs which cannot be directly assigned to one customer class will be allocated to the customer classes benefiting from those programs using an allocation factor determined by dividing the EE&C costs directly assigned to each customer class by the total of the Company's EE&C Plan costs directly assigned to all customer classes.~~

~~ACT 129 COMPLIANCE RIDER – PHASE 2 (CONTINUED)~~

~~D = For the Large C&I customer class, the total of the monthly billing demands for all customers in the class, projected for the computation year. The peak demand will be based on the customer's peak load contribution to the PJM peak load during the prior year of the PJM Planning Year.~~

~~E = Net over or undercollection of the ACR 2 charges as of the end of the 12-month period (except in the first reporting year, the 10-month period) ending April 30 immediately preceding the next compliance year. Reconciliation of the ACR 2 will be conducted separately for each of the three customer classes based upon the annual EE&C budget for each customer class. No interest shall be computed monthly on over or undercollections. The reconciliation of ACR 2 revenues and expenses shall be adjusted during the 2016-2017 ACR 2 application year to reflect actual data for the month of May 2016, as well as any expenses incurred prior to May 31, 2016, but paid after that date.~~

~~S = The Company's total billed KWH sales in each customer class who receive distribution service under this tariff (including distribution losses), projected for the computation year.~~

~~T = The total Pennsylvania gross receipts tax rate in effect during the billing period, expressed in decimal form.~~

~~The ACR 2 shall be filed with the Pennsylvania Public Utility Commission (Commission) by May 1 of each year. The ACR 2 charge shall become effective for distribution service provided to all customers on or after the following June 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's ACR 2, if left unchanged, would result in a material over or undercollection of Phase 2 Act 129 Compliance costs incurred or expected to be incurred during the current 12-month period ending May 31, the Company may file with the Commission for an interim revision of the ACR 2 to become effective ten (10) days from the date of filing, unless otherwise ordered by the Commission.~~

~~At the conclusion of the Phase 2 EE&C Plan on May 31, 2016, collections under the ACR 2 for each customer class will be reconciled to the total cost of the EE&C Plan allowed by the Commission for that customer class. Overcollections or undercollections will be reflected in the E factor, defined above, and will be refunded or recovered through application of the ACR 2 E factor through May 31, 2017. If any over/under collection balance is expected to remain after May 31, 2017, the collection period may be extended beyond May 31, 2017 to ensure the balance is eliminated.~~

~~Minimum bills shall not be reduced by reason of the ACR 2 nor shall charges hereunder be a part of the monthly rate schedule minimum. The ACR 2 shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under this Rider. Charges under ACR 1 and ACR 2 will be combined for billing purposes only.~~

~~The Company shall file a report of collections under the ACR 2 within thirty (30) days following the conclusion of each compliance-year quarter. These reports will be in a form prescribed by the Commission. The third-quarter report shall be accompanied by a preliminary forecast of the ACR 2 for the next compliance year.~~

Supplement No. 208

PL Electric Utilities Corporation

Electric Pa. P.U.C. No. 201
Original Page No. 197-10D

ACT 129 COMPLIANCE RIDER – PHASE 3

A Phase 3 Act 129 Compliance Rider (ACR 3) shall be applied, on a non-bypassable basis, to charges for electricity supplied to customers who receive distribution service from the Company under this Tariff. The ACR 3 will be implemented beginning June 1, 2016.

The ACR 3 shall be computed separately for each of the following three customer classes:

(1) Residential: Consisting of Rate Schedules RS and RTS (R),
(2) Small Commercial and Industrial (Small C&I): Consisting of Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, SE, TS (R), and GH-2 (R), and
(3) Large Commercial and Industrial (Large C&I): Consisting of Rate Schedules LP-4, LP-5, LPEP, and L5S.

The ACR 3 will be computed for each customer receiving distribution service from the Company using the formulae described below. For residential customers, the ACR 3 charge shall be included in the distribution charges on a kWh basis of the monthly bill. For all other customers, the ACR charge shall be listed as a separate charge on the monthly bill. All charges shall be reconciled on an annual basis for undercollections and ov ercollections experienced during the previous year. Charges set forth in the residential rate schedules in this tariff have been adjusted to reflect application of the currently effective ACR 3.

The ACR 3 for the Residential class and the Small C&I class shall be computed using the following formula:

ACR 3 = [ACc/S - E/S] X 1 / (1-T)

The ACR 3 for the Large C&I class shall be computed using the following formula:

ACR 3 = [ACc/D - E/D] X 1 / (1-T)

Where:

ACc = An annual budget of all costs required for the Company to implement its Commission-approved Phase 3 Energy Efficiency and Conservation (EE&C) Plan during a compliance year. A compliance year is the 12-month period beginning June 1 of each calendar year and ending May 31 of the following calendar year. The annual project program cost is the sum of all direct and indirect costs (including all deferred design and development costs, general administrative costs, and applicable statewide evaluator costs) required to implement the Company's EE&C Plan divided by the number of months in the Company's EE&C Plan for the given application year. All deferred design and development cost, general administrative costs, and applicable statewide evaluator costs will be amortized over a 60 month period.

The costs of each EE&C program available to only one customer class will be directly assigned to that customer class. Costs of EE&C programs which cannot be

~~directly assigned to one customer class will be allocated to the customer classes benefiting from those programs using an allocation factor determined by dividing the EE&C costs directly assigned to each customer class by the total of the Company's EE&C Plan costs directly assigned to all customer classes.~~

~~(Continued)~~

Supplement No. 208

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 201
Original Page No. 197-10E

ACT 129 COMPLIANCE RIDER – PHASE 3 (CONTINUED)

D = For the Large C&I customer class, the total of the monthly billing demands for all customers in the class, projected for the computation year. The peak demand will be based on the customer's peak load contribution to the PJM peak load during the prior PJM Planning Year.

E = Net over or undercollection of the ACR 3 charges as of the end of the 12-month period ending March 31 immediately preceding the next compliance year. Reconciliation of the ACR 3 will be conducted separately for each of the three customer classes based upon the actual expenses incurred and actual revenues received for each customer class. No interest shall be computed monthly on over or undercollections. The reconciliation of ACR 3 revenues and expenses shall be adjusted during the 2017-2018 ACR 3 application year to reflect actual data for the months of April and May 2015, as well as any expenses incurred prior to May 31, 2016, but paid after that date.

S = The Company's total billed KWH sales in each customer class who receive distribution service under this tariff (including distribution losses), projected for the computation year.

T = The total Pennsylvania gross receipts tax rate in effect during the billing period, expressed in decimal form.

The ACR 3 shall be filed with the Pennsylvania Public Utility Commission (Commission) by May 1 of each year. The ACR 3 charge shall become effective for distribution service provided to all customers on or after the following June 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's ACR 3, if left unchanged, would result in a material over or undercollection of Phase 3 Act 129 Compliance costs incurred or expected to be incurred during the current 12-month period ending May 31, the Company may file with the Commission for an interim revision of the ACR 3 to become effective ten (10) days from the date of filing, unless otherwise ordered by the Commission.

At the conclusion of the Phase 2 EE&C Plan on May 31, 2016, collections under the ACR 2 for each customer class will be reconciled to the total cost of the EE&C Plan allowed by the Commission for that customer class. Overcollections or undercollections will be reflected as a separate line item in the E factor calculation and will be refunded or recovered through application of the ACR 3 rate effective June 1, 2016 through May 31, 2017. If any over/under collection balance is expected to remain after March 31, 2017, the collection will be included in the ACR 3 rate going forward.

Minimum bills shall not be reduced by reason of the ACR 3 nor shall charges hereunder be a part of the monthly rate schedule minimum. The ACR 3 shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under this Rider. Charges under ACR 1, and ACR 2, and ACR 3 will be combined for billing purposes only.

The Company shall file a report of collections under the ACR 3 within thirty (30) days following the conclusion of each compliance year.

~~Application of the ACR 3 shall be subject to review and audit by the Commission at intervals it shall determine. The Commission shall review the level of charges produced by the ACR 3 and the costs included therein.~~

~~ACT 129 COMPLIANCE RIDER – PHASE 4~~

~~A Phase 4 Act 129 Compliance Rider (ACR 4) shall be applied, on a non-bypassable basis, to charges for electricity supplied to customers who receive distribution service from the Company under this Tariff. The ACR 4 will be implemented beginning June 1, 2021.~~

~~The ACR 4 shall be computed separately for each of the following three customer classes:~~

~~(1) Residential: Consisting of Rate Schedules RS and RTS (R),~~
~~(2) Small Commercial and Industrial (Small C&I): Consisting of Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, SE, TS (R), and GH-2 (R), and~~
~~Large Commercial and Industrial (Large C&I): Consisting of Rate Schedules LP-4, LP-5, LPEP, and L5S.~~

The ACR 4 will be computed for each customer receiving distribution service from the Company using the formulae described below. For residential customers, the ACR 4 charge shall be included in the distribution charges on a kWh basis of the monthly bill. For all other customers, the ACR charge shall be listed as a separate charge on the monthly bill. All charges shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the residential rate schedules in this tariff have been adjusted to reflect application of the currently effective ACR 4.

The costs of each EE&C program available to only one customer class will be directly assigned to that customer class. Costs of EE&C programs which cannot be directly assigned to one customer class will be allocated to the customer classes benefiting from those programs using an allocation factor determined by dividing the EE&C costs directly assigned to each customer class by the total of the Company's EE&C Plan costs directly assigned to all customer classes.

The ACR 4 for the Residential class and the Small C&I class shall be computed using the following formula:

ACR 4 = [ACc/S - E/S] X 1 / (1-T)

The ACR 3 for the Large C&I class shall be computed using the following formula:

ACR 4 = [ACc/D - E/D] X 1 / (1-T)

The ACR 4 shall be filed with the Pennsylvania Public Utility Commission (Commission) by May 1 of each year. The ACR 4 charge shall become effective for distribution service provided to all customers on or after the following June 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's ACR 4, if left unchanged, would result in a material over or undercollection of Phase 4 Act 129 Compliance costs incurred or expected to be incurred during the current 12-month period ending May 31, the Company may file with the Commission for an interim revision of the ACR 4 to become effective ten (10) days from the date of filing, unless otherwise ordered by the Commission.

ACT 129 COMPLIANCE RIDER – PHASE 4 (CONTINUED)

At the conclusion of the Phase 3 EE&C Plan on May 31, 2021, collections under the ACR 3 for each customer class will be reconciled to the total cost of the EE&C Plan allowed by the Commission for that customer class. Overcollections or undercollections will be reflected as a separate line item in the E factor calculation and will be refunded or recovered through application of the ACR 4 rate effective June 1, 2021 through May 31, 2022. If any over/under collection balance is expected to remain after March 31, 2022, the collection will be included in the ACR 4 rate going forward.

Minimum bills shall not be reduced by reason of the ACR 4 nor shall charges hereunder be a part of the monthly rate schedule minimum. The ACR 4 shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under this Rider. Charges under ACR 3 and ACR 4 will be combined for billing purposes only.

The Company shall file a report of collections under the ACR 4 within thirty (30) days following the conclusion of each compliance year.

Application of the ACR 4 shall be subject to review and audit by the Commission at intervals it shall determine. The Commission shall review the level of charges produced by the ACR 4 and the costs included therein.

MERCHANT FUNCTION CHARGE RIDER ~~(C)~~

The Merchant Function Charge (MFC) Rider, stated as a percentage, shall be applied to the ~~(C)~~ generation supply and transmission services charges billed, under the GSC-1 and TSC, respectively, as set forth in this Tariff, to each residential and small commercial & industrial (Small C&I) customer taking ~~Basic Utility Supply Service (BUSS)~~default service under these Rate Schedules: RS, ~~RTS (R),~~ GS-1, GS-3, BL, SA, SM (R), SHS, SLE, ~~SE, TS (R),~~ and ~~GH-2 (R),~~SE and stand-by service for the foregoing rate schedules. The MFC will be reflected in the Company's Price To Compare.

The MFC, which will not be subject to reconciliation, is designed to make the Company's Price To Compare (PTC) more comparable to electric supply service prices offered by EGSs by reflecting anticipated generation supply-related uncollectible accounts expense in default service rates. In addition, the MFC will be applied to the TSC to reflect the applicable transmission service-related uncollectible accounts expense previously recovered though PPL Electric's distribution rates. The MFC is calculated by multiplying the generation supply charges billed under the GSC-1, and transmission service charges billed under the TSC, to each customer in the applicable class by the following uncollectible accounts expense percentages.

~~Residential Customer Class: 2.31% (C)~~

~~Small C&I~~

~~Customer Class: 0.23% (C)~~

~~To eliminate the potential for a double recovery of generation supply related and transmission service related uncollectible accounts expense, the distribution charges for the applicable Rate Schedules have been reduced by the amount of bundled generation supply related, and transmission service related, uncollectible accounts expense established in the Company's most recent distribution rate case at Docket No. R-2015-2469275.~~

~~The MFC Rider will continue until its terms and conditions are changed in a subsequent distribution rate case.~~

~~SMART METER RIDER – PHASE 1~~ ~~(C)~~

~~A Phase 1 Smart Meter Rider (SMR 1) shall be applied, on a non-bypassable basis, to charges for~~ ~~(C)~~

~~electricity supplied to customers who receive~~ in place until changed in a subsequent distribution ~~service from the Company under this Tariff~~rate case.

~~The SMR 1 shall be computed separately for each of the following three customer classes:~~ ~~(C)~~

~~(1) Residential: Consisting of Rate Schedules RS and RTS (R),~~
~~(2) Small Commercial and Industrial (Small C&I): Consisting Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, SE, TS (R), and GH-2 (R), and~~
~~(3) Large Commercial and Industrial (Large C&I): Consisting of Rate Schedules LP-4, LP-5, LPEP, and L5S.~~

~~The SMR 1, as computed using the formulae described below, shall be included in the distribution charges of the monthly bill for each customer receiving distribution service from the Company and shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the applicable rate schedules in this tariff have been adjusted to reflect application of the currently effective SMR 1.~~

~~The SMR 1 for the Residential class and the Small C&I class shall be computed using the following formula:~~

~~$SMR\ 1 = [SM_e / S – E_s / S] X 1 / (1-T)$~~

~~The SMR 1 for the Large C&I class shall be computed using the following formula:~~

~~$SMR\ 1 = [SM_e / N – E_s / N] X 1 / (1-T)$~~

~~Where:~~

~~SM_e = An annual budget amount of all costs required for the Company to implement its Commission-approved Smart Meter Plan (SMP) during a compliance year. A compliance year is the 12-month period beginning January 1 of each calendar year and ending December 31 of the same calendar year, except the first compliance year which will also include all smart meter costs incurred prior to January 1, 2011. The annual budget amount is the sum of all direct and indirect capital (e.g., return of and return on applicable smart meter-related investment) and operating (e.g, applicable O&M and taxes) costs, including all deferred design and development costs, and general administrative costs, required to implement the Company's SMP in the compliance year.~~

~~The capital and operating costs of each SMP initiative available to only one customer class will be directly assigned to that customer class. The costs of SMP initiatives which cannot be directly assigned to one customer class will be assigned based on the ratio of number of meters assigned to the classes, divided by the number of meters for the entire system.~~

~~SMART METER RIDER – PHASE 1 (CONTINUED) (C)~~

~~Es = Net over or undercollection of the SMR 1 charges as of the end of the 12-month period ending June 30 of each year. Reconciliation of the SMR 1 will be conducted separately for each of the three customer classes based upon the annual EE&C and SMP budgets for each customer class. Interest shall be computed monthly at the legal rate of interest of 6% from the month the over or undercollection occurs to the effective month that the overcollection is refunded or the undercollection is recouped.~~

~~S = The Company's total delivered KWH sales to customers in each customer class who receive distribution service under this tariff (including distribution losses), projected for the computation year.~~

~~T = The total Pennsylvania gross receipts tax rate in effect during the billing period, expressed in decimal form.~~

~~The SMR 1 shall be filed with the Pennsylvania Public Utility Commission (Commission) by August 1 of each year. The SMR 1 charge shall become effective for distribution service provided to all customers on or after the following January 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a customer class's SMR 1, if left unchanged, would result in a material over or undercollection of Smart Meter costs incurred or expected to be incurred during the current 12-month period ending December 31, the Company may file with the Commission for an interim revision of the SMR 1 to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.~~

~~Minimum bills shall not be reduced by reason of the SMR 1, nor shall charges hereunder be a part of the monthly rate schedule minimum. The SMR 1 shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under this Rider.~~

~~The Company shall file a report of collections under the SMR 1 within thirty (30) days following the conclusion of each computation-year quarter. These reports will be in a form prescribed by the Commission. The third-quarter report shall be accompanied by a preliminary forecast of the SMR 1 for the next computation year.~~

~~Application of the SMR 1 shall be subject to review and audit by the Commission at intervals it shall determine. The Commission shall review the level of charges produced by the SMR 1 and the costs included therein.~~

SMART METER RIDER - PHASE 2 ~~(C)~~

~~A Phase 2 Smart Meter Rider (SMR 2) shall be applied, on a non-bypassable basis, to charges for electricity supplied to customers who receive distribution service from the Company under this Tariff.~~

~~The SMR 2 shall be computed separately for each of the following three customer classes:~~

~~(1) Residential: Consisting of Rate Schedules RS and RTS (R),~~
~~(2) Small Commercial and Industrial (Small C&I): Consisting Rate Schedules GS-1, GS-3, IS-1 (R), BL, and GH-2 (R), and~~
~~(3) Large Commercial and Industrial (Large C&I): Consisting of Rate Schedules LP-4, LP-5, LPEP, and L5S.~~

~~The SMR 2, as computed using the formulae described below, shall be included in the distribution charges of the monthly bill for each customer receiving distribution service from the Company and shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the applicable rate schedules in this tariff have been adjusted to reflect application of the currently effective SMR 2.~~

~~The SMR 2 for the Residential class, the Small C&I class, and the Large C&I class shall be computed using the following formula:~~

~~$SMR\ 2 = ((SM_e - E_s) / N) \times 1 / (1-T)$~~

~~Where:~~

~~SM_e =~~ ~~A quarterly actual amount of all costs required for the Company to implement its Commission approved Smart Meter Plan (SMP) during a compliance period. The initial SMR 2, effective October 1, 2015, shall be calculated to recover costs not previously reflected in PPL Electric's rates or rate base and that have been recorded on the Company's books and records between February 1, 2015 and August 31, 2015. Thereafter, the SMR 2 will be updated on a (C) quarterly basis to reflect costs during the three-month period ending one month prior to the effective date (a compliance period) of each SMR 2 update. The quarterly amount is the sum of all direct and indirect capital (e.g. return of and return on applicable smart meter-related investment) and operating (e.g., applicable O&M and taxes (dependent upon the Company's tax net operating loss carryforward)) costs, including all deferred design and development costs, and general administrative costs, required to implement the Company's SMP in the compliance period. Deferred costs incurred during 2014 and through May 2015 will be recovered over a three-year period.~~

~~The costs of SMP will be allocated to the total number of meters on PPL Electric's system based on the ratio of investment in meters for each rate class.~~

COMPETITIVE ENHANCEMENT RIDER **(C)**

The Competitive Enhancement Rider (CER) charge shall be applied on a dollar per customer basis to each customer who takes distribution service under this Tariff. The CER provides for the recovery of the annual costs associated with the Company's competitive retail electricity market enhancement initiatives and related consumer education programs.

Beginning January 1, 2025 and continuing through December 31, 2025, the CER charge will **(C)** be negative $0.01. For subsequent years, the CER charge shall be filed with the Pennsylvania **(D)** Public Utility Commission (Commission) by December 21 of the previous year. The CER charge shall reflect the Company's estimate of the costs it will incur during the application year associated with its competitive retail electricity market enhancement initiatives and related consumer education programs. The CER charge shall become effective for service rendered on or after the following January 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that a CER charge, if left unchanged, would result in a material over or under-collection of all CER costs incurred or expected to be incurred during the current 12-month period, the Company may file with the Commission for an interim revision of the CER charge to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

The Company will file with the Commission by December 21 of each year an annual reconciliation of the actual CER revenue billed and the actual CER costs incurred during the immediately preceding application period, pursuant to 66 Pa. C.S. §1307. The reconciliation shall become effective for service rendered on and after January 1 and shall remain in effect for a period of one year, or until new CER rates are approved by the Commission. Interest on overcollections and undercollections shall be computed monthly at the appropriate rate, as provided for in Section 1308(d) of the Public Utility Code, from the month the over or undercollection occurs to the effective month that the overcollection is refunded or the undercollection is recouped.

Application of the CER shall be subject to review and audit by the Commission at intervals that it shall determine. The Commission shall review the level of charges produced by the CER charge and the costs included therein.

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rider.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of ~~7.50~~0.00% will apply consistent with the Commission Order dated May 23, 2013, at Docket No. P-2012-2325034, approving the DSIC ~~and the Commission Order dated February 28, 2025, at Docket No. P- 20243048732, increasing the cap on the DSIC to 7.5% of billed distribution revenues until the effective date of rates established in the Company's next base rate case or until the end of the Company's 2023-2027 LTIIP, whichever occurs first. This charge will be effective during the period July 1, **(C)** 2025 through September 30, 2025.~~. This charge will be effective upon the effective date of new rates established at Docket No. R-2025-3057164.

GENERAL DESCRIPTION

A. Purpose: To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide PPL Electric with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

B. Eligible Property: The DSIC-eligible property will consist of the following:

- Poles and towers (Account 364);
- Overhead conductors (Account 365) and underground conduit and conductors (Accounts 366 and 367);
- Line transformers (account 368) and substation equipment (Account 362);
- Any fixture or device related to eligible property listed above, including insulators, circuit breakers, fuses, reclosers, grounding wires, crossarms and brackets, relays, capacitors, converters and condensers;
- Unreimbursed costs related to highway relocation projects where an electric distribution company must relocate its facilities; and
- Other related capitalized costs.

C. Effective Date: The DSIC will become effective for bills rendered on and after July 1, 2013.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (~~DSIC) (Continued)~~ CONTINUED)

COMPUTATION OF THE DSIC

A. ~~Calculation: The initial DSIC, effective July 1, 2013, shall be calculated to recover the fixed costs of eligible plant additions that have not previously been reflected in PPL Electric's rates or rate base and will have been placed in service between March 1 through May 31, 2013. Thereafter, the~~Calculation: The DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update. Thus, changes in the DSIC rate will occur as follows:

~~(C)~~

Effective Date of Change	Date to which DSIC-Eligible Plant Additions Reflected
April 1st	December 1st – February 28th
July 1st	March 1st – May 31st
October 1st	June 1st – August 31st
January 1st	September 1st – November 30th

~~B.~~

B. Determination of Fixed Costs: The fixed costs of eligible distribution system improvements projects will consist of depreciation and pre-tax return, calculated as follows:

1. Depreciation: The depreciation expense shall be calculated by applying the annual accrual rates employed in PPL Electric's most recent base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded to the original cost of DSIC-eligible property.

2. Pre-tax return: The pre-tax return shall be calculated using the statutory state and federal income tax rates, PPL Electric's actual capital structure and actual cost rates for long-term debt and preferred stock as of the last day for the three-month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in PPL Electric's last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission in the most recent Quarterly Report on the Earnings of Jurisdictional Utilities released by the Commission.

~~C.~~

C. Application of DSIC: The DSIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for distribution service under PPL Electric's otherwise applicable rates and charges, excluding amounts billed for the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by PPL Electric's projected revenue for distribution service (including all applicable clauses and riders) for the quarterly period during which the charge will be collected, exclusive of the STAS.

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC) (~~Continued~~CONTINUED)

COMPUTATION OF THE DSIC (Continued)
~~COMPUTATION OF THE DSIC (Continued)~~

~~D.~~

D. Formula: The formula for calculation of the DSIC is as follows: ~~(C)~~

$$DSIC = \frac{((DSI \times PTRR) + STFT + Dep + e) \times \frac{1}{(1-T)}}{PQR}$$

Where:

~~$$DSIC = \frac{((DSI \times PTRR) + STFT + Dep + e) * \frac{1}{(1-T)}}{PQR}$$~~

~~PTRR = Where:~~

~~STFT = DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences resulting from the use of accelerated depreciation per Internal Revenue Code, 26 U.S. Code § 168.~~

~~Dep =~~

~~e =~~

~~PQR = Pre-tax return rate applicable to DSIC-eligible property.~~

~~(State Tax Flow Through) Pre-tax flow through calculated on book tax timing differences between accelerated tax depreciation and book depreciation net of federal tax.~~

~~T = Depreciation expense related to DSIC-eligible property.~~

~~Amount calculated (+/-) under the annual reconciliation feature or Commission audit, as described below.~~

~~Projected quarterly revenues for distribution service (including all applicable clauses and riders) from appliable customers. The quarterly revenues will be determined on the basis of the summation of projected revenues for the applicable three-month period.~~

~~Pennsylvania gross receipts tax rate in effect during the billing month, expressed in decimal form.~~

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences from the use of accelerated depreciation per

Internal Revenue Code, 26 U.S. Code § 168.

PTRR = Pre-tax return rate applicable to DSIC-eligible property.

STFT = (State Tax Flow Through) Pre-tax flow through calculated on book-tax timing differences between accelerated tax depreciation and book depreciation net of federal tax.

Dep = Depreciation expense related to DSIC-eligible property.

e = Amount calculated (+/-) under the annual reconciliation feature or Commission audit, as described below.

PQR = Projected quarterly revenues for distribution service (including all applicable clauses and riders) from appliable customers. The quarterly revenues will be determined on the basis of the summation of projected revenues for the applicable three-month period.

T = Pennsylvania gross receipts tax rate in effect during the billing month, expressed in decimal form.

Minimum bills shall not be reduced by reason of the DSIC, nor shall charges hereunder be a part of the monthly rate schedule minimum. The DSIC shall not be subject to any credits or discounts. The State Tax Adjustment Surcharge (STAS) included in this Tariff is applied to charges under the DSIC.

~~QUARTERLY UPDATES~~

~~Supporting data for each quarterly update will be filed with the Commission and served upon the Commission's Bureau of Investigation and Enforcement, the Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.~~

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC) (~~Continued)~~ CONTINUED)

CUSTOMER SAFEGUARDS

A. Cap: ~~Consistent with the Commission Order dated February 28, 2025, at Docket No. (C) P-2024-3048732, the~~The DSIC is capped at ~~7.50~~5.00% of the amount billed to customers for distribution service (including all applicable clauses and riders) as determined on an annualized basis ~~until the effective date of rates established in the Company's next base rate case or until the end of the Company's 2023-2027 LTIIP, whichever occurs first~~.

~~A.~~ Audit/Reconciliation: The DSIC is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1350, et seq., shall be credited to customer accounts. The DSIC is subject to annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or PPL Electric may elect to subject the DSIC to quarterly reconciliation but only upon

B. request and approval by the Commission. The revenue received under the DSIC for the reconciliation period will be compared to PPL Electric's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period commencing on April 1 of each year, or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on over-collections and credits will be calculated at the residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) and will be refunded in the same manner as an over-collection. PPL Electric is not permitted to accrue interest on under collections.

C. New Base Rates: The DSIC will be reset at zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had previously been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in PPL Electric's rates or rate base will be reflected in the quarterly updates of the DSIC.

D. Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change. An explanatory bill insert also shall be included with the first billing.

E. Customer classes: Effective July 1, 2013, the DSIC shall be applied equally to all customer classes except Rate Schedule LP-5, consistent with the Commission Order entered April 9, 2015 at Docket No. P-2012-2325034. ~~Effective January 1, 2016, the DSIC shall be applied equally to all customer classes except Rate Schedules LP-5 and LPEP.~~

~~E.~~F. Earning Reports: The DSIC also will be reset at zero if, in any quarter, data filed with the Commission in PPL Electric's then most recent Annual or Quarterly Earnings reports (Schedule D-2) show that PPL Electric would earn a rate of return that would exceed

the allowable rate of return used to calculate its fixed costs under the DSIC as described in the pre-tax return section. PPL Electric shall file a tariff supplement implementing the reset to zero due to overearning on one-days' notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that PPL Electric has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.

STORM DAMAGE EXPENSE RIDER

PURPOSE

The Storm Damage Expense Rider (SDER) shall be applied to bills of all ~~retail~~ customers of the Company. The SDER provides for recovery of qualified storm damage expenses incurred by the Company from storms reportable to the Pennsylvania Public Utility Commission (Commission) that are not otherwise currently recovered through its base rates.

STORM DAMAGE EXPENSES

Storm damages for purposes of this SDER are those resulting from direct physical loss or damage to property from wind, tornado, hurricane, tropical storm, tropical depression, rain, snow, hail, sleet, ice, lightning, flood, fire resulting from any of these perils, and similar causes. Storm damage expenses consist of those expenses incurred to remediate storm damage to the Company's distribution system, including, but not limited to, overtime and premium wages of the Company's employees, costs of outside service providers and mutual aid utilities employed by the Company during storm restoration efforts, materials and ~~s upplies~~supplies used to repair or replace damaged property, overhead charges associated with storm damage expenses, including wages and benefits, transportation, purchasing and stores charges, expediting expenses for the reasonable and extra costs to make temporary repairs and to expedite the permanent repair or replacement of damaged property, and expenses of providing services to customers whose electric service has been interrupted by any of the perils listed above. ~~S traight~~Straight-time wages and benefits and expenses reimbursed by others will be excluded from the SDER, and capitalized costs of repairing or replacing facilities damaged by the perils listed above, will be excluded from the SDER.

FACTOR DEFINITION

Net storm damage expenses to be recovered in the SDER shall be equal to:

SDER = (C – R) + E,

Where C equals the Cost factor, R equals the Base Rate factor and E equals the Experience factor.

The C Factor = For purposes of calculating SDER charges, storms will be categorized as reportable or non-reportable storms. Reportable storms are those that cause unscheduled service interruptions in a single event to 2,500 or more customers for 6 or more consecutive hours; non-reportable storms are all other storms. See 52 Pa. Code § 67.1(b). ~~Storm damage expenses from non-reportable storms will be recovered through base rates and not through the SDER.~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 29

STORM DAMAGE EXPENSE RIDER (~~Continued)~~ CONTINUED)

FACTOR DEFINITION (~~Continued~~CONTINUED)

In order to calculate the C factor for each application year ~~starting with 2015~~, the Company will include in the SDER all qualifying storm damage expenses caused by reportable storms and non-reportable storms incurred during the 12-month period

ending two months prior to the application year, except that all qualifying ~~(C)~~ expenses caused by major storm events, defined as an interruption of electric service resulting from conditions beyond the control of the Company which affects at least 10% of the Company's customers during the course of the event for a duration of 5 minutes each or greater (see 52 Pa. Code §57.192), will be recovered over three years and reflected in SDER rates commencing in the application year after the storm occurred.

~~Qualifying expenses from major storm events occurring during 2012 that were the subject of deferral petitions which subsequently were approved by the Commission shall be recovered over three application years commencing in 2015.~~

The C factor will include interest for major storm events that are subject to amortization, as provided above. Such interest shall be computed monthly at the average rate of interest specified for residential mortgage lending by the Secretary of Banking in accordance with the Act of January 30, 1974 (P.L. 13, No. 6 referred to as the Loan Interest and Protection law, 41 P.S. §§ 101 et seq.), from the month the amortization begins to the effective month that the full amount of the amortization is recovered.

The R Factor = The R factor is the amount of applicable storm damage expense reflected in the Company's base rates. The R factor for ~~2014~~July 1, 2026 and thereafter, unless modified by the Commission in a subsequent base rate case, shall equal $~~14,700~~42,500,000, consisting of: (1) $32,000,000, which for purposes of this SDER constitutes the amount of expense from reportable storms currently recovered through base rates, excluding previously approved amortization allowances for expenses for extraordinary storms ~~that currently are reflected in the Company's base rates~~, defined by the Uniform System of Accounts General Instruction 7 as an item that exceeds five percent (5%) of a utility's annual net income, that currently are reflected in the Company's base rates; and (2) $10,500,000, which for purposes of this SDER constitutes the amount of expense from non-reportable storms currently recovered through base rates. The Company will consider storm damage expenses exceeding 5% of its annual distribution net income as extraordinary for SDER recovery purposes.

STORM DAMAGE EXPENSE RIDER (CONTINUED)

PRICING PROVISION
~~PRICING PROVISION~~

The SDER shall be computed separately for each of the following four customer classes: ~~(C)~~

(1) Residential: Consisting of Rate ~~Schedules~~Schedule RS ~~and RTS (R),~~
(2) Small Commercial and Industrial (Small C&I): Consisting Rate Schedules GS-1, GS-3, BL, SA, SM (R), SHS, SLE, ~~SE, TS (R),~~ and ~~GH-2 (R),~~SE,
(3) Large Commercial and Industrial - Primary (Large C&I - Primary): Consisting of Rate Schedule LP-4, and
(4) Large Commercial and Industrial – Transmission (Large C&I – Transmission): Consisting of Rate Schedule~~s~~ LP-5~~, LPEP, and L5S~~.

Net storm damage expenses to be recovered in each application year (C-R+E) will be allocated among these four customer classes using the method in the cost allocation study approved by the Commission in the Company's most recent base rate proceeding.

~~Per the Company's most recent approved distribution base rate case at Docket No. R-2015-2469275, the~~ ~~(C)~~
The following Allocation Schedule percentages apply for the following four customer classes.

~~Customer Class~~	~~Residential~~	~~Small C&I~~	~~Large Primary C&I~~	~~Large Transmission~~
~~Allocation Schedule~~	~~70.15% (I)~~	~~24.53% (D)~~	~~4.82% (I)~~	~~0.50% (I)~~

Customer Class	Residential	Small C&I	Large Primary C&I	Large Transmission C&I
Allocation Schedule	72.60% (I)	22.90% (D)	4.35% (D)	0.14% (D)

The SDER, as computed using the formula described below, shall be included in the distribution charges of the monthly bill for each customer receiving distribution service from the Company and shall be reconciled on an annual basis for undercollections and overcollections experienced during the previous year. Charges set forth in the applicable rate schedules in this tariff have been adjusted to reflect application of the currently effective SDER.

~~Net storm damage expenses to be recovered in each application year (C-R+E) will be allocated among these four customer classes using the method in the cost allocation study approved by the Commission in the Company's most recent base rate proceeding.~~

STORM DAMAGE EXPENSE RIDER (CONTINUED)

ACCOUNTING

~~**Beginning on December 1, 2013, the**~~

The Company will record any qualifying storm damage expenses from reportable storms and non-reportable storms in excess of the $~~**14,700**~~42,500,000 included in base rates, to a regulatory asset for inclusion in the SDER. ~~**If**~~If the amount of storm damage expense incurred is less than the $~~**14,700**~~42,500,000 included in base rates, the Company will record a regulatory liability for inclusion in the SDER.

CUSTOMER SAFEGUARDS

Cap: Total annual revenues collected under the SDER will be capped at an amount not to exceed 3% of the total intrastate operating revenues billed to customers, exclusive of amounts recovered under the State Tax Adjustment Surcharge. If storm damage expense for recovery exceeds 3%, the excess expenses will be deferred and available for recovery in the Company's next base rate case under Section 1308.

Audit/Reconciliation: The SDER is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. §§ 1307, *et seq.*, shall be credited to customer accounts. The SDER is subject to annual reconciliation based on a reconciliation period ending October 31 of each year. The revenue received under the SDER for the reconciliation ~~**(C)**~~ period will be compared to PPL Electric's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period.

STORM DAMAGE EXPENSE RIDER CHARGE

~~**(Continued)**~~

Effective July 1, 2026, the SDER charges will be applied as set forth in the applicable Rate Schedules, unless otherwise ordered by the Commission.

RESIDENTIAL ELECTRIC VEHICLE (EV) TIME OF USE (TOU) CHARGING REBATE PROGRAM

A. PROGRAM DESCRIPTION AND ELIGIBILITY

The Residential EV TOU Charging Rebate Program is available to residential customers with Level 2 EV chargers, subject to a cap of 2,000 customers. A customer can enroll in this program through the Company's website. The program's purpose is to incent participating customers to charge their EVs using their Level 2 chargers during the off-peak hours established for this program by providing a flat rebate to each participating customer who conducts at least 80% of their EV charging using their Level 2 charger during off-peak hours. To be eligible for this program, the customer's EV charging equipment must be on the list of compatible equipment certified by the Company.

B. ON-PEAK AND OFF-PEAK HOURS

For purposes of this program, the On-Peak Hours are 4:00 PM to 7:00 PM in the summer months of June, July, and August and 6:00 AM to 9:00 AM and 6:00 PM to 8:00 PM in the winter months of December, January, and February.

C. REBATE AMOUNT

A participating customer who conducts at least 80% of their EV charging using their Level 2 charger during off-peak hours during the applicable billing period will receive a flat rebate of $10.00.

D. DATA COLLECTION

Customers participating in the program must agree that the Company can conduct EV charging session validation and data collection for their EV charger via approved telematics or EV supply equipment. Data collected by the Company can be used for internal planning and operational purposes.

E. MARKETING

The Company may conduct targeted marketing to customers in areas where EV growth is forecasted to start causing system constraints in the next 5-7 years.

TCJA TEMPORARY SURCHARGE ~~(C)~~

~~To implement the effects of the Tax Cuts and Jobs Act (TCJA), on March 15, 2018 the Pennsylvania Public Utility Commission (Commission) issued a Temporary Rates Order at Docket No. M-2018-2641242 directing the utility to file its current base rates and riders as temporary rates, pursuant to Section 1310(d) of the Public Utility Code. 66 Pa. C.S. § 1310(d). Subsequently on May 17, 2018, and June 14, 2018, the Commission entered an Order superseding the March 15, 2018 Temporary Rates Order directing the utility to establish temporary rates as follows:~~

~~A negative surcharge of 8.00% will apply as a credit for intrastate service to all customer bills rendered on and after January 1, 2025. This negative surcharge will be distributed equally among the utility's various customer classes, exclusive of STAS and automatic adjustment clause revenues.~~ ~~(D)~~ ~~(C)~~

~~This negative surcharge will be reconciled at the end of each calendar year and will remain in place until the utility files and the Commission approves new base rates for the utility pursuant to Section 1308(d) that include the effects of the TCJA tax rate changes. After the initial filing on June 15, 2018, the TCJA Temporary Surcharge shall be filed with the Commission by December 1 of each year that it is in place.~~

~~Interest on over or under collections shall be computed monthly at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) from the month that the over or under collection occurs to the mid-point of the recovery period.~~

~~Upon determination that the negative surcharge, if left unchanged, would result in a material over or under collection, the Company may file with the Commission, on at least 10 days' notice, for an interim revision of the TCJA Temporary Surcharge.~~

APPLICATION PROVISIONS

For the purposes of the application of this Rate Schedule, a dwelling is defined as a living space consisting of at least permanent provisions for shelter, dining, sleeping, and cooking, with provisions for permanent electric, water, and sanitation services.

~~(1)~~

(1) This Rate Schedule is for single phase electric service for:

(a) A single-family dwelling and detached buildings when the detached buildings are served at the customer's expense through the same meter as the single family dwelling.

(b) A separate dwelling unit in an apartment house.

(c) A single farm dwelling and general farm uses when general farm uses are served at the customer's expense through the same meter as the single farm dwelling.

(d) A building previously wired for single meter service which is converted to not more than 8 separate dwelling units served through one meter.

~~(2)~~

(2) This Rate Schedule does not apply to: ~~(C)~~

(a) Residential service that includes more than 2,000 watts of connected load attributable to commercial or professional use exclusive of space heating and air conditioning in common with the residence.

(b) Residential service combined with any commercial or professional use outside the residence or in a section of a multi-use building that is separate from the dwelling unit.

(c) Service which includes common use in excess of 5,500 watts of connected load for halls, basement, or other portions of an apartment building.

(d) Single meter service to multiple dwelling units in buildings constructed after June 28, 1980.

(e) Establishments recognized by name, notice or advertisement, such as hotels, clubs, fraternities, sororities, boarding houses, institutions, orphanages, rest homes, tourist homes and rooming houses with more than 3 rooms available for such use and rectories and convents with accommodations for more than 5 adults.

PPL Electric Utilities Corporation

RATE SCHEDULE RS (CONTINUED)

(f) Residential service locations connected on or after September 28, 1995, which include more than 2,000 watts of general farm load.

(g) Residential service locations with an installed generating system that has a nameplate capacity greater than 50 kilowatts.

(h) Campers, Recreational Vehicles (RV), and construction trailers that are mobile in nature and are not permitted dwellings.

(3) ~~(3)~~ Where any use of service at a residence or on a farm is not eligible for the application of this Rate Schedule, customer has the option to provide separate circuits so that the portion that is applicable can be metered and billed separately hereunder and the remaining portion can be billed under the applicable general service rate schedule. When separate circuits are not provided, the entire service is billed under the applicable general service rate schedule.

APPLICATION PROVISIONS

1. This Rate Schedule is applicable to service which would otherwise qualify under Rate Schedule RS except for the following:

(a) Service to two or more separate dwelling units supplied through a single meter.

(b) Seasonal service and seasonal use customers.

(c) Service with separate meter controlled water heater service.

(d) Residential service with general farm use which includes more than 2,000 watts.

2. Any changes in service entrance equipment to accommodate metering under this Rate Schedule are made by the customer at his own expense.

3. Load management capability is the positive automatic control of the operation of any thermal storage system for spacenoninductive heating which is acceptable to the Company as being effective in limiting on-peak use of electric service. The Company reserves the right to inspect such systems at reasonable times and may discontinue billing under this Rate Schedule whenever, in the Company's sole judgment, the system no longer qualifies.

4. The maximum electric thermal unit that may beelements so connected under this Rate Schedule is 75 KW. Heating elements must be switched in stages not in excess of 7.5 KW per stage.

(4) 5.that not more than 5500 watts can be operated at one time. The Company reserves the right to install necessary devices to control the operation of the electric components of the thermal storage systemwater heaters at its option.

Customer is responsible for paying all costs associated with line extensions and service extensions to take service under this rate schedule, except when, in the Company's discretion, it is determined that certain line extensions will provide reliability or other benefits to the Company's transmission system. The Company shall not charge the customer directly for line extension upgrades that provide benefits to the Company's transmission system, as determined by PPL Electric. For the purposes of this rate schedule, any upgrades to the 230 kV and 500 kV networked bulk electric system may be presumed to provide reliability benefits to the Company's transmission system. Other benefits that would support relieving the customer of the obligation to directly pay for line extension costs include, but not are not limited to, increased capacity, lower system congestion, service to multiple customers, increased resiliency and operational flexibility, and expanded capacity for new generation and interconnections.

The customer shall enter into an agreement providing a revenue guarantee in the amount of all line extension costs that were not directly charged to the customer. The agreement shall include, at a minimum, the following terms:

1) Initial term of not less than five (5) years;

2) Customer shall provide an initial load ramp schedule for the initial five (5) year term;

3) Customer shall provide a revenue guarantee in the amount of the line extension costs that customer was not directly charged;

~~$13.400~~Distribution Charge
$15.872 per fixture for Light Emitting Diode (LED)

~~(C)~~

Transmission Service Charge

~~Transmission Service Charge~~

The ~~Transmission Service Charge included in this Tariff applies to all KW and/or KWH billed~~customer is responsible for applicable charges under ~~this Rate Schedule.~~the TSC rate schedule.

Generation Supply Charge - 1

~~The Generation Supply Charge -1 included in this Tariff applies to all KWH billed under this Rate Schedule.~~The customer is responsible for applicable charges under the GSC-1 rate schedule.

The number of KWH supplied is based upon the average hours use and input wattage of each luminaire.

EQUIPMENT AND SERVICE

Company installs and maintains the bracket, luminaire, lamp and photoelectric control on a Company-owned wood pole. Lamp is lighted from dusk to dawn or for approximately 4,300 hours per annum.

~~A high pressure sodium (HPS) lamp of a nominal 9,500 lumens or~~A Light Emitting Diode (LED) ~~(C)~~

of a nominal 4,~~300~~700 lumens is installed in a luminaire on a 30-inch bracket. ~~Lamp replacements are~~Outage notifications will normally ~~made by~~ be assessed within 1 business week from the ~~third (3) working day after outage~~time of notification by the customer to ~~a~~the Company ~~office~~. There is no credit for outages. The Company reserves the right to make ~~substitutes~~substitutions when identical materials are not available.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 36A

Company installs up ~~t o~~to one ~~s pan~~span of secondary not exceeding 150 feet from an existing secondary voltage supply and one ~~pol e~~pole for each lamp provided the location of the pole is accessible by a service truck for the installation and maintenance of the lamp and provided the Company is furnished a suitable ~~right-of-way~~ROW.

Upon request and at the Company's discretion, the Company may install an area light fixture on a suitable customer-owned support.

Where a secondary supply is not available at the desired lamp location and/or where the distance is more than one span, the Company may furnish the service ~~providing~~provided the customer reimburses Company for the Company's estimated added investment required to supply the service in each case.

RATE SCHEDULE SM (R) ~~(C)~~
MERCURY VAPOR STREET LIGHTING SERVICE

The application of this Rate Schedule to all service is limited as indicated in the Application section of this Rate Schedule. No new installations of mercury vapor lamps and fixtures shall be offered after January 1, 2008, in accordance with the Energy Policy Act of 2005. This Rate Schedule is only available until such time prior to the Company transferring customers to Rate Schedule SLE. In the event that the Company cancels a contract under this Rate Schedule the customer's only option to continue street light service is to take service under Rate Schedule SLE.
~~after January 1, 2008 in accordance with the Energy Policy Act of 2005.~~

APPLICATION RATE SCHEDULE SM

This Rate Schedule is for lighting service from overhead or underground facilities on public areas such as streets, highways, bridges and parks, to municipalities, other governmental agencies, or private property customers, when all such service is supplied under Company's standard form of contract in accordance with the various laws applicable thereto.

The application of this Rate Schedule is limited as follows:

~~The application of this Rate Schedule is limited as follows:~~

(a) 10,500 lumen and 34,000 lumen mercury vapor lamps -- fixtures installed on or before and supplied continuously after June 2, 1973, and also prospective fixtures where a definite rate commitment has been made as of that date as long as service is continuous thereafter, and fixtures previously supplied under Hershey Electric Company SMVO rate.

(b) metal pole overhead -- poles installed on or before and in service continuously after June 2, 1973, and fixtures previously supplied under Hershey Electric Company SMVO and S rates.

(c) customer-owned equipment -- customers served on or before and ~~s upplied~~supplied continuously after August 26, 1976.

(d) 20,000 lumen and 51,000 lumen mercury vapor lamps -- fixtures installed on or before and supplied continuously after August 22, 1983, and additions at locations adjacent to such existing installations.

(e) 3,350 lumen and 6,650 lumen mercury vapor lamps -- fixtures installed on or before and supplied continuously after April 28, 1987, and additions at locations adjacent to or interspersed with such existing installations.

(f) The mercury vapor (MV) lamps which fail will be transitioned to the ~~High Pressure Sodium (HPS) (Rate Schedule SHS) nominal lumens equivalent or~~ ~~(C)~~ Light Emitting Diode (LED) (Rate Schedule SLE) nominal lumens equivalent. A nominal lumen/wattage equivalent table is shown below. This is in accordance with the Energy Policy Act of 2005 – Section 135 H.R. 6-39, which states that "Mercury Vapor Lamp ballasts shall not be manufactured or imported after January 1, 2008."

STANDARD INSTALLATION AND SERVICE

All necessary street lighting facilities are supplied, installed, operated and maintained by ~~**STANDARD INSTALLATION AND SERVICE**~~

~~**All necessary street lighting facilities are supplied, installed, operated and maintained by Company**~~the Company and are connected to the Company's available ~~**general**~~ distribution system. The equipment installed under ~~**the above rate**~~ this Rate Schedule is of the type currently being furnished by the Company at the time service is contracted for.

Wood Pole Overhead Service. Lamps are mounted on Company's wood poles, or other supports not supplied by Company specifically for street lighting purposes, and are supplied by overhead wires. Luminaires are mounted on brackets or mast arms. A standard installation under ~~**the above rates**~~this Rate Schedule includes one span of secondary conductor per location.

Metal Pole Overhead Service. Lamps are mounted on Company's existing metal poles served by overhead wires. No new overhead supplied metal pole installations will be made under this rate schedule.

Wood Pole Underground Service. Lamps are mounted on Company's wood or fiberglass street lighting poles and are supplied by underground wires. A standard installation under ~~**the above rates**~~this Rate Schedule includes a maximum of 150 circuit feet of cable and trenching and backfilling.

Low Mounting Underground Service. Lamps are mounted on Company's low mounting street lighting poles and are supplied by underground cable. A standard installation under ~~**the above rates**~~this Rate Schedule includes a maximum of 150 circuit feet of cable and trenching and backfilling.

High Mounting Underground Service. Lamps are mounted on Company's high mounting

metal street lighting poles not exceeding 35 feet in height and are supplied by underground cable. A standard installation under ~~the above rates~~this Rate Schedule includes a maximum of 175 circuit feet of cable and trenching and backfilling.

Multiple Unit Service. When practical, each additional lamp after the first mounted on a street lighting pole is billed under the above Multiple Unit rate. A standard installation under ~~the above rates~~this Rate Schedule includes only the luminaire, lamp, photocontrol, bracket or mast arm and wire in the bracket or mast arm.

All lamps are ~~lighted~~lit from dusk to dawn every night, or for approximately 4,300 hours per annum.

RATE SCHEDULE ~~SHS~~SLE (CONTINUED) ~~(C)~~

CONTINUOUS OPERATION

At customer request, individual lamps may be operated continuously 24 hours per day. The net monthly rate for continuous operation shall be 160% of the aforementioned applicable net monthly rates.

SPECIAL INSTALLATIONS

~~SPECIAL INSTALLATIONS~~

Whenever customer requests an installation that is not in conformity with the aforementioned ~~STANDARD INSTALLATION AND SERVICE~~standard installation and service provisions, Company may, at its option, install the lamps as requested upon payment in advance by the customer of the estimated installed cost of facilities required in excess of that required for standard installation or of the excess investment in special equipment over that of standard equipment. The maintenance of special equipment is cost over standard for each replacement subject to (1) time and ability to obtain replacement, and (2) advance payment of the then excess.

~~REMOVALS~~

~~If customer requests Company to remove any part of a mercury vapor (MV) street lighting system to install high pressure sodium (HPS) street lighting equipment or to remove any part of a high pressure sodium (HPS) street lighting system to install another high pressure sodium (HPS) street lighting system or any other type of street lighting system and if the mercury vapor (MV) or high pressure sodium (HPS) or Light Emitting Diode (LED) luminaires, supporting brackets, poles and/or conductors which are to be removed as a result of any requested removal, are less than ten (10) years old, Company will charge for and Customer shall pay for such a change. The charge will be based upon Company's estimated costs for removal and rehabilitation plus the estimated remaining life value of the removed equipment less salvage. However, if the Customer's request is made to upgrade the lighting on the street to Illuminating Engineering Society standards, in accordance with the Energy Policy Act of 2005 which states Mercury Vapor Lamp ballasts shall not be manufactured or imported after January 1, 2008, the Company may waive the charge calculated hereunder.~~ ~~(C)~~

Application is limited to mercury vapor, high pressure sodium, metal halide, ~~induct ion~~induction, or Light Emitting Diode (LED) ~~street lights~~streetlights in systems of a ~~mini mum~~minimum of 5 contiguous lamps of one customer. Customer-owned ~~street lights~~streetlights served hereunder may not be intermixed with street lights served under the Company's other street lighting rate schedules.

The 5-lamp minimum may, at Company's option, be waived when a customer desires to take service for its entire street lighting ~~requirem ents~~ requirements hereunder and said total requirement is less than the 5-lamp minimum.

~~INITIAL SYSTEM AND FUTURE ADDITIONS~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 41

RATE SCHEDULE SE (CONTINUED)

INITIAL SYSTEM AND FUTURE ADDITIONS

The Customer ~~provides~~must provide advance written notice to ~~Comp any~~Company (at least 90 days for initial systems or 30 days for additions to existing systems) of its intentions to install customer-owned street lighting hereunder. The notification includes the location, wattage, lumen size, type of equipment, and proposed installation date. In addition, for customer-owned street lighting proposed for installation on Company's ~~p oles~~poles the customer provides the construction specifications for Company's approval.

STANDARD INSTALLATION AND SERVICE

Street Lighting Equipment on ~~Comp any~~Company Wood Pole: The customer provides, installs, operates and maintains the street lighting luminaire, lamp, control, bracket and the wire from the luminaire to the point of connection with the Company's overhead general distribution system. The ~~Comp any~~Company provides, installs, operates and maintains the wood pole and the overhead secondary wire from Company's general distribution system to the point of connection with customer's wire. ~~Gene rally~~Generally, the customer will attach its street lighting system to Company's existing poles; but the Company at its option ~~provides, installs, operates and maintains~~, may provide, install, operate and maintain a maximum of one wood pole and one span of secondary conductor to new locations requested by the customer. The installation by Company in excess of one wood pole and one span of secondary conductor to serve a customer-owned street light is at the customer's expense.

Street Lighting Equipment on Customer Pole or Support: The customer ~~pro vides~~provides, installs, operates and maintains the street lighting ~~lu minaire~~luminaire, lamp, control, bracket, ~~p ole~~pole or ~~sup port~~support, foundation and wire between poles or supports. The Company provides, installs, operates and maintains one span of overhead secondary conductor to a group of street lights, as defined by the Company, on customer-owned poles or supports. The installation by Company in excess of one span of overhead secondary to a group of customer-owned ~~street lights~~streetlights is at customer's expense.

Customer-owned street lighting equipment mounted on poles or supports of other utilities with whom Company has joint-use agreements are billed at the rate for Street Lighting Equipment on Company Poles.

~~Customer-owned street lighting equipment mounted on poles or supports of other utilities with whom Company has joint-use agreements are billed at the rate for Street Lighting Equipment on Company Poles.~~

Any non-municipal customer will be required to demonstrate that it has complied with all ~~(C)~~ municipal requirements pertaining to lighting before being eligible for service under Rate Schedule SE. In additional, before street lighting facilities may be energized, the non-municipal customer shall provide the Company ~~and t he municipality with~~ an inspector's ~~certificatio n~~ certification that the

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202

STANDARD INSTALLATION AND SERVICE (Continued)

Customer-owned street lighting installed as multiple units on a Company or other utility pole are billed at the rate for Street Lighting Equipment on customer Pole or Support. Multiple un itsunits are defined hereunder as additional l ampslamps installed on a Compan yCompany or other utility pole already supporting customer-owned street lighting equipment.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 41A

RATE SCHEDULE SE (CONTINUED)

STANDARD INSTALLATION AND SERVICE (Continued)

Customer-owned street lighting equipment is installed in accordance with Company and industry safety codes and, where installed ~~o n~~on Company poles, in accordance with general Company specifications for similar equipment.

Any rearrangements, replacements or relocations of Company's ~~electric~~ distribution system required solely for the installation, operation or maintenance of the customer's street lighting equipment are at the customer's expense.

The Company makes all connections of the customer's street lighting system to the Company's available general distribution system. Generally, customer-owned street lighting equipment will be served at 120 volts or 240 volts. However, at Company's option, customer-owned street lighting equipment mounted on customer pole or ~~sup port~~support may be served at other available ~~secon dary~~secondary voltages.

All luminaires served hereunder are operated at alternating current, 60 hertz, single phase and are controlled by photo control for dusk to dawn operation every night, approximately 4,300 hours per year.

~~All luminaires served hereunder are operated at alternating current, 60 hertz, single phase and are controlled by photo control for dusk to dawn operation every night, approximately 4,300 hours per year.~~

All relocations of customer-owned street lighting equipment are at the customer's expense. ~~CONTINUOUS OPERATION~~

CONTINUOUS OPERATION

When the customer ~~op erates~~operates individual lamps continuously 24 hours ~~p er~~per day, the KWH billed hereunder is doubled for those individual lamps operated continuously.

IDENTIFICATION
~~IDENTIFICATION~~

Each customer-owned luminaire and support bracket served hereunder must ~~b e~~be marked ~~b y~~by customer with two adjacent wraps of 2 inch wide, yellow and black diagonal striped, pressure sensitive tape, clearly identifiable ~~by a~~at ground level which indicates customer ownership of the equipment.

Company will supply the customer with sufficient tape to mark the equipment~~.~~ and grid coordinate tag. The customer shall affix

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 41A

to each luminaire pole or location, a placard indicating ~~with~~their ownership, the customer's name ~~if the customer~~, and ~~(C)~~

a telephone number to report light outages. In addition, customer shall notify the public and the local municipality of the customer's ownership of and responsibility for the street lighting equipment in the areas served hereunder and shall publish and advertise a customer telephone number for public and municipal use in reporting malfunctioning equipment.

CHANGE IN SIZE AND TYPE OF STREET LIGHTING UNIT
~~CHANGE IN SIZE AND TYPE OF STREET LIGHTING UNIT~~

Written notice of any change in size or type of any components of the customer's street lighting system ~~by location is furnished by customer~~shall be communicated to the Company not more than 14 days after the date of such change.

MUNICIPAL TRAFFIC SIGNAL LIGHTING SERVICE

This Rate Schedule is in the process of elimination and service hereunder is available only to existing locations continuously supplied hereunder as of August 26, 1976.

APPLICATION OF RATE SCHEDULE TS(R)

This Rate Schedule is for traffic signal lighting service to cities, boroughs, and townships. The minimum under this rate schedule is 50 watts.

NET MONTHLY RATE

Distribution Charge

~~NET MONTHLY RATE~~

~~Distribution Charge~~

~~7.496 cts.~~8.967 cents per watt of connected load.

~~(I)~~

Transmission Service Charge

The Transmission Service Charge included in this Tariff applies to all KW and/or KWH billed under this Rate Schedule. Customer is responsible for applicable charges under the TSC rate schedule.

Generation Supply Charge -1

The Generation Supply Charge -1 included in this Tariff applies to all KWH billed under this Rate Schedule. customer is responsible for applicable charges under the GSC-1 rate schedule.

The number of KWH supplied is based upon the average hours use and size of lamps.

MONTHLY MINIMUMS

The Minimum Billing Demand is 50 KW. The Monthly Minimum Distribution Charge is 50 KW times the demand step of the effective Distribution Charge. The Monthly Minimum Capacity and Energy Charge is 50 Watts times the effective Generation Supply Charge - GSC-1.

RIDERS

The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this ~~STATE TAX ADJUSTMENT SURCHARGE~~

~~The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this~~ Rate Schedule.

~~RIDERS~~

~~The Riders included in this Tariff that apply to this Rate Schedule are listed in the Rider Matrix on Page 14D.~~

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge included in this Tariff is applied to charges under this Rate Schedule.

PAYMENT **(C)**

The above net rate applies when bills are paid on or before the due date specified on the bill, which is not less than 15 days from the date bill is mailed via the U.S. Postal Service or mailed electronically. When not so paid the gross rate applies which is the above net rate plus 5% on the first $200.00 of the then unpaid balance of the monthly bill and 2% on the remainder thereof.

CONTRACT PERIOD

Service under this Rate Schedule is for an initial term of one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

APPLICATION PROVISIONS

Service hereunder is applicable under the following conditions:

(a) All the space heating requirements on customer's premises, or in customer's building or newly constructed section thereof, are supplied hereunder through a separate meter from the same point of delivery and at the same voltage as the general service.

(b) Use of service for comfort cooling air conditioning, for commercial cooking and for automatic storage type water heaters with thermostatically controlled non-inductive heating units, may be included hereunder in connection with and on the same premises as the space heating equipment. This does not include ventilating fans, water for process purposes and plug-in commercial cooking appliances not used with commercial electric ovens and ranges.

(c) Supplemental use of renewable energy sources such as wood, solar, wind, and water is permitted in conjunction with service supplied hereunder without violating the total electric energy requirement of this Rate Schedule. Any customer system of this type that produces electric energy may not be operated concurrently with service supplied by the Company except under written agreement setting forth the conditions of such operation.

~~Customer Assistance Program (CAP)~~

~~**PPL Electric Utilities Corporation**~~

~~**OnTrack Program**~~

~~1. Program Description~~

~~1.2. Overview~~

~~OnTrack is a special payment program for low-income households at or below 150 percent of the federal poverty level who have trouble paying the full cost of their electric bill. OnTrack is PPL Electric Utilities Corporation's (PPL Electric, PPL, or the Company) Customer Assistance Program (CAP) and is one of its Universal Service Programs (USP). This program, funded by residential customers and administered by community-based organizations, started as a pilot in 1993.~~

~~The primary features of OnTrack include:~~

- ~~A reduced fixed payment amount based on ability to pay~~
- ~~Arrearage forgiveness over a specified period of time (18 months)~~
- ~~Protection against shutoff of electric service~~
- ~~Referrals to other programs and services~~

~~PPL Electric establishes an 18-month debt forgiveness timetable for all new OnTrack enrollees. The customer's outstanding balance amount is reviewed at the time of enrollment and the overdue amount is frozen. The outstanding balance is forgiven in a straight-line method. Equal installments are forgiven over the 18-month time period. The debt forgiveness installments are shown on the customer's statement of account and in the Company's Customer Service System (CSS) as arrearage forgiveness credits.~~

~~The 18-month forgiveness timetable provides benefits to customers and the Company. From customers' perspectives, they are able to see significant progress every month as the debt owed to PPL Electric becomes smaller and smaller. This helps motivate customers to continue making on-time payments and managing their usage to remain in the program and ultimately see the pre-program arrears amount (overdue balance) get to zero. The Company benefits by receiving a timely recovery of costs and ultimately lower overdue receivables.~~

Electric Pa. P.U.C. No. 202
Original Page No. 42

~~1.3. Background~~

(C) Indicates Change (D) Indicates Increase (I) Indicates Increase

3

In July 1992, the Pennsylvania Public Utility Commission (PUC or the Commission) adopted a Policy Statement that established guidelines for Customer Assistance Programs. The Commission encouraged all electric and gas utilities to implement CAP pilots. After receiving approval from the Commission for its pilot proposal, PPL Electric implemented OnTrack in December 1993. The pilot began in one region and expanded to all regions by June 1994. The Company agreed to enroll 2,000 low-income customers in OnTrack. PPL Electric stopped the pilot program on July 31, 1995.

On December 3, 1996, Governor Tom Ridge signed a law that increased competition in the electric utility industry. The new law gave consumers the opportunity to choose their electric generation supplier. The legislation required electric distribution companies to continue their various assistance programs (e.g., CARES, Operation HELP, OnTrack and WRAP).

As a result of its August 12, 1998 Re-structuring Settlement Agreement with all interested parties, PPL Electric agreed to expand OnTrack expenditures significantly from 1999 through 2002. During this four-year period, the program's annual budget increased from $5.875 million in 1999 to $11.7 million in 2002. In December 2007, as part of base rate case proceeding at Docket No. R-00072155, the Commission approved an annual funding level of $19.0 million for OnTrack. Actual total program expenditures for OnTrack over the past five years has been as follows: $54M in 2011, $47.1M in 2012, $55.2M in 2013, $72M in 2014, and $83.6M in 2015.

1.4. Objectives

PPL Electric recovers its universal service program costs through the Universal Service Rider (USR)[1]. The Company has proposed CAP expenditure funding of approximately $106 million in 2017, $118 million in 2018, and $129 million in 2019. PPL Electric has increased the number of active OnTrack participants by 26 percent to approximately 47,000 in 2015 from 37,200 in 2014 (as of December 31 for each year noted). For the 2010 through 2015 period, the Company had year-over-year growth rates of 16 percent, 8 percent, 2 percent, 2 percent, 9 percent, and 19 percent. PPL Electric has developed a strategy to increase the Company's ability to target low-income customers that are overdue and payment troubled. The key policy objectives for OnTrack are to:

~~1 As a part of the settlement agreement for PPL's 2007 distribution rate case, the Commission approved a reconcilable USR to recover appropriate costs for PPL Electric's CAP and weatherization program (WRAP).~~

1. Administer a cost-effective program;
2. Provide expanded services to low-income households;
3. Identify for enrollment those customers who meet the OnTrack guidelines;
4. Adhere to all PUC reporting requirements and policies; and
5. Identify and implement improvements to strengthen the effectiveness of OnTrack.

1.5. Statement of Purpose & Operating Objectives

In performing collection functions, PPL Electric gives careful attention to the wide variety of circumstances that can affect customers. Financial hardships, physical disabilities, family problems, and poor money management are but a few of the factors that can lead to non-payment of electric bills and, ultimately, overdue receivables and write-offs. The Company considers each customer's situation in determining the appropriate collection action. PPL Electric has structured and implemented OnTrack to address the needs of low-income customers while balancing financial, regulatory, and social interests.

The four primary operating objectives of the OnTrack program are to:

1. Improve customers' bill payment habits and attitudes;
2. Stabilize or reduce customers' energy usage;
3. Eliminate overdue balances for program participants; and
4. Provide the customer with other beneficial services and/or programs through a network of local community-based organizations (CBOs or agencies).

1.6. Payment Plan Design

A key feature of the OnTrack program is to establish payment plans based on the customer's ability to pay. To provide sufficient flexibility in the selection process and an appropriate payment plan, the computer system calculates a Percent of Bill and Minimum Payment plan option for each OnTrack participant. The system also has an Agency Selected (or custom) payment option for situations where the Percent of Bill or Minimum Payment option does not offer the best fit given the customer's situation.

~~For discussion purposes, it is important to note the difference between the Minimum Payment plan option that is calculated by PPL Electric's computer system versus the minimum payment control feature that is built-in to the~~

~~5~~

~~system. The Minimum Payment plan option is one of the three plans that an OnTrack customer could be placed on (discussed in more detail below), whereas the minimum payment control feature is a failsafe that does not allow a system user (e.g., OnTrack caseworker) to process a payment amount in the Agency Selected plan option field that is lower than $30 for electric heat customers or $12 for non-electric heat customers.~~

~~The table below shows the percent amounts that are used when the system calculates the Percent of Bill payment option.~~

~~Income Level (Percent of Poverty Level)~~	~~Percent of Bill Option Percentage Factor~~
~~0% - 50%~~	~~50%~~
~~51% - 100%~~	~~70%~~
~~101% - 150%~~	~~80%~~

~~PPL Electric calculates the Percent of Bill payment by multiplying the estimated annual bill by the applicable percent of bill percentage factor (see table above), adding the $60 annual arrearage co-payment (if the customer has pre-program arrearage), and dividing the total by 12 months in order to get the fixed monthly OnTrack payment (or installment) amount. The $60 annual arrearage co-payment is broken up in $5 monthly installments and is applied only to the pre-program arrearage balance for the account for which it was paid. The last step in this calculation is to add the CAP Plus amount to the installment amount (see page 7 and the CAP Plus table below). The estimated annual bill amount is defined as a rolling twelve-month view of the average actual bills. For example, if the average actual bill over the last twelve months equals $150, the estimated annual bill used in the Percent of Bill calculation would be $1,800 ($150 x 12). The Percent of Bill calculation using the 51% to 100% income level would be $1,800 x 70% = $1,260. $1,260 + $60 annual arrearage co-pay = $1,320. $1,320 divided by 12 months = $110 monthly OnTrack installment amount.~~

~~The Minimum Payment plan option amount is calculated by taking the customer's estimated monthly budget amount and subtracting the straight-line monthly OnTrack credit amount (i.e., $185/month for an electric heat customer or $73/month for a non-electric heat customer within the 101% to~~

~~150% income level), and adding the $5 arrearage co-payment (if the customer has pre-program arrearage). For example, the Minimum Payment calculation~~

~~6~~

~~for a non-electric heat customer with a $200 estimated monthly budget would be ($200 – $73) + ($5) = $132. The Percent of Bill and Minimum Payment options provide an automatic adjustment mechanism for gains or losses realized due to a customer's electric generation shopping choice.~~

~~The third payment plan option is Agency Selected Payment (ASP). This is a blank field where the caseworker enters a custom amount that is less than the Percent of Bill amount. The ASP plan takes into account extenuating circumstances that may be present within the customer's household and/or the financial situation the customer is facing. The ASP plan is also used to reset an OnTrack plan agreement after billing issues or account maintenance work is completed. Regardless of which payment option is selected for the customer, the system will not allow a payment amount to be lower than the minimum payment control feature of $30 for electric heat customers or $12 for non-electric heat customers, and will also have a control feature that will limit a customer's OnTrack payment consistent with the maximum energy burden levels in the CAP Policy Statement, subject to the minimum payment guidelines mentioned above.~~

~~The purpose is not simply to find the lowest payment amount; rather, the Company is trying to identify the payment amount that most closely matches the customer's ability to pay. PPL Electric believes that establishing a payment agreement amount that is too low results in greater costs for other residential customers who pay for the program through the USR. In addition, if a payment amount is selected that is too low and not in-line with the customer's ability to pay, the customer would risk reaching the maximum CAP credit amount. This situation would result in the customer being automatically transitioned to the OnTrack Budget Billing (OTBB) status. The OTBB standing in the program is still beneficial because the customer receives debt forgiveness and OnTrack credits (if applicable), but the customer's fixed monthly payment amount is increased from his or her normal OnTrack amount to their budget billing amount.~~

~~OnTrack evaluation work done by the Applied Public Policy Research Institute for Study and Evaluation has demonstrated that a reliable predictor of customers' success or failure is the difference between their OnTrack payment amounts and what they managed to pay prior to joining the program. In other words, if OnTrack payment plans are set too high, even though they are within~~

~~the percentage of income guidelines, customers default because they cannot make the payments. This is particularly true for electric heat customers.~~

~~7~~

~~Compared with other electric utilities in Pennsylvania, PPL Electric has a high saturation of electrically-heated homes.~~

~~The 2015 average monthly bill for an electric heat and non-electric heat customer were $181 and $118, respectively. The average monthly OnTrack bill for an electric heat and non-electric heat customer were $107 and $67. The average OnTrack bill amounts mentioned above exclude the CAP Plus amounts that were added to customers' bills beginning in late 2011. The historical CAP Plus amounts are shown in the table below.~~

~~Time Period~~	~~CAP Plus Amount~~
~~November 2011 – October 2012~~	~~$8.00~~
~~November 2012 – October 2013~~	~~$5.00~~
~~November 2013 – October 2014~~	~~$2.50~~
~~November 2014 – October 2015~~	~~$4.00~~
~~November 2015 – October 2016~~	~~$3.00~~

~~The CAP Plus amount stems from the Company's 2010 distribution rate case settlement (Docket No. R-2010-2161694). The purpose of CAP Plus is to help offset program expenses for all residential customers who pay for OnTrack through the reconcilable Universal Service Rider. The Company determines the CAP Plus amount by taking the total amount of LIHEAP funding received by OnTrack participants, dividing that dollar amount by the number of active OnTrack accounts as of September 30, and then dividing that annual amount by 12 months. The CAP Plus payment amount is applicable to all OnTrack participants and may change annually, as shown above, depending on the level of federal funding available for LIHEAP. PPL Electric includes the CAP Plus payment amount in the formulas for the Percent of Bill option and the Minimum Payment option. When the Agency Selected option is used, the CAP Plus amount is also included. OnTrack customers who have a credit balance due to a LIHEAP grant are exempt from the CAP Plus charge until they have exhausted their credit balance.~~

~~PPL Electric offers three payment plans approach for the following reasons:~~

~~1. The three payment plan design provides a simple model and sets the foundation for the core component of the program, but it also provides some flexibility for customers. Having three payment options relieves the~~

~~"one size fits all" approach. PPL believes each household could present different situations, and having some flexibility regarding the payment amount allows the Company to take these situations into consideration.~~

2. The payment plan design is understood by customers and stakeholders. The calculations behind the payment plans do not include complex algorithms or assumptions, thereby making the OnTrack payment amounts relatively easy to understand.
3. All the payment plan designs result in a fixed monthly payment amount for the customer. Previous research conducted by Opinion Dynamics and APPRISE indicated the fixed monthly payment is a feature that OnTrack customers prefer and is tied to success, meaning retention, in the program.
4. One of the primary objectives of OnTrack is to improve customers' bill payment habits. The ability to offer three payment options and select the one that fits the customers' circumstances should help increase on-time payments.

2. Eligibility

2.1. Eligibility Criteria for Participation in the Program & Removal Requests

OnTrack offers qualified customers payments less than their current bills, arrearage forgiveness and a chance to get a fresh start with PPL Electric. In addition, the Company coordinates referrals with other low-income assistance programs such as WRAP, Operation HELP, LIHEAP, as well as other programs administered by the CBOs that administer OnTrack.

PPL Electric designed OnTrack specifically for low-income customers with household income at or below 150 percent of the poverty level who are unable to pay their electric service bills in full. Eligibility criteria for OnTrack include:

1. The household must be at or below 150 percent of the poverty level.
2. The household must have a source of income or provide a form explaining their income situation. This form, and the parameters around it, will be submitted as an addendum within 60 days of plan approval. In the past, PPL has seen the topic of a customer claiming zero income to be one of confusion. In order to clarify zero income claims the Company will follow these guidelines, but is open to making exceptions for households based on specific circumstances.

~~a. The OnTrack application has wording that tells the customer to specify income, even if the income is unearned. Unearned income can come in the form of government assistance (temporary or long-term), public assistance grants, money from friends or relatives, and other one-time lump-sum payments. Examples include:~~

~~9~~

~~Temporary Assistance for Needy Families (TANF); Diversion Program; State Blind Pension Program; Refugee Cash Assistance Program; and State Supplementary Payments. Support payments that are actually paid to the household can be included if verified and documented as such.When a customer's only source of income is unearned income of this type, a simple self-declaration statement needs to be submitted with the OnTrack application. This self-declaration statement does not need to be notarized. This statement is essentially the proof document that tells the Company how the customer is paying for basic living needs such as food, shelter, personal items, etc.~~

~~3. The customer applying cannot own or be listed on multiple properties/multiple PPL accounts.~~
~~4. The customer must permanently reside in PPL's service territory.~~
~~5. The customer applying may or may not have an overdue balance owed to PPL.~~
~~a. The standard operating procedure (SOP) for new enrollees is for the enrollee to have an overdue balance amount. However, PPL realizes there are situations where new enrollees may be in need of the program and have a balance amount of zero. These zero balance households will be considered eligible for the program, but the Company will not target these zero balance households as a part of its normal business procedure. Specifically, this means the PPL referral system will be set up to find potential good fits and the overdue balance amount indicator will be one of the attributes. However, the program management team has the flexibility to change this operating procedure/setting at any point throughout the year based on items such as trends within the PPL service territory (i.e. payment habits or data across the low-income population), customer/program needs, interests from stakeholders, or current issues facing the Company or the low-income population.~~
~~b. This part of the eligibility criteria allows the Company to serve and target those who are in most need of the program. For definition purposes, new enrollees are customers that could have been previously enrolled in OnTrack or they could be entering the program for the first time. For example, a household enrolled in May 2013, removed in May 2014, but re-enrolled in May of 2016 would be considered a new enrollee in the program.~~

~~There a few notable differences between the eligibility criteria discussed above and the criteria from the prior 2014-2016 USECP. First, the prior USECP stated the customer must have a source of income but did not go into any further detail regarding that rule. The current USECP provides more insight~~

regarding how the PPL program management team will deal with zero income situations when they arise.

Second, the prior 2014-2016 USECP stated the customer must be payment troubled and defined payment troubled as having entered into a payment arrangement with the Company within the past 12 months. The existence of a payment arrangement also means the customer has an overdue balance owed to PPL, even though the prior 2014-2016 USECP did not specifically state that using the words "overdue balance." The current USECP has eliminated the overdue balance requirement and has provided some specifics regarding the standard operating procedure that will be followed by the Company. The Company will generally target customers with an overdue balance, but as the need changes, so will this standard procedure.

Third, the prior 2014-2016 USECP eligibility section discussed how OnTrack graduates are able to reapply to the program after a certain amount of time has elapsed. This item is not discussed in the current USECP because PPL has eliminated the graduation process. Under the prior USECP, at the recertification point a caseworker would follow general rules of thumb in order to determine if the customer could be removed from the program (graduated). In order to make this decision, the caseworker would review information such as payment history and compare the OnTrack installment amount to the budget bill amount. If the customer displayed good payment habits and the OnTrack installment amount was close to the budget bill amount (defined as around 10%), the customer may be graduated from the program. At that point, the customer would be placed on the budget billing program or be required to pay the full actual bill amount each month. The Company has eliminated this graduation process because it believes the low-income population will always face challenges when it comes to meeting financial obligations. As a result, PPL has shifted its approach to having the customer request removal from OnTrack. At any point during enrollment in the program, the customer may request removal from OnTrack. This request could come in the form of a verbal or written request. The customer could make the verbal request for removal by contacting the PPL Contact Center (CC), or the CBO. Written requests via a hard copy letter could be sent to the PPL CC or the CBO. The PPL CC address is 827 Hausman Road Allentown, PA 18104. Online requests could be submitted at the following location: https://www.pplelectric.com/my-account/web-contact-us.aspx. The customer will receive a confirmation letter or email reply once he or she has been removed from OnTrack.

~~Fourth, the prior 2014-2016 USECP did not include a control feature for the Agency Selected Payment option. This new feature will ensure that the~~

customer's OnTrack amount falls within the maximum energy burden levels in the CAP Policy Statement, subject to the minimum payment guidelines.

Finally, the company has increased the maximum allowable duration for OnTrack Lifestyle (OTLS). OnTrack Lifestyle will be discussed in more detail, in Section 2.3. OnTrack Lifestyle is a special program feature for customers with housing expenses that exceed income. The maximum duration was previously six months under the Company's 2014-2016 USECP. Customers in OTLS must submit their updated income information every nine (9) months. This provides a check up for the customer, which ensures that the Company is accurately documenting their income situation and aligning their payment with the most recent information.

2.2. Determining and Calculating Income

Caseworkers count all OnTrack applicant household members, regardless of relationship, when determining household size and income. Caseworkers will include Social Security Income (SSI) or Social Security Disability (SSD) received for children as household income. In determining household income for a self-employed potential OnTrack customer, the CBO caseworkers follow the Pennsylvania Department of Public Welfare's LIHEAP guidelines. These guidelines are included in DPW's annual LIHEAP State Plan.

2.2.1. Income Counted

To determine the income level for a customer, the CBO must count income of the following persons:

1. The household members, regardless of relationship. This could include household members who are related by blood, marriage, or adoption as well as household members who are not related.

2.2.2. Income Documentation

Income documentation requirements (referred to as proof or proof of income) refer to the specific paperwork submitted by the customer to the agency via U.S. mail, fax, or email. This documentation is used by the agency caseworker for purposes of calculating household income and determining if the customer

~~is eligible (or not) for the program. Income documentation could include pay stubs from employers, pay stubs from government organizations, self-declaration statements describing money received from family or friends, bank~~

~~statement showing direct deposit information, or official tax return documents. If the customer is self-employed or owns a small business, the income documentation must include a copy of the latest federal income tax return and net profit (not gross income) will be used to determine eligibility.~~

~~2.2.3. Income Defined~~

~~The following income definitions are in line with the Pennsylvania Department of Human Services Low-Income Home Energy Assistance Program (LIHEAP) guidelines. Income is the total earned and non-earned income of a household and includes the following:~~

~~1. Employee earnings: Employee earnings are money, including wages, salaries, bonuses, commissions and tips, before taxes or other deductions that a person receives for providing services on behalf of an employer.~~

~~2. Profit from self-employment: Profit of a self-employed person is gross receipts minus costs of operating a business or farm, practicing a profession, providing day care for children in an approved family day-care facility, or renting nonresident real property.~~

~~a. The following expenses are among those that are not deductible from gross receipts:~~

~~i. Depreciation.~~
~~ii. Personal business and entertainment expenses.~~
~~iii. Personal transportation.~~
~~iv. Purchase of capital equipment.~~
~~v. Payment on the principal of loans for capital assets or durable goods.~~

~~3. Income from roomers, boarders, or apartment renters: Gross income from providing room or board, or both, or from apartment rentals paid directly to a household member.~~

~~4. Unearned Income: Unearned income includes, but is not limited to, the following:~~

~~a. Public assistance grants.~~
~~b. Social Security benefits.~~
~~c. Workers' compensation (or disability).~~

~~d. Supplemental Security Income.~~
~~e. Unemployment compensation.~~
~~f. Support payments (child, foster care, spousal, etc.).~~
~~g. Cash gifts and contributions.~~
~~h. Pensions.~~
~~i. Interest and/or dividends from investment or bank accounts.~~
~~j. Veterans' benefits.~~

13

k. Funds withdrawn from Individual Retirement Accounts, Certificates of Deposit and proceeds from the sale of stock certificates.
l. Disability.
m. Money/income received from a family member or friend. This type of income must be documented with a simple statement. The statement does not need to be notarized.
n. Social Security Income or Social Security Disability received for a child.

5. A loss from one source of income cannot be used to offset another source of income.

2.3. OnTrack Lifestyle Feature (OTLS)

There is a special household situation where the Company will enroll a customer into OnTrack but require the customer to update their income information every nine months. The Company refers to this special situation as OnTrack Lifestyle (OTLS). The purpose of the Lifestyle feature is to address situations where customers' incomes are less than or equal to their mortgage payments or rent, but they are not in foreclosure or facing eviction. If a customer is facing foreclosure or eviction he/she will not be eligible for OTLS. In effect, customers reported that they did not have enough income but somehow managed to pay their mortgage/rent and OnTrack payments. This gave rise to concerns that customers might not be reporting all sources of household income or other resources.

The purpose of OnTrack Lifestyle is to provide a check-up for the customer, which ensures that the Company is accurately documenting their income situation and aligning their payments with the most recent information. As long as a customer continues to update their income information every nine months, and they still meet the income requirements, he or she can remain in the program.

3. Potential Participants & Needs Assessment

Matching the proper assistance program with each potential applicant is an overriding objective in PPL Electric's administration of the Universal Service Programs. PPL Electric personnel, as well as the community-based organizations that cooperate with the Company in administering these

~~programs, seek to ensure that eligible residential customers have an opportunity to successfully maximize the benefits available to them via OnTrack, WRAP, Operation HELP, LIHEAP and other related programs.~~

~~14~~

~~PPL Electric used the 2013 U.S. Census data file as the foundation for estimating households below 150% of the Federal Poverty Level (FPL). The 2013 Census data set provides estimates at the county level. The Company averaged the percentages for the 29 counties within PPL Electric's service territory and applied that percentage to the average monthly residential customer count. The average monthly residential customer count used was 1,226,583[2]. This resulted in 325,879 estimated households below 150% of the FPL.~~

~~It is important to note that not all of these low-income customers would be eligible for OnTrack for several reasons. Some examples are:~~

- ~~Some customers will be over 150% of the FPL if they were asked to provide proof of actual income; this could be timing related (change in jobs, working hours, pay rate, etc.)~~
- ~~Some will not be payment-troubled and/or have an overdue balance,~~
- ~~Some live in master-metered apartments,~~
- ~~Some are hard-to-reach (language barriers, access to technologies, handicaps, etc.), and~~
- ~~Some choose not to participate in PPL's programs.~~

~~The Company's past performance indicates the following (data 12/31/15):~~

- ~~On an average monthly basis, PPL has approximately 1,226,000 residential households. Of this total, the Company estimates a low-income household (monthly average) of approximately 174,000[3]. This is an internal estimate based on previously supplied financial statement information by the customer and includes data for customers with incomes up to 150% of FPL.~~
- ~~Of the 1,226,000 households, approximately 47,500[4] (or 4%) per month had an overdue balance and were on a payment arrangement. Of the 174,000 low-income households, approximately 27,700[5] (or 16%) per month had an overdue balance and were on a payment arrangement.~~

~~To assist those most in need, PPL Electric regularly identifies and contacts residential customers who meet the income guidelines and have overdue~~

~~[2] The data source for the average monthly residential count is the 2015 Universal Service Reporting Requirements (USRR) submittal, number six.~~

~~[3] Source is 2015 Universal Service Reporting Requirement (USRR) data~~

~~[4] Source is 2015 Universal Service Reporting Requirement (USRR) data~~

~~[5] Source is 2015 Universal Service Reporting Requirement (USRR) data~~

balances. Depending on factors such ability to pay, payment history and extenuating circumstances, the Company routinely refers these customers to OnTrack, Operation HELP, CARES, and LIHEAP.

3.1. Referrals / Enrollment

PPL Electric has found that the primary source of potential OnTrack participants is referrals from the Company's Customer Service Representatives ("CSRs") and/or Customer Service contractors. CSRs have daily contacts with low-income, payment-troubled customers with overdue balances and routinely refer these customers to the CBOs that administer the program. During 2015, for example, the referral process generated approximately 200,000 referrals to OnTrack administering organizations prompted by information provided by customers.

PPL Electric developed an online application which was designed and created with the customer in mind. In addition to making applying easier for the customer, the process also shortens wait times by eliminating mailing delays with paper applications. To apply, the customer goes to www.pplelectric.com/OnTrack . The customer navigates through an intuitive series of screens providing the information to determine eligibility into the OnTrack program. The customer has the option of uploading their proof of income, or mailing this information in to the agency who implements the program in their area. The online system provides the customer with the name and contact information, including email address, for the agency in their area if they decide to mail in their proof of income or if they have any questions. Applications are automatically routed to the agency who implements the program in the customer's area. The agency reviews the application and processes for enrollment.

The Company takes steps to contact hard-to-reach customers within its service territory. A team of employees within the Customer Services Department is responsible for communicating the Company's programs and services offerings at local events such as senior citizen fairs, community events, and school events. Employees engage with participants at these events, educate customers about program benefits, and provide program information. PPL Electric also

~~has a language phone line to communicate with customers in approximately 170 languages.~~

~~16~~

~~In addition, other sources of potential participants may include internal lists, OnTrack CBOs, LIHEAP-based data, and information from other PPL programs.~~

~~4. Control Features~~

~~4.1. Recertification after 18 Months~~

~~The normal program timeline is 18 months. A new enrollee will enter the program and receive a payment plan amount based on his/her ability to pay. Ability to pay means the enrollment and screening process takes into account the customer's current financial situation and household size. Based on these factors, the CBO caseworker selects a payment amount that appears to set the customer up for success in the program. Success in the program is primarily defined as making on-time payments, eliminating any pre-program arrears (overdue balance), and preventing additional arrears from accumulating.~~

~~At month 17 the recertification process begins. The system reviews OnTrack accounts and looks for accounts that qualify for automatic recertification. Accounts that qualify for automatic recertification are those that have received LIHEAP funds within the past 16 months or have Supplemental Security Income (SSI) as the primary source of income. Accounts that meet the automatic recertification criteria will be recertified for another 18 months in the program at the same OnTrack installment amount. This automatic recertification feature will not occur two consecutive times. At month 18, accounts are reviewed again for automatic recertification. This second review is completed in order to identify any accounts that may have recently received a LIHEAP grant. OnTrack Budget Billing accounts are also eligible for automatic recertification as long as they have received LIHEAP in the last 16 months or have SSI as their primary source of income. When OTBB customers are automatically recertified, they will return into regular OnTrack at the conclusion of their 18-month program cycle.~~

~~A program cover letter and application is sent to customers who do not qualify for automatic recertification. The CBO caseworker completes the recertification review for the customer, sets up the new OnTrack installment amount, and sends the customer a post enrollment package with information about the~~

~~program and his/her payment amount. Customers remain enrolled in the program even after the pre-program arrears (overdue balance) have been forgiven.~~

Under the Company's previous 2014-2016 Universal Service and Energy Conservation Plan, some customers were graduated, meaning removed, from the program. This program feature no longer applies because the Company believes limited income customers face ongoing challenges meeting their financial obligations. Providing a reduced energy burden alleviates some of this pressure on the customer while avoiding potential collection costs that will be borne by the Company and, ultimately, ratepayers. The Company's OnTrack program is available for any customer who meets the eligibility criteria as described in Section 2.1. Prior enrollment in the program is not a disqualifying factor. If the customer is removed before the full 18-month term, the OnTrack Budget Billing process will ensue (see Section 4.2 below for more detail), but the customer is still eligible to re-enroll in OnTrack at the end of the 18-month timeline if they are not automatically recertified based on the criteria above. In addition, if a customer was previously enrolled in the program in prior years but still meets the eligibility criteria, he/she will be eligible for enrollment. Any pre-program arrears that may have been accumulated while not enrolled in the program will be forgiven during his/her time as an active member in the program.

4.2. Minimum Payment Amount & Maximum CAP Credits

The minimum payment control feature within the system will not allow a monthly payment amount to be less than $30 for electric heat customers and $12 for non-electric heat customers. The maximum 18-month revenue shortfall amount (also referred to as CAP credits or benefits) for electric heat customers and non-electric heat customers are shown in the table below and are different based on where the customer falls within the three tiers of the Federal Poverty Level (FPL) and whether the customer has electric heat.

FPL Tier/Level	Account Classification	Maximum Credit Amount That Could Be Used Over 18 Months
0% to 50%	Electric Heat	$4,027
51% to 100%	Electric Heat	$3,661
101% to 150%	Electric Heat	$3,328

~~0% to 50%~~	~~Non-Electric Heat~~	~~$1,585~~
~~51% to 100%~~	~~Non-Electric Heat~~	~~$1,441~~
~~101% to 150%~~	~~Non-Electric Heat~~	~~$1,310~~

~~18~~

~~The program design does not restrict customers from using these maximum amounts in a fixed or straight-line fashion. Customers who are active in the program will have different revenue shortfall amounts each month because the actual revenue shortfall amount will be calculated by taking the actual bill amount minus the (fixed) OnTrack installment amount.~~

~~If a customer exceeds these maximum credit amounts before the 18-month point, the customer will be automatically moved to a program status referred to as OnTrack Budget Billing (OTBB). When this occurs, the OTBB activation letter is sent to the customer and informs him/her of this change in status. The OTBB activation letter also informs the customer that PPL Electric will automatically send a program application when the time comes for recertification/re-enrollment, which is 18 months from the original enrollment date in OnTrack, unless the customer has SSI as their primary source of income or they have received LIHEAP in the last 16 months. If so, they will be automatically enrolled.~~

~~The customer will receive a letter when the pre-program arrears amount (overdue balance) is at zero. This point in time also corresponds to the recertification point. This letter, referred to as the *OTBB All Is Forgiven* letter, recaps the customer's transition from traditional OnTrack to OnTrack Budget Billing. The end of the letter states that all of the overdue balance has been eliminated, but PPL still wants to help you by re-enrolling you in OnTrack at a payment amount that is lower than what you are currently paying. The customer is informed that a program application has been mailed in a distinctive gold-colored envelope.~~

~~These tiered maximum CAP Credit limits will be implemented to all OnTrack customers within three months upon final approval of the 2017-2019 USECP.~~

~~4.3. Default Design: Removal for Non-Payment & Reinstatement~~

~~The Company designed the OnTrack program with the idea of balance in mind. PPL Electric believes the energy burden reduction needs to be balanced against the need to hold limited income customers accountable for making on-time payments. The Company's billing system runs on a chronological billed, due, review cycle. Actual payments received are woven into this cycle to determine how to treat the account. Essentially, this means the system bills the~~

~~customer, waits for the due date, and then reviews the account to see if any additional actions are needed based on what was billed versus payments actually received. The billed amount is also shown as the Pay This Amount on PPL's bill. Once a customer is enrolled in OnTrack, the system will be looking~~

~~19~~

~~for the OnTrack installment amount, plus any missed installments when the review moment occurs. At review, based on this aforementioned criteria, if the customer is behind he or she will either enter collections, or, if two or more installments behind, be removed from the program for non-payment (also referred to as defaulted).~~

~~If a customer is removed from the program due to non-payment, a letter is sent explaining what happened and the catch-up opportunity window opens. The catch-up opportunity window begins at the time of default. The OnTrack catch-up amount is the difference between what the customer should have paid (the billed OnTrack installment amounts) and the payments actually received from the customer.~~

~~When the customer submits a payment that is equal to the OnTrack catch-up amount, the Company's system will automatically re-enroll the customer back into the program at his/her prior OnTrack installment amount. In addition, any revenue shortfall and arrearage forgiveness credits are posted (credited) to the customer's account after the OnTrack catch-up amount is received. The system will also automatically reverse any previously billed late payment charges that may have been incurred by the customer during the catch-up window timeframe. These reversed late payment amounts will be shown as credits on the customer's account statement. Essentially, the payment of the OnTrack catch-up amount during the opportunity window restores the customer back into the program as if he/she never left.~~

~~If a previously active OnTrack customer is removed from the program for non-payment and the electric service is terminated, the OnTrack catch-up amount will also represent the reconnect amount for the customer at any time during the 18-month program cycle.~~

~~One missed payment may result in the customer entering the collections process. An exception to this process is an active OnTrack customer who misses a payment of less than $60. No collection activity will ensue for a missed payment of less than $60. There is a distinction between missed installments equaling two or more and resulting in a default status (explained in detail above) versus a customer who misses one installment of $60 or more. Since the program is designed with on-time payments as a component of customer accountability, one missed payment may lead to electric service termination during non-moratorium months. If an active OnTrack customer~~

~~falls into the collection process after one missed payment and has his/her electric service cut, the reconnect amount will be equal to the missed OnTrack payment amount.~~

The Company has messaging in place to remind customers of the benefits of paying the bill by the due date. Five (5) days before the due date, the Company's system will deliver a short reminder phone call to the customer. In addition, if the customer misses one payment, a letter is sent and informs the customer about the missed payment. This letter also discusses the possibility of entering the collection process and having the electric service terminated.

4.4. Other Reasons for Removal from OnTrack

As previously discussed, the most common reason for removal from the program is due to missed payments. Other less common situations that may result in removal include the following:

1. Customers who failed to provide access to their meters may be removed. Reinstatement to OnTrack will occur when the Company confirms that the customer has provided access to the meter.
2. Customers who fail to provide the necessary proof of income during the recertification process. Reinstatement to OnTrack occurs if the customer responds to the contact(s) made the by caseworker and provides the necessary proof of income information.
3. Customers who request removal from the OnTrack program may be removed at any time. If the customer requests reinstatement, they are given the opportunity to catch-up on any outstanding OnTrack payments at any time during the 18-month cycle.

4.5. Energy Burden Control Feature

The Company has a built-in safety net that will not allow a customer's OnTrack installment amount to be more than the appropriate percent of his/her

monthly gross income based on the maximum energy burden levels listed in the CAP Policy Statement. This control feature is a ceiling used by PPL's system behind the scenes as payment plan options are being calculated. The system calculates all of the possible plan types and if all of those payment amounts produce a number that is higher than the appropriate percent of the customer's monthly income based on the maximum energy burden levels listed in the CAP Policy Statement, the system implements the corresponding percent of income in order to calculate the OnTrack installment amount.

4.6. Recalculating OnTrack Customers that Move

~~Under the Company's previous 2014-2016 USECP, when an OnTrack customer moved from one residence to another, their OnTrack amount was only recalculated if their heat source changed from electric to non-electric,~~

or vice versa. In the 2017-2019 USECP, the OnTrack amount will be recalculated at the new address regardless of a change in heating source.

4.7. Weatherization, Energy Education & Consumption

OnTrack administering agencies and/or WRAP contractors are responsible for providing energy education information to program participants. The material provided to OnTrack customers at the time of enrollment explains the customer's responsibility for not exceeding the OnTrack credit amount. The energy education material distributed by the agencies also provides the customer with energy conservation tips and recommendations for controlling and/or decreasing their electricity consumption.

Energy conservation education plays an important role in helping OnTrack customers achieve success in the program. Through the OnTrack and the Winter Relief Assistance Program (WRAP) partnership, PPL Electric attempts to increase customers' awareness about using energy wisely and to offer ideas for reducing kWh consumption. Specifically, customers may receive consumer education in the following areas:

- Energy conservation tips
- Electric bill and analysis of usage
- Light-emitting diode (LED)
- Promotion of PPL Electric's online Bill Analyzer tool

PPL Electric channels this aspect of the program through WRAP, which is a partnership program that helps qualified customers reduce their energy use, lower the amounts of their electric bills, and make their homes more comfortable year-round.

The Company offers WRAP to OnTrack customers who have electric heat or electric water heating, as well as baseload customers who have the potential to receive energy-saving measures. Under the umbrella of Universal Service Programs, the Company provides weatherization measures, specifically approved appliance replacements and energy conservation education services to qualified customers. All installed measures must meet the PUC's payback criteria. Weatherization activities for WRAP include energy audits, infiltration

~~control, insulation measures, water heating treatment, appliance replacement, and energy education.~~

The Company's normal business process does not give any sort of preference or priority to OnTrack customers who are seeking or waiting to receive WRAP services. However, the Company will accelerate WRAP activities if the customer or caseworker reaches out to PPL Electric and makes such a request. The Company takes proactive steps regarding WRAP outreach activities for newly enrolled OnTrack customers. As a part of its normal business process, PPL Electric contacts new enrollees and encourages them to apply for WRAP services. The preference order for this outreach contact work is to contact new enrollees with the highest usage before enrollees that are showing a lower usage amount. By June 2018, the Company will implement an automatic WRAP enrollment process for OnTrack customers with high usage.

It is not PPL Electric's intent to make WRAP services available only to OnTrack customers at the expense of other deserving customers. However, the

Company believes that expediting a WRAP services request from an OnTrack customer may result in greater post-weatherization savings due to strong interest from the customer.

WRAP has incorporated the OnTrack high-energy usage approach as a best practice. In addition, PPL Electric provides energy education for OnTrack customers who are ineligible for WRAP. This includes households that received WRAP within the past seven years and homes that do not receive property owner consent.

4.7. Advisory Panel

PPL Electric will establish a universal service stakeholder group that meets at least twice per year. The intent of the stakeholder group is to improve PPL's universal service programs through sharing information and inviting feedback.

5. Customer Encouragement & Responsibilities

Success in the OnTrack program demands focus from the customer and the Company. PPL Electric is committed to providing the customer with all the information, education material, and tools to make on-time payments and control energy usage. In many cases, the customer needs to change existing

~~habits that will keep his or her payment plan current and the usage under control. To further strengthen this partnership between the two parties, the Company attempts to partner other services that may help the customer remain in the program.~~

~~23~~

~~Since applicants can choose where to send their LIHEAP payments (primary or secondary fuel vendor), eligible OnTrack participants are encouraged to apply for LIHEAP and to direct the grant to their electric bill. The Company will conduct outreach mailings to eligible participants to encourage increased awareness of LIHEAP. The Company will continue to have its management team meet with the CBOs and evaluate current issues facing OnTrack customers and, in some cases, develop action plans that could minimize or eliminate these concerns. Participation in programs such as weatherization, energy conservation education, budget counseling (provided by some agencies depending on location) and other related services are some of the other opportunities available to OnTrack participants.~~

~~The case management approach for the OnTrack program requires the coordination of both internal and external resources. These resources allow OnTrack customers to have a greater degree of control over their lives. The CBOs provide a post-enrollment package that contains all of the key information and actions the customer should take to remain in the program.~~

~~Some of the more specific customer responsibilities that will lead to success in the program are below. The failure to complete some of these responsibilities may result in removal from OnTrack. Reinstatement back into OnTrack will occur after the customer fulfills his/her responsibility.~~

1. ~~Respond promptly to OnTrack program referrals and/or recertification requests by completing the program application and providing income documentation/proof for all household income.~~
    a. ~~There is an exception. If a potential enrollee received a LIHEAP grant within the last 16 months there is no need to provide proof of income with the application.~~
2. ~~Make on-time payments while enrolled in OnTrack. One or more missed payment could result in collection action and the loss of electric service. Being behind and/or late two or more installments will result in removal and automatic reinstatement back into the program will occur if all missed payments are made.~~
3. ~~Contact the CBO if there is a change in household size and/or income.~~
4. ~~Use energy wisely. This includes partnering with WRAP and taking other actions that attempt to control or lower electricity consumption.~~

5. ~~Follow requests for information and/or appointments associated with WRAP. The failure to fulfill WRAP related requirements may result in removal from OnTrack and reinstatement back into the program will occur after the requirements are fulfilled.~~

6. OnTrack program participants must provide access to their electric meters. Failure to provide access to the meter may result in removal and reinstatement will occur once access is provided.
7. Follow applicable provisions outlined in 52 Pa. Code § 56.116 for OnTrack customers with medical certifications: "Whenever service is restored or termination postponed under the medical emergency procedures, the ratepayer shall retain a duty to equitably arrange to make payment on all bills." If an OnTrack customer fails to comply with this provision, the Company may remove the customer from OnTrack and advise the customer to establish a regular payment agreement.
8. Review the post-enrollment package and all customer letters/emails sent by PPL Electric. The customer should contact the CBO office or PPL Electric if he/she has any questions. The guidelines below provide direction regarding what office to contact (CBO or PPL). If the customer contacts the wrong office, the office representative helps to re-direct the customer.

Topic, Subject, Issue	Who To Contact
Change in household situation. Includes change in household size, income, and/or special situations.	CBO
Customer request to be removed early from the program.	CBO
Questions regarding the status of the application submitted (new enrollee or recertification).	CBO
Questions related to the following: • Billing (usage, suppliers, budget billing, etc.) • Payment • Collections and termination • Account maintenance • Help with online profile • How OnTrack works • Moving, transferring, or disconnecting service • Power outages • Property Damage • Tree Trimming	PPL Electric

6. Financial Posting Order for LIHEAP Funds & OnTrack Credits

~~PPL Electric Utilities is an authorized LIHEAP vendor. The Company receives and posts LIHEAP funds to customer's accounts. The Pennsylvania~~

~~25~~

~~Department of Human Services (DHS, formerly DPW, Department of Public Welfare) has determined that utilities cannot use LIHEAP cash grants to offset the costs of OnTrack credits (i.e., the difference between actual bills and OnTrack payments). As a result, the financial posting order for LIHEAP cash or crisis grants is as follows:~~

- ~~Missed OnTrack payments~~
- ~~Current OnTrack bill due~~
- ~~Payment of future OnTrack bills~~

~~If the OnTrack customer has a current account (defined as zero overdue money), any remaining LIHEAP grant monies will appear as an excess credit on the customer's account. The customer is not required to make his or her monthly OnTrack payments until the LIHEAP credit is exhausted. PPL Electric will not apply any of the LIHEAP cash or crisis grants to offset the cost of the OnTrack program.~~

~~Section 4.3 reviewed the program design criteria for the chronological order of billed, due, and account review within PPL's system. Payments received by the customer are woven into this timeline in order to determine if the Pay This Amount on the bill has been satisfied or not. The Pay This Amount is also referred to as the scheduled amount/installment. When an OnTrack customer pays their normal OnTrack amount, they are responding to the bill's Pay This Amount. Basically, this means they are current or they need to catch-up with program payments they are required to make as part of the agreement, via the bill.~~

~~If the customer keeps making his/her scheduled payments the account balance continues to reduce through arrearage forgiveness credits. There are instances where a customer pays exactly what should be paid, but the correct scheduled payments by the customer exceed the balance of the account. When this occurs, the system is designed to create an OnTrack Overpayment (OTOP) excess credit.~~

~~The OTOP credit is created when these current or accumulated balance overpayments for an active OnTrack customer cause the account balance to be reduced to less than $0. For example, a customer has an OnTrack installment amount of $100, which is reflected as the Pay This Amount on the bill and the account balance is $55. The customer pays $100. The system will create an~~

~~OTOP credit of $45 ($100 - $55). This $45 OTOP credit will be applied to the future Pay This Amount (scheduled payment), as shown on the bill.~~

~~7. Effective Practices~~

~~Staff from the PUC's Bureau of Consumer Services and PPL Electric discussed recommendations and findings regarding the latest six-year evaluation of the Company's Universal Service Programs. The Company has already implemented key findings that will add value to the program. In addition, PPL Electric is continually evaluating possibilities that will improve program design and delivery.~~

~~The PPL Electric management team and the OnTrack CBOs have demonstrated a capacity to administer the program; however, the management team is committed to finding new solutions and implementing features to improve the customer experience and to keep administrative costs at a reasonable level. In 2015, the administrative costs, as a percentage of total program costs, were approximately three percent (excluding internal PPL expenses). Below is a brief sample of recent or planned program improvements.~~

1. ~~The Company transitioned most OnTrack-related calls/inquiries to a dedicated team of contractors. This allowed the Company to deliver training to a smaller team of phone agents and work on escalated issues through a focused and more direct channel.~~
2. ~~The management team regularly delivers refresher training to the existing staff of CBO caseworkers. Specific scenarios are addressed and program memos are developed in order to document talking points and suggested follow-up actions.~~
3. ~~The management team is developing preliminary plans to offer a total web-based enrollment and screening system to customers. This system will streamline existing processes, provide transparency throughout all stages of the process, and improve the existing data tracking and analysis tools.~~
4. ~~The management team implemented a "You Were Recently Referred" reminder call. This call is made to customers who were recently referred (within the past week) and tells them to watch for a gold envelope that contains the application.~~

~~5. At the initial program application and enrollment stage, the customer does not need to provide proof of income if he or she received LIHEAP funds within the last LIHEAP program year.~~

~~6. If the customer's account shows LIHEAP funds posted within the last heating season (defined as the last 16 months to include situations when~~

currently in a heating season), the Company's system will automatically recertify the customer for another 18 months in the OnTrack program at the same payment amount. This automatic recertification will not occur two consecutive program timelines, which are defined as 18 months. For example, if automatic recertification due to the receipt of LIHEAP funds has taken place, this automatic feature will not occur at the next recertification point. The agency will request proof of income to evaluate the payment plan and update information during this manual recertification process.

7. If the customer's main source of income is Supplemental Security Income (SSI) and the most recent income statement is less than 375 days, the Company's computer system will automatically recertify the customer for another 18 months in the OnTrack program at the same payment amount. This automatic recertification will not occur two consecutive program timelines, which are defined as 18 months. For example, if automatic recertification due to SSI income has taken place, this automatic feature will not occur at the next recertification point. The agency will request proof of income to evaluate the payment plan and update information during this manual recertification process.
8. Utilize analytics/reporting tools to identify customers who received LIHEAP but are not enrolled in OnTrack. These customers are contacted and enrolled in OnTrack over the phone.
9. Utilize analytics/reporting tools to identify and reach out to customers who have not interacted with the Company and who are currently not in the program. The attributes within the system identifies these customers as good candidates for the program.
9. Team members regularly review customer-facing information, such as program letters and emails, for clarity and purpose. For example, the post-enrollment package was updated with a more appealing design and easier-to-understand wording.
10. OnTrack program information is included within termination notices, as a part of the normal collections process. This wording informs the customer about the availability of OnTrack and the benefits.

8. Shopping for Electric Generation Supply

PPL Electric supports the opportunity for an OnTrack customer to shop for an Electric Generation Supplier (EGS). The Company's Default Service Plan IV discusses the specific process design and philosophy regarding OnTrack shopping (Docket Number P-2016-2526627). This document could be found by

~~using the PUC's *Search For Public Documents* tool located at http://www.puc.pa.gov/about_puc/search_results.aspx. As of June 1, 2017, the only way for OnTrack customers to shop for their electricity is to enroll in CAP SOP. This special OnTrack shopping program allows OnTrack customers~~

to shop from an electric generation supplier at a discount of 7% off of PPL's price to compare.

9. Appeal Process

OnTrack participants maintain all their PUC dispute and complaint rights as outlined in 52 Pa. Code Chapter 56. Clearly, PPL Electric does not accept all applicants and it removes others for not completing one or more of the customer responsibilities, as outlined in Section 5. For those who believe they were treated unfairly, the following appeal procedures are available.

Step 1:

The applicant discusses his or her rejection/dismissal from the program with the regional Regulatory Programs Specialist, who investigates the reasons for rejection or dismissal.

Step 2:

If the customer is dissatisfied with the results of the discussion with the regional Regulatory Programs Specialist, he or she may file a complaint with the PUC.

0. Projected Participation Levels

PPL Electric will continue to work with internal and external resources in order to identify, engage, and enroll eligible customers. Projected participation levels are in the table below.

Program Year (as of the end of December)	Active OnTrack Households (Target/Estimate)
2017	57,000
2018	62,500
2019	67,500

1. Project Funding Levels

~~PPL Electric projects the following level of expenditures for OnTrack from 2017 through 2019. These projections include the core component costs of revenue shortfall (OnTrack credits), arrearage forgiveness, and external administration. These expenditures do not include PPL Electric's internal costs.~~

Program Year (January – December)	Project Program Expenditures (millions)
2017	$106 M
2018	$118 M
2019	$129 M

12. Resource Plan

PPL Electric uses a combination of internal resources, contractors, and CBOs to manage and deliver the OnTrack program. The PPL Electric management team of six employees consists of one Program Manager and five Regulatory Program Specialists. The Program Manager is responsible for the design and implementation of OnTrack and has the primary responsibilities of creating program strategy, developing operational and financial plans, preparing communications, and coordination external and internal resources. The Regulatory Program Specialists are primarily responsible for individual case management support and auditing/quality assurance.

Other internal resources, such as administrative employees, training staff, Customer Services supervisors, and analysts provide support functions for program communications and changes that need to be managed over the course of the year. PPL Electric utilizes call center contractors to handle most types of OnTrack-related phone calls. The Company uses Customer Service Representatives (CSRs), Universal Service Representatives (USRs), and call center contractors to handle the daily/weekly account level work that needs to take place after an OnTrack customer contacts PPL Electric. For example, CSRs or USRs will handle any account maintenance work including items such as: billing issues, payment issues, explaining OnTrack plan details, issuing referrals, customers who fall into the collections process and rate class investigations.

CBOs and other contractors also play a critical role in the delivery of the OnTrack program. PPL Electric will continue to use CBOs for eligibility screening, enrollment and recertification. The screening and enrollment work involves tasks such as, assessing documentation submitting by the potential enrollee, determining eligibility, and establishing the OnTrack payment plan in the system. The CBO staff completes similar tasks for customers during the

~~recertification stage. The Company utilizes other contractors to execute special projects, such as targeted outreach, phone enrollment, and customer education.~~

CBOs enroll and maintain customers on-line in real time through direct connections with PPL Electric's Customer Service System (CSS). The Company has provided appropriate letters to aid in customer contact, along with the necessary training in the use of CSS and the administration of OnTrack. The Company has given this information to each agency and their caseworkers in a comprehensive manual entitled *OnTrack Payment Program Procedures and Processes*. The list of OnTrack agencies, phone numbers and counties served follows. Presently, the CBO network of eight (8) organizations encompasses 54 employees located at sites throughout PPL's eastern Pennsylvania service territory. Within this team of 54 employees, there are eight (8) CBO

supervisors. The staffing levels at the CBOs may vary throughout the year based on workload demand and program needs.

14. How to Apply

There are multiple options for a customer to initiate the screening process for the OnTrack program. These options include the following:

1. During the payment assistance (phone call) interaction with the PPL contact center if the customer appears to be a good fit for the program, the system will automatically alert the CSR and a program application will be sent to the customer. The CSR will inform the customer that a program application is on the way.
2. The customer could call PPL directly at 1-800-342-5775 and request an application for the OnTrack program.
3. The customer could call his/her local CBO (see Section 15) and request an application for the OnTrack program.
4. The customer could visit his/her local CBO's website and download an application for the OnTrack program.
5. The customer could walk in to the CBO office and complete a program application or ask for assistance completing the application.
6. The customer could apply online at www.pplelectric.com/OnTrack .

The Company will continue to evaluate new options for applying to the program and move toward implementation when the benefits align with improving the customer's experience and the costs are reasonable.

~~15. OnTrack Community-Based Agencies & Counties Served~~

~~The table below lists the CBOs associated with PPL's OnTrack program, contact information, and counties served.~~

16. Organizational Structure of PPL Electric Staff

Corporate administration of PPL Electric's OnTrack Payment Program is the responsibility of the Regulatory Programs & Business Services group of the Customer Services Department. The staff provides program management and field personnel are responsible for the day-to-day administration of OnTrack. The key personnel include the following:

Program Management Staff:

- Christopher Cardenas, Vice President – Customer Services

- ~~Melinda Stumpf, Manager – Regulatory Programs and Business Services~~
- ~~Chris R. Schoemaker, Jr., Program Manager – Regulatory Programs and Business Services~~

Regulatory Programs Specialists:

- Gladys Malone – Lancaster and Harrisburg Regions
- Florence McNelis – Northeast and Central Regions
- Kristen Kelly – Northeast and Susquehanna Regions
- Jaclyn Baldwin – Lehigh Region

Administrative Support:

- Cheryl Mohr, Steno/Clerk

17. Summary of Difference Between Proposed Plan (2017-2019) and Current Plan (2014-2016)

The table below provides a description of the key program design changes.

ID #	Category	Current Plan (2014-2016)	Proposed Plan (2017-2019)
1	Recertification	At the recertification point, the caseworker (CW) evaluates the customer for possible graduation (removal from OnTrack).	At the recertification point, the CW will re-evaluate the customer's position and adjust the OnTrack plan amount, if necessary, and the customer will remain active in the program.
2	Eligibility	Part of the eligibility criteria is for the customer to have a payment arrangement within the past twelve months.	The new eligibility criteria will eliminate the need to have had a payment arrangement over the past twelve months. An overdue balance is not required for enrollment.
3	Controls	Maximum OnTrack credit amounts are set at $3,328 (electric heat) and $1,310 (non-electric heat) for use over 18 months, regardless of where customer falls within the FPL tiers (101%150%, 51%-100%, 0%50%).	Maximum OnTrack credit amounts are set based on an increasing scale; the lower FPL tiers are allocated a higher credit amount. Electric Heat: 101%-150% = $3,328

PPL Electric Utilities Corporation

ID #	Category	Current Plan (2014-2016)	Proposed Plan (2017-2019)
			0%-50% = $4,027 Non-electric Heat: 101%-150% = $1,310 51%-100% $1,441 0%-50% = $1,585
4	Controls	Company's built in safety net did not allow a customer's OnTrack bill amount exceed 16% of their monthly income.	Company has control feature that will limit a customer's OnTrack payment consistent with the maximum energy burden levels in the CAP Policy Statement, subject to the minimum payment guidelines.
4	Eligibility	OnTrack Lifestyle (OTLS) feature is available for customers to receive six months of benefits when household income is less than or equal to mortgage payments or rent.	OTLS feature is available for customers whose household income is less than or equal to their mortgage payment or rent. The will receive a check-up every nine months to ensure the Company is accurately documenting income and aligning customer payments with the most recent information."
5	Eligibility	Zero income situations were not clearly defined. The plan stated the customer must have income but did not elaborate and provide more details.	Zero income situations are clarified (see Section 2.1). Potential enrollee must have income and non-earned income situations are discussed in more detail.
6	Procedural	Company only recalculated the OnTrack amount for a customer that moved to a new residence if their heat source changed from electrically heated to non-electrically heated, or vice versa.	Company will recalculate the OnTrack amount for all customers moving from one residence to another.

~~Proposed Plan (2017-2019)~~	~~suppliers that offer rates up to 7% lower than PPL's price to compare.~~
~~Company will only charge the $5/month co-payment to OnTrack customers with pre-program arrearage. In addition, the Company will apply the $5 monthly arrearage co-payment only to a pre-program arrearage balance for the account in which it was paid.~~	
~~Company will meet twice a year with stakeholders to discuss Universal Service Program issues.~~	
~~Customer who voluntarily removes themselves from OnTrack can request and be granted reinstatement at any time within the 18-month cycle by making the missed OnTrack payments to date.~~	
~~Customers in OTBB who have SSI as their primary source of income or have received LIHEAP within the last 16 months are eligible for automatic recertification.~~ ~~Customers will zero income will still be permitted in the OnTrack program with completion and submittal of a zero income form.~~	
~~OnTrack customers can only shop from a select group of generation~~	

~~Winter Relief Assistance Program~~

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 42

~~(WRAP)~~

~~37~~

~~PPL Electric Utilities Corporation~~

~~Winter Relief Assistance Program (WRAP) 1.~~

~~Program Description and Overview~~

~~1.1. Background~~

~~The Winter Relief Assistance Program (WRAP) reduces electric bills and improves comfort for low-income customers. PPL Electric Utilities Corporation (PPL Electric or the Company) funds and administers the program.~~

~~Contractors conduct energy surveys or "audits," install weatherization measures and provide energy education. The Company also uses contractors to conduct quality assurance inspections of completed work.~~

~~The WRAP services and measures installed by contractors depend on the customer's use of electricity, the results of an energy audit, and any coordination between other weatherization programs. PPL Electric encourages customers to participate as "partners" in the audit and energy education session(s) so that they can maximize their savings' success.~~

~~The Company started WRAP as a pilot program in 1985 with the support of the Pennsylvania Public Utility Commission (PUC or the Commission) for customers at or below 150 percent of poverty level. At that time, customers needed to have electric heat or an electric water heater to qualify for the program.~~

~~In 1988, the PUC required that all covered electric and gas utilities in Pennsylvania establish a Low Income Usage Reduction Program ("LIURP") for customers in their territories. WRAP became PPL Electric's LIURP and the Company agreed to expand funding from $2,000,000 to $3,023,000. The Company also added energy education and lighting measures as part of WRAP.~~

~~In 1998, PPL Electric implemented the concept of universal service programs for low-income customers as part of the settlement agreement associated with electric utility industry restructuring. Universal service programs include WRAP (LIURP), OnTrack (Customer Assistance Program or "CAP"), CARES and Operation HELP. The Company agreed to expand its annual funding to $4,700,000 and serve "an appropriate" amount of baseload ("lighting and appliance") customers as part of its settlement agreement. PPL Electric also incorporated an additional $1,000,000 annual funding from its "Keep Warm"~~

~~Pilot Program (1995-1997), targeted at customers between 150% and 200% of poverty level, as part of LIURP.~~

~~PPL Electric has expanded its LIURP funding and scope of services through various regulatory proceedings and initiatives since 1998, most recently from $9,500,000 to $10,000,000 as part of its 2016 distribution rate case~~

settlement. In addition to LIURP, the Company has provided a direct install program for low-income customers through Act 129 WRAP since 2009. Act 129 Phase 3 started on 6/1/2016 and ends on 5/31/2021 and will continue to feature a direct install program as well as other energy-saving programs for customers with limited incomes. The PUC approved PPL's Energy Efficiency and Conservation Plan for Act 129 Phase 3 in March 2016.

1.2. Objectives

The primary objectives for WRAP are to:

1. Reduce the energy usage and electric bills of low-income customers; and
2. Increase the ability to pay and decrease the arrearages of low-income customers.

Secondary objectives include:

1. Improve comfort for low-income customers;
2. Promote safer living conditions through the reduction of secondary heating devices;
3. Maintain/establish partnerships with social service agencies, community-based organizations and local private contractors to promote maximum and timely assistance; and
4. Make tailored referrals to Company and other assistance programs, such as OnTrack, LIHEAP, Act 129 programs and other weatherization programs.

1.3. Participation Eligibility

PPL Electric requires that customers meet the following criteria to qualify for WRAP:

- Household income is at or below 150 percent of poverty level. The Company will serve up to 20% of customers that are between 150% - 200% of poverty level through its LIURP budget. This includes "special needs" customers as defined by the PUC, customers living in multi-unit projects who could best benefit from "whole building" treatments, and customers referred through inter-utility coordination.
- Customer is at least 18 years old.

- ~~The premise is in PPL Electric's service area and has its own electric meter.~~
- ~~Customer's home is the primary home, not a "second" or vacation home.~~

- The electric service is the name of one of the household's occupants. (Exception: home is part of a multi-unit project and service is temporarily in the landlord's name).
- The premise did not receive LIURP WRAP or Act 129 WRAP within the past three years and has the potential to receive energy reduction measures and services. PPL staff will review applicants who received LIURP or Act 129 WRAP within the past three years on a case-by-case basis.
- The customer has at least nine months usage history at the premise. (Exceptions made with Company approval).[6]

If an apartment building contains at least three units and at least 50 percent of the tenants qualify for WRAP, PPL Electric may provide weatherization measures and services to all tenants in the building. Each tenant must provide consent for WRAP.

As part of PPL's Energy Efficiency and Conservation Plan (EE&C) Plan, Act 129 WRAP serves customers in multi-unit households with incomes at or below 150% of the federal poverty income guidelines. Multi-unit buildings with incomes between 150% and 200% of the federal poverty income guidelines or Act 129 recipients who could benefit from additional WRAP measures will be referred by the Act 129 conservation service provider (CSP). There is no minimum usage for jobs coordinated with Act 129 WRAP. A household must have an individual meter to qualify for LIURP; master-metered buildings are not eligible for LIURP WRAP.

A customer does not need to have an overdue amount with PPL Electric to qualify for WRAP. However, the company may prioritize WRAP services in situations where a customer has high electric consumption or, the customer participates in OnTrack and is at risk for exceeding the OnTrack benefit levels. The Company currently defines "high usage" households as households that use more than 18,000 kWhs per year.

1.4. Customer Consent

The Company requires customer consent prior to the start of any WRAP work. In addition to authorizing WRAP, the customer agrees to participate in the energy audit and energy education session(s).

1.5. Landlord Consent

~~Customers that have less than 9 months usage and are below 150 percent of Poverty Level guidelines are eligible for Act 129 WRAP.~~

Homeowners and renters are eligible for WRAP. PPL Electric requires that the landlord sign a consent form before a tenant receives most measures. If the landlord does not sign the consent form, the Company will offer one or more of the following to the tenant:

- Referral to Act 129 Low-Income Program, if income eligible
- Provision of an energy saving kit, if the household income is between 150-200% of the federal poverty income guidelines
- Phone or in-home energy education session (e.g. high usage OnTrack customer)
- Limited baseload WRAP

1.6. Lifestyle

PPL Electric offers baseload WRAP when a family's income is less than their monthly rent or mortgage payment. The Company may provide partial weatherization in situations where lifestyle choices (hot tub, heated sunroom, etc.) accounts for major energy use.

1.7. Usage Criteria

Effective 2017, PPL Electric's proposed minimum criteria for WRAP is 6,000 annual kWh. The Company can make exceptions for customers living in very small premises or hardship situations (e.g. elderly customer limits use of electric heat during the pre-treatment period). PPL Electric will refer "low usage" customers not served through LIURP to other utility programs, other weatherization programs (if not previously received) and to LIHEAP Crisis when available.

1.8. Promoting WRAP

Well-planned outreach is an essential component of WRAP. PPL Electric Utilities advertises WRAP in its bill insert annually and promotes WRAP on its website so all residential customers can learn about the program. The Company also implemented an "on-line" WRAP Application in March 2015.

The Company strongly encourages that OnTrack customers participate in WRAP. Failure for an OnTrack customer to reduce or maintain electric usage or to fulfill WRAP-related requirements may result in removal from the

~~program. PPL Electric informs OnTrack customers about the program through its *Post Enrollment OnTrack Brochure*, agency referrals, website, and targeted phone calls and mailings. The Company will continue to seek innovative ways to enroll OnTrack customers into WRAP and to focus on the benefits that the service provides.~~

In addition, the Company may use some or all of the following outreach methods to reach potentially eligible customers in years 2017-2019:

- Phone calls, mailings, and e-mail "blasts" to electric LIHEAP recipients and customers identified as "low-income" in PPL's Customer Service System (CSS) or through data-mining in CSS
- Program information on PPL Electric's website (www.pplelectric.com)
- Presentations and communications to PPL Electric employees, including information and updates on the Customer Services internal website
- Cross-marketing with other weatherization and utility programs
- Social media (e.g. Facebook)
- Presentations and communications to social service agencies, senior citizens groups and other organizations such as "Healthy Homes and Lead Partnership"
- Participation in community events, PUC/Utility events, and booths at high traffic areas where customers with limited incomes can be reached
- Communications and personal contact with multi-family housing authorities, project managers, and landlords
- WRAP Contractor Referrals/Word-of-Mouth
- "Free" news segments and press releases
- Low-cost print media options such as "merchandisers"
- PPL Outreach Pilot in the Lancaster Area which includes mailings and posters to churches, food pantries, etc.
- Other, as appropriate

PPL Electric tracks the number of qualified WRAP participants and "how they heard about WRAP" through its "Low-Income Energy Assistance Programs" Database System or LEAP. The Company will continue to evaluate new outreach technologies and strategies throughout 2017-2019 and implement as cost-effective and feasible.

1.9. Intake

PPL Electric's goal is to make the WRAP intake process quick and easy for the customer. In order to make the WRAP process seamless to the customer, the Company will employ a customer care center to enroll customers through outbound and inbound phone calls.[7] PPL Electric's USRs will continue to process applications received through mail. PPL will employ the strategies below to enroll customers (specific processes are subject to change based on new systems or technologies):

~~[7] The proposed intake process for Universal Service WRAP (LIURP) mirrors that of Act 129 Low Income WRAP Phase 3 which took effect on June 1, 2016.~~

~~42~~

1. ~~Customer calls the designated customer care center or responds to an outbound call. The customer care "associate" enters the information into LEAP and informs the customer of their eligibility status.~~

2. ~~Customer completes a hard copy application as a result of an outbound mailing, agency referral or personal contact and mails to a PPL office. PPL scans the application and related information into a central work management system. A PPL USR enters the information into LEAP and notifies the customer of their eligibility status.~~

3. ~~Customer completes and submits an application through PPL Electric's website. The customer will receive an auto-generated message as to whether the application is accepted along with a Case Number, or if the application is under review. The application information automatically migrates into LEAP.~~

4. ~~Customer completes an application in-person (e.g. senior citizen event). The USR or a representative of the Act 129 CSP enters the information into LEAP and notifies the customer of their eligibility status.~~

5. ~~OnTrack caseworker issues an electronic referral to WRAP on PPL's CSS system. A PPL staff member will follow up with a letter or phone call. Or, the OnTrack or other agency caseworker assists the customer in completing an application and mails or faxes the WRAP Application to PPL EU.~~

6. ~~WRAP Contractor mails, faxes or delivers a completed WRAP Application as part of inter-utility coordination. The PPL USR enters the application into LEAP and notifies the contractor and/or customer of their eligibility. When possible, the contractor completes WRAP work in tandem with another weatherization program.~~

7. ~~The customer receives Act 129 WRAP and the Act 129 CSP recommends additional measures through LIURP using the LEAP system. PPL staff will determine if the customer is eligible for LIURP, and if so, will create a separate LIURP case.~~

~~If a customer qualifies for WRAP, LEAP assigns a Case Number and designates the case as "LIURP" or "Act 129 WRAP" based on the pre-determined criteria as delineated in the following table.~~

~~LIURP and Act 129 Eligibility~~

~~LIURP~~	~~Act 129 WRAP~~
~~All cases between 150%-200% of the~~	~~All Multi-unit homes~~

FPL income guidelines*	
Installed electric heat (primary source)*	Non-installed electric heat (primary source) and usage is less than 18,000 kWhs**
Annual usage is greater than 17,999 kWhs*	Less than 10 months usage at the premise under the current account**
Electric water heater 12+ years old, or mobile home with an electric water heater*	Mobile home without an electric water heater and usage is less than 18,000 kWhs

*Excludes multi-unit premises

** Household income must be at least 150% of the FPL guidelines or lower

Act 129 cases are assigned to an Act 129 CSP; LIURP cases are assigned to a LIURP contractor. PPL staff can change the program type based on contractor field observations and prior to submitting any invoices for the case. Act 129 customers may receive additional measures from LIURP, which are tracked separately under a different case number.

An application that does not automatically qualify goes under "review" (e.g. customer has service at multiple premises). PPL Electric staff makes the determination as to customer eligibility based on program guidelines, customer need and the potential to receive WRAP measures.

1.10. Energy Survey

PPL Electric uses the energy survey or "audit" to identify what measures and services the contractor will install in the customer's home. Decisions made during the audit are based on:

- Customer interview/occupant practices
- Electric usage history
- Site-specific diagnosis
- Prioritization of measures
- PUC payback criteria
- Coordination with other weatherization programs

WRAP auditors recommend measures in compliance with the priority lists contained in the *WRAP Standards and Field Guide*. The objectives of the priority lists are to:

1. ~~Reduce electric consumption installed through WRAP measures and occupant education;~~
2. ~~Comply with PA State Weatherization Health and Safety standards; and~~

3. Provide all income-eligible customers in PPL Electric's distribution service area with an equal opportunity for receiving WRAP services and measures.

The content on the priority lists may change based on the Company's evaluation results, changes in state regulations, the implementation of new measures and technologies, and changes in customer demographics and housing stock.

The LEAP system assigns a Case Number for every WRAP Job followed by the Program or "campaign" type (LIURP or Act 129 WRAP) and Job Type. The Job Types are Full Cost (heating), Low Cost (water heating) or Baseload (lighting and appliances) in accordance with the PUC reporting criteria.

If a customer has installed electric heat as indicated on the WRAP Application, LEAP categorizes the Job as Full Cost. The auditor (contractor) can downgrade the job type to baseload or low cost if the premise has less than 50 percent installed electric heat, if there is no opportunity to install heating measures, or for health and safety reasons. PPL staff will also downgrade any heating job assigned to a contractor if the customer is a renter and the landlord does not provide written consent for WRAP.

LEAP assigns any job where the customer did not indicate installed electric heat as a baseload job. The contractor can upgrade for full cost measures if the customer has installed heat in at least 50 percent of the home or for high seasonal usage/electric space heating where the auditor can demonstrate the potential for cost-effective electric energy savings (with PPL approval).

If a premise has an installed electric water heater and the auditor recommends at least one water heating measure, LEAP automatically upgrades a job from baseload to low cost.

The LEAP system matches the LIURP measures to the Job Type. Therefore, the auditor only views those potential measures that pertain to the job.

WRAP Contractors can bypass the LIURP audit if an equivalent audit was done within the past 12 months through another weatherization program. The Contractor or PPL employee must upload a copy of the Audit or Assessment Form into LEAP.

1.11. Installation of Measures – Baseload

~~All WRAP customers are eligible for baseload measures. Standard measures and services include:~~

- Energy education
- Installation of Light-Emitting Diode bulbs (LEDs) s
- Refrigerator replacement;
- Window air conditioner replacement
- Dehumidifier replacement
- Waterbed replacement with a mattress
- Changing or cleaning of heating/cooling filters
- Dryer venting (electric dryer)
- Clothesline installation
- Power Strip/Smart Plug
- Appliance replacement, with PPL Electric approval
- Carbon monoxide detector
- Comfort measures such as a door sweep or widow quilt
- Appliance replacement if the auditor can demonstrate a 12-year payback[9]

1.12. Installation of Measures – Low Cost

If the baseload customer has an electric water heater and has the potential for water heating measures, the WRAP auditor may upgrade the job to "low cost" at the time of the baseload audit (or downgrade the job during the full cost audit).

Low cost measures include:

- Water heater replacement with a Heat Pump Water Heater ("HPWH") or a standard domestic electric water heater
- Gravity Film Exchange
- Repair of water leaks
- Water pipe insulation
- Installation of energy/efficient showerhead(s)
- Installation of energy-efficient aerator(s)
- All baseload measures
- Other measures that meet PUC payback criteria

The Company has no expenditure limit on low cost jobs. However, measures must meet the PUC payback criteria described in PPL Electric's *WRAP*

[8] PPL Electric began replacing incandescent light bulbs with LEDs in 2014 with PUC approval. The Company will continue to explore lighting technologies and implement as cost-effective and feasible.

[9] Examples of appliance replacement include washing machines, electric dryers and electric stoves. The Company addresses specific guidelines for replacement in the WRAP Standards and Field Guide.

~~46~~

~~*Standards and Field Guide*. PPL Electric requires that contractors install HPWHs when the site meets the criteria for a standard replacement.~~

~~1.13. Installation of Measures – Full Cost~~

~~Customers with installed electric heat in 50 percent or more of the premise are eligible for a full cost audit. The baseload auditor can upgrade a job in a home with high seasonal usage where full cost measures may reduce heating and/or cooling costs. Conversely, the auditor may downgrade a job if there is no potential to install electric heating/cooling measures or the home is beyond the scope of weatherization. PPL Electric staff makes the final determination as to the "job type" based on the measures installed.~~

~~Full cost measures include:~~

- ~~Blower door testing and associated air sealing~~
- ~~Attic, wall and floor insulation~~
- ~~Sealing of attic bypasses~~
- ~~Attic vents and hatches~~
- ~~Crawlspace and header insulation~~
- ~~Heating equipment repair/retrofit/replacement~~
- ~~Duct insulation and repair~~
- ~~Caulking and weather-stripping~~
- ~~Door sweeps~~
- ~~Storm windows~~
- ~~Window replacement~~
- ~~Thermostat replacement~~
- ~~Water heating measures, if the premise has an electric water heater~~
- ~~Baseload measures~~
- ~~Other measures that meet the PUC payback criteria~~

~~The PUC's LIURP guidelines suggest a seven-or twelve-year payback for most measures. In 2002, PPL Electric implemented an aggregate payback formula based on the customer's electric seasonal usage. The Company assigns a "shell allowance" for each full cost job based on the payback formula. The shell allowance serves as a spending guideline for full cost measures in order to reduce electric usage. Examples of shell measures include insulation and air sealing.~~

~~PPL Electric plans to continue using the shell allowance as a guideline for full cost expenditures in years 2017-2019. However, the Company will allow WRAP contractors to exceed the shell allowance for "high" priority measures such as~~

~~attic insulation and associated air sealing and electric heat repair with PPL approval.~~

47

Incidental Repairs – Contractors can make small incidental repairs as needed for the installation of other weatherization measures. As a general guideline, the suggested spending allowance for incidental repairs is 30 percent above the shell allowance limit.

Health and Safety – Contractors can spend up to $650 in health and safety diagnostic testing and measures for heating jobs without PPL Electric's approval. Examples of health and safety measures include dryer venting, and the installation of carbon monoxide detectors and bathroom exhaust fans. PPL Electric proposes to continue allowing a "standard" $650 health and safety allowance in years 2017-2019. Contractors can exceed the allowance with PPL approval to address more extensive health and safety problems such as mold or lead remediation that inhibit the installation of full cost measures.

WRAP Contractors can spend up to $250 in "comfort" measures in conjunction with electric energy-saving measures for low cost and baseload jobs.

Contractors should install comfort measures, such as window quilts, that will not impact the air changes-per-hour of the home where feasible. In situations where the contractor installs a measure that will impact air quality or combustion levels (e.g. the customer is over income for the PA Weatherization Assistance Program), the contractor should, at a minimum, conduct a Combustion Appliance Zone (CAZ) test before and after the installation.

Indoor Air Quality – Contractors may choose to do air sealing in homes where there are comfort and/or moisture problems or when the electric usage is high, even if the home is below the minimum ventilation guidelines ("MVG"). If the home is below the MVG before or after the installation of WRAP measures, contractors may add mechanical ventilation to ensure proper indoor air quality; this cost is included as a health and safety measure.

Municipal Requirements – Certain municipalities require permits for the installation of WRAP measures such as water heater replacement. PPL Electric will expect contractors to acquire a permit as part of the WRAP job. WRAP Contractors should include a copy of the permit as part of the invoicing process.

PPL currently allows the installation of smoke alarms, water heating check valves, and water heating expansion tanks in accordance with municipal requirements as needed to install WRAP measures. The Company will address

~~additional municipal requirements on an individual basis. The cost of the municipal measure should not exceed the cost of the energy-saving measure.~~

~~1.14. Energy Education~~

48

Energy education is an important component of WRAP. All WRAP customers are eligible for at least one home energy education session. There are several types of sessions.

Initial – The educator works with the customer to itemize electric costs and to influence choices that will save energy and improve comfort and safety. The educator conducts the initial session prior to the installation of measures, usually during the audit. In years 2017-2019, PPL Electric will continue to require that all LIURP customers receive an initial energy education session, unless the customer received an equivalent session through Act 129 WRAP prior to the installation of LIURP measures.

WRAP contactors are required to integrate education into all aspects of WRAP. The LIURP installer should continue to reinforce educational concepts from the LIURP or Act 129 Audit.

Additional Session – The quality assurance inspector offers a follow-up session to customers in conjunction with a post-installation inspection or within six months after the installation of all measures. If a full-cost recipient does not receive a site inspection, PPL Electric will offer follow-up education while conducting a phone inspection. A PPL EU staff member or WRAP quality assurance inspector will respond to the request.

A quality assurance inspector can conduct follow-up education as a site visit or phone session. The educator reviews the installed measures, discusses any changes in electric usage with the household and continues to work with the household to influence good choices.

Effective 2017, PPL will monitor the post-usage recipients within 3-9 months after receiving WRAP. The company will offer the customer a remedial energy education session (usually by phone) and/or provide energy-saving tips per mail. [10]

One-Year Follow-up – As per the suggestion of WRAP contractors, the Company will develop and implement a feedback mechanism for customers after the twelve-month post-WRAP period in 2017. In situations where the customer's usage continues to increase or remains high, PPL will offer remedial energy education or a referral for additional WRAP services and measures.

OnTrack Education – In years 2017-2019, PPL Electric plans to expand its efforts to provide educational services to "high usage" OnTrack customers. [11]

~~10 PPL Electric expects to have the system functionality to monitor post-installation usage in September 2016.~~

~~11 Effective May 2016, PPL Electric gained the functionality to track information in LEAP for customers that PPL staff assigns for energy education (no installed measures).~~

49

While the Company expects to refer most customers to WRAP, OnTrack customers who are not eligible for WRAP can receive home, phone or mail education/energy-saving kits. The Company may also assign a customer for education if there is an immediate need for education (e.g. high defacto space heating usage) and the customer cannot receive WRAP for at least 30 days. PPL personnel and WRAP Contractors will also educate customers on PPL Electric's internet tools for monitoring energy usage when applicable.[12]

1.15. Quality Assurance

PPL Electric will target a minimum of 30 percent of all full cost jobs for a site inspection. The Company will conduct phone inspections for a minimum of 25 percent of baseload and low cost recipients. PPL Electric may choose to inspect all jobs with new or pilot measures.

The objectives of the inspection are to:

1. Ensure that all measures and services listed in LEAP are installed in accordance with WRAP standards;

2. Identify major missed opportunities and adherence to the priority lists; and

3. Gather customer satisfaction data.

The inspector verifies the installation of invoiced measures and notes any concerns or major missed opportunities in LEAP. The contractor has 30 days in which to respond to a customer. The Company uses contractors to conduct most inspections. WRAP contractors can be inspectors as long as they are not the auditors and/or installers for the jobs for which they inspect.

2. Funding and Enrollment Levels

PPL Electric's current WRAP (LIURP) budget is $10,000,000 annually, a 20 percent increase since 2013.

In order to minimize the impact on all residential customers, PPL Electric is not proposing a LIURP funding increase over the next three years. The Company expects to serve more customers through coordination with other weatherization programs (including Act 129), reduced administration and field support costs and decreased material costs for lighting measures. PPL expects to channel most income-eligible baseload customers to Act 129 WRAP.

~~12 A PPL study conducted in 2014 showed that 39% of WRAP recipients registered to use PPL Electric's Energy Analyzer web tool.~~

The chart below depicts the 2017-2019 funding levels and projected enrollment by job type:

Year	Expenditures	Full Cost (Heating)	Low Cost (Water Heating)	Baseload
2017	$10,000,000	2,010	575	715
2018	$10,000,000	2,010	575	715
2019	$10,000,000	2,010	575	715

In addition to the projected numbers by WRAP job type listed above, the Company will provide energy-saving kits and/or energy education for low-income customers not eligible for WRAP measures in conjunction with the LIURP budget.

3. Needs Assessment

PPL identifies 102,197 customers that can benefit from WRAP. The Company projects a total cost of $250,769,335 to serve these customers based on the methodology below. The costs are based on the 2017 average cost per job for direct costs, multiplied by 1.12 (12%) for administrative and field support costs. The calculation below takes into account that the average cost per job for direct costs differs based on the type of job. The total cost to serve figure was calculated as follows:

- Number of confirmed low-income customers coded as residential – electric heat: 43,945
- Customers likely to receive electric heat treatments based on historical data: 38,232[13]
- The average cost-per-job for direct cost (electric heat treatment): $3,581

To calculate the total cost to serve residential electric heat customers, PPL Electric multiplied the number of heating customers (38,232) by the average-cost-per-job for direct costs ($3,581) and added 12% for administrative/field support. This resulted in a total cost to serve in the amount of $153,337,487.

- Number of confirmed low-income customers coded as residential – non-electric heat = 58,252
- Customers likely to receive water heating and/or baseload treatments, including customers with electric heat = 63,965

~~13 Approximately 13 percent of customers with electric heat do not receive heating treatments due to health and safety deferrals, lack of landlord consent, or the premise does not qualify for heating measures as determined by the LIURP Contractor. These customers are factored into the customer segment that is likely to receive water heating and/or baseload treatments.~~

- The average cost-per-job for direct cost (water heating and/or baseload treatment): $1,360

To calculate the total cost to serve residential non-electric heat customers, PPL Electric multiplied the number of customers likely to receive water heating and/or baseload treatments (63,965) by the average cost-per-job for direct cost ($1,360) and added 12% for administrative/field support. This resulted in a total cost to serve in the amount of $97,431,488.

To complete the calculation, the total cost to serve 43,945 heating customers ($153,337,847) and the total cost to serve 63,965 customers with water heating/baseload jobs ($97,431,488) were added together to provide a total cost of $250,769,335.

4. Organizational Structure of PPL Electric Staff

The Regulatory Programs and Business Services work group at PPL Electric administers Universal Service WRAP (LIURP). The Program Manager oversees the program and is responsible for all regulatory reporting and compliance. She works closely with the Low Income Customer Programs Specialist to ensure effective coordination between Universal Service and Act 129 WRAP.

Five Regional Program Specialists (RPSs) direct the implementation of universal service programs within their respective regions.[14] They manage the budgets, workload and contractors in their areas and respond to escalated customer inquiries and concerns.

A team of Universal Service Representatives is responsible for the daily operations of WRAP such as data entry into LEAP, reviewing applications, verifying invoices, and handling customer inquiries. They also support specific OnTrack and CARES functions.

Program Management Staff:

- Christopher Cardenas, Vice President – Customer Services
- Melinda Stumpf, Manager – Regulatory Programs and Business Services
- Linda Melenchek, Program Manager – Regulatory Programs and Business Services

~~1.~~ ~~WRAP and OnTrack regions are comprised of specific counties which may change based on customer need and availability of resources.~~

Regional Regulatory Programs Specialists: 15

- Jaclyn Baldwin – Lehigh Region
- Kristen Kelly – Susquehanna Region
- Gladys Malone – Lancaster and Harrisburg Regions
- Florence McNelis – Northeast Region

Universal Service Reps

- Linda Banzhof – Lancaster Region
- Kimberly Brummett – Northeast and Susquehanna Regions
- Ann Miller – Susquehanna Region
- Zachary Reynolds – Harrisburg Region
- Donna Schall – Lehigh Region
- Pamela Yale – Northeast Region

5. Contractor Selection, Requirements, and Support

5.1. Contractor Selection and Requirements

PPL Electric uses contractors to install weatherization measures and conduct audits, inspections and energy education sessions. The Company's Regulatory Programs Specialists select contractors from qualified and reputable weatherization agencies and local private contractors. Weatherization contractors may use sub-contractors for specialized work (e.g. electrical, plumbing and heating equipment repair).

The Company issues contracts on a three year basis with the opportunity for annual adjustments. PPL Electric staff will select the contractors through a request for proposal process in accordance with the Company's procurement guidelines and policies.

The Company expects contractors to conform to all federal, state and local requirements and to upload any permits into LEAP. Materials and the installation of materials must comply with WRAP standards. All Full Cost auditors, inspectors and at least one member of each installation agency that performs full cost work must have an active Building Performance Institute (BPI) – Analyst I Certification or PA weatherization certification equivalent.

In addition, contractors must meet the following requirements:

1. Adhere to PPL Electric's standard WRAP contractual terms and conditions
2. Complete the required documentation for each WRAP job in LEAP.

~~15 Regulatory Programs Specialists and Universal Service Reps support other regions as needed.~~

3. Comply with OSHA and the WRAP Standard as specified in the *WRAP Standards and Field Guide*.
4. Adhere to all codes and municipal requirements. Documents any permits acquired for WRAP work in LEAP.
5. Complete work within a specified time mutually agreed upon by PPL Electric and the contractor.
6. Submit invoices in accordance with the policies issued by the Company's Financial Department.
7. Procure all materials, including LEDs.
8. Refer customer to payment assistance programs, other weatherization programs, and Act 129 programs where applicable and documents in LEAP. Coordinates LIURP and Act 129 work as requested by PPL EU.
9. Provide a one year warranty on all labor and materials, unless otherwise noted in the contract.
10. Address problems upon notification and no later than 30 days.
11. Correct problems identified by PPL Electric as emergencies within 24 hours. Contractors should provide customers with their names and phone number upon completion of work.
12. Attend required meetings and training provided by PPL Electric.
13. Adhere to a performance review, minimum of once per year.

PPL Electric assigns work to contractors based on customer need, location, skill sets, experience and ability to handle increased workload. Habitual delays may result in the assignment of work to another contractor.

5.2. Performance

PPL Electric conducts a performance review with individual WRAP contractors at least once per year. The Company evaluates contractors on their ability to complete assigned work on time, quality of their work, cost effectiveness and customer satisfaction. Performance metrics, as documented in LEAP, include:

- Turn around time for job completion
- Coordination with other programs and services
- Measures installed, cost per measure installed
- Customer satisfaction

Contractors will also receive feedback as part of the annual LIURP evaluation as to their average pre to post WRAP savings, acquisition cost (when available) and WRAP savings' results in general.

~~The performance review gives contractors the opportunity to express any problems or concerns and to make suggestions for improvement.~~

In addition to the annual performance review, PPL Electric staff or a designated home performance specialist performs periodic field observations of auditors, crew leaders, and energy educators to include observations of new personnel. The Company's staff may also conduct field inspections of jobs that do not require diagnostic testing.

PPL Electric may request additional meetings and/or training for contractors that do not meet WRAP requirements. If performance does not improve, the Company may terminate the WRAP contract.

5.3. Training

PPL Electric will continue to reserve a portion of its annual field support budget for existing WRAP contractors. Training funds will be used to:

1. Sponsor and/or provide contractor sponsorships to conferences and special events (e.g., National Affordable Comfort Conference).
2. Sponsor and /or provide training that will enable contractors to receive Continuing Education Units (CEUs) or prepare for BPI Certification.
3. Sponsor and coordinate training for specialized work (e.g., combustion testing, infrared training, heat pump water heater installation, baseload measures and energy education).
4. Develop and implement training that is PPL Electric specific (e.g., OnTrack education, new pilots or measures).
5. Sponsor webinars on new technologies, techniques and best practices.

PPL will allocate a portion of its training budget, as needed, to support the PA Quality Control Inspector (QCI) and BPI testing and certification/re-certification fees. The Company will work with the PUC, the PA Weatherization Advisory Panel, and WRAP Contractors to identify and support training needs as needed to meet state or federal home performance standards.

The Company offers a stipend to contractors who attend mandatory training that is specific to PPL's LIURP program to help offset productivity losses. The stipend does not apply to training at the job site.

5.4. Computer Enhancements

In 2014-2015, PPL Corporation re-wrote its fourteen year-old WRAP database and reporting system. The Company deployed the new system, LEAP, to

~~internal users and WRAP contractors in March 2015. The new system featured improved communications between PPL and contractors, data validation, enhanced workflow and budget management, and reduced paperwork.~~

~~55~~

~~The Company deployed LEAP Release 2.1 in May 2016 which focused on LIURP/Act 129 Phase 3 coordination[16], improved invoicing functionality, and the capturing of post-installation data for LIURP Reporting. PPL Electric is scheduled to deploy subsequent releases in 2016 which will focus on improved field communications and ease of completing the annual LIURP report.~~

~~The Company will continue making enhancements to the system based on internal and contractor feedback, new regulatory or company requirements, and the implementation of new pilots and process improvements.~~

~~5.5. Contractor Communications~~

~~PPL Electric is committed to the continuous improvement of WRAP. In 2010, the Company established the WRAP Technical Team of PPL Electric staff and at least one contractor in each region. The team provided recommendations for WRAP standards and training and all WRAP organizations had the opportunity to review the standards prior to publication.~~

~~PPL Electric is in the process of revising its field standards manual with subsequent revisions "as needed" during 2017-2019. As in the past, the WRAP Technical Team will provide initial input followed by a review period for all contractors. The Company may also hire a home performance consultant(s) to help develop or review the more technical aspects of the manual.~~

~~As part of a WRAP Contractor Survey (March 2016), some contractors requested periodic updates on program changes and best practices. Starting in 2017, PPL will minimally provide quarterly e-mail updates on WRAP changes, etc. to include any changes in other weatherization programs that impact WRAP. The WRAP Team also plans to continue coordinating an annual contractor meeting, usually in the fall.~~

~~PPL Electric will continue to invite suggestions and ideas for WRAP process improvement from WRAP contractors and other stakeholders. For example, almost all contractors reported scheduling difficulties or lack of customer cooperation as the primary reason for work delays. As a result, PPL staff is identifying and implementing better ways to communicate with customers during the WRAP process.~~

~~5.6.Advisory Panel~~

~~PPL Electric will establish a universal service stakeholder group that meets at least twice per year. The intent of the stakeholder group is to improve PPL's~~

~~16 Act 129 Phase 3 began in June 2016. PPL Electric split the costs for LEAP development between the LIURP and Act 129 budgets.~~

universal service programs, including LIURP, through sharing information and inviting feedback.

6. Pilots

The Company periodically pilots new products, measures, techniques or approaches to weatherization as part of WRAP. Pilot suggestions come from regulators, WRAP contractors, customers and PPL Electric staff.

6.1. Ductless (Mini-Split) Heat Pumps:

In accordance with contractor feedback, PPL Electric is proposing to implement a Ductless Heat Pump Pilot in 2017 for electric resistance heating and

(possibly) space heating customers. The WRAP Technical Team will develop the site selection and installation criteria with guidance from a home performance expert. The Company will spend a maximum of $250,000 or serve 25

customers (whichever comes first), excluding evaluation costs. The pilot evaluation will be done in conjunction with the 2017 Billing/Analyses and LIURP Report which is due to the PUC in April 2019. In the event that PPL cannot identify customers that meet the site selection criteria through normal LIURP channels, the Company will apply the installation of any unspent funds towards LIURP measures and services.

6.2. Additional Pilots

In 2017 and beyond, PPL Electric will continue to investigate pilot

opportunities and, if feasible, seek approval from the Commission to

implement. The Company will continue to maintain an open process towards pilot suggestions. Interested parties should submit a brief proposal to the PPL Electric WRAP Team that includes the pilot description, objectives, rationale, and suggestions for evaluation. The WRAP Technical Team will need to review any pilot suggestions that involve field or technical applications prior to regulatory submission.

The WRAP Technical Team and contractor network will continue to evaluate suggestions for pilot or new measures (e.g. solar motion sensor lights).

7. Energy Devices (Home Area Networks)

~~Beginning November 2016, PPL Electric is replacing its existing residential meters in accordance with Act 129 requirements. Deployment will continue until mid-2019. The new meters will enable the technology to facilitate customers' direct access to price and consumption information utilizing the industry standard Zigbee technology that will be included in the new meters. An additional device that is commercially available will be required to enable this capability.~~

~~57~~

~~During the years 2017-2019, PPL Electric WRAP staff will work with PPL's Advanced Metering Infrastructure (AMI) Project Team to explore the feasibility of a home area network (HAN) pilot program to include Low Income~~

~~Customers. This will be addressed in greater detail as part of its 2020-2023 Three Year Plan.~~

~~8. Inter-Utility Coordination~~

~~PPL will continue to encourage coordination with the PA WAP, gas utility and county weatherization programs in accordance with the budget and resources of the other programs. Current initiatives include:~~

- ~~The WRAP Team accepts ongoing contractor and utility referrals through e-mail, phone calls and faxes. The Company will schedule WRAP work in conjunction with the other weatherization programs when feasible. Contractors enter coordination efforts within a twelve-year period into LEAP.~~
- ~~Agencies that provide multiple programs encourage customers to apply for multiple programs and assist customer in the application process. Or, the agency mails the customer a WRAP Application during WAP intake.~~
- ~~WRAP contractors refer WRAP participants to other weatherization programs and document in LEAP.~~
- ~~The WRAP Team provides electric usage information to WAP agencies for evaluation and referral.~~
- ~~PPL coordinates "as-needed" calls with the gas utility. However, coordination is difficult due to discrepancy in funding and the amount of customers served.~~
- ~~The WRAP Team sponsors and shares information at PUC utility events.~~

~~In 2017-2019, PPL Electric plans to strengthen utility coordination through the following initiatives:~~

1. ~~Initiate a quarterly contact (meetings, phone calls or e-mail) with DCED WAP staff and the gas utilities to improve coordination efforts and receive updates of changing guidelines and procedures. Communicate changes to WRAP contractors in quarterly updates.~~
2. ~~Monitor contractor coordination efforts through LEAP.~~
3. ~~Provide WAP contractors with WRAP Applications and referral postcards.~~

~~4. Screen customer lists provided by agencies for possible WRAP referral.~~
~~5. Participate in the WAP Advisory Council Meetings and related inter-utility projects (e.g. the possible development of an inter-utility coordination database).~~

~~58~~

~~6. Align WRAP with PA WAP standards where cost-effective and feasible. Continue to identify and implement training partnerships with the National Sustainable Structures Center.[17]~~

~~9. Reporting and Evaluation~~

~~PPL Electric is required to submit the following annual reports to the PUC on or near the following dates:~~

~~1. LIURP Productivity Report – March 1~~
~~2. USP Report (LIURP Section) – April 1~~
~~3. LIURP Annual Report – April 30~~
~~4. LIURP Annual Narrative Report – April 30~~

~~The reports due at the end of April are PPL Electric's "self-evaluation" of its LIURP program two years prior to the submission date. In other words, the 2017 LIURP Report will evaluate jobs completed in 2015. This allows the Company to collect 12 months of post-weatherization data.~~

~~PPL Electric currently uses a third-party evaluator to prepare a billing/usage analysis for inclusion in the annual LIURP Narrative Report. In 2014-2016, PPL Electric submitted LIURP data from its WRAP V system to Penn State for analysis.[18] PPL's third-party evaluator[19] is responsible for working with PPL Electric to reconcile any data discrepancies with Penn State.~~

~~PPL Electric received approval from the PUC to use the audit date as the "demarcation" date (the date that segregates pre-and-post WRAP usage) for billing analysis as part of its current plan. PPL proposes to use the installation date or the date of the last installed major measure, for the annual reports due 2017-2019 so that the Company can include any case without a LIURP audit date (e.g. audit done in conjunction with Act 129 WRAP) in the analysis. The Company will continue to secure an analysis of both the audit (initial visit) and installation date as part of its data collection.~~

~~PPL Electric is currently modifying LEAP to capture all data for PUC reports and to facilitate report preparation. PPL Electric plans on submitting data~~

~~[17] PPL Electric partnered with the NSSC to develop standards for ductless heat pump inspection and related training in conjunction with the Act 129 Phase 2 De Facto Heat Pump Pilot (2016).~~

~~[18] The Bureau of Consumer Services (BCS) uses Penn State to analyze the annual LIURP report.~~

~~[19] PPL Electric hired the Cadmus Groups to prepare the billing/usage analysis for the 2012, 2013, and 2014 LIURP Narrative Reports as submitted to BCS in April 2014, 2015, and 2016.~~

from LEAP, including weather-normalized pre-and-post WRAP consumption data, to Penn State for the annual reports due 2017-2019.

PPL Electric is required to submit a third-party evaluation on its universal service programs to the PUC every six years. Approximately 15 percent of the evaluation is dedicated to WRAP and funded through the LIURP budget. PPL's next Universal Service Program evaluation is due to the Commission in October 2020. The Company will begin the evaluator selection process in the fourth quarter of 2019.

10. WRAP Contractors

The table below lists the organizations that serve PPL Electric's Universal Service WRAP Program (LIURP), their contact information and scope of work.

WRAP Contractor	Contact Information	Scope of Work
Berks Community Action Program (BCAP)	P.O. Box 22 Reading, PA 19603 610-376-6571 info@bcapberks.org	Auditing General Contractor/Installatio

11. Summary of Differences Between Proposed and Current Plans

The table below depicts the key program changes between the current plan and the proposed plan (2017-2019).

ID#	Category	Current Plan (2014-2016)	Proposed Plan (2017-2019)
1	Funding	$9.500,000[20]	$10,000,000
2	Projected – Customers Served	1,900 Full Cost 800 Low Cost 400 Baseload	2,010 Full Cost 575 Low Cost 715 Baseload[21]
4	Compliance with OnTrack	Customers are required to participate in WRAP	Customers are strongly encouraged to participate in WRAP. Implement the automatic referral process for high usage OnTrack customers into WRAP by June 2018
5	Outbound/Intake (Primary Methods)	1. Outbound/inbound calls or letters from PPL Corporation. 2. Electronic referrals from OnTrack agencies to PPL's CSS System 3. PPL Electric responds to inquiries via its website[22] 4. Referrals from other weatherization programs 5. Direct customer referrals through customer calls , advertising or	1. Outbound/inbound calls and letters from a designated Customer Care Center. The Call Center will handle calls for potential LIURP and Act 129 customers. 2. Customer completes an on-line application on PPL Electric's website 3. Referrals from other weatherization programs,

~~[20] PPL Electric increased its WRAP budget from $9,500,000 to $10,000,000 in 2016 in accordance with a distribution rate case settlement~~

~~[21] PPL Electric projects to serve an additional 7,000 customers per year through its Act 129 direct install program.~~

~~[22] PPL Electric deployed an on-line WRAP Application in March 2015.~~

			~~threshold. The threshold does not apply to jobs coordinated with other programs, including multi-unit projects served by Act 129 WRAP.~~

~~Operation HELP~~

~~68~~

~~PPL Electric Utilities Corporation~~

~~Operation HELP Assistance Program~~

~~1. Program Description & Overview~~

~~Operation HELP is a hardship fund supported by donations from PPL Corporation, its employees, retirees, and customers. The program targets low-income customers who have overdue balances and an inability to pay the full amount of their energy bills. Operation HELP defines low income as~~

~~households that have annual incomes at or below 200 percent of the federal poverty level (FPL).~~

~~The primary features of Operation HELP include:~~

- ~~Direct financial assistance for overdue energy bills~~
- ~~Protection against shutoffs~~
- ~~Referrals to other programs and services~~

~~Operation HELP is available on a year-round basis throughout the Company's service area. However, due to the demand for energy assistance, some agencies may stop taking applications for a period of time because they have exhausted their current funding. Because of ongoing donations from contributors, PPL Electric Utilities Corporation (PPL Electric or the Company) disburses funding quarterly to the 15 community-based organizations (CBOs) that administer Operation HELP. Funding for the program pays for any type of home energy bill (e.g., gas, coal, oil and electric).~~

~~2. Background~~

~~Begun in March 1983, Operation HELP was one of the early utility-sponsored hardship funds in the nation. Through its annual promotional campaign, PPL Electric encourages customers to contribute by adding an extra $1, $2, or $5 to their monthly electric bill or by sending in one-time, lump-sum checks. Approximately 15,000 customers give to Operation HELP via their electric bill payments. PPL Electric's customer service billing system has the flexibility to allow customers to give any amount to the program and to choose a specific period (e.g., contribute $10 monthly over the winter).~~

~~Employees may support Operation HELP as customers or through payroll deduction. About 1,500 employees give to the program via payroll deduction.~~

In addition, PPL Electric encourages retirees to give in two ways: pension deduction or a one-time separate check donation.

3. Objectives

The overall objectives of Operation HELP are as follows:

1. Provide financial assistance to qualified low-income families who are having difficulty paying the full amount of their energy bills;
2. Offer financial assistance to low-income households that are ineligible for the federally funded Low-Income Home Energy Assistance Program ("LIHEAP");
3. Expand the capabilities of CBOs that provide energy-related assistance; and
4. Administer a year-round program as funding permits.

4. General Administration

To administer Operation HELP, PPL Electric partners with 15 CBOs that have extensive experience in delivering human services. The administration of the program is collaboration between these organizations and the Company. The primary duties include the following.

PPL Electric:

- Collect and disburse contributions to the CBOs.
- Provide corporate funding to support program administration.
- Process Operation HELP payments.
- Solicit donations annually from customers, employees and retirees.
- Oversee the administration of the program.
- Maintain close working relationships with the CBOs.
- Conduct procedural audits to review performance.
- Complete PUC-required reports.

Operation HELP CBOs:

- Conduct intake and verify applicants' eligibility.

- ~~Process Operation HELP authorization forms.~~
- ~~Send timely payments directly to energy vendors.~~

- Refer applicants to other assistance programs.
- Establish a separate account for processing donations and disbursements.
- Maintain detailed program records and arrange for an annual financial audit of Operation HELP.

8. Control Features

The decision to give to any charitable cause involves several factors. One of the most important is the belief by contributors that the charitable organization uses their funds properly. PPL Electric encourages the Operation HELP administering organizations to have a Certified Public Accounting (CPA) firm conduct an annual financial audit of the program. Some of the CBOs complete their Operation HELP audit in conjunction with their annual federal and state-funded program audits.

To supplement the CPA audit, PPL Electric conducts annual procedural audits of the CBOs that administer Operation HELP. The primary purposes of the audit include:

1. Review the CBOs' record keeping procedures;
2. Discuss the findings with the CBOs and implement corrective action where necessary;
3. Monitor the CBOs adherence to Operation HELP guidelines and procedures; and
4. Ensure the proper expenditure of donations

PPL Electric prepares monthly reports that monitor and track the CBOs' performance. The Company provides monthly feedback (e.g., electronic copy of reports) to the agencies regarding Operation HELP results. The PPL management team also conducts meetings throughout the year with the CBOs to discuss progress and special situations.

The Company uses its outside auditor to review internal procedures and records regarding Operation HELP. The audit includes, among other things, a review of record-keeping procedures and a reconciliation of donations from a sampling of customers.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 42

~~6. Eligibility Criteria~~

(C) Indicates Change

(D) Indicates Increase (I) Indicates Increase

Issued: September 30, 2025

Effective: December 1, 2025

~~71~~

~~PPL Electric established the eligibility criteria in cooperation with the Operation HELP administering organizations. As a general rule, customers with household incomes at or below 200 percent of the FPL and other hardships are eligible for assistance.~~

~~Under the Operation HELP guidelines, a customer can receive assistance once in a calendar year. However, the Company gives the CBOs the flexibility to review referrals on a case by case basis if customers have compelling and extenuating circumstances. The Operation HELP organizations must consult with PPL Electric's Regulatory Program Specialists (RPSs) to discuss the individual cases with extenuating circumstances. The RPSs have responsibility for the day to day administration of the Company's universal service programs.~~

~~Operation HELP applicants are not automatically eligible for assistance by virtue of their income, age or family circumstances. The Company targets program funds for income-eligible customers who face hardships and have an inability to pay the full amount of their energy bills. PPL Electric does not use customer, employee or retiree donations for administrative expenses, weatherization measures, food, winter clothing or promotional activities.~~

~~When interviewing applicants for Operation HELP, the CBOs generally consider the following factors:~~

- ~~Death of primary wage earner~~
- ~~Serious injury or illness to primary wage earner~~
- ~~Life-threatening or health-threatening situations~~
- ~~Families with infants~~
- ~~Households with elderly or disabled occupants~~
- ~~Eligibility for LIHEAP~~
- ~~PPL Electric overdue amount and payment history~~

~~7. Projected Needs Assessment~~

~~The need for energy assistance exceeds the resources currently available through Operation HELP. Although donations have increased over the years, they have leveled off since 2008 at approximately $1.4 million annually from~~

~~all sources. PPL Electric started Operation HELP to address customers' needs and to supplement LIHEAP's efforts. Nevertheless, the Company is committed to increasing donations and to improving implementation processes.~~

PPL Electric used the 2013 U.S. Census data file as the foundation for estimating households below 150% of the Federal Poverty Level (FPL). The 2013 Census data set provides estimates at the county level. The Company averaged the percentages for the 29 counties within PPL Electric's service territory and applied that percentage to the average monthly residential customer count. The average monthly residential customer count used was 1,226,583[24]. This resulted in 325,879 estimated households below 150% of the FPL.

Collection data for 2015 (monthly averages) shows approximately 1,226,000 total residential households. Of that total, approximately 47,500 households (or 4 percent) had an overdue balance and were on a payment agreement. In addition, approximately 92,700 (or 8 percent) residential households had an overdue balance and were not on a payment.

Depending on factors such as overdue amount, payment arrangement history, and extenuating circumstances, the Company's Customer Service Representatives refer these customers to programs like the Customer Assistance Program (CAP) known as OnTrack, the Company's Low-Income Usage Reduction Program (LIURP) known as the Winter Referral Assistance Program (WRAP), Customer Assistance and Referral Evaluation Service (CARES), Operation HELP and LIHEAP when available.

Because the Company uses 200 percent of the federal poverty guidelines for the Operation HELP program, PPL Electric projects it can assist about 3,900 customers annually (2017 through 2019) with estimated funding of approximately $1.4 million yearly.

8. Project Enrollment Levels

PPL Electric based its projected enrollment levels for 2017 through 2019 on an estimated $1.4 million in funding for Operation HELP from all donation sources (e.g., PPL Corporation, customers and employees) and a historical average grant amount. The projection also considers that the Company earmarks about 11 percent of its corporate contribution for agencies' administrative

~~[24] The data source for the average monthly residential count is the 2015 Universal Service Reporting Requirements (USRR) submittal, number six.~~

expenses. The average Operation HELP grant is approximately $346 per customer[25]. The projected enrollment levels are as follows:

Year	Enrollment Level
2017	3,900
2018	3,900
2019	3,900

9. Program Budget

The projected level of donations from PPL Electric, its customers, employees and retirees determines the number of customers assisted annually. The Company will actively solicit donations from these groups from 2017 through 2019. Solicitation activities will include, but are not limited to, the following:

Method	Timeframe	Audience
Bill Insert and Bill Message	Summer, Winter	All Customers
Enrollment Form	Summer, Winter	All Customers
Return Postcard	Summer, Winter	EFT Customers[26]
PPL Electric President Letter	Summer, Winter	Employees and Retirees
News Release	Summer, Winter	General Public
Response to Customer Inquiries	Summer, Winter	All Customers
Internal Electronic Newsletter	Summer, Winter	Employees

In addition, PPL Electric conducts other fundraising activities for Operation HELP (e.g., golf tournament). The Company's tariff has a provision that directs all final bills with balances less than five dollars to the Operation HELP hardship fund.

[25] Based on 2015 Universal Service Reporting Requirements (USRR) data.

~~[26] EFT (electronic fund transfer) pertains to customers who have given PPL Electric permission to deduct their bill payments and donations automatically from their bank accounts.~~

74

The projected budget amounts shown below for 2017 through 2019 will remain relatively flat.

Year	Funding Level (estimate)
2017	$1,400,000
2018	$1,400,000
2019	$1,400,000

10. Plans to Use Community-Based Organizations (CBOs)

PPL Electric collaborates with 15 CBOs to administer Operation HELP throughout its 10,000 square mile service area in central and eastern Pennsylvania. Almost all of these CBOs have administered the program since its inception in March 1983. Many were involved in the planning meetings the Company conducted in 1982 to develop the guidelines and procedures for Operation HELP. The CBOs use approximately 40 caseworkers at 25 sites (main offices and satellite locations) to administer the program. Not all of these caseworkers focus solely on Operation HELP. They may have duties such as assisting in the administration of OnTrack or implementing other programs offered by their agencies.

The Operation HELP CBOs process referrals, schedule and conduct interviews, determine eligibility, refer applicants to other assistance programs, and send payments to energy vendors. In addition, the Company has implemented a process improvement whereby CBO caseworkers enter the information directly into a database via a web-based authorization form. PPL Electric's database is a repository for record keeping, analysis of program performance and to generate various reports. The authorization forms include demographic and funding data for every customer assisted by Operation HELP.

The following table shows the 15 Operation HELP administering organizations and counties they serve.

Organization	Phone	Counties Served

~~Carbon County Action Committee~~	~~610-377-6400~~	~~Carbon~~

~~11. Organizational Structure of PPL Electric Staff~~

~~PPL Electric's Regulatory Programs and Business Services (RP&BS) work group oversees the administration of Operation HELP. RP&BS is part of the Customer Services Department. RP&BS staff provides program oversight and field personnel manage the day-to-day administration of the program.~~

~~Program Management Staff:~~

- ~~Christopher Cardenas, Vice President – Customer Services~~

- ~~Melinda Stumpf, Manager – Regulatory Programs and Business Services~~
- ~~Chris R. Schoemaker, Jr., Program Manager – Regulatory Programs and Business Services~~

~~Regulatory Programs Specialists:~~

- ~~Gladys Malone – Lancaster and Harrisburg Regions~~
- ~~Florence McNelis – Northeast and Central Regions~~
- ~~Kristen Kelly – Northeast and Susquehanna Regions~~
- ~~Jaclyn Baldwin – Lehigh Region~~

~~Administrative Support:~~

- ~~Cheryl Mohr, Steno/Clerk~~

~~12. Differences between Approved Plan and Proposed Plan~~

~~PPL Electric has consistently administered Operation HELP according to long-established guidelines and procedures. There are no major changes proposed in the current Plan (2017-2019) as compared to the prior Plan (2014-2016).~~

~~77~~

PPL Electric Utilities Corporation

~~CARES~~

(C) Indicates Change

(D) Indicates Increase (I) Indicates Increase

~~78~~

~~PPL Electric Utilities Corporation~~

~~Customer Assistance & Referral Evaluation Service (CARES)~~

~~1. Program Description & Overview~~

~~The Customer Assistance and Referral Evaluation Service (CARES) program is a special referral service for customers with temporary hardships, such as illness, injury, loss of job or high medical bills. The program recognizes that people are sometimes victims of circumstances beyond their control. These conditions create hardships that are difficult to address without some type of assistance. CARES plays a role in responding to customers who have special circumstances.~~

~~The primary features of CARES include:~~

- ~~Protection against shutoff of electric service~~
- ~~Referrals to other programs and services~~
- ~~Possible financial assistance for overdue electric bills~~

~~The program is available to residential customers, regardless of income level, who face a temporary hardship that could result in the loss of electric service. PPL Electric Utilities Corporation (PPL, PPL Electric, or the Company) defines temporary as a time period of three months or less. The Company refers low-income customers with longer-term problems to its Customer Assistance Program (CAP) known as OnTrack, which offers reduced payment amounts, arrearage forgiveness and referrals to other assistance programs.~~

~~2. Background~~

~~PPL Electric started CARES as a six-month pilot program in 1980-81. The Company conducted the pilot in three areas: Lancaster, Harrisburg, and Hazleton. Following an evaluation of the pilot, the Company implemented CARES as a system-wide program in February 1982. PPL Electric appointed CARES Representatives in each region and they reported to the local Consumer Affairs Director.~~

~~In April 1995, PPL Electric merged the positions of Consumer Affairs Director and CARES Representative into a new position called Customer Assistance Representative. PPL Electric renamed this position as the Customer Programs Director (CPD) in March 1997 and later as Regulator Programs Specialist (RPS)~~

in 2015. The PPL Program Manager will develop program guidelines and communications, set funding levels, and resolve escalated customer issues. The RPS provides the day-to-day administration of the CARES program. In addition, the RPS develops and maintains effective working relationships with a variety of community based organizations (CBOs) and supports outreach efforts for the Low-Income Homes Energy Assistance Programs (LIHEAP) in each of their operating areas.

The primary objectives of the CARES program are to:

1. Help customers who are experiencing temporary hardships to prevent termination of service and to manage their overdue electric bills by providing them with information and resources;
2. Make referrals to Company and/or community assistance programs; and
3. Act as an internal advocate for residential payment-troubled customers

3. Program Design

3.1. Referrals & Assistance Coordination

PPL Electric's support staff communicates directly with CARES customers. They attempt to match customers' needs with existing Company and/or community programs. The RPSs or support staff analyzes customer accounts and circumstances to determine the basic cause(s) of their bill-payment problems. They may refer customers to appropriate programs and services offered by various agencies or PPL Electric.

3.3. Networking

Another key responsibility of the PPL management team is to establish close working relationships with CBOs and departments within PPL Electric. Social service agencies and other community groups are essential to the success of CARES because they provide the needed services for payment-troubled customers. The PPL management team established a network of agencies throughout PPL Electric's service area. The Company has more than 30 years of experience in working effectively with various CBOs. The management team also works closely with internal work groups like the Customer Contact Center, Revenue Assurance, Field Operations, and Corporate Communications.

PPL Electric Utilities Corporation

Electric Pa. P.U.C. No. 202
Original Page No. 42

~~3.4. CARES Credits~~

(C) Indicates Change

(D) Indicates Increase (I) Indicates Increase

Issued: September 30, 2025

Effective: December 1, 2025

~~A unique feature of PPL Electric's CARES program is a provision for CARES Credits. The CARES recipient receives these credits to help pay electric bills. There are circumstances where neither PPL Electric nor social service agencies can provide sufficient and/or timely assistance to customers. Programs may have closed (e.g., LIHEAP) or the customer is ineligible for services because his or her household income is above program guidelines.~~

~~The typical annual CARES Credit budget is $54,000, which comes from PPL Corporation's annual donation to Operation HELP. No formal guidelines exist for the use of CARES Credits because PPL Electric applies the funds on a case-by-case basis. The RPSs often use the credits for customers confronted with high medical bills or the death of the primary wage earner. In 2015, 158 customers received assistance through CARES Credits. The average grant was approximately $342 during this period.~~

~~4. Eligibility Criteria~~

~~Referrals to the CARES program originate from PPL Electric's Customer Contact Center (CCC) Customer Service Representatives (CSRs), social agency caseworkers, and self-referrals. PPL Electric established referral criteria for CCC employees and CBO caseworkers to use as a screening device to ensure appropriate referrals to CARES services. In practice, the CCC's CSRs refer most customers to the program.~~

~~CSRs and CBO caseworkers refer customers to CARES when the following conditions exist:~~

- ~~Illness, injury or high medical bills~~
- ~~Previously good-paying customers with temporary hardship situation~~
- ~~Recent loss of job or major reduction in household income~~
- ~~Death of primary wage earner~~
- ~~Confused and disoriented customer~~

~~The above referral criteria do not address every customer situation or hardship. The CCC representatives and agency caseworkers use their judgment and~~

~~discretion in referring customers to CARES who may not precisely match the referral criteria. If unusual conditions exist, the support staff consults with the local CPD to discuss the situation.~~

5. Projected Needs Assessment

The program is available to any residential customer regardless of income. However, CARES bases eligibility on customers' individual needs and concerns, and targets households with temporary hardships. PPL Electric used the 2013 U.S. Census data file as the foundation for estimating households below 150% of the Federal Poverty Level (FPL). The 2013 Census data set provides estimates at the county level. The Company averaged the percentages for the 29 counties within PPL Electric's service territory and applied that percentage to the average monthly residential customer count. The average monthly residential customer count used was 1,226,583[27]. This resulted in 325,879 estimated households below 150% of the FPL.

Collection data for 2015 (monthly averages) shows approximately 1,226,000 total residential households. Of that total, approximately 47,500 households (or 4 percent) had an overdue balance and were on a payment agreement. In addition, approximately 92,700 (or 8%) residential households had an overdue balance and were not on a payment. Assuming the accumulation of past due money correlates to a temporary (or longer term) hardship of some type, these statistics provide some insight regarding the financial challenges facing some of PPL's customers.

The number of low-income households with overdue balances and other hardships has provided a sufficient number of referrals to CARES in the past. PPL Electric believes that CARES will continue to serve the needs of a specific segment of residential customers.

6. Projected Enrollment Levels

PPL Electric bases the projected enrollment levels on its historical experience with CARES. In 2015, for example, there were 850 customer referrals to the program. Of this total, 158 customers had CARES Credits applied to their account. The Company projects that the number of CARES referrals will likely remain at around 850 annually. PPL Electric now refers many low-income, payment-troubled customers to OnTrack, which is a special payment program, instead of CARES. Because OnTrack offers a longer-term solution, it may be a better alternative than CARES.

~~27 The data source for the average monthly residential count is the 2015 Universal Service Reporting Requirements (USRR) submittal, number six.~~

~~82~~

~~The projected enrollment levels will remain flat as shown in the table below for 2017 through 2019.~~

~~Year~~	~~CARES Referral Estimate~~
~~2017~~	~~850~~
~~2018~~	~~850~~
~~2019~~	~~850~~

~~7. Program Budget~~

~~The annual expenditure for CARES in 2017 is approximately $101,000: $47,000 for staff who support the program and $54,000 for CARES Credits. There is no specific operating and maintenance budget for CARES per se. PPL Electric estimates that the time spent by PPL Electric staff in support of the program is valued at $47,000 annually. These expenses are included in the Company's base rates. As noted earlier, the RPSs use the remaining $54,000 of CARES Credits to assist customers who need help and have run out of options.~~

~~The projected budget amounts shown below for 2017 through 2019 will remain relatively flat. The annual increases represented below are due to increases in staff wages and overhead costs.~~

~~Year~~	~~Total Funding Level[28]~~
~~2017~~	~~$100,940~~
~~2018~~	~~$103,968~~
~~2019~~	~~$107,087~~

~~8. Plans to use Community-Based Organizations (CBOs)~~

~~PPL Electric recognizes the importance of establishing and maintaining its network of contacts and working relationships with the CBOs. Public-private partnerships are essential in providing services and programs to residential customers, especially low-income households. The following list is a fair representation of agencies that the CPDs work with to address customer problems.~~

PPL Electric Utilities Corporation

9. Organizational Structure of PPL Electric Staff

PPL Electric's Regulatory Programs and Business Services (RP&BS) work group has oversight responsibility for CARES. RP&BS is part of the Customer Services Department and provides direction for the program. The Regulatory Programs Specialists (RPSs) oversee the day-to-day administration of CARES.

Program Management Staff:

- ~~Christopher Cardenas, Vice President – Customer Services~~
- ~~Melinda Stumpf, Manager – Regulatory Programs and Business Services~~

~~85~~

- ~~Chris R. Schoemaker, Jr., Program Manager – Regulatory Programs and Business Services~~

~~Regulatory Programs Specialists:~~

- ~~Gladys Malone – Lancaster and Harrisburg Regions~~
- ~~Florence McNelis – Northeast and Central Regions~~
- ~~Kristen Kelly – Northeast and Susquehanna Regions~~
- ~~Jaclyn Baldwin – Lehigh Region~~

~~Administrative Support:~~

- ~~Cheryl Mohr, Steno/Clerk~~

~~Universal Service Representative (USR):~~

- ~~Kimberly Brummett~~

~~10. Differences between Approved Plan and Proposed Plan~~

~~PPL Electric has consistently administered CARES according to long-established guidelines and procedures. There are no major changes proposed in the current Plan (2017-2019) as compared to the prior Plan (2014-2016).~~

CONTRACT PERIOD

Service under this Rate Schedule is for an initial term of one (1) year from the date service is first rendered, unless the Company and the customer mutually agree to a different term in the contract for service.

PPL Electric Exhibit GEO-2

Summary List of Retail Tariff Changes

1. Definitions – The new tariff includes a Definitions section to provide clarity and ease of reference for readers of the tariff.

2. Rule 1 – Changes to improve clarity and correct any small typographical errors. Edits to reflect replacement of the term "basic utility supply service" to "default service."

3. Rule 2 – Changes to improve clarity and correct any small typographical errors. Changes to Rule 2(C) regarding selection of rate schedules, including removal of the option to contract for service under any rate schedule that applies when one or more rate schedule is applicable to the service. Clarifications on security deposits and when they will be refunded. Provision added to address when restoration of service is not possible due to an obstruction on the premises. Changes to provisions about access to customers' premises and about customer installations and code compliance.

4. Rule 3 – Changes to improve clarity and correct any small typographical errors. Consolidation and clarification of provisions governing line extensions, service extensions, and speculative line extensions.

5. Rule 4 – Changes to improve clarity and correct any small typographical errors. Clarification of provisions governing underground facilities and extraordinary service. Changes to provisions regarding non-liability, warranty, and delineation of Company versus customer responsibility.

6. Rule 5 – Changes to improve clarity and correct any small typographical errors. Edits to provision about interruption of service and variation in supply characteristics. Removal of provision addressing service during construction or emergency. Updates to section on redistribution of service, including when submetering may be permitted.

7. Rule 6 – Changes to improve clarity and correct any small typographical errors. Incorporation of Stand-By Service proposal set forth in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

8. Rule 6A – Deleted due to the addition of the new Rule 6.

9. Rule 7 – Changes to improve clarity and correct any small typographical errors. Edits to temporary service provisions, including how a contract may be required for a customer to receive temporary service.

10. Rule 8 – Changes to improve clarity and correct any small typographical errors. Edits to reflect consolidation of submetering provisions in Rule 5. Deletion of automatic meter reading fee.

11. Rule 9 – Changes to improve clarity and correct any small typographical errors. Clarifications of the bill due date and the bill payment date. Removal of provision regarding regular employee bill reduction.

12. Rule 10 – Changes to improve clarity and correct any small typographical errors. Updates to sections on contract cancellation and service termination.

13. Rule 11 – Changes to improve clarity and correct any small typographical errors.

14. Rule 12 – No substantive changes.

15. Rider Matrix – Updates to reflect changes to and elimination of riders and surcharges.

16. State Tax Adjustment Surcharge – Resetting of surcharge to 0% in accordance with PPL Electric witness Katelyn Arnold's direct testimony (PPL Electric St. No. 13).

17. Emergency Energy Conservation Rider – Deletion of the rider.

18. Universal Service Rider – Changes to improve clarity and correct any small typographical errors. Edits to provision governing the report of collections under the USR.

19. Net Metering for Renewable Customer-Generator – Changes to improve clarity and correct any small typographical errors. Clarification of requirement for customer-generators to submit a written application demonstrating compliance with the Net Metering Rider provisions and the Company's interconnection standards and quantifying the nameplate capacity of their alternative energy source. Incorporation of deposit requirement when distribution system upgrades are necessary to interconnect the interconnection applicant's generating facility safely and reliably. Update to provision regarding the title to alternative energy credits.

20. Green Power Option – Deleted due to program termination on May 31, 2013.

21. Metering and Billing Credit Rider – Changes to improve clarity and correct any small typographical errors. Updates to reflect elimination of certain rate schedules.

22. Transmission Service Charge – Changes to improve clarity and correct any small typographical errors. Updates to reflect elimination of certain rate schedules.

23. Generation Supply Charge -1 – Changes to improve clarity and correct any small typographical errors. Updates to reflect elimination of certain rate schedules.

24. Generation Supply Charge - 2 – Changes to improve clarity and correct any small typographical errors.

25. Act 129 Compliance Rider - Phase 1 – Deleted, as the effective rider is the Act 129 Compliance Rider - Phase 4.

26. Act 129 Compliance Rider - Phase 2 –Deleted, as the effective rider is the Act 129 Compliance Rider - Phase 4.

27. Act 129 Compliance Rider - Phase 3 – Deleted, as the effective rider is the Act 129 Compliance Rider - Phase 4.

28. Merchant Function Charge Rider – Changes to improve clarity and correct any small typographical errors. Updates to reflect elimination of certain rate schedules. Updates to uncollectible accounts expense percentages.

29. Smart Meter Rider - Phase 1 – Deleted in accordance with PPL Electric witness Katelyn Arnold's direct testimony (PPL Electric St. No. 13).

30. Smart Meter Rider - Phase 2 – Deleted in accordance with PPL Electric witness Katelyn Arnold's direct testimony (PPL Electric St. No. 13).

31. Competitive Enhancement Rider – Deleted in accordance with PPL Electric witness Katelyn Arnold's direct testimony (PPL Electric St. No. 13).

32. Distribution System Improvement Charge – Resetting of the surcharge rate to 0% and the DSIC cap to 5.0% in accordance with PPL Electric witness Katelyn Arnold's direct testimony (PPL Electric St. No. 13). Removal of old language applicable to when the DSIC was first established. Removal of provision applicable to Rate Schedule LPEP, which is being eliminated.

33. Storm Damage Expense Rider – Changes to improve clarity and correct any small typographical errors. Updates to incorporate the proposed changes to the SDER described in PPL Electric witness Katelyn Arnold's direct testimony (PPL Electric St. No. 13). Removal of old language applicable to when the SDER was first established. Deletion of references to rate schedules that are being eliminated.

34. Residential Electric Vehicle (EV) Time of Use (TOU) Charging Rebate Program – Added to the tariff in accordance with the proposal described in PPL Electric witness James Conrad's direct testimony (PPL Electric St. No. 20).

35. Rate Schedule RS – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

36. Rate Schedule RTS (R) – Deleted as described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

37. Rate Schedule GS-1 – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8). Removal of provisions with respect to separate metering of space conditioning and water heating.

38. Rate Schedule GS-3 – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8). Removal of provisions with respect to separate metering of space conditioning and water heating.

39. Rate Schedule LP-4 – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

40. Rate Schedule LP-5 – Changes to improve clarity and correct any small typographical errors. Decrease to the distribution customer charge described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

41. Rate Schedule LPEP – Deleted as described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

42. Rate Schedule BL – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

43. Rate Schedules for West Chillisquaque Rate Division – Deleted as customers are proposed to be included in PPL Electric's standard rate schedules.

44. Rate Schedule SA – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

45. Rate Schedule SM (R) – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8). Updates to reflect PPL Electric's LED streetlight conversion proposal.

46. Rate Schedule SHS – Changes to improve clarity and any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8). Updates to reflect PPL Electric's LED streetlight conversion proposal.

47. Rate Schedule SLE – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

48. Rate Schedule SE – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

49. Rate Schedule TS (R) – Changes to improve clarity and correct any small typographical errors. Increases to the rates described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

50. Rate Schedule GH-2 (R) – Deleted as described in PPL Electric witness Steven Wishart's direct testimony (PPL Electric St. No. 8).

51. Universal Service & Energy Conservation Plan (USECP) Dated November 6, 2017 – Deleted as it is no longer the effective USECP and does not need to be included in the Company's tariff.

PPL Electric Utilities Corporation

DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS

Active Load Management – The process for arranging to have firm load become interruptible in accordance with criteria established by the PJM OI.

Appropriate Similar Day – Hourly forecasted load comparable based on weekday, month, season, and weather.

Bad Credit - Insolvency (liabilities exceeding assets or generally failing to pay debts as they become due, as evidenced by a credit report prepared by a reputable credit bureau or credit reporting agency or public financial data) or failure to pay Company invoices when they become due on two (2) or more occasions within the last twelve (12) billing cycles.

Basic Electric Supply – Energy (including renewable energy) and renewable energy or alternative energy credits (RECs/AECs) procured by an EGS, provided that the RECs/AECs are bundled with the associated delivered energy. For residential Customers, Basic Electric Supply does not include early contract cancellation fees, late fees, or security deposits imposed by an EGS.

Company – PPL Electric Utilities Corporation.

Competition Act – The Electricity Generation Customer Choice and Competition Act, 66 Pa.C.S. § 2801, et seq.

Competitive Energy Supply – Unbundled electric energy, capacity, transmission, and ancillary services provided by an Electric Generation Supplier.

Competitive Retail Electric Service – Retail electric generation, aggregation, power marketing, and/or power brokerage services supplied to Customers of the Company by an EGS.

Consolidated EDC Billing – When the EDC bills both the EDC and EGS charges by issuing a single bill to a Customer.

Coordination Activities – All activities related to the provision of Coordination Services.

Coordination Agreement – An agreement between the Company and an EGS that arranges for the provision of Coordination Services. The form Coordination Agreement is provided in the Individual Coordination Agreement Rider.

Coordination Obligations – All obligations identified in this Tariff relating to the provision of Coordination Services.

Coordination Services – Those services that permit the type of interface and coordination between EGSs and the Company in connection with the delivery of Competitive Energy Supply to serve Customers located within the Company's service territory including, but not limited to, provision of metering information to PJM. Coordination Services do not include Network Integration Transmission Service and ancillary services which are offered under the PJM Tariff.

PPL Electric Utilities Corporation

DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS (CONTINUED)

Coordination Services Charges – All charges stated in the charges section of this Tariff that are billed by the Company for Coordination Services performed hereunder.

Coordinated Supplier – An Electric Generation Supplier that has appointed a Scheduling Coordinator as its designated agent for the purpose of submitting energy schedules to the PJM OI.

Creditworthy – A creditworthy EGS pays the Company's charges as and when due and otherwise complies with the Rules and Regulations of this Tariff or the PaPUC. To determine whether an EGS is creditworthy, the Company will evaluate the EGS's record of paying Company charges and may also take into consideration the EGS's credit history.

Customer – Any person, partnership, association, or corporation receiving Competitive Energy Supply from an Electric Generation Supplier in accordance with the Competition Act.

Default Service – Service provided pursuant to a Default Service Program to a Default Service Customer.

Default Service Customer – A delivery service Customer not receiving service from an EGS.

Direct Access – The term shall have the meaning set forth in the Competition Act.

EDC Tariff – The Company's Electric Service Tariff, denominated Electric Pa. P.U.C. No. 202.

Electric Distribution Company or "EDC" – The term shall have the meaning set forth in the Competition Act.

Electric Generation Supplier or "EGS" – Any person, corporation or other entity that has received a certification from the Commission that it is eligible and licensed to supply electric energy, capacity, transmission and ancillary services to Customers in the Company's service territory under and pursuant to the Competition Act.

EGS Representative – Any officer, director, employee, consultant, contractor, or other agent or representative of an EGS in connection with the EGS's activity solely as an EGS.

Electronic Data Exchange Working Group ("EDEWG") – Commission group developing standardized formats and methodology for exchanging information electronically within the Pennsylvania deregulated electric market.

Electronic Data Interchange ("EDI") – Guidelines that represent the standard electronic communication method for exchanging data between an EDC and an EGS.

PPL Electric Utilities Corporation

DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS (CONTINUED)

FERC – The Federal Energy Regulatory Commission.

Hourly or Sub-Hourly Metering Equipment – Electric metering equipment that supplies hourly or sub-hourly data of Customer consumption.

Interest Index – An annual interest rate determined by the average of 1-Year Treasury Bills for September, October and November of the previous year.

Load Bus – As used in this Tariff, shall have the same meaning ascribed to the term in the PJM Tariff.

Load Serving Entity or "LSE" – An entity that has been granted the authority or has an obligation pursuant to applicable law, regulation or franchise to sell electric energy to end- users located within the PJM Control Area as that term is defined by the PJM Tariff.

Locational Marginal Price or "LMP" – The marginal price for energy at the location where the energy is delivered or received as specified in the PJM Tariff.

Market Participant – The term has the same meaning as set forth in the PJM Tariff.

Meter Read Date – The date on which the Company schedules a meter to be read for purposes of producing a Customer bill in accordance with the regularly scheduled billing cycles of the Company, as may be modified from time to time.

Month – A month under this Tariff means 1/12 of a year, or the period of approximately 30 days between two regular consecutive readings of the Company's meter or meters installed on the Customer's premises.

Network Integration Transmission Service – Network Integration Transmission Service as set forth in the PJM Open Access Transmission Tariff and any direct Transmission Owner charged expense.

North American Energy Industry Standards Board ("NAESB", formerly known as the Gas Industry Standards Board, "GISB") – The Board which sets standards associated with the electronic method of communication for data transfer that allows information to be sent and received electronically using the Internet. This method must meet the following minimum criteria:

- Security and/or encryption of transactions and Customer information.
- Proof of transmission and receipt.
- Positive identity of sender and recipient (non-repudiation).
- Reliability.
- Data and file integrity.
- Network performance and availability.
- Recoverability and archiving of data.

PaPUC or Commission – The Pennsylvania Public Utility Commission.

PJM – The regional transmission organization operated by PJM Interconnection, L.L.C., or its Successor.

PPL Electric Utilities Corporation

DEFINITION OF TERMS AND EXPLANATION OF ABBREVIATIONS (CONTINUED)

PJM Control Area – The term has the same meaning as set forth in the PJM Tariff.

PJM eScheduler System – Software program administered by the PJM OI through which energy load schedules may be submitted.

PJM OI – The PJM Office of Interconnection, the system operator for the PJM Control Area.

PJM Tariff – The PJM Open Access Transmission Tariff, including schedules and exhibits.

Rate Ready – When an EGS that employs Consolidated EDC Billing provides an EDC with EGS rate information that the EDC uses to calculate the Customer's EGS charges to be billed.

Scheduling Coordinator – An entity that performs one or more of an EGS's Coordination Obligations.

Tangible Net Worth – Total assets less intangible assets and total liability. Intangible assets include benefits such as goodwill, patents, copyrights, and trademarks.

Tariff – This Electric Generation Supplier Coordination Tariff.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

1. THE TARIFF

1.1 Filing And Posting. A copy of this Tariff, which comprises the Charges, Rules and Regulations and Riders under which the Company will provide Coordination Services to EGSs, is on file with the Commission and is posted and open to inspection at the offices of the Company.

1.2 Revisions. This Tariff may be revised, amended, supplemented or otherwise changed from time to time in accordance with the Pennsylvania Public Utility Code, and such changes, when effective, shall have the same force as the present Tariff.

1.3 Application. The Tariff provisions apply to all EGSs providing Competitive Energy Supply to Customers located in the Company's service territory and with whom the Company has executed a Coordination Agreement as required herein. The obligations and charges herein shall apply to anyone providing or receiving service unlawfully or to any unauthorized or fraudulent provision or receipt of Coordination Services in addition to any other remedies available to the Company.

1.4 Rules And Regulations. The Rules and Regulations, filed as part of this Tariff, are a part of every Coordination Agreement entered into by the Company pursuant to this Tariff and govern all Coordination Activities.

1.5 Statement By Agents. No Company representative has authority to modify a Tariff rule or provision, or to bind the Company by any promise or representation contrary thereto or inconsistent therewith.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

2. SCOPE AND PURPOSE OF TARIFF

2.1 Scope And Purpose Of Tariff. This Tariff sets forth the basic requirements for interactions and coordination between the Company as the EDC and EGSs necessary for ensuring the delivery of Competitive Energy Supply from EGSs to their Customers.

2.2 Applicability of Terms to Scheduling Coordinators. As used in this Tariff, the term "EGS" shall apply equally to a Scheduling Coordinator for an EGS for the responsibilities and rights properly assigned to that Scheduling Coordinator by the EGS.

2.3 FERC Jurisdictional Matters. The inclusion of FERC-jurisdictional matters within the scope of the Tariff is intended solely for informational purposes and is not intended to accord any jurisdictional authority over such matters to the PaPUC. Furthermore, to the extent that anything stated herein is found by FERC to conflict with or to be inconsistent with any provision of the Federal Power Act (“FPA”), as amended, or any rule, regulation, order or determination of FERC under FPA, then such FERC rule, regulation, order or determination of the FERC shall control. To the extent required under any provision of the FPA, or any rule, regulation, order or determination of FERC under the FPA, the Company shall endeavor to secure, from time to time, all necessary orders, approvals, and determinations from FERC necessary to implement this Tariff.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

3. COMMENCEMENT OF EDC/EGS COORDINATION

3.1 Registration for Coordination Services. An EGS seeking to obtain Coordination Services hereunder must deliver to the Company a completed registration, consisting of the following:

(a) a fully executed Coordination Agreement by a duly authorized representative of the EGS;

(b) a service agreement for Network Integration Transmission Service under the PJM Tariff, fully executed by a duly authorized representative of the EGS;

(c) a Market Participant Agreement as defined under the PJM Tariff, fully executed by a duly authorized representative of the EGS;

(d) a copy of the EGS's license issued by the PaPUC to provide Competitive Retail Electric Service to the Company's retail Customers;

(e) a fully completed credit history form;

(f) for EGSs that use Consolidated EDC Billing, a copy of the EGS's rate schedule must be provided to the Company. When an EGS requests the implementation of "Standard Rates" on or after registration, or revisions to existing Standard rate schedules, the Company will implement the requested EGS rate schedule(s) within 14 calendar days. Standard Rates include fixed cents per kWh rates, starting from $0.0500 through $0.1199 per kWh in $0.0001 increments, and up to four decimal place precision. A "percent off" of shopping rates would be available from 1% through 50% off the Price to Compare in one-half percent increments. An EGS will be limited to no more than 200 discrete Rate Ready rates per calendar quarter. Additionally, any rate design other than the one specified in Rule 12.1 may delay power flow to a Customer billed under Consolidated EDC Billing;

(g) if an EGS will utilize Sections 6 through 9 of this tariff, written evidence that the EGS is a signatory to the Operating Agreement and Reliability Assurance Agreement of the PJM Interconnection, L.L.C., or its successors;

(h) a completed Supplier Communication Details form (available on the Company's website);

(i) a completed W-9 form;

(j) banking information (Bank Name, Routing Number, and Account Number) provided on EGS letterhead with a signature; and

(k) the EGS's Pennsylvania sales tax identification number.

3.2 Incomplete Registrations. In the event the EGS submits an incomplete registration application, the Company shall provide written notice to the EGS of the application's deficiencies within ten (10) business days after the date of service of the application, as determined under 52 Pa. Code § 1.56,. The Company will not process an incomplete application until the EGS corrects the deficiencies and delivers a completed application to the Company.

PPL Electric Utilities Corporation

COMMENCEMENT OF EDC/EGS COORDINATION (CONTINUED)

3.3 Credit Check. A registration for Coordination Services shall constitute authorization to the Company to conduct a background credit check on the EGS.

3.4 Processing of Registrations. The Company shall complete the processing of each registration for Coordination Services within ten (10) business days after the date of service of the completed registration, as determined under 52 Pa. Code § 1.56,. The Company shall approve all completed registrations unless grounds for rejecting the registration exist, as defined below.

3.5 Grounds for Rejecting Registration. The Company may reject any registration for Coordination Services on any of the following grounds:

(a) the EGS has undisputed outstanding debts to the Company arising from its previous receipt of Coordination Services from the Company under this Tariff;

(b) the EGS has failed to comply with the payment and billing requirements specified in Rule 12 of the Tariff; or

(c) the Company has provided written notice to the EGS that a registration is deficient, and the EGS has failed to submit a completed registration within thirty (30) calendar days of deficiency notification.

The Company may also petition the PaPUC to reject the registration of an EGS with Bad Credit as to PaPUC jurisdictional transactions. The Company need not provide Coordination Services to the EGS pending the PaPUC's review of said Petition unless the EGS has provided security to the Company as provided for in Rule 12.5. The EGS must comply with all applicable requirements of the PJM Tariff in order for its registration to be accepted as complete.

3.6 Offer of Conditional Acceptance of Registration. Where grounds for rejection of a registration exist due to an EGS's outstanding and undisputed debts arising from its previous receipt of Coordination Services from the Company under the Tariff, the Company may offer the affected EGS a conditional acceptance if the EGS pays such debts before it receives Coordination Services. If the EGS rejects the Company's offer of conditional acceptance under this Rule or if the EGS does not act upon the Company's offer of conditional acceptance within thirty (30) calendar days following the offer, then the EGS's registration for Coordination Services will be deemed rejected.

3.7 Rejection of Registration. Upon rejection of any registration, the Company shall provide the affected EGS with written notice of rejection within the ten (10) days of date of service of the registration (as determined consistently with the provisions of 52 Pa. Code § 1.56) or the date of the end of the thirty (30) day period for corrections of deficiencies or conditional acceptance, and shall state the basis for its rejection.

3.8 Approval of Registration. Upon its approval of a registration for Coordination Services, the Company shall execute the Coordination Agreement tendered by the registrant and shall provide one copy to the EGS and maintain a copy for its own records.

PPL Electric Utilities Corporation

COMMENCEMENT OF EDC/EGS COORDINATION (CONTINUED)

3.9 Identification Numbers. Upon its approval of a registration for Coordination Services, the Company will assign to the EGS a supplier identification number to be used in subsequent electronic information exchange between the EGS and the Company. This number shall be consistent with the EGS's Dunn & Bradstreet Business number. In addition, the Company may also assign identification numbers to the EGS that may be required by PJM in connection with the submission and/or confirmation of load schedules for serving load in the Company's service territory.

3.10 Commencement of Coordination Services. Coordination Services shall commence within fifteen (15) days after the Company’s approval of an EGS’s registration for Coordination Services provided that all of the information necessary for the Company to provide Coordination Services has been provided to the Company and any conditions established under Rule 3.6 have been satisfied by the EGS.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

4. COORDINATION OBLIGATIONS

4.1 Provision of Coordination Services. The Company shall provide all Coordination Services, as provided herein, necessary for the delivery of an EGS's Competitive Energy Supply to serve Customers located within the Company's service territory.

4.2 Timeliness and Due Diligence. EGSs shall exercise due diligence in meeting their obligations and deadlines under this Tariff so as to facilitate Direct Access.

4.3 Duty of Cooperation. The Company and each EGS will cooperate in order to ensure delivery of Competitive Energy Supply to Customers as provided for by this Tariff, the EDC Tariff, the PJM Tariff, and the Competition Act.

4.4 State Licensing. An EGS must have and maintain in good standing a license from the PaPUC as an authorized EGS. The EGS shall notify the Company within three (3) business days of any amendment, revocation, termination or other change in its License applicable to the Company's service territory.

4.5 Energy, Capacity, and AEPS Procurement. An EGS is responsible for all necessary arrangements for supply and delivery of electric energy and capacity in a quantity sufficient to serve its own Customers under the PJM Tariff and to also satisfy AEPS obligations associated with its supply.

4.6 Transmission Services and Obligations. An EGS is responsible for arranging, procuring, taking and paying for those services provided by PJM that are necessary for the delivery of Competitive Energy Supply to its Customers pursuant to the PJM Tariff and this Tariff. Failure to do so will result in a suspension of the EGS's registration until resumption of such services by the EGS occurs.

4.7 Energy Scheduling. An EGS must make all necessary arrangements for scheduling the delivery of energy with PJM.

4.8 Reliability Requirements. An EGS shall satisfy those reliability requirements issued by the PaPUC, PJM, or any other governing reliability council with authority over the EGS.

4.9 Determination of Load and Location. The Company and EGS shall coordinate with the PJM OI to determine the magnitude and location of the EGS's actual or projected load, as required by the PJM OI, for the purpose of calculating a Network Integration Transmission Service Reservation, an installed capacity obligation, or other requirements under the PJM Tariff.

4.10 Supply of Data. An EGS and the Company shall supply to each other all data, materials or other information specified in this Tariff, or otherwise reasonably required by the EGS or Company in connection with the provision of Coordination Services, in a thorough and timely manner.

PPL Electric Utilities Corporation

COORDINATION OBLIGATIONS (CONTINUED)

4.11 Communication Requirements. An EGS must be equipped with the following communications capabilities:

- Internet electronic mail (e-mail), including the capability to receive ASCII file attachments;
- Internet browser capable of access to the PPL Electric web-site and file uploads and downloads;
- Internet EDI peer-to-peer communication with push and pull capability, and
- NAESB standards which is the preferred method of communication (EDI), as determined by the Electronic Data Exchange Working Group (EDEWG) and Pa PUC Docket No. M-00960890.F0015.

4.12 Record Retention. An EGS and the Company shall comply with all applicable laws and PaPUC rules and regulations for record retention, including but not limited to those Rules of Chapter 56 of the PaPUC's regulations.

4.13 Payment Obligation. The Company's provision of Coordination Services to an EGS is contingent upon the EGS's payment of all charges provided for in this Tariff and the PJM Tariff.

4.14 Credit Requirements

The Company will apply, on a non-discriminatory and consistent basis, reasonable financial standards to assess and examine an EGS's Creditworthiness. These standards will take into consideration the scope of operations of each EGS and the level of risk to the Company. This determination will be aided by appropriate data concerning the EGS, including load data or reasonable estimates thereof, where applicable.

The Company requires an initial credit amount of $250,000 and shall adjust the amount required commensurate with the financial risks placed on the Company by an EGS, including recognition of an EGS's performance. An EGS shall satisfy its Creditworthiness requirement and receive an unsecured credit limit which will be a maximum of 5% of an EGS's Tangible Net Worth by demonstrating that it has, and maintains, investment grade long-term bond ratings from any two of the following four rating agencies:

AGENCY	**SENIOR SECURITIES RATING (BONDS)**
Standard & Poor's	BBB- or higher
Moody's Investors' Services	Baa3 or higher
Fitch IBCA	BBB- or higher
Duff & Phelps Credit Rating Company	BBB- or higher

PPL Electric Utilities Corporation

COORDINATION OBLIGATIONS (CONTINUED)

The EGS will provide the Company with its or its parent's most recent independently-audited financial statements (if applicable) and its or its parent's most recent Form 10-K and Form 10-Q (if applicable).

The Company shall make reasonable alternative credit arrangements with an EGS that is unable to meet the aforementioned criteria and with those EGSs whose credit requirements exceed their allowed unsecured credit limit. The EGS may choose from any of the following credit arrangements in a format acceptable to the Company: an irrevocable Letter of Credit; a cash deposit established with the Company; including the Company as a beneficiary; or other mutually agreeable security or arrangement. The alternate credit arrangements may be provided by a party other than the EGS, including one or more ultimate Customers. The fact that an irrevocable Letter of Credit or Cash Deposit is provided by a party other than the EGS shall not be a factor in the determination of the reasonableness of any alternative credit arrangement, as long as such party and the related credit arrangements meet the Company's standard credit requirements.

4.15 Data Exchange.

(a) An EGS shall implement NAESB standards which is the preferred method of communication (EDI), as determined by the EDEWG and PaPUC Docket No. M-00960890F.0015. NAESB standards must meet the minimum criteria of, and be endorsed by, the EDEWG. An EGS shall have appropriate software for access to the Company's Internet site for file viewing, uploads and downloads.

(b) The Company shall make available to an EGS, on a daily basis, the following information regarding that EGS's Customers in electronic files available on the PPL Electric supplier website:

(i) PPL Electric Account Number
(ii) Billing Route
(iii) Customer Name
(iv) Service Address
(v) Service City
(vi) Service State Zip
(vii) Mailing Address
(viii) Mailing City
(ix) Mailing State Zip
(x) Contact Name (applicable to industrial and large commercial Customers only)
(xi) Contact Address (applicable to industrial and large commercial Customers only)
(xii) Contact City, State, Zip (applicable to industrial and large commercial Customers only)
(xiii) Unlisted Telephone Number Code
(xiv) Telephone Number
(xv) Rate Class
(xvi) Rate Class Load Profile and Class Strata (if any)
(xvii) Registered Peak Demand
(xviii) Load Factor
(xix) Annual kWh
(xx) Meter Use Code
(xxi) Delivery Date

PPL Electric Utilities Corporation

COORDINATION OBLIGATIONS (CONTINUED)

(xxii) Load Bus
(xxiii) Whether Customer is on budget billing
(xxiv) Whether the Customer a special payment agreement.

(c) An EGS must notify its Customers that by signing up for Competitive Energy Supply with the EGS, the Customer is consenting to the disclosure by the Company to the EGS of certain basic information about the Customer, as listed in Rule 4.15(b). At a minimum, the notice shall inform the Customer that the following information will be disclosed: the Customer's PPL Electric account number, data about meter readings, rate class and electric usage, the Customer's address(es) and telephone number, and whether the Customer is on a budget billing plan or payment arrangement.

(d) On its supplier website, the Company will maintain copies of the standard file formats it will provide to EGSs containing the data listed in this Rule of this Tariff. The Company will not change the file formats without first providing at least seven (7) days' notice of any such change via Internet electronic mail and posting on its supplier website. The Company will make a good faith effort to provide a greater period of notice when warranted.

(e) Nothing in this Rule 4.15 shall prohibit the Company from making available to EGSs other electronic data, in formats chosen by the Company. The Company will not change the file formats of the electronic data made available under this Rule 4.15(e) without first providing at least seven (7) days' notice of such change via Internet electronic mail and posting on the supplier website. The Company will make a good faith effort to provide a greater period of notice when warranted.

4.16 Code of Conduct. The Codes of Conduct contained in the Company's EDC Tariff are incorporated herein by reference.

4.17 Standards of Conduct and Disclosure for Licensed EGSs. Standards of Conduct and Disclosure for Licensed EGSs. The Commission's Standards of Conduct and Disclosure for Licensees are incorporated herein by reference.

4.18 Coordination Service Charges. EGSs shall be required to pay the following as part of Coordination Service Charges to facilitate the transfer of data between the Company and EGSs.

(a) EDI Transaction Fees – Each distinct transfer of data through EDI is considered a transaction. PPL Electric incurs a per transaction fee for every EDI transaction. The Company will directly assign EDI Transaction fees to each EGS for their EDI transactions. PPL Electric will charge its actual costs incurred for EDI transaction fees.

(b) DUNS Testing Fees – Coordination Service Charges will include the costs of testing a new Data Universal Numbering System ("DUNS") that the Company needs to set up for each EGS. There are two types of DUNS fees: (1) "Full" testing, which is to test DUNS activity for a new supplier; and (2) "Abbreviated" testing, which is to test DUNS activity for an existing supplier requesting an additional DUNS number. The DUNS fees will be directly assigned to the EGS for each test performed.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

5. DIRECT ACCESS PROCEDURES

5.1.3 Eligible Customer List.

(a) The following information shall be provided to EGSs about Customers that have not opted out of the release of Customer information:

i. PPL Electric Account Number
ii. Billing Country Code
iii. Customer Name
iv. Service Address
v. Service City
vi. Service State Zip
vii. Billing Address
viii. Billing City
ix. Billing State Zip
x. Meter Read Cycle
xi. Contact Name (applicable to industrial and large commercial Customers only)
xii. Contact Address (applicable to industrial and large commercial Customers only)
xiii. Contact City, State, Zip (applicable to industrial and large commercial Customers only)
xiv. Rate Class
xv. Rate Class Load Profile and Class Strata (if any)
xvi. Registered Peak Demand
xvii. Load Factor
xviii. Annual kWh
xix. Meter Use Code
xx. Delivery Date
xxi. Load Profile Group Indicator
xxii. Default Service Indicator
xxiii. Interval Meter Indicator
xxiv. Capacity and Transmission Obligations (including current and future Capacity and Transmission Peak Load Contributions)
xxv. Net Metering Flag
xxvi. Tax Status Flag

5.2 Interval Meter Data. A licensed EGS is expected to maintain appropriate Customer authorization when requesting historical Interval Meter data. The Interval Meter data will be provided at no cost to an EGS and will be transferred in a standardized format and sent to the EGS via EDI and will include 12 months of data. Alternatively, an EGS may access the data through a secured portion of the Company's supplier website. The EGS will share its records of Customer authorization with the Company upon request and those records shall be subject to audit by the Commission.

5.3 Switching Among EGSs (or between an EGS and the Company as the Provider-of-Last Resort). EGS selection switching by Customers shall occur in accordance with the Direct Access Procedures contained in this Tariff.

PPL Electric Utilities Corporation

DIRECT ACCESS PROCEDURES (CONTINUED)

5.3.1

(a) If a Customer contacts a new EGS to request a change of EGS and the new EGS agrees to serve the Customer, the Customer's new EGS shall obtain appropriate authorization from the Customer, or person authorized to act on the Customer's behalf, indicating the Customer's choice of EGS. It is the EGS's responsibility to maintain records of the Customer's authorization in the event of a dispute in order to provide documented evidence of authorization to the Company or the Commission.

(b) The Customer's new EGS shall also submit the Customer's enrollment information using the PA EDI 814 transaction. Upon receipt of the 814 enrollment transaction from the EGS, the Company will automatically confirm receipt of the file.

(c) The Company will send the Customer a confirmation letter before the end of the next business day to confirm the Customer's EGS selection. The EGS selection will be effective within three (3) business days after processing the selection. The confirmation letter shall include notice to residential and small commercial Customers that the Customer's service may be terminated for failure to pay for generation service provided by an EGS and billed by the EDC.

(d) Once the preceding process is complete, the Company will notify the Customer's prior EGS of the discontinuance of service to the Customer from that prior EGS.

5.3.2 If a Customer contacts the Company to request a change of its EGS to another EGS, the Company shall notify the Customer that the newly selected EGS must be contacted directly by the Customer in order to initiate the change.

5.3.3 If an EGS wishes to obtain from the Company confidential Customer-specific information about a Customer with whom it is discussing the possibility of providing Competitive Energy Supply but who has restricted access to the information, the Company will only provide such information after receiving written, electronic or telephonic customer authorization from the requesting supplier or attestation from the supplier that it has such authorization. The EGS will share its records of Customer authorization with the Company upon request and those records shall be subject to audit by the Commission.

5.3.4 If a Customer contacts the Company to request a change of EGS to the Company's Default Service, the Company will process the request and send the Customer a confirmation letter before the end of the next business day confirming the Customer's return to Default Service. The selection will be effective within three (3) business days after processing the request. Once the preceding process is complete, the Company will notify the Customer's prior EGS of the discontinuance of service to the Customer from that prior EGS.

(a) If a Customer contacts the Company to discontinue electric service at the Customer's then current location, and initiates a request for service at a new location in the Company's service territory, the Company will adhere to the processes set forth in the Company's Plan for Seamless Moves and Instant Connects approved at Docket No. M-2014-2401103.

PPL Electric Utilities Corporation

DIRECT ACCESS PROCEDURES (CONTINUED)

(b) If a Customer contacts the Company to discontinue electric service the Company will notify the current EGS via an EDI drop transaction of the Customer's discontinuance of service for the location.

5.3.5 If the Company elects to change the account number for a Customer receiving generation service from an EGS, the Company will notify the EGS of the change in account number at the same Customer location, via EDI transaction.

5.4 Provisions relating to an EGS's Customers.

5.4.1 Arrangements with EGS Customers. EGSs shall be solely responsible for having appropriate contractual or other arrangements with their Customers necessary to implement Direct Access consistent with all applicable laws, PaPUC requirements, the PJM Tariff and this Tariff. The Company shall not be responsible for monitoring, reviewing or enforcing such contracts or arrangements.

5.4.2 Transfer of Cost Obligations Between EGSs and Customers. Nothing in this Tariff is intended to prevent an EGS and a Customer from agreeing to reallocate between them any charges that this Tariff imposes on the EGS, provided that any such agreement shall not change in any way the EGS's obligation to pay such charges to the Company, and that any such agreement shall not confer upon the Company any right to seek recourse directly from the EGS's Customer for any charges owed to the Company by the EGS.

5.4.3 Customers of an EGS remain bound by the rules and requirements of the applicable PPL Electric Tariff under which they receive retail service from the Company.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

6. LOAD FORECASTING

6.1 Customer Load Forecasting. The Company, in conjunction with an EGS, shall perform a Customer load forecasting process for each EGS's load requirements which shall approximate EGS's anticipated aggregate hourly Customer load. The aggregate hourly load forecast shall define the hourly energy requirements for an EGS. Energy will be delivered to the Company's electric distribution system using the PJM power scheduling policies and procedures.

6.2 Forecasting Methodology.

6.2.1 Monthly Metered Customer Forecasts. For each EGS, the Company will provide hourly load profiles by rate class for Customers with monthly metering equipment, which will establish the hourly supply obligations of the EGS for serving such Customers. The Company has developed and will maintain, based on load survey data, load forecast categories corresponding to the Company's current rate class load profile identified in the EDC Tariff. The load curves of these rate classes will be the basis for the forecasts prepared by the EGS for the aggregate of monthly metered Customers' load in each rate class load profile.

6.2.2 Hourly Metered Customer Forecasts. An EGS shall provide hourly load forecasts for their Customers with Hourly or Sub-Hourly Metering Equipment.

6.2.3 Typical Load Curve Data. On or before the day of energy scheduling, the Company will make available to EGSs the typical load and all algorithms and data necessary to calculate the hourly forecast for monthly metered Customers. This information will be available on an ongoing basis for an EGS to download from the supplier website and will permit an EGS to develop forecasts for any future period using the same methodology as the Company will use.

6.2.3.1 Updates to Typical Load Profile Data. The Company shall review annually its methodology, algorithms and load forecasting results and shall perform additional load studies to update the load curve data as required.

6.2.4 Right to Aggregate. EGSs may aggregate their Customers' loads. Such right to aggregate shall not mean that if a Customer of an EGS has multiple PPL Electric accounts, the Customer's PPL Electric charges may be billed conjunctively. Such right also shall not mean that the PPL Electric charges of an EGS's aggregated Customers may be billed conjunctively.

6.3 Customer Loads.

6.3.1 Determination of Customers for Pro-rata Share of Load. The Company will consider the Rate Schedules of LP-4 and LP-5 as large Commercial and Industrial Customers and, if over-subscribed, will receive a 'pro-rata' share of the available rate schedule class load for competitive supply during phase-in. All other customers will be able to have all of their load served by competitive supply if they are so chosen under the provisions of enrollment in their rate class. These customers shall be enrolled on a first come-first served basis pursuant to the Commission's procedures for customer enrollment.

PPL Electric Utilities Corporation

LOAD FORECASTING (CONTINUED)

6.3.2 Process Description for Forecasting. Except as provided in Rule 6.2.5 and 6.2.6, a customer at a single metered location purchasing Competitive Energy Supply from an EGS may not simultaneously purchase energy or capacity from the Company.

Purchase of Energy and Capacity from More Than One EGS. Customers may choose to be supplied with energy and/or capacity from more than one EGS. Customers or their EGSs will be responsible to the Company for any additional costs the Company incurs that result from a Customer purchasing energy and/or capacity from more than one EGS. Where one or more of the EGSs serving the customer fails to fulfill its obligation to supply energy or capacity, the customer may receive service from the Company. However, in order for the customer to continue to receive service from the customer's other EGS(s), the customer must arrange for a replacement for the non-supplying EGSs by the end of the second full monthly billing cycle after the customer receives notice of the EGS's failure to supply. If, by that time, the customer has not replaced the non-supplying EGS(s), the customer must either discontinue receiving service from the Company or receive service from the Company for its entire load. If a customer receives electric supply from more than one EGS, the Company is not obligated to supply consolidated EDC billing.

6.4 Daily Forecasting Process.

6.4.1 Business Days and Scheduling Window. The daily forecasting process shall be performed on each business day. A business day is a weekday excepting Company holidays. The daily forecasting process shall be performed on each business day for a scheduling window consisting of all following days through the next business day.

The daily forecasting process shall be performed Monday through Thursday (except holidays) for a scheduling window that covers the following day (midnight to midnight). If the following day is a holiday, then the scheduling window shall include the holiday and be extended to include the first business day following the holiday. Similarly, the daily forecasting process shall be performed on Friday for a scheduling window consisting of the following Saturday, Sunday, and Monday. If the Monday is a holiday, then the scheduling window shall include the holiday and extend through the first business day following the holiday.

In addition to the forecasts required of EGSs hereunder, the EGS may provide advance- hourly forecasts for each of its Customers with Hourly or Sub-Hourly Metering Equipment. Forecasts are not final until the business day before those forecasts are to apply.

6.4.2 Process Description for Forecasting. The following process shall be followed on each business day:

Step 1:

Each EGS will calculate the load forecast for each monthly metered rate class load profile by multiplying the load profile for the appropriate day type by the number of an EGS's Customers (including Customers of any Coordinated Suppliers that have a designated EGS as their Scheduling Coordinator) in that rate class load profile. These values will have been adjusted upward by an amount necessary to cover line losses based on current line loss percentages for the Customer Class to which each Customer belongs.

PPL Electric Utilities Corporation

LOAD FORECASTING (CONTINUED)

Step 2a:

By 10:00 a.m. Eastern Prevailing Time of the business day, an EGS shall enter the load forecast for each of an EGS's hourly metered Customers and for each hourly metered Customer of any Coordinated Suppliers that have a designated EGS as their Scheduling Coordinator and the aggregated forecast for monthly metered customers. Forecasts for hourly metered Customers should include estimated losses based on current loss factors for each rate class. If an EGS fails to enter a load forecast for any of its required hourly metered Customers by 10:00 a.m. Eastern Prevailing Time the business day before the load forecast is to apply, the Company will use its forecast values calculated for the hourly load of the EGS previously entered for an Appropriate Similar Day. Such default values shall be binding on an EGS that fails to enter load forecasts as required as if it had entered the values itself.

Step 2b:

The Company and the EGS shall seek to reach an agreement as to the load forecasts submitted by an EGS under Step 2a, provided that nothing in this Step 2b shall limit the Company's right to reject a forecast and submit a Company forecast pursuant to Step 3.

Step 3:

The Company will accept or reject an EGS load forecast by 11:00 a.m. Eastern Prevailing Time. If the Company's Alternative Supplier Coordination (ASC) personnel determine that a forecast is going to be rejected and conditions permit, then an ASC staff member will attempt to contact an EGS to explain the reason for rejection and resolve forecast problems. If the reason for rejecting an EGS load forecast values or changes cannot be resolved by 12:00 noon Eastern Prevailing Time, the scheduling process will continue using the Company forecast values.

6.5 Real-Time Load Following. To the extent an EGS has installed and pays for the necessary metering and telecommunications equipment for actual load following, an EGS may follow such Customers' load. To the extent that an EGS's total supply is for such Customers, an EGS shall be obligated to follow such Customers' loads on a real-time basis.

For real-time load following, including interruptible Customers claimed with PJM as Active Load Management, an EGS will have special obligations with respect to both the Company and PJM that must be dealt with on a Customer-by-Customer basis to ensure operational integrity. An EGS and the Company shall work cooperatively to address the technical and operational issues posed by real-time load following as the need arises. The loads of Customers using real-time load following will not be incorporated into an EGS's hourly load forecasts except as required for PJM operation and transmission purposes.

To the extent an EGS's commencement of real-time load following requires modifications of the Company's computer, telemetering, telecommunication, and other systems to enable such activity, the EGS making such request shall be responsible for paying the Company's incremental costs associated with such modifications. The Company shall bill the EGS for any such costs in accordance with Rule 13 of this Tariff.

PPL Electric Utilities Corporation

LOAD FORECASTING (CONTINUED)

6.6 Adequacy of Forecast. An EGS may provide, at its own discretion, its own forecast for the aggregate requirements of its monthly metered Customers, independent of the Company's forecast. The EGS and the Company shall concur on the compatibility of the forecasting methodology to be used by the EGS. The Company may review, for operational reasons, an EGS's forecast. By executing an Individual Coordination Agreement, an EGS agrees that the Company's load forecast for monthly metered Customers will be used for scheduling absent a specific load forecast by the EGS and will be adequate for this purpose. An EGS's remedies for any claimed deficiency in the Company's forecast for monthly metered Customers shall be limited to either:

(1) arranging, at its own expense, for the installation pursuant to PaPUC rules and procedures of Hourly or Sub-Hourly Metering Equipment at Customer's premises in order to permit the Customer's load to be forecasted, billed and reconciled as an hourly Customer; or
(2) entering, at its own expense, into a joint load study with the Company to develop new load curves.

6.7 Provision of Load Profile Data. The Company agrees that it will make Company personnel available to EGSs to explain and discuss the Company's load forecasting procedure, and the applicability of its methodology. In addition, the Company will provide EGSs, upon request, the data points used in the Company's load research system to develop the company's Load forecasts, provided, however, that nothing in this tariff will obligate the Company to disclose the customer specific metering data used to develop these data points.

6.8 Line Losses. For purposes of forecasting, scheduling, and reconciliation in sections 6-8 of this Supplier Coordination Tariff, the combined transmission and distribution line losses for the Secondary voltage level (Rate Schedules RS, GS-1, GS-3, BL, and those applicable to street and area lighting), the Primary voltage level (Rate Schedules LP-4), and the Transmission voltage level (Rate Schedules LP-5 and Standby Service) shall be calculated by multiplying hourly kWh sales delivered to customer(s) served at these voltage levels by the applicable line loss factor. The applicable line loss factors are:

- Secondary voltage level - 1.08047231
- Primary voltage level - 1.05364821
- Transmission voltage level - 1.02682410

The Company reserves the right to file to revise these factors from time to time to reflect changes in system line losses. The Company will revise these line loss factors if the PJM imposes or changes any separate charges on its transmission customers for the level of line losses that is included in these factors. Any such revision will be filed with the FERC and the Commission, provided to EGSs via Internet electronic mail and posting on the Company’s supplier website, and become effective thirty (30) days after filing unless otherwise ordered by the Commission or the FERC. PPL Electric will file any such revision and propose that it becomes effective concurrently with any change in or imposition of separate PJM line loss charges. The Company will make a good faith effort to advise EGSs of any change in these loss factors more than thirty (30) days in advance of a change when warranted.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

7. LOAD SCHEDULING

7.1 Net Load Schedules. The net load schedule for an EGS shall be equal to the aggregate forecast value for all of the monthly metered and hourly metered Customers of that EGS and any Coordinated Suppliers that have designated the EGS as their Scheduling Coordinator.

7.2 Rounding to Whole Megawatts. For as long as the PJM OI or its successor requires the scheduling and delivery of power only in whole MW, the Company will round the aggregate forecast value for each hour to a whole MW value for load scheduling purposes according to the following rules:

- If the aggregate forecast value for an hour is less than 1.0 MW, the value will be rounded to 1.0 MW.
- If the aggregate forecast value for an hour is greater than 1.0 MW, the value will be rounded downward to the nearest whole MW if the decimal portion is less than 0.5.
- If the aggregate forecast value for an hour is greater than 1.0 MW, the value will be rounded upward to the nearest whole MW if the decimal portion is greater than or equal to 0.5.

7.3 Daily Load Scheduling Process.

7.3.1 Uploading Schedules. The Company will upload the load schedule for the scheduling window to PJM by 12:00 noon Eastern Prevailing Time on each business day using the PJM eScheduler System according to PJM requirements. The schedule uploaded by the Company shall be binding on that EGS.

7.3.2 Load Schedule Changes. An EGS may initiate changes to the load schedule using the PJM eScheduler System. It is the responsibility of an EGS to make any necessary changes to the PJM eScheduler System and submit a revised load forecast to the Company. The EGS will notify the Company by contacting a member of the Alternative Supplier Coordination Section by telephone and indicate that changes have been made and a general description of the operational reasons for the changes. The Company will make reasonable efforts to review and, if the reason for the changes is determined by the Company to be operationally valid, confirm the load schedule changes using the PJM eScheduler System before the PJM designated deadline. In the absence of confirmation by the Company, the prior load schedule value will remain in effect. In light of deadlines imposed by the PJM OI for the submission of load schedule changes, an EGS should initiate any necessary changes and notify the Company well before the cut off time to increase the likelihood that the changes will be accepted.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

8. RECONCILIATION SERVICE

8.1 General Description. Reconciliation service accounts for mismatches between an EGS's load schedule (with PJM approved load schedule changes) for serving its Customers and the energy that was actually used by those Customers. This service differs from Energy Imbalance Service - a related service performed exclusively by the PJM OI under the PJM Tariff - because the latter accounts for differences between an EGS's scheduled energy obligation and the quantity of energy actually delivered by the EGS. Without universal real-time metering, the calculation of reconciliation quantities typically must occur after the monthly reading of Customers' meters.

8.2 Billing. The Company and the EGS will rely on PJM to perform calculations to determine the monetary value of reconciliation quantities and to bill and/or credit EGSs and the Company for oversupplies and undersupplies at an hourly price through the PJM grid accounting system. The oversupplies and undersupplies will be calculated at the LMP as warranted.

8.3 The Company’s Role. The Company will assist PJM in accounting for reconciliation quantities by (1) collecting all Customer usage data; (2) determining hourly reconciliation quantities for each EGS or Scheduling Coordinator; (3) calculating monthly reconciliation quantities for each EGS or Scheduling Coordinator; and (4) submitting the reconciliation quantities to the PJM OI. The Company also shall provide all algorithms and data necessary for an EGS to independently determine the reconciliation calculations.

8.4 Meter Data Collection. Meter data supplied to or collected by the Company shall be utilized to calculate the quantity of energy actually consumed by an EGS's Customers for a particular reconciliation period. The meter data shall be available for use following the time of a Customer's monthly meter reading. Thus, in order to measure the energy consumed by all Customers on a particular day, at least one month is required for data collection. In general, on each day that new metered-usage data is posted, one or more days in the previous month will become "fully metered."

8.4.1 Monthly Metered Customers. Data from monthly metered Customers is collected in subsets corresponding to customer billing cycles (billing routes), which close on different days of the month. To reconcile energy mismatches on an hourly basis, the Company shall convert such meter data for Customers to the equivalent hourly usage. Rate class load profiles adjusted for system load values will be applied to metered usage to derive an estimate for the hour-by-hour usage.

8.4.2 Hourly Metered Customers. Data from hourly metered Customers will also be collected by or provided to the Company monthly on a billing route basis.

8.5 Daily Reconciliation. Each business day that new fully metered days are available, the Company will determine hourly reconciliation quantities for that portion of the previous month's usage corresponding to new fully metered days. This information will be made available to the EGS via the website and enable EGSs and the Company to track the day-by-day buildup toward the monthly reconciliation billing that the Company and the EGS will rely on PJM to perform.

PPL Electric Utilities Corporation

RECONCILIATION SERVICE (CONTINUED)

8.5 Daily Reconciliation. Each business day that new fully metered days are available, the Company will determine hourly reconciliation quantities for that portion of the previous month's usage corresponding to new fully metered days. This information will be made available to the EGS via the website and enable EGSs and the Company to track the day-by-day buildup toward the monthly reconciliation billing that the Company and the EGS will rely on PJM to perform.

The following calculations will be used to determine the reconciliation quantities:

Step 1:
Monthly-metered Customers' actual usage (the billing usage reported by or to the Company) will be spread over each hour in the usage period based on each Customer's weather-adjusted hourly usage curve using actual hourly weather data for the usage period. The monthly-metered Customer's weather- adjusted usage by hour will be multiplied by the loss factor determined by Customer rate class to determine the Customer's gross usage by hour.

Each hourly-metered Customer's hourly usage will be multiplied by a loss factor determined by Customer rate class to determine the Customer's gross usage by hour.

Step 2:
The gross hourly usage quantity for each Customer will be aggregated by the Company to arrive at a total gross Customer usage quantity by hour for each EGS for use in Step 3 of this Rule 8.5. For Scheduling Coordinators, this aggregation will account for usage of Coordinated Suppliers' Customers.

Step 3:
The hourly reconciliation quantity for each hour will be calculated by subtracting an EGS's hourly total gross Customer usage amount from the hourly load schedule submitted to PJM for that EGS, including the effect of any confirmed changes to the load schedule entered before the PJM accounting deadline.

8.6 Monthly Reconciliation. By the third business day after a calendar month becomes fully metered, the Company will compute and make available the complete hourly reconciliation quantities for the entire month to the Company Website.

By the third business day after a calendar month becomes fully metered, the Company will also transfer the monthly reconciliation quantity to PJM. The Company and the EGS will rely on PJM to calculate the EGS reconciliation dollar amounts for each hour. The Company and the EGS will rely on PJM to include EGS reconciliation dollar amounts in the monthly PJM bills to each EGS or Scheduling Coordinator.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

9. UTILIZATION OF SCHEDULING COORDINATORS

9.1 Participation Through a Scheduling Coordinator. If an EGS chooses not to interact directly with PJM for scheduling purposes or cannot schedule directly with PJM because its schedules do not meet the "whole megawatt" requirements set by PJM for scheduling, an EGS may become a Coordinated Supplier by entering into a business arrangement with another EGS or other person that will act as a Scheduling Coordinator. A Coordinated Supplier may enter into this business arrangement with a Scheduling Coordinator(s) for an individual service such as load scheduling, or for a variety of services encompassing installed capacity, import capability, load scheduling, and reconciliation rights and responsibilities. To the extent it is responsible for the following activities, the Scheduling Coordinator's transmission service obligation, installed capacity obligation, import capability, load scheduling and reconciliation rights and responsibilities shall include its own Customers and the Customers of its Coordinated Suppliers. All actions of the Scheduling Coordinator that relate to one of its Coordinated Suppliers are binding on, and attributable to, said Coordinated Supplier.

9.2 Designation of a Scheduling Coordinator. To designate a Scheduling Coordinator, an EGS must provide the Company with a completed Scheduling Coordinator Designation Form, included as a Rider hereto, fully executed by both the EGS and the Scheduling Coordinator. The Scheduling Coordinator Designation Form is not intended to supplement or replace any agency contract between an EGS and a Scheduling Coordinator.

9.3 Change in or Termination of Scheduling Coordinator. To change a Scheduling Coordinator, or cease using a Scheduling Coordinator, an EGS shall notify the Company in writing and said notice shall specify the effective month of the change or termination. The effective day of the change or termination shall be the first day of the month indicated in the notification letter unless notification is received by the Company less than ten business days before the first day of that month, in which case the effective day of the change shall be the first day of the subsequent month.

In the event an EGS ceases using a Scheduling Coordinator, an EGS shall immediately resume the direct performance of all EGS obligations under this Tariff.

9.4 Load Scheduling through a Scheduling Coordinator. Coordinated Suppliers cannot submit individual load schedules to the PJM OI, nor can Coordinated Suppliers propose scheduling changes on an individual basis. Rather, the Scheduling Coordinator is responsible for submitting all schedules and changes thereto on behalf of itself as well as its Coordinated Suppliers.

9.5 Primary Obligations of a Coordinated Supplier. Notwithstanding their designations of Scheduling Coordinators, each and every EGS remains primarily responsible for fully satisfying the requirements of this Tariff.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

10. METERING DATA

10.1 Generally. All metering activities will be in accordance with the Competitive Metering Specifications attached as a rider to this tariff.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

11. CONFIDENTIALITY OF INFORMATION

11.1 Generally. All Company information available to an EGS in connection with the provision of coordination services, including, but not limited to, rate class load profile data and information regarding the Company and its computer and communications systems, shall not be disclosed to third parties without appropriate authorization and/or consent.

11.2 Customer Information. The EGS shall keep all Customer-specific information supplied by the Company confidential unless the EGS has the Customer's authorization to do otherwise.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

12. PAYMENT AND BILLING

12.1 Customer Billing by the Company or EGS. All customer billing by either the Company or EGS shall be done in accordance with the Competitive Billing Specifications attached as a Rider to this tariff.

12.2 EGS Payment of Obligations to the Company. An EGS shall pay all Coordination Services Charges or any other Charge it incurs hereunder in accordance with the following provisions:

12.2.1 Billing Procedure. Each month for EGSs not participating in POR, the Company shall submit an invoice to the EGS for all Coordination Services Charges provided under this Tariff. The invoice may be transmitted to the EGS by any reasonable method requested by the EGS. An EGS shall make payment for Coordination Service Charges incurred on or before the due date shown on the bill. The due date shall be determined by the Company and shall not be less than fifteen (15) days from the date of transmittal of the bill.

12.2.2 Billing Corrections and Estimated Billings. Notwithstanding anything stated herein bills shall be subject to adjustment for any errors in arithmetic, computation, meter readings, estimating or other errors for a period for six (6) months from the date of such original monthly billing.

12.2.3 Manner of Payment. The EGS may make payments of funds payable to the Company by wire transfer to a bank designated by the Company. The Company may require that an EGS that is not creditworthy tender payment by means of a certified, cashier's, teller's, or bank check, or by wire transfer, or other immediately available funds. If disputes arise regarding an EGS bill, the EGS must pay the undisputed portion of disputed bills under investigation.

12.2.4 Late Fee for Unpaid Balances. If payment is made to the Company after the due date shown on the bill, a late fee will be added to the unpaid balance until the entire bill is paid. This late fee will be 2% per month on the unpaid balance.

12.2.5 EGS Default. In the event the EGS fails, for any reason other than a billing dispute as described below, to make payment to the Company on or before the due date as described above, and such failure of payment is not corrected within thirty (30) calendar days after the Company notifies the EGS to cure such failure, a Default by the EGS shall be deemed to exist. In the event of a billing dispute between the Company and the EGS, the Company will continue to provide service pursuant to the Individual Coordination Agreement and the Tariff as long as the EGS continues to make all payments not in dispute. A billing dispute shall be dealt with promptly in accordance with the dispute resolution procedures set forth below in Rule 18.

12.3 Billing for Supplier Obligations to Other Parties. The Company will assume no responsibility for billing between an EGS and PJM, an EGS and any energy source, or a Scheduling Coordinator and any Coordinated Suppliers.

PPL Electric Utilities Corporation

PAYMENT AND BILLING (CONTINUED)

12.4 Guarantee of Payments. Before the Company will render service or continue to render service, the Company may require an applicant for Coordination Service or an EGS currently receiving such service that has Bad Credit to provide a cash deposit, letter of credit, surety bond, or other guarantee, satisfactory to the Company. The Company will hold the deposit as security for the payment of final bills and compliance with the Company's Rules and Regulations. In addition, the Company may require an EGS to post a deposit at any time if the Company determines that the EGS is no longer creditworthy or has Bad Credit. An EGS shall have the right to submit to the Commission for resolution any reasonable dispute regarding such deposit, letter of credit, surety bond or other guarantee sought by the Company if the EGS believes such a requirement is inappropriately based or assessed.

12.5 Amount of Deposits. The deposit shall be equal to the value of Coordination Services Charges the Company projects the EGS will incur during the next two billing periods based on that EGS's forecasted load obligation.

12.6 Return of Deposits. Deposits secured from an EGS shall either be applied with interest to the EGS's account or returned to the EGS with interest when the EGS becomes creditworthy. In cases of discontinuance or termination of service, deposits will be returned with accrued interest upon payment of all service charges and guarantees or with deduction of unpaid accounts.

12.7 Interest on Deposits. The Company will allow simple interest on cash deposits calculated at the lower of the Interest Index or six (6) percent. Deposits shall cease to bear interest upon discontinuance of service (or, if earlier, when the Company closes the account).

12.8 Credit Information. In addition to information required otherwise hereunder, an EGS shall be required to provide to the Company such credit information as the Company requires. The Company will report to a national credit bureau the EGS's credit history with the Company.

12.9 Purchase Of EGS Receivables (POR) Program. PPL Electric will purchase the accounts receivable, without recourse, associated with EGS sales of retail electricity supply, comprised of generation and transmission services, to consolidated EDC billing customers within PPL Electric's service territory served under the following Rate Schedules: RS, GS-1, GS-3, BL, SA, SM(R), SHS, SLE, SE, TS(R) and SI-1(R), and standby service for the foregoing rate schedules. Under the POR Program, PPL Electric will reimburse EGSs for their customer billings regardless of whether PPL Electric receives payment from the customer, subject to the limitations set forth below; provided, however, that for an EGS participating in the POR Program, the Company will offset its payments to the EGS by the EGS's Coordinated Service Charge. PPL Electric will seek to recover the EGS receivables from EGS customers consistent with PPL Electric's existing collection procedures for recovery of billings to default service customers and will incur any uncollectible accounts expense related to billings for EGSs. PPL Electric will purchase only those receivables that are associated with basic electric supply services and not receivables associated with charges for other products or services. Participating EGSs will be required to certify that purchased receivables are associated with only basic electric supply service.

PPL Electric Utilities Corporation

PAYMENT AND BILLING (CONTINUED)

12.9.1 Eligibility Requirements. PPL Electric will perform consolidated billing for EGSs that voluntarily choose this option. An EGS that chooses the Company's consolidated EDC billing option for all or a portion of its residential accounts will be required to sell its accounts receivables to PPL Electric for those residential customers for whom PPL Electric issues a consolidated bill. An EGS will be permitted to choose the consolidated billing option for less than all of its customers in the residential class. Pursuant to the Commission Order entered December 21, 2010 at Docket No. R-2010-2161694, an EGS may issue its own bills [dual billing] for any residential customers upon one of the two following conditions: (1) PPL Electric's billing system cannot accommodate consolidated billing for the EGS; or (2) the EGS residential customer purchases products from the EGS that are bundled with non-basic services. An EGS that issues its own bills to residential customers will not be eligible to participate in the POR Program for those residential customers that receive dual billing.

An EGS will be permitted to choose the consolidated billing option for less than all of its customers in the small C&I class. An EGS that chooses the Company's consolidated EDC billing option for all or a portion of its small C&I accounts will be required to sell its accounts receivables to PPL Electric for those small C&I customers for whom PPL Electric issues a consolidated bill. An EGS may continue to issue its own bills [dual billing] for basic supply service, for all or a portion of its small C&I customers, but will not be eligible to participate in the POR Program for those small C&I customers that receive dual billing.

EGSs may choose to participate in the POR Program with consolidated EDC billing at any time during the term of the POR Program. A customer whose service is terminated or who voluntarily switches from the EGS' service to another generation provider is not considered to have been removed by the EGS from consolidated EDC billing and the POR Program. In addition, this section is not intended to interfere with an EGS's ability to offer customers product terms that are shorter in duration than the POR Program.

EGSs participating in the residential POR Program will agree not to reject for enrollment a new residential customer covered by the residential POR Program based on credit-related issues and will agree not to require a deposit for providing service to such residential customers. Any residential customer who wishes to be served by an EGS participating in the residential POR Program will be accepted by that EGS if that EGS is actively serving the residential customer class.

EGSs are permitted to perform credit checks and require deposits for small C&I customers and are permitted to deny serving small C&I customers for credit-related reasons.

12.9.2 Purchase Price Discount. EGSs accounts receivables associated with electric generation and transmission services will be purchased at a discount. The discount rate will be calculated separately for the residential customer class and the small C&I customer class. The rate will consist of two components that reflect: (1.)the cost of PPL Electric's uncollectable accounts expense, which will be fixed throughout the term of the program, unless and until modified upon Commission approval; and (2) recovery of the initial and ongoing development, operation and administrative costs associated with the POR Program. The discount rate for electric generation and transmission services to the residential customer class will equal 1.80%, which is the sum of 1.80% for the first component and 0.00% for the second component. The discount rate for electric generation and transmission services to the small C&I customer class will equal 0.26%, which is the sum of 0.26% for the first component and 0.00% for the second component.

PPL Electric Utilities Corporation

PAYMENT AND BILLING (CONTINUED)

12.9.2.1 Timing Of Payments. Payments to EGSs will occur electronically---25 days after consolidated EDC bills are issued to residential customers and 20 days after consolidated EDC bills are issued to non-residential (small commercial and industrial) customers---and will continue throughout the billing cycle. If either the 25th day for residential customers or 20th day for non-residential customers falls on a weekend, PPL Electric holiday or bank holiday, payments will occur on the next business day.

12.9.2.2 Other Payment Provisions. EGS customers on consolidated EDC billing will be able to select budget billing. The Company will pay EGSs based on actual billed supplier charges less the POR discount (versus budget amounts), and suppliers will not be impacted in any way by the budget billing program. The Company will inform customers that they can select a supplier and their budget payment plan will only be impacted to the extent necessary to assure that savings are reflected.

12.9.2.3 Transfer Of Collection Responsibilities and Rights. Under the POR Program, PPL Electric is entitled to receive and retain all payments from customers. PPL Electric is authorized to conduct collection activities and, if necessary, terminate its delivery service and EGS generation and transmission services to residential and/or small C&I customers whose accounts receivables were purchased and who fail to make payment of amounts due on the consolidated EDC bill, including the full amount of the purchased EGS accounts receivables. Any customer termination shall be consistent with the Pennsylvania Public Utility Code and the Commission's regulations.

An EGS residential and/or small C&I customer in the POR Program that has been terminated for non-payment may be reconnected upon paying the sum of unpaid distribution charges (plus any applicable reconnection fees or deposits) and the amount billed for EGS generation and transmission services. That customer will remain a customer of the EGS as long as the payment of unpaid amounts is made before the account is finalized.

12.9.2.4 Dispute Resolution. To the extent concerns arise regarding the implementation of the provisions of the POR Program, parties shall attempt to resolve such disputes according to the dispute resolution procedures described in Section 18 of this supplier tariff. Parties also shall have the right to resolve such disagreements through the Commission's dispute resolution process.

12.9.2.5 PURCHASE PRICE DISCOUNT ADJUSTMENT FOR AN INDIVIDUAL EGS THAT DOES NOT SELL ALL OF ITS SMALL C&I ACCOUNTS RECEIVABLES TO THE COMPANY: PPL Electric will monitor individual EGS uncollectible accounts percentages (measured as any unpaid amounts 60 days or older divided by that EGS' total annual consolidated billings) for those EGSs that sell a portion of, but not all of, their small C&I accounts receivables to the Company, to determine whether any individual EGS is engaging in unusual business behavior that results in an increase to the total uncollectible accounts expense percentage for the small C&I customer class. If, based on this monitoring, PPL Electric determines that an individual EGS's uncollectible accounts percentage exceeds 1.5% for the small C&I customer class, then PPL Electric, at its discretion, may increase the discount rate for that individual EGS' accounts to reflect the increased costs associated with the EGS's uncollectible accounts by the difference between the EGS's uncollectible accounts percentage and 0.75% for the small C&I customer class. For purposes of this calculation, PPL Electric shall rely on the most recent 12-month period (or shorter if less data is available) to

PPL Electric Utilities Corporation

PAYMENT AND BILLING (CONTINUED)

calculate the EGS's uncollectible accounts percentage. PPL Electric, in its discretion, may opt to waive the imposition of the additional discount if the increase in the uncollectible accounts percentage primarily is the result of providing service to previously poor paying customers currently on default service, and the individual EGS is able to provide a reasonable explanation that the significant increase in its uncollectible accounts percentage is not the result of a particular price offering, marketing strategy, selling selective accounts receivables, or other actions of the individual EGS. If, however, PPL Electric determines that an additional discount is appropriate, the EGS may challenge that determination pursuant to the dispute resolution procedures discussed above. Should the result of those procedures uphold the EGS's position, PPL Electric will refund to the EGS the additional discount withheld from its receivables. In the course of the dispute resolution, the EGS may be called upon to provide customer payment history for those customers it serves, generation and transmission services pricing, and other such information deemed appropriate, subject to a confidentiality agreement. The discount will be lowered to the level applicable to other EGSs when and if the particular EGS's uncollectible account percentage decreases to a level of 0.75%, or below, for the small C&I customer class over a 12-month period. If the particular EGS stops providing service to a customer under the POR Program, the EGS must pay to PPL Electric an amount equal to the increase to the discount multiplied by that customer's prior year's billings (or for the time the EGS served the customer, whichever is shorter), to the extent that such amount has not already been paid on the date the EGS stops providing service to that customer.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

13. WITHDRAWAL BY EGS FROM RETAIL SERVICE

13.1 Notice of Withdrawal to the Company. An EGS shall provide electronic notice to the Company in a form specified by the Company of withdrawal by the EGS from retail service in a manner consistent with the PaPUC's rulings in Docket No. M-00960890F.0013, and any subsequent applicable PaPUC rulings.

13.2 Notice to Customers. An EGS shall provide notice to its Customers of withdrawal by the EGS from retail service in accordance with the PaPUC's rulings in Docket No. M-00960890F.0013 and any subsequent applicable PaPUC rulings.

13.3 Costs for Noncompliance. An EGS that withdraws from retail service and fails to provide at least ninety (90) days written notice of said withdrawal shall reimburse the Company for any of the following costs associated with the withdrawal:

(a) mailings by the Company to the EGS's Customers to inform them of the withdrawal and their options;
(b) non-standard/manual bill calculation and production performed by the Company;
(c) EGS data transfer responsibilities that must be performed by the Company; and
(d) charges or penalties imposed on the Company by PJM or other third parties resulting from EGS non- performance.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

14. DISCONTINUANCE OF CUSTOMERS

14.1 Notice of Discontinuance to the Company. An EGS shall provide electronic notice to the Company in a form specified by the Company of all intended discontinuances of service to Customers in a manner consistent with applicable PaPUC rules, which apply to all Customer classes.

14.2 Notice to Customers. An EGS shall provide a minimum of thirty (30) days advance notice to residential customers prior to canceling generation supply service except as set forth below. An EGS may cancel generation supply service to a residential customer for theft of service, fraud or failure to pay overdue charges consistent with applicable Pa PUC orders and regulations. With respect to all other classes of Customers, it will be the EGS's responsibility to provide notice to a Customer of its intention to discontinue service in accordance with the EGS's contractual obligations with the Customer.

14.3 Effective Date of Discontinuance. Any discontinuance will be effective on a Meter Read Date and in accordance with the EGS switching rules in this Tariff and the EDC Tariff.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

15. LIABILITY

15.1 General Limitation on Liability. The Company shall have no duty or liability with respect to electric energy before it is delivered by an EGS to a point of delivery on the Company's distribution system. After its receipt of electric energy and capacity at the point of delivery, the Company shall have the same duty and liability for distribution service to customers receiving Competitive Energy Supply as to those receiving electric energy and capacity from the Company.

15.2 Limitation on Liability for Service Interruptions and Variations. The Company does not guarantee continuous, regular and uninterrupted supply of service. The Company may, without liability, interrupt or limit the supply of service for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public or for the purpose of preventing or limiting any actual or threatened instability or disturbance of the system. The Company is also not liable for any damages due to accident, strike, storm, riot, fire, flood, legal process, state or municipal interference, or any other cause beyond the Company's control.

15.3 Additional Limitations on Liability in Connection with Direct Access. Other than its duty to deliver electric energy and capacity, the Company shall have no duty or liability to an EGS providing Competitive Energy Supply arising out of or related to a contract or other relationship between an EGS and a Customer of the EGS.

The Company shall implement Customer selection of an EGS consistent with applicable rules of the Commission and shall have no liability to an EGS providing Competitive Energy Supply arising out of or related to switching EGSs, unless the Company is negligent in switching or failing to switch a customer.

15.4 Company’s Indemnification of EGS. Subject to Rule 15.2, in the event the Company is not able to render continuous, regular, and uninterrupted supply of service due to interruption or service limitations not caused by the EGS, the Company shall hold the EGS harmless for any penalties, fines, or other costs that the Company may incur.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

16. BREACH OF COORDINATION OBLIGATIONS

16.1 Breach of Obligations. The Company or an EGS shall be deemed to be in breach of its Coordination Obligations under the Individual Coordination Agreement and this Tariff upon its failure to observe any material term or condition of this Tariff, including any Rule and Regulation, Charge or Rider thereof.

16.2 Events of Breach. A material breach of Coordination Obligations hereunder, as described in Rule 16.1, shall include, but is not limited to, the following:

(a) a breach of any Rule or Regulation of the Tariff;
(b) an EGS's failure to maintain license or certification as an electric generation supplier or electricity supplier from the PaPUC;
(c) an EGS's failure to make payment of any undisputed Coordination Services Charges in the time prescribed;
(d) the involuntary bankruptcy/insolvency of the EGS, including but not limited to, the appointment of a receiver, liquidator or trustee of the EGS, or a decree by such a court adjudging the EGS bankrupt or insolvent or sequestering any substantial part of its property or a petition to declare bankruptcy as to reorganize the EGS; or
(e) an EGS's filing of a voluntary petition in bankruptcy under any provision of any federal or state bankruptcy law, or its consent to the filing of any bankruptcy or reorganization petition against it under any similar law; or without limiting the generality of the foregoing, an EGS admits in writing its inability to pay its debts generally as they become due or consents to the appointment of a receiver, trustee or liquidator of it or of all or any part of its property.

16.3 Cure and Default. If either the Company or an EGS materially breaches any of its Coordination Obligations (hereinafter the "Breaching Party"), the other party (hereinafter the "Non Breaching Party") shall provide the Breaching Party a written notice describing such breach in reasonable detail and demanding its cure. The Breaching Party shall be deemed to be in default ("Default") of its obligations under this Tariff and the Individual Coordination Agreement if: (i) it fails to cure its breach within thirty (30) days after its receipt of such notice; or (ii) the breach cannot be cured within such period and the Breaching Party does not commence action to cure the breach within such period and, thereafter, diligently pursues such action to completion.

16.4 Rights Upon Default. Notwithstanding anything stated herein, upon the occurrence of any Default, the party not in Default shall be entitled to (i) commence an action to require the party in Default to remedy such Default and specifically perform its duties and obligations hereunder in accordance with the terms and conditions hereof, and (ii) exercise such other rights and remedies as it may have in equity or at law.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

17. TERMINATION OF INDIVIDUAL COORDINATION AGREEMENT

17.1 Termination. An Individual Coordination Agreement will or may be terminated as follows:

(a) Withdrawal of the EGS from Retail Service. In the event the EGS ceases to participate in or otherwise withdraws the provision of Competitive Energy Supply to Customers in the Company's Service Territory, the Individual Coordination Agreement between the EGS and the Company shall terminate thirty (30) days following the date on which the EGS has no more active Customers.

(b) The Company's Termination Rights upon Default by EGS. In the event of a Default by the EGS, the Company may terminate the Individual Coordination Agreement between the EGS and the Company by providing written notice to the EGS in Default, without prejudice to any remedies at law or in equity available to the party not in Default by reason of the Default.

17.2 Effect of Termination. Termination of Individual Coordination Agreements will have the same effect on an EGS's Customers as the EGS's discontinuance of supply to such Customers described in the EDC Tariff: If a Customer of a terminated EGS has not switched to another EGS prior to termination, said Customer will receive Default PLR Service (as defined in the EDC Tariff) pending its selection of another EGS.

17.3 Survival of Obligations. Termination of an Individual Coordination Agreement for any reason shall not relieve the Company or an EGS of any obligation accrued or accruing prior to such termination.

PPL Electric Utilities Corporation

RULES AND REGULATIONS

18. ALTERNATIVE DISPUTE RESOLUTION
