PPL Electric Utilities Corporation
Lag in Payment of Micellaneous Expenses
12 Months Ended June 30, 2025

Line No.	Description	Days
1	Company Weighted Average Lag for Micellaneous Expenses	17.54 1/
2	OCA Weighted Average Lag for Miscellaneous Expenses	18.90 2/

Note:
1/ Company filing Volume I, Attachment II-B-4, page 3.
2/ Company response to OCA I-1, Attachment 229 Arnold SUPPLEMENTAL.

Vendor Name	Invoice or Reference Number / Sheet ID	Mid-point of Service Date	Payment Date	(A) Amount	(B) Days Lag	(A) x (B) Weighted Amount

DIRECT TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

December 22, 2025

TABLE OF CONTENTS

I. INTRODUCTION 1
II. EXECUTIVE SUMMARY 2
A. Rate of Return Summary 2
B. Depreciation Summary 3

Part One: Rate of Return

III. REGULATORY STANDARDS 6
IV. GENERAL CONCEPTS AND METHODOLOGY 10
V. RISK AND RETURN CONCEPTS 11
VI. DISCOUNTED CASH FLOW ANALYSIS 18
A. Stock Price 18
B. Dividend 20
C. Growth Rate 21
D. Response to Ms. Nelson's DCF Model 27
VII. CAPITAL ASSET PRICING MODEL ANALYSIS 28
A. The Risk-Free Rate 29
B. The Beta Coefficient 30
C. The Equity Risk Premium 31
D. Response to Ms. Nelson's CAPM Analysis and Other Issues 38
1. Equity Risk Premium 39
2. Other Risk Premium Analysis 41
3. Size Effect 42
4. Flotation Costs 44
VIII. CAPITAL STRUCTURE 46
A. Proxy and Industry Debt Ratios 51
B. The Hamada Model: Capital Structure's Effect on ROE 54
C. Capital Structure and Credit Ratings 57
IX. RATE OF RETURN CONCLUSION 59

Part Two: Depreciation

X. DEPRECIATION STANDARDS AND SYSTEMS 61
XI. SERVICE LIFE ANALYSIS 63
A. Account 356.00 – Overhead Conductors and Devices 66
B. Account 364.40 – Poles, Towers, and Fixtures – Poles 69
C. Account 366.00 – Underground Conduit 70
D. Account 367.00 – Underground Conductors and Devices 72
E. Account 369.00 – Services 74

LIST OF EXHIBITS

Part One: Rate of Return

Exhibit DJG-1	Curriculum Vitae
Exhibit DJG-2	Proxy Group Summary
Exhibit DJG-3	DCF – Stock and Index Prices
Exhibit DJG-4	DCF – Dividend Yields
Exhibit DJG-5	DCF – Terminal Growth Determinants
Exhibit DJG-6	DCF – Final Results
Exhibit DJG-7	CAPM – Risk-Free Rate Estimate
Exhibit DJG-8	CAPM – Beta Coefficients
Exhibit DJG-9	CAPM – Implied ERP Estimate
Exhibit DJG-10	CAPM – Equity Risk Premium Results
Exhibit DJG-11	CAPM – Final Results
Exhibit DJG-12	Cost of Equity Summary
Exhibit DJG-13	Proxy Group Debt Ratios
Exhibit DJG-14	Competitive Industry Debt Ratios
Exhibit DJG-15	Hamda Model Results
Exhibit DJG-16	Final Rate of Return Recommendation

Part Two: Depreciation

Exhibit DJG-17	Summary Rate and Accrual Adjustment
Exhibit DJG-18	Detailed Rate Comparison – 2025 Study
Exhibit DJG-19	Depreciation Rate Development – 2025 Study
Exhibit DJG-20	Detailed Rate Comparison – 2026 Study
Exhibit DJG-21	Depreciation Rate Development – 2026 Study
Exhibit DJG-22	Detailed Rate Comparison – 2027 Study
Exhibit DJG-23	Depreciation Rate Development – 2027 Study

I. INTRODUCTION

Q. State your name and occupation.

A. My name is David Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Summarize your educational background and professional experience.

A. I received a B.B.A. with a major in Finance, an M.B.A., and a Juris Doctor from the University of Oklahoma. I worked in private legal practice for several years before accepting a position as assistant general counsel at the Oklahoma Corporation Commission in 2011. At the commission, I worked in the Office of General Counsel in regulatory proceedings. In 2012, I began working for the Public Utility Division as a regulatory analyst providing testimony in regulatory proceedings. After leaving the commission, I formed Resolve Utility Consulting PLLC, where I have represented various consumer groups and state agencies in utility regulatory proceedings, primarily in the areas of cost of capital and depreciation. I am a Certified Depreciation Professional with the Society of Depreciation Professionals. I am also a Certified Rate of Return Analyst with the Society of Utility and Regulatory Financial Analysts. A more complete description of my qualifications and regulatory experience is included in my curriculum vitae.[1]

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

[1] Exhibit DJG-1.

Q. Describe the purpose and scope of your testimony in this proceeding.

A. My testimony addresses PPL Electric Utilities Corporation ("PPL" or the "Company") proposed rate of return in response to the direct testimony of Company witness Jennifer Nelson. I also address PPL's depreciation study and proposed depreciation rates in response to the direct testimony of Company witness John Spanos.

Q. Please describe the organization of your testimony.

A. In the executive summary below, I provide an overview of the cost of capital issues, my recommendations, and my response to the Company's testimony on these issues. In the sections that follow, I discuss the legal standards governing the awarded return issue as well as the general concepts involved in estimating the cost of equity. I discuss the concepts of risk and return. I provide detailed analysis of the Discounted Cash Flow ("DCF") Model, the Capital Asset Pricing Model ("CAPM"), including my results for these models and my responses to Ms. Nelson's results. I also address capital structure, which is a key component to the cost of capital. I also address the testimony of Company witness Julissa Burgos regarding how credit ratings relate to PPL's authorized rate of return. Finally, I discuss my recommended adjustments to the Company's proposed depreciation rates.

II. EXECUTIVE SUMMARY

A. Rate of Return Summary

Q. Please summarize your rate of return recommendation to the Commission.

A. The key points of my testimony are as follows:

- The Commission should reject the Company's proposed return on equity ("ROE") of 11.30% because it is excessive and unsupported. An objective cost of equity

analysis shows that the Company's market-based cost of equity is notably lower than the Company's proposed ROE.

- Based on the results of my financial modeling using the DCF and CAPM models, I recommend that the Commission authorize an ROE of 8.4% for the Company.
- I propose the Commission impute a capital structure for ratemaking purposes that consists of 58% debt and 42% equity. Due to the discrepancy between PPL's capital structure and the proxy group's capital structure, this adjustment is necessary to account for the fact that PPL has less financial risk than the proxy group.

B. Depreciation Summary

Q. Please summarize the Company's proposed depreciation rates.

A. PPL's proposed depreciation rates are based on the depreciation study sponsored by Mr. Spanos, which is based on plant balances as of June 30, 2025 (the "2025 Study"), June 30, 2026 (the "2026 Study"), and June 30, 2027 (the "2027 Study"). In this case, Mr. Spanos used the average life group ("ALG") method for calculating depreciation rates. The ALG method is the method most commonly used in U.S. jurisdictions.

Q. Please summarize your adjustments to the Company's proposed depreciation rates.

A. While I agree with Mr. Spanos that the ALG method should be used in this case, the service lives proposed by Mr. Spanos for several of PPL's accounts are unreasonably short, based on a technical analysis of the Company's historical retirement data. The following tables

show a summary of the impact of my proposed service life adjustments to the Company's proposed annual depreciation accruals.[2]

Figure 1:
Summary Depreciation Accrual Adjustment – 2025 Study

Plant Function	PPL Accrual	OCA Accrual	OCA Accrual
Transmission	$ 175,592,348	$ 172,192,597	$ (3,399,751)
Distribution	157,968,661	153,917,543	(4,051,118)

Distribution	228,441,137	224,045,117	(4,396,020)
General	59,822,209	59,654,702	(167,507)
TOTAL PLANT STUDIED	**$ 488,175,659**	**$ 479,531,682**	**$ (8,643,977)**

The evidence supporting my recommendations are discussed in more detail in my testimony.

PART ONE: RATE OF RETURN

III. REGULATORY STANDARDS

Q. Discuss the legal standards governing the awarded rate of return on capital investments for regulated utilities.

A. In *Wilcox v. Consolidated Gas Co. of New York*, [3] the Supreme Court first addressed the meaning of a fair rate of return for public utilities. The Court found that "the amount of risk in the business is a most important factor" in determining the appropriate allowed rate of return.[4] Later, in two landmark cases, the Court set forth the standards by which utilities are allowed to earn a return on capital investments. In *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, [5] the Court held:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public . . . but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.[6]

In *Federal Power Commission v. Hope Natural Gas Company*,[7] the Court expanded on the guidelines set forth in *Bluefield* and stated:

---

[3] *Wilcox v. Consolidated Gas Co. of New York*, 212 U.S. 19 (1909).

[4] *Id*. at 48.

[5] *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923).

[6] *Id.* at 692-93.

[7] *Federal Power Commission v. Hope Natural Gas Co*., 320 U.S. 591 (1944).

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[8]

The cost of capital models I have employed in this case are in accordance with the foregoing legal standards.

Q. Should the awarded rate of return be based on the Company's actual cost of capital?

A. Yes. The *Hope* Court makes it clear that the allowed return should be based on the actual cost of capital. Moreover, the awarded return must also be fair, just, and reasonable under the circumstances of each case. Under the rate base rate of return model, a utility should be allowed to recover all its reasonable expenses, its capital investments through depreciation, and a return on its capital investments sufficient to satisfy the required return of its investors. The "required return" from the investors' perspective is synonymous with the "cost of capital" from the utility's perspective. Scholars agree that the allowed rate of return should be based on the actual cost of capital:

> Since by definition the cost of capital of a regulated firm represents precisely the expected return that investors could anticipate from other investments while bearing no more or less risk, and since investors will not provide capital unless the investment is expected to yield its opportunity cost of capital, the correspondence of the definition of the cost of capital with the court's definition of legally required earnings appears clear.[9]

---

[8] *Id.* at 603 (emphasis added).

[9] A. Lawrence Kolbe, James A. Read, Jr. & George R. Hall, *The Cost of Capital: Estimating the Rate of Return for Public Utilities*, p. 21 (The MIT Press 1984).

The models I have employed in this case closely estimate the Company's market-based cost of equity. If the Commission sets the awarded return based on my lower, and more reasonable, rate of return, it will comply with the U.S. Supreme Court's standards, allow the Company to maintain its financial integrity, and satisfy the claims of its investors. On the other hand, if the Commission sets the allowed rate of return *higher* than the true cost of capital, it arguably results in an inappropriate transfer of wealth from ratepayers to shareholders.

Q. What does this standard mean for determining the awarded return and the cost of capital?

A. It is important to understand that the *awarded* return and the *cost* of capital are different but related concepts. The two concepts are related in that the legal and technical standards encompassing this issue require that the awarded return reflects the true cost of capital. On the other hand, the two concepts are different in that the legal standards do not mandate that awarded returns exactly match the cost of capital. Awarded returns are set through the regulatory process and may be influenced by factors other than objective market drivers. The cost of capital, on the other hand, should be evaluated objectively and be closely tied to economic realities. In other words, the cost of capital is driven by stock prices, dividends, growth rates, and — most importantly — it is driven by risk. The cost of capital can be estimated by financial models used by firms, investors, and academics around the world for decades. The problem is, with respect to regulated utilities, there has been a trend in which awarded returns fail to closely track with actual market-based cost of capital as further discussed below. To the extent this occurs, the results are detrimental to ratepayers and the state's economy.

Q. Describe the economic impact that occurs when the awarded return strays too far from the U.S. Supreme Court's cost of equity standard.

A. When the awarded ROE is set far above the *cost* of equity, it runs the risk of violating the U.S. Supreme Court's standards that the awarded return should be *based on the cost of capital*.[10] If the Commission were to adopt the Company's position in this case, it would be permitting an excess transfer of wealth from customers to Company shareholders. Moreover, establishing an awarded return that far exceeds the true cost of capital effectively prevents the awarded returns from changing along with economic conditions. This is especially true given the fact that regulators tend to be influenced by the awarded returns in other jurisdictions, regardless of the various unknown factors influencing those awarded returns. This is yet another reason why it is crucial for regulators to focus on the target utility's actual *cost* of equity, rather than awarded returns from other jurisdictions. Awarded returns may be influenced by settlements and other political factors not based on true market conditions. In contrast, the market-based cost of equity as estimated through objective models is not influenced by these factors but is instead driven by market-based factors. If regulators rely too heavily on the awarded returns from other jurisdictions, it can create a cycle over time that bears little relation to the market-based cost of equity.

[10] *See Hope Natural Gas Co*., 320 U.S. at 603.

IV. GENERAL CONCEPTS AND METHODOLOGY

Q. Discuss your approach to estimating the cost of equity in this case.

A. While a competitive firm must estimate its own cost of capital to assess the profitability of competing capital projects, regulators determine a utility's cost of capital to establish a fair rate of return. The legal standards set forth above do not include specific guidelines regarding the models that must be used to estimate the cost of equity. Over the years, however, regulatory commissions have consistently relied on several models. The models I have employed in this case have been the two most widely used and accepted in regulatory proceedings for many years. These models are the DCF Model and the CAPM. The specific inputs and calculations for these models are described in more detail below.

Q. Please explain why multiple models are used to estimate the cost of equity.

A. The models used to estimate the cost of equity attempt to measure the return on equity required by investors by estimating several different inputs. It is preferable to use multiple models because the results of any one model may contain a degree of imprecision, especially depending on the reliability of the inputs used at the time of conducting the model. By using multiple models, the analyst can compare the results of the models and look for outlying results and inconsistencies. Likewise, if multiple models produce a similar result, it may indicate a narrower range for the cost of equity estimate.

Q. Please discuss the benefits of choosing a proxy group of companies in conducting cost of capital analyses.

A. The cost of equity models in this case can be used to estimate the cost of capital of any individual, publicly-traded company. There are advantages, however, to conducting cost of capital analyses on a "proxy group" of companies that are comparable to the target

company. First, it is better to assess the financial soundness of a utility by comparing it to a group of other financially sound utilities. Second, using a proxy group provides more reliability and confidence in the overall results because there is a larger sample size. Finally, the use of a proxy group is often a pure necessity when the target company is a subsidiary that is not publicly traded. This is because the financial models used to estimate the cost of equity require information from publicly-traded firms, such as stock prices and dividends.

Q. Describe the proxy group you selected in this case.

A. In this case, I chose to use the same utility proxy group that Ms. Nelson used for her analyses. Thus, the difference in our modeling results are due to the different inputs and assumptions used in our modeling, rather than the composition of the proxy group.

V. RISK AND RETURN CONCEPTS

Q. Please discuss the general relationship between risk and return.

A. As discussed above, risk is the most important factor for the Commission to consider when determining the allowed return. There is a direct relationship between risk and return: the more (or less) risk an investor assumes, the larger (or smaller) return the investor will demand. There are two primary types of risk: firm-specific risk and market risk. Firm-specific risk affects individual companies, while market risk affects all companies in the market to varying degrees.

Q. Discuss the differences between firm-specific risk and market risk.

A. Firm-specific risk affects individual companies, rather than the entire market. For example, a competitive firm might overestimate customer demand for a new product, resulting in

reduced sales revenue. This is an example of a firm-specific risk called "project risk."[11] There are several other types of firm-specific risks, including: (1) "financial risk" — the risk that equity investors of leveraged firms face as residual claimants on earnings; (2) "default risk" — the risk that a firm will default on its debt securities; and (3) "business risk" — which encompasses all other operating and managerial factors that may result in investors realizing less than their expected return in that particular company.

While firm-specific risk affects individual companies, market risk affects all companies in the market to varying degrees. Examples of market risk include interest rate risk, inflation risk, and the risk of major socio-economic events. When there are changes in these risk factors, they affect all firms in the market to some extent.[12]

Analysis of the U.S. market in 2001 provides a good example for contrasting firm-specific risk and market risk. During that year, Enron Corp.'s stock fell from $80 per share and the company filed for bankruptcy at the end of the year. If an investor's portfolio had held only Enron stock at the beginning of 2001, this irrational investor would have lost the entire investment by the end of the year due to assuming the full exposure of Enron's firm-specific risk (in that case, imprudent management). On the other hand, a rational, diversified investor who invested the same amount of capital in a portfolio holding every stock in the S&P 500 would have had a much different result that year. The rational investor would have been relatively unaffected by the fall of Enron because her portfolio included 499 other stocks. Each of those stocks, however, would have been affected by

[11] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, pp. 62-63 (3rd ed., John Wiley & Sons, Inc. 2012).

[12] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments*, p. 149 (9th ed., McGraw-Hill/Irwin 2013).

various *market* risk factors that occurred that year, including the terrorist attacks on September 11th, which affected all stocks in the market. Thus, the rational investor would have incurred a relatively minor loss due to market risk factors, while the irrational investor would have lost everything due to firm-specific risk factors.

Q. Can investors minimize firm-specific risk through portfolio diversification?

A. Yes. A fundamental concept in finance is that firm-specific risk can be minimized through diversification.[13] If someone irrationally invested all their funds in one firm (such as Enron), they would be exposed to all the firm-specific risk *and* the market risk inherent in that single firm. Rational investors, however, are risk-averse and seek to eliminate risk they can control. Investors can essentially eliminate firm-specific risk by adding more stocks to their portfolio through a process called "diversification."

There are two reasons why diversification eliminates firm-specific risk. First, each stock in a diversified portfolio represents a much smaller percentage of the overall portfolio than it would in a portfolio of just one or a few stocks. Thus, any firm-specific action that changes the stock price of one stock in the diversified portfolio will have only a small impact on the entire portfolio.[14]

The second reason why diversification eliminates firm-specific risk is that the effects of firm-specific actions on stock prices can be either positive or negative for each stock. Thus, in large, diversified portfolios, the net effect of these positive and negative

---

[13] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, pp. 179-80 (3rd ed., South Western Cengage Learning 2010).

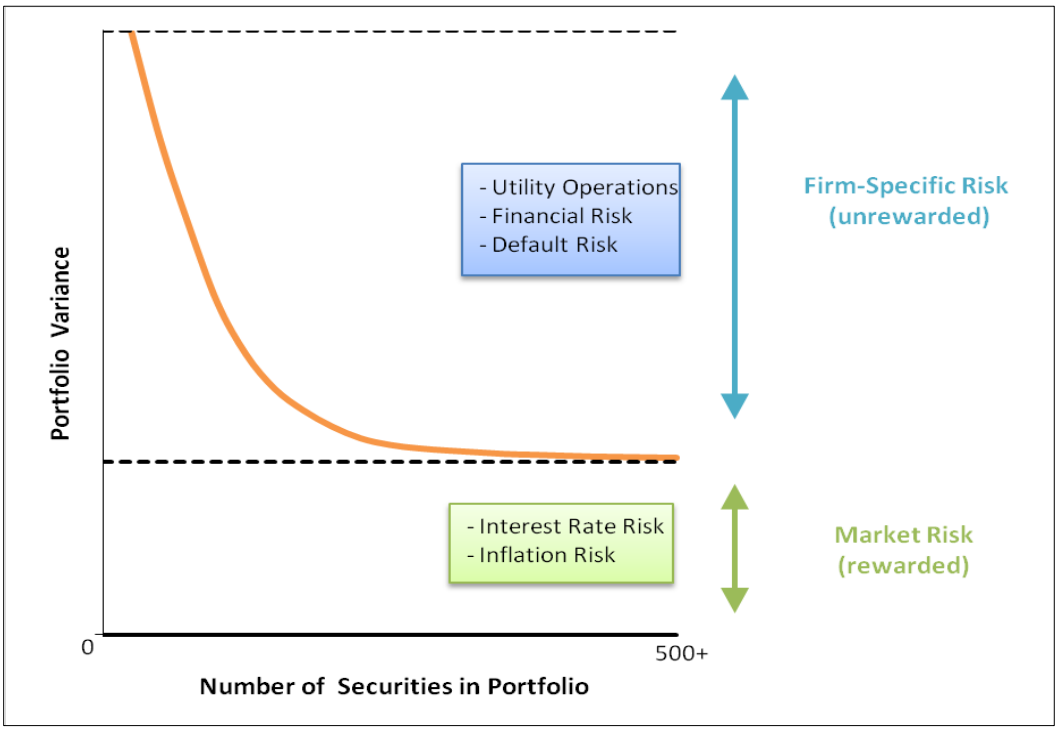
[14] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, p. 64 (3rd ed., John Wiley & Sons, Inc. 2012).

firm-specific risk factors will be essentially zero and will not affect the value of the overall portfolio.[15] Firm-specific risk is also called "diversifiable risk" because it can be easily eliminated through diversification.

Q. Do investors expect an additional return for assuming firm-specific risks?

A. No. Because investors eliminate firm-specific risk through diversification, they know they cannot expect a higher return for assuming the firm-specific risk in any one company. Thus, the risks associated with an individual firm's operations are not rewarded by the market. In fact, firm-specific risk is also called "unrewarded" risk for this reason. Market risk, on the other hand, cannot be eliminated through diversification. Because market risk cannot be eliminated through diversification, investors expect a return for assuming this type of risk. Market risk is also called "systematic risk." Scholars recognize the fact that market risk, or "systematic risk," is the only type of risk for which investors expect a return for bearing:

> If investors can cheaply eliminate some risks through diversification, then we should not expect a security to earn higher returns for risks that can be eliminated through diversification. Investors can expect compensation *only* for bearing systematic risk (i.e., risk that cannot be diversified away).[16]



These important concepts are illustrated in the figure below. Some form of this figure is found in many financial textbooks.

---

[15] *Id*.

[16] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 180 (3rd ed., South Western Cengage Learning 2010).

Figure 4:
Effects of Portfolio Diversification

This figure shows that as stocks are added to a portfolio, the amount of firm-specific risk is reduced until it is essentially eliminated. No matter how many stocks are added, however, there remains a certain level of fixed market risk. The level of market risk will vary from firm to firm. Market risk is the only type of risk that is rewarded by the market and is thus the primary type of risk the Commission should consider when determining the allowed return for the utilities it regulates.

Q. Describe how market risk is measured.

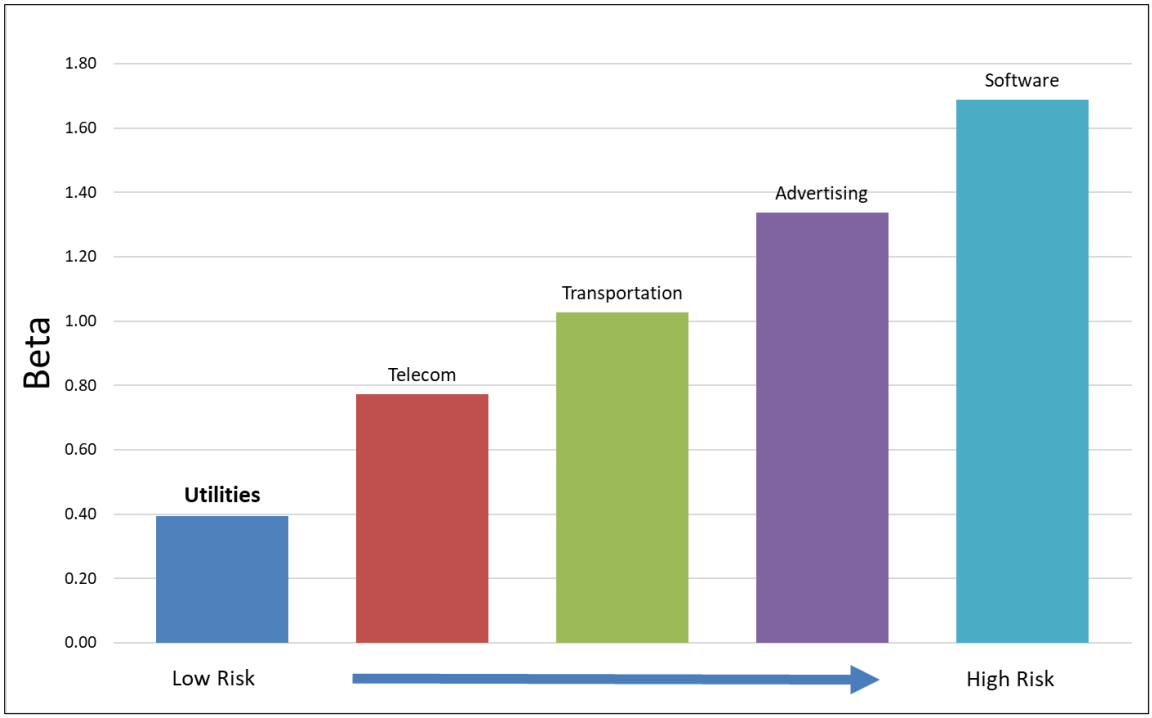
A. Investors who want to eliminate firm-specific risk must hold a fully diversified portfolio. To determine the amount of risk that a single stock adds to the overall market portfolio, investors measure the covariance between a single stock and the market portfolio. The

result of this calculation is called "beta."[17] Beta represents the sensitivity of a given security to the market as a whole. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than one are relatively more sensitive to market risk than the average stock. For example, if the market increases (decreases) by 1.0%, a stock with a beta of 1.5 will, on average, increase (decrease) by 1.5%. In contrast, stocks with betas of less than one are less sensitive to market risk, such that if the market increases (decreases) by 1.0%, a stock with a beta of 0.5 will, on average, only increase (decrease) by 0.5%. Thus, stocks with low betas are relatively insulated from market conditions. The beta term is used in the CAPM to estimate the cost of equity, which is discussed in more detail later.[18]

Q. Are public utilities characterized as defensive firms that have low betas, low market risk, and are relatively insulated from overall market conditions?

A. Yes. Although market risk affects all firms in the market, it affects different firms to varying degrees. Firms with high betas are affected more than firms with low betas, which is why firms with high betas are riskier. Stocks with betas greater than one are generally known as "cyclical stocks." Firms in cyclical industries are sensitive to recurring patterns of recession and recovery known as the "business cycle."[19] Thus, cyclical firms are exposed to a greater level of market risk. Securities with betas less than one, on the other hand, are known as "defensive stocks." Companies in defensive industries, such as public utility companies, "will have low betas and performance that is comparatively unaffected

---



[17] *Id*. at 180-81.

[18] Though it will be discussed in more detail later, Exhibit DJG-9 shows that the average beta of the proxy group was less than 1.0. This confirms the well-known concept that utilities are relatively low-risk firms.

[19] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments*, p. 382 (9th ed., McGraw-Hill/Irwin 2013).

by overall market conditions."[20] In fact, financial textbooks often use utility companies as prime examples of low-risk, defensive firms. The figure below compares the betas of several industries and illustrates that the utility industry is one of the least risky industries in the U.S. market.[21]

Figure 5:
Beta by Industry

The fact that utilities are relatively insulated from market conditions should be accurately reflected in the Company's cost of equity estimate.

[20] *Id*. at 383.

[21] *See* Betas by Sector (US) available at http://pages.stern.nyu.edu/~adamodar/ (2018). (After clicking the link, click "Data" then "Current Data" then "Risk / Discount Rate" from the drop down menu, then "Total Beta by Industry Sector"). The exact beta calculations are not as important as illustrating the well-known fact that utilities are very low-risk companies. The fact that the utility industry is one of the lowest risk industries in the country should not change from year to year.

VI. DISCOUNTED CASH FLOW ANALYSIS

Q. Describe the DCF Model.

A. The DCF Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates.[22] Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. These versions, along with other formulas and theories related to the DCF Model, are discussed in more detail in Appendix A.

Q. Describe the inputs to the DCF Model.

A. There are three primary inputs in the DCF Model: (1) stock price; (2) dividend; and (3) the long-term growth rate. The stock prices and dividends are known inputs based on recorded data, while the growth rate projection must be estimated. I discuss each of these inputs separately below.

A. Stock Price

Q. How did you determine the stock price input of the DCF Model?

A. For the stock price (P_0), I used a 30-day average of stock prices for each company in the proxy group.[23] Analysts sometimes rely on average stock prices for longer periods (*e.g.*, 60, 90, or 180 days). According to the efficient market hypothesis, however, markets reflect all relevant information available at a particular time, and prices adjust

[22] Present value (PV) is the current value of a future sum of money or stream of cash flows given a specified rate of return. Present value takes the future value and applies a discount rate or the interest rate that could be earned if invested.

[23] Exhibit DJG-3.

instantaneously to the arrival of new information.[24] Past stock prices, in essence, reflect outdated information. The DCF Model used in utility rate cases is a derivation of the dividend discount model, which is used to determine the current value of an asset. Thus, according to the dividend discount model and the efficient market hypothesis, the value for the "P_0" term in the DCF Model should technically be the current stock price, rather than an average.

Q. Why did you use a 30-day average for the current stock price input?

A. Using a short-term average of stock prices for the current stock price input adheres to market efficiency principles while avoiding any irregularities that may arise from using a single current stock price. In the context of a utility rate proceeding, there is a significant length of time between when an application is filed and when testimony is due. Choosing a current stock price for one particular day could raise a separate issue concerning which day was chosen to be used in the analysis. In addition, a single stock price on a particular day may be unusually high or low. It is arguably ill-advised to use a single stock price in a model that is ultimately used to set rates for several years, especially if a stock is experiencing some volatility. Thus, it is preferable to use a short-term average of stock prices, which represents a good balance between adhering to well-established principles of market efficiency while avoiding any unnecessary contentions that may arise from using a

[24] *See* Eugene F. Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, Vol. 25, No. 2 The Journal of Finance, p. 383 (1970); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 357 (3rd ed., South Western Cengage Learning 2010). The efficient market hypothesis was formally presented by Eugene Fama in 1970 and is a cornerstone of modern financial theory and practice.

single stock price on a given day. The stock prices I used in my DCF analysis are based on 30-day averages of adjusted closing stock prices for each company in the proxy group.[25]

B. Dividend

Q. Describe how you determined the dividend input of the DCF Model.

A. The dividend term in the DCF Model represents dividends per share (d_0). I used forward-looking annualized dividends published by Yahoo! Finance for the dividend input to my constant growth DCF Model.[26] Dividing these dividends by the stock prices for each proxy company results in the dividend yield for each company.[27]

Q. Are the stock price and dividend inputs for each proxy company a significant issue in this case?

A. No. Although my stock price and dividend inputs are more recent than those used by Ms. Nelson, there is not a statistically significant difference between them because utility stock prices and dividends are generally quite stable. This is another reason that cost of capital models such as the CAPM and the DCF Model are well-suited to be conducted on utilities. The differences between my DCF Model and Ms. Nelson's DCF Model are primarily driven by differences in our growth rate estimates, which are further discussed below.

---

[25] Exhibit DJG-3. Adjusted closing prices, rather than actual closing prices, are ideal for analyzing historical stock prices. The adjusted price provides an accurate representation of the firm's equity value beyond the mere market price because it accounts for stock splits and dividends.

[26] Exhibit DJG-4.

[27] *Id*.

C. Growth Rate

Q. Please Summarize the growth rate input in the DCF Model.

A. The most critical input in the DCF Model is the growth rate. Unlike the stock price and dividend inputs, the growth rate input (g) must be estimated. As a result, the growth rate is often the most contentious issue related to DCF model inputs in utility rate cases. The DCF model used in this case is based on the sustainable growth valuation model. Under this model, a stock is valued by the present value of its future cash flows in the form of dividends. Before future cash flows are discounted by the cost of equity, however, they must be "grown" into the future by a sustainable growth rate. As stated above, one of the inherent assumptions of this model is that these cash flows in the form of dividends grow at a sustainable rate forever. For young, high-growth firms, estimating the growth rate to be used in the model can be especially difficult, and may require the use of multi-stage growth models. For mature, low-growth firms such as utilities, however, estimating the sustainable growth rate is more transparent. The growth term of the DCF Model is one of the most important, yet least understood, aspects of cost of equity estimations in utility regulatory proceedings. I provide a more detailed explanation on the various determinants of growth below.

Q. Describe the various determinants of growth that can be considered for the growth rate input in the DCF Model.

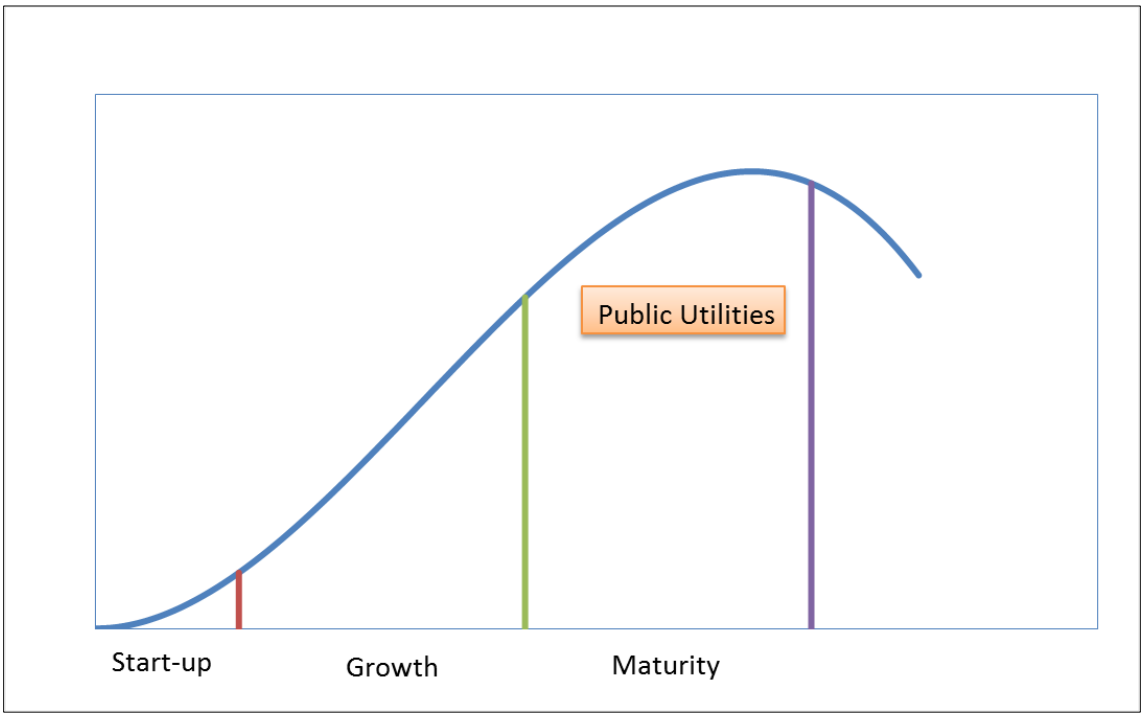
A. Although the DCF Model directly considers the growth of dividends, there are a variety of growth determinants that should be considered when estimating growth rates. It should be noted that these various growth determinants are used primarily to determine the short-term growth rates in multi-stage DCF models. For utility companies, it is necessary to

focus primarily on a long-term growth rate in dividends. This is also known as a "sustainable" growth rate, since this is the growth rate assumed for the company's dividends in perpetuity. That is not to say that these growth determinants cannot be considered when estimating sustainable growth; however, as discussed below, sustainable growth must be constrained much more than short-term growth, especially for young firms with high growth opportunities. Additionally, I briefly discuss these growth determinants here because it may reveal some of the sources of confusion in this area.

(1) Historical Growth

Looking at a firm's actual historical experience may theoretically provide a good starting point for estimating short-term growth. However, past growth is not always a good indicator of future growth. Some metrics that might be considered here are a historical growth in revenues, operating income, and net income. Since dividends are paid from earnings, estimating historical earnings growth may provide an indication of future earnings and dividend growth.

(2) Analyst Growth Rates



Analyst growth rates refer to short-term projections of earnings growth published by institutional research analysts such as Value Line and Bloomberg. Analyst growth rates, including the limitations with using them in the DCF Model to estimate utility cost of equity, are discussed in more detail below.

(3) Sustainable Growth Rates

In order to make the DCF Model a viable, practical model, an infinite stream of future cash flows must be estimated and then discounted back to the present. Otherwise, each annual cash flow would have to be estimated separately. Some analysts use "multi-

stage" DCF Models to estimate the value of high-growth firms through two or more stages of growth, with the final stage of growth being sustainable. However, it is not necessary to use multi-stage DCF Models to analyze the cost of equity of regulated utility companies. This is because regulated utilities are already in their "sustainable," low growth stage. Unlike most competitive firms, the growth of regulated utilities is constrained by physical service territories and limited primarily by ratepayer and load growth within those territories. The Figure below illustrates the well-known business/industry life-cycle pattern.

Figure 6:
Industry Life Cycle

In an industry's early stages, there are ample opportunities for growth and profitable reinvestment. In the maturity stage however, growth opportunities diminish, and firms choose to pay out a larger portion of their earnings in the form of dividends instead of

reinvesting them in operations to pursue further growth opportunities. Once a firm is in the maturity stage, it is not necessary to consider higher short-term growth metrics in multi-stage DCF Models; rather, it is sufficient to analyze the cost of equity using a stable growth DCF Model with one sustainable growth rate.

Q. Is the aggregate growth rate of the economy typically a limiting factor for the terminal growth rate in the DCF Model?

A. Yes. A fundamental concept in finance is that no firm can grow forever at a rate higher than the growth rate of the economy in which it operates.[28] Thus, the terminal growth rate used in the DCF Model should not exceed the aggregate economic growth rate. This is especially true when the DCF Model is conducted on public utilities because these firms have defined service territories. As stated by Dr. Damodaran: "[i]f a firm is a purely domestic company, either because of internal constraints . . . or external constraints (such as those imposed by a government), the growth rate in the domestic economy will be the limiting value."[29]

In fact, it is reasonable to assume that a regulated utility would grow at a rate that is less than the U.S. economic growth rate. Unlike competitive firms, which might increase their growth by launching a new product line, franchising, or expanding into new and developing markets, utility operating companies with defined service territories cannot do

[28] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 306 (3rd ed., John Wiley & Sons, Inc. 2012).

[29] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 306 (3rd ed., John Wiley & Sons, Inc. 2012); Aswath Damodaran is a renowned Professor of Finance at NYU Stern School of Business known for his expertise in corporate finance and valuation, teaching MBA students and publishing influential books. He is recognized for transparent teaching, real-time analysis, and making complex finance accessible globally through various platforms.

any of these things to grow. Gross Domestic Product ("GDP") is one of the most widely used measures of economic production and is used to measure aggregate economic growth. According to the Congressional Budget Office's Budget Outlook, the long-term forecast for nominal U.S. GDP growth is 3.7%. [30] For mature companies in mature industries, such as utility companies, the terminal growth rate should not exceed nominal GDP growth.

Q. Did you also consider growth determinants specific to PPL when assessing the reasonableness of your DCF sustainable growth inputs?

A. Yes. I considered firm-specific qualitative growth determinants, namely load growth and customer growth, to assess the reasonableness of my long-term growth rate inputs. PPL's own forecasted annual growth rates for load and customers are -0.1% and 0.5%, respectively.[31] As with the sustainable growth determinants discussed above, these firm-specific growth determinants also avoid the circular reference problem inherent in considering earnings and dividend growth when conducting a DCF Model on a regulated utility for purposes of setting a fair awarded ROE. These firm-specific, low growth determinants provide additional support for why GDP may be properly considered as a *ceiling* for sustainable growth rate inputs in the DCF Model, particularly for a utility company.

Q. Please summarize the growth rate determinants you considered for your DCF Models.

A. The following figure compares the terminal growth rate determinants I considered in my sustainable growth DCF Model in this case.[32]

---

[30] Congressional Budget Office Long-Term Budget Outlook, https://www.cbo.gov/publication/59014.

[31] Exhibit DJG-5.

[32] *See also* Exhibit DJG-5.

Figure 7:
Sustainable Growth Rate Determinants

DCF Growth Rate Indicators	Rate
Nominal GDP	3.7%
Real GDP	1.6%
PPL Annual Load Growth (2015-2024)	-0.1%
PPL Annual Customer Growth (2015-2024)	0.5%
Long-Term Growth Ceiling	**3.7%**

Each of these growth determinants avoids the circular reference problem inherent in other growth determinants such as dividends and earnings growth when conducting a DCF Model on a regulated utility for purposes of setting a fair awarded ROE (because the awarded ROE more directly impacts earnings and dividends).

Q. Did you also consider a variation of the DCF Model that incorporates analysts' growth rate projections?

A. Yes. In this case, I present the results of analyst growth variation of my DCF Model because it is commonly presented in rate proceedings and considered by regulators when assessing a utility's authorized ROE.

Q. Please describe the results of your DCF Models?

A. For my DCF Models, I considered two variations: one using analysts' growth rates and one using the maximum sustainable growth rate. The results of these models are 8.7% and 7.3%, respectively.[33]

[33] Exhibit DJG-6.

D. Response to Ms. Nelson's DCF Model

Q. Please summarize the results of Ms. Nelson's DCF analyses.

A. Ms. Nelson conducted several variations of the DCF Model, with average results ranging as high as 10.46%.[34]

Q. Does the result of Ms. Nelson's DCF Model indicate a reasonable cost of equity estimate for PPL?

A. No. Whether the sustainable GDP growth rate or projected dividend growth rates published by Value Line are considered, the highest DCF result I obtained was 8.7%. The primary reason Ms. Nelson's DCF results are overstated is her use of unsustainably high growth rates for some proxy companies, and average growth rates for the proxy group that are unsustainably high. For example, Ms. Nelson incorporated an annual long-term growth rate as high as 9.2% for Dominion Energy. This means Ms. Nelson is suggesting the company's earnings will grow by more than 9.0% each year, every year, in perpetuity. This growth rate estimate published by S&P Capital IQ is a short-term growth rate. It is Ms. Nelson, not the commercial analyst, who is suggesting that this annual earnings growth rate can be achieved each year in perpetuity. As a result, the cost of equity results indicated by Ms. Nelson's DCF Model are unreasonably high in my opinion.

[34] Direct Testimony of Jennifer E. Nelson, p. 24, Fig. 4.

VII. CAPITAL ASSET PRICING MODEL ANALYSIS

Q. Please describe the CAPM.

A. The CAPM is a market-based model founded on the principle that investors expect higher returns for incurring additional risk.[35] The CAPM estimates this expected return. The various assumptions, theories, and equations involved in the CAPM are discussed further in Appendix B. Using the CAPM to estimate the cost of equity of a regulated utility is consistent with the legal standards governing the fair rate of return. The U.S. Supreme Court has recognized that "the amount of *risk* in the business is a most important factor" in determining the allowed rate of return,[36] and that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding *risks*."[37] The CAPM is a useful model because it directly considers the amount of risk inherent in a business and directly measures the most important component of a fair rate of return analysis: Risk.

Q. Describe the inputs for the CAPM.

A. The basic CAPM equation requires only three inputs to estimate the cost of equity: (1) the risk-free rate; (2) the beta coefficient; and (3) the equity risk premium. Each input is discussed separately below.

[36] *Wilcox*, 212 U.S. at 48 (emphasis added).

[37] *Hope Natural Gas Co*., 320 U.S. at 603 (emphasis added).

A. The Risk-Free Rate

Q. Please explain the risk-free rate.

A. The first term in the CAPM is the risk-free rate (R_F). The risk-free rate is simply the level of return investors can achieve without assuming any risk. The risk-free rate represents the bare minimum return that any investor would require on an investment. Even though no investment is technically devoid of risk, investors often use U.S. Treasury securities to represent the risk-free rate because they accept that those securities essentially contain no default risk. The Treasury issues securities with different maturities, including short-term Treasury Bills, intermediate-term Treasury Notes, and long-term Treasury Bonds.

Q. Is it preferable to use the yield on long-term Treasury bonds for the risk-free rate in the CAPM?

A. Yes. In valuing an asset, investors estimate cash flows over long periods of time. Common stock is viewed as a long-term investment, and the cash flows from dividends are assumed to last indefinitely. As a result, short-term Treasury bill yields are rarely used in the CAPM to represent the risk-free rate. Short-term rates are subject to greater volatility and thus can lead to unreliable estimates. Instead, long-term Treasury bonds are usually used to represent the risk-free rate in the CAPM. I considered a 30-day average of daily Treasury yield curve rates on 30-year Treasury bonds in my risk-free rate estimate, which resulted in a risk-free rate of 4.71%.[38]

[38] Exhibit DJG-7.

B. The Beta Coefficient

Q. How is the beta coefficient used in this model?

A. As discussed above, beta represents the sensitivity of a given security to movements in the overall market. The CAPM states that in efficient capital markets, the expected risk premium on each investment is proportional to its beta. Recall that a security with a beta greater than 1.0 is riskier than the market portfolio. Conversely, a security with a beta less than one is less risky than the market portfolio. An index such as the S&P 500 Index is used as a proxy for the market portfolio. The historical betas for publicly traded firms are published by various institutional analysts. Beta may also be calculated through a linear regression analysis, which provides additional statistical information about the relationship between a single stock and the market portfolio. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than one are relatively more sensitive to market risk than the average stock. In contrast, stocks with betas of less than one are less sensitive to market risk.

Q. Describe the source for the betas you used in your CAPM analysis.

A. I used betas recently published by Value Line Investment Survey. The beta for each proxy company is less than 1.0, and the average beta for the total proxy group is only 0.83.[39] Thus, we have an objective measure to prove the well-known concept that utility stocks are less risky than the average stock in the market. While there is evidence suggesting that betas published by sources such as Value Line may actually overestimate the risk of

[39] Exhibit DJG-8.

utilities (and thus overestimate the CAPM), I used the betas published by Value Line in the interest of reasonableness.[40]

C. The Equity Risk Premium

Q. Describe the equity risk premium.

A. The final term of the CAPM is the equity risk premium ("ERP"), which is the required return on the market portfolio less the risk-free rate ($R_M - R_F$). In other words, the ERP is the level of return investors expect above the risk-free rate in exchange for investing in risky securities. Many experts agree that "the single most important variable for making investment decisions is the equity risk premium."[41] Likewise, the ERP is arguably the single most important factor in estimating the cost of capital in this matter. There are three basic methods that can be used to estimate the ERP: (1) calculating a historical average; (2) taking a survey of experts; and (3) calculating the implied ERP. I will discuss each method in turn, noting advantages and disadvantages of these methods.

1. Historical Average

Q. Describe the historical equity risk premium.

A. The historical ERP may be calculated by simply taking the difference between returns on stocks and returns on government bonds over a certain period of time. Many practitioners rely on the historical ERP as an estimate for the forward-looking ERP because it is easy to obtain. However, there are disadvantages to relying on the historical ERP.

---

[40] *See* Appendix B for a more detailed discussion of raw beta calculations and adjustments.

[41] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns*, p. 4 (Princeton University Press 2002).

Q. What are the limitations of relying solely on a historical average to estimate the current or forward-looking ERP?

A. Some investors may rely on the historic ERP because it is convenient and easy to calculate. But what matters in the CAPM model is the current and forward-looking risk premium.[42] Some investors may think that a historic ERP provides some indication of what the prospective risk premium is; however, there is empirical evidence to suggest the prospective, forward-looking ERP is actually *lower* than the historical ERP. In a landmark publication on risk premiums around the world, *Triumph of the Optimists*, the authors suggest through extensive empirical research that the prospective ERP is lower than the historical ERP.[43] This is due in large part to what is known as "survivorship bias" or "success bias" — a tendency for failed companies to be excluded from historical indices.[44] From their extensive analysis, the authors make the following conclusion regarding the prospective ERP:

> The result is a forward-looking, geometric mean risk premium for the United States . . . of around 2½ to 4 percent and an arithmetic mean risk premium . . . that falls within a range from a little below 4 to a little above 5 percent.[45]

Indeed, these results are lower than many reported historical risk premiums. Other noted experts agree:

[44] *Id*. at 194.

[45] *Id*.

> The historical risk premium obtained by looking at U.S. data is biased upwards because of survivor bias. . . The true premium, it is argued, is much lower. This view is backed up by a study of large equity markets over the twentieth century (*Triumph of the Optimists*), which concluded that the historical risk premium is closer to 4%.[46]

Regardless of the variations in historic ERP estimates, many leading scholars and practitioners agree that simply relying on a historic ERP to estimate the risk premium going forward is not ideal. Fortunately, "a naïve reliance on long-run historical averages is not the only approach for estimating the expected risk premium."[47]

Q. Did you rely on the historical ERP as part of your CAPM analysis in this case?

A. No. Due to the limitations of this approach, I primarily relied on the ERP reported in expert surveys and the implied ERP method discussed below.

2. Expert Surveys

Q. Describe the expert survey approach to estimating the ERP.

A. As its name implies, the expert survey approach to estimating the ERP involves conducting a survey of experts including professors, analysts, chief financial officers, and other executives around the country and asking them what they think the ERP is. The IESE Business School conducts such a survey each year. Its 2025 expert survey reported an average ERP of 5.5%.[48]

IESE Business School is the graduate business school of the University of Navarra.

3. Implied Equity Risk Premium

Q. Describe the implied equity risk premium approach.

A. The third method of estimating the ERP is arguably the best. The implied ERP relies on the stable growth model proposed by Gordon, often called the "Gordon Growth Model," which is a basic stock valuation model that has been widely used in finance for many years.[49] This model is a mathematical derivation of the DCF Model. In fact, the underlying concept in both models is the same: The current value of an asset is equal to the present value of its future cash flows. Instead of using this model to determine the discount rate of one company, we can use it to determine the discount rate for the entire market by substituting the inputs of the model. Specifically, instead of using the current stock price (P_0), we will use the current value of the S&P 500 (V_{500}). Instead of using the dividends of a single firm, we will consider the dividends paid by the entire market. Additionally, we should consider potential dividends. In other words, stock buybacks should be considered in addition to paid dividends, as stock buybacks represent another way for the firm to transfer free cash flow to shareholders. Focusing on dividends alone, without considering stock buybacks, could understate the cash flow component of the model and ultimately understate the implied ERP. The market dividend yield plus the market buyback yield gives us the gross cash yield to use as our cash flow in the numerator of the discount model. This gross cash yield is increased each year over the next five years by the growth

[49] Myron J. Gordon and Eli Shapiro, *Capital Equipment Analysis: The Required Rate of Profit* 102-10 (Management Science Vol. 3, No. 1 Oct. 1956); Myron Gordon was an American economist and Professor Emeritus of Finance at the Rotman School of Management, University of Toronto. In 1956, Gordon along with Eli Shapiro, published a method for valuing a stock or business, now known as the Gordon growth model.

rate. These cash flows must be discounted to determine their present value. The discount rate in each denominator is the risk-free rate (R_F) plus the discount rate (K). Equation 1 below shows how the implied return is calculated. Since the current value of the S&P is known, we can solve for K, the implied market return.[50]

Equation 1:
Implied Market Return

$$V_{500} = \frac{CY_1(1+g)^1}{(1+R_F+K)^1} + \frac{CY_2(1+g)^2}{(1+R_F+K)^2} + \cdots + \frac{CY_5(1+g)^5 + TV}{(1+R_F+K)^5}$$

where:

V_{500}	=	*current value of index (S&P 500)*
CY_{1-5}	=	*average cash yield over last five years (includes dividends and buybacks)*
g	=	*compound growth rate in earnings over last five years*
R_F	=	*risk-free rate*
K	=	*implied market return (this is what we are solving for)*
TV	=	*terminal value = CY_5 (1+R_F) / K*

The discount rate is called the "implied" return because it is based on the current value of the index as well as the value of free cash flow to investors projected over the next five years. Thus, based on these inputs, the market is "implying" the expected return; or in other words, based on the current value of all stocks (the index price) and the projected value of future cash flows, the market is telling us the return expected by investors for investing in the market portfolio. After solving for the implied market return (K), we simply subtract the risk-free rate from it to arrive at the implied ERP as shown in the following equation.

[50] *See* Exhibit DJG-9 for detailed calculation.

Equation 2:
Implied Equity Risk Premium

$$Implied\ Expected\ Market\ Return - R_F = Implied\ ERP$$

Q. Discuss the results of your implied ERP calculation.

A. After collecting data for the index value, operating earnings, dividends, and buybacks for the S&P 500 over the past six years, I calculated the dividend yield, buyback yield, and gross cash yield for each year. I also calculated the compound annual growth rate (g) from operating earnings. I used these inputs, along with the risk-free rate and current value of the index to calculate a current required return on the U.S. equity market of 9.7%. I subtracted the risk-free rate to arrive at the implied equity risk premium of 5.0%.[51] Dr. Damodaran, one of the world's leading experts on the ERP, promotes the implied ERP method discussed above. He calculates monthly and annual implied ERPs with this method and publishes his results. Dr. Damodaran's average ERP estimate for December 2025 using several implied ERP variations was 4.2%.[52]

Q. Did you also consider the ERP estimate published by Kroll?

A. Yes. Kroll (formerly Duff & Phelps), is a multinational financial and risk advisory company. Kroll recently published an ERP estimate of 5.0%.[53]

Q. What are the results of your final ERP estimate?

A. For the final ERP estimate I used in my CAPM analysis, I considered the results of the ERP surveys, the estimated ERP reported by Kroll, the estimated ERP calculated by Dr.

---

[51] *Id*.

[52] *See* monthly ERP estimates published by Dr. Damodaran at http://pages.stern.nyu.edu/~adamodar/

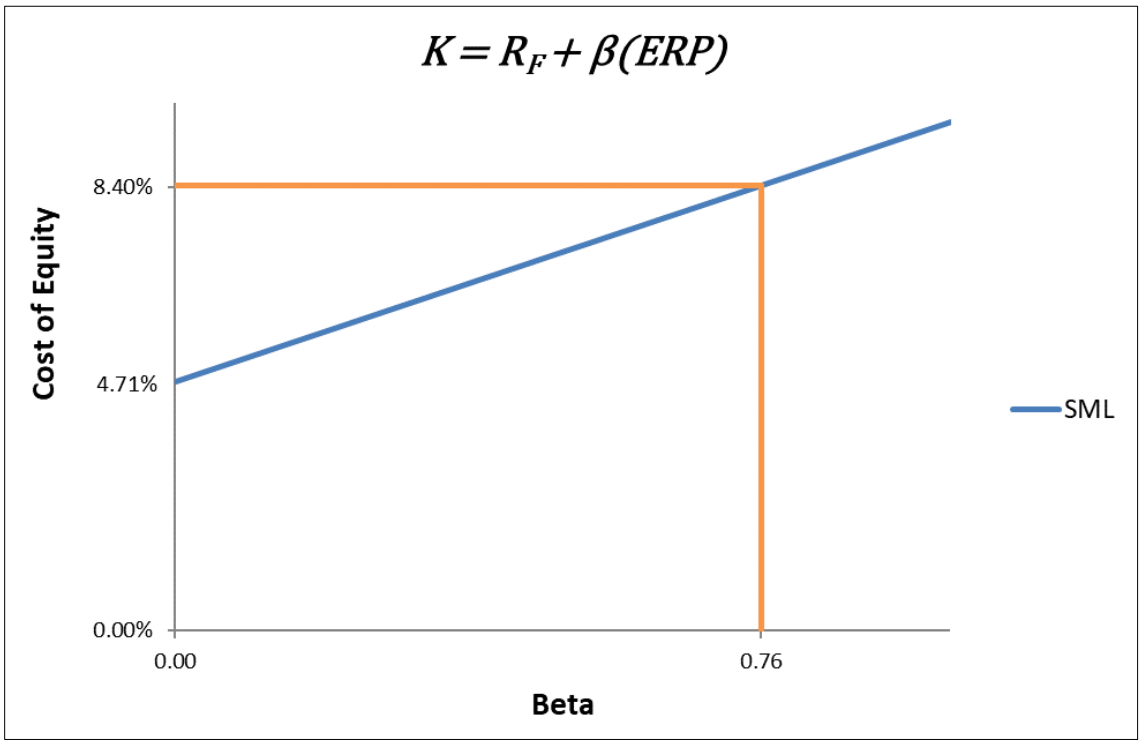
[53] Kroll, Cost of Capital Inputs Updated to Reflect a De-Escalation of Trae Tensions and Economic Support from Monetary and Fiscal Policies (September 3, 2025).

Damodaran, and the implied ERP based on my calculations.[54] The results are summarized in the following figure:

Figure 8:
Equity Risk Premium Results

IESE Business School Survey	5.5%
Kroll (Duff & Phelps) Report	5.0%
Damodaran (average)	4.2%
Garrett	5.0%
Average	**4.9%**

I used the average ERP of 4.9% from these sources in my CAPM.



Q. Please explain the final results of your CAPM analysis.

A. Using the inputs for the risk-free rate, beta, and equity risk premium discussed above, I estimate that the Company's CAPM cost of equity is 8.4%, but only if the proxy group average debt ratio is assumed (otherwise, the Company's CAPM cost of equity estimate is only 7.6%, which is discussed later in my testimony regarding the Hamada Model).[55] The CAPM can be displayed graphically through what is known as the Security Market Line ("SML"). The figure below shows the expected return (cost of equity) on the y-axis, and the average beta for the proxy group on the x-axis. The SML intercepts the y-axis at the level of the risk-free rate. The slope of the SML is the equity risk premium.

[54] *See also* Exhibit DJG-10.

[55] Exhibits DJG-11 and DJG-12.

Figure 9:
CAPM Graph

The SML provides the rate of return that will compensate investors for the beta risk of that investment. Thus, at an average beta of 0.76 for the proxy group, and assuming the proxy group's average capital structure is used, the CAPM result is 8.4%.

D. Response to Ms. Nelson's CAPM Analysis and Other Issues

Q. Please summarize the results of Ms. Nelson's CAPM analysis

A. Ms. Nelson's traditional CAPM analysis produced a results ranging from 10.04% - 12.05%.[56] Ms. Nelson also conducted another variation of the CAPM called the "empirical

[56] Direct Testimony of Jennifer E. Nelson, Exhibit JEN-5.

CAPM" ("ECAPM"), which produced results ranging from 10.57% - 12.74%.[57] Ms. Nelson also conducted another type of risk premium analysis, which produced a result of 10.41%. Finally, Ms. Nelson also considered a size premium and flotation cost premium. I will discuss each of these issues below.

Q. Do the results of Ms. Nelson's CAPM and other risk premium analyses indicate a reasonable cost of equity estimate for PPL?

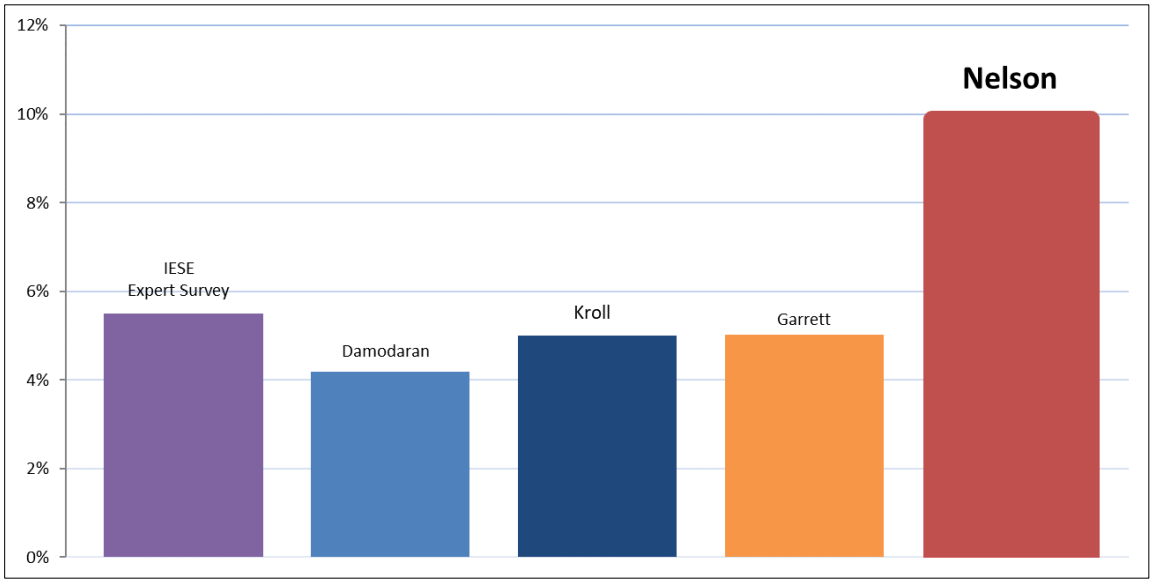
A. No. The primary factor which causes Ms. Nelson's CAPM results to be unreasonably high is her use of an unreasonably high ERP estimate. Also, the size premium Ms. Nelson applies to her CAPM results is unreasonable and unnecessary. I will discuss these issues below as well as the results of Ms. Nelson's other risk premium analysis.

1. <u>Equity Risk Premium</u>

Q. Did Ms. Nelson rely on a reasonable measure for the ERP?

A. No. The primary factor which causes Ms. Nelson's CAPM results to be unreasonably high is her use of an unreasonably high ERP estimate. Ms. Nelson considered an ERP as high as 9.89% in her analysis.[58] The ERP is one of three inputs in the CAPM equation, and it is one of the most important factors for estimating the cost of equity in this case. As discussed above, I used three widely accepted methods for estimating the ERP, including consulting expert surveys, calculating the implied ERP based on aggregate market data, and considering the ERPs published by reputable analysts. The average ERP calculated from my research is only 4.9%.

---



[57] *Id*.

[58] *Id*. at Exhibit JEN-5.

Q. Please discuss and illustrate how Ms. Nelson's ERP compares with other estimates for the ERP.

A. The 2025 IESE Business School expert survey reports an average ERP of 5.5%. Similarly, Kroll recently estimated an ERP of 5.0%. Dr. Damodaran, one of the leading experts on the ERP, recently estimated an ERP of only 4.2%.[59] The chart in the following figure illustrates that Ms. Nelson's ERP estimate higher than other reasonable, objective estimates for the ERP.[60]

Figure 10:
Equity Risk Premium Comparison

When compared with other independent sources for the ERP, as well as my estimate, Ms. Nelson's ERP estimate is clearly too high. This factor contributes to Ms. Nelson's CAPM results to overstate PPL's cost of equity.

[59] Aswath Damodaran, *Implied Equity Risk Premium Update*, DAMODARAN ONLINE, http://pages.stern.nyu.edu/~adamodar/. Dr. Damodaran estimates several ERPs using various assumptions.

[60] The ERP estimated by Dr. Damodaran is the highest of several ERP estimates under slightly differing assumptions.

2. Other Risk Premium Analysis

Q. Please describe Ms. Nelson's other risk premium analysis in addition to the CAPM.

A. In addition to the CAPM, which is a risk premium model, Ms. Nelson also conducted another type of risk premium model which she calls the "Bond Yield Plus Risk Premium" model. This model produced results ranging from 10.22% - 10.41%.[61]

Q. Does the result of Ms. Nelson's risk premium model indicate a reasonable cost of equity for PPL?

A. No. Unlike the CAPM and DCF Model, Ms. Nelson's risk premium model does not even estimate the cost of equity. Ms. Nelson's personal risk premium model adds no marginal value to estimating cost of equity beyond the CAPM – a risk premium mode that resulted in a Nobel Prize in economics and has been used by investors, managers, and analysts around the world for decades. Ms. Nelson's risk premium model considers, in part, authorized returns from other jurisdictions dating back to 1980. Unlike the inputs to the CAPM, authorized ROEs from other jurisdictions are not market-based. Furthermore, relying on data nearly 50 years old contradicts Ms. Nelson's own acknowledgement that the cost of capital is "forward-looking."[62] Thus, the Commission should simply reject the results of Ms. Nelson's risk premium model and focus on the results of the CAPM and DCF Model presented in this case

[61] *Id*. at p. 36, Fig. 12.

[62] Id. at p. 7, line 6.

3. Size Effect

Q. Describe Ms. Nelson's size premium.

A. Ms. Nelson considers the notion that PPL's size relative to the proxy group has an increasing effect on its cost of equity. In this case, Ms. Nelson did not make an explicit adjustment to her ROE recommendation for the Company's size; however, the Commission should reject the argument that PPL's size should have an increasing effect on either its cost of equity or authorized ROE.

Q. Do you agree with Ms. Nelson's opinion regarding PPL's size?

A. No. PPL should not receive any upward adjustment or consideration to its cost of equity estimate or authorized ROE due to its size. The "size effect" phenomenon arose from a 1981 study conducted by Banz, which found that "in the 1936 – 1975 period, the common stock of small firms had, on average, higher risk-adjusted returns than the common stock of large firms."[63] According to Ibbotson, Banz's size effect study was "[o]ne of the most remarkable discoveries of modern finance."[64] Perhaps there was some merit to this idea at the time, but the size effect phenomenon was short lived. Banz's 1981 publication generated much interest in the size effect and spurred the launch of significant new small cap investment funds. However, this "honeymoon period lasted for approximately two years. . ." [65] After 1983, U.S. small-cap stocks actually underperformed relative to large cap stocks. In other words, the size effect essentially reversed. In *Triumph of the Optimists*,

---

[63] Rolf W. Banz, *The Relationship Between Return and Market Value of Common Stocks* 3-18 (Journal of Financial Economics 9 (1981)).

[64] 2015 Ibbotson Stocks, Bonds, Bills, and Inflation Classic Yearbook 99 (Morningstar 2015).

[65] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns* 131 (Princeton University Press 2002).

the authors conducted an extensive empirical study of the size effect phenomenon around the world. They found that after the size effect phenomenon was discovered in 1981, it disappeared within a few years:

> It is clear . . . that there was a global reversal of the size effect in virtually every country, with the size premium not just disappearing but going into reverse. Researchers around the world universally fell victim to Murphy's Law, with the very effect they were documenting – and inventing explanations for – promptly reversing itself shortly after their studies were published.[66]

In other words, the authors assert that the very discovery of the size effect phenomenon likely caused its own demise. The authors ultimately concluded that it is "inappropriate to use the term 'size effect' to imply that we should automatically expect there to be a small-cap premium," yet, this is exactly what utility witnesses often do in attempting to artificially inflate the cost of equity with a size premium. Other prominent sources have agreed that the size premium is a dead phenomenon. According to Ibbotson:

> The unpredictability of small-cap returns has given rise to another argument against the existence of a size premium: that markets have changed so that the size premium no longer exists. As evidence, one might observe the last 20 years of market data to see that the performance of large-cap stocks was basically equal to that of small cap stocks. In fact, large-cap stocks have outperformed small-cap stocks in five of the last 10 years.[67]

In addition to the studies discussed above, other scholars have concluded similar results. According to Kalesnik and Beck:

---

[66] *Id*. at 133.

[67] 2015 Ibbotson Stocks, Bonds, Bills, and Inflation Classic Yearbook 112 (Morningstar 2015); Roger Ibbotson is Professor in the Practice Emeritus of Finance at Yale School of Management. He is also chairman of Zebra Capital Management, LLC, an equity investment, index, and hedge fund manager. He is founder, advisor and former chairman of Ibbotson Associates, now a Morningstar Company.

> Today, more than 30 years after the initial publication of Banz's paper, the empirical evidence is extremely weak even before adjusting for possible biases. . . . The U.S. long-term size premium is driven by the extreme outliers, which occurred three-quarters of a century ago. . . . Finally, adjusting for biases . . . makes the size premium vanish. If the size premium were discovered today, rather than in the 1980s, it would be challenging to even publish a paper documenting that small stocks outperform large ones.[68]

For all of these reasons, the Commission should reject the arbitrary size premium proposed by the Company.

4. <u>Flotation Costs</u>

Q. Please summarize Ms. Nelson's position regarding flotation costs.

A. Ms. Nelson also considers the notion that the proxy companies' costs of issuing equity shares should have an increasing effect on PPL's authorized ROE. However, in this case Ms. Nelson does not make an explicit adjustment to her recommended ROE for PPL to account for flotation costs. Regardless, the Commission should reject any argument that suggests flotation costs should have an increasing effect on PPL's cost of equity or authorized ROE.

Q. Why should flotation costs not have an increasing effect on PPL's cost of equity or authorized ROE?

A. When companies issue equity securities, they typically hire at least one investment bank as an underwriter for the securities. "Flotation costs" generally refer to the underwriter's

---

[68] Vitali Kalesnik and Noah Beck, *Busting the Myth About Size* (Research Affiliates 2014), available at https://www.researchaffiliates.com/Our%20Ideas/Insights/Fundamentals/Pages/284_Busting_the_Myth_About_Size.aspx (emphasis added); Vitali Kalesnik is responsible for quantitative research using advanced econometric tools in asset pricing and active asset allocation. Noah Beck conducts quantitative equity research relating to dynamic factor investing and smart beta strategies. He supports existing portfolios and advances research for product development.

compensation for the services it provides in connection with the securities offering. However, Ms. Nelson's arguments regarding flotation costs should be rejected for several reasons, as discussed further below.

1. Flotation costs are not actual "out-of-pocket" costs.

The Company has not experienced any out-of-pocket costs for flotation. Underwriters are not compensated in this fashion. Instead, underwriters are compensated through an "underwriting spread." An underwriting spread is the difference between the price at which the underwriter purchases the shares from the firm, and the price at which the underwriter sells the shares to investors.[69] Accordingly, the Company has not experienced any out-of-pocket flotation costs, and if it has, those costs should be included in the Company's expense schedules.

2. The market already accounts for flotation costs.

When an underwriter markets a firm's securities to investors, the investors are aware of the underwriter's fees. The investors know that a portion of the price they are paying for the shares does not go directly to the company, but instead goes to compensate the underwriter for its services. In fact, federal law requires that the underwriter's compensation be disclosed on the front page of the prospectus.[70] Thus, investors have already considered and accounted for flotation costs when making their decision to purchase shares at the quoted price.

---

[69] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 509 (3rd ed., South Western Cengage Learning 2010).

[70] *See* 17 C.F.R. § 229.501(b)(3) (requiring that the underwriter's discounts and commissions be disclosed on the outside cover page of the prospectus). A prospectus is a legal document that provides details about an investment offering.

As a result, there is no need for shareholders to receive additional compensation to account for costs they have already considered and agreed to. Similar compensation structures are found in other kinds of business transactions. For example, a homeowner may hire a realtor and sell a home for $100,000. After the realtor takes a six percent commission, the seller nets $94,000. The buyer and seller agreed to the transaction notwithstanding the realtor's commission. Obviously, it would be unreasonable for the buyer or seller to demand additional funds from anyone after the deal is completed to reimburse them for the realtor's fees. Likewise, investors of competitive firms do not expect additional compensation for flotation costs. Thus, it would not be appropriate for a commission standing in the place of competition to reward a utility's investors with this additional compensation.

3. It is inappropriate to add any additional basis points to an awarded ROE proposal that is already far above the Company's cost of equity.

For the reasons discussed above, flotation costs should be disallowed from a technical standpoint; they should also be disallowed from a policy standpoint. The Company is asking this Commission to award it a cost of equity that is nearly 300 basis points above a reasonable estimate of its market-based cost of equity. Under these circumstances, it is especially inappropriate to suggest that flotation costs should be considered in any way to increase an already inflated ROE proposal.

VIII. CAPITAL STRUCTURE

Q. Describe in general the concept of a company's "capital structure."

A. "Capital structure" refers to the way a company finances its overall operations through external financing. The primary sources of long-term, external financing are debt capital

and equity capital. Debt capital usually comes in the form of contractual bond issues that require the firm to make payments, while equity capital represents an ownership interest in the form of stock. Because a firm cannot pay dividends on common stock until it satisfies its debt obligations to bondholders, stockholders are referred to as "residual claimants." The fact that stockholders have a lower priority to claims on company assets increases their risk and the required return relative to bondholders. Thus, equity capital has a higher cost than debt capital. Firms can reduce their Weighted Average Cost of Capital (WACC) by recapitalizing and increasing their debt financing. In addition, because interest expense is deductible, increasing debt also adds value to the firm by reducing the firm's tax obligation.

Q. Please explain the concept of the "weighted average cost of capital."

A. The term "cost of capital" refers to the weighted average cost of all the components of a company's capital structure, including debt and equity. Determining the cost of debt is relatively straightforward. Interest payments on bonds are contractual, "embedded costs" that are generally calculated by dividing total interest payments by the book value of outstanding debt. Determining the cost of equity, on the other hand, is more complex. Unlike the known, contractual cost of debt, there is no explicit "cost" of equity; the cost of equity must be estimated through various financial models. Thus, the overall weighted average cost of capital includes the cost of debt and the estimated cost of equity. It is a "weighted average" because it is based upon the Company's relative levels of debt and equity, or "capital structure." Companies in the competitive market often use their WACC as the discount rate to determine the value of capital projects, so it is important that this figure be closely estimated. The basic WACC equation used in regulatory proceedings is presented as follows:

Equation 3:
Weighted Average Cost of Capital

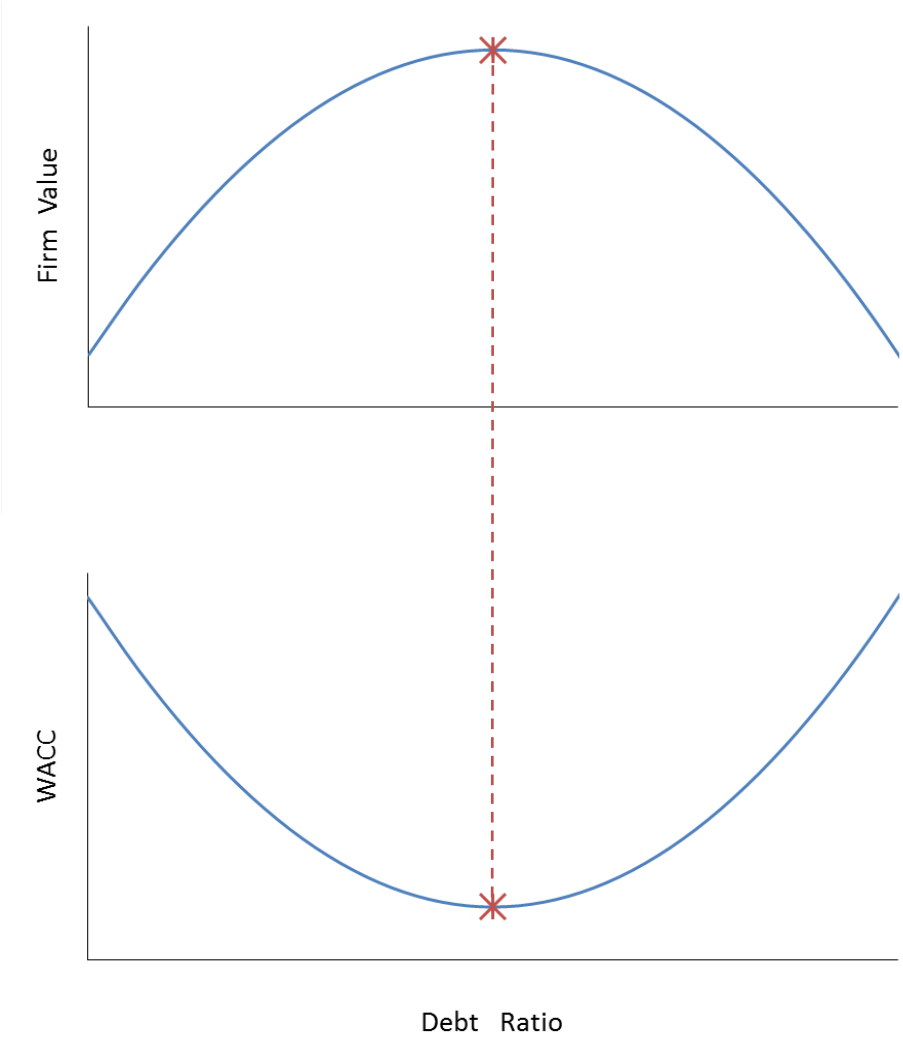
$$WACC = \left(\frac{D}{D+E}\right) C_D + \left(\frac{E}{D+E}\right) C_E$$

where: $WACC$ = *weighted average cost of capital*
D = *book value of debt*
C_D = *embedded cost of debt capital*
E = *book value of equity*
C_E = *market-based cost of equity capital*

Thus, the three components of the weighted average cost of capital include the following:

(1) Cost of Equity

(2) Cost of Debt



(3) Capital Structure

The term "cost of capital" is necessarily synonymous with the "weighted average cost of capital," and the terms are used interchangeably throughout this testimony.

Q. Is it true that, by increasing debt, competitive firms can add value and reduce their WACC?

A. Yes, it is. A competitive firm can add value by increasing debt. After a certain point, however, the marginal cost of additional debt outweighs its marginal benefit. This is because the more debt the firm uses, the higher interest expense it must pay, which causes the likelihood of loss to increase. This also increases the risk of non-recovery for both bondholders and shareholders, causing both groups of investors to demand a greater return on their investment. Thus, if debt financing is too high, the firm's WACC will increase instead of decrease. The following Figure illustrates these concepts.

Figure 11:
Optimal Debt Ratio

As shown in this figure, a competitive firm's value is maximized when the WACC is minimized. In both graphs, the debt ratio is shown on the x-axis. By increasing its debt ratio, a competitive firm can minimize its WACC and maximize its value. At a certain point, however, the benefits of increasing debt do not outweigh the costs.

Q. Does the rate base rate of return model effectively incentivize utilities to operate at the optimal capital structure?

A. No. While it is true that competitive firms maximize their value by minimizing their WACC, this is not the case for regulated utilities. Under the rate base rate of return model, a higher WACC results in higher rates, all else held constant. The basic revenue requirement equation is as follows:

Equation 4:
Revenue Requirement for Regulated Utilities

$$RR = O + d + T + \boldsymbol{r}(A - D)$$

where:

RR	=	*revenue requirement*
O	=	*operating expenses*
d	=	*depreciation expense*
T	=	*corporate tax*
r	=	***weighted average cost of capital (WACC)***
A	=	*plant investments*
D	=	*accumulated depreciation*

As shown in this equation, utilities can increase their revenue requirement by *increasing* their WACC, not by minimizing it. Thus, because there is no incentive for a regulated utility to minimize its WACC, a Commission standing in the place of competition must ensure that the regulated utility is operating at the lowest reasonable WACC. Left unrestrained, utilities will increase their equity and decrease their debt to unreasonably increase their profits that flow through to shareholders.

Q. Can utilities generally afford to have higher debt levels than other industries?

A. Yes. Because regulated utilities have large amounts of fixed assets, stable earnings, and low risk relative to other industries, they can afford to have relatively higher debt ratios (or "leverage"). As aptly stated by Dr. Damodaran:

> Since financial leverage multiplies the underlying business risk, it stands to reason that firms that have high business risk should be reluctant to take on financial leverage. It also stands to reason that firms that operate in stable businesses should be much more willing to take on financial leverage. *Utilities*, for instance, have historically had high debt ratios but have not had high betas, mostly because their underlying businesses have been stable and fairly predictable.[71]

Note that Dr. Damodaran explicitly contrasts utilities with firms that have high underlying business risk. Because utilities have low levels of risk and operate a stable business, they should generally operate with relatively high levels of debt to achieve their optimal capital structure.

A. Proxy and Industry Debt Ratios

Q. Please describe the debt ratios of the proxy group.

A. According to Value Line, the average capital structure mix for the proxy group consists of 58% debt and 42% equity.[72] This debt ratio is notably higher than PPL's proposed capital structure consisting of only 44% debt. More importantly, this means that PPL has a lower level of financial risk relative to the proxy group – a discrepancy that can be mathematically accounted for in terms of cost of equity estimation through the Hamada Model, which is discussed in more detail below.

---

[71] *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, p. 196 (emphasis added).

[72] Exhibit DJG-13.

Q. Please describe the debt ratios recently observed in competitive U.S. industries.

A. There are more than 2,000 firms in U.S. industries with higher debt ratios of at least 50%, and with an average debt ratio of about 63%.[73] The following figure shows a sample of these industries with debt ratios higher than 56%.

[73] *See* Exhibit DJG-14.

Figure 12:
Industry Debt Ratio Comparison

Industry	# Firms	Debt Ratio
Financial Svcs. (Non-bank & Insurance)	166	92%
Hotel/Gaming	65	86%
Brokerage & Investment Banking	30	80%
Retail (Automotive)	29	80%
Hospitals/Healthcare Facilities	33	76%
Air Transport	24	76%
Bank (Money Center)	15	71%
Rubber& Tires	3	67%
Recreation	50	66%
Food Wholesalers	14	66%
Transportation	21	66%
Computers/Peripherals	35	65%
Cable TV	9	65%
Advertising	54	64%
Retail (Grocery and Food)	17	64%
Retail (Special Lines)	98	64%
Telecom (Wireless)	11	63%
Power	48	62%
R.E.I.T.	192	62%
Oil/Gas Distribution	24	62%
Transportation (Railroads)	4	62%
Telecom. Services	32	62%
Chemical (Diversified)	4	61%
Auto & Truck	34	61%
Aerospace/Defense	67	60%
Broadcasting	22	60%
Packaging & Container	22	60%
Apparel	37	59%
Beverage (Soft)	29	59%
Utility (General)	14	59%
Retail (Distributors)	66	58%
Farming/Agriculture	35	57%
Green & Renewable Energy	18	57%
Information Services	16	57%
Total / Average	**1,338**	**66%**

Many of the industries shown here, like public utilities, are generally well-established industries with large amounts of capital assets. The shareholders of these industries generally prefer these higher debt ratios in order to maximize their profits. There are several notable industries that are relatively comparable to public utilities. For example, the Cable TV, Telecom, Power, and Telecom industries all have an average debt ratios of at least 60%.

Q. Are you basing your capital structure recommendation on any industry or company outside of the proxy group?

A. No. I am basing my capital structure recommendation primarily on the proxy group average capital structure. I present the capital structures observed in other competitive industries to show it is not uncommon for firms to operate with relatively higher amounts of leverage.

B. The Hamada Model: Capital Structure's Effect on ROE

Q. Have you considered the impact that your capital structure recommendation could have on the company's indicated cost of equity?

A. Yes. I assessed the impact of my capital structure proposal on the Company's cost of equity estimate by using the Hamada model.

Q. What is the premise of the Hamada model?

A. The Hamada formula can be used to analyze changes in a firm's cost of capital as it adds or reduces financial leverage, or debt, in its capital structure by starting with an "unlevered" beta and then "relevering" the beta at different debt ratios. As leverage increases, equity investors bear increasing amounts of risk, leading to higher betas. Before the effects of financial leverage can be accounted for, however, the effects of leverage must first be

removed, which is accomplished through the Hamada formula. The Hamada formula for unlevering beta is stated as follows:[74]

Equation 5:
Hamada Formula

$$\beta_U = \frac{\beta_L}{\left[1 + (1 - T_c)\left(\frac{D}{E}\right)\right]}$$

where: β_U = *unlevered beta (or "asset" beta)*
β_L = *average levered beta of proxy group*
T_C = *corporate tax rate*
D = *book value of debt*
E = *book value of equity*

Using this equation, the beta for the firm can be unlevered, and then "relevered" based on various debt ratios (by rearranging this equation to solve for β_L).

Q. Please summarize the results of the Hamada formula based on the average capital structure of the proxy group.

A. The average capital structure of the proxy group consists of 58% debt and 42% equity. Because PPL's debt ratio is notably lower than that of the proxy group, when PPL is "relevered" to match the proxy group, it results in a lower ROE than if PPL had been operating with a capital structure equal to that of the proxy group. This makes sense because PPL has less financial risk relative to the proxy group due to the lower amount of debt in its capital structure. The results of my Hamada model are presented in the following figure.

[74] Damodaran *supra* n. 22 at 197. This formula was originally developed by Hamada in 1972.

Figure 13:
Hamada Model ROE

Unlevering Beta	
Proxy Debt Ratio	58%
Proxy Equity Ratio	42%
Proxy Debt / Equity Ratio	1.4
Tax Rate	21%
Equity Risk Premium	4.9%
Risk-free Rate	4.7%
Proxy Group Beta	0.76
Unlevered Beta	0.36

Relevered Betas and Cost of Equity Estimates

Debt Ratio	D/E Ratio	Levered Beta	Cost of Equity
0%	0.0	0.36	6.5%
20%	0.3	0.43	6.8%
25%	0.3	0.46	7.0%
30%	0.4	0.48	7.1%
44%	0.8	0.58	7.6%
58%	1.4	0.76	8.4%
60%	1.5	0.79	8.6%

According to the results of the Hamada model, if the Commission were to adopt the Company's proposed capital structure consisting of only 44% debt, then its indicated cost of equity estimate (under the CAPM) would be only 7.6%.[75]

[75] *See* Exhibit DJG-15.

C. Capital Structure and Credit Ratings

Q. Please summarize the issues raised in the direct testimony of Ms. Burgos that you will address.

A. In her direct testimony, Ms. Burgos suggests that approval of the Company's proposed ROE and capital structure is necessary in order for PPL to maintain its credit rating, and to "access capital at lower costs."[76] Ms. Burgos ultimate concludes that the rate of return proposed by Ms. Nelson is reasonable.[77]

Q. Do you agree with the assertions made by Ms. Burgos regarding these issues?

A. No. Ms. Burgos's testimony regarding the Company's credit ratings and its relation to the authorized ROE and capital structure is misleading. Effectively, Ms. Burgos is suggesting that if the Commission does not approve PPL's requested ROE and capital structure, it could lead to lower credit ratings, which could increase the cost of debt. however, there are multiple problems with this narrative. First, it should be clear that any adjustment made to the Company's capital structure in this case is for ratemaking purposes, which means the capital structure that is used to calculate a fair rate of return to apply to the Company's rate base. The Company's actual capital structure is within discretion of Company management.

Second, Ms. Burgos's testimony regarding the Company's credit metrics effectively suggests that there is a direct link between the Commission's authorized return for the Company in this case and the PPL's credit metrics. In other words, she effectively

---

[76] Direct Testimony of Julissa Burgos, p. 7, line 6.

[77] *Id*. at lines 15-18.

removes the responsibility of Company management to maintain a good credit rating. Every cash expense made by the Company, including those not necessary to provide service, effect the financial metrics used to determine credit ratings. It is ultimately the responsibility of PPL's management to operate the Company in an efficient, prudent, and economical manner such that good credit metrics can be maintained. If the Commission sets a fair ROE in this case that is reflective of the Company's market-based cost of equity, this will give the Company a fair opportunity to earn a fair return for investors and maintain a strong credit rating.

Third, for Ms. Burgos to suggest that the Company's proposed rate of return will allow the Company to "access capital at lower costs" is highly misleading. I am not aware of any U.S. utility that has ever been unable to "access capital." Moreover, the "lower cost" Ms. Burgos is referring to is the cost of debt, not the weighted average cost of capital, which is the primary cost that matters. In other words, even if the Commission authorized a lower ROE and/or higher ratemaking debt ratio for PPL, and it resulted in a one-notch credit rating downgrade (again this is largely a function of management), the marginal impact it would have on the embedded cost of debt would be minimal compared to the overall savings customers would receive from having a lower ROE and overall rate of return. In other words, customers would gladly pay a slightly higher cost of debt to achieve lower overall capital costs.

In conclusion, the Commission should authorize a fair ROE and ratemaking capital structure for PPL. Doing so will allow the Company to maintain strong credit ratings, and more importantly, it will result in lower overall capital costs. Unlike regulated utilities, non-regulated companies have a natural incentive to minimize capital costs. A regulatory

commission standing in the place of competition should set the ROE and capital structure such that it results in the lowest reasonable weighted average cost of capital.

IX. RATE OF RETURN CONCLUSION

Q. Please summarize your analyses and conclusions regarding PPL's cost of equity.

A. A utility's awarded ROE should be based on its cost of equity, which can be estimated using various financial models. In estimating PPL's cost of equity, I performed a cost of equity analysis on a proxy group of utility companies using the two most widely used and widely-accepted financial models for calculating cost of equity in utility rate proceedings: the CAPM and DCF Model. I conducted two variations of both the CAPM and DCF Model. The results are shown in the figure below.

Figure 14:
Cost of Equity Model Summary

Model	Cost of Equity
CAPM (at Proxy Debt Ratio)	8.4%
Hamada CAPM (at Company-Proposed Debt Ratio)	7.6%
DCF Model (Analyst Growth)	8.7%
DCF Model (Sustainable Growth)	7.3%
Model Average	**8.0%**
Recommended ROE	**8.4%**

Q. Please summarize your recommendation to the Commission regarding PPL's authorized rate of return.

A. I am recommending an authorized ROE of 8.4% for PPL. I also recommend the Commission impute a capital structure for PPL for ratemaking purposes consisting of 58% debt and 42% equity.

PART TWO: DEPRECIATION

X. DEPRECIATION STANDARDS AND SYSTEMS

Q. Please discuss the standard by which regulated utilities are allowed to recover depreciation expense.

A. In *Lindheimer v. Illinois Bell Telephone Co.*, the U.S. Supreme Court stated "depreciation is the loss, not restored by current maintenance, which is due to all the factors causing the ultimate retirement of the property. These factors embrace wear and tear, decay, inadequacy, and obsolescence."[78] The *Lindheimer* Court also recognized that the original cost of plant assets, rather than present value or some other measure, is the proper basis for calculating depreciation expense.[79] Moreover, the *Lindheimer* Court found:

> [T]he company has the burden of making a convincing showing that the amounts it has charged to operating expenses for depreciation have not been excessive. That burden is not sustained by proof that its general accounting system has been correct. The calculations are mathematical, but the predictions underlying them are essentially matters of opinion.[80]

Thus, the Commission must ultimately determine if PPL has met its burden of proof by making a convincing showing that its proposed depreciation rates are not excessive.

---

[78] *Lindheimer v. Illinois Bell Tel. Co.*, 292 U.S. 151, 167 (1934).

[79] *Id*. (Referring to the straight-line method, the *Lindheimer* Court stated that "[a]ccording to the principle of this accounting practice, the loss is computed upon the actual cost of the property as entered upon the books, less the expected salvage, and the amount charged each year is one year's pro rata share of the total amount."). The original cost standard was reaffirmed by the Court in *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591, 606 (1944). The *Hope* Court stated: "Moreover, this Court recognized in [*Lindheimer*], supra, the propriety of basing annual depreciation on cost. By such a procedure the utility is made whole and the integrity of its investment maintained. No more is required."

[80] *Id*. at 169.

Q. Please discuss the definition and general purpose of a depreciation system, as well as the specific depreciation system you employed for this project.

A. The legal standards set forth above do not mandate a specific procedure for conducting depreciation analysis. These standards, however, direct that analysts use a system for estimating depreciation rates that will result in the "systematic and rational" allocation of capital recovery for the utility. Over the years, analysts have developed "depreciation systems" designed to analyze grouped property in accordance with this standard. A depreciation system may be defined by several primary parameters, including: 1) a method of allocation; 2) a procedure for applying the method of allocation; 3) a technique of applying the depreciation rate; and 4) a model for analyzing the characteristics of vintage property groups.[81] In this case, I used the straight-line method, the average life group procedure, the remaining life technique, and the broad group model.[82]

Q. Did both Mr. Spanos and you use the same depreciation system?

A. Yes. Pertinently, Mr. Spanos and I both used the average life group ("ALG") method. This method is the most commonly used around the country based on my experience. Mr. Spanos and I have both used this method in many other jurisdictions. The method itself promotes fair and reasonable depreciation rates. Since we both used the same depreciation system, the difference in our proposed deprecation rates is due to the difference in our service life estimates for several of the Company's accounts.

[81] *See* Wolf & W. Chester Fitch, Depreciation Systems 70, 140 (Iowa State University Press 1994).
[82] *See* Appendix C for further discussion.

XI. SERVICE LIFE ANALYSIS

Q. Describe the methodology used to estimate the service lives of grouped depreciable assets.

A. The process used to study industrial property retirement is rooted in the actuarial process used to study human mortality. Just as actuarial analysts study historical human mortality data to predict how long a group of people will live, depreciation analysts study historical plant data to estimate the average lives of property groups. The most common actuarial method used by depreciation analysts is called the "retirement rate method." In the retirement rate method, original property data, including additions, retirements, transfers, and other transactions, are organized by vintage and transaction year.[83] The retirement rate method is ultimately used to develop an "observed life table," ("OLT") which shows the percentage of property surviving at each age interval. This pattern of property retirement is described as a "survivor curve." The survivor curve derived from the observed life table, however, must be fitted and smoothed with a complete curve in order to determine the ultimate average life of the group.[84] The most widely used survivor curves for this curve fitting process were developed at Iowa State University in the early 1900s and are commonly known as the "Iowa curves."[85] A more detailed explanation of how the Iowa curves are used in the actuarial analysis of depreciable property is set forth in Appendix C.

---

[83] The "vintage" year refers to the year that a group of property was placed in service (aka "placement" year). The "transaction" year refers to the accounting year in which a property transaction occurred, such as an addition, retirement, or transfer (aka "experience" year).

[84] *See* Appendix C for a more detailed discussion of the actuarial analysis used to determine the average lives of grouped industrial property.

[85] *See* Appendix D for a more detailed discussion of the Iowa curves.

Q. Describe how you analyzed PPL's historical retirement data in order to determine the most reasonable Iowa curve to apply to each account.

A. The Company's aged property data is used to create OLTs for each account. The data points on the OLT can be plotted to form a curve (the "OLT curve"). The OLT curve is not a theoretical curve; rather, it is actual observed data from the Company's records that indicate the rate of retirement for each property group. An OLT curve by itself, however, is rarely a smooth curve, and is often not a "complete" curve (i.e., it does not end at zero percent surviving). In order to calculate average life (the area under a curve), a complete survivor curve is required. The Iowa curves are empirically derived curves based on the extensive studies of the actual mortality patterns of many different types of industrial property. The curve-fitting process involves selecting the best Iowa curve to fit the OLT curve. This can be accomplished through a combination of visual and mathematical curve-fitting techniques, as well as professional judgment.

Q. Is mathematical fitting an important part of the curve-fitting process?

A. Yes. Mathematical curve-fitting promotes objective, unbiased results. While mathematical curve-fitting is important, it may not always yield the optimum result. Simply determining which Iowa curve best fits an OLT curve ignores professional judgment that may be needed for specific situations. For example, if there is insufficient historical data in a particular account and the OLT curve derived from that data is relatively short and flat, the mathematically "best" curve may be one with a very long average life. However, when there is sufficient data available, mathematical curve fitting can be used as part of an objective service life analysis.

Q. Should every portion of the OLT curve be given equal weight?

A. Not necessarily. Many analysts have observed that the points towards the end of OLT curves may often have less analytical value than other portions of the curve. Indeed, "[p]oints at the end of the curve are often based on fewer exposures and may be given less weight than points based on larger samples. The weight placed on those points will depend on the size of the exposures."[86] In accordance with this standard, an analyst may decide to truncate the tail end of the OLT curve at a certain percent of initial exposures, such as one percent. Using this approach puts greater emphasis on the most valuable portions of the curve. For my analysis in this case, I not only considered the entirety of the OLT curve, but also conducted further analyses that involved fitting Iowa curves to the most significant part of the OLT curve for certain accounts.

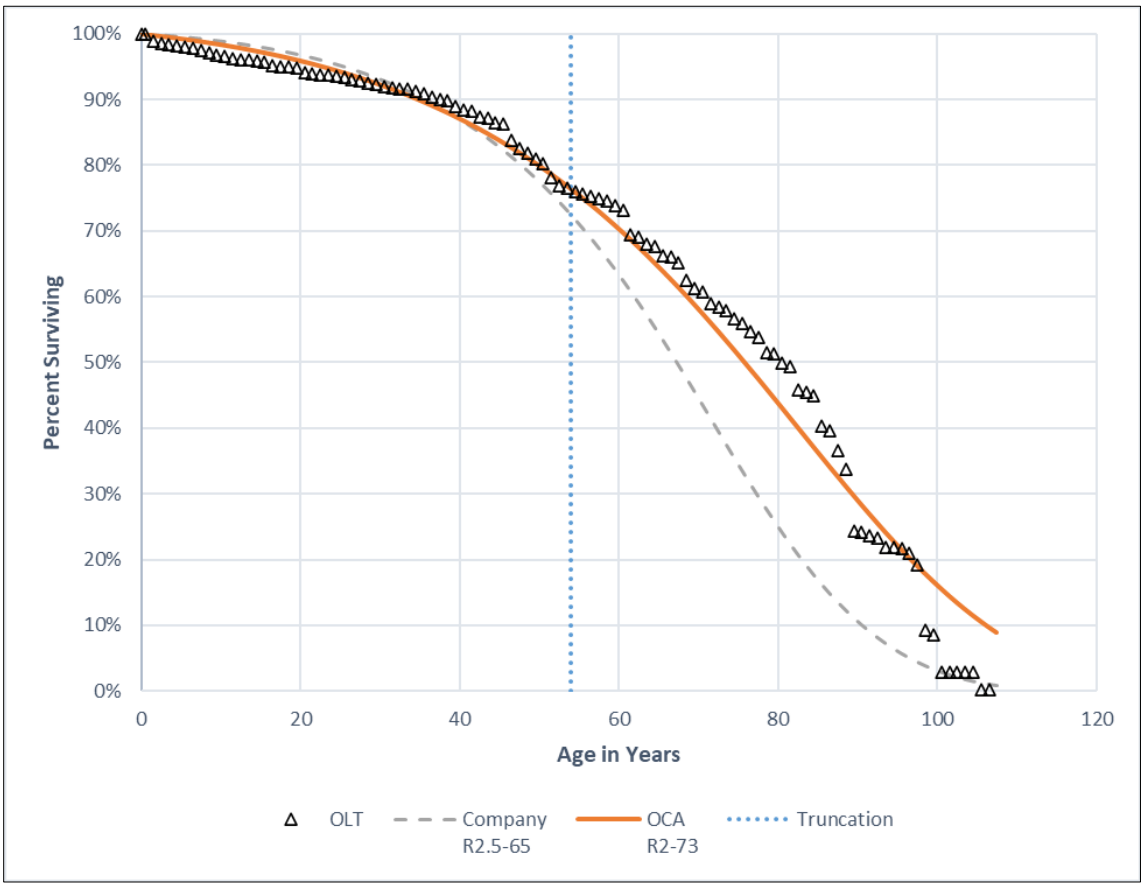
Q. Are you recommending service life adjustments in this case based on the following analyses?

A. Yes. I am recommending service life adjustments to five of PPL's accounts, as summarized in the following figure.

[86] Wolf & W. Chester Fitch, Depreciation Systems 46 (Iowa State University Press 1994).

Figure 15:
Service Life Comparison

Account No.	Description	PPL Curve	OCA Curve
	Transmission Plant		
356.00	OH CONDUCTORS AND DEVICES	R2.5 - 65	R2 - 73
	Distribution Plant		
364.40	POLES, TOWERS AND FIXTURES - POLES	R0.5 - 55	R0.5 - 59
366.00	UNDERGROUND CONDUIT	R3 - 70	R2.5 - 80
367.00	UG CONDUCTORS AND DEVICES	R2.5 - 56	R2 - 62
369.00	SERVICES	R2 - 60	R1.5 - 68



These accounts are discussed in more detail below.

A. Account 356.00 – Overhead Conductors and Devices

Q. Please describe your service life estimate for this account and compare it with the Company's estimate.

A. The OLT curve for this account is shown in the graph below. The graph also shows the Iowa curves that Mr. Spanos and I selected to estimate the average life for this account. The average life is determined by calculating the area under the Iowa curves. Thus, a longer curve will produce a longer average life, and it will also result in a lower depreciation rate. For this account, Mr. Spanos selected the R2.5-65 Iowa curve, and I selected the R2-73 Iowa curve. The average lives resulting from each curve are indicated by the numbers after the dashes (65 and 73 years, respectively). Both Iowa curves are shown with the OLT curve in the following graph.

Figure 16:
Account 356.00 – Overhead Conductors and Devices

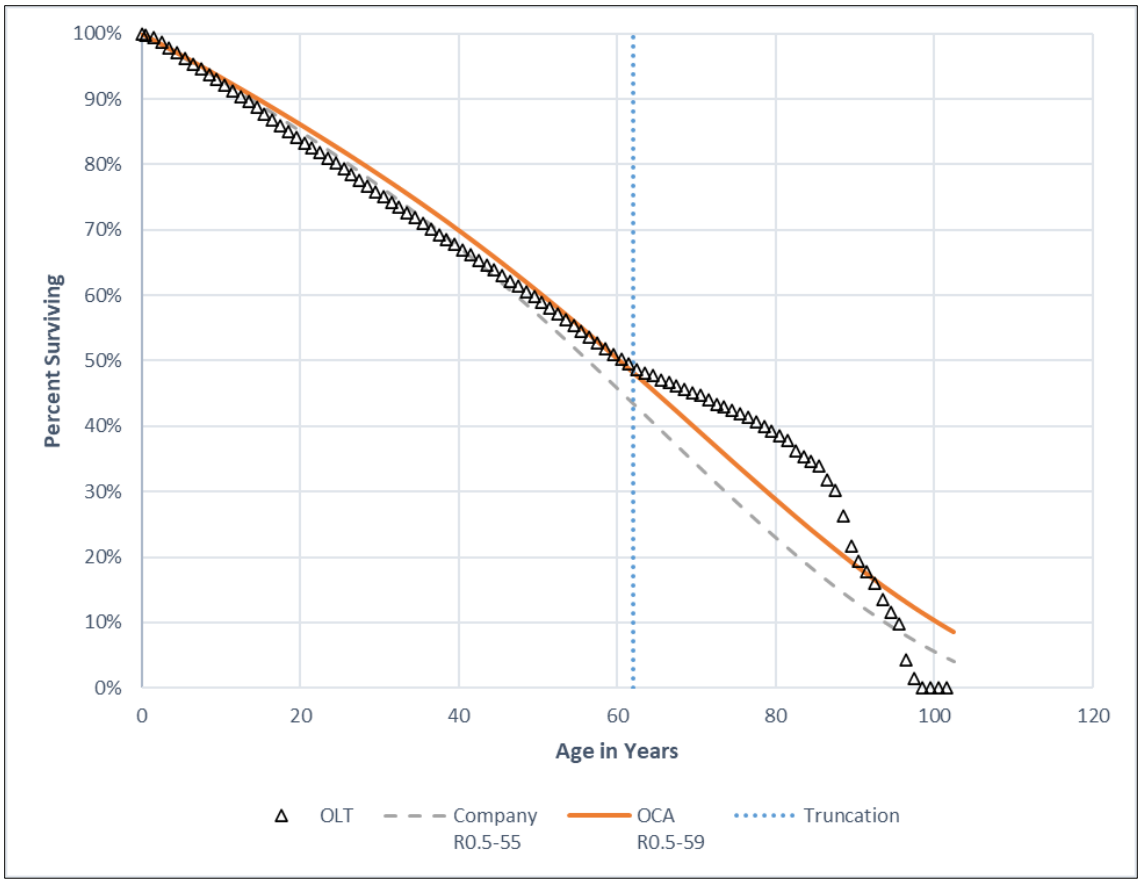
In this graph, the black triangles represent the historical retirement rate for the assets in this account. As shown in this graph, both Iowa curves provide relatively close fits to the observed data through approximately 50 years. After that point, the Iowa curve selected by Mr. Spanos is notably shorter than the retirement pattern projected in the OLT curve. The vertical dotted line represents a potential truncation point discussed above, which is based on a benchmark that considers data points on the OLT curve associated with dollars exposed to retirement that are less than one percent of the total dollars exposed at age zero in the account. The benchmark considers these data points to be statistically less relevant. However, since the pattern and trajectory of the OLT curve for this account remains

consistent through the potential truncation line, it indicates that eliminating the remaining data at this point may not be as necessary as it is in some cases. Regardless, the R2-73 curve I selected results in a closer fit to the OLT curve, whether the truncated or entire OLT curve is measured. These results can be confirmed mathematically, as further discussed below.

Q. Does the Iowa curve you selected provide a better mathematical fit to the truncated OLT curve for this account?

A. Yes. Regardless of whether the entire or truncated OLT curve is measured, the Iowa curve I selected results in the closer fit. While visual curve fitting techniques help identify the most statistically relevant portions of the OLT curve for this account, mathematical curve fitting techniques can also aid in determining which of the two Iowa curves provides the better fit. Mathematical curve fitting essentially involves measuring the distance between the OLT curve and the selected Iowa curve. The best mathematically-fitted curve is the one that minimizes the distance between the OLT curve and the Iowa curve, thus providing the closest fit. The distance between the curves is calculated using the "sum-of-squared differences" ("SSD") technique. For this account, the SSD between the truncated OLT curve and the Company's curve is 0.0226, and the SSD between the truncated OLT curve and the R2-73 Iowa curve I selected is only 0.0095.[87] Thus, the R2-73 curve results in a closer mathematical fit. For this reason, along with the fact that the Company presented no convincing evidence beyond the statistical analysis to support its service life proposals, I believe the Commission should apply an even greater weight to the statistical analysis

[87] Exhibit DJG-24.



when determining the fairest and most reasonable service life proposals for this account. Based on the statistical analysis, the Iowa curve I propose for this account results in a more reasonable and accurate depreciation rate.

B. Account 364.40 – Poles, Towers, and Fixtures – Poles

Q. Please describe your service life estimate for this account and compare it with the Company's estimate.

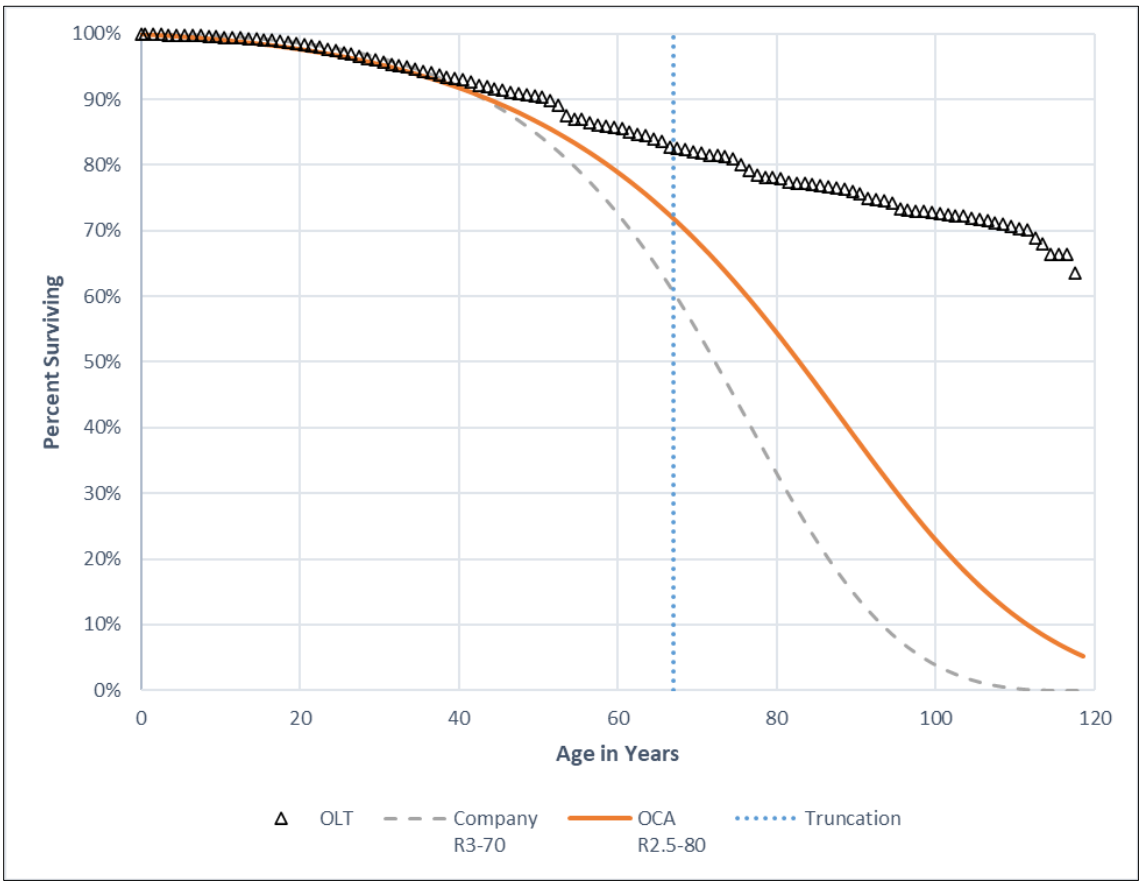
A. For this account, Mr. Spanos selected the R0.5-55 curve, and I selected the R0.5-59 curve. Both of these Iowa curves and the OLT curve are shown in the graph below.

Figure 17:
Account 364.40 – Poles, Towers, and Fixtures – Poles

As shown in this graph, the retirement rate in the OLT curve for this account is almost linear until age 60. The OLT curve for this account also shows why a truncation benchmark can be a useful tool in disregarding less relevant data. After the vertical truncation line, the data in the OLT curve clearly becomes more erratic. While both Iowa curves are relatively close, it is arguably better to select the one that results in the closer mathematical fit since the Company did not provide evidence beyond the statistical data to support its proposed service life for this account. The results can be confirmed mathematically.

Q. Does the Iowa curve you selected provide a better mathematical fit to the OLT curve for this account?

A. Yes. Regardless of whether the entire OLT curve or truncated OLT curve is measured, the R0.5-59 curve I selected results in the closer fit. Specifically, the SSD between the Company's curve and the truncated OLT curve is 0.0233, and the SSD between the R0.5-59 curve I selected and the truncated OLT curve is 0.0230, which means it results in a closer fit.[88]



C. Account 366.00 – Underground Conduit

Q. Please describe your service life estimate for this account and compare it with the Company's estimate.

A. For this account, Mr. Spanos selected the R3-70 curve, and I selected the R2.5-80 curve. Both of these Iowa curves and the OLT curve are shown in the graph below.

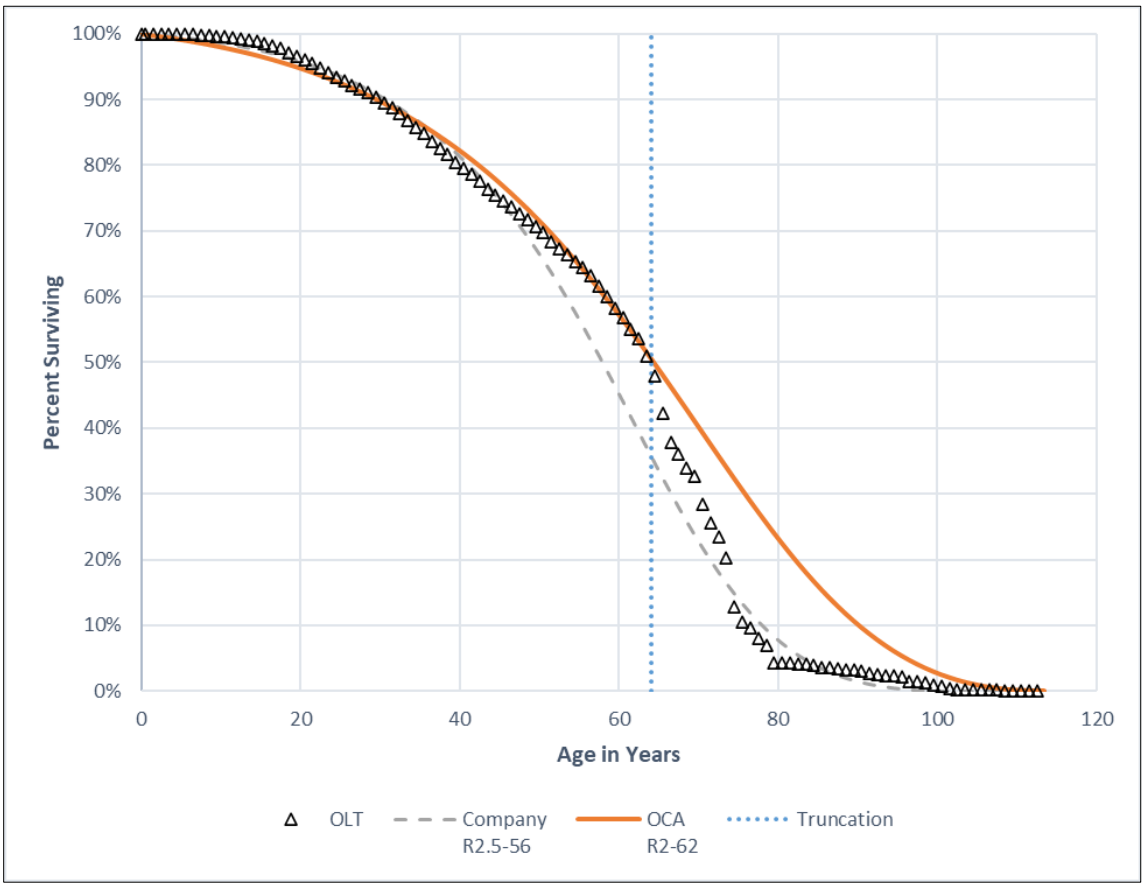
[88] Exhibit DJG-25.

Figure 18:
Account 366.00 – Underground Conduit

As shown in this graph, both Iowa curves effectively ignore the data that would be truncated based on the truncation line position in this graph. In that regard, attempting to fit this OLT curve with the closest fitting Iowa curve would run the risk of a service life estimate that is unreasonably long based on typically industry ranges for underground conduit. Nonetheless, the retirement data provided by the Company are more supportive of a longer service life than the one proposed by Mr. Spanos. The flatter trajectory and the longer average life of the R2.5-80 curve clearly results in a closer fit, yet it is also conservative selection given the life otherwise indicated by the retirement data.

Q. Does the Iowa curve you selected provide a better mathematical fit to the OLT curve for this account?

A. Yes. Regardless of whether the entire OLT curve or truncated OLT curve is measured, the R3-70 curve I selected results in the closer fit. The SSD between the Company's curve and the truncated OLT curve is 0.3045, and the SSD between the R2,5-80 curve I selected and the truncated OLT curve is 0.0874, which means it results in a closer fit.[89]



D. Account 367.00 – Underground Conductors and Devices

Q. Please describe your service life estimate for this account and compare it with the Company's estimate.

A. For this account, Mr. Spanos selected the R2.5-56 curve, and I selected the R2-62 curve. Both of these Iowa curves and the OLT curve are shown in the graph below.

[89] Exhibit DJG-26.

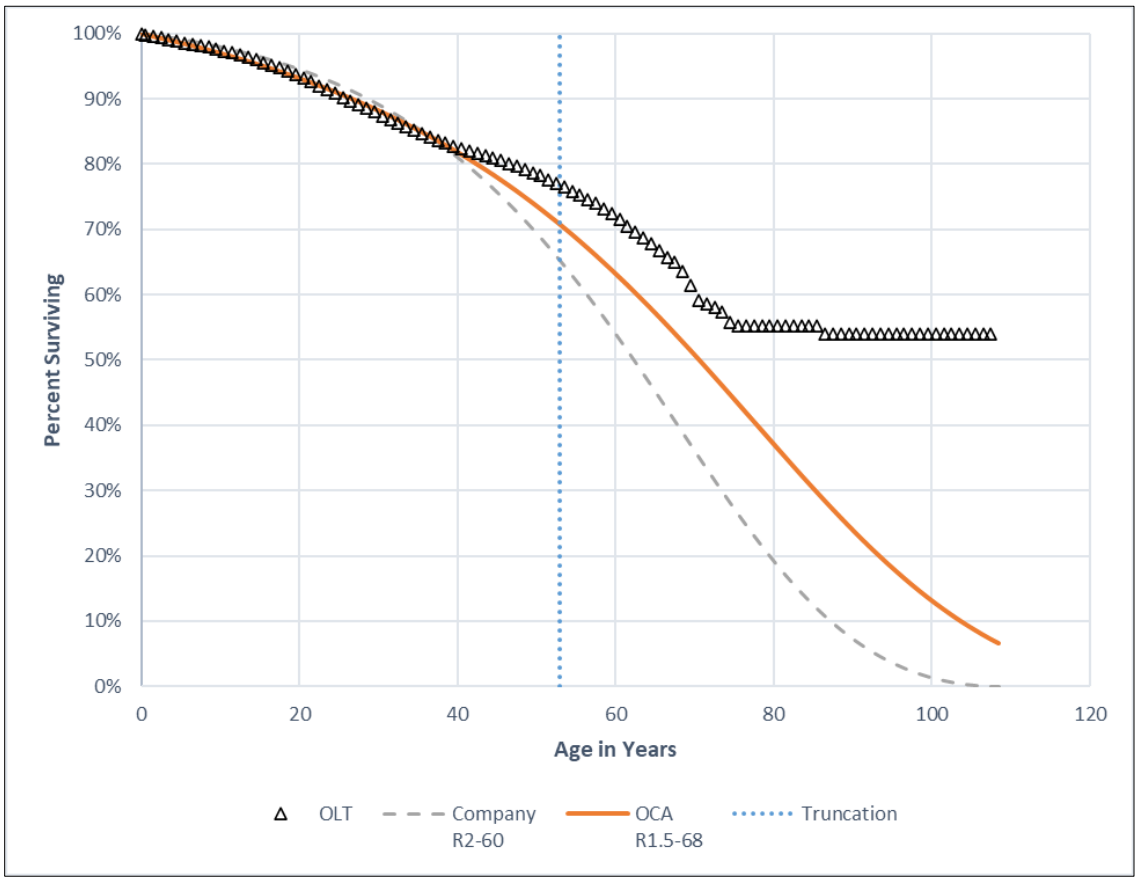
Figure 19:
Account 367.00 – Underground Conductors and Devices

Both of the selected Iowa curves for this account are relatively similar, however, the R2.5-56 curve selected by Mr. Spanos arguably ignores a notable portion of relevant retirement data from ages 50 -60. As a result, the service life he proposes for this account is underestimated in my opinion. The results can be confirmed mathematically.

Q. Does the Iowa curve you selected provide a better mathematical fit to the truncated OLT curve for this account?

A. Yes, when the truncated OLT curve is measured. As seen in the graph, there are a few irrelevant data points towards the tail end of the OLT curve to which the Iowa curve selected by Mr. Spanos results in a close fit, which skews the mathematical results when

measuring the entire OLT curve. The SSD between the Company's curve and the truncated OLT curve is 0.1531, and the SSD between the R2-62 curve I selected and the truncated OLT curve is 0.0121, which means it results in a closer fit.[90]



E. Account 369.00 – Services

Q. Please describe your service life estimate for this account and compare it with the Company's estimate.

A. For this account, Mr. Spanos selected the R2-60 curve, and I selected the R1.5-68 curve. Both of these Iowa curves and the OLT curve are shown in the graph below.

[90] Exhibit DJG-27.

Figure 20:
Account 369.00 – Services

As with Account 369 discussed above, the Iowa curve selected by Mr. Spanos effectively ignores too much of the retirement data, even when the truncation benchmark is considered. As a result, the service life he proposes for this account is unreasonably short. The flatter trajectory and longer average life of the R1.5-68 curve clearly results in a more accurate fit to the OLT curve, while still being conservative and reasonable.

Q. Does the Iowa curve you selected provide a better mathematical fit to the OLT curve for this account?

A. Yes. Regardless of whether the entire OLT curve or truncated OLT curve is measured, the R1.5-68 curve I selected results in the closer fit. The SSD between the Company's curve

and the truncated OLT curve is 0.0664, and the SSD between the R1.5-68 curve I selected and the truncated OLT curve is 0.0184, which means it results in a closer fit.[91]

Q. What is your recommendation to the Commission regarding the Company's depreciation rates.

A. Both Mr. Spanos and I proposed the ALG method for calculating depreciation rates in this case. This method will promote fair and reasonable depreciation rates. However, for several of the Company's accounts, Mr. Spanos estimates service lives that are shorter than what the retirement data and evidence provided by the Company indicate. Accordingly, the Commission should authorize the service lives and depreciation rates I proposes for these accounts, which are more supported by the evidence, and will result in fairer and more reasonable depreciation rates. Thus, I recommend the Commission adopt my proposed depreciation rates for the accounts in dispute, which are summarized in Exhibit DJG-29.

Q. Does this conclude your testimony?

A. Yes.

[91] Exhibit DJG-28.

APPENDIX A:

DISCOUNTED CASH FLOW MODEL THEORY

The Discounted Cash Flow ("DCF") Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. In its most general form, the DCF Model is expressed as follows:[1]

Equation 1:
General Discounted Cash Flow Model

$$P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + \cdots + \frac{D_n}{(1+k)^n}$$

where: P_0 = *current stock price*
$D_1 \ldots D_n$ = *expected future dividends*
k = *discount rate / required return*

The General DCF Model would require an estimation of an infinite stream of dividends. Since this would be impractical, analysts use more feasible variations of the General DCF Model, which are discussed further below.

The DCF Models rely on the following four assumptions:

1. Investors evaluate common stocks in the classical valuation framework; that is, they trade securities rationally at prices reflecting their perceptions of value;
2. Investors discount the expected cash flows at the same rate (K) in every future period;

[1] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 410 (9th ed., McGraw-Hill/Irwin 2013).

3. The K obtained from the DCF equation corresponds to that specific stream of future cash flows alone; and

4. Dividends, rather than earnings, constitute the source of value.

The General DCF can be rearranged to make it more practical for estimating the cost of equity. Regulators typically rely on some variation of the Constant Growth DCF Model, which is expressed as follows:

Equation 2:
Constant Growth Discounted Cash Flow Model

$$K = \frac{D_1}{P_0} + g$$

where: K = *discount rate / required return on equity*
D_1 = *expected dividend per share one year from now*
P_0 = *current stock price*
g = *expected growth rate of future dividends*

Unlike the General DCF Model, the Constant Growth DCF Model solves directly for the required return (K). In addition, by assuming that dividends grow at a constant rate, the dividend stream from the General DCF Model may be essentially substituted with a term representing the expected constant growth rate of future dividends (g). The Constant Growth DCF Model may be considered in two parts. The first part is the dividend yield (D_1/P_0), and the second part is the growth rate (g). In other words, the required return in the DCF Model is equivalent to the dividend yield plus the growth rate.

In addition to the four assumptions listed above, the Constant Growth DCF Model relies on four additional assumptions as follows:[2]

[2] *Id.* at 254-56.

1. The discount rate (K) must exceed the growth rate (g);
2. The dividend growth rate (g) is constant in every year to infinity;
3. Investors require the same return (K) in every year; and
4. There is no external financing; that is, growth is provided only by the retention of earnings.

Because the growth rate in this model is assumed to be constant, it is important not to use growth rates that are unreasonably high. In fact, the constant growth rate estimate for a regulated utility with a defined service territory should not exceed the growth rate for the economy in which it operates.

APPENDIX B:

CAPITAL ASSET PRICING MODEL THEORY

The Capital Asset Pricing Model ("CAPM") is a market-based model founded on the principle that investors demand higher returns for incurring additional risk.[3] The CAPM estimates this required return. The CAPM relies on the following assumptions:

1. Investors are rational, risk-adverse, and strive to maximize profit and terminal wealth;
2. Investors make choices based on risk and return. Return is measured by the mean returns expected from a portfolio of assets; risk is measured by the variance of these portfolio returns;
3. Investors have homogenous expectations of risk and return;
4. Investors have identical time horizons;
5. Information is freely and simultaneously available to investors.
6. There is a risk-free asset, and investors can borrow and lend unlimited amounts at the risk-free rate;
7. There are no taxes, transaction costs, restrictions on selling short, or other market imperfections; and,
8. Total asset quality is fixed, and all assets are marketable and divisible.[4]

[3] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277-93 (Management Science IX 1963); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 208 (3rd ed., South Western Cengage Learning 2010).

[4] *Id*.

While some of these assumptions may appear to be restrictive, they do not outweigh the inherent value of the model. The CAPM has been widely used by firms, analysts, and regulators for decades to estimate the cost of equity capital.

The basic CAPM equation is expressed as follows:

Equation 3:
Capital Asset Pricing Model

$$K = R_F + \beta_i(R_M - R_F)$$

where: K = *required return*
R_F = *risk-free rate*
β = *beta coefficient of asset i*
R_M = *required return on the overall market*

There are essentially three terms within the CAPM equation that are required to calculate the required return (K): (1) the risk-free rate (R_F); (2) the beta coefficient (β); and (3) the equity risk premium ($R_M - R_F$), which is the required return on the overall market less the risk-free rate.

Raw Beta Calculations and Adjustments

A stock's beta equals the covariance of the asset's returns with the returns on a market portfolio, divided by the portfolio's variance, as expressed in the following formula:[5]

Equation 4:
Beta

$$\beta_i = \frac{\sigma_{im}}{\sigma_m^2}$$

where: β_i = *beta of asset i*
σ_{im} = *covariance of asset i returns with market portfolio returns*
σ^2_m = *variance of market portfolio*

[5] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180-81 (3rd ed., South Western Cengage Learning 2010).

Betas that are published by various research firms are typically calculated through a regression analysis that considers the movements in price of an individual stock and movements in the price of the overall market portfolio. The betas produced by this regression analysis are considered "raw" betas. There is empirical evidence that raw betas should be adjusted to account for beta's natural tendency to revert to an underlying mean.[6] Some analysts use an adjustment method proposed by Blume, which adjusts raw betas toward the market mean of one.[7] While the Blume adjustment method is popular due to its simplicity, it is arguably arbitrary, and some would say not useful at all. According to Dr. Damodaran: "While we agree with the notion that betas move toward 1.0 over time, the [Blume adjustment] strikes us as arbitrary and not particularly useful."[8] The Blume adjustment method is especially arbitrary when applied to industries with consistently low betas, such as the utility industry. For industries with consistently low betas, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average. Vasicek proposed such a method, which is preferable to the Blume adjustment method because it allows raw betas to be adjusted toward an industry average, and also accounts for the statistical accuracy of the raw beta calculation.[9] In other words, "[t]he Vasicek adjustment seeks to overcome one weakness of the Blume model by not applying the same adjustment to every security; rather, a security-specific adjustment is made depending on the

[8] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 187 (3rd ed., John Wiley & Sons, Inc. 2012).

[9] Oldrich A. Vasicek, *A Note on Using Cross-Sectional Information in Bayesian Estimation of Security Betas* 1233-1239 (Journal of Finance, Vol. 28, No. 5, December 1973).

statistical quality of the regression."[10] The Vasicek beta adjustment equation is expressed as follows:

Equation 5:
Vasicek Beta Adjustment

$$\beta_{i1} = \frac{\sigma^2_{\beta i0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_0 + \frac{\sigma^2_{\beta 0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_{i0}$$

where: β_{i1} = *Vasicek adjusted beta for security i*
β_{i0} = *historical beta for security i*
β_0 = *beta of industry or proxy group*
$\sigma^2_{\beta 0}$ = *variance of betas in the industry or proxy group*
$\sigma^2_{\beta i0}$ = *square of standard error of the historical beta for security i*

The Vasicek beta adjustment is an improvement on the Blume model because the Vasicek model does not apply the same adjustment to every security. A higher standard error produced by the regression analysis indicates a lower statistical significance of the beta estimate. Thus, a beta with a high standard error should receive a greater adjustment than a beta with a low standard error. As stated in Ibbotson:

[10] 2012 Ibbotson Stocks, Bonds, Bills, and Inflation Valuation Yearbook 77-78 (Morningstar 2012).

> While the Vasicek formula looks intimidating, it is really quite simple. The adjusted beta for a company is a weighted average of the company's historical beta and the beta of the market, industry, or peer group. How much weight is given to the company and historical beta depends on the statistical significance of the company beta statistic. If a company beta has a low standard error, then it will have a higher weighting in the Vasicek formula. If a company beta has a high standard error, then it will have lower weighting in the Vasicek formula. An advantage of this adjustment methodology is that it does not force an adjustment to the market as a whole. Instead, the adjustment can be toward an industry or some other peer group. *This is most useful in looking at companies in industries that on average have high or low betas*.[11]

Thus, the Vasicek adjustment method is statistically more accurate, and is the preferred method to use when analyzing companies in an industry that has inherently low betas, such as the utility industry. The Vasicek method was also confirmed by Gombola, who conducted a study specifically related to utility companies. Gombola concluded that "[t]he strong evidence of auto-regressive tendencies in *utility* betas lends support to the application of adjustment procedures such as the . . . adjustment procedure presented by Vasicek."[12] Gombola also concluded that adjusting raw betas toward the market mean of 1.0 is *too high*, and that "[i]nstead, they should be adjusted toward a value that is less than one."[13] In conducting the Vasicek adjustment on betas in previous

[11] *Id*. at 78 (emphasis added).

[12] Michael J. Gombola and Douglas R. Kahl, *Time-Series Processes of Utility Betas: Implications for Forecasting Systematic Risk* 92 (Financial Management Autumn 1990) (emphasis added).

[13] *Id*. at 91-92.

cases, it reveals that utility betas are even lower than those published by Value Line.[14] Gombola's findings are particular important here, because his study was conducted specifically on utility companies. This evidence indicates that using Value Line's betas in a CAPM cost of equity estimate for a utility company may lead to overestimated results. Regardless, adjusting betas to a level that is *higher* than Value Line's betas is not reasonable, and it would produce CAPM cost of equity results that are too high.

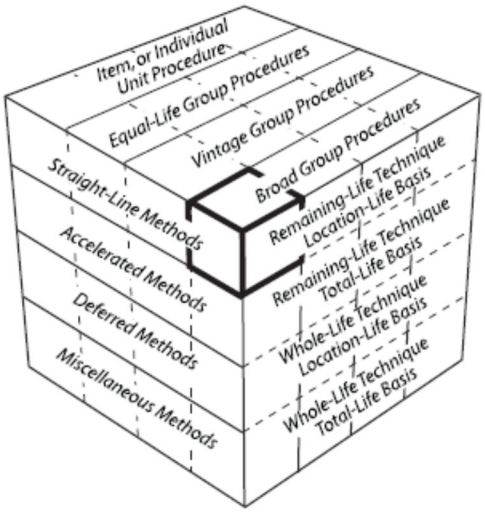
[14] *See e.g.* Responsive Testimony of David J. Garrett, filed March 21, 2016 in Cause No. PUD 201500273 before the Corporation Commission of Oklahoma (the Company's 2015 rate case), at pp. 56 – 59.

APPENDIX C:

THE DEPRECIATION SYSTEM

A depreciation accounting system may be thought of as a dynamic system in which estimates of life and salvage are inputs to the system, and the accumulated depreciation account is a measure of the state of the system at any given time.[15] The primary objective of the depreciation system is the timely recovery of capital. The process for calculating the annual accruals is determined by the factors required to define the system. A depreciation system should be defined by four primary factors: 1) a *method* of allocation; 2) a *procedure* for applying the method of allocation to a group of property; 3) a *technique* for applying the depreciation rate; and 4) a *model* for analyzing the characteristics of vintage groups comprising a continuous property group.[16] The figure below illustrates the basic concept of a depreciation system and includes some of the available parameters.[17]

There are hundreds of potential combinations of methods, procedures, techniques, and models, but in practice, analysts use only a few combinations. Ultimately, the system selected must result in the systematic and rational allocation of capital recovery for the utility. Each of the four primary factors defining the parameters of a depreciation system is discussed further below.



---

[15] *See* Frank K. Wolf & W. Chester Fitch, *Depreciation Systems* 69-70 (Iowa State University Press 1994).

[16] *Id.* at 70, 139-40.

[17] Edison Electric Institute, *Introduction to Depreciation* (inside cover) (EEI April 2013). Some definitions of the terms shown in this diagram are not consistent among depreciation practitioners and literature due to the fact that depreciation analysis is a relatively small and fragmented field. This diagram simply illustrates the some of the available parameters of a depreciation system.

Figure 1:
The Depreciation System Cube

1. Allocation Methods

The "method" refers to the pattern of depreciation in relation to the accounting periods. The method most commonly used in the regulatory context is the "straight-line method" — a type of age-life method in which the depreciable cost of plant is charged in equal amounts to each accounting period over the service life of plant.[18] Because group depreciation rates and plant balances often change, the amount of the annual accrual rarely remains the same, even when the straight-line method is employed.[19] The basic formula for the straight-line method is as follows:[20]

Equation 6:
Straight-Line Accrual

$$Annual\ Accrual = \frac{Gross\ Plant - Net\ Salavage}{Service\ Life}$$

[18] National Association of Regulatory Utility Commissioners, *Public Utility Depreciation Practices* 56 (NARUC 1996).

[19] *Id*.

[20] *Id*.

Gross plant is a known amount from the utility's records, while both net salvage and service life must be estimated in order to calculate the annual accrual. The straight-line method differs from accelerated methods of recovery, such as the "sum-of-the-years-digits" method and the "declining balance" method. Accelerated methods are primarily used for tax purposes and are rarely used in the regulatory context for determining annual accruals.[21] In practice, the annual accrual is expressed as a rate which is applied to the original cost of plant in order to determine the annual accrual in dollars. The formula for determining the straight-line rate is as follows:[22]

Equation 7:
Straight-Line Rate

$$Depreciation\ Rate\ \% = \frac{100 - Net\ Salvage\ \%}{Service\ Life}$$

2. Grouping Procedures

The "procedure" refers to the way the allocation method is applied through subdividing the total property into groups.[23] While single units may be analyzed for depreciation, a group plan of depreciation is particularly adaptable to utility property. Employing a grouping procedure allows for a composite application of depreciation rates to groups of similar property, rather than excessively conducting calculations for each unit. Whereas an individual unit of property has a single life, a group of property displays a dispersion of lives and the life characteristics of the group must be described statistically.[24] When analyzing mass property categories, it is important that

[21] *Id*. at 57.

[22] *Id*. at 56.

[23] Wolf *supra* n. 15, at 74-75.

[24] *Id*. at 74.

each group contains homogenous units of plant that are used in the same general manner throughout the plant and operated under the same general conditions.[25]

The "average life" and "equal life" grouping procedures are the two most common. In the average life procedure, a constant annual accrual rate based on the average life of all property in the group is applied to the surviving property. While property having shorter lives than the group average will not be fully depreciated, and likewise, property having longer lives than the group average will be over-depreciated, the ultimate result is that the group will be fully depreciated by the time of the final retirement.[26] Thus, the average life procedure treats each unit as though its life is equal to the average life of the group. In contrast, the equal life procedure treats each unit in the group as though its life was known.[27] Under the equal life procedure the property is divided into subgroups that each has a common life.[28]

3. Application Techniques

The third factor of a depreciation system is the "technique" for applying the depreciation rate. There are two commonly used techniques: "whole life" and "remaining life." The whole life technique applies the depreciation rate on the estimated average service life of a group, while the remaining life technique seeks to recover undepreciated costs over the remaining life of the plant.[29]

In choosing the application technique, consideration should be given to the proper level of the accumulated depreciation account. Depreciation accrual rates are calculated using estimates of service life and salvage. Periodically these estimates must be revised due to changing

[25] NARUC *supra* n. 18, at 61-62.

[26] *See* Wolf *supr*a n. 15, at 74-75.

[27] *Id*. at 75.

[28] *Id*.

[29] NARUC *supra* n. 18, at 63-64.

conditions, which cause the accumulated depreciation account to be higher or lower than necessary. Unless some corrective action is taken, the annual accruals will not equal the original cost of the plant at the time of final retirement.[30] Analysts can calculate the level of imbalance in the accumulated depreciation account by determining the "calculated accumulated depreciation," (a.k.a. "theoretical reserve" and referred to in these appendices as "CAD"). The CAD is the calculated balance that would be in the accumulated depreciation account at a point in time using *current* depreciation parameters.[31] An imbalance exists when the actual accumulated depreciation account does not equal the CAD. The choice of application technique will affect how the imbalance is dealt with.

Use of the whole life technique requires that an adjustment be made to accumulated depreciation after calculation of the CAD. The adjustment can be made in a lump sum or over a period of time. With use of the remaining life technique, however, adjustments to accumulated depreciation are amortized over the remaining life of the property and are automatically included in the annual accrual.[32] This is one reason that the remaining life technique is popular among practitioners and regulators. The basic formula for the remaining life technique is as follows:[33]

---

[30] Wolf *supra* n. 15, at 83.

[31] NARUC *supra* n. 18, at 325.

[32] NARUC *supra* n. 18, at 65 ("The desirability of using the remaining life technique is that any necessary adjustments of [accumulated depreciation] . . . are accrued automatically over the remaining life of the property. Once commenced, adjustments to the depreciation reserve, outside of those inherent in the remaining life rate would require regulatory approval.").

[33] *Id*. at 64.

Equation 8:
Remaining Life Accrual

$$Annual\ Accrual = \frac{Gross\ Plant - Accumulated\ Depreciation - Net\ Salvage}{Average\ Remaining\ Life}$$

The remaining life accrual formula is similar to the basic straight-line accrual formula above with two notable exceptions. First, the numerator has an additional factor in the remaining life formula: the accumulated depreciation. Second, the denominator is "average remaining life" instead of "average life." Essentially, the future accrual of plant (gross plant less accumulated depreciation) is allocated over the remaining life of plant. Thus, the adjustment to accumulated depreciation is "automatic" in the sense that it is built into the remaining life calculation.[34]

4. Analysis Model

The fourth parameter of a depreciation system, the "model," relates to the way of viewing the life and salvage characteristics of the vintage groups that have been combined to form a continuous property group for depreciation purposes.[35] A continuous property group is created when vintage groups are combined to form a common group. Over time, the characteristics of the property may change, but the continuous property group will continue. The two analysis models used among practitioners, the "broad group" and the "vintage group," are two ways of viewing the life and salvage characteristics of the vintage groups that have been combined to from a continuous property group.

The broad group model views the continuous property group as a collection of vintage groups that each has the same life and salvage characteristics. Thus, a single survivor curve and a

[34] Wolf *supra* n. 15, at 178.

[35] *See* Wolf *supra* n. 15, at 139 (I added the term "model" to distinguish this fourth depreciation system parameter from the other three parameters).

single salvage schedule are chosen to describe all the vintages in the continuous property group. In contrast, the vintage group model views the continuous property group as a collection of vintage groups that may have different life and salvage characteristics. Typically, there is not a significant difference between vintage group and broad group results unless vintages within the applicable property group experienced dramatically different retirement levels than anticipated in the overall estimated life for the group. For this reason, many analysts utilize the broad group procedure because it is more efficient.

APPENDIX D:

IOWA CURVES

Early work in the analysis of the service life of industrial property was based on models that described the life characteristics of human populations.[36] This explains why the word "mortality" is often used in the context of depreciation analysis. In fact, a group of property installed during the same accounting period is analogous to a group of humans born during the same calendar year. Each period the group will incur a certain fraction of deaths / retirements until there are no survivors. Describing this pattern of mortality is part of actuarial analysis and is regularly used by insurance companies to determine life insurance premiums. The pattern of mortality may be described by several mathematical functions, particularly the survivor curve and frequency curve. Each curve may be derived from the other so that if one curve is known, the other may be obtained. A survivor curve is a graph of the percent of units remaining in service expressed as a function of age.[37] A frequency curve is a graph of the frequency of retirements as a function of age. Several types of survivor and frequency curves are illustrated in the figures below.

1. Development

The survivor curves used by analysts today were developed over several decades from extensive analysis of utility and industrial property. In 1931 Edwin Kurtz and Robley Winfrey used extensive data from a range of 65 industrial property groups to create survivor curves representing the life characteristics of each group of property.[38] They generalized the 65 curves

[36] Wolf *supra* n. 15, at 276.

[37] *Id*. at 23.

[38] *Id*. at 34.

into 13 survivor curve types and published their results in *Bulletin 103: Life Characteristics of Physical Property*. The 13 type curves were designed to be used as valuable aids in forecasting probable future service lives of industrial property. Over the next few years, Winfrey continued gathering additional data, particularly from public utility property, and expanded the examined property groups from 65 to 176.[39] This resulted in 5 additional survivor curve types for a total of 18 curves. In 1935, Winfrey published *Bulletin 125: Statistical Analysis of Industrial Property Retirements*. According to Winfrey, "[t]he 18 type curves are expected to represent quite well all survivor curves commonly encountered in utility and industrial practices."[40] These curves are known as the "Iowa curves" and are used extensively in depreciation analysis in order to obtain the average service lives of property groups. (Use of Iowa curves in actuarial analysis is further discussed in Exhibit DJG-23, Appendix E.)

In 1942, Winfrey published *Bulletin 155: Depreciation of Group Properties*. In Bulletin 155, Winfrey made some slight revisions to a few of the 18 curve types, and published the equations, tables of the percent surviving, and probable life of each curve at five-percent intervals.[41] Rather than using the original formulas, analysts typically rely on the published tables containing the percentages surviving. This is because absent knowledge of the integration technique applied to each age interval, it is not possible to recreate the exact original published table values. In the 1970s, John Russo collected data from over 2,000 property accounts reflecting

[40] Robley Winfrey, *Bulletin 125: Statistical Analyses of Industrial Property Retirements* 85, Vol. XXXIV, No. 23 (Iowa State College of Agriculture and Mechanic Arts 1935).

[41] Robley Winfrey, Bulletin 155: Depreciation of Group Properties 121-28, Vol XLI, No. 1 (The Iowa State College Bulletin 1942); see also Wolf supra n. 15, at 305-38 (publishing the percent surviving for each Iowa curve, including "O" type curve, at one percent intervals).

observations during the period 1965 – 1975 as part of his Ph.D. dissertation at Iowa State. Russo essentially repeated Winfrey's data collection, testing, and analysis methods used to develop the original Iowa curves, except that Russo studied industrial property in service several decades after Winfrey published the original Iowa curves. Russo drew three major conclusions from his research:[42]

1. No evidence was found to conclude that the Iowa curve set, as it stands, is not a valid system of standard curves;

2. No evidence was found to conclude that new curve shapes could be produced at this time that would add to the validity of the Iowa curve set; and

3. No evidence was found to suggest that the number of curves within the Iowa curve set should be reduced.

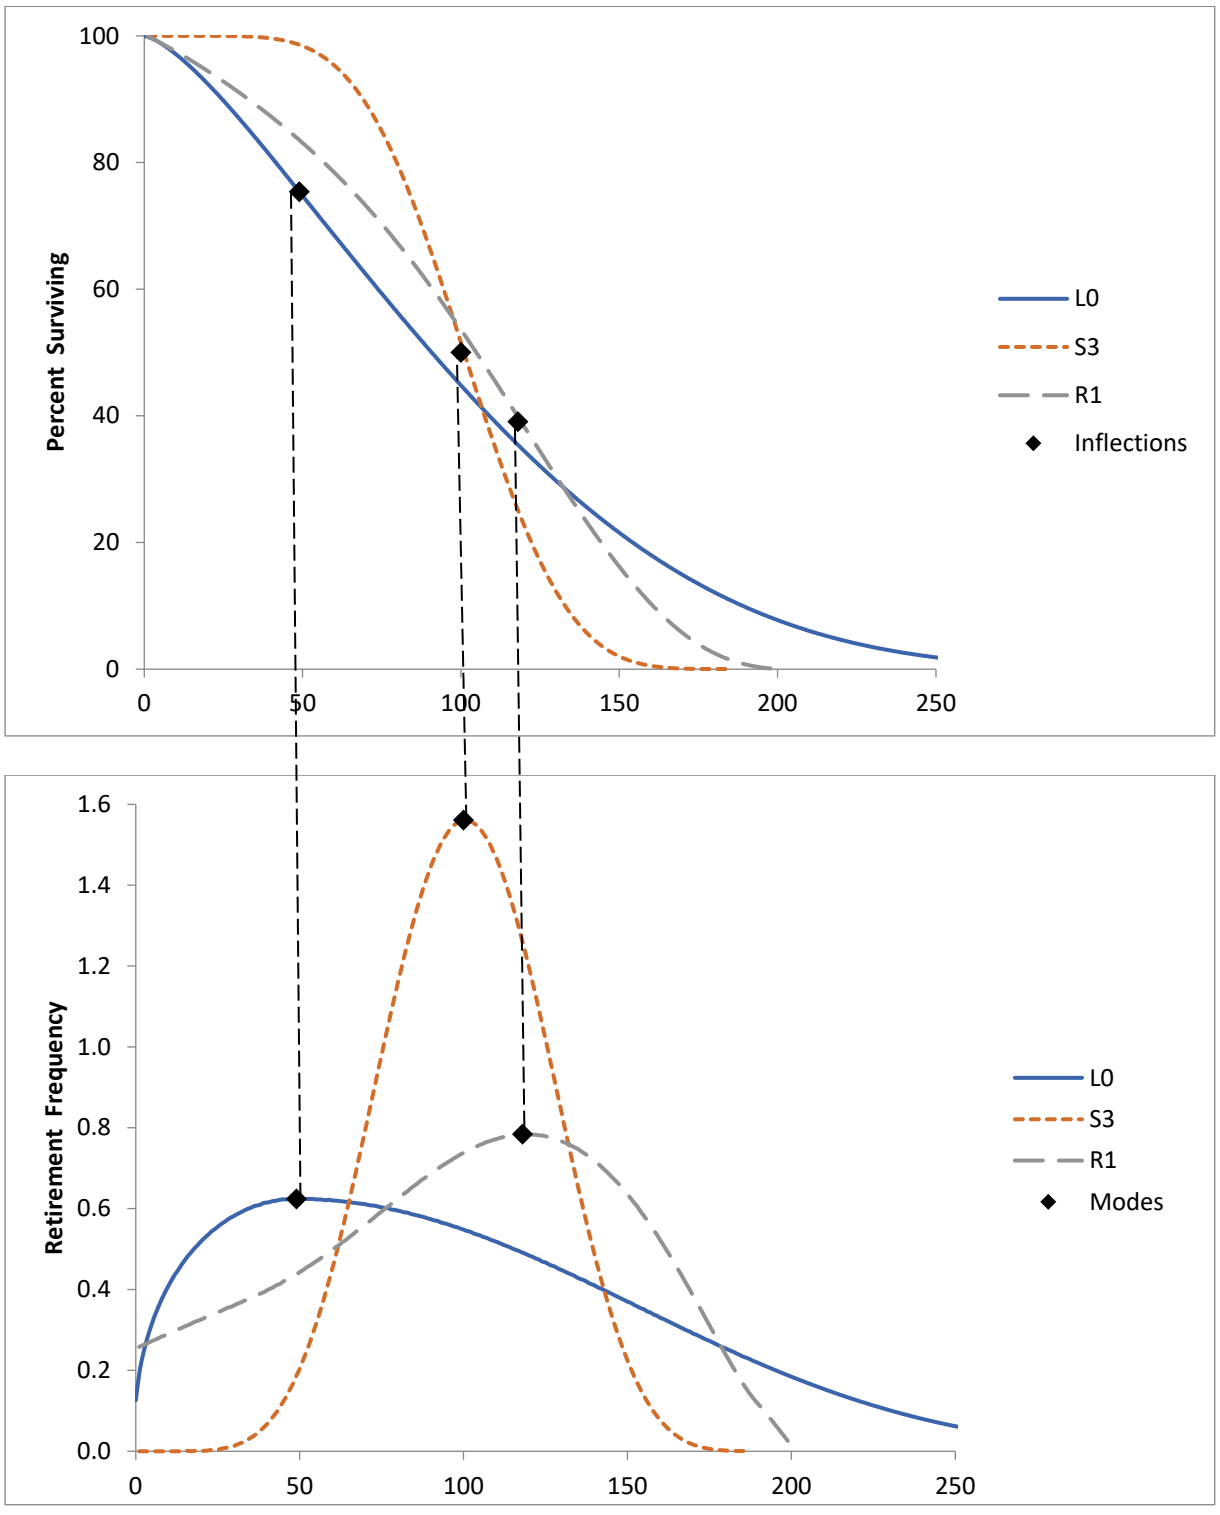
Prior to Russo's study, some had criticized the Iowa curves as being potentially obsolete because their development was rooted in the study of industrial property in existence during the early 1900s. Russo's research, however, negated this criticism by confirming that the Iowa curves represent a sufficiently wide range of life patterns, and that though technology will change over time, the underlying patterns of retirements remain constant and can be adequately described by the Iowa curves.[43]

Over the years, several more curve types have been added to Winfrey's 18 Iowa curves. In 1967, Harold Cowles added four origin-modal curves. In addition, a square curve is sometimes used to depict retirements which are all planned to occur at a given age. Finally, analysts

[42] *See* Wolf *supra* n. 15, at 37.

[43] *Id*.

commonly rely on several "half curves" derived from the original Iowa curves. Thus, the term "Iowa curves" could be said to describe up to 31 standardized survivor curves.



2. Classification

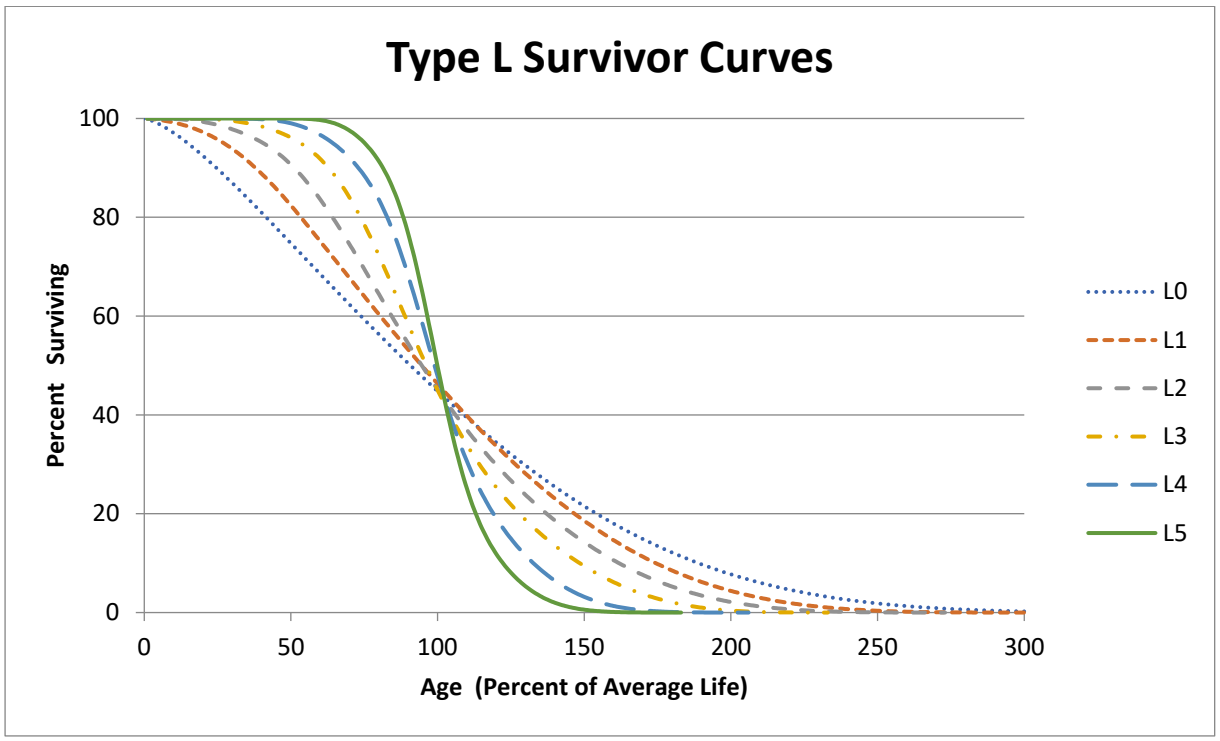
The Iowa curves are classified by three variables: modal location, average life, and variation of life. First, the mode is the percent life that results in the highest point of the frequency curve and the "inflection point" on the survivor curve. The modal age is the age at which the greatest rate of retirement occurs. As illustrated in the figure below, the modes appear at the steepest point of each survivor curve in the top graph, as well as the highest point of each corresponding frequency curve in the bottom graph.

The classification of the survivor curves was made according to whether the mode of the retirement frequency curves was to the left, to the right, or coincident with average service life. There are three modal "families" of curves: six left modal curves (L0, L1, L2, L3, L4, L5); five right modal curves (R1, R2, R3, R4, R5); and seven symmetrical curves (S0, S1, S2, S3, S4, S5, S6).[44] In the figure below, one curve from each family is shown: L0, S3 and R1, with average life at 100 on the x-axis. It is clear from the graphs that the modes for the L0 and R1 curves appear to the left and right of average life respectively, while the S3 mode is coincident with average life.

[44] In 1967, Harold A. Cowles added four origin-modal curves known as "O type" curves. There are also several "half" curves and a square curve, so the total amount of survivor curves commonly called "Iowa" curves is about 31 (see NARUC supra n. 119, at 68).

Figure 2:
Modal Age Illustration

The second Iowa curve classification variable is average life. The Iowa curves were designed using a single parameter of age expressed as a percent of average life instead of actual age. This was necessary in order for the curves to be of practical value. As Winfrey notes:



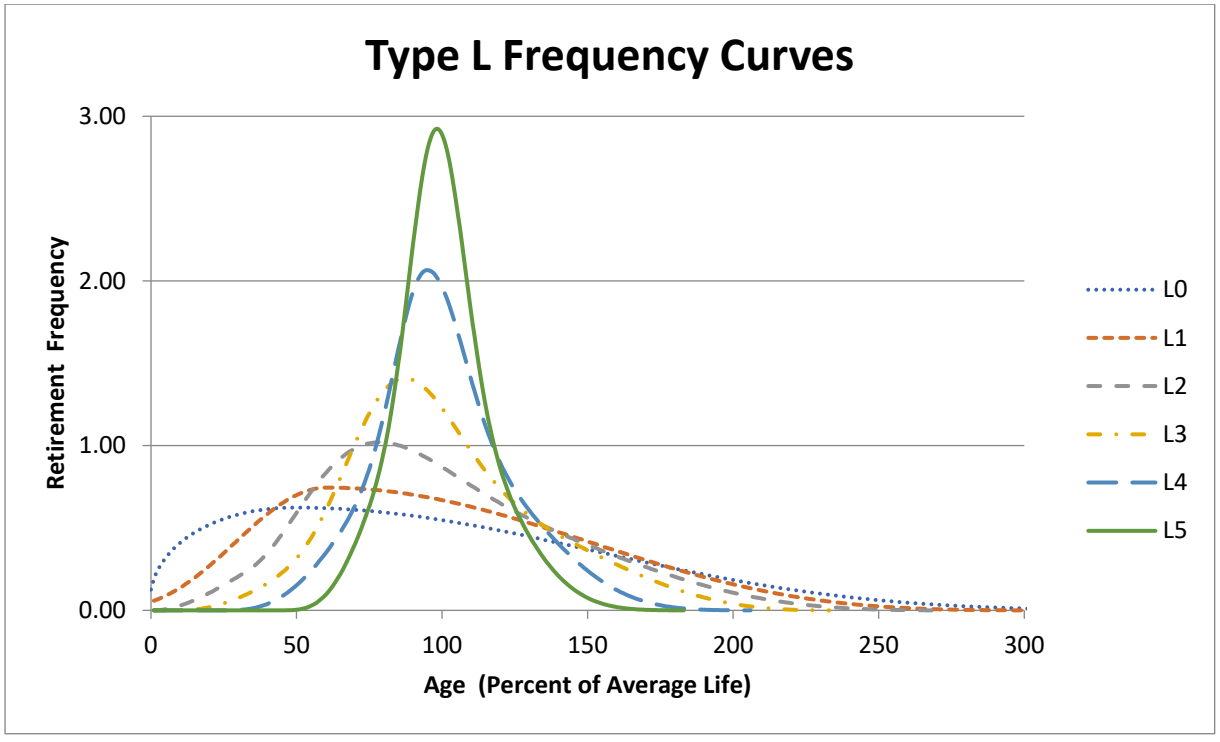
> Since the location of a particular survivor on a graph is affected by both its span in years and the shape of the curve, it is difficult to classify a group of curves unless one of these variables can be controlled. This is easily done by expressing the age in percent of average life."[45]

Because age is expressed in terms of percent of average life, any particular Iowa curve type can be modified to forecast property groups with various average lives.

The third variable, variation of life, is represented by the numbers next to each letter. A lower number (e.g., L1) indicates a relatively low mode, large variation, and large maximum life; a higher number (e.g., L5) indicates a relatively high mode, small variation, and small maximum life. All three classification variables – modal location, average life, and variation of life — are used to describe each Iowa curve. For example, a 13-L1 Iowa curve describes a group of property with a 13-year average life, with the greatest number of retirements occurring before (or to the left of) the average life, and a relatively low mode. The graphs below show these 18 survivor curves, organized by modal family.

[45] Winfrey *supra* n. 40, at 60.

Figure 3:
Type L Survivor and Frequency Curves



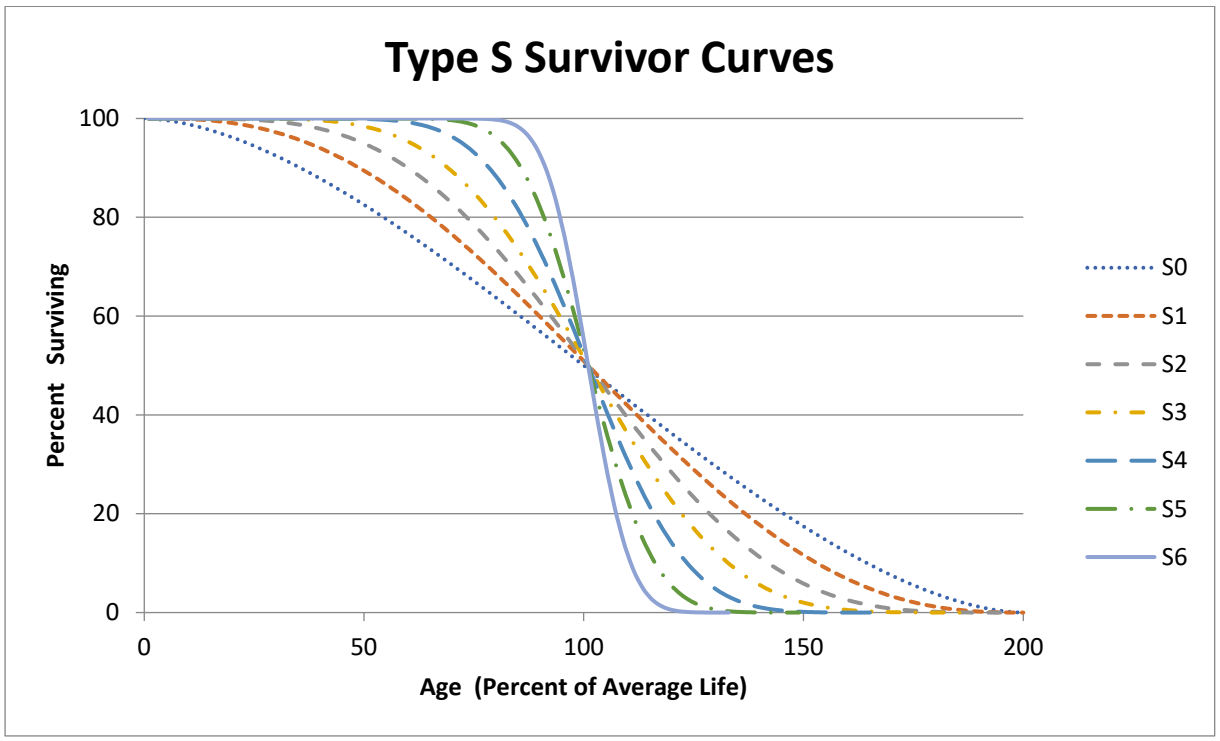


Figure 4:
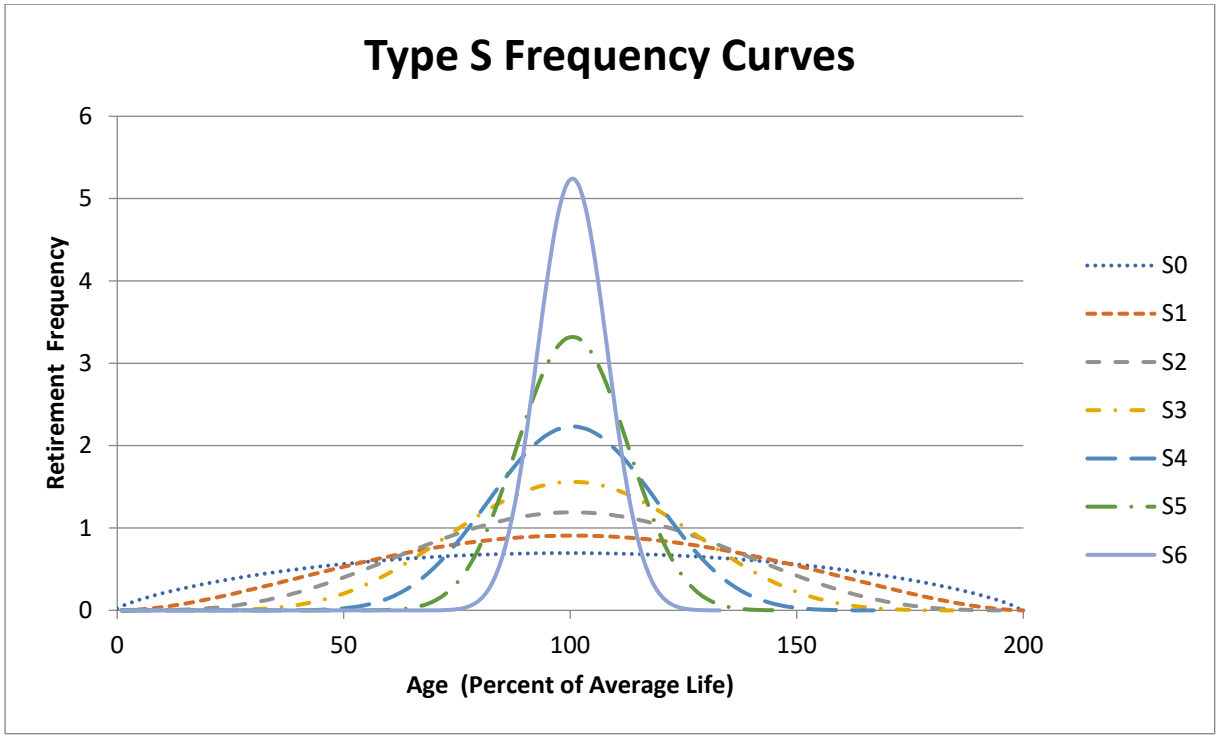
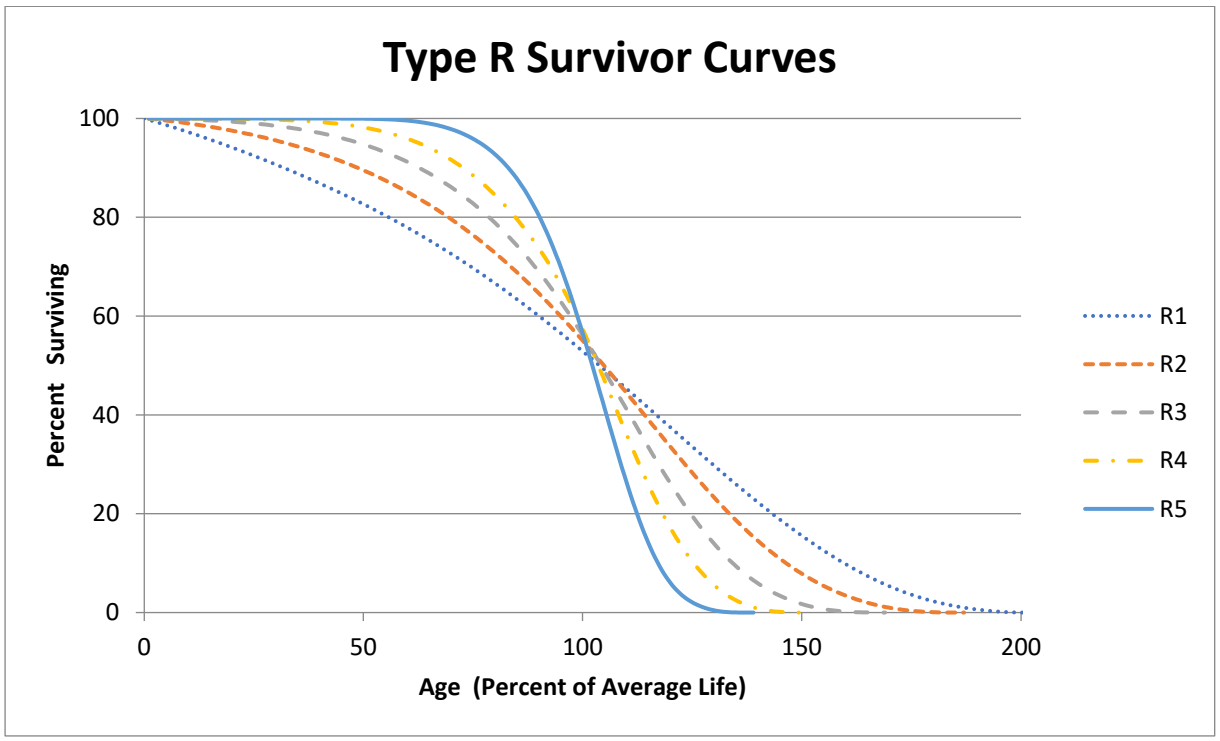
Type S Survivor and Frequency Curves





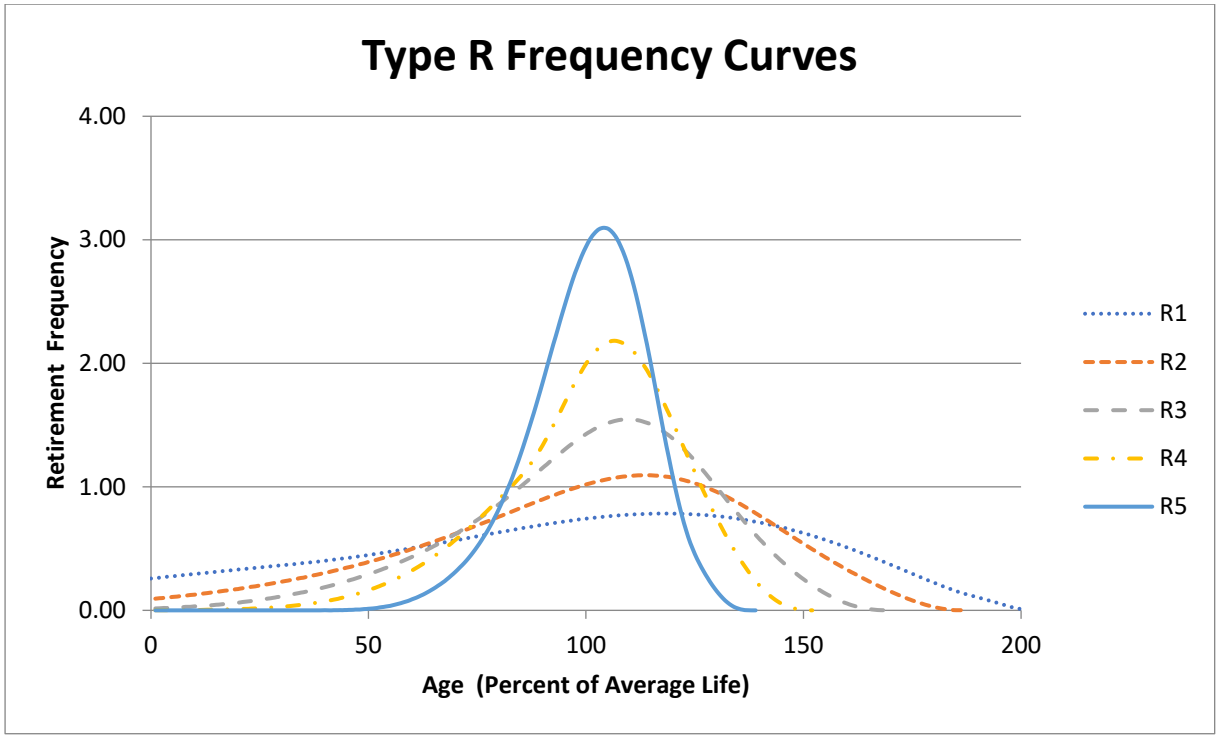


Figure 5:
Type R Survivor and Frequency Curves

As shown in the graphs above, the modes for the L family frequency curves occur to the left of average life (100% on the x-axis), while the S family modes occur at the average, and the R family modes occur after the average.

3. Types of Lives

Several other important statistical analyses and types of lives may be derived from an Iowa curve. These include: 1) average life; 2) realized life; 3) remaining life; and 4) probable life. The figure below illustrates these concepts. It shows the frequency curve, survivor curve, and probable life curve. Age M_x on the x-axis represents the modal age, while age AL_x represents the average age. Thus, this figure illustrates an "L type" Iowa curve since the mode occurs before the average.[46]

First, average life is the area under the survivor curve from age zero to maximum life. Because the survivor curve is measured in percent, the area under the curve must be divided by 100% to convert it from percent-years to years. The formula for average life is as follows:[47]

Equation 9:
Average Life

$$Average\ Life\ = \frac{Area\ Under\ Survivor\ Curve\ from\ Age\ 0\ to\ Max\ Life}{100\%}$$

Thus, average life may not be determined without a complete survivor curve. Many property groups being analyzed will not have experienced full retirement. This results in a "stub" survivor

[46] From age zero to age M_x on the survivor curve, it could be said that the percent surviving from this property group is decreasing at an increasing rate. Conversely, from point M_x to maximum on the survivor curve, the percent surviving is decreasing at a decreasing rate.

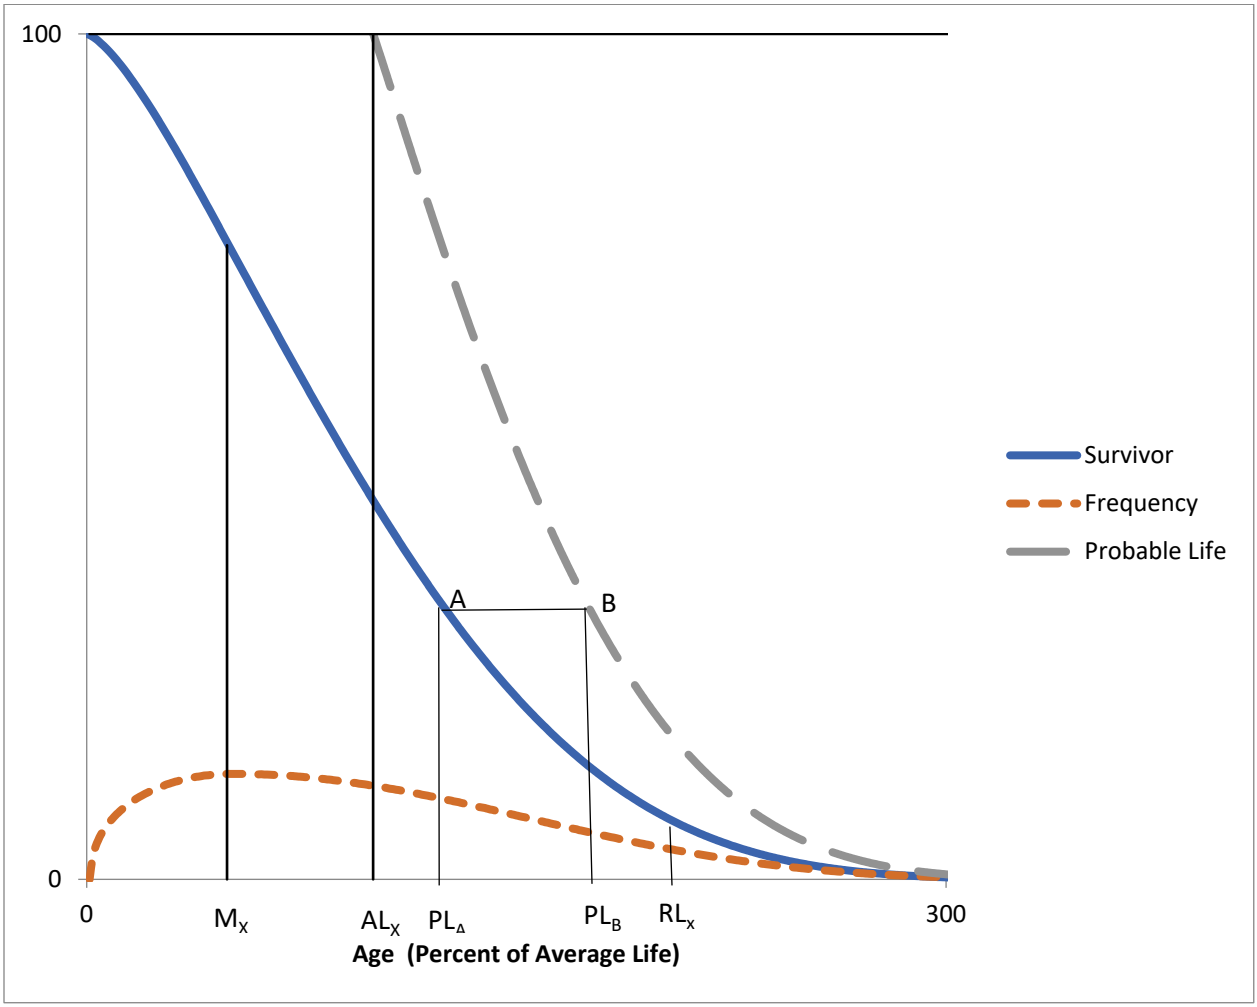
[47] *See* NARUC *supra* n. 18, at 71.

curve. Iowa curves are used to extend stub curves to maximum life in order for the average life calculation to be made (see Exhibit DJG-23, Appendix E).

Realized life is similar to average life, except that realized life is the average years of service experienced to date from the vintage's original installations.[48] As shown in the figure below, realized life is the area under the survivor curve from zero to age RL_X. Likewise, unrealized life is the area under the survivor curve from age RL_X to maximum life. Thus, it could be said that average life equals realized life plus unrealized life.

Average remaining life represents the future years of service expected from the surviving property.[49] Remaining life is sometimes referred to as "average remaining life" and "life expectancy." To calculate average remaining life at age x, the area under the estimated future potion of the survivor curve is divided by the percent surviving at age x (denoted S_X). Thus, the average remaining life formula is:

Equation 10:
Average Remaining Life



$$Average\ Remaining\ Life\ = \frac{Area\ Under\ Survivor\ Curve\ from\ Age\ x\ to\ Max\ Life}{S_X}$$

It is necessary to determine average remaining life in order to calculate the annual accrual under the remaining life technique.

[48] *Id*. at 73.

[49] *Id*. at 74.

Figure 6:
Iowa Curve Derivations

Finally, the probable life may also be determined from the Iowa curve. The probable life of a property group is the total life expectancy of the property surviving at any age and is equal to the remaining life plus the current age.[50] The probable life is also illustrated in this figure. The probable life at age PL_A is the age at point PL_B. Thus, to read the probable life at age PL_A, see the corresponding point on the survivor curve above at point "A," then horizontally to point "B" on

[50] Wolf *supra* n. 15, at 28.

the probable life curve, and back down to the age corresponding to point "B." It is no coincidence that the vertical line from AL_X connects at the top of the probable life curve. This is because at age zero, probable life equals average life.

APPENDIX E:

ACTUARIAL ANALYSIS

Actuarial science is a discipline that applies various statistical methods to assess risk probabilities and other related functions. Actuaries often study human mortality. The results from historical mortality data are used to predict how long similar groups of people who are alive will live today. Insurance companies rely of actuarial analysis in determining premiums for life insurance policies.

The study of human mortality is analogous to estimating service lives of industrial property groups. While some humans die solely from chance, most deaths are related to age; that is, death rates generally increase as age increases. Similarly, physical plant is also subject to forces of retirement. These forces include physical, functional, and contingent factors, as shown in the table below.[51]

Figure 7:
Forces of Retirement

Physical Factors	Functional Factors	Contingent Factors
Wear and tear Decay or deterioration Action of the elements	Inadequacy Obsolescence Changes in technology Regulations Managerial discretion	Casualties or disasters Extraordinary obsolescence

While actuaries study historical mortality data in order to predict how long a group of people will live, depreciation analysts must look at a utility's historical data in order to estimate the average lives of property groups. A utility's historical data is often contained in the Continuing Property Records ("CPR"). Generally, a CPR should contain 1) an inventory of property record

[51] NARUC *supra* n. 18, at 14-15.

units; 2) the association of costs with such units; and 3) the dates of installation and removal of plant. Since actuarial analysis includes the examination of historical data to forecast future retirements, the historical data used in the analysis should not contain events that are anomalous or unlikely to recur.[52] Historical data is used in the retirement rate actuarial method, which is discussed further below.

The Retirement Rate Method

There are several systematic actuarial methods that use historical data in order to calculate observed survivor curves for property groups. Of these methods, the retirement rate method is superior, and is widely employed by depreciation analysts.[53] The retirement rate method is ultimately used to develop an observed survivor curve, which can be fitted with an Iowa curve discussed in Exhibit DJG-23, Appendix D in order to forecast average life. The observed survivor curve is calculated by using an observed life table ("OLT"). The figures below illustrate how the OLT is developed. First, historical property data are organized in a matrix format, with placement years on the left forming rows, and experience years on the top forming columns. The placement year (a.k.a. "vintage year" or "installation year") is the year of placement of a group of property. The experience year (a.k.a. "activity year") refers to the accounting data for a particular calendar year. The two matrices below use aged data — that is, data for which the dates of placements, retirements, transfers, and other transactions are known. Without aged data, the retirement rate actuarial method may not be employed. The first matrix is the exposure matrix, which shows the

[52] *Id*. at 112-13.

[53] Anson Marston, Robley Winfrey & Jean C. Hempstead, *Engineering Valuation and Depreciation* 154 (2nd ed., McGraw-Hill Book Company, Inc. 1953).

exposures at the beginning of each year.[54] An exposure is simply the depreciable property subject to retirement during a period. The second matrix is the retirement matrix, which shows the annual retirements during each year. Each matrix covers placement years 2003–2015, and experience years 2008-2015. In the exposure matrix, the number in the 2009 experience column and the 2003 placement row is $192,000. This means at the beginning of 2012, there was $192,000 still exposed to retirement from the vintage group placed in 2003. Likewise, in the retirement matrix, $19,000 of the dollars invested in 2003 was retired during 2012.

Figure 8:
Exposure Matrix

	Experience Years									
	Exposures at January 1 of Each Year (Dollars in 000's)									
Placement Years	2008	2009	2010	2011	2012	2013	2014	2015	Total at Start of Age Interval	Age Interval
2003	261	245	228	211	**192**	173	152	131	131	11.5 - 12.5
2004	267	252	236	220	202	**184**	165	145	297	10.5 - 11.5
2005	304	291	277	263	248	232	**216**	198	536	9.5 - 10.5
2006	345	334	322	310	298	284	270	**255**	**847**	8.5 - 9.5
2007	367	357	347	335	324	312	299	286	1,201	7.5 - 8.5
2008	375	366	357	347	336	325	314	302	1,581	6.5 - 7.5
2009		377	366	356	346	336	327	319	1,986	5.5 - 6.5
2010			381	369	358	347	336	327	2,404	4.5 - 5.5
2011				386	372	359	346	334	2,559	3.5 - 4.5
2012					395	380	366	352	2,722	2.5 - 3.5
2013						401	385	370	2,866	1.5 - 2.5
2014							410	393	2,998	0.5 - 1.5
2015								416	3,141	0.0 - 0.5
Total	1919	2222	2514	2796	3070	3333	3586	3827	23,268	

[54] Technically, the last numbers in each column are "gross additions" rather than exposures. Gross additions do not include adjustments and transfers applicable to plant placed in a previous year. Once retirements, adjustments, and transfers are factored in, the balance at the beginning of the next account period is called an "exposure" rather than an addition.

Figure 9:
Retirement Matrix

Placement Years	Experience Years: Retirments During the Year (Dollars in 000's) 2008	2009	2010	2011	2012	2013	2014	2015	Total During Age Interval	Age Interval
2003	16	17	18	19	**19**	20	21	23	23	11.5 - 12.5
2004	15	16	17	17	18	**19**	20	21	43	10.5 - 11.5
2005	13	14	14	15	16	17	**17**	18	59	9.5 - 10.5
2006	11	12	12	13	13	14	15	**15**	**71**	8.5 - 9.5
2007	10	11	11	12	12	13	13	14	82	7.5 - 8.5
2008	9	9	10	10	11	11	12	13	91	6.5 - 7.5
2009		11	10	10	9	9	9	8	95	5.5 - 6.5
2010			12	11	11	10	10	9	100	4.5 - 5.5
2011				14	13	13	12	11	93	3.5 - 4.5
2012					15	14	14	13	91	2.5 - 3.5
2013						16	15	14	93	1.5 - 2.5
2014							17	16	100	0.5 - 1.5
2015								18	112	0.0 - 0.5
Total	74	89	104	121	139	157	175	194	1,052	

These matrices help visualize how exposure and retirement data are calculated for each age interval. An age interval is typically one year. A common convention is to assume that any unit installed during the year is installed in the middle of the calendar year (i.e., July 1st). This convention is called the "half-year convention" and effectively assumes that all units are installed uniformly during the year.[55] Adoption of the half-year convention leads to age intervals of 0-0.5 years, 0.5-1.5 years, etc., as shown in the matrices.

The purpose of the matrices is to calculate the totals for each age interval, which are shown in the second column from the right in each matrix. This column is calculated by adding each number from the corresponding age interval in the matrix. For example, in the exposure matrix, the total amount of exposures at the beginning of the 8.5-9.5 age interval is $847,000. This number was calculated by adding the numbers shown on the "stairs" to the left (192+184+216+255=847).

[55] Wolf *supra* n. 15, at 22.

The same calculation is applied to each number in the column. The amounts retired during the year in the retirements matrix affect the exposures at the beginning of each year in the exposures matrix. For example, the amount exposed to retirement in 2008 from the 2003 vintage is $261,000. The amount retired during 2008 from the 2003 vintage is $16,000. Thus, the amount exposed to retirement in 2009 from the 2003 vintage is $245,000 ($261,000 - $16,000). The company's property records may contain other transactions which affect the property, including sales, transfers, and adjusting entries. Although these transactions are not shown in the matrices above, they would nonetheless affect the amount exposed to retirement at the beginning of each year.

The totaled amounts for each age interval in both matrices are used to form the exposure and retirement columns in the OLT, as shown in the chart below. This chart also shows the retirement ratio and the survivor ratio for each age interval. The retirement ratio for an age interval is the ratio of retirements during the interval to the property exposed to retirement at the beginning of the interval. The retirement ratio represents the probability that the property surviving at the beginning of an age interval will be retired during the interval. The survivor ratio is simply the complement to the retirement ratio (1 – retirement ratio). The survivor ratio represents the probability that the property surviving at the beginning of an age interval will survive to the next age interval.

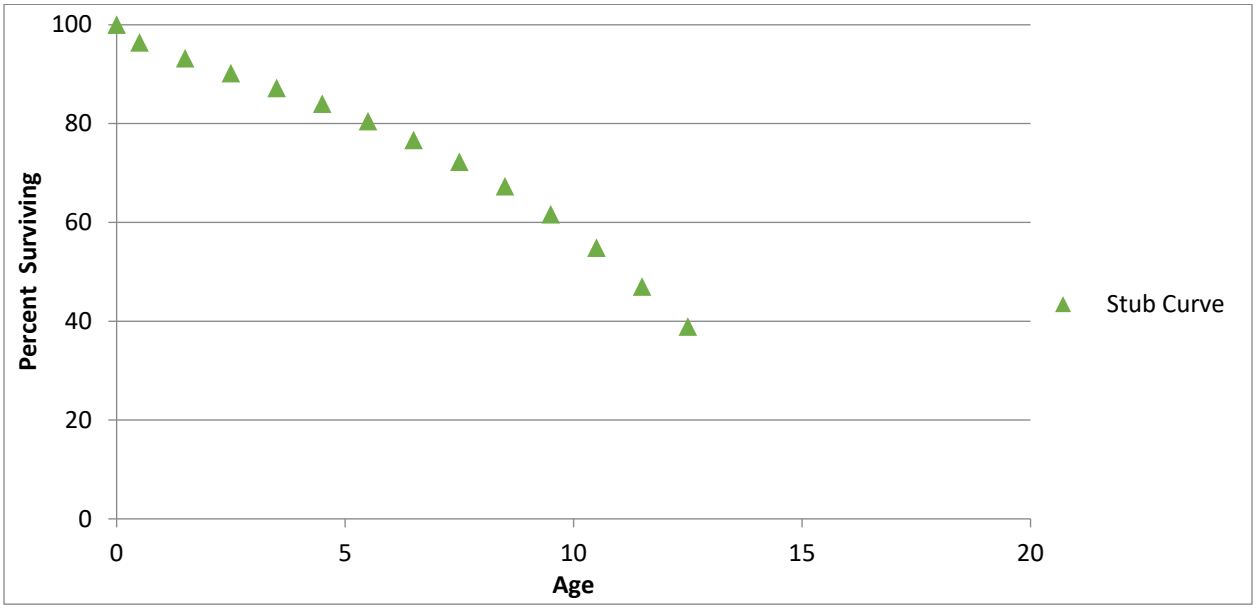


Figure 10:
Observed Life Table

Age at Start of Interval	Exposures at Start of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Start of Age Interval
A	B	C	D = C / B	E = 1 - D	F
0.0	3,141	112	0.036	0.964	**100.00**
0.5	2,998	100	0.033	0.967	**96.43**
1.5	2,866	93	0.032	0.968	**93.21**
2.5	2,722	91	0.033	0.967	**90.19**
3.5	2,559	93	0.037	0.963	**87.19**
4.5	2,404	100	0.042	0.958	**84.01**
5.5	1,986	95	0.048	0.952	**80.50**
6.5	1,581	91	0.058	0.942	**76.67**
7.5	1,201	82	0.068	0.932	**72.26**
8.5	847	71	0.084	0.916	**67.31**
9.5	536	59	0.110	0.890	**61.63**
10.5	297	43	0.143	0.857	**54.87**
11.5	131	23	0.172	0.828	**47.01**
					38.91
Total	23,268	1,052			

Column F on the right shows the percentages surviving at the beginning of each age interval. This column starts at 100% surviving. Each consecutive number below is calculated by multiplying the percent surviving from the previous age interval by the corresponding survivor ratio for that age interval. For example, the percent surviving at the start of age interval 1.5 is 93.21%, which was calculated by multiplying the percent surviving for age interval 0.5 (96.43%) by the survivor ratio for age interval 0.5 (0.967).

The percentages surviving in Column F are the numbers that are used to form the original survivor curve. This particular curve starts at 100% surviving and ends at 38.91% surviving. An observed survivor curve such as this that does not reach zero percent surviving is called a "stub" curve. The figure below illustrates the stub survivor curve derived from the OLT table above.

Figure 11:
Original "Stub" Survivor Curve

The matrices used to develop the basic OLT and stub survivor curve provide a basic illustration of the retirement rate method in that only a few placement and experience years were used. In reality, analysts may have several decades of aged property data to analyze. In that case, it may be useful to use a technique called "banding" in order to identify trends in the data.

Banding

The forces of retirement and characteristics of industrial property are constantly changing. A depreciation analyst may examine the magnitude of these changes. Analysts often use a technique called "banding" to assist with this process. Banding refers to the merging of several years of data into a single data set for further analysis, and it is a common technique associated with the retirement rate method.[56] There are three primary benefits of using bands in depreciation analysis:

[56] NARUC *supra* n. 18, at 113.

1. Increasing the sample size. In statistical analyses, the larger the sample size in relation to the body of total data, the greater the reliability of the result;
2. Smooth the observed data. Generally, the data obtained from a single activity or vintage year will not produce an observed life table that can be easily fit; and
3. Identify trends. By looking at successive bands, the analyst may identify broad trends in the data that may be useful in projecting the future life characteristics of the property.[57]

Two common types of banding methods are the "placement band" method and the "experience band" method." A placement band, as the name implies, isolates selected placement years for analysis. The figure below illustrates the same exposure matrix shown above, except that only the placement years 2005-2008 are considered in calculating the total exposures at the beginning of each age interval.

[57] *Id*.

Figure 12:
Placement Bands

Placement Years	Experience Years: Exposures at January 1 of Each Year (Dollars in 000's) 2008	2009	2010	2011	2012	2013	2014	2015	Total at Start of Age Interval	Age Interval
2003	261	245	228	211	192	173	152	131		11.5 - 12.5
2004	267	252	236	220	202	184	165	145		10.5 - 11.5
2005	304	291	277	263	248	232	216	198	198	9.5 - 10.5
2006	345	334	322	310	298	284	270	255	471	8.5 - 9.5
2007	367	357	347	335	324	312	299	286	788	7.5 - 8.5
2008	375	366	357	347	336	325	314	302	1,133	6.5 - 7.5
2009		377	366	356	346	336	327	319	1,186	5.5 - 6.5
2010			381	369	358	347	336	327	1,237	4.5 - 5.5
2011				386	372	359	346	334	1,285	3.5 - 4.5
2012					395	380	366	352	1,331	2.5 - 3.5
2013						401	385	370	1,059	1.5 - 2.5
2014							410	393	733	0.5 - 1.5
2015								416	375	0.0 - 0.5
Total	1919	2222	2514	2796	3070	3333	3586	3827	9,796	

The shaded cells within the placement band equal the total exposures at the beginning of age interval 4.5–5.5 ($1,237). The same placement band would be used for the retirement matrix covering the same placement years of 2005 – 2008. This of course would result in a different OLT and original stub survivor curve than those that were calculated above without the restriction of a placement band.

Analysts often use placement bands for comparing the survivor characteristics of properties with different physical characteristics.[58] Placement bands allow analysts to isolate the effects of changes in technology and materials that occur in successive generations of plant. For example, if in 2005 an electric utility began placing transmission poles with a special chemical treatment that extended the service lives of the poles, an analyst could use placement bands to isolate and analyze the effect of that change in the property group's physical characteristics. While placement

[58] Wolf *supra* n. 15, at 182.

bands are very useful in depreciation analysis, they also possess an intrinsic dilemma. A fundamental characteristic of placement bands is that they yield fairly complete survivor curves for older vintages. However, with newer vintages, which are arguably more valuable for forecasting, placement bands yield shorter survivor curves. Longer "stub" curves are considered more valuable for forecasting average life. Thus, an analyst must select a band width broad enough to provide confidence in the reliability of the resulting curve fit yet narrow enough so that an emerging trend may be observed.[59]

Analysts also use "experience bands." Experience bands show the composite retirement history for all vintages during a select set of activity years. The figure below shows the same data presented in the previous exposure matrices, except that the experience band from 2011 – 2013 is isolated, resulting in different interval totals.

[59] NARUC *supra* n. 18, at 114.

Figure 13:
Experience Bands

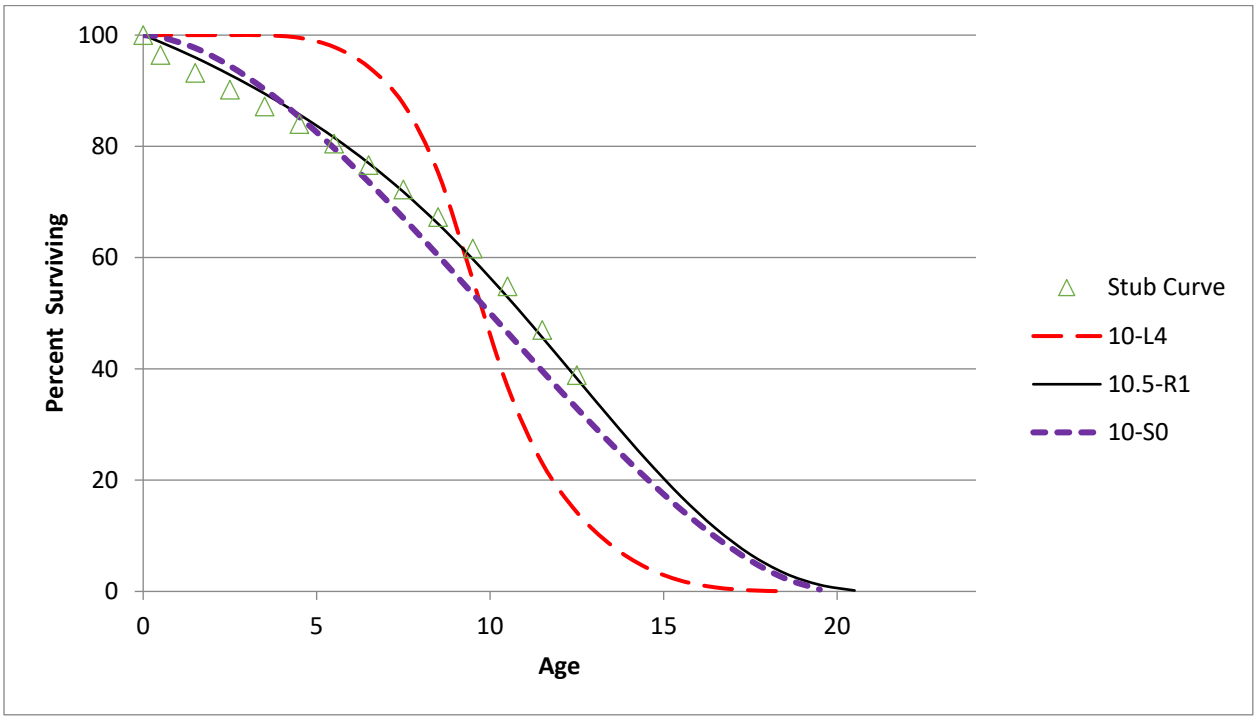
	Experience Years									
	Exposures at January 1 of Each Year (Dollars in 000's)									
Placement Years	2008	2009	2010	2011	2012	2013	2014	2015	Total at Start of Age Interval	Age Interval
2003	261	245	228	211	192	173	152	131		11.5 - 12.5
2004	267	252	236	220	202	184	165	145		10.5 - 11.5
2005	304	291	277	263	248	232	216	198	173	9.5 - 10.5
2006	345	334	322	310	298	284	270	255	376	8.5 - 9.5
2007	367	357	347	335	324	312	299	286	645	7.5 - 8.5
2008	375	366	357	347	336	325	314	302	752	6.5 - 7.5
2009		377	366	356	346	336	327	319	872	5.5 - 6.5
2010			381	369	358	347	336	327	959	4.5 - 5.5
2011				386	372	359	346	334	1,008	3.5 - 4.5
2012					395	380	366	352	1,039	2.5 - 3.5
2013						401	385	370	1,072	1.5 - 2.5
2014							410	393	1,121	0.5 - 1.5
2015								416	1,182	0.0 - 0.5
Total	1919	2222	2514	2796	3070	3333	3586	3827	9,199	

The shaded cells within the experience band equal the total exposures at the beginning of age interval 4.5–5.5 ($1,237). The same experience band would be used for the retirement matrix covering the same experience years of 2011 – 2013. This of course would result in a different OLT and original stub survivor than if the band had not been used. Analysts often use experience bands to isolate and analyze the effects of an operating environment over time.[60] Likewise, the use of experience bands allows analysis of the effects of an unusual environmental event. For example, if an unusually severe ice storm occurred in 2013, destruction from that storm would affect an electric utility's line transformers of all ages. That is, each of the line transformers from each placement year would be affected, including those recently installed in 2012, as well as those installed in 2003. Using experience bands, an analyst could isolate or even eliminate the 2013 experience year from the analysis. In contrast, a placement band would not effectively isolate the

[60] *Id.*

ice storm's effect on life characteristics. Rather, the placement band would show an unusually large rate of retirement during 2013, making it more difficult to accurately fit the data with a smooth Iowa curve. Experience bands tend to yield the most complete stub curves for recent bands because they have the greatest number of vintages included. Longer stub curves are better for forecasting. The experience bands, however, may also result in more erratic retirement dispersion making the curve fitting process more difficult.

Depreciation analysts must use professional judgment in determining the types of bands to use and the band widths. In practice, analysts may use various combinations of placement and experience bands in order to increase the data sample size, identify trends and changes in life characteristics, and isolate unusual events. Regardless of which bands are used, observed survivor curves in depreciation analysis rarely reach zero percent. This is because, as seen in the OLT above, relatively newer vintage groups have not yet been fully retired at the time the property is studied. An analyst could confine the analysis to older, fully retired vintage groups in order to get complete survivor curves, but such analysis would ignore some the property currently in service and would arguably not provide an accurate description of life characteristics for current plant in service. Because a complete curve is necessary to calculate the average life of the property group, however, curve fitting techniques using Iowa curves or other standardized curves may be employed in order to complete the stub curve.



Curve Fitting

Depreciation analysts typically use the survivor curve rather than the frequency curve to fit the observed stub curves. The most commonly used generalized survivor curves used in the curve fitting process are the Iowa curves discussed above. As Wolf notes, if "the Iowa curves are

adopted as a model, an underlying assumption is that the process describing the retirement pattern is one of the 22 [or more] processes described by the Iowa curves."[61]

Curve fitting may be done through visual matching or mathematical matching. In visual curve fitting, the analyst visually examines the plotted data to make an initial judgment about the Iowa curves that may be a good fit. The figure below illustrates the stub survivor curve shown above. It also shows three different Iowa curves: the 10-L4, the 10.5-R1, and the 10-S0. Visually, it is clear that the 10.5-R1 curve is a better fit than the other two curves.

Figure 14:
Visual Curve Fitting

In mathematical fitting, the least squares method is used to calculate the best fit. This mathematical method would be excessively time consuming if done by hand. With the use of

[61] Wolf *supra* n. 15, at 46 (22 curves includes Winfrey's 18 original curves plus Cowles's four "O" type curves).

modern computer software however, mathematical fitting is an efficient and useful process. The typical logic for a computer program, as well as the software employed for the analysis in this testimony is as follows:

> First (an Iowa curve) curve is arbitrarily selected. . . . If the observed curve is a stub curve, . . . calculate the area under the curve and up to the age at final data point. Call this area the realized life. Then systematically vary the average life of the theoretical survivor curve and calculate its realized life at the age corresponding to the study date. This trial and error procedure ends when you find an average life such that the realized life of the theoretical curve equals the realized life of the observed curve. Call this the average life.
>
> Once the average life is found, calculate the difference between each percent surviving point on the observed survivor curve and the corresponding point on the Iowa curve. Square each difference and sum them. The sum of squares is used as a measure of goodness of fit for that particular Iowa type curve. This procedure is repeated for the remaining 21 Iowa type curves. The "best fit" is declared to be the type of curve that minimizes the sum of differences squared.[62]

Mathematical fitting requires less judgment from the analyst and is thus less subjective. Blind reliance on mathematical fitting, however, may lead to poor estimates. Thus, analysts should employ both mathematical and visual curve fitting in reaching their final estimates. This way, analysts may utilize the objective nature of mathematical fitting while still employing professional judgment. As Wolf notes: "The results of mathematical curve fitting serve as a guide for the analyst and speed the visual fitting process. But the results of the mathematical fitting should be checked visually and the final determination of the best fit be made by the analyst."[63]

In the graph above, visual fitting was sufficient to determine that the 10.5-R1 Iowa curve was a better fit than the 10-L4 and the 10-S0 curves. Using the sum of least squares method, mathematical fitting confirms the same result. In the chart below, the percentages surviving from

---

[62] Wolf *supra* n. 15, at 47.

[63] *Id*. at 48.

the OLT that formed the original stub curve are shown in the left column, while the corresponding percentages surviving for each age interval are shown for the three Iowa curves. The right portion of the chart shows the differences between the points on each Iowa curve and the stub curve. These differences are summed at the bottom. Curve 10.5-R1 is the best fit because the sum of the squared differences for this curve is less than the same sum of the other two curves. Curve 10-L4 is the worst fit, which was also confirmed visually.

Figure 15:
Mathematical Fitting

Age	Stub	Iowa Curves			Squared Differences		
Interval	Curve	10-L4	10-S0	10.5-R1	10-L4	10-S0	10.5-R1

EDUCATION

University of Oklahoma — Norman, OK
Master of Business Administration — 2014
Areas of Concentration: Finance, Energy

University of Oklahoma College of Law — Norman, OK
Juris Doctor — 2007
Member, American Indian Law Review

University of Oklahoma — Norman, OK
Bachelor of Business Administration — 2003
Major: Finance

PROFESSIONAL DESIGNATIONS

Society of Depreciation Professionals
Certified Depreciation Professional (CDP)

Society of Utility and Regulatory Financial Analysts
Certified Rate of Return Analyst (CRRA)

WORK EXPERIENCE

Resolve Utility Consulting PLLC — Oklahoma City, OK
Managing Member — 2016 – Present
Provide expert analysis and testimony specializing in depreciation and cost of capital issues for clients in utility regulatory proceedings.

Oklahoma Corporation Commission — Oklahoma City, OK
Public Utility Regulatory Analyst — 2012 – 2016
Assistant General Counsel — 2011 – 2012
Represented commission staff in utility regulatory proceedings and provided legal opinions to commissioners. Provided expert analysis and testimony in depreciation, cost of capital, incentive compensation, payroll and other issues.

Perebus Counsel, PLLC — Oklahoma City, OK
Managing Member — 2009 – 2011
Represented clients in the areas of family law, estate planning, debt negotiations, business organization, and utility regulation.

Moricoli & Schovanec, P.C. — Oklahoma City, OK
Associate Attorney — 2007 – 2009
Represented clients in the areas of contracts, oil and gas, business structures and estate administration.

TEACHING EXPERIENCE

University of Oklahoma — Norman, OK
Adjunct Instructor – "Conflict Resolution" — 2014 – 2021
Adjunct Instructor – "Ethics in Leadership"

Rose State College — Midwest City, OK
Adjunct Instructor – "Legal Research" — 2013 – 2015
Adjunct Instructor – "Oil & Gas Law"

PROFESSIONAL ASSOCIATIONS

Oklahoma Bar Association — 2007 – Present

Society of Depreciation Professionals — 2014 – Present
Board Member – President — 2017
Participate in management of operations, attend meetings, review performance, organize presentation agenda.

Society of Utility Regulatory Financial Analysts — 2014 – Present

Sum of Squared Differences (SSD)				[8]	1.4568	0.1739
SSD - Truncated OLT Curve				[9]	0.0226	0.0095

[1] Age in years using half-year convention

[2] Dollars exposed to retirement at the beginning of each age interval

[3] Observed life table based on the Company's property records. These numbers form the original survivor curve.

[4] The Company's selected Iowa curve to be fitted to the OLT.

[5] My selected Iowa curve to be fitted to the OLT.

[6] = ([4] - [3])^2. This is the squared difference between each point on the Company's curve and the observed survivor curve.

[7] = ([5] - [3])^2. This is the squared difference between each point on my curve and the observed survivor curve.

[8] = Sum of squared differences. The smallest SSD represents the best mathematical fit.

Sum of Squared Differences (SSD)				[8]	17.5823	9.2150
SSD - Truncated OLT Curve				[9]	0.3045	0.0847

[1] Age in years using half-year convention

[2] Dollars exposed to retirement at the beginning of each age interval

[3] Observed life table based on the Company's property records. These numbers form the original survivor curve.

[4] The Company's selected Iowa curve to be fitted to the OLT.

[5] My selected Iowa curve to be fitted to the OLT.

[6] = ([4] - [3])^2. This is the squared difference between each point on the Company's curve and the observed survivor curve.

[7] = ([5] - [3])^2. This is the squared difference between each point on my curve and the observed survivor curve.

[8] = Sum of squared differences. The smallest SSD represents the best mathematical fit.

Sum of Squared Differences (SSD)				[8]	0.2276	0.5194
SSD - Truncated OLT Curve				[9]	0.1531	0.0121

[1] Age in years using half-year convention

[2] Dollars exposed to retirement at the beginning of each age interval

[3] Observed life table based on the Company's property records. These numbers form the original survivor curve.

[4] The Company's selected Iowa curve to be fitted to the OLT.

[5] My selected Iowa curve to be fitted to the OLT.

[6] = ([4] - [3])^2. This is the squared difference between each point on the Company's curve and the observed survivor curve.

[7] = ([5] - [3])^2. This is the squared difference between each point on my curve and the observed survivor curve.

[8] = Sum of squared differences. The smallest SSD represents the best mathematical fit.

Sum of Squared Differences (SSD)				[8]	8.1223	3.7438
SSD - Truncated OLT Curve				[9]	0.0664	0.0184

[1] Age in years using half-year convention

[2] Dollars exposed to retirement at the beginning of each age interval

[3] Observed life table based on the Company's property records. These numbers form the original survivor curve.

[4] The Company's selected Iowa curve to be fitted to the OLT.

[5] My selected Iowa curve to be fitted to the OLT.

[6] = ([4] - [3])^2. This is the squared difference between each point on the Company's curve and the observed survivor curve.

[7] = ([5] - [3])^2. This is the squared difference between each point on my curve and the observed survivor curve.

[8] = Sum of squared differences. The smallest SSD represents the best mathematical fit.

PPL Electric Utilities Corporation	:	

VERIFICATION

I, David J. Garrett, hereby state that the facts above set forth in my Direct Testimony, OCA Statement 3, are true and correct to the best of my knowledge, information, belief, and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: December 22, 2025

SURREBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

February 9, 2026

I. Introduction

Q. State your name and occupation.

A. My name is David J. Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed direct testimony in OCA Statement 3 on December 22, 2025 on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). A summary of my qualifications is included in my direct testimony.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal testimony responds to the rebuttal testimony of PPL Electric Utilities Corporation ("PPL" or the "Company") witness Jennifer Nelson regarding rate of return issues. I also address the rebuttal testimony of PPL witness John Spanos regarding depreciation issues.

Q. Did the Company's rebuttal testimony cause you to change any of your positions or recommendations discussed in your direct testimony?

A. No. Additionally, to the extent I do not specifically address a statement made in the Company's rebuttal testimony filed in this case, it should not constitute my agreement with such testimony.

Q. Are you sponsoring any exhibits to your surrebuttal testimony?

A. No.

II. Rate of Return

Q. Please summarize your surrebuttal testimony directed to the rebuttal testimony of Ms. Nelson.

A. In my surrebuttal testimony to Ms. Nelson, I will address the assertions made in her rebuttal testimony regarding my overall rate of return recommendation, my capital structure recommendation, the Discounted Cash Flow ("DCF") Model, and the Capital Asset Pricing Model ("CAPM").

A. Rate of Return Recommendation

Q. Please summarize Ms. Nelson's criticism of your ROE recommendation.

A. In her rebuttal testimony, Ms. Nelson states: "Mr. Garrett's and Mr. Rábago's ROE recommendations are unjustly low – below all authorized for other electric utilities in at least the past 46 years. No rational investor would invest in PPL Electric if they could earn a higher return investing in any other electric utility."

Q. Do you agree with Ms. Nelson's testimony regarding your ROE recommendation.

A. No. There are several problems with her statement. First, it is patently false. To suggest that no investor (or only irrational ones) would invest in PPL debt or equity if buying PPL meant that the investor received an 8.4% authorized ROE is absurd, and Ms. Nelson offers no evidence to support her claim. In reality, investors invest in all types of securities with different levels of risk and expected return. Regulated utilities in the U.S. are among the least risky companies in the country, which can be objectively measured through security betas. Thus, their cost of equity and required return estimates are lower than those of riskier companies. This fact should be accurate and fairly reflected in the Company's authorized ROE. Regarding Ms. Nelson's comparison of my cost of equity estimate to authorized

ROEs in the past highlights some important issues. It is true that an ROE of 8.4% would be lower than the level of ROE typically authorized by this Commission and other regulators. The fact is, authorized ROEs for U.S. utilities have consistently and significantly exceeded market-based cost of equity for decades. My approach in this case involved estimating an objective and intellectually honest cost of equity for the Company, then recommending a fair authorized ROE based on that analysis. I do not base my cost of equity estimates on an average of authorized ROEs from regulatory commissions, as doing so would clearly inflate the results.

Q. Does Ms. Nelson refer to an average of authorized ROEs throughout her testimony when rebutting your model results?

A. Yes. For example, Ms. Nelson states that my and Mr. Rábago's DCF-based ROE estimates do not satisfy the Hope and Bluefield comparable return standard because they are below other recently-authorized ROEs.

Q. What is your response to Ms. Nelson's rebuttal testimony on this issue.

A. Ms. Nelson again is simply appealing to the status quo, which perpetuates a mean reversion tendency of authorized ROEs nationally. In reality, a proper discounted cash flow analysis has nothing to do with the authorized ROE decisions from regulators. They are completely different things. One is market-based; the other is not. One can be used to make important investment decisions; the other cannot. One indicates the cost of equity; the other does not. Ms. Nelson's argument on this issue also suffers from a clear feedback loop problem. Under her apparent logic, a cost of equity model result complies with the Hope and Bluefield standards only if it does not deviate too far from an average of authorized ROEs. To the extent regulators set ROEs pursuant to this faulty premise, then authorized ROEs

will not meaningfully change, and the mean reversion phenomenon continues. In addition, the authorized ROEs from other jurisdictions occurred in different market environments, which means the risk-free rate, equity risk premium, and other key market indicators were necessarily different than they are now. Furthermore, the utilities being studied in those cases would have different capital structures and other company-specific risk indicators, which would also affect the analysis. Thus, there is no value in looking to outdated authorized ROEs from other jurisdictions set for other utility companies to determine an accurate, forward-looking cost of equity estimate for PPL.

Q. Did Ms. Nelson provide an updated cost of equity analysis in her testimony?

A. Yes. Based on my review of her updated analysis, it suffers from all of the upwardly biased assumptions in her original cost of equity analysis, and for those reasons it should be rejected.

Q. Do you have a response to Ms. Nelson's rebuttal testimony regarding your misunderstanding of the market?

A. Yes. On page six of her rebuttal testimony, Ms. Nelson suggests that PPL's ROE should be higher than in the 2012 and 2015 rate cases simply because utility bond yields are higher. In reality, a proper cost of equity estimate considers all relevant market factors and relies on objective inputs to financial modeling. An objective cost of equity analysis in this case, using all relevant and current market factors shows that PPL's cost of equity is likely no higher than 8.4%.

B. DCF Analysis

Q. Please summarize Ms. Nelson's criticisms of your DCF Model.

A. Ms. Nelson criticizes the analyst-growth variation of my DCF Model because I used dividend growth, rather than earnings growth, as my primary growth rate indicator in that model. In addition, Ms. Nelson criticizes the sustainable growth variation of my DCF Model.

Q. Do you agree with Ms. Nelson's criticisms regarding your applications of the DCF Models?

A. No. Ms. Nelson criticizes the fact that I considered dividend growth rather than earnings growth. It is important to reiterate that in the DCF Model, the "cash" that is being discounted is the dividends paid to investors. While it is true that dividends are paid from earnings, and earnings growth can be an indicator to consider when assessing the growth rate input in the DCF Model, the ultimate form of "cash flow" in the discounted cash flow model, is dividends. In that regard, it is perfectly appropriate and reasonable to consider dividend growth when conducting the DCF Model. Moreover, as discussed in my direct testimony, the short-term growth rate estimates published by analysts overstate the annual growth rate that can be achieved by the Company (or any utility company in general) over the long run. In other words, they are not sustainable. Interestingly, however, the results of the analyst growth variation of my DCF Model still produced a result of only 8.7%, which is slightly higher than my authorized ROE recommendation.

The result of the analyst growth variation of my DCF Model further confirms the reasonableness of my overall authorized ROE recommendation of 8.4% as reasonable. This is because the analyst growth variation likely overstates PPL's cost of equity. As

discussed in my direct testimony, I presented the analyst growth variation of the DCF Model in my testimony because it is often presented in regulatory proceedings and considered by regulators. However, this application of the DCF Model has numerous problems, including the use of unsustainably high growth rates.

Q. Please summarize Ms. Nelson's criticism of your sustainable growth DCF Model

A. Ms. Nelson states that "there is no reason to expect that an individual corporation competing for capital as a going concern will limit its future earnings or dividend growth rate to that of GDP. Limiting growth in the DCF model to long-term GDP is an unfounded constraint."[1] In addition, Ms. Nelson suggests that I contradict myself regarding the sustainability of utility growth rates.

Q. Do you agree with Ms. Nelson?

A. No. Limiting the perpetual growth rate input to level less than U.S. GDP growth is the only mathematically sound approach. To assume otherwise would suggest that the earnings of an individual company will eventually surpass U.S. GDP (albeit after many years), which is impossible. However, even if we disregard the concept of perpetuity (even the DCF Model does not), the "growth" Ms. Nelson is referring to for utilities is primarily driven by increasing rate base. PPL's own annual growth rates for customers and load have been less than 1% over the past 10 years. I observe similar, small growth rates for utilities throughout the country. Qualitatively speaking, U.S. utilities are effectively non-growth companies. They can achieve fairly consistent quantitative earnings growth by increasing rate base and successfully arguing for above-market authorized ROEs. In my

[1] Rebuttal testimony of Jennifer Nelson, p. 37, lines 11-14.

opinion, this does not represent fundamental growth. A competitive firm cannot simply pursue an aggressive capital spending program, increase its plant, and have that translate to sustained earnings growth.

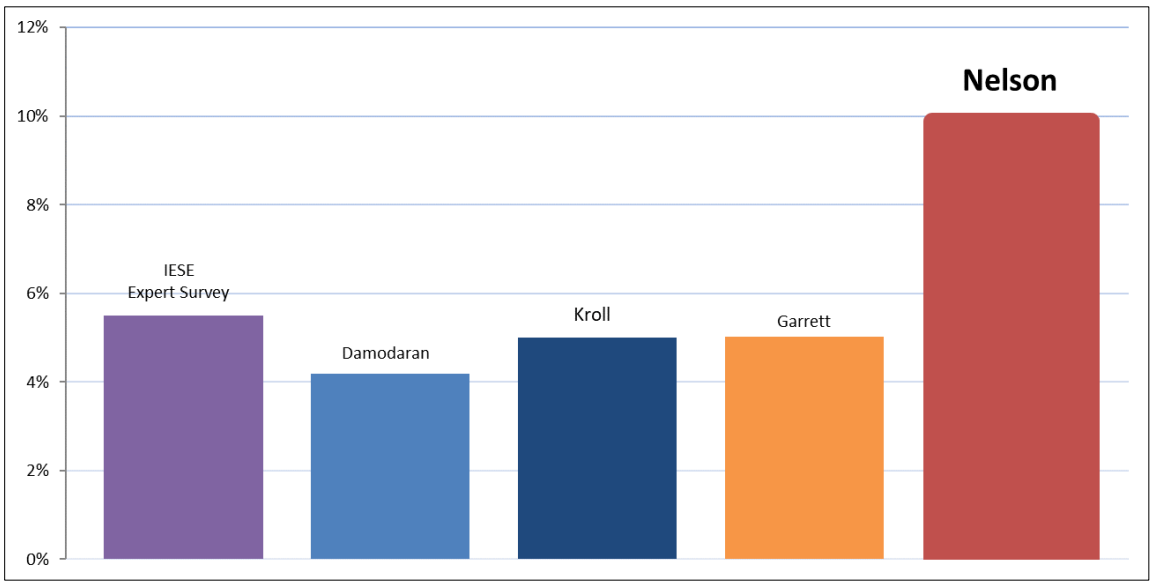
Q. What is your response to Ms. Nelson's claim that you contradict yourself regarding the sustainability of utility growth rates?

A. On page 35 of her rebuttal testimony, Ms. Nelson says that I contradict myself regarding the sustainability of utility growth rates. I do not contradict myself at all. For high-growth firms (i.e., not utility companies), the use of a multi-stage DCF or more complex growth analysis might be warranted. However, for low-growth utility companies, using a sustainable, constant growth rate is reasonable.

C. CAPM Analysis

Q. Please summarize Ms. Nelson's criticisms of your CAPM analysis.

A. Ms. Nelson primarily disagrees with my equity risk premium ("ERP") estimate, which is a key input to the CAPM. [2]



Q. Please briefly reiterate the sources you considered for the ERP estimate.

A. The ERP is an important figure for financial and market analysts in all industries, not just utility regulation. Thus, many analysts, managers, investors, and academics are constantly studying and are concerned with obtaining a reliable and accurate estimate of this important number, which can be used in a variety of financial analyses, including the CAPM. All else held constant, a higher ERP will result in a higher indicated cost of equity and apply upward pressure on the authorized ROE. I considered three reliable and objective sources

[2] See Rebuttal Testimony of Jennifer Nelson, pp. 49-52.

to include in my overall ERP estimate, including the result of the IESE Business School survey of experts, the estimate published by Kroll (formerly Duff & Phelps), and the estimate published by one of the world's leading experts on the issue, Dr. Aswath Damodaran. I also conducted and presented my own ERP estimate, the result of which is similar to those from the other sources. The figure below contrasts the ERP estimates from these sources with the ERP estimated by Ms. Nelson.[3]

Figure 1:
Equity Risk Premium Comparison

When compared with other independent sources for the ERP (as well as my estimate), which do not have a wide variance, Ms. Nelson's ERP estimate is clearly not within the range of reasonableness. Ms. Nelson offers various criticisms of these sources, and basically argues the Commission should accept her estimate over the opinions of hundreds

[3] *See also* Exhibit DJG-10.

of CEOs, CFOs, scholars, and an international corporate finance advising company. I would argue that investors are more likely to rely on these types of sources for the ERP than Ms. Nelson's personal ERP estimate. Effectively, Ms. Nelson is suggesting the Commission should adopt her ERP estimate over the opinions of thousands of unbiased experts, Kroll (a global financial advisory firm), and one of the world's leading experts on the ERP.

Q. Does Ms. Nelson agree that the beta and risk-free rate inputs of the CAPM are not material issues?

A. Yes. She acknowledges that these are areas of general agreement.[4]

Q. Does Ms. Nelson agree with your betas adjustment in the Hamada Model?

A. No. This is a separate issue than the standard CAPM application. For my Hamada Model adjustment, she argues that market value rather than book value should be used, and that PPL should actually receive an upward adjustment in the ROE for its relatively equity-rich capital structure, which is nonsensical. In ratemaking, book values of debt and equity are used to determine the rate of return and set rates. Book values of debt provide an apples-to-apples comparison of the level of financial risk of PPL compared with the proxy group. That analysis clearly shows PPL is less risky than the proxy group because it has less debt. Thus, a downward adjustment to the indicated cost of equity through the CAPM is warranted.

[4] Rebuttal Testimony of Jennifer Nelson, p. 43, lines 10-14.

Q. What does this mean regarding PPL's cost of equity estimate?

A. There are only three inputs to the CAPM: 1) risk-free rate; 2) beta, and 3) ERP. The formula is quite simple: Cost of equity = risk-free rate + beta x ERP. Thus, if the Commission is inclined to accept the ERP input of thousands of other non-biased experts over Ms. Nelson's individual ERP estimate, the CAPM result is 8.4%.

Q. Do you have any remarks on Ms. Nelson's updated cost of equity analysis?

A. Ms. Nelson conducted an updated analysis that produced an even higher ROE recommendation than her initial analysis. Her updated analysis suffers from the same upwardly biased and unreasonable assumptions. The Commission should reject her updated analysis for the same reasons it should reject her original analysis as well as her ROE recommendation based on that analysis.

D. Capital Structure

Q. Please summarize Ms. Nelson's criticisms of your capital structure recommendation.

A. Ms. Nelson claims my recommendation is not reasonable because it is based on the average capital structure of the proxy group rather than the capital structure of the subsidiaries of the proxy group.

Q. Do you agree with Ms. Nelson?

A. No. Ms. Nelson and I used the same proxy group in this case. We used this proxy group to obtain all the necessary inputs of our DCF and CAPM (stock prices, dividends, beta, etc.). For my capital structure analysis, I used the capital structures of this same proxy group. In other words, my approach is perfectly consistent. Ms. Nelson, however, uses the capital structures of the operating subsidiaries of the proxy group. In other words, her

approach is not consistent, and it amounts to cherry-picking a different set of companies which ultimately results in a higher indicated equity ratio and higher rate of return. It is a common scheme for U.S. utilities to set up parent-subsidiary structures and have higher amounts of equity at the subsidiary level. However, since the subsidiary's "equity" is funded by the parent, a significant portion of that "equity" capital is funded by debt from the parent company. Thus, it is common for utility companies to have higher levels of debt than the subsidiaries, so that shareholders can send low-cost debt down to the subsidiary level, call it "equity," and receive a high equity return on that capital. This makes Ms. Nelson's argument here especially disingenuous, because instead of being consistent by using the actual proxy group for a capital structure analysis, she is cherry-picking only this aspect of her analysis to look instead at the equity-rick capital structure of the subsidiaries who are employing the double leverage scheme in their various jurisdictions. It is a bad argument, and it adds insult to injury for customers to the extent the Commission gives it any consideration.

III. Depreciation

Q. Please summarize the issues raised in Mr. Spanos's rebuttal testimony you are addressing.

A. Mr. Spanos raises an issue regarding the Company's proposed net salvage costs. Mr. Spanos also criticizes my proposed service life adjustments.

E. Net Salvage

Q. Please summarize Ms. Spanos's testimony regarding the amortization of net salvage.

A. Mr. Spanos states that it is a standard practice in Pennsylvania to include a five-year amortization of net salvage as part of depreciation expense. Mr. Spanos also states that the amortization of net salvage was inadvertently left out of the depreciation expense that was included in the schedules for developing the Company's revenue requirement. Mr. Spanos notes the amortization of net salvage for the FPFTY should be an addition to annual depreciation expense of $34.6 million based on the net salvage amounts calculated and shown on PPL Electric Exhibit JJS-3, p. I-7.

Q. Did you review the net salvage calculations as part of your review of the Company's depreciation study?

A. Yes.

Q. Did you recommend any adjustments to the Company's proposed net salvage expense as presented in the depreciation study?

A. No. Based on my review of the Company's proposed net salvage costs, they appear to be calculated correctly according to the Commission's standard practice regarding this issue.

Q. Do you have any reason to believe the net salvage expense should not be included in the Company's revenue requirement?

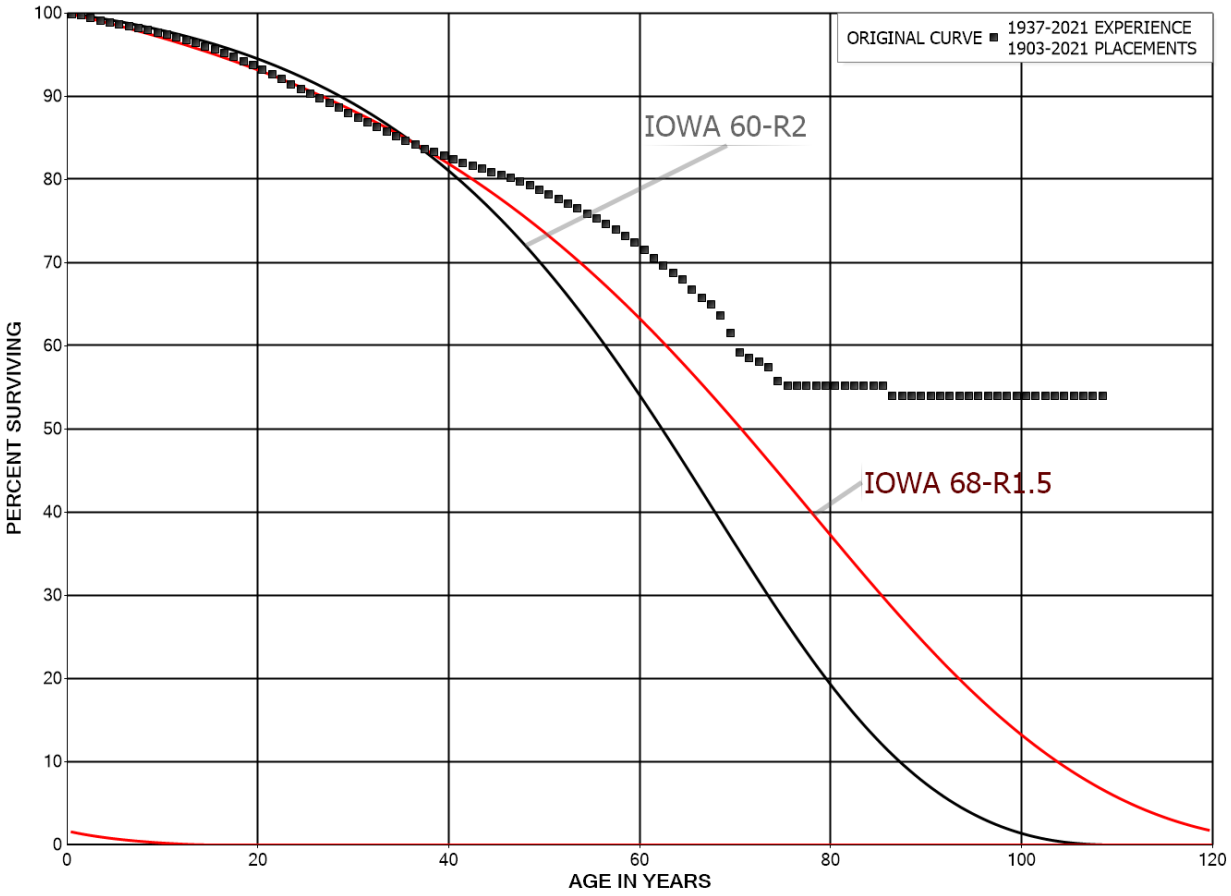
A. No.

F. Service Lives

Q. Please summarize Ms. Spanos's testimony regarding the amortization of net salvage.

A. Mr. Spanos argues that my proposed service life adjustments are not reasonable. He also states that my approach to service life estimates "differs from the correct and proper approach to estimating service lives that is set forth in authoritative treatises on

depreciation."[5] Mr. Spanos argues that estimating service lives must include the exercise of the analyst's informed professional judgment.



Q. What is your response to Mr. Spanos regarding these issues?

A. There are several problems with Mr. Spanos's characterization of my approach to estimating service lives in addition to the approach he espouses. First, I would generally agree with Mr. Spanos that service life estimation is not a purely mathematical exercise. The best evidence to support this is the fact that I did not select the mathematically best-fitting Iowa curve for each account. As shown in the graph below, when I deviate from the best mathematical Iowa curve fit, it is typically in favor of a *shorter* Iowa curve selection (which results in higher depreciation rates). This further highlights the reasonableness of my proposed service lives.

While I will not reiterate each account in my surrebuttal testimony, I would refer to the graphical presentation of Account 369 (Services) in Mr. Spanos's rebuttal testimony as an example of our contrasting approaches to service life estimates (a similar graph was presented in my direct testimony at Figure 20).

[5] Rebuttal Testimony of John Spanos, p. 8, lines 7-9.

Figure 2:
Account 369.00 – Services

As shown in this graph, the Iowa curve I selected for this account results in a closer fit to the Company's own historical retirement pattern for the assets in this account. Even Mr. Spanos does not dispute this fact, as it can be confirmed mathematically (and is obvious visually). Effectively, Mr. Spanos is suggesting that this evidence should be ignored in favor of his "judgment," which happens to result in a higher revenue requirement and cash flow for PPL. The problem with Mr. Spanos's overreliance on judgment is that "judgment" by itself does not amount to evidence, which is problematic in an evidentiary proceeding. The only real evidence provided by the Company to support its service life proposal for this account is the data which forms the original survivor curve (shown in black squares in

the above graph). This evidence strongly indicates that the average life for the assets included in Account 369 is notably longer than the 60-year life proposed by Mr. Spanos. In fact, the data indicate an even longer service life than the 68-year average life I proposed. The fact that Mr. Spanos may have physically observed a small sample of the Company's assets (though likely none in Account 369) and spoke with some members of the Company does not outweigh the substantial evidence presented in the observed survivor curve for this account. To accept Mr. Spanos's approach would run the risk of negating Iowa curve and statistical analysis altogether. In other words, if an original survivor curve strongly indicates an average life of 70 years, but the Company's witness can simply play the wild card of "judgment" and recommend a much shorter life (and higher depreciation expense), then there would be no point in doing all of the technical analysis in the first place.

In contrast to Mr. Spanos's approach, my approach places more weight on the actual evidence provided by the Company regarding its service life. Although actuarial depreciation analysis can be complex, one of its main advantages is that this complex technical analysis can be culminated in a visual representation of average life that anyone can understand at a high level, and that the Commission can ultimately use to make an informed decision. The fact is the empirical evidence presented in this case is much more supportive of my service life estimates than those of Mr. Spanos. The Commission should base its decision on the evidence, rather than subjective, unsupported, and potentially biased expressions of "judgment."

Q. Does this conclude your surrebuttal testimony?

A. Yes.

Exhibit CJ-4 Basic Customer Charge Analysis

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Clarence L. Johnson. My business address is 3707 Robinson Ave, Austin, Texas 78722.

Q. ON WHOSE BEHALF ARE YOU PRESENTING TESTIMONY IN THIS PROCEEDING?

A. I am presenting testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS YOUR CURRENT EMPLOYMENT?

A. I am self-employed as a consultant providing technical analysis, advice, and testimony regarding energy and utility regulatory issues.

Q. DO YOU HAVE PREVIOUS EXPERIENCE AS AN EXPERT ON REGULATED UTILITY MATTERS?

A. Yes. I have 40 years of experience as a utility regulatory expert, including 25 years as director of regulatory analysis for the Texas Office of Public Utility Counsel ("OPC"). As a consultant, I have provided expert advice, assistance, and testimony on utility-related issues to a number of parties. My clients have included state consumer advocate offices, customer groups, and various coalitions of municipalities in Texas. Municipalities in Texas act as original jurisdiction regulators over electric utility rates within city boundaries. I have previously filed testimony in PECO, FirstEnergy, and Duquesne electric rate cases in Pennsylvania.

Q. HAVE YOU PROVIDED AN ATTACHMENT WHICH DETAILS YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL EXPERIENCE?

A. Yes. Please see Attachment A.

Q. PLEASE OUTLINE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I have a B.S. in Political Science and a M.A. in Urban Studies from the University of Houston. My graduate degree is in an interdisciplinary program offered by the University of Houston's College of Social Science, which incorporated substantial training in economics, including course work in the application of cost-benefit analysis to public policy. During my 25-year tenure at OPC, I gained experience in virtually all phases of economic review required for the ratemaking process. I was chairman of the Economics and Finance Committee of the National Association of State Utility Consumer Advocates ("NASUCA") and served as a presenter for NASUCA's workshops and panels on cost allocation and rate design, demand-side management incentives, market power and electric utility competition. Also, at various times, I have undergone training in specific subjects, such as electric wholesale market design, cogeneration engineering and Electric Reliability Council of Texas ("ERCOT") operations.

I have previously filed testimony in approximately 150 proceedings at the Public Utility Commission of Texas, Texas Railroad Commission, Pennsylvania Public Utility Commission, Maryland Public Service Commission and Connecticut Public Utility Regulatory Authority.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS CASE?

A. My testimony will address cost allocation and rate design issues pertaining to PPL's ("Company") base rate increase requested in this docket. For purposes of comparability, my analysis generally utilizes the revenue requirements and schedules filed by the Company. My use of PPL's filed costs and revenues should not be construed as agreement or acceptance of the Company's requested revenues. Other witnesses retained by OCA will address the Company's proposed revenue requirements.

Q. WHAT DOCUMENTS HAVE YOU REVIEWED IN PREPARING THIS TESTIMONY?

A. I reviewed relevant testimony and exhibits in PPL's rate case filing. I also propounded interrogatories to the Company and reviewed the responses and accompanying attachments.

II. SUMMARY

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

A. My recommendations are as follows:

- My preferred position is to classify shared distribution delivery facilities as 100% demand related and meters and services as 100% customer related. This recognizes that demand is the principal causal factor for sizing the primary and secondary system. However, given PPL's history of using a minimum distribution system, in this case I propose a reduction in the customer classification through a revision of the minimum distribution system.
- A major flaw in the minimum distribution system is that selected minimum size components have material load carrying capability. As a result, the theoretical system double allocates demand costs. In order to correct this deficiency, I propose to limit

minimum size plant to its labor installation percentage. In addition, an alternative approach is to classify primary voltage plant as 100% demand related. As a result, I present two revised class cost of service studies (CCOSS).

- The class revenue distribution should recognize CCOSS results, but the ultimate revenue allocation should be constrained by rate mitigation. My recommendation is based on the same gradualism constraints as proposed by the Company: no class receives a revenue reduction and a 150% cap is placed on class revenue increases. As a practical matter, when mitigation is applied, the difference in revenue allocation between the two versions of the revised CCOSS is minimal. I applied the revenue allocation constraints to the CCOSS presented as Exhibit CJ-3.
- The Company proposes to apply a 10% - 21% increase to the residential customer charge, depending on whether riders are considered part of the current customer charge. The current $14.09 residential base customer charge is the highest electric residential customer charge in the state. This is an unreasonable increase which adversely affects low usage customers, reduces customers' control over their electric bill, and discourages customers from undertaking energy efficiency measures. My analysis indicates that a customer charge of $8.59 would recover costs which vary directly with the number of customers. My primary recommendation is to set the customer charge at $14.09, which is the base customer charge established in PPL's last general rate case. This level exceeds other electric customer charges in the state and substantially exceeds the $8.54 basic customer charge which excludes indirect costs. As an alternative, if some part of the current riders are attributed to the customer charge, my secondary recommendation is to set the customer charge at $15.58, which is the current customer charge with "per bill" riders included.

III. CLASS COST OF SERVICE STUDY

A. Overview

Q. WHAT IS A CLASS COST OF SERVICE STUDY (CCOSS)?

A. The CCOSS is a fully allocated cost study which distributes the Company's costs to customer classes. The intent of the study is to allocate costs based on cost causation, generally resulting in a portion of costs allocated on causal measures and the remainder of indirect costs following those costs. The CCOSS is at best a general benchmark for evaluating customer class cost responsibility. The CCOSS can provide guidance to the regulator, but considerations other than the CCOSS also are appropriate in determining the ultimate allocation of costs among customer classes. The CCOSS provides rates of return for each customer class at current and proposed class rates. Sometimes the class rates of return are divided by the total retail rate of return to arrive at a relative rate of return (RROR). The relative rate of return (or unitized return) at present rates may be used as a benchmark for guiding the direction of revenue changes at the class level. The CCOSS also provides class revenues based upon equalized rates of return (all classes' revenue produce the proposed overall retail rate of return). The class revenues at equalized rates of return can be used as a rough target for apportioning class revenue increases, but the results at equalized rates of return do not necessarily dictate the exact levels of class revenues. The class revenues may depart from equalized rates of return in order to recognize rate gradualism, relative risks associated with serving each class, or other non-cost considerations. However, the resulting revenues indicated by the CCOSS may provide useful information regarding the equitable distribution of a system revenue increase among customer classes.

Q. HOW IS THE COST CAUSATION CRITERION APPLIED IN THE CCOSS?

A. Some costs are incurred directly to serve only an individual customer or set of customers. For example, substations are sometimes dedicated to serving an individual customer and can be directly assigned.

However, the provision of electric utility service is predominated by common and joint costs, which either support the overall enterprise or produce shared benefits for all or most customers. These costs often are assigned based upon indirect, and often weak, measures of causation. For example, overhead costs, such as Board of Director fees, might be allocated based upon measures as diverse as revenues, labor costs, energy sales, plant or demand. No single objective economic basis supports the allocation of these costs; therefore, the allocation decisions are subjective or based on rate making conventions. Ideally, the analyst selects a method that best recognizes the manner in which customer classes' characteristics contributed to the incurrence of utility investments and expenses. The manner in which a utility plans and installs an investment often informs the analyst's evaluation of causal factors related to classification or allocation of the investment.

The three major steps of the embedded cost of service study are functionalization, classification, and allocation. Functionalization is the procedure for separating costs into functional segments, such as generation, transmission, and distribution. The next two accounting steps, classification and allocation, facilitate the recognition of causation. The classification procedure, which pools costs into general categories of causation (i.e., demand, customer, energy), is an intermediate step in determining the allocation factors that are used to divide costs among jurisdictions and customer classes. The allocation step

determines the appropriate percentage of a particular FERC account which is attributed to each customer class.

Q. CAN YOU PROVIDE MORE DETAIL REGARDING THE DEVELOPMENT OF THE ALLOCATION FACTORS FOR THE DISTRIBUTION COST OF SERVICE STUDIES?

A. Yes. The principal external allocation factors in the CCOSS are customer and demand. Customer allocators are based on class customer count as a percentage of total retail customer count. Sometimes weighting factors are applied to the customer count in order to reflect differences in cost per customer. For instance, customer allocators applied to service drops may be weighted to reflect the differences in the cost of average service drops for each customer class.

The predominant demand allocation factor for the distribution system is non-coincident peak demand (NCP). NCP is based on the maximum hour of demand for the class. Since classes incur peak demand in different time periods, the NCP method is said to reflect demand diversity on the system. Each class's demand allocator is the ratio of the class maximum kW demand relative to the sum of all classes' maximum demands. Energy allocation factors, based on kWh usage, are not used by PPL for distribution costs in the CCOSS.

Indirect costs in the CCOSS usually are allocated on the basis of internal allocation factors which "follow" the allocation of direct costs. An example is the labor allocator, which may be used to allocate administrative & general expenses; the labor allocator will be driven by the labor portion of accounts which are classified as customer, demand, or

both. A substantial portion of the customer and demand costs in the CCOSS will consist of indirect costs which are not inherently customer- or demand-related, but follow the customer/demand classification of other accounts. This explains in part why the results of a CCOSS frequently are sensitive to small changes in the customer/demand classification for certain accounts.

Q. PLEASE DESCRIBE YOUR REVIEW OF THE CCOSS PRESENTED BY THE COMPANY.

A. I evaluated the studies for consistency and accuracy in the allocation of costs among classes. Based on my review, the allocation or classification of several CCOSS elements, principally the secondary distribution system, were identified as insufficiently justified or warranting improvement. My testimony proposes modifications to the treatment of those costs in the CCOSS. These changes affect my recommendations with respect to class revenue distribution. My recommendations focus on a limited number of CCOSS issues; omission of other issues should not be construed as agreement with all other aspects of the Company's cost studies. The OCA does not agree with the proposed revenue requirements in the CCOSS, therefore, the revised versions of the CCOSS should be used only to examine class cost relationships rather than absolute revenue levels.

Q. DID YOU MODIFY THE COMPANY'S CCOSS TO REFLECT YOUR PROPOSED REVISIONS?

A. Yes. PPL provided OCA with a live version[1] of the CCOSS in Excel format after execution of a protective order. The Company considers the live version of the Excel model to be

[1] I&E-RE-I-14-D CONFIDENTIAL Attachment 2_SUPPLEMENTAL

"confidential." As I will discuss, I attempted to modify the Company's CCOSS in order to evaluate customer class relationships.

B. Distribution Plant Classification

Q. WHAT PORTION OF THE DISTRIBUTION PLANT ALLOCATION WILL YOU ADDRESS?

A. This section of my testimony will discuss potential changes to PPL's classification of poles, overhead conductors, transformers and underground conductors/conduit.

Q. HOW DOES PPL CLASSIFY LOCAL DISTRIBUTION INFRASTRUCTURE?

A. PPL splits the poles, towers, transformers, and overhead and underground facilities between the demand and customer allocation factors. The impact of a customer allocation is particularly detrimental for residential customers. The customer allocation factor for the two residential classes is 86% compared to the demand allocation factor of 64%. The classification of a significant portion of distribution delivery facilities on a customer basis is adverse to any class which contains relatively small demand per customer, due to the difference between demand and customer allocation factors. In particular, the residential and small general service classes pay proportionately more of the system's costs if basic infrastructure is assigned partially on a customer basis. This practice is not universal in the field of electric utility regulation, and many state jurisdictions assign joint facilities only on a demand basis and utilize customer classification only for facilities dedicated to the

customer premises. The Company's proposed classification is shown below.

Facility	Demand	Customer
Primary Poles	39.03%	60.97%
Secondary Poles	20.04%	79.96%
Primary Overhead	54.88%	45.12%
Secondary Overhead	78.89%	21.11%
Primary Underground	67.80%	32.20%
Secondary Underground	72.14%	27.86%
Line Transformers	62.86%	37.14%
Secondary Services	0.00%	100.00%

Q. WHAT IS THE PRIMARY COST CAUSATION DETRMINANT OF LOCAL DISTRIBUTION FACILITIES?

A. NCP demand is the principal cost causal driver of the delivery system. The sizing of distribution lines is based on projected local maximum demand which will be carried by the delivery system. PPL states that it collects reported or experienced demand data which determines "the appropriate size of the required service wire" for new secondary installations.[2] As stated in PPL Response to OCA Interrogatory IX-18b, replacements and upgrades of the primary delivery system are driven by increases in loads:

> PPL uses net loading values measures at distinct points on the system. The peak values are forecast over five years, and projects are developed to address conditions that exceed the planning rating for those facilities. Both primary and secondary system upgrades are designed such that future upgrades are not necessary in the next five year planning horizon unless additional loads are requested.

Peak demand is of paramount importance because the capacity to meet expected demand is significant to the utility's core task of maintaining reliable service. A failure to monitor and make corrections and upgrades when demand exceeds the rating of delivery

[2] PPL Response to OCA IX 18(b).

facilities can lead to outages and burned out or melted wires and devices. To the extent that the numbers of customers enter into cost incurrence, this is primarily due to the indirect relationship between adding new customers and demand. The actual driver is demand.

Q. WHAT BASIC APPROACH TO DISTRIBUTION CLASSIFICATION IS PREFERABLE?

A. The two alternative approaches are (1) the basic customer method, which assigns all jointly used delivery facilities as 100% demand and services and meters as 100% customer or (2) developing customer/demand splits using minimum system studies. In my opinion, the best approach is to limit the customer classification to service drops and meters, since these facilities are located on or close to the customer's premises. The remaining distribution plant should be classified as demand-related. There is little dispute that jointly-used distribution plant must be sized to accommodate maximum demand, and local demand is the most straightforward and readily measured method of allocating the plant. As provided above, PPL also uses demand to determine how to size secondary distribution plant. This approach is consistent with the following description of regulatory practice in a recently updated electric utility cost allocation manual:

> The most common method [for apportioning distribution facilities between demand and customer] used is the "basic customer method" which classifies all wires, transformers, and poles as demand-related, and meters, meter reading, and billing as customer-related. This general approach is used by more than 30 states."[3]

[3] "Lazar, J., Chernick, P., Marcus, W., and LeBel, M. (Ed.). (2020, January). Electric Cost Allocation for a New Era: A Manual. Montpelier, VT: Regulatory Assistance Project. At 145.

The manual continues, pointing out that many jurisdictions have accepted or mandated the basic customer classification, including Arkansas, California, Colorado, Illinois, Iowa, Massachusetts, Texas, and Washington.[4] The states' regulatory preference for the "basic customer method" is logical. Meters and service lines are located on or near the customer's premises. The remaining distribution facilities radiate outward from the customer's location and are part of an integrated electrical system which is designed and sized to support aggregations of load which may be nearly equivalent to the demand of the total system as the lines approach major substations. By classifying all of the facilities except those located on the customer's premises as demand-related, the regulatory authorities avoid the complications associated with relying upon minimum system studies.[5]

Q. IS YOUR RECOMMENDATION IN THIS CASE BASED ON 100% DEMAND CLASSIFICATION?

A. No. The Company has been utilizing a customer/demand split for the jointly used delivery facilities for approximately 20 years. Applying 100% demand classification would involve rather large changes in the share of costs allocated to non-residential classes. Therefore, as a second-best approach, my recommendation is to reduce the magnitude of customer classification. This provides a more gradual recommendation for reducing the customer ratio which addresses known weaknesses in applying minimum system studies. Moreover, when rate mitigation is applied to the class revenue allocation, the practical difference between the effect of decreasing the customer percentage vs. 100% demand classification is likely minimal in terms of actual class revenue allocation. However, the Commission

[4] Ibid.

[5] The Manual concludes: "The basic customer method for classification is by far the most equitable solution for the vast majority of utilities." Ibid.

should consider the benefits of the basic customer method of classification and direct the Company to move in the direction of that approach in future rate cases.

C. Minimum System Method

Q. HOW DOES PPL DEVELOP THE CUSTOMER AND DEMAND RATIOS FOR THE COMPONENTS OF THE DISTRIBUTION DELIVERY SYSTEM?

A. The Company conducts a minimum system study. The smallest component (wire or pole size and transformer size) is used to develop the percentage of the average component cost which is customer-related. The fictitious distribution system is comprised of components which are not intended to carry load.[6] Most such studies either identify minimum size plant components or perform a statistical regression analysis to determine the hypothetical cost of a system which has zero load carrying capability[7] The nature of a minimum system study—developing a theoretical cost structure for a distribution system which is uninfluenced by demand—can produce a wide range of results, depending on the assumptions made by the analyst.

Q. IS THE MINIMUM SYSTEM CONCEPT FLAWED FROM THE PERSPECTIVE OF COST CAUSATION?

A. Yes. The rationale for the method is that the number of customers is a proxy for the length of lines. But this rationale ignores the fact that customer density is not uniform across the service area. Even if non-demand related costs can be identified, the causation for those

[6] Carried to its logical conclusion, one could speculate whether this theoretical system would require insulated wires or be required to comply with code and safety regulation.

[7] In response to OCA IX-5, PPL states that the Company has not attempted to perform a zero intercept study.

costs is unlikely to be purely customer-related. Dr. James Bonbright's critique of the minimum distribution system concept is frequently cited by cost analysts:

> [T]he annual costs of this phantom, minimum sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs…. Their inclusion among the customer costs is defended on the ground that, since they vary directly with area of the distribution system (or else with the lengths of the distribution lines, depending on the type of distribution system), they therefore vary indirectly with the number of customers.
>
> What this last-named cost imputation overlooks, of course is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this system. For it makes no allowance for the density factor (customers per linear mile or per square mile). Indeed, if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs of a minimum-sized distribution system.[8]

The implication of Dr. Bonbright's conclusion is that this "residual" cost of the distribution system is not closely related to either demand or customer factors, but instead varies on the basis of less easily discerned geographic variables such as customer density or topography.[9] These factors are consistent with Dr. Bonbright's conclusion that the portion of distribution investment identified as "customer-related" should instead be regarded as inherently un-allocable.[10]

The PPL service area is composed of rural, suburban, and urban areas with varying customer density. PPL defines rural areas as 1 – 50 customers per mile, suburban as 50 –

---

[8] *Principals of Public Utility Rates*, Columbia University Press, James Bonbright (1961) at 347-348.

[9] In addition to spatial density, other factors that are not related to customer count, such as economies of scale, efficiencies of stocking standard components, and life cycle cost optimization, may be intervening variables.

[10] Bonbright at 347-348.

149 customers per mile, and urban areas as 150 customers per mile.[11] Obviously the length of wire and number of poles per customer will vary significantly between each of these areas. PPL also has several low tension networks in major cities and these networks serve 4,365 customers per mile in small densely populated urban areas.[12] As a result of the varying customer densities, the number of customers is a poor proxy for the costs of delivery facilities. Moreover, PPL designs its underground facilities with spare conduit and circuits so that new customers can be added at minimal or no incremental cost.[13] This is consistent with Dr Bonbright's conclusion that customers frequently can be added to a fixed service area without any increase in the minimum distribution system.

Q. DO LINE TRANSFORMERS PROVIDE AN EXAMPLE OF THE DISTORTION CAUSED BY DENSITY ON THE MINIMUM SYSTEM COST?

A. Yes. The number of customers served by each transformer varies based on the types of customers and the area's customer density. The number of transformers per customer can vary significantly between classes and within a class. In a typical residential sub-division, 4 – 6 customers may be served by a single transformer. In more dense residential areas, one transformer may serve 10 or more residential customers. In rural residential areas, one transformer may serve 1 – 2 customers. A larger commercial and industrial customer may be served by a single dedicated transformer because of the size of the load and the distance between properties. For underground networks, multiple transformers may serve a single large building or a single large transformer may serve hundreds of smaller customers over many blocks. The Companies' allocation of a portion of transformer cost on the basis of

[11] Response to OCA IX-36.
[12] Ibidem.
[13] Response to OCA IX 40.

unweighted customer count is inaccurate because it assumes that all customer classes are served by the same number of transformers per customer. To the extent that the residential class is associated with more customers per transformer, the customer allocation will overstate the amount of minimum transformer cost attributed to the residential class. Similarly, customer density raises analogous customer allocation issues with respect to feet of conductor per customer and number of poles per customer.

1. PPL's Minimum System Overstates Minimum Costs

Q. WHY DO YOU PROPOSE TO REDUCE THE MINIMUM SYSTEM CUSTOMER PERCENTAGE?

A. Yes. I will address weaknesses in the Company's minimum system which justify an adjustment to the customer percentages. First, the Company has not utilized true minimum size components, thereby oversizing the load carrying capability of the minimum system. In my view, this undermines the theory behind a minimum distribution system construct. Second, the load carrying capability of the minimum size components creates inequitable double counting of demand related costs.

Q. DOES THE COMPANY'S METHODOLOGY OVERSTATE THE CUSTOMER RATIO FOR CONDUCTORS BECAUSE DEMAND-RELATED DEVICES ARE INCLUDED?

A. Yes. The Companies' minimum grid study develops customer percentages for FERC Accounts 365 (conductors) based on the relative price per 100 foot of overhead conductors. These percentages are applied to all of the costs in the FERC account. However, devices

which are clearly demand-related[14] are also recorded in these accounts. As a result, these demand-related devices are incorrectly classified as partially customer-related. $34 million capacitors are recorded in FERC Account 365 (2.1% of the account)[15]; these devices are used to maintain the proper power factor, reduce line losses, and increase the load carrying capacity of conductors. These devices enhance the reliability of the system and, therefore, are demand-related. Application of the minimum conductor percentages to the costs of these devices within those accounts will overstate customer costs. As a result, the primary conductor percentage is overstated by 2.1%.

Q. IS THE COMPANY'S STUDY BASED UPON ACTUAL MINIMUM SIZE COMPONENTS?

A. No. The Company's study relies upon facility component sizes which are larger than the minimum size installed on the system. To some extent, this reflects the subjectivity of the minimum size methodology. In preparing a minimum distribution system study, utilities choose minimum size components based upon a wide range of criteria such as: (a) currently in use on the system; (b) currently purchased by the utility; (c) currently used within the electric utility industry; (d) available from electrical component suppliers; (e) currently required by safety codes; or (f) representing the current standard component of the utility. The criteria chosen will determine the size of minimum facilities, which in turn can produce significant swings in the percentages attributable to the customer classification. The fact that the size is larger than the "smallest" size is inconsistent with the underlying rationale for the minimum system concept. If the components are supposed to reflect purely the cost

[14] Arguably a portion of these devices could be classified as energy-related, given the reduction in energy losses which are associated with capacitors. However, the important point is that the devices are not customer-related.

[15] PPL Response to IX-20.

of access for a customer with little or no demand, the larger components will include more than minimal load carrying capacity.

Some examples based on components used in the Company's study:

- The smallest conductor installed on the Companies' systems is 50% of the load carrying capability (measured in amps) and 30% of the cost/per foot, compared to the overhead minimum conductor used in the Companies' minimum grid study.[16]
- The Companies' Minimum Size Study uses a 10 kVA transformer as the minimum size transformer. The Company's system includes smaller transformer sizes of 1, 3, 5, and 7.5 kVA.[17] Other utilities have used minimum sizes of 3 – 5 kVA transformers in minimum system studies.
- The Company's Minimum System Study selects 35 foot poles as the minimum size for secondary poles and 40 feet for primary poles.[18] Although poles have no direct electrical load carrying ability, the size of poles is influenced by the size, weight and voltage of the conductors (which is related to demand capacity). The smallest pole on the system is 11 feet and approximately 9,000 poles of 25 feet or smaller are installed on the system.[19] A more reasonable 25 foot minimum size pole requires a cost 70% less than the 35 foot pole, which indicates that the minimum size cost for Account 364 could have been reduced significantly.[20]

This Company's minimum size selections result in higher customer classification percentages. In addition, this practice results in more demand-related costs embedded in the minimum size component, thereby increasing the magnitude of double counting demand costs.

[19] OCA IX 13 Attachment 1 and OCA XXVI-8.

[20] Ibidem.

Q. DOES THE COMPANY'S INCLUSION OF PRIMARY FACILITIES WITHIN THE SCOPE OF THE MINIMUM SYSTEM POTENTIALLY OVERSTATE THE TOTAL MIMIMUM SYSTEM COST?

A. Yes. Some other electric utilities, such as PECO, treat primary wires and poles as 100% demand. Primary distribution facilities are upstream of secondary facilities and tend to serve aggregated loads of customers taking power at different voltages. The principal objective of primary facilities is to transmit power from distribution substations to localized transformers. Mr. Rimal states that the hypothetical minimum system is a system sized to "simply connect customers" and the customer classification is the cost to simply "attach a customer to the system."[21] The objective of the primary system is not to connect or attach secondary customers to the system. However, secondary customers are allocated primary facilities partially on a customer basis. If a minimum system analysis is utilized for distribution wires and poles, in my view it would not be unreasonable to exclude primary facilities from the scope of the minimum system.

2. Double-Counting Class Demands

Q. DOES PPL'S MINIMUM SYSTEM DOUBLE COUNT DEMAND?

A. Yes. Given the manner used by the Company to select minimum size components with substantial load-carrying capacity, PPL's overall minimum system can serve substantial electric demand. The inevitable impact is to overcharge low use customers (such as residential) who pay twice for the distribution facilities demand capability. A double-counting issue arises because customer class demands are reflected in the allocation of both

[21] PPL Statement No. 7, pages 15 and 17.

customer and demand-related investment. First, demands that can be served by the minimum size facilities are allocated to classes on a customer basis; second, all class demands, including the demand associated with minimum facilities, are used to allocate the demand portion of distribution facilities. Therefore, low use customers pay twice for the demand capability built into the minimum size component—once through the demand allocation and again through the customer allocation.

The NARUC Electric Utility Cost Allocation Manual acknowledges this issue and indicates that adjustments may be required for the demand allocation factors:[22]

> Cost analysts disagree on how much of the demand costs should be allocated to customers when the minimum-size distribution method is used to classify distribution plant. *When using this distribution method, the analyst must be aware that the minimum-size distribution equipment has a certain load-carrying capability, which can be viewed as a demand-related cost.*
>
> When allocating distribution costs determined by the minimum-size method, some cost analysts will argue that some customer classes can receive a disproportionate share of demand costs. Their rationale is that customers are allocated a share of distribution costs classified as demand related. Then those customers receive a second layer of demand costs that have been mislabeled customer costs because the minimum-size method was used to classify those costs.

The zero intercept methodology, which uses regression analysis to estimate the cost of facilities sized for zero demand, was developed in part to address this problem. PPL does not utilize a zero intercept method nor does it propose an adjustment to correct double charging demand costs.

[22] *NARUC Electric Utility Cost Allocation Manua (CAM)l* at 95 (emphasis added).

Q. IS THE DOUBLE-COUNTING ISSUE A SERIOUS DEFECT IN THE MINIMUM SYSTEM STUDY?

A. Yes. The demand carrying capability associated with minimum size components could, in theory, be deducted from the class demand allocation factors. A frequently cited article regarding the double-counting issue describes such an adjustment but concludes that a 100% demand classification is the more straightforward solution:[23]

> One way to solve the double allocation problem would be to determine, for each piece of minimum equipment, the demand level it would be capable of serving, and then adjusting the demand allocation factors used to allocate the costs of all equipment of that type in order to assure that minimum use customers and the residential class were not charged twice. In many cases this would mean calculating several allocation factors for each FERC distribution account, since more than one type of equipment is used in the account.
>
> * * *
>
> The direct way to assure that problems of overcollection are not built into the methodology used to determine class costs of service is to classify all distribution costs as demand costs. If this methodology is used in embedded cost studies, the studies produce more equitable estimates of the cost of serving low-use residential customers. (emphasis added)

The article noted that this double allocation "leads inescapably to the conclusion that minimum use residential customers will be overcharged by such cost allocation practices."[24]

[23] "The Customer Charge and Problems of Double Allocation of Costs," George Sterzinger, Public Utilities Fortnightly, page 31 (July 2, 1981).

[24] Ibidem.

Q. IS IT POSSIBLE TO CORRECT THE DOUBLE-COUNTING OF DEMANDS BY THE COMPANY MINIMUM SYSTEM?

A. Yes. A reasonable approach is to limit the cost of minimum size components to the labor installation cost. The labor portion of the facility cost is considered relatively fixed, and removing the material component eliminates the portion most relevant to demand carrying capability. The premise of this method is that the minimum plant's load carrying capability is principally confined to the material cost, since labor costs would be incurred regardless of the load size. The labor percentage can be applied as an adjustment to the minimum system customer ratios in order to reduce any capacity costs. The Company states that the following labor installation percentages are associated with the minimum components:[25]

Labor Percent For Minimum Components

POLES	71 %
OH CONDUCTORS	66 %
UG CONDUCTORS	45 %
TRANSFORMERS	56 %

Exhibit CJ-1 provides customer classification percentages adjusted to reflect only the labor component for minimum size plant. Limiting the minimum cost component only to labor installation was a method developed by utilities to estimate zero capacity cost without the complexity of a zero-intercept model.[26] The Pennsylvania Commission has previously adopted a minimum distribution system based only on the labor costs associated with minimum size components.[27]

[25] Response to OCA IX 12.

[26] RAP Electric Utility Cost Allocation Manual at 148.

[27] Duquesne Light Co., Docket No. R-8435583, 59 Pa PUC 57 (1985) at 74-75.

3. Company's Minimum Distribution System is Incomplete

Q. WHY DO YOU CONTEND THAT THE PPL MINIMUM SYSTEM STUDY IS INCOMPLETE?

A. The Company classifies 100% of services (Account 369) as customer-related. I agree with the classification *if* the minimum system study is *not* applied to distribution facilities. However, if a minimum system study is used, the method should be applied in a symmetric fashion to service conductors, which are ordinarily classified as customer-related. The minimum system concept attempts to divide facilities into percentages of cost that are demand and customer-related. Just like overhead conductors, different sizes of service lines have varying load carrying capability, and a complete application of the minimum system approach would recognize that part of the services cost is demand-related. The incorporation of a demand classification for services would reduce the overall customer classification amount within the Companies' cost of service study. The minimum size method, according to the NARUC Cost Allocation Manual (CAM), "involves determining the minimum size pole, conductor, cable, transformer *and service* that is currently installed by the utility."[28]

Q. HAVE YOU ADJUSTED THE CCOSS TO INCLUDE A CUSTOMER / DEMAND SPLIT FOR SERVICES?

A. No. The Company has not presented a study to identify the minimum size service lines. Therefore, I am reluctant to recommend a customer percentage in the absence of a

[28] NARUC Electric Utility Cost Allocation Manual (1992) at 90 and 92. (Emphasis added).

minimum system analysis.[29] But I recommend that PPL present a minimum system classification for service lines in its next rate case.

D. CCOSS Adjustment Recommendation

Q. WHAT IS YOUR RECOMMENDATION FOR CHANGING THE CUSTOMER CLASSIFICATION OF DISTRIBUTION DELIVERY FACILITES?

A. Adjusting the minimum system to reflect only labor installation costs for the minimum size components is a reasonable means of ensuring that capacity costs are not included in the minimum plant. This approach achieves the objective of zero capacity plant costs without some of the complexities and flaws of a zero-intercept study.[30] This adjustment addresses some of the problematic issues with the Company's minimum system study, such as oversizing of minimum component and double counting the demand allocation. The impact on the CCOSS results can be evaluated based on the classes' Relative Rate of Return (RROR) at Current Rates. A RROR above 1.0 indicates that the class is subsidizing other classes, and a RROR below 1.0 indicates that the class is being subsidized. The results for both the Residential class and the Small Commercial class (GS-1) move to a position substantially above one. Both the Large Commercial class (GS-2) and Large Power (LP-4) class produced significantly less favorable cost results. My adjustment to the minimum system study reveals that the CCOSS results are quite sensitive to the customer ratio applied to the distribution delivery plant. The RROR results below are

[29] Given that the Company quantifies a 66% labor ratio for services, a 34% demand ratio would be a preliminary estimate.

[30] Zero intercept studies can involve complex statistical controversies. The issues can involved inadequate sample sizes, appropriate statistical tests, the appropriate model (linear, log linear, curvilinear, etc.) and anomalous results such as extrapolation to a negative value at zero size.

useful in evaluating the direction of class revenue allocation. The CCOSS results are shown on Exhibit CJ-2.

Current Rates		
	Per Company	As Adjusted
Class	RROR	RROR
RS	0.98	1.14
RTS	0.51	0.32
GS-1	0.91	1.08
GS-3	1.20	0.74
LP-4	0.80	0.28
LP-5	5.42	5.96
GH-2	1.02	0.84
SL/AL	1.33	1.41

Q. HAVE YOU PREPARED A SUMMARY OF AN OCA CCOSS WHICH IS BASED ON AN ADDITIONAL ADJUSTMENT TO THE MINIMUM SYSTEM?

A. Yes. Exhibit CJ-3 provides a summary of the OCA CCOSS results which includes both the labor installation cost adjustment, above, and 100% demand classification for Primary. As stated previously, classifying Primary voltage as 100% demand is reasonable. PPL asserts that the customer classification represents only the "access" cost. But Primary lines connect the substation and transformer and do not provide a direct access function for

secondary customers. As expected, the Residential and GS-1 RROR is even higher under this classification approach. However, after mitigation, the practical effect of both CCOSS methods is similar. The RROR comparison at current rates for the version that includes 100% demand for Primary is shown below.

Current Rates		
	Per Company	As Adjusted
Class	RROR	RROR
RS	0.98	1.34
RTS	0.51	0.19
GS-1	0.91	1.33
GS-3	1.20	0.38
LP-4	0.80	-0.17
LP-5	5.42	5.96
GH-2	1.02	0.68
SL/AL	1.33	1.39

Q. HAVE YOU PREPARED A SUMMARY OF THE OCA CCOSS WHICH IS BASED ON THESE ADJUSTMENTS TO THE MINIMUM SYSTEM?

A. Yes. Exhibits CJ-2 and CJ-3 provide a summary of the OCA CCOSS results.

IV. CLASS REVENUE DISTRIBUTION

Q. IS THE CLASS COST OF SERVICE STUDY AN ABSOLUTE DETERMINANT OF THE DISTRIBUTION OF THE SYSTEM REVENUE INCREASE AMONG CLASSES?

A. No. The cost of service study results should be tempered by gradualism considerations. Gradualism constraints are a means of mitigating the CCOSS results in order to avoid rate shock and produce a balanced allocation of the system revenue increase. Moreover, because the CCOSS may be quite sensitive to changes in allocation or classification choices, "cost-based rates" are best viewed as representing a reasonable band around the CCOS results, rather than exact price points.

Q. HAS THE COMPANY PROPOSED MITIGATION OF THE RESULTS FROM ITS CCOSS?

A. Yes. Mr. Rimal proposes the following constraints on the CCOSS indicated class revenue increases: (a) No class receives a percentage increase more than 150% of the system percentage increase; and (b) No class receives a revenue reduction. [31] He opines that this will provide for class movement toward cost of service while also ensuring that the impact on any single class is moderate and gradual. The Company's ACCOS model produces mitigated revenue allocations based on these constraints.

[31] PPL Statement No. 7 at 21.

Q. DO YOU AGREE WITH MR. RIMAL'S MITIGATION CONSTRAINTS?

A. While a number of different mitigation methods are within the range of reasonableness, in my view the two constraints (150% cap and no revenue decrease) proposed by Mr. Rimal are reasonable and consistent with the most commonly used gradualism benchmarks. In this case, I will accept the Company's mitigation constraints and apply them to the OCA CCOS study shown in Exhibit CJ-3. When these mitigation constraints are applied, the class revenue allocations associated with the two OCA studies are similar with differences measured in tenths of a percentage point.

Q. COMPARE THE DIFFERENCES IN CCOSS CLASS REVENUE INCREASES IF NO MITIGATION IS ADPOTED.

A. Below, I compare the indicated increase according to the PPL study with the indicated increase for the two OCA CCOS studies (Exhibits CJ-2 and CJ-3). The modified minimum system study is labeled OCA 1; and OCA 2 has the same adjustment but also utilizes 100% demand for primary plant. Without mitigation the OCA CCOSS would produce an indicated Residential class increase which is $47 - $99 million less than PPL's CCOSS increase. These differences confirm that the customer classification issue is very important to any claim about cost-based rates.

Increase @ Cost			
	PPL Increase	OCA 1 incr.	OCA 2 incr.
RS	274,418,397	$226,643,511	$174,863,487

SL/AL	6,385,352	6,584,322	6,774,729

Q. WHAT IS OCA'S REVENUE ALLOCATION RECOMMENDATION AFTER MITIGATION IS APPLIED?

A. The table below provides OCA's mitigated class revenue increase in the same table format at Mr. Rimal's testimony at page 22.

Rate Class	Rate Code	Revenue at Current Rates	Revenue Requirement based on ACOSS	Mitigated Revenue Requirement	ACOSS Increase (%)	Mitigated Increase (%)
Residential	RS	$722,478,068	$897,341,554	$972,585,022	24.2%	34.6%
Res.Thermal	RTS	$7,975,047	$15,519,859	$12,595,723	94.6%	57.9%
SGS-Sec	GS-1	$78,788,843	$97,633,478	$105,908,148	23.9%	34.4%
LGS - Sec.	GS-3	$129,227,939	$243,146,687	$204,302,663	88.2%	58.1%
LGS-LP4	LP-4	$38,995,732	$106,248,113	$61,589,535	172.5%	57.9%
LGS-LP5	LP-5	$1,980,696	$1,364,702	$1,980,696	-31.1%	0.0%
GS Heating	GH-2	$1,307,020	$2,044,327	$2,051,089	56.4%	56.9%
Lighting	SL/AL	$24,465,816	$31,240,545	$33,526,390	27.7%	37.0%
Total System		**$1,005,219,161**	**$1,394,539,265**	**$1,394,539,265**	**38.7%**	**38.7%**

Q. PLEASE COMPARE THE PPL MITIGATED CLASS INCREASES WITH THE OCA PROPOSAL.

A. The table below compares the PPL mitigated proposed increase (based on the supplemental ACCOS) with the OCA mitigated increase:

Mitigated			
	PPL Increase	**OCA Increase**	**Difference**
RS	277,550,521	250,106,954	(27,443,567)
RTS	4,534,966	4,620,676	85,710
GS-1	32,031,470	27,119,305	(4,912,165)
GS-3	45,952,974	75,074,725	29,121,751
LP-4	22,174,706	22,593,802	419,096
LP-5	-	-	-
GH-2	521,376	744,069	222,692
SL/AL	6,554,090	9,060,573	2,506,484

Q. DO YOU EXPECT THE OVERALL PROPOSED DISTRIBUTION REVENUE INCREASE TO BE LESS THAN THE COMPANY'S FILED REQUEST?

A. Yes. The OCA presents revenue requirement testimony which proposes downward adjustments to the system revenue requirement. I recommend that the class results should be proportionately scaled back by the adopted revenue requirement adjustments.

V. RATE DESIGN

A. Rate Class RS

Q. WHAT IS PPL'S PROPOSED RESIDENTIAL CUSTOMER CHARGE?

A. PPL proposes to increase the residential customer charge to $17.00. The current customer charge is $14.09. But the Company's testimony includes riders in order to characterize the current customer charge as $15.58.[32] The Company proposes to increase the residential customer charge by $1.42 - $2.91, depending on whether the current charge includes riders. The percentage increase is 9.7% - 20.6%, depending on whether the current charge is perceived as including riders.

Q. DO YOU HAVE AN OPINION AS TO WHICH PERCENTAGE INCREASE (10% OR 21%) IS MORE APPROPRIATE?

A. That depends on the context of the comparison. While the Company's claimed current customer charge of $15.58 has some validity, in my view, $14.09 is more appropriately labeled as the current customer charge. The $14.09 customer charge was determined to be the appropriate residential customer charge in PPL's 2015 base rate case. Therefore, I would describe the percentage increase as 20.6%. The riders which are assessed "per bill" are used to support the claimed $15.58 current residential customer charge. The choice of billing determinants for riders may involve factors other than cost-based rate design. In

[32] OCA 1-1, Attachment 227 (Revised).

the case of a "per bill" rider, ease of administration probably is a consideration. Moreover, unlike a rider, the fixed customer charge normally is not an adjustable or reconcilable rate.

Q. IS PPL'S RESIDENTIAL CUSTOMER CHARGE THE HIGHEST AMONG PENNSYLVANIA ELECTRIC UTILITIES?

A. Yes. According to data provided by PPL, the Company's $14.09 residential customer charge is the highest in the state.[33] The Pennsylvania average electric utility residential customer charge is $11.22. [34] The proposed $17.00 PPL customer charge would be 52% higher than the average and 29% higher than the second highest customer charge ($13.09).

Pennsylvania Residential Customer Charges

PPL	$14.09
Citizens	$13.10
Duquesne	13.09
Met Ed	$11.25
PECO	$11.30
Penelec	11.25
Penn Power	$11.00
Pike County	$9.55
UGI	$10.75
Wellsboro	$12.00
West Penn	$9.00

[33] Response to OCA XXI-15.
[34] Ibidem. (Average calculated without PPL).

Q. DO YOU AGREE WITH PPL'S RECOMMENDED INCREASE IN THE RESIDENTIAL CUSTOMER CHARGE?

A. No. As a matter of regulatory principles and policy, the absolute level of the fixed customer charge should be limited so that it provides the customer with more control over the size of the monthly bill. The customer charge is the least informative part of a utility's rate design, and an excessive customer charge is inconsistent with energy conservation objectives because it diminishes the price signal provided by usage rates.

Q. WHAT ARE THE POLICY REASONS FOR ENSURING THE RESIDENTIAL CUSTOMER CHARGE IS NOT EXCESSIVE?

A. An excessive customer charge can distort appropriate price signals for residential customers. The principal economic function of a customer charge is to ration access to the utility system. That objective conflicts with the policy basis for regulating monopolies and is counter to the concept of the essential service character of electricity. Public policy encourages universal service, rather than limiting public access to regulated monopoly service. Except for its role in rationing access to the system, the customer charge provides no meaningful price signal that is relevant to resource allocation. This contrasts with kWh charges which are controlled by the consumer's usage decisions. A tenet of rate design is that lowering the customer charge will increase the proportion of costs recovered through a usage-sensitive rate (i.e., price per kWh). That result is more consistent with energy conservation goals and provides pricing policies appropriate for consumption of finite natural resources. By allowing customers to control their utility bill with conservation, minimizing the customer charge is aligned with the Company's stated objective of

aggressively pursuing energy efficiency and reducing greenhouse emissions.[35] In addition, a policy that minimizes the customer charge is more equitable to low usage and low income residential customers.[36]

Q. MR. WISHART STATES THAT THE CURRENT CUSTOMER CHARGE MUST BE INCREASED TO REDUCE CROSS SUBSIDIES.[37] DO YOU AGREE WITH THIS APPROACH?

A. No. I disagree with his implicit definition of "cost" in the context of determining appropriate customer charges. Mr. Wishart's approach presumes that a cross-subsidy exists if the customer charge is not set equal to the allocation of costs to the customer classification in the CCOSS. However, the CCOSS is forced to allocate substantial indirect and overhead costs for which there is no economically objective allocation method and for which multiple methods of allocation may be equally justified. Economic theory would define a cross subsidy as a charge which falls below its direct incremental cost. So long as a customer charge recovers incremental costs which vary directly with the number of customers and provides a contribution to common and indirect costs, the charge is subsidy-free from an economic standpoint. My pricing approach is to set a customer charge at least equal to direct costs which vary with the number of customers.

---

35 PPL 2024 Sustainability Report. "PPL has adopted a net zero by 2050 greenhouse gas emissions goal."

36 See also, OCA St 6,OCA witness Colton.

37 PPL Statement 8, Wishart at 10.

Q. MR. WISHART ASSERTS THAT THE PPL CCOSS JUSTIFIES A CUSTOMER CHARGE HIGHER THAN $42 AND HIS $17 PROPOSAL REPRESENTS GRADUALISM. IS THE $42 TARGET MEANINGFUL?

A. No. My understanding is that Pennsylvania PUC's customary practice does not allow the residential customer charge to include distribution infrastructure delivery costs typically quantified by the minimum system. [38] The investment associated with lines, poles, and underground facilities are not appropriate components for the customer charge. Almost one-half of the cost utilized to "build up" Mr. Rimal's $42 customer charge consists of facilities classified by the minimum system. The Pennsylvania electric utilities with an average $11.22 customer charge, as discussed previously, did not include the shared distribution delivery investment in the customer charge.

Q. WHAT IS AN APPROPRIATE BENCHMARK FOR SETTING THE CUSTOMER CHARGE?

A. In my view, basic customer costs constitute the appropriate benchmark. The cost standard I applied to PPL's residential customer charge is based on the following components: O&M expense for (1) meters, meter reading, and customer accounting; (2) return, income tax and depreciation on meter and service investment and (3) minus credits for customer deposits, late payment fees and reconnection revenues and related deferred federal income tax components. In my view, general overhead, such as administrative and general expense,

[38] As stated in the 2020 RAP "Electric Utility Cost Allocation for a New Era" (p. 241-242), some states allow the minimum system classification for allocation among rate classes but utilize the basic customer charge within the class.

and customer classified costs which are only weakly related to customer count, should be excluded from the customer charge computation, because these costs do not vary directly with number of customers.[39] The customer charge is compensatory so long as it recovers the expenses which are required to maintain the residential customer on the system. My understanding is that the Commission historically favored a "basic customer cost" composed of costs for meter/service drops, meter reading, and billing.[40] I recommend that the Commission continue the approach taken in those historical cases which relied on the basic customer cost to evaluate the customer charge.

Q. WHAT IS THE RATE JUSTIFIED BY THE BASIC CUSTOMER CHARGE METHOD?

A. The residential customer charge developed by this analysis is **$8.54**. Importantly, this result is based on the Company's return proposed in its filing, and is, therefore, conservative. With the OCA's recommended return, or any lower return authorized by the Commission, the direct cost of serving residential customers would be lower. Because the current customer charge, $14.09, exceeds this cost, the residential customer charge recovers direct customer costs and contributes a 64% margin to common costs.[41] Details regarding my analysis of the customer charge are shown on Exhibit CJ-4.

---

[39] The calculation of direct customer costs includes limited employee benefit expense.

[40] *See e.g. Re: West Pennsylvania Power Co.*, 69 PUR4th 470 (1985); *Re: West Pennsylvania Power Co.*, 119 PUR4th 110 (1990); In addition, the direct cost method is also supported by *PPL Gas Utilities Corporation* (2007) Docket No. R-00061398 and *Columbia Gas of Pennsylvania* (2011) Docket No. R-2010-2201974.

[41] $24.09 / 8.54 = 1.64

Q. DID YOU INCLUDE UNCOLLECTIBLE EXPENSE IN THE BASIC CUSTOMER CHARGE ANALYSIS?

A. No. The PPL proposed customer charge includes uncollectible expense within customer accounting. My calculation excludes uncollectible expense from the residential customer charge because the amount of uncollectible expense is determined by the size of customer bills which are unpaid. The inclusion of uncollectible expense in the customer charge occurs because uncollectible expense is recorded in customer accounting; however, the act of recording the expense in a customer account does not mean that the cost varies directly with number of customers.[42] Moreover, residential uncollectibles are overwhelmingly associated with unpaid variable charges. The variable rate comprises 91% of the residential bill, and bills of uncollectible accounts probably include a higher percentage of variable charges.[43] Furthermore, the uncollectible expense in Account 904 includes retail transmission and energy functional components of unpaid bills. Therefore, uncollectible costs should be recovery through the base variable rate.

Q. DOES ENERGY CONSERVATION POLICY FAVOR THE USE OF THE BASIC CUSTOMER CHARGE CALCULATION?

A. Yes. In weighing the appropriateness of limited or broad calculations of the customer charge, the Commission should consider the effect on energy efficiency policies. A high customer charge tends to inhibit energy conservation. Minimizing the customer charge provides the ratepayer with a greater ability to control his/her bill on the basis of usage. For that reason, an excessive customer charge can promote wasteful energy consumption.

---

[42] The NARUC Electric Utility CAM specifically excludes uncollectible expense from Customer.CAM 103.

[43] Response to OCA IX 31 and XXI 14.

Pennsylvania's policy favors energy efficiency, as evidenced by directives requiring utility-funded energy efficiency conservation programs.

Q. BY RESTRAINING THE FIXED CUSTOMER CHARGE PRICING COMPONENT, DOES THE COMMISSION PERFORM ITS FUNCTION AS A CHECK ON MONOPOLY POWER?

A. Yes. PPL is a natural monopoly, and monopolists may be tempted to implement high customer charges as a form of strategic pricing.[44] Professor Bonbright observed that the utility cost analyst preparing a fully distributed cost of service study is "under impelling pressure to 'fudge' his cost apportionments by using the category of customer costs as a dumping ground for costs that he cannot plausibly impute to any of his other categories."[45] Furthermore, public utilities have an incentive to propose higher fixed charges because the charges produce less financial risk; however, they do not propose to compensate customers for the lower risk through a reduction in the allowable return on equity. Without such explicit compensation to ratepayers, the utilities' frequent argument in favor of the "revenue stability" aspect of fixed charges is not a reasonable policy basis for adopting high customer charges that produce an increased stream of guaranteed revenue.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE RESIDENTIAL CUSTOMER CHARGE?

A. My primary recommendation is to maintain the residential customer charge at its current price, which is $14.09 - $15.58, depending on the inclusion of riders. The current

[44] Under perfect competition, suppliers charge volumetric prices equal to marginal cost because they are price takers and would be unable to increase revenues with a fixed charge. The potential for price arbitrage in competitive markets prevent the supplier from attempting to shift cost recovery to a fixed price.

[45] Bonbright, James, *Principles of Public Utility Rates*, at 349, Columbia University Press, 1961.

residential customer charge exceeds my estimate of basic customer costs. Therefore, my position is that the ultimate revenue increase for the residential class should be recovered through the variable energy charge. Given that PPL's current $14.09 residential customer charge, as determined in PPL's last general base rate case, is the highest in the state, my primary recommendation is to reset the residential customer charge at that level. Simply put, the Commission should avoid raising the currently highest customer charge even higher. My alternative recommendation is to maintain the fixed charge at a level that includes current riders, which implies a current charge between $14.09 and $15.58, depending on how much of the SRM-2 rider should be imputed to the customer charge. If this approach is adopted, I recommend a $15.58 residential customer charge, which is a $1.49 increase over the current base 14.09 charge.

B. Rate Class RTS

Q. PLEASE DISCUSS THE RESIDENTIAL THERMAL STORAGE CLASS?

A. This is a legacy promotional rate class which was closed to new customers and grandfathered for existing customers in 1995. The class was originally intended to promote thermal storage end-uses within the residential class. The average usage of customers within this class is significantly higher than for the RS class. The class has continued at below cost rates, but PPL proposes to terminate the rate class and roll the customers into the RS class. The existing rate structure consists of a higher base customer charge (relative to the RS class) of $18.06 and a lower flat energy charge.

Q. WHAT IS YOUR RECOMMENDATION FOR THE CUSTOMER CHARGE?

A. If the Commission approves the elimination of this class rate, then the customers will be charged under the RS class tariff, and they should pay the same customer charge ($14.06-

$15.58) my testimony recommends for the RS class. However, if the Commission rejects the elimination of this class, the RTS customer charge should be maintained at its current $18.06 level.

Q. WHAT IS YOUR OPINION OF THE COMPANY'S PROPOSAL TO ELIMINATE THIS GRANDFATHERED RATE CLASS?

A. Purely from the perspective of appropriate rate design, it is reasonable to phase out end - use based rate classes which are the legacy of PPL's function as a vertically integrated utility. The only policy issue is whether the impact of the elimination on RTS customers is so severe as to justify continuation of the class. Mr. Wishart's supplemental rate design schedule indicates that the average bill impacts on RTS customers is a 70.5% increase in base rate bills and a 13.2% increase in total bills (including energy). If OCA's revenue allocation for the residential class is adopted and the overall revenue requirement is decreased in this proceeding, the impact on RTS customers of converting to RS should be moderated. In addition, I would urge the Company to consider other moderation devices such as rate limiters which are applied to individual bills that exceeds the fixed base rate bill cap, in the event that individual billing cases arise that produce severe impacts.

C. LP-5 RATES

Q. DOES ANOTHER OCA WITNESS ADDRESS TARIFF AND COST ISSUES RELATED TO LARGE LOADS?

A. Yes. Matthew Hoyt [46]will address OCA's position on large loads. Large loads, such as data centers, are expected to take service under Rate LP-5, which is the distribution tariff applicable to 69 kV or higher transmission customers. Currently LP-5 has a distribution

[46] OCA Statement 5.

base rate tariff comprised of a customer charge without a base volumetric or billed demand charge. Currently these customers also pay a $1.057 per kVa demand charge for the ACR-4 Rider, which pertains to energy efficiency programs. The Company proposes to maintain this structure. For the average monthly LP-5 bill, the customer charge is $994 and the rider ACR-4 charge is $13,523. This rate structure may be reasonable for current customers, but with the potential for new large loads in the future, the Company should consider making future changes to the tariff which would recover part of the class' costs based on a usage charge such as billed demand. As new large loads enter the class, so long as customer' base rates are priced purely on a customer charge, customers with potentially very high monthly peaks could create inequitable cost recovery within the class. Mr. Hoyt will address whether the generic large load tariff should require a separate customer class and the nature of future charges to the customers.

Q. YOUR REVENUE ALLOCATION RECOMMENDS THAT LP-5 BASE REVENUES SHOULD NOT DECREASE, DESPITE THE CCOSS INDICATING THAT THE CLASS' REQUIRED REVENUES ARE BELOW COST. DO YOU CONTEND THAT THE ISSUES CONSIDERED BY MR. HOYT SUPPORT YOUR POSITION THAT LP-5 RATES SHOULD NOT BE REDUCED?

A. Yes. Like the Company, I concluded that reasonable mitigation constraints should preclude any class from receiving a reduction. However, additionally new large loads may entail both financial and economic risk for both PPL and its customers. Such risk is not incorporated into equalized rates of return, and for this reason the supposed need for a class

revenue reduction may be suspect. The appropriate response is to review those risk issues in a broader proactive manner, as discussed by Mr. Hoyt.

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes.

Appendix A

SUMMARY OF QUALIFICATIONS

CLARENCE JOHNSON

EDUCATION

Bachelor of Science, Political Science, University of Houston.

Master of Arts, College of Social Science (Interdisciplinary/Urban Studies), University of Houston.

EXPERIENCE

Mr. Johnson has more than 35 years' experience as an expert witness and analyst related to electric and telecommunications utility issues.

CURRENT EMPLOYMENT

Mr. Johnson currently provides professional consulting and analytical analyses regarding regulatory and public policies related to public utilities and the energy industry.

PREVIOUS EMPLOYMENT 1983-2008

From September 1983 to June 2008, Mr. Johnson was a Regulatory Analyst for the Office of Public Utility Counsel. He was the professional staff person with primary responsibility for advising the Public Counsel on economic and regulatory policy issues. His responsibilities included: presenting expert testimony on regulatory matters; research related to rate filings of regulated public utilities; acting as a non-testifying expert and advising attorneys in cross-examination of witnesses and development of trial exhibits for utility regulatory proceedings; analyzing policies and practices for regulating public utilities; and preparing comments on proposed Public Utility Commission rules; assisting financial and economic staff in the development and preparation of testimony; providing expert testimony on selected issues; preparation of reports to the Legislature regarding the utility regulatory process.

EMPLOYMENT BEFORE 1983

During the period 1977 to 1983, Mr. Johnson extensively engaged in analysis and supervision of public interest advocacy programs. He directed two non-profit corporations involved in public policy research from 1978 to 1980 and 1982 to 1983, respectively; responsibilities included overall management of the corporations, negotiation and management of grants and contracts, supervision of research activities, and presentations of research findings to legislative and administrative governmental entities. From 1980 to 1982, he also performed policy analysis and substantive research on the impact of governmental policies for two publicly-funded entities. His responsibilities for the statewide support center for legal services programs in Texas assessed the effect of federal and state regulatory changes upon indigent clients. As an analyst for the Texas State Senate's Natural Resources

Committee, Mr. Johnson was responsible for research related to low-level radioactive waste disposal and low-head hydropower, and the committee's staff's interim report on energy conservation.

AWARDS Mr. Johnson was the recipient of the first annual Texas Outstanding Public Service Award in 1988.

MEMBERSHIP American Economic Association.

TESTIMONY ON BEHALF OF TEXAS OFFICE OF PUBLIC UTILITY COUNSEL

Docket No. 6588, Re Southwestern Bell Telephone Company,
Subject: Declassification of Documents.

Docket Nos. 7195 and 6755, Re Gulf States Utilities Company,
Subject: Rate Design/Cost Allocation.

Docket No. 7510, Re West Texas Utilities Company,
Subject: Rate Design/Cost Allocation.

Docket No. 8095, Re Texas-New Mexico Power Company,
Subject: Rate Design/Cost Allocation.

Docket No. 8363, Re El Paso Electric Company,
Subject: Rate Design/Cost Allocation.

Docket No. 8425, Re Houston Lighting & Power Company,
Subject: Revenue Requirements.

Docket No. 8425, Re Houston Lighting & Power Company,
Subject: Rate Design/Cost Allocation.

Docket No. 8646, Re Central Power and Light Company,
Subject: Revenue Requirements.

Docket No. 8646, Re Central Power and Light Company,
Subject: Rate Design/Cost Allocation.

Docket No. 8646, Re Central Power and Light Company,
Subject: Interim Rate Relief.

Docket No. 8555, Proceedings Concerning Houston Lighting & Power Company on Remand From Cause No. C-5705 and Cause No. 352,044,
Subject: Determination of Remand Amount.

Docket No. 8928, Re Texas-New Mexico Power Company,
Subject: Rate Design/Cost Allocation.

Docket No. 8585, Re Southwestern Bell Telephone Company,
Subject: Revenue Requirements/Affiliates.

Docket No. 8585, Re Southwestern Bell Telephone Company,
Subject: Reply, Revenue Requirements/Affiliates.

Docket No. 8585, Subject:	Re Southwestern Bell Telephone Company, Reply, Rate Design.
Docket No. 8585, Subject:	Southwestern Bell Telephone Company, Proposed Non-Unanimous Stipulation.
Docket No. 9300, Subject:	Texas Utilities Electric Company, Revenue Requirement.
Docket No. 9300, Subject:	Texas Utilities Electric Company, Cost Allocation and Rate Design.
Docket No. 9300, Subject:	Texas Utilities Electric Company, Prudence of Plant Acquisition.
Docket No. 9561, Subject:	Central Power and Light Company, Revenue Requirement.
Docket No. 9561, Subject:	Central Power and Light Company, Cost Allocation and Rate Design.
Docket No. 9578, Subject:	Sugar Land Telephone Company, Inquiry into Sale.
Docket No. 9850, Subject:	Houston Lighting & Power Company, Revenue Requirement.
Docket No. 9850, Subject:	Houston Lighting & Power Company, Cost Allocation and Rate Design.
Docket No. 9850, Subject:	Houston Lighting & Power Company, Settlement Testimony: Revenue Requirement and Rate Design.
Docket No. 9981, Subject:	Central Telephone Company, Revenue Requirement/Affiliates.
Docket No. 10894, Subject:	Gulf States Utilities Company, Affiliate Transactions/Power Purchases.
Docket No. 11735, Subject:	Texas Utilities Electric Company, Revenue Requirement and Rate Design.

Docket No. 11892, General Counsel's Original Petition for Generic Proceeding Regarding Purchased Power,
Subject: Impact of Purchased Power on Cost of Capital.

Docket No. 12700, El Paso Electric Company,
Subject: Acquisition, Revenue Requirement and Rate Design.

Docket No. 12957, Houston Lighting & Power Company,
Subject: Contract Pricing Tariff.

Docket No. 13100, Texas Utilities Electric Company,
Subject: Competitive Pricing Tariffs.

Docket No. 13575, Texas Utilities Electric Company,
Subject: Demand Side Management and Purchase Power Recovery.

Docket No. 12065, Houston Lighting & Power Company,
Subject: Revenue Requirement/Plant Cancellation/Prudence.

Docket No. 12065, Houston Lighting & Power Company,
Subject: Cost Allocation and Rate Design.

Docket No. 13943, Gulf Coast Power Connect,
Subject: Transmission Line CCN.

Docket No. 13575, TUEC Application for Relief Regarding Recovery Solicitations,
Subject: DSM and Purchase Power Cost Recovery.

Docket No. 13369, West Texas Utilities Company,
Subject: Cost Allocation and Rate Design.

Docket No. 14435, Southwestern Electric Power Co.,
Subject: Rate Design.

Docket No. 14716, Texas Utilities Electric Company,
Subject: Wholesale Competitive Rate.

Docket No. 14965, Central Power and Light Company,
Subject: Cost Allocation, Rate Design and Competitive Issues.

Docket No. 14965, Central Power and Light Company,
Subject: Reply, Cost Allocation, Rate Design and Competitive Issues.

Docket No. 15560, Texas-New Mexico Power Company,
Subject: Competitive Issues.

Docket No. 16705, Entergy Gulf States, Inc.,
Subject: Cost Allocation, Rate Design and Competitive Issues.

Docket No. 16705, Entergy Gulf States, Inc.,
Subject: Reply, Cost Allocation, Rate Design and Competitive Issues.

Docket No. 16995, Central Southwest Corp.,
Subject: Integrated Resource Planning.

Docket No. 17751, Texas-New Mexico Power Company,
Subject: Rate Design and Competitive Issues.

Docket No. 18845, CPL, WTU, and SWEPCO,
Subject: Integrated Resource Planning.

Docket No. 21527, TXU Financing Order,
Subject: Cost Allocation.

Docket No. 21528, CPL Financing Order,
Subject: Cost Allocation.

Docket No. 21591, Sharyland Utilities Initial Rates & Tariffs,
Subject: Deferrals.

Docket No. 21956, Reliant Business Separation Plan,
Subject: Price to Beat and Capacity Auction.

Docket No. 22344, Generic Rate Design and Customer Classification for TDUs,
Subject: Rate Design.

Docket No. 22349, TNMP Unbundling,
Subject: Competitive Transition Charge and Revenue Requirements/Cost Allocation/Rate Design.

Docket No. 22350, TXU Unbundling,
Subject: Competitive Transition Charge.

Docket No. 22351, Southwestern Public Service Company Unbundling,
Subject: Cost Allocation/Rate Design.

Docket No. 22352, Central Power & Light Company,
Subject: Competitive Transition Charge.

Docket No. 22355, Reliant Unbundling,
Subject: Non-Bypassable Charges and Competitive Transition Charge/Cost Allocation/Rate Design.

Docket No.22356, Entergy Gulf States Utilities Unbundling,
Subject: Revenue Requirements/Cost Allocation/Competitive Transition Charge/Settlement Rate Design.

Docket No. 24194, Application of TNMP to Establish Price to Beat Fuel Factor,
Subject: Fuel and purchased power costs.

Docket No. 25230, Joint Application for Approval of Stipulation Regarding TXU Electric Company Transition to Competition Issues,
Subject: Retail Clawback Provisions of Non-Unanimous Agreement.

Docket No. 25314, Application of West Texas Utilities Company and Mutual Energy WTU to Establish a Fuel Reconciliation Methodology for Southwest Power Pool (SPP) Customers,
Subject: Fuel Cost Method.

Docket No. 24336, Application of Entergy Gulf States, Inc. for Approval of Price to Beat Factor,
Subject: Unaccounted for Energy.

Docket No. 23320, Petition of ERCOT for Approval of the ERCOT Administrative Fee,
Subject: ERCOT Fee Structure.

Docket No. 26194, El Paso Electric Company Fuel Reconciliation,
Subject: Purchased Power and Off-System Sales.

Docket No. 27576, Application of Texas-New Mexico Power Company for Reconciliation of Fuel Costs,
Subject: Fuel Reconciliation.

Docket No. 28813, Inquiry Into Rates of Cap Rock Energy,
Subject: Revenue Requirements/Cost Allocation/Rate Design.

Docket No. 28840, Application of AEP Texas Central Company for Change in Rates,
Subject: Cost Allocation/Rate Design/Affiliate Transactions.

Docket No. 30485, Application of CenterPoint Energy Houston Electric, LLC For A Financing Order,
Subject: Transition Charge Recovery.

Docket No. 30143, Petition of El Paso Electric Company to Reconcile Fuel Costs (Initial and Rebuttal Testimonies),
Subject: Fuel Reconciliation.

Docket No. 30706, Application of CenterPoint Energy Houston Electric, LLC for A Competition Transition Charge,
Subject: Competitive Transition Charge Structure.

Docket No. 31315, Application of Entergy Gulf States, Inc. for Approval of Incremental Purchased Capacity Recovery Rider,
Subject: Purchase Power Capacity Rates.

Docket No. 31544, Application of Entergy Gulf States, Inc. for Recovery of Transition to Competition Costs,
Subject: Allocation of Transition Costs.

REBUTTAL TESTIMONY OF CLARENCE L. JOHNSON ON BEHALF OF THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

January 23, 2026

Contents

I. INTRODUCTION 2

II. ALLOCATION OF CLASS REVENUE INCREASE 4

III. RESIDENTIAL CUSTOMER CHARGE 10

IV. UNBUNDLING PROPOSAL 13

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Clarence L. Johnson. My business address is 3707 Robinson Ave, Austin, Texas 78722.

Q. ON WHOSE BEHALF ARE YOU PRESENTING TESTIMONY IN THIS PROCEEDING?

A. I am presenting testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS YOUR CURRENT EMPLOYMENT?

A. I am self-employed as a consultant providing technical analysis, advice, and testimony regarding energy and utility regulatory issues.

Q. ARE YOU THE SAME CLARENCE JOHNSON WHO PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?

A. Yes. I presented my direct testimony and exhibits in OCA Statement No. 4.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY IN THIS CASE?

A. My rebuttal testimony will rebut testimony presented by other parties on cost allocation and rate design issues pertaining to PPL's ("PPL" or "Company") base rate increase requested in this docket.

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS.

A. My conclusions are as follows:

- PPLICA witness LaConte accepts the Company's CCOSS, which results in an excessive customer classification due to the load carrying capability of the minimum system facilities.
- PPLICA witness LaConte proposes a 1.3 times mitigation cap (130% of system percent increase) for the RTS and LP-4 classes, instead of 1.5 times mitigation cap proposed by the Company. If the Commission is inclined to accept a lower mitigation cap, my suggestion is to utilize a 1.4 times mitigation cap as an alternative. In addition, if my proposed CCOSS is adopted, I would not object to the 1.3 times mitigation cap.
- OSBA witness Ewan accepts the Company's revenue allocation generally but recommends an increase in the Residential allocation and a decrease in the GS-1 allocation. I oppose his recommendation for two reasons: (1) As stated above,

acceptance of the Company minimum system study results in an excessive customer classification; and (2) Mr. Ewan has not provided sufficient information about his proposal to permit an evaluation.

- SEF witness Costlow asserts that the Company's "cost-based" customer charge of $42 per month should be adopted. I recommend rejection of his proposal inasmuch as it is contrary to sound and reasonable rate design practice.
- RESA witness Lacey recommends that PPL should conduct an unbundling process to modify the allocation of costs between shopping and non-shopping customers. His proposal is vague and fails to identify specific costs which should be reallocated. In addition, the Commission previously rejected a similar proposal. My recommendation is to reject his proposed modification of unbundled costs.

II. ALLOCATION OF CLASS REVENUE INCREASE

Q. WHAT IS THE POSITION OF PPLICA WITNESS BILLIE LACONTE REGARDING CLASS REVENUE INCREASES?

A. Ms. LaConte generally supports the Company's proposed class revenue increase. She agrees that the 150% mitigation cap is often applied but concludes that the results for the Large Power 4 (LP-4) and Residential Thermal Storage (RTS) classes (56.9% increase) are high enough to produce rate shock. Therefore, her recommendation is to reduce the 150% mitigation cap to 130%.

Q. PLEASE COMPARE THE PPL, OCA, AND PPLICA REVENUE ALLOCATION RECOMMENNDATIONS.

A. The table below compares the PPL, PPLICA, and OCA recommended percentage increases after mitigation.

Mitigated Percentage Increase

Rate Code	PPL	PPLICA	OCA
RS	**38.42%**	**38.77%**	**34.6%**
RTS	**56.86%**	**49.26%**	**57.9%**
GS-1	**40.65%**	**40.91%**	**34.4%**
GS-3	**35.56%**	**36.03%**	**58.1%**
LP-4	**56.86%**	**49.26%**	**57.9%**
LP-5	**0.00%**	**0.00%**	**0.0%**
GH-2	**39.89%**	**40.18%**	**56.9%**
SL/AL	**26.79%**	**27.64%**	**37.0%**
System	**38.7%**	**38.7%**	**38.7%**

Q. WHAT ARE CAUSES OF THE DIFFERENCE?

A. The difference between Ms. LaConte's recommended class increases and PPL's recommended class percentages is due to the use of a 130% mitigation cap instead of the Company's 150% mitigation cap. The difference between the OCA's proposal and PPL's proposed class increase is due to my proposed modification of the CCOSS minimum system utilized by PPL. The cause of the difference between

OCA and PPLICA recommendations is due to both the 130% cap and OCA's recommended modifications to the CCOSS.

Q. DO YOU DISAGREE WITH MS. LACONTE'S ACCEPTANCE OF PPL'S CCOSS?

A. Yes. For the reasons explained in my direct testimony, PPL's minimum system study classifies an excessive proportion of lines, poles, transformers, and underground facilities as customer-related. The customer allocation allocates almost 90% of customer classified grid costs to residential customers. Because the Company's minimum system study is based on facilities and equipment with material demand-carrying capability, the methodology over-allocates costs to low usage customers (such as the residential class). My recommendation is to adjust the CCOSS customer ratios in order to minimize the demand carrying capacity of facilities and equipment used in the minimum system study.

Q. WOULD THE RESULTS OF MS. LACONTE'S MITIGATION RECOMMENDATION CHANGE IF THE OCA'S CCOSS WAS UTILIZED?

A. Yes. The table below shows the OCA's revenue allocation, which is based on OCA's CCOSS, if Ms. LaConte's proposed 130% cap is applied.

OCA With 130% CAP

Rate Code	Revenue Increase	Percent
RS	262,032,232	36.27%
RTS	4,037,155	50.62%
GS-1	28,454,466	36.11%
GS-3	65,064,761	50.35%
LP-4	19,740,550	50.62%
LP-5	-	0.00%
GH-2	658,070	50.35%
SL/AL	9,332,870	38.15%
System	389,320,104	38.7%

Q. PLEASE DISCUSS PPLICA'S PROPOSED 130% OF SYSTEM AVERAGE CAP.

A. Ms. LaConte asserts that the "common rule" of applying a 150% cap will result in rate shock for the LP-4 and RTS classes in this case. As an alternative mitigation measure, her testimony recommends a 130% cap. While I agree that varying mitigation cap levels can be tailored to the circumstances, 130% provides a lessor recognition of cost-based results. If the Commission is inclined to accept some easing of the mitigation cap, my recommendation is to adopt a 140% cap. This provides more mitigation than proposed by the Company but still recognizes the importance of CCOSS results. Moreover, if the Commission adopts the OCA's

CCOSS result, application of the 130% cap may be reasonable and appropriate, given the more significant impact on LP-4 customers. In order to compare these proposals, I have restated Ms. LaConte's revenue allocation with a 140% cap below:

PPLICA: 140% CAP

Rate Code	Revenue Increase	Percent
RS	262,032,232	38.60%
RTS	4,037,155	53.05%
GS-1	28,454,466	40.80%
GS-3	65,064,761	35.79%
LP-4	19,740,550	53.05%
LP-5	-	0.00%
GH-2	658,070	40.05%
SL/AL	9,332,870	27.16%
System	389,320,104	38.7%

Q. DOES PPLICA'S REDUCTION OF THE MITIGTION CAP PROVIDE DIRECT BENEFITS TO CUSTOMERS CURRENTLY TAKING RTS SERVICE?

A. Not necessarily. The impact depends on whether the Commission adopts PPL's proposal to roll RTS customers onto the RS tariff. If it is adopted, the magnitude of increase for current RTS customers is likely to be dictated by the difference between standard residential rates and current RTS rates.

Q. PLEASE RESPOND TO OSBA WITNESS EWAN'S TESTIMONY REGARDING REVENUE ALLOCATION.

A. Mr. Ewan expresses agreement with PPL's CCOSS and appears to accept the Company's revenue allocation because it is "directionally" consistent with the CCOSS. I disagree with this conclusion because the Company's CCOSS allocates excessive costs on a customer basis, as discussed previously and in my direct testimony. Mr. Ewan goes on to say that the Company could increase the RS percentage increase and reduce the GS-1 percentage increase based on the mitigated revenue-cost ratios. However, his testimony does not reveal or quantify a proposed change in the Company's revenue allocation. I disagree with his proposal to raise the residential class percentage increase for the sake of reducing the GS-1 percentage increase.[1] Moreover, he has not provided a revenue allocation proposal to evaluate.

[1] The revenue-cost ratios for RS and GS-1 are identical in the mitigated revenue increase calculated in the Company's Supplemental ACCOS (confidential) tab "Mitigation."

III. RESIDENTIAL CUSTOMER CHARGE

Q. DO YOU DISAGREE WITH SEF WITNESS COSTLOW'S TESTIMONY REGARDING THE RESIDENTIAL CUSTOMER CHARGE?

A. Yes. Mr. Costlow argues that the PPL proposed customer charge is too low and should be increased to full cost ($42 per month) based on the Company's CCOSS. I will address some of Mr. Costlow's assertions regarding costing and rate design. OCA witness Colton will address Mr. Costlow's claims regarding low-income customers.[2]

Q. DO YOU AGREE WITH MR. COSTLOW'S POSITION THAT THE CUSTOMER CHARGE REPRESENTS A SIGNIFICANT SUBSIDY WITHIN THE RESIDENTIAL CLASS?

A. No. As my direct testimony (OCA Statement 4) explains at page 34, such an approach incorrectly presumes the existence of a cross-subsidy if the customer charge does not equal the total of customer classified embedded costs in the CCOSS. The CCOSS is forced to allocate substantial indirect and overhead costs for which there is no economically objective allocation method and for which multiple methods of allocation may be equally justified. The classification of poles, lines, and transformers is particularly problematic, given the substantial division among

[2] OCA Statement 6R.

state regulators as to whether such costs are customer or demand related. Economic theory would define a cross subsidy as a charge which falls below its direct incremental cost. So long as a customer charge recovers incremental costs which vary directly with the number of customers and provides a contribution to common and indirect costs, the claims of a subsidy are not correct from an economic standpoint.

Q. IS MR. COSTLOW'S SUPPORT OF A $42 RESIDENTIAL CUSTOMER CHARGE REASONABLE?

A. No. A 170% increase in the customer charge is extreme and contrary to gradualism principles.[3] Approximately one-half of this customer charge calculation is comprised of distribution lines, poles, underground facilities, and transformers. In my experience, the Commission does not normally include these costs in the customer charge. While parties may disagree regarding the inclusion of particular indirect costs, the scope of the fixed charge is generally limited to the costs associated with customer billing and collection, metering, and services rather than delivery infrastructure. Mr. Costlow's argument appears to be based on the position that fixed costs should be recovered through a fixed charge rather than a volumetric rate.[4] This is a view that equates fixed costs with sunk costs and ignores the

[3] This is based on the current $15.53 customer charge (including riders) compared to a $42 customer charge.
[44] SEF Statement 1 at 24.

economic concept that all costs are variable in the long run.[5] Shifting the fixed costs of the delivery system to the customer charge, in my opinion, represents a departure from the Commission's normal practice. For instance, when Citizens Electric[6] proposed a similar shifting of fixed costs to the customer charge, the Commission concluded, "We do not believe that this type of rate structure represents sound regulatory policy or best serves the public interest."[7]

Q. IF FIXED COSTS ARE LOADED INTO THE CUSTOMER CHARGE, DOES THAT HINDER ENERGY EFFICIENCY?

A. Yes. The kWh charge is the primary means of sending price signals to residential customers. By minimizing the variable charge, the signal for energy conservation is diminished. In the Citizen Electric case referenced above, the Commission pointed out that the Company's fixed charge proposal would suppress the customer's ability to control their costs, stating: "if customers try to reduce their energy consumption as a means of reducing their energy expense, they will expect, reasonably so, to see that reflected on their bill. With the Company's proposed rate design, that will not happen to the full extent that it could."[8] For the reasons I have discussed, my recommendation is to reject Mr. Costlow's position that the residential customer charge should be significantly increased.

[5] PPL planning provides for a five year time horizon for upgrading primary and secondary conductors. OCA IX-18.
[6] *Pennsylvania PUC vs. Citizens Electric Co. of Lewisburg PA*, R-2019-3008212, April 14, 2020.
[7] Ibidem, Opinion at 148. "This seems almost punitive to customers who attempt to control their usage."
[8] Ibid.

IV. UNBUNDLING PROPOSAL

Q. DO YOU ADDRESS RESA WITNESS LACEY'S TESTIMONY?

A. Yes. While I take no position on the testimony regarding supplier tariff provisions, I disagree with his brief comments discussing potential efforts to modify PPL's unbundled costs. He recommends that PPL should be directed to "conduct an exercise to unbundle all of PPL's cost" and allocate those costs between default service and distribution only customers.[9] He also contends that PPL allocates customer service, billing, IT, HR, and rent expenses to all customers when "they should rightfully not be fully allocated to shopping customers."[10] To the extent that Mr. Lacey is requesting that certain indirect costs should be shifted onto default customers, I disagree with his recommendation.

Q. HAS THE COMMISSION ADDRESSED A SIMILAR ARGUMENT PREVIOUSLY?

A. Yes. In the 2018 PECO base rate case, NRG proposed to reallocate indirect administrative costs onto residential customers taking default service.[11] The Commission rejected the proposal, stating "the distinction that NRG wishes to draw

[9] RESA Statement 1 at 36.
[10] Ibidem at 18.
[11] Pennsylvania PUC v. PECO Electric Division, R-2018-3000164,

between shopping and non-shopping customers is not a definable classification."[12]

According to the Commission:

> A theory that underlies NRG's proposal is that the categories of cost incorporated in alternative energy suppliers' charges to their customers should be the same as the categories of costs incorporated in PECO's PTC. However, rate design is governed by the principle of cost causation. This principle requires that the cost of supplying public utility services is allocated to those who cause the costs to be incurred.[13]

Q. IS PROVIDING DEFAULT SERVICE DIFFERENT FROM COMPETITIVE SUPPLIERS?

A. Yes. By law, the default service provider (PPL) must meet a set of standards with the goal of providing "adequate, reliable, affordable, efficient and environmentally sustainable electric service at the least cost, taking into account any benefits of price stability over time and the impact on the economy."[14] In its role as default service provider, PPL must be prepared to meet the requirements of serving 100% of residential customers at any time. As such, PPL's default costs are not avoidable as PPL must stand ready to serve at all times. For that reason, the default service provider's obligations are not the same as EGS providers, and it is not reasonable to "force" the default service cost to be comparable to EGS costs.

[12] Ibidem. Order and Opinion at 38.
[13] Ibid.
[14] Act 129 of 2008, Preamble.

Q. PLEASE SUMMARIZE YOUR POSITION REGARDING MR. LACEY'S CONTENTION THAT PPL SHOULD BE DIRECTED TO UNDERTAKE AN UNBUNDLING PROCESS.

A. Mr. Lacey has not identified the specific costs which should be removed from distribution-only costs and assigned only to default service customers. Furthermore, he has not set out proposed reallocation methods and describes his recommended procedure only in vague terms. Therefore, I cannot evaluate the impact of his proposal. Moreover, he has not provided a reason to undertake an indeterminate unbundling procedure which potentially could significantly affect future distribution costs. This portion of his recommendation should be denied.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes.

SURREBUTTAL TESTIMONY
OF
CLARENCE L. JOHNSON

ON BEHALF OF
OFFICE OF CONSUMER ADVOCATE

February 9, 2026

SURREBUTTAL TESTIMONY OF CLARENCE JOHNSON

I. INTRODUCTION **1**

II.SUMMARY **1**

III. CLASSIFICATION OF THE MINIMUM DISTRIBUTION SYSTEM **3**

IV. RESIDENTIAL CUSTOMER CHARGE **13**

V. REVENUE ALLOCATION **18**

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Clarence L. Johnson. My business address is 3707 Robinson Ave, Austin, Texas 78722.

Q. ON WHOSE BEHALF ARE YOU PRESENTING SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. I am presenting surrebuttal testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS CASE?

A. My surrebuttal testimony will address the following rebuttal testimony of PPLICA's LaConte and PPL's Rimal and Wishart.

II. SUMMARY

Q. PLEASE SUMMARIZE THE ISSUES DISCUSSED IN YOUR SURREBUTTAL TESTIMONY.

A. My conclusions are as follows:

- Rebuttal witnesses LaConte and Rimal utilize an overly expansive notion of the cost of connecting and attaching customers, which results in incorrect views of customer classified costs. In particular, Mr. Rimal fails to recognize the consequences of double counting demand in his minimum system study, which could be alleviated by utilizing components with little or no load carrying capacity for his study.

- Contrary to the rebuttal testimony of PPL and PPLICA, the Company's study should reflect the removal of demand related capacity by applying the minimum system study adjustment recommended in my direct testimony (OCA Statement 4).
- Mr. Rimal's proposed $17 customer charge includes indirect costs which are only weakly related to cost causation. For purposes of developing rate design rate components, the Company is not required or compelled to establish rates based on ambiguous or weak relationships to cost causation. Rate design is based on developing appropriate pricing principles, Contrary to Mr. Wishart's rebuttal testimony, the impact upon energy conservation is an important principle which favors lower customer charges.
- To the extent feasible, the residential customer charge should be limited to recovery of costs which vary directly with the number of customers. Mr. Rimal's rebuttal testimony incorrectly claims that my "basic customer charge" calculation is flawed because it omits certain indirect costs. Given that the current customer charge exceeds the direct costs of adding customers to the system, a customer charge increase is not required. Mr. Rimal's rebuttal testimony erroneously characterizes my customer charge recommendation and should be rejected.
- The Company's rebuttal ACCOS study corrects an error. As a result, the mitigated revenue allocation results are somewhat more favorable to the residential class than the

Company's original proposal. I have reflected the Company's correction in the OCA revised revenue increase recommendation.

III. CLASSIFICATION OF THE MINIMUM DISTRIBUTION SYSTEM

A. PPLICA STATEMENT 1R

Q. PPLICA WITNESS LACONTE DISAGREES WITH YOUR POSITION THAT TOO MUCH OF THE LINES, POLES, TRANSFORMERS AND UNDERGROUND FACILITIES ARE CLASSIFIED AS CUSTOMER. PLEASE RESPOND TO HER ARGUMENT.

A. Ms. LaConte argues that the access function of distribution plant ("access to a delivery ready distribution grid") is the basis for customer classification. "In other words investments made *solely* to attach the customer to the system are clearly customer-related."[1] (*emphasis added*) But the actual investments required to attach the customer to the system—the service lines and meter—are not included in the minimum system and are classified fully to the customer classification. However, her argument expands the customer access function beyond connecting the customer to the system. Basically this argument boils down to "the existence of the customer" causes the distribution system to be built in order to provide "readiness to serve." Taken to its logical conclusion, this position would classify a portion of generation and transmission facilities as customer-related because they are required by the customer's existence to provide readiness to serve.

[1] PPLICA Statement No. 1R at 4.

Of course, regulatory commissions do not classify generation and transmission facilities as customer-related, but instead they are classified as demand and energy related, thereby exposing the inexplicable "readiness to serve" position. Almost any utility cost is premised on the utility serving customers. But that is not a sound or logical basis for classifying costs as access-related. Ms. LaConte's readiness to serve argument is similar to the economic concept of option demand[2]. But this principle is a contingent demand function and surely any pricing of the option to take service will be based on the customer's probable maximum demand for electricity. Just as the utility builds facilities to serve customers, the utility also requires customer demand for the electricity carried by the facilities. Without demand for electricity, no business reason exists to construct a distribution network. Ms. LaConte also contends that "voltage support" provided by the distribution system is "clearly…related to the existence of the customer."[3] However, these are costs required for reliability which are more properly classified as demand-related. For example, if a distribution line has a large customer at the end of the line whose demand would cause unacceptable voltage drop, the utility would take measures (such as installing capacitors / voltage regulation devices or re-configuring the line) in order to maintain voltage within required limits. These actions are taken in order to avoid outages--costs which are properly viewed as demand-related.

Q. MS. LACONTE JUSTIFIES THE CUSTOMER CLASSIFICATION BY STATING "THERE ARE COSTS OF THE DISTRIBUTION NETWORK THAT ARE

---

22 Option Demand theory is the payment a customer would make in order to maintain the option of taking service at any time.

3 PPLICA Statement No. 1R at 4.

ENTIRELY UNRELATED TO CUSTOMER DEMAND." [4] DO YOU AGREE WITH THIS CONTENTION?

A. No, this is not a justification for assigning the cost to the customer category. Just because a cost factor is not directly caused by demand does not mean that the cost is attributable to the customer classification. My direct testimony acknowledges that many factors affect the incurrence of distribution costs which are not completely caused by either demand or number of customers. The lists of factors can be quite long: geographic circumstance, topology, soil conditions, location of roads and highways, economies of scale, customer density, load forecasting uncertainty, safety standards, minimization of energy losses, corporate standards, etc. But it is incorrect to take the cost impacts of these factors and dump them in the bin of customer costs solely because they are not directly linked to demand. The Company's argument treats customer allocation as the default method for any causal relationship that can't be clearly defined. That approach is consistent with Dr. Bonbright's concern that cost study analysts inappropriately use "the category of customer costs as a dumping ground for costs that he cannot plausibly impute to any of his other categories."[5] Moreover, many of those cost influences are more related to demand and customer usage than customer count.[6]

[4] PPLICA Statement 1R at 4.
[5] Bonbright, James, *Principles of Public Utility Rates*, at 349, Columbia University Press, 1961.
[6] Examples include economies of scale (based on facility size), forecasting uncertainty, and losses.

Q. PPLICA'S REBUTTAL TESTIMONY DISPLAYS A DIAGRAM TO DEMONSTRATE THAT DISTRIBUTION DELIVERY INFRASTRUCTURE IS CUSTOMER-RELATED.[7] DOES IT PROVE WHAT IT CLAIMS?

A. No. The diagram purports to show two classes with equal demand, Class A, a residential subdivision, and Class B, a single large factory or power user. Without providing any numerical comparison, Ms. LaConte concludes "a much more extensive distribution system is required to attach a multitude of small customers than a single large customer, even though demand for each class is the same."[8] Apparently this impression is based on the perceived length of wire serving both classes in the diagram However, this illustration omits two critical factors, cost per customer and customer density (as in customers per linear mile).. When the customer density of serving different customer classes varies, the customer allocation produces weak and potentially misleading results. As noted in my direct testimony, Dr. James Bonbright's foundational textbook described the incongruity of using the minimum system without recognizing differences in customer density:

> [T]he annual costs of this phantom, minimum sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs…. Their inclusion among the customer costs is defended on the ground that, since they vary directly with area of the distribution system (or else with the lengths of the distribution lines, depending on the type of distribution system), they therefore vary indirectly with the number of customers.
>
> What this last-named cost imputation overlooks, of course is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this

[7] PPLICA Statement 1R at 5.
[8] Ibidem.

> system. For it makes no allowance for the density factor (customers per linear mile or per square mile). Indeed, if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs of a minimum-sized distribution system.[9]

Q. CAN YOU ILLUSTRATE HOW CUSTOMER DENSITY MIGHT AFFECT THE CONCLUSION DRAWN FROM MS. LACONTE'S HYPOTHETICAL?

A. Yes. During discovery, PPL provided data on the recent extension of service to five large power or large general service customers.[10] For the five customers, the average cost of additional distribution facilities was $1.75 million per customer and the mileage of added distribution lines was 1.78 miles per customer. As a contrast, presumably the residential tract is a suburban development with much higher density. PPL states that suburbs have an average 51 – 149 customers per mile.[11] In other words, for the average length of line to serve the single large customer, above, the residential development's lines would serve 86 – 253 residential customers.[12] This would suggest that allocating the costs of Class A and Class B on customer count, simply assuming a fixed relationship between length of lines and customers, is unreasonable.

Q. DID MS. LACONTE RESPOND TO YOUR POSITION THAT PPL'S MINIMUM SYSTEM FACILITIES ENCOMPASS SIGNIFICANT LOAD CARRYING CAPABILITY?

---

9 *Principals of Public Utility Rates*, Columbia University Press, James Bonbright (1961) at 347-348.

10 PPL Response to OCA IX-37.

11 PPL Response to OCA IX-36.

12 1.7 miles X 51 customers/mile and 1.7 times X 149 customers/mile.

A. Yes. Her testimony states that assuming this claim is true, it does not justify rejecting the minimum system study. The testimony goes on to point to another utility that adjusts its CCOSS factors to remove its estimate of the load carrying capability of the minimum system.[13] However, the criticism ignores the fact that my recommendation also adjusts the minimum facility to remove the cost of load carrying capability (by removing labor installation cost). In fact, my proposal also adjusts the CCOSS in order to avoid the double counting of demand. Presumably the adjustment discussed by Ms. LaConte and my adjustment in this case are both intended to remove the impact of minimum system load carrying capacity, but my proposal is simpler and more straightforward. However, PPL has not proposed a demand adjustment similar to the adjustment discussed in her testimony.

B. PPL STATEMENT 7R

Q. MR. RIMAL CONTENDS THAT THE INCLUSION OF LOAD CARRYING COSTS WITHIN THE MINIMUM SYSTEM'S CUSTOMER CLASSIFICATION IS REASONABLE. DO YOU AGREE?

A. No. In my view, Mr. Rimal's description of the customer classification in his direct testimony is inconsistent with his position. His direct testimony states that the minimum system is a "system designed to simply connect customers."[14] He states that customer costs are incurred "to simply attach a customer to the system and are the same regardless of the

[13] PPLICA Statement 1R at 7.
[14] PPL Statement 7 at 15.

amount of energy the customer might consume." [15] These aspirations are consistent with the concept of minimizing usage-related costs within the customer classification. Like the PPLICA witness, Mr. Rimal expands the notion of "simply connecting customers" to a broader definition of access which can include some indeterminant level of load carrying capacity. By expanding the notion of "connecting" and "attaching" customers to a broader scope of costs, he has muddled the purpose of the minimum system study. How is the customer classified primary system simply the cost of connecting or attaching a customer when the principal purpose of primary lines is to connect substations to localized transformers? What size of pole or tower is required if the lines do not have load carrying capacity? My rebuttal of Ms. LaConte regarding her expanded view of "access" is similarly applicable to Mr. Rimal's rebuttal testimony.

Q. HOW DOES MR. RIMAL RESPOND TO YOUR TESTIMONY THAT THE PPL MINIMUM SYSTEM IS COMPRISED OF COMPONENTS WHICH ARE NOT THE MINIMUM SIZE FACILITIES ON THE SYSTEM?

A. My direct testimony provided examples of distribution facilities in the Company's minimum system study which were larger than the minimum sizes on the system. In order to minimize the inclusion of load carrying capacity, I recommended limiting the costs in the study to the portion represented by labor installation (i.e., non-material cost) expenditure, because labor is the portion of cost least likely to be affected by material sizing. Mr. Rimal responded that he did not conduct a zero-intercept study and that the NARUC manual permits the inclusion of load carrying costs in the minimum system,

[15] PPL Statement 7 at 18.

which is the alternative to a zero-intercept study.[16] Mr. Rimal stated that, based on the guidance of the NARUC manual, the minimum size components are the minimum size currently being installed on the system, as determined by the information Company personnel provided to him.[17]

Q. MR. RIMAL CITES THE NARUC ELECTRIC UTILITY COST ALLOCATION MANUAL ("NARUC CAM") AS SUPPORT FOR THE COMPANIES' MINIMUM DISTRIBUTION SYSTEM. PLEASE RESPOND TO HIS RELIANCE ON THE MANUAL.

A. First, reliance upon the NARUC Manual should be placed in appropriate perspective. The NARUC Manual is useful as an informative guide, but it is not intended to be applied in an unquestioned manner. The preface to the NARUC Manual sets out its objectives, including:

> The writing style should be non-judgemental, not advocating any one particular method, but trying to include all currently used methods with pros and cons.

The NARUC Manual was prepared in 1991 and probably reflected prevailing distribution classification practices at that time. However, "currently used methods" may have changed since that time. Nine years later, NARUC commissioned a report on distribution pricing methods which concluded that the majority of state commissions used a distribution classification method consistent with my recommendation (100% demand for joint distribution facilities and 100% customer for meters and services):

---

16 PPL Statement 7R at 12.
17 Ibidem.

> The most common method [for apportioning distribution facilities between demand and customer] used is the "basic customer method" which classifies all wires, transformers, and poles as demand-related, and meters, meter reading, and billing as customer-related." This general approach is used by more than 30 states.[18]

Furthermore, the cautionary statements in the NARUC Electric Utility Cost Allocation Manual (CAM) regarding the application of minimum distribution system methods, indicate that the manual contemplates that utilities will consider potential demand double counting issues when they select minimum size components:

> The analyst must determine the minimum size of each piece of equipment. "Should the minimum size be based on the minimum size equipment currently installed, historically installed, or the minimum size necessary to meet safety requirements?"…Cost analysts disagree on how much of the demand costs should be allocated to customers when the minimum-size distribution method is used to classify distribution plant. *When using this distribution method, the analyst must be aware that the minimum-size distribution equipment has a certain load-carrying capability, which can be viewed as a demand-related cost.*
>
> When allocating distribution costs determined by the minimum-size method, some cost analysts will argue that some customer classes can receive a disproportionate share of demand costs. Their rationale is that customers are allocated a share of distribution costs classified as demand related. Then those customers receive a second layer of demand costs that have been mislabeled customer costs because the minimum-size method was used to classify those costs.[19]

As discussed in my initial testimony, the minimum size components used in the Companies' minimum distribution system studies contain considerable load carrying capability and, therefore, result in the double recovery of demand costs under the label of

[18] "Charges for Distribution Service: Issues in Rate Design," Regulatory Assistance Project, Dec. 2000, page 30, Weston, Harrington, Cowart, Moskovitz, and Shirley.

[19] NARUC CAM at 95 (emphasis added).

customer costs. The NARUC CAM explicitly recognizes that the minimum distribution system method can result in double counting class demands, and suggests that the problem can be minimized through the careful selection of minimum size components or the use of the zero intercept methodology.[20] Mr. Rimal does not give adequate recognition of the NARUC manual's cautionary advice about the load carrying capacity of minimum size components.

Q. WHAT IS YOUR CONCLUSION REGARDING THE REBUTTAL OF YOUR MINIMUM SYSTEM RECOMMENDATION BY MS. LACONTE AND MR. RIMAL?

A. Their rebuttal testimony on this subject should be rejected. The Company's minimum system recommendation results in an excessive customer classification due to the inclusion of significant demand capacity as a customer cost, which results in a double counting of class demands. The impact of double counting adversely affects customer classes comprised of low usage customers, such as residential and small general service. My recommendation limiting the minimum size components to installed labor cost minimizes the load carrying portion of the equipment cost and represents a reasonable adjustment of the Company's minimum system study.

Q. DID ANY OTHER PARTY'S REBUTTAL WITNESS ADDRESS YOUR MINIMUM SYSTEM RECOMMENDATION?

[20] Ibidem.

A. Yes. OSBA witness Ewen states that OCA's modification of the Company's ACCOS appears reasonable.[21]

IV. RESIDENTIAL CUSTOMER CHARGE

Q. DOES MR. RIMAL ATTEMPT TO REBUT YOUR CUSTOMER CHARGE RECOMMENDATION?

A. Yes. Mr. Rimal recommends a $17 residential customer charge. My recommendation is to maintain the customer charge at $14.09 - $15.58 (depending on whether previous riders are included).

Q. MR. RIMAL CONTRASTS YOUR BASIC CUSTOMER CHARGE ANALYSIS WITH YOUR RECOMMENDATION TO UTILIZE THE HIGHER EXISTING CUSTOMER CHARGE LEVEL. HAS HE CONVEYED THE CONTEXT OF THIS POSITION?

A. Not fully. Mr. Rimal says that my objective of limiting the customer charge analysis to costs which vary with the number of customers is contrary to the ACCOSS framework which allocates embedded costs among customer classes. However, his testimony inappropriately conflates class cost allocation --which allocates total costs to customer classes--with rate design, which develops rates to recover costs within each customer class. Cost allocation is concerned with fairly apportioning total costs among customer classes. Rate design focuses on the component rates charged to end use consumers and should consider several pricing objectives, including public policy, economic efficiency, and the

[21] OSBA Statement 1R at 1.

manner in which the customers respond to prices. From an economic perspective, residential rates should convey usable pricing information to the end user so that they can respond by controlling their usage of utility service. In a two part tariff (fixed charge and usage charge), the monthly fixed customer charge conveys no useful pricing information to customers other than rationing access to the utility system. For this reason, my testimony quantified a basic customer cost composed of only those accounts which vary directly with the number of customers. So long as the customer charge recovers this basic cost, plus a reasonable contribution to common cost, the resulting fixed monthly charge is consistent with economic principles and is subsidy-free. Therefore, I concluded that the current PPL customer charge satisfies this criterion and should not be changed

Q. IS MR. RIMAL'S CRITICISM THAT YOUR ANALYSIS OMITS "CUSTOMER RELATED" A&G AND GENERAL PLANT COSTS VALID?

A. No, He claims that my analysis has utilized a "a very restrictive and flawed description" of what constitutes customer-related costs. The cardinal principle of assigning costs to classes is cost causation. However, the types of costs he is concerned with have a very weak or non-existent relationship to cost causation and are only classified in order to force the ACCOS study to equal full costs. The reason the costs are termed "indirect" is because they do not have a clear unambiguous causal connection to particular classifications. They do not directly vary with customer count or other classifiers. Although the classification can be a necessary but flawed means of achieving full allocation in the ACCOSS, analysts are not compelled to develop rate design pricing components based upon weak causality.

My understanding is that the Commission does not require PPL to include such costs nor does it prevent a deeper review of the appropriateness of costs in the customer charge. Contrary to Mr. Rimal's position and consistent with my analysis of a cost-based customer charge, the 2023 Columbia Water Company decision rejected a customer charge which is comprised of components which do not vary directly with the number of customers:

> We agree with the OCA that the Company's analysis includes numerous overhead costs that cannot reasonably be considered "direct costs" required to connect and maintain a customer's account. Rather, they are simply overhead costs that Columbia Water incurs in rendering service to its customers. The fact that some of these costs may be fixed, does not in and of itself make them direct costs that should be collected from a customer charge. Rather, the appropriate test is "whether the costs would increase with the addition of a customer and decrease with the subtraction of a customer." [22]

Q. MR. RIMAL CRITICIZES YOUR EXCLUSION OF UNCOLLECTIBLE EXPENSE FROM THE CUSTOMER CHARGE. DO YOU AGREE WITH HIS CRITICISM?

A. No. The Company assigns 100% of uncollectible expense to the customer charge. This pricing decision fails the test of cost causation. First, the customers who caused the uncollectible expense are no longer on the system. Existing customers cannot control the sunk cost of uncollectible accounts. Second, if uncollectibles were to be considered a customer charge component, the percentage would be much smaller than 100%. The size of customer bills have a strong causal influence on customer default. The customer charge

[22] Columbia Water Company Docket No. R-2023-3040258, Order at 155, Jan. 18, 2024.

comprises, on average, 9% of residential customer bills. It is not unreasonable to expect that distribution and energy usage rates have a much greater causal connection to uncollectibles. Mr. Rimal asserts that uncollectibles are included in customer accounts based on Uniform System of Accounts (USOA) practice. However, as noted in my direct testimony, the decision to record an expense to customer accounts does not dictate customer classification decisions which are based on cost causality.

Q. MR. WISHART REBUTS THE ARGUMENT THAT HIGHER CUSTOMER CHARGES DECREASE THE INCENTIVE FOR ENERGY CONSERVATION. DO YOU AGREE WITH HIS ARGUMENT?

A. No, Mr. Wishart essentially argues that the monthly impact of higher volumetric charges caused by a higher customer charge are too small to make a difference in customer behavior. However, his position is overly simplistic and does not reflect the impact on life cycle costs of appliances with long lives. And it ignores the differences in various customers' behavior and discount rates. For example, some customers may require both an appliance rebate and lower customer charges to make the life cycle costs and benefits of an appliance decision viable. The marginal impact on conservation decisions is important. Mr. Wishart illustrates the difference in volumetric rate for a $17 customer charge vs. a $10 customer charge, which is approximately $.008 per kWh.[23] I have performed analyses in the past of an Energy Star heat pump compared to standard heat pump in which a 1 penny differential in the volumetric rate was the difference between a

[23] PPL Statement 8R at 18,

positive or negative life cycle benefit for purchasing the higher efficiency heat pump.[24] Mr. Wishart dismisses out of hand the impact of an eight-tenth cent differential in the volumetric rate for PPL. In my opinion, that is an overly simplistic view of energy conservation and ignores the life cycle accumulation of bill impacts.

Q. MR. WISHART CRITICIZES YOUR TESTIMONY FOR STATING THAT THE PROPOSED CUSTOMER CHARGE INCERASE IS 20% RATHER THAN 9% WITH RIDERS INCLUDED. PLEASE RESPOND TO HIS CRITICISM.

A. First, my testimony included both percentage figures and stated that $14.09 and $15.58 are alternative ways of expressing the current customer charge, depending on whether riders are included or not. While I prefer the base customer charge to represent the current rate, my testimony states that the Company figure including riders is also valid. Second, the $15.58 PPL current customer charge favored by Mr. Wishart is 38.8% higher than the statewide average of electric utility customer charges.[25] PPL currently has the highest electric customer charge in Pennsylvania, and the increase to $17.00 would result in a 52% higher charge than the statewide average. Therefore, the PPL proposal expands the extent that its customer charge exceeds the monthly fixed charge of other Pennsylvania electric utilities.

Q. DO YOU HAVE A CORRECTION TO YOUR BASIC CUSTOMER CHARGE ANALYSIS?

[24] Docket No. R-2018-3000164, PUC v. PECO Electric, OCA Statement 3, Schedule CJ-4.
[25] The statewide average residential customer charge is $11.22. See OCA Statement 4 at 32.

A. Yes. OCA Statement 4 Exhibit CJ-4 provided my analysis of customer direct costs for the residential customer charge. During the course of responding to discovery, I found a minor error in the calculation of the basic customer costs. Exhibit SR-CJ-1 contains the corrected calculation. As a result of the correction, the basic customer charge is $8.85 instead of $8.54.

V. REVENUE ALLOCATION

Q. DID MR. RIMAL'S REBUTTAL TESTIMONY REVISE THE COMPANY'S REVENUE ALLOCATION?

A. Yes. The Company corrected several errors in both the revenue requirement and the class allocation. Of particular note, the Company's weighted class allocation of service lines contained an error which reduced the residential class allocation and changed allocations among general service classes.

Q. HAVE YOU COMPARED THE COMPANY'S REVISED REVENUE ALLOCATION WITH THE OCA REVENUE ALLOCATION AFTER CORRECTION OF THE ERROR.

A. Yes. In order to compare the OCA and PPL revenue allocation recommendation, it was necessary to reflect the same corrections from Mr. Rimal's rebuttal testimony in the OCA version of the ACCOS model and mitigated revenue results. The tables below show the mitigated revenue allocation with rebuttal correction for the PPL and OCA revised recommendations. Both are based on the 150% revenue increase cap and no decrease limitation.

PPL Mitigated Revenue Corrected			
Rate	Revenue Increase	Percent of Total	Percent
RS	$ 268,662,051	69.9%	37.13%
RTS	4,473,691	1.2%	56.05%
GS-1	35,024,543	9.1%	44.38%
GS-3	47,427,685	12.3%	36.66%
LP-4	21,883,322	5.7%	56.05%
LP-5	-	0.0%	0.00%
GH-2	549,707	0.1%	42.00%
SL/AL	6,500,203	1.7%	26.58%
System	$ 384,521,202	100.0%	38.20%

OCA Mitigated Allocation Corrected			
Rate	Revenue Increase	Percent of Total	Percent
RS	$ 244,452,903	63.6%	33.79%
RTS	4,561,762	1.2%	57.15%
GS-1	29,282,643	7.6%	37.11%
GS-3	74,137,747	19.3%	57.30%
LP-4	22,314,129	5.8%	57.15%
LP-5	-	0.0%	0.00%
GH-2	749,911	0.2%	57.30%
SL/AL	9,022,106	2.3%	36.89%
System	$ 384,521,202	100.0%	38.20%

Q. HAVE YOU ATTEMPTED TO REVIEW THE MID-POINT BETWEEN THE TWO ALLOCATION RECOMMENDATIONS?

A. Yes. While the OCA revenue allocation, above, continues to be my recommendation, sometimes reviewing the mid-point between the two proposals can be useful. The table below is based on averaging the class percent of total increase to arrive at a middle ground.

In my opinion, this middle ground result is not unreasonable and reflects elements of both the OCA and Company position.

Average of OCA and PPL Revenue Increases			
Rate	Revenue Increase	Percent of Total	Percent
RS	$ 256,557,477	66.7%	35.51%
RTS	$ 4,517,727	1.2%	56.65%
GS-1	$ 32,153,593	8.4%	40.81%
GS-3	$ 60,782,716	15.8%	47.04%
LP-4	$ 22,098,725	5.7%	56.67%
LP-5	$ -	0.0%	0.00%
GH-2	$ 649,809	0.2%	49.72%
SL/AL	$ 7,761,154	2.0%	31.72%
System	$ 384,521,201	100.0%	38.20%

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes.

DIRECT TESTIMONY

BARBARA R. ALEXANDER
BARBARA ALEXANDER CONSULTING LLC

ON BEHALF OF

OFFICE OF CONSUMER ADVOCATE

December 22, 2025

I. INTRODUCTION AND SUMMARY OF RECOMMENDATIONS

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member manager of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. WHAT IS YOUR BACKGROUND AND EXPERIENCE WITH RESPECT TO THE ISSUES ON WHICH YOU ARE PROVIDING TESTIMONY IN THIS PROCEEDING?

A. I opened my consulting practice in March 1996, after nearly ten years as the Director of the Consumer Assistance Division of the Maine Public Utilities Commission. While there, I testified as an expert witness on consumer protection, customer service and low-income issues in rate cases and other investigations before the Commission. My consulting practice is directed to consumer protection, customer service and low-income programs and policies relating to the regulation of the telephone, electric and gas industries. My practice has included policy issues relating to the adoption of retail energy markets and the regulation of public utility distribution service, particularly relating to reliability of service, rate programs, customer service performance, as well as default service programs and policies. I have appeared in over 30 U.S. and Canadian jurisdictions as an expert witness on behalf of state utility consumer advocates and national and state non-profit consumer organizations.

I am a graduate of the University of Michigan (B.A. 1968) and the University of Maine School of Law (J.D. 1976).

I have appeared before the Pennsylvania Public Utility Commission (PUC or Commission)

many times on behalf of the OCA. I filed testimony on consumer education, consumer protection, supplier licensing, customer enrollment, default service, and Code of Conduct issues for the OCA in the Commission's electric restructuring proceedings in 1997 and 1998, as well in all in the natural gas restructuring cases beginning in 1999. With respect to issues relating to retail market competition policies, I have filed testimony on behalf of the OCA on policies that should govern the planning and acquisition of Default Service for residential customers and on proposals to adopt Purchase of Receivables (POR) programs, Customer Referral Programs, and other "retail market enhancement" programs for electric and natural gas utilities, including PPL Electric. I have provided testimony submitted on behalf of the OCA on service quality and low-income program issues associated with recent electric and natural gas distribution company mergers and base rate cases for electric utilities, water and sewer utilities, and natural gas utilities as documented in my CV with the specific identification of relevant proceedings attached as Exhibit BA-1.

Q. DO YOU HAVE ADDITIONAL EXHIBITS ATTACHED TO THIS TESTIMONY?

A. Yes. I attach the following Exhibits:

- Exhibit BA-1: C.V. of Barbara R. Alexander
- Exhibit BA-2: Call Center Performance Data 2023-2025
- Exhibit BA-3: Summary of Root Cause Analysis (Barbara Alexander)
- Exhibit BA-4: PPL Field Technician Termination of Service Training, PPL Response to OCA-VII-7, attachment 1.
- Exhibit BA-5: Settlement and Commission Order, Docket No. P-2016-2524581.

Q. PLEASE SUMMARIZE PPL ELECTRIC'S PROPOSAL TO INCREASE RATES IN THIS PROCEEDING.

A. On September 30, 2025, PPL Electric Utilities Corporation (PPL Electric or the Company) filed a base rate case with the Commission. The Company proposes to increase rates to produce additional overall revenues of $356.3 million per year, a 33.4% increase in overall distribution revenue requirement. PPL provides electric distribution service to approximately 1.49 million residential, commercial, and industrial customers in portions of 29 counties across eastern and central Pennsylvania. Under the Company's proposal, the monthly bill for distribution charges for a residential customer using 1,000 kWh per month would increase by $14.80, from $65.16 to $79.96, or by approximately 22.7%. The Company has proposed increasing the fixed, monthly residential customer charge from $15.58 to $17.00, or by 9%.[1] The Company proposes a return on equity of 11.3% resulting in an overall rate of return of 8.56%, in conjunction with an equity-rich capital structure of 56% equity and 44% debt. Additionally, the filing requests approval of operational improvements regarding storm reliability, vegetation management, and infrastructure improvements. The filing also requests approval of customer service-related improvements as follows: cancelation of bill payment fees, EDI transaction fees will be recovered directly from the Electric Generation Suppliers instead of distribution customers, a large load interconnection tariff, electric vehicle rebate program, and tariff changes to classify customers based on use of the system.

Q. WHAT ISSUES WILL YOU ADDRESS IN YOUR TESTIMONY?

A. I will address the following issues in this proceeding:

[1] However, as included in OCA Witness Clarence Johnson's testimony, the actual current customer charge is $14.09 as set in PPL Electric's last base rate case. The reference to the larger customer charge amount above reflects PPL's intent to include various other charges in their description of the customer charge.

- Customer service, including the performance of the call center, billing, meter reading, complaint handling, and other metrics tracked by the Commission.
- Consumer protection policies and programs, particularly those relating to Chapter 56 of the Commission's regulations.
- PPL Electric's analysis of its customer complaints and payment arrangements;
- PPL Electric's proposal to eliminate fees for certain forms of customer payments for the PPL Electric bill and its inclusion of costs associated with this proposal in its revenue requirement;
- PPL Electric's presentation of, and customer communications concerning, Electric Generation Supplier Charges included on PPL Electric's residential customer bills; and
- PPL Electric's proposed customer communications and marketing for its Electric Vehicle charging pilot.

Q. IS YOUR TESTIMONY EXCLUSIVE ON THESE ISSUES?

A. No. While I am the primary witness on customer service and consumer protection policies and programs, my testimony supplements and contributes to the overall recommendations of the other OCA witnesses.

Q. WILL YOU PROPOSE CHANGES TO THE REVENUE REQUIREMENT OR RATES PROPOSED BY PPL ELECTRIC?

A. Not directly. My testimony concerning customer service and reliability of service performance is intended to provide context on the reasonableness of PPL Electric's proposed revenue requirement, as well as the adjustments made by other OCA witnesses. In particular, I recommend that the Commission take PPL Electric's actual customer

service performance and deficiencies that I have documented in my testimony into account in the determination of the Company's rate of return.

Q. WHAT IS THE CONNECTION BETWEEN YOUR DISCUSSION OF SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE AND THE RATE INCREASE PROPOSED BY PPL ELECTRIC?

A. Any public utility must justify its rates in part based on its ability to perform its essential quality of service and customer service functions at a reasonable performance level. It is appropriate to compare the performance of the utility seeking a significant rate increase to other Pennsylvania utilities, particularly where, as here, PPL Electric has not filed a base rate case since 2015. My analysis and findings should inform the Commission on the reasonableness of PPL Electric's significant rate increase proposals. In other words, if PPL Electric seeks a rate increase, but there are deficiencies in its customer service performance, the Commission should order improvements in specific areas as a condition of any rate increase or consider reducing the rate increase until reforms have been adopted. This approach is mandated by the statutory guidelines governing public utility rate cases in which the Commission must evaluate the "efficiency, effectiveness, and adequacy of service."[2]

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS:

A. I recommend the following requirements that should be imposed if any rates are increased:

- PPL Electric's oversight of its numerous call center third party contractors and their varied locations in and outside of the United States is deficient. My first recommendation

[2] 66 Pa. C.S. Section 523.

is that PPL Electric should review and update its vendor provided training materials to ensure that they reflect the most current Pennsylvania policies and PPL's own commitments in recent proceedings that I have documented in my testimony. I also recommend that PPL Electric be required to conduct a regular audit and evaluation of compliance with Chapter 56 for its call centers wherever they are located. This more formal audit or evaluation should not rely on incidents of complaints or solely based on monitoring calls but should seek to find and document actions and customer transactions that raise concerns or that reflect indicia of a system wide problem with training content or onsite oversight. Contracts should reflect provisions that allow PPL Electric to impose penalties based on the findings of these audits and external criteria, such as Bureau of Consumer Service (BCS) infractions and verified complaints. Additionally, documentation associated with these audits and their findings should be available for discovery in a future base rate case or in the investigation of complaints. This recommendation is closely aligned with my recommendation for a more structured root cause analysis of customer complaints discussed in more detail below.

- PPL Electric's call center performance is below average and has significantly deteriorated since 2023. PPL Electric does not link meeting any call center performance standards to its request for a significant rate increase in this proceeding. While the Company has customer service performance goals, those goals reflect a below average performance and fail to include any objective for the abandonment rate. I recommend that as a condition of any rate increase adopted by the Commission, that PPL Electric be required to conform to the average performance of other Pennsylvania electric distribution companies (EDCs), namely answering 80% of the calls within 30 seconds and an

abandonment rate of less than 9%, a performance that PPL met in 2023. Finally, PPL's monthly performance varies widely and should be supervised and managed to achieve a more regular and higher level of performance to avoid dramatic swings in customer experience.

- PPL Electric does not conduct regular root cause analysis of its customer complaints and BCS findings. I recommend that PPL Electric investigate customer complaints and BCS findings of "infractions," Second, I recommend that PPL Electric formally track the recommendations, document system-wide steps taken in response to those recommendations and evaluate on an ongoing basis whether or how the steps and implementation taken in response to the root cause evaluation have achieved their intended purpose. Any ongoing root cause analysis should include this organic feedback mechanism to determine if the root cause has been properly identified and the steps or implementation taken to respond to those findings have accomplished the intended results. Third, I recommend that PPL Electric develop a methodology to track and evaluate the success and failure of a statistically valid number of payment plans negotiated by PPL Electric, with perhaps starting with an evaluation of the Payment Agreement Requests (PARs) resolved by BCS.

- PPL Electric's proposal to eliminate transaction fees for the payment of customer bills should be approved. However, the amount that PPL Electric proposes to include in its revenue requirement to pay a third party contractor to process customer payments should be evaluated to ensure that those costs are the lowest possible and that reasonable efforts have been undertaken to ensure competitive based costs. I recommend that PPL Electric provide documentation that the fees that it seeks to include in rates are the lowest cost and

that reflects a more recent analysis of handling these transactions in house (i.e., directly with the credit card companies) or by means of a more recent request for proposals. This information should be included in PPL Electric's Rebuttal testimony in order to determine the reasonable amount of additional costs to be included in rates.

- Based on the materials I have reviewed, PPL Electric has not complied with its 2016 settlement of a proceeding to establish specific training materials and obligations of the Company's field technicians prior to the use of its metering system to remotely terminate service. I recommend that PPL Electric immediately revise and submit updated training materials and evidence of compliance with the training and operations of its field representatives with all the terms of this almost decade-old Settlement. Second, I recommend that PPL Electric implement a monthly "personal contact report" that contains information about the attempt of personal contact, whether such contact occurred, and whether termination occurred or was halted at that time and for what reason. Third, I recommend that PPL Electric develop a method of categorizing the reasons for when a hold is ordered so that PPL Electric can evaluate the potential for additional communications or other actions that might prevent the more expensive attempt to terminate service. In effect, my recommendation is to consider this information in future root cause analysis of key performance data.

- PPL Electric should consider providing the same consumer protections against higher electric generation supplier (EGS) charges for "low income" customers as it has committed to provide to its CAP or OnTrack low income customers. In light of the ongoing adverse bill impacts due to EGS charges that exceed the Price to Compare, I recommend that the Company undertake additional targeted outreach and education to its residential

customers concerning high EGS charges and the impact of those charges on the customer's PPL Electric bill, payment plans, and collection actions.

- PPL Electric's proposed electric vehicle pilot is not fully designed and without sufficiently identified or supported marketing and evaluation criteria. These defects support the recommendations of OCA witness Matthew Hoyt concerning this proposed pilot.

II. CUSTOMER SERVICE PERFORMANCE METRICS, OVERSIGHT OF CALL CENTERS, AND CALL CENTER PERFORMANCE

Q. AS A PRELIMINARY MANNER, DID PPL ELECTRIC INCLUDE ANY TESTIMONY IN ITS BASE RATE FILING THAT SUMMARIZES OR ADDRESSES ITS CUSTOMER SERVICE PERFORMANCE?

A. No. PPL Electric's filing did not include any presentation of its customer service performance, its most recent Management Audit, or performance metrics reported by the Commission. This omission is particularly troubling because the Company experienced a significant episode of billing errors and metering errors when it changed its internal software in 2023. That episode resulted in a formal Commission investigation and the approval of a Settlement that required the Company to pay a penalty, incur $16.2 million in mitigation expenses that it committed not to seek recovery in any future rate case, as well as certain actions to remediate the affected customers and its invest in certain meter data management technologies.[3] I find the omission of an evidence based discussion of

[3] Pennsylvania Public Utility Commission, Bureau of Investigation and Enforcement v. PPL Electric Utilities Corporation, Docket No. M-2023-3038060 (Opinion and Order entered May 16, 2024).

the Company's customer service performance and description of how it has complied with this Settlement and documented how those costs are not included in proposed customer rates indicates a lack of priority associated with the statutory linkage between rates and quality of service. As a result, my evidence and findings reflect discovery conducted in this proceeding and should be taken into account when reviewing the reasonableness of the proposed rate increase and the rate of return.

Q. PLEASE SUMMARIZE THE CUSTOMER SERVICE PERFORMANCE METRICS MONITORED BY THE COMMISSION.

A. The Commission publishes an annual Customer Service Performance report for the call center, meter reading, billing timeliness, customer satisfaction survey responses, and response to customer disputes for electric and natural gas distribution companies.[4] The most recent published data reflects 2023 performance. I obtained similar or comparable data on these performance areas from PPL Electric in discovery for 2024 and 2025 to date. In addition, the Commission publishes a quarterly UCARE report (Utility Customer Activities Report and Evaluation) that presents data on complaints and payment arrangements handled by the Commission's Bureau of Consumer Services for electric, natural gas, and water and sewer utilities, including PPL Electric. The most recent UCARE report presents preliminary calendar year 2024 results.[5]

Q. PLEASE DISCUSS WHY PPL ELECTRIC'S CALL CENTER PERFORMANCE IS CRUCIAL TO ANY EVALUATION OF ITS CUSTOMER SERVICE.

[4] https://www.puc.pa.gov/filing-resources/reports/customer-service-performance-reports/
[5] https://www.puc.pa.gov/filing-resources/reports/consumer-activities-report-evaluation/

A. PPL Electric relies on a customer call center as the main method by which customers can communicate with PPL Electric's customer representatives. PPL Electric does not maintain any office in its service territory in which a customer can interact in person with a PPL Electric customer service representative to report an outage, ask questions about the calculation of their bill, file a complaint, ask for a payment plan, or respond to a termination notice.[6] PPL Electric tracks the standard performance metrics that are typical for a large call center, including the average speed of answering a call once it is transferred to a live customer service representative, the abandonment rate, the percentage of calls in which customers hang up or abandon their call due to a long wait time, and the busy-out rate, the percentage of calls that encounter a busy signal.[7]

Q. DESCRIBE THE STAFFING, LOCATION, AND MANAGEMENT OVERSIGHT OF PPL ELECTRIC'S CUSTOMER CALL CENTER.

A. PPL Electric relies on PPL customer service employees and a third party contractor to handle customer calls. The third party contractor maintains call center employees in the U.S. and in other countries outside of the U.S. The staffing levels for each type of call center and their locations are as follows:[8]

A. PPL Lehigh:
- 53 agents with 47 remote and 6 in person
- Location Manager:

B. PPL Scranton
- 49 agents with 47 remote and 2 in person
- Location Manager:

[6] PPL Response to OCA-VII-5.
[7] While the busy out rate has historical significance, modern call centers for large utilities and businesses rely on an automated interactive menu of options for all calls and normally do not, therefore, experience busy signals. Once entering the menu, a caller may experience long wait times to speak to a customer representative which is captured in the average speed of answer or the percentage of calls answered within a certain time period.
[8] PPL Response to OCA-VII-4, Attachment 1 (CONFIDENTIAL). My testimony eliminates the names of the managers/supervisors and reflects PPL's agreement to include the information above as public.

C. iQor US:
- 94 Virtual Agents with 52 agents that take On-Track calls
- Location Manager:

D. iQor Trinidad:
- 45 on-site agents
- Location Manager:

E. iQor Philippines:
- 39 on-site agents
- Location Manager:

F. iQor Colombia:
- 38 on-site agents
- Location Manager:

G. Overarching support:
- - iQor Director
- - iQor Senior Director
- – PPL Vendor Support

Q. AS A RESULT OF THIS USE OF CALL CENTER EMPLOYEES NOT LOCATED IN THE U.S. AND THE RELIANCE ON VIRTUAL OR REMOTE ACCESS, DO YOU HAVE CONCERNS THAT SHOULD BE TAKEN INTO ACCOUNT?

A. Yes. The supervision of call center representatives employed by a third party contractor, the use of virtual and remote agents, and their location outside of the U.S. at the very least complicates the obligation to ensure that the transactions reflect the Commonwealth's policies and Commission regulations. PPL Electric management must rely on oversight and ensure compliance without routine access to the call center locations, the ability to monitor call and call transactions in person and the reliance on the third party contractor to implement training, ensure discipline and enforcement of PPL Electric's requirements and training materials.

Q. HOW DOES PPL TRAIN ITS CUSTOMER SERVICE REPRESENTATIVES?

A. PPL Electric has produced over 2,000 pages of training documents that are used to conduct training for its customer service representatives in their call centers based in the U.S.,

Trinidad, Columbia, and Philippines.[9] I have not reviewed the content of these training documents in detail. However, they reflect a wide range of detailed instructions on current Pennsylvania regulations, PPL Electric Company policy, and how to interact with customers in the PPL Electric customer billing and software systems. These training sessions are conducted remotely. According to PPL, "All vendor training sessions are delivered by certified vendor trainers and follow the PPL Electric approved training curriculum."[10] I interpret this statement to mean that PPL Electric employees may or may not conduct the actual training modules but rely on "vendors."

Q. DO YOU HAVE REASON TO CONCLUDE THAT THESE TRAINING MATERIALS DO NOT REFLECT CURRENT PENNSYLVANIA POLICIES AND/OR RECENT PPL ELECTRIC COMMITMENTS?

A. Yes. Of particular concern is that the training documents do not reflect PPL Electric's agreements to settlements (DSP V and DSP VI) that eliminate OnTrack customers from participating in the retail electric supply market (both directly and via the Standard Offer Program). The training documents explicitly state that CAP or OnTrack customers can shop and can participate in the Standard Offer Program, and explains why such a policy is supported:

> OnTrack customers are allowed to shop for an alternate generation supplier and are eligible to participate in the Standard Offer Program (SOP).
> There are 3 primary reasons for allowing OnTrack customers to shop:
> 1.The Customer Choice Act passed by the state legislature in 1997 encourages and allows all customer to shop.
> 2.Reducing generation costs for OnTrack customers would lower overall costs for all residential customers who pay for the program.

[9] PPL Response to OCA-XV-1 provides a document listing the training sessions, location, and number of representatives attending these sessions (Attachment 1) and 35 documents (Attachments 2-36) representing the separate training modules.
[10] PPL Response to OCA-XV-1.

3. Lowering generation costs would allow OnTrack participants to use their CAP Credits allocation for a longer period.[11]

Q. HOW DOES PPL ELECTRIC ENSURE COMPLIANCE AND OVERSIGHT OF ITS THIRD PARTY CONTRACTOR CALL CENTER OPERATIONS?

A. In addition to relying on the implementation of these training documents, PPL Electric relies on the performance standards and predetermined penalties set forth in the contracts with their third party call center vendors. However, none of these performance standards reflect compliance with Chapter 56 or findings relating to customer complaints. Rather, these contractual standards for the most part reflect call handling efficiency metrics and the penalties are specifically limited to those metrics.[12] No such penalties have been imposed under these call handling metrics.[13]

PPL Electric does track customer complaints that reflect the contact with the specific representative and has compiled a list of complaints where the Company determined that the contractors were not in compliance since January 2023.[14] A total of 264 incidents of failure to comply by the third party agents is documented.[15] However, there is no specific action undertaken in response to this compilation in terms of disciplinary actions, contractual penalties, or how these incidents were explored to determine if there were similar occurrences. PPL also reviews a sampling of customer call recordings. A "quality score" is calculated based on the identification of "customer experience improvement opportunities and to ensure compliance with Pennsylvania regulations."[16] PPL Electric

[11] PPL Response to OCA-XV-1, Attachment 30, page 38.
[12] PPL Response to OCA-VII-42.
[13] PPL Response to OCA-VII-45.
[14] PPL Response to OCA-XIV-8.
[15] PPL Response to OCA-XIV-8, attachment 1.
[16] PPL Response to OCA-VII-30.

also states that the Company has "customer satisfaction mechanisms at the agent level and has understanding/satisfaction checks with robust education/referral content."[17] As I discuss below, I find these oversight activities insufficient.

Q. ARE THE COMPANY'S COMPLIANCE MECHANISMS SUFFICIENT?

A. No. There is no evidence that PPL Electric management has conducted an evaluation or audit to proactively document violations or actions that fail to comply with Commission regulations. Nor is there any evidence that the oversight that I have described above has actually resulted in any formal action in response to improper actions by any agent. Rather, any incidence that is uncovered as a result of a customer complaint or call recording is handled primarily with "coaching" and increased supervision by the third party contractor's managers since there is no contractual penalties for violations of the Commission's regulations.[18]

Q. WHAT DO YOU RECOMMEND?

A. I recommend that PPL Electric be required to conduct a thorough examination and update its training materials and training vendors to ensure that the materials are up to date and conform to PPL Electric's commitments in recent regulatory proceedings. This is particularly important in dealing with OnTrack customer policies. In addition, I recommend that PPL Electric be required to conduct a regular audit and evaluation of compliance with Chapter 56 for its call centers wherever they are located. This more formal audit or evaluation should not rely on incidents of complaints or solely based on monitoring calls but should seek to find and document actions and customer transactions

[17] PPL Response to OCA-VII-29.
[18] PPL Response to XIV-13.

that raise concerns or that reflect indicia of a system wide problem with training content or onsite oversight. Contracts should reflect provisions that allow PPL Electric to impose penalties based on the findings of these audits and external criteria, such as BCS infractions and verified complaints. And documentation associated with these audits and their findings should be available for discovery in a future base rate case or in the investigation of complaints. This recommendation is closely aligned with my recommendation for a more structured root cause analysis of customer complaints discussed in more detail below.

Q. PLEASE SUMMARIZE PPL ELECTRIC'S CALL CENTER PERFORMANCE.

A. PPL Electric's call center performance is below average. The Company answers significantly less than 80% of its customer calls within 30 seconds, deteriorating from 67% in 2023 to 35% in 2024. Furthermore, the abandonment rate has increased from 9% in 2023 to 17% in 2024 and even higher at 19% for 2025 to date. This deteriorating performance has occurred even though the volume of residential customer calls decreased 17% from 2023 to 2024. The Commission's Management Audit documented this poor performance in 2024 without any significant overall improvement until the last few months.[19] While the last several months of 2025 data has shown improvement, there is little basis for assuming that the Company's below average performance will remain a priority if increased rates and profits are approved in this base rate case. I attach Exhibit BA-2 showing the recent call center performance results with my calculations of annual

[19] PPL Response to OCA-VII-36 attached the Management Audit and subsequent reports from PPL on its response to the audit findings. The Audit found serious degradation of call center performance: "In addition, PPL Electric maintains numerous metrics to evaluate its customer service performance, which reflect significant degradation in some key metrics between 2019 and 2023. Specifically, the company's Service Level sharply declined during the audit period to levels well below the 80% goal, as illustrated in Exhibit X-2. In 2020, performance exceeded the 80% goal through the first four months of the year and peaked at 91% in April 2020 but then sharply declined. Beginning in January 2021, management reduced its target performance goal to 70%." Page 68, Attachment 1.

averages.[20] I assume that this data from PPL Electric does not include Interactive Voice Response (IVR) calls in these calculations.[21]

Q. ARE THERE OTHER WAYS IN WHICH CUSTOMERS CAN INTERACT WITH PPL ELECTRIC AND, IF SO, SHOULD THOSE OPTIONS BE TAKEN INTO ACCOUNT?

A. Similar to most large utilities and businesses, PPL Electric offers some transactions that can be done via the IVR menu that greets every caller[22] as well as via web-based forms and data entry.[23] However, PPL Electric does not have an Android or Apple approved application that allows the customer to interact via their smart phone or tablet, requiring the customer to use a web browser on their laptop or other internet-connected device to sign into their account. PPL Electric has plans to expand both options and offer a stand-alone application in the future.[24] However, these options do not substitute for a call center that is required to handle customer account specific negotiations and transactions in conformance with the Commonwealth's regulations and Commission policies, such as the negotiation of affordable payment plans, documenting and responding to questions and disputes, bill inquiries, application for service when there is a requirement for a deposit and proof of identity, considering of personal and household income, and complex metering and service related issues. Furthermore, customers should not be required to choose between an automated and internet based transaction and a personal interaction with a qualified customer representative to obtain reasonable service.

[20] PPL Response to OCA-VII-1(a), Attachment 1.
[21] See FN. 22 and 23.
[22] PPL Response to OCA-VII-67 describes enhancements to the current IVR that are being implemented in 2025 and through 2026.
[23] PPL Response to OCA-VII-66 describes enhancements to its web portal implemented in 2025 and planned for 2026.
[24] PPL Response to OCA-VII-68.

Q. WHAT DO YOU RECOMMEND?

A. PPL Electric does not link meeting any call center performance standards to its request for a significant rate increase in this proceeding.[25] While the Company has customer service performance goals, those goals reflect a below average performance and fail to include any objective for the abandonment rate.[26] I recommend that, as a condition of any rate increase adopted by the Commission, PPL Electric be required to conform to the average performance of other Pennsylvania EDCs, namely answering 80% of the calls within 30 seconds[27] and an abandonment rate of less than 9%, a performance level that PPL met in 2023.[28] There is a substantial risk that PPL Electric may deprioritize these functions in pursuit of cost savings in future years in which any approved rate increase is in effect. Moreover, because PPL Electric customers do not have competitive alternatives for its

[25] PPL Response to OCA-VII-56. When asked if its rate filing includes any specific reliability or customer service performance results that will be implemented as a condition of its rate increase, the Company responded, "No. PPL Electric's rate filing does not include any specific reliability and customer service results that will be implemented as a condition of the rate increase."

[26] PPL Response to OCA-VII-57. The internal goal is to provide a 70/30 service level for 2024 through 2026 that I interpret to mean to answer 70% of the calls within 30 seconds. This annual average would allow significantly poor performance in individual months.

[27] See the Commission's 2023 Customer Service Performance Report, page 8. I also highlight the Report's comment on the PPL apparently high call answering rate on this chart:

> PPL's notification that IVR calls were included in the reported data raises concerns that other EDCs and NGDCs may have also included IVR calls in data for the performance metrics. However, the regulations per § 54.153 (b)(1)(i)) and § 62.33(b)(1)(i), specifically define calls answered within 30 seconds to mean that an EDC or NGDC representative is ready to render assistance and to accept information to process the call. The data for this metric should reflect this interpretation. Data that is based on calls where an acknowledgement that the customer or applicant is waiting on the line does not constitute an answer and therefore should not be reported for this metric.

[28] See the Commission's 2023 Customer Service Performance Report, page 6. I also highlight the Report's comment on the PPL low abandonment rate on this chart:

> PPL reported a decrease in the 2023 call abandonment percentage, as compared to the 2022 level. While PPL's call abandonment rate in 2023 is consistent with pre-pandemic levels, PPL also reported that the company included calls handled by Interactive Voice Response (IVR) in the service level calculations. The inclusion of IVR calls may have artificially improved the performance level of this and the other PPL phone metrics. In 2023, for several months, PPL had significant billing system issues that prevented many customers from reaching PPL CSRs, leading them to file informal complaints with BCS. As regulations specifically indicate that IVR calls are not to be included in the call metrics, PPL has advised BCS that they will be excluded in these reporting metrics going forward.

distribution and customer service functions, it is imperative that any long-term rate structure include safeguards to ensure continued service quality. Failing to do so not only compromises accountability and transparency but also erodes public trust in the regulatory process. The fact that PPL Electric has internal performance standard goals is insufficient to justify any rate increase because there is no consequence for PPL Electric's failure to achieve these objectives.

III. COMPLAINT TRACKING AND ROOT CAUSE ANALYSIS

Q. TURNING TO THE BCS REPORTS CONCERNING COMPLAINTS AND PAYMENT ARRANGEMENT DISPUTES THAT REQUIRE FURTHER INVESTIGATION, WHAT IS PPL ELECTRIC'S RECENT PERFORMANCE?

A. Every Pennsylvania public utility is required to educate customers about how to register informal and formal complaints, the former resolved by the Commission's Bureau of Consumer Services because of a customer's dissatisfaction with the utility's response and the latter handled as a formal matter by the Commission because of a formal filing by the customer or group of customers. Utilities also receive "disputes" directly from customers and are obligated to investigate and respond to those issues or indications of dissatisfaction. Customer complaints typically form a hierarchy or pyramid from a large volume of disputes to a smaller group of informal complaints to the BCS and a relatively small number of formal complaints filed with the Commission. Tracking and evaluating disputes and informal or formal complaints are key to ensuring ongoing improvements in customer service because that evaluation is likely to spot the "red flag" that indicates a systemic issue or concern that requires management's attention and, in some cases, a change in policy or

procedure. In addition, of course, this type of evaluation may also identify violations of the Commission's regulations.

BCS reports on the frequency and trends associated with informal complaints filed by residential customers who are dissatisfied with their initial resolution by the public utility. In the 2023 and 2024 UCARE Reports, BCS reported the following results for PPL Electric:

- PPL's residential total complaints and complaint rate dramatically increased in 2023 due to serious billing issues associated with the installation of new software (13,832 complaints) and significantly decreased in 2024 (1,355 complaints). However, the volume of complaints in 2024 was the second highest of the other EDCs and only less than PECO's complaint data that included both electric and gas customers.
- Payment Arrangement Referrals (PAR) increased in 2023 compared to 2021 and 2022, although this trend was uniform among other EDCs as well. However, in 2024 the level of such Referrals was substantially higher than other EDCs: 6,410 compared to slightly over 4,000 for PECO or the FirstEnergy EDCs (Penelec, Met-Ed, and West Penn). The PAR Response Time also increased.
- BCS identifies "justified"[29] complaints and "verified infractions"[30] for PPL Electric in its public reports. The 2023 data was substantially impacted by the high volume of billing errors and delayed bills, showing a 35% rate for "justified" complaints, 5-6 times

[29] Defined by BCS as: A consumer complaint case where, prior to BCS intervention, the company did not comply with Commission Orders, policies, regulations, reports, Secretarial Letters, tariffs, or guidelines when the consumer brought the complaint to the company's attention.
[30] Defined by BCS as: A misapplication or infringement of a Commission regulation, particularly the standards and billing practices for residential utility service.

the rate for other EDCs. In 2024, a total of 142 "verified infractions" were preliminarily documented by BCS relating to Chapter 56 by PPL Electric.

Q. DID PPL ELECTRIC DISCUSS THIS INFORMATION IN ITS RATE CASE FILING?

A. No. PPL Electric's testimony did not refer, discuss, or evaluate its customer service performance at the call center, the recently completed PUC Management Audit, or the BCS Reports I have summarized above.

Q. WHAT DO YOU RECOMMEND?

A. In addition to my recommendation that the Commission require PPL Electric to meet specific annual performance standards for its call center as a condition of any rate increase, I also recommend that the Commission take PPL's performance as I have documented above into consideration when setting the reasonable rate of return.

Q. PLEASE DESCRIBE PPL ELECTRIC'S TRACKING AND ANALYSIS OF INFORMAL CUSTOMER COMPLAINTS SUBMITTED TO THE BCS, INCLUDING FINDINGS OF JUSTIFIED COMPLAINTS AND INFRACTIONS.

A. PPL Electric does not routinely conduct a root cause analysis of its customer complaints. While the Company tracks complaints by major topics, its only analysis to date has been to identify the common trends.[31] I acknowledge that PPL did undertake a Company-wide analysis of a meter exchange incident that had system wide implications.[32] However, the Company has not documented any regular analysis of the root cause of any complaint category and then undertaken any action to undertake reforms or substantive changes in practices and procedures to prevent future complaints. This concern is also a reflection of

[31] PPL Response to OCA-VII-24. The complaint tracking is done for informal complaints filed with the BCS and for which PPL must provide a written utility report.
[32] PPL Response to OCA-VII-28, Attachment 1.

my description of PPL Electric's oversight of its third party call center contractor. I attach a summary description of a proper root cause analysis as Exhibit BA-3.

Q. CLOSELY RELATED TO A ROOT CAUSE ANALYSIS OF CUSTOMER COMPLAINTS, DOES PPL ELECTRIC TRACK AND EVALUATE THE SUCCESS OR FAILURE OF ITS PAYMENT PLANS OFFERED TO RESIDENTIAL CUSTOMERS?

A. No.[33] I note the increase in Payment Arrangement Requests documented in the most recent BCS report quoted above as a "red flag" indicator that requires further analysis.[34]

Q. WHAT IS YOUR RECOMMENDATION WITH REGARD TO THE IMPLEMENTATION OF THE ROOT CAUSE ANALYSIS AS A CONDITION OF ANY RATE INCREASE IN THIS PROCEEDING?

A. First, I recommend that PPL Electric investigate customer complaints and BCS findings of "infractions," Second, I recommend that PPL Electric formally track the recommendations, document system-wide steps taken in response to those recommendations, and evaluate on an ongoing basis whether or how the steps and implementation taken in response to the root cause evaluation have achieved their intended purpose. Any ongoing root cause analysis should include this organic feedback mechanism to determine if the root cause has been properly identified and the steps or implementation taken to respond to those findings have accomplished the intended results. Third, I recommend that PPL Electric develop a methodology to track and evaluate the success and failure of a statistically valid number of

[33] PPL Response to OCA-VII-19, Attachment 1 provides a monthly list of payment arrangement "counts" but does not include any analysis of this data.

[34] Red flag factors in the Pennsylvania PUC's Bureau of Consumer Services (BCS) reports are indicators of potential utility performance issues. These include high complaint or termination rates, slow dispute resolution, billing errors, and noncompliance with customer assistance or regulatory requirements. Identifying these factors helps monitor utility practices and protect consumers.

payment plans negotiated by PPL Electric, with perhaps starting with an evaluation of the Payment Agreement Requests (PARs) resolved by BCS.

Q. DURING YOUR REVIEW OF PPL ELECTRIC'S PAYMENT ARRANGEMENT POLICIES, IS THERE ANOTHER ISSUE THAT REQUIRES REFORM?

A. Yes. PPL Electric offers to confirm negotiated payment terms in writing or electronically to the customer. However, this communication does not inform the customer of their right to dispute the terms of the payment plan and this automated letter should be reformed to do so.[35]

IV. PPL ELECTRIC'S PROPOSAL TO ELIMINATE PAYMENT FEES

Q. TURNING TO PPL ELECTRIC'S PROPOSAL TO ELIMINATE CREDIT CARD FEES TO RESIDENTIAL CUSTOMERS, DO YOU AGREE WITH THIS RECOMMENDATION?

A. Yes. Customers using a credit or debit card for payment of essential water, sewer, and stormwater charges should be provided with the same expectation as using their card to pay for food, medical services, and other consumer goods where extra fees to use a credit/debit card are not imposed. While this practice of charging customers who use electronic payments might have been justified years ago when most customers paid by check or in person, the proliferation of electronic payment options and the widespread use of digital payment options via smart phones suggest a different approach. Consumers are used to using electronic payment methods on their smart phones and with their bank-issued

[35] PPL Response to OCA-VII-14, Attachment 1 is the form letter issued to the customer to summarize the payment plan agreement but does not provide any information on how to dispute these terms.

credit and debit cards to purchase consumer goods and services and the use of these internet-based payment options is growing rapidly.[36] Additionally, many Pennsylvania public utilities have adopted this no fee policy for customer payments.[37] Credit/debit card fees should be treated in the same manner as allowing withdrawal from their banking account, and the processing of checks or cash payments at authorized vendors, the costs of which are currently reflected in the revenue requirement paid by all customers.

Q. WHAT BILL PAYMENT FEES ARE CURRENTLY CHARGED BY PPL ELECTRIC?

A. PPL Electric's current credit/debit card fees online or through apps such as Venmo and PayPal are $2.50 per transaction of up to $1,000 for residential customers and $7.50 per transaction of up to $1,500 for non-residential customers. The walk-in fee is $2.00 per transaction.[38]

Q. DOES PPL ELECTRIC USE A THIRD PARTY TO PROCESS PAYMENTS?

A. Yes. PPL Electric has used the same third party to process payments and proposes to continue that relationship and those payment fees, pending any future renegotiation of those contracts.[39]

Q. DO YOU AGREE WITH THE AMOUNT THAT PPL ELECTRIC SEEKS TO COLLECT IN RATES FOR PAYMENT TRANSACTION FEES?

---

[36] Forbes Advisor. August 2023. "53% of Americans Use Digital Wallets More Than Traditional Payment Methods: Poll." (Accessed June 26, 2025); Federal Reserve. April 2024. "Federal Reserve Payments Insight Brief: Banking My Way – Gen Z and Millennials Are Driving Change in Payments." (Accessed June 26, 2025). [Key takeaway: More than half of Generation Z (ages 18-25) and millennials (26-41) now use digital wallets, and 80% say it is important to be able to make payments by mobile device.]

[37] In the last several years Pittsburgh Water, York Water, Pennsylvania American Water, UGI-Gas and UGI-Electric, and Columbia Gas have eliminated credit card and debit card payment fees.

[38] PPL Electric Statement No. 18, page 7, lines 16-19.

[39] PPL Response to OCA-VII-63.

A. Not necessarily. PPL has documented their current payment fees equal to approximately $3.8 million and seeks to include a higher amount in its rates with projections of growth in use of these payment methods.[40] I recommend that PPL Electric provide documentation that the fees that it seeks to include in rates are the lowest cost and that reflects a more recent analysis of handling these transactions in house (i.e., directly with the credit card companies) or by means of a more recent request for proposals. This information should be included in PPL Electric's Rebuttal testimony in order to determine the reasonable amount of additional costs to be included in rates.

V. PPL ELECTRIC'S FIELD TECHNICIAN TRAINING FOR PERSONAL CONTACT PRIOR TO TERMINATION OF SERVICE

Q. HAVE YOU REVIEWED PPL ELECTRIC'S IMPLEMENTATION OF THE OBLIGATION TO ATTEMPT PERSONAL CONTACT IMMEDIATELY PRIOR TO TERMINATION OF SERVICE?

A. Yes. I reviewed PPL Electric's training materials. I attach the Company's field technician training materials for termination of services as Exhibit BA-4.[41] In addition, I have reviewed PPL Electric's response to additional discovery that included attachments intended to document the Company's remote disconnection of service procedures.[42] These internal training materials are deficient. This document does not explicitly require the field technician to attempt personal contact at the customer's premises. Furthermore, the

[40] PPL Response to IE RE-II-19-D as referenced in its Response to OCA-VII-63.
[41] PPL Response to OCA-VII-7, Attachment 1.
[42] PPL Response to OCA-XIV-1, Attachments 1-4.

document does not contain the training on the customer rights and protections required to be included in the 2016 Settlement document that I include and quote from later in my testimony. One provision of this Attachment addresses observing a "medical condition" at the customer's home and instructs, "Do not cut someone that you can visually verify a serious condition is present that you have not seen or dealt with previously. Tell them to call the 800 number so they can get the information on to provide a medical certification." This instruction does not reflect the 2016 Settlement conditions on how PPL's field technicians should respond to any indication or statement of a medical emergency at the time of the premise visit. These documents do not include any mention of, or training on, Protection from Abuse orders or any training on how to handle a customer dispute or reference to the rights to file a complaint with the Commission. These materials do not require the field representative to document each door knock, customer interaction, and notice posting, including the date, time, contact information of the adult with whom personal contact was made, conversation details, and why the termination was stopped using approved menu options.

Q. DID PPL ELECTRIC COMMIT TO SPECIFIC TRAINING AND ACTIONS TO CONDUCT ATTEMPTS AT PERSONAL CONTACT AS A CONDITION OF THEIR USE OF THE REMOTE TERMINATION FUNCTIONALITY OF ITS AUTOMATED METERING INFRASTRUCTURE (AMI) SYSTEM?

A. Yes. I attach the Settlement that PPL Electric agreed to in 2016 and that the Commission ordered and approved as Exhibit BA-5.[43] This Settlement sets forth specific obligations to

[43] Petition of PPL Electric Utilities Corporation for Approval to Use the Remote Service Switch In Its Meters for Involuntary Service Terminations, Docket No. P-2016-2524581, Order (Jan. 19, 2017); Petition of PPL Electric

train the field representatives on the customer's rights and remedies that PPL Electric's current training materials do not reflect. Specifically, the Settlement requires:

> 12. PPL Electric shall comply with all provisions of Chapter 14 of the Pennsylvania Public Utility Code (66 Pa. C.S. Chp. 14) and Chapter 56 of the Commission's regulations (52 Pa. Code Chp. 56) with respect to the application of remote connect and disconnect for involuntary service terminations.
>
> 13. PPL Electric will send an appropriately trained field representative to the customer's premises on the day that termination is scheduled to occur. The field representative will use reasonable efforts to make personal contact with a responsible adult occupant of the premises prior to the termination.
>
> 14. Appropriate training of the field representative will include at least: medical certificate procedures; relevant complaint procedures; general familiarity with Protection from Abuse ("PFA") Orders; and how to refer customers to PPL Electric's universal service programs. In addition, the field representative will be trained to call PPL Electric staff for further guidance if presented with a PFA Order.
>
> 16. Service shall not be terminated if the field representative becomes aware of a personal safety condition that warrants delay in service termination, including if the field representative is informed that the occupant is seriously ill or affected with a medical condition which will be aggravated by cessation of service and that a medical certificate will be procured pursuant to 52 Pa. Code § 56.112. The field

Utilities Corporation for Approval to Use the Remote Service Switch In Its Meters for Involuntary Service Terminations, Docket No. P-2016-2524581, Recommended Decision (Dec. 7, 2016).

representative shall be fully trained to direct low income and vulnerable customers to the line to reach PPL Electric staff where the customer can receive information on all PPL Electric's Universal Service and Energy Conservation programs and related payment information.

17. Upon confirmation in PPL Electric's system that payment has been made, PPL Electric will reconnect the customer's service using the remote switch as quickly as possible.

18. PPL Electric's hours for disconnection and reconnection will be consistent with the Public Utility Code, the Commission's regulations and Commission directives. PPL Electric will reconnect service using the RF mesh remote switch from 7:00 a.m. to 10:00 p.m. seven days per week beginning when the Company uses the remote switch for involuntary service termination.

Q. IS THERE ANY INTERNAL COMPILATION OF THE DATA ASSOCIATED WITH ATTEMPTS AT PERSONAL CONTACT PRIOR TO THE ACTUAL TERMINATION OF SERVICE (EITHER MANUALLY OR VIA THE REMOTE FUNCTION FOR THE AMI METER)?

A. No.

Q. DO YOU HAVE ANY RECOMMENDATIONS WITH REGARD TO PPL ELECTRIC'S POLICIES AND REPORTING ON ATTEMPTING CONTACT AT THE TIME OF TERMINATION OF SERVICE?

A. First, I recommend that PPL Electric immediately revise and submit updated training materials and evidence of compliance with the training and operations of its field representatives with all the terms of this Settlement. Second, I recommend that PPL

Electric implement a monthly "personal contact report" that contains information about the attempt of personal contact, whether such contact occurred, and whether termination occurred or was halted at that time and for what reason. Third, I recommend that PPL Electric develop a method of categorizing the reasons for when a hold is ordered so that PPL Electric can evaluate the potential for additional communications or other actions that might prevent the more expensive attempt to terminate service. In effect, my recommendation is to consider this information in future root cause analysis of key performance data.

VI. PPL ELECTRIC'S PRESENTATION OF EGS CHARGES AND ANALYSIS OF BILL IMPACTS

Q. PPL ELECTRIC PURCHASES THE RECEIVABLES OF ELECTRIC GENERATION SUPPLIERS (EGS) AND BILLS AND COLLECTS THOSE CHARGES, CORRECT?

A. Yes.

Q. HAVE YOU REVIEWED THE PRESENTATION OF THE EGS CHARGES ON THE PPL ELECTRIC BILL AND COMPARED THOSE CHARGES TO WHAT THE CUSTOMER WOULD PAY FOR DEFAULT SERVICE OR THE PRICE TO COMPARE?

A. Yes. PPL Electric properly presents the cents per kWh charge billed on behalf of the EGS and presents the Price to Compare (PTC) on the bill to allow the customer to compare those charges.[44] In addition, PPL has tracked the comparison of EGS charges billed to its

[44] Based on my review of PPL's Response to CAUSE-PA-III-17, attachment 2.

residential customers with the applicable PTC.[45] For 2024, customers billed at a higher rate than the PTC were billed an additional ~$103.7 million dollars compared to the same usage had these customers utilized PPL's PTC. Customers billed at a lower rate than the PTC saved ~$47 million dollars during year. Overall residential customers were billed an additional ~$56 million dollars more than the same usage had every residential customer utilized PPL's default rate. On average ~267K customers were billed higher rates than the default rate each month compared to ~253K customers billed at lower rates than the PTC. On average Residential Customers billed at a higher rate were billed an additional $388 in 2024.

Q. DID PPL ELECTRIC ALSO EVALUATE THE IMPACT OF EGS PRICES FOR LOW INCOME CUSTOMERS?

A. Yes. For 2024 low-income customers billed at a higher rate than the PTC were billed an additional ~$15.4 million compared to the same usage had these customers utilized PPL's default rate (PTC). Customers billed at a lower rate than the PTC saved ~$3.6 million during year. Overall PPL low- income residential customers were billed an additional ~$11.8 million vs. the same usage had every residential customer utilized PPL's default rate. On average ~36.4K customers were billed higher rates than the default rate each month vs. ~21.5K customers billed at lower rates than the PTC. On average Residential low-income customers billed at a higher rate were billed an additional $422 in 2024.

Q. HAS PPL ELECTRIC PREVIOUSLY AGREED TO EXCLUDE ITS CAP CUSTOMERS (CALLED ONTRACK CUSTOMERS BY PPL) FROM THE STANDARD OFFER

[45] PPL Response to OCA-VII-12, Attachment 1 (2025) and Attachment 2 (2024).

PROGRAM AND THE RETAIL SHOPPING MARKET (SERVICE BY AN ELECTRIC GENERATION SUPPLIER)?

Q. Yes. These commitments and updated versions of these policies were summarized and enhanced in the Settlement of PPL Electric's most recent Default Service Proceeding (DSP VI).[46] As a result, PPL Electric has excluded its CAP customers from the offers to be served by an EGS in its Standard Offer Program since the DSP V Settlement in 2023. The reforms that will ensure that CAP customer enrollments with an EGS will be rejected without requiring the CAP customer to take further action that were adopted in this most recent DSP settlement are not effective until June 2025. Therefore, it is likely that some CAP customers are included in this "low income" bill impact analysis in 2024. It is also possible that PPL Electric included other indicia for identifying "low income" in this analysis but the documentation does not describe the methodology for identifying "low income."

Q. IN LIGHT OF THE SIGNIFICANT OVER CHARGING BY EGSs, WHAT DO YOU RECOMMEND?

A. First, PPL Electric should confirm that its practices and customer service representative training reflects these commitments set forth in the prior DSP V and VI settlements and update its policies and procedures in its Rebuttal filing in this proceeding. To the extent that its "low income" bill impact analysis includes customers with indicia of low income, I recommend that PPL Electric also seek to exclude those customers from the retail market.

[46] Petition of PPL Electric Utilities Corporation for Approval of a Default Service Program and Procurement Plan for the Period from June 1, 2025 through May 31, 2029 (DSP VI Program), Docket No. P-2024-3047290 (Order entered Nov. 7, 2024). PPL's own statement in support of the settlement provided an excellent summary of these policies from DSP V and the new enhancement added in DSP VI.

In addition, PPL Electric should conduct additional outreach and messaging to its residential customers to alert them about the potential for higher EGS charges and how to find and take action in response to this information. These communications should alert customers to where the cents per kWh charge is presented on the customer bill for the EGS and where on the bill the cents per kWh charge for the current PTC is located on the bill. If there is a web or text based option to return to default service, that option should be identified to the customer as well.

VII. PPL ELECTRIC'S PROPOSAL FOR AN ELECTRIC VEHICLE CHARGING PILOT

Q. TURNING TO PPL ELECTRIC'S PROPOSAL FOR AN ELECTRIC VEHICLE CHARGING PILOT, WHAT ASPECT OF THAT PROPOSAL HAVE YOU REVIEWED?

A. I have reviewed PPL Electric's proposal from the perspective of customer education and consumer protections. OCA Witness Matthew Hoyt will address the design of the pilot itself.

Q. HAS PPL ELECTRIC DEVELOPED ANY CUSTOMER COMMUNICATIONS, APPLICATION FORMS, OR MARKETING MATERIALS FOR THIS PILOT?

A. No. PPL has not developed an application form or customer communications that identifies the requirements and programs rules.[47] Nor has PPL Electric developed marketing materials or decided where its marketing will be targeted.[48] As a result, I cannot

[47] PPL Response to OCA-XIV-16.
[48] PPL Response to OCA-XIV-15.

evaluate or endorse any aspect of this proposed pilot. The Company's proposal is deficient and without sufficient details to recommend approval of those aspects of the proposal that I have sought to review.

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes. However, I reserve the right to supplement this testimony if additional relevant information is received.

Areas of Expertise:

- Default Service, Consumer Protection, Service Quality, and Universal Service policies and programs associated with the alternative rate plans and mergers;
- Consumer Protection and Service Quality policies and programs associated with the regulation of competitive energy and telecommunications providers;
- The regulatory policies associated with the regulation of Credit, Collection, Consumer Protection, Low Income, and Service Quality programs and policies for public utilities;
- Customer Education and Rate design and pricing policies applicable to residential customers; and
- Advanced Metering Infrastructure and Grid Modernization costs and benefits, time-based pricing proposals, and performance standards.

Prior Employment

DIRECTOR

1986-96

Consumer Assistance Division

Maine Public Utilities Commission *Augusta, Maine*

One of five division directors appointed by a three-member regulatory commission and part of commission management team. Direct supervision of 10 employees, oversight of public utility consumer complaint function, appearance as an expert witness on customer services, consumer protection, service quality and low income policy issues before the PUC. Chair, NARUC Staff Subcommittee on Consumer Affairs.

SUPERINTENDENT

1979-83

Bureau of Consumer Credit Protection
Department of Professional and Financial Regulation *Augusta, Maine*

Director of an independent regulatory agency charged with the implementation of Maine Consumer Credit Code and Truth in Lending Act. Investigations and audits of financial institutions and retail creditors, enforcement activities, testimony before Maine Legislature and U.S. Congress.

Education

JURIS DOCTOR

1973-76

University of Maine School of Law *Portland, Maine*

Admitted to the Bar of the State of Maine, September 1976. Currently registered as "inactive."

B.A. (WITH DISTINCTION) IN POLITICAL SCIENCE 1964-68
University of Michigan *Ann Arbor, Michigan*

Boards and Commissions

Councilor, Winthrop (ME) City Council 2020-2022

Member, Board of Trustees, University of Maine System May 2022 to present
(Nominated by Governor and Confirmed by Maine Legislature)

FirstEnergy Pennsylvania, Docket No. R-2024-3047068 (June, July, and August 2024) [customer service performance, compliance with statutory and regulatory rules; billing for non-basic services; tariffs; EV rate pilots; management performance; payment processing fees; root cause analysis]

Direct and Surrebuttal Testimony on behalf of the Pennsylvania Office of Consumer Advocate before the Pennsylvania Public Utilities Commission, Pennsylvania PUC v. Aqua Pennsylvania, Docket Nos. R-2024-3047822 (Water) and R-2024-3047824 (Wastewater) (August and September 2024) [customer service performance, compliance with statutory and regulatory rules; payment processing fees; tariffs; management performance; root cause analysis]

Direct and Surrebuttal Testimony on behalf of the Pennsylvania Office of Consumer Advocate before the Pennsylvania Public Utility Commission, Pennsylvania PUC v. UGI Utilities, Inc.—Gas Division, Docket No. 2024-R-3052716 (April-May 2025) [customer service performance, compliance with statutory and regulatory rules, management performance, root cause analysis, billing for supplier charges]

Direct and Surrebuttal Testimony on behalf of the Pennsylvania Office of Consumer Advocate before the Pennsylvania Public Utilities Commission, Pennsylvania PUC v. Philadelphia Gas Works, Docket No. 2025-R-3053112 (May-July 2025) [customer service performance, compliance with statutory and regulatory rules, management performance, root cause analysis, billing for supplier charges]

Direct and Surrebuttal Testimony on behalf of the Pennsylvania Office of Consumer Advocate before the Pennsylvania Public Utilities Commission, Pennsylvania PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499 (June-July 2025) [customer service performance, compliance with statutory and regulatory rules, management performance, root cause analysis, billing for supplier charges]

Direct and Surrebuttal Testimony on behalf of the Pennsylvania Office of Consumer Advocate before the Pennsylvania Public Utilities Commission, Pennsylvania PUC v. The York Water Co., Docket Nos. R-2025-3053442, et al. (August-October 2025) [customer service performance, compliance with statutory and regulatory rules, management performance, root cause analysis, low income programs and policies]

Direct and Surrebuttal Testimony on behalf of the Pennsylvania Office of Consumer Advocate before the Pennsylvania Public Utilities Commission, Pennsylvania PUC v. Pittsburgh Water and Sewer Authority, Docket Nos. R-2023-3039920, et al. (September-October 2025) [customer service performance, compliance with statutory and regulatory rules, management performance, root cause analysis; payment fees]

Exhibit BA-3

A SUMMARY OF A PROPER ROOT CAUSE ANALYSIS

Barbara R. Alexander
Barbara Alexander Consulting LLC

A root cause analysis is a fact-based exercise in which the underlying cause or causes of an undesirable outcome(s) is identified and specific remedial steps are identified and determined to result in systematically correcting or improving the previously identified undesirable result. A list of customer complaints by category is not a root cause analysis.

While there may be differences in approach about what a root cause analysis entails, the following summary by the American Society for Quality (ASQ) provides a helpful overview:

> A root cause is defined as a factor that caused a nonconformance and should be permanently eliminated through process improvement. The root cause is the core issue—the highest-level cause—that sets in motion the entire cause-and-effect reaction that ultimately leads to the problem(s).

A "Root Cause Analysis" is defined as a collective term that describes a wide range of approaches, tools, and techniques used to uncover causes of problems. Some RCA approaches are geared more toward identifying true root causes than others, some are more general problem-solving techniques, and others simply offer support for the core activity of root cause analysis.

There are many methodologies, approaches, and techniques for conducting root cause analysis, including:

1. **Events and causal factor analysis:** Widely used for major, single-event problems, such as a refinery explosion, this process uses evidence gathered quickly and methodically to establish a timeline for the activities leading up to the accident. Once the timeline has been established, the causal and contributing factors can be identified.
2. **Change analysis:** This approach is applicable to situations where a system's performance has shifted significantly. It explores changes made in people, equipment, information, and more that may have contributed to the change in performance.
3. **Barrier analysis:** This technique focuses on what controls are in place in the process to either prevent or detect a problem, and which might have failed.
4. **Management oversight and risk tree analysis:** One aspect of this approach is the use of a tree diagram to look at what occurred and why it might have occurred.
5. **Kepner-Tregoe Problem Solving and Decision Making:** This model provides four distinct phases for resolving problems:
    a) Situation analysis
    b) Problem analysis
    c) Solution analysis

d) Potential problem analysis[43]

According to the publications developed by the American Society for Quality, and other comparable publications[44], a proper analysis of any "root cause" requires the identification of "symptoms," which are not actual causes but signs of existing problems, and first level causes," which are the causes that directly lead to a problem; and "higher level causes," which are links in the chain of cause-and-effect relationships that ultimately create the problem.[45]

---

43 See American Society for Quality website for more general information: https://asq.org/quality-resources/root-cause-analysis

44 There is an extensive body of literature used in the medical community to conduct root cause analysis and develop plans to prevent adverse events. See, e.g., https://www.cms.gov/medicare/provider-enrollment-and-certification/qapi/downloads/guidanceforrca.pdf

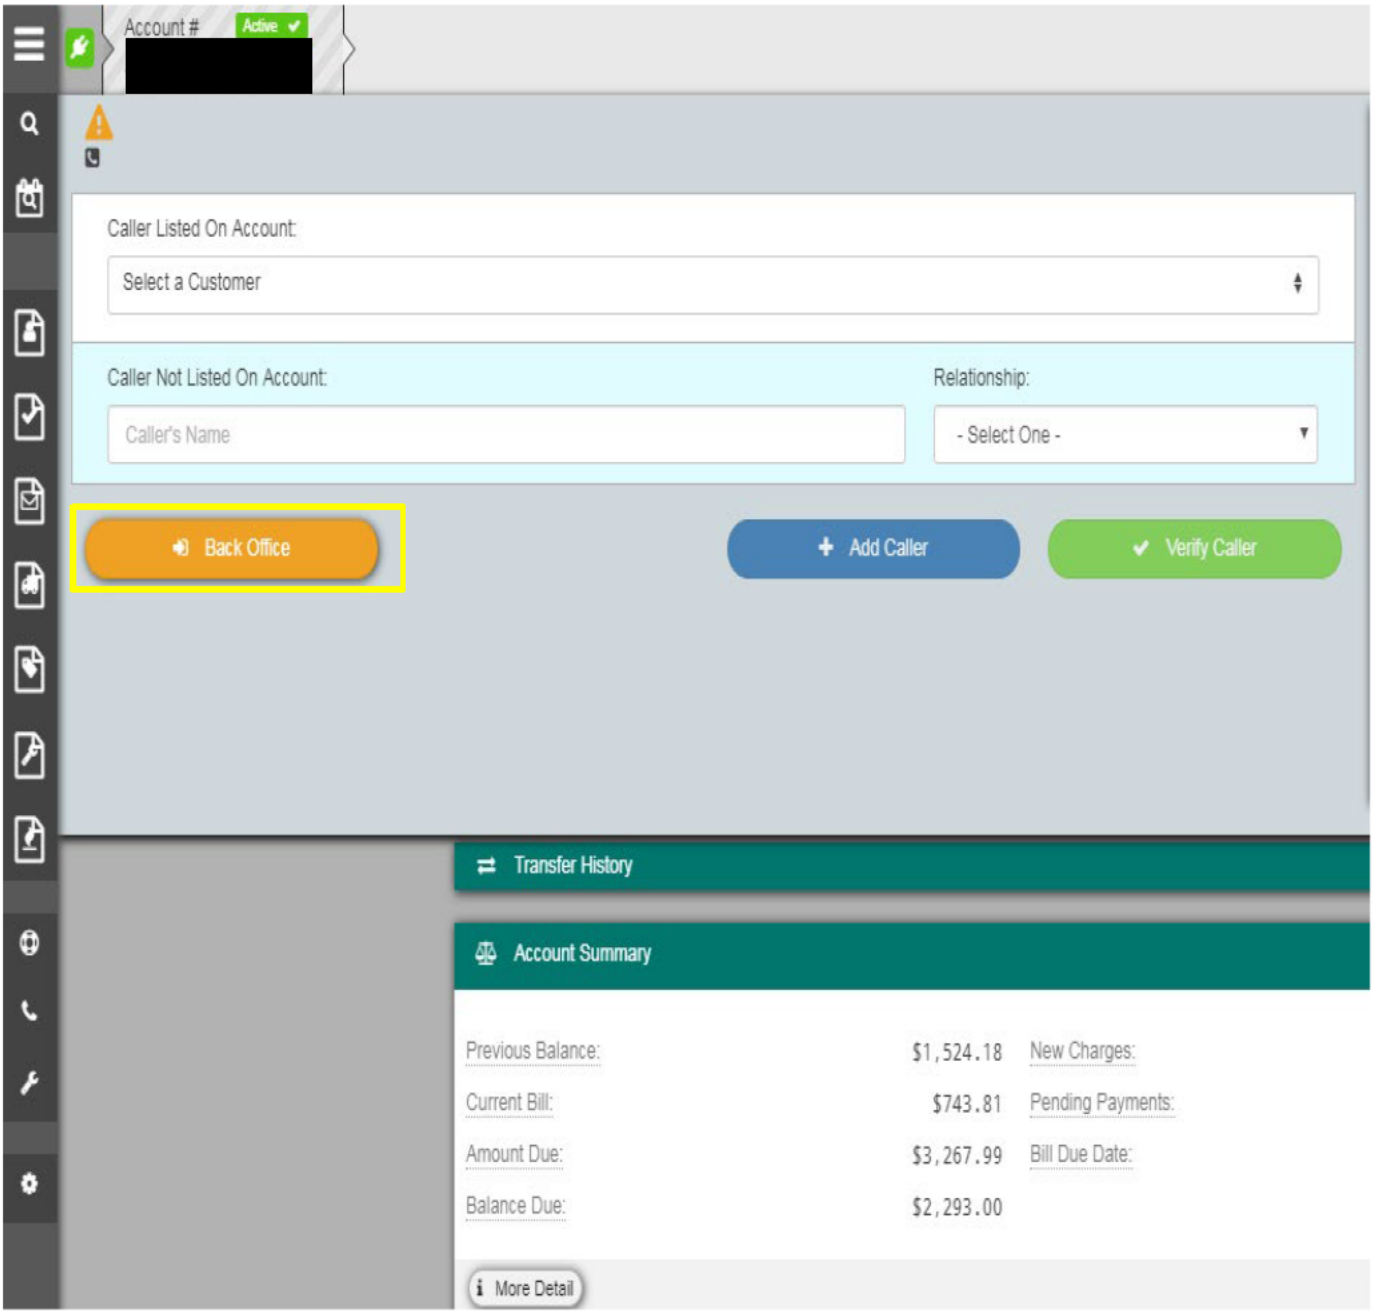
Technician's Field Guide 2022

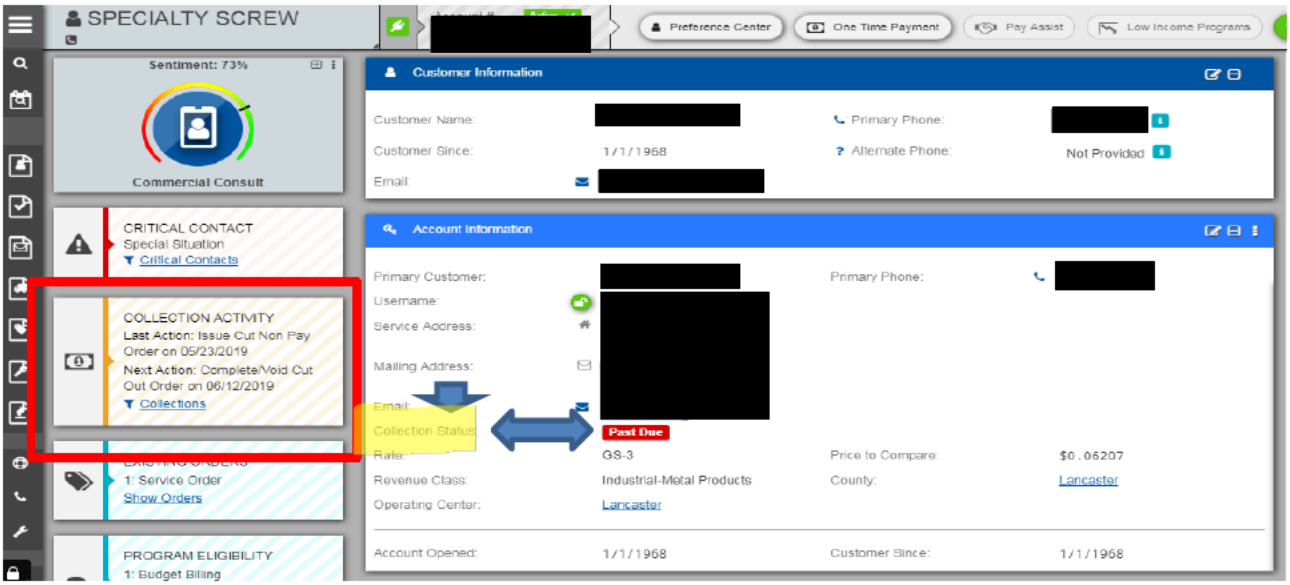
ID in the field: Use, navigation, and walkthroughs

Access link for Intelligent Desktop (bookmark the link for easy access)
*****ALWAYS select "Back Office" whenever pulling up accounts in ID.**

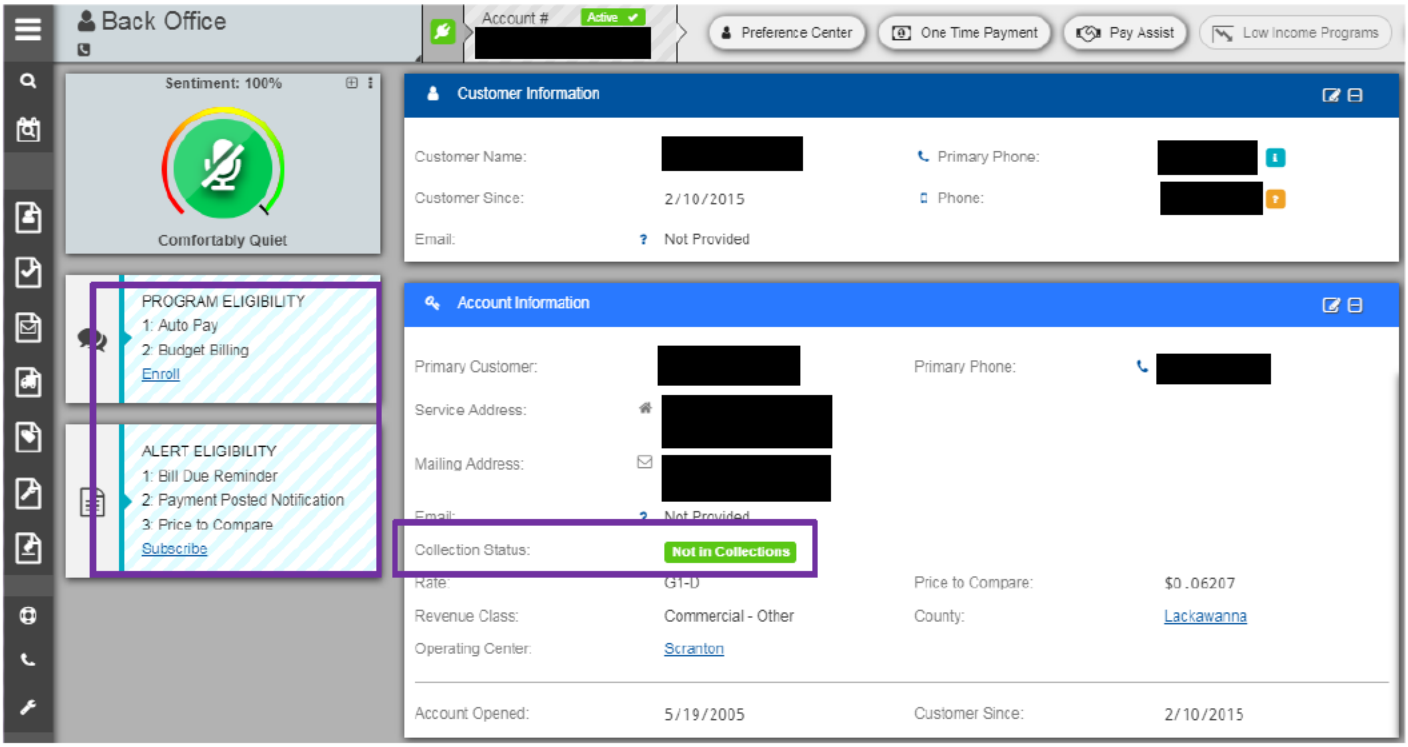


Identify a Valid Cut for Non-Pay Order in Intelligent Desktop

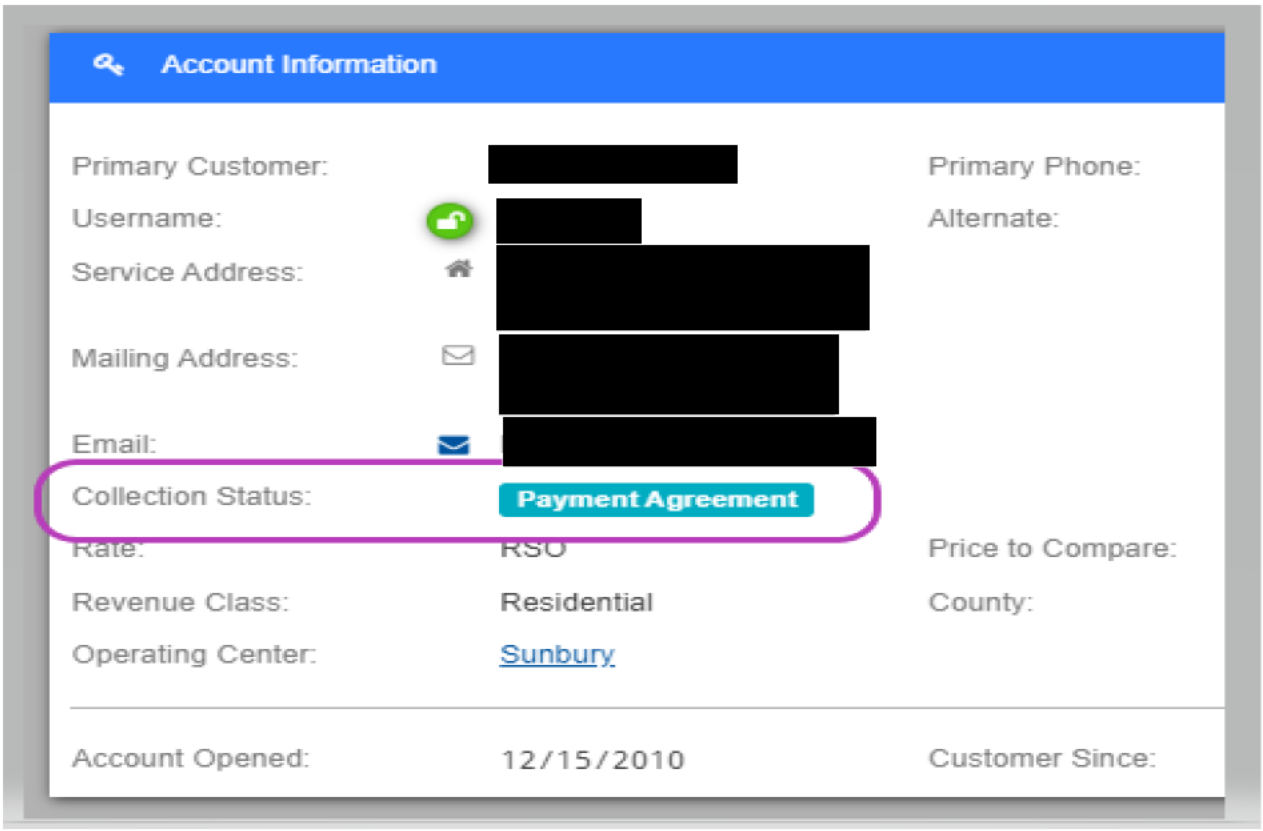
1. Search for the customer's account # and click Search.

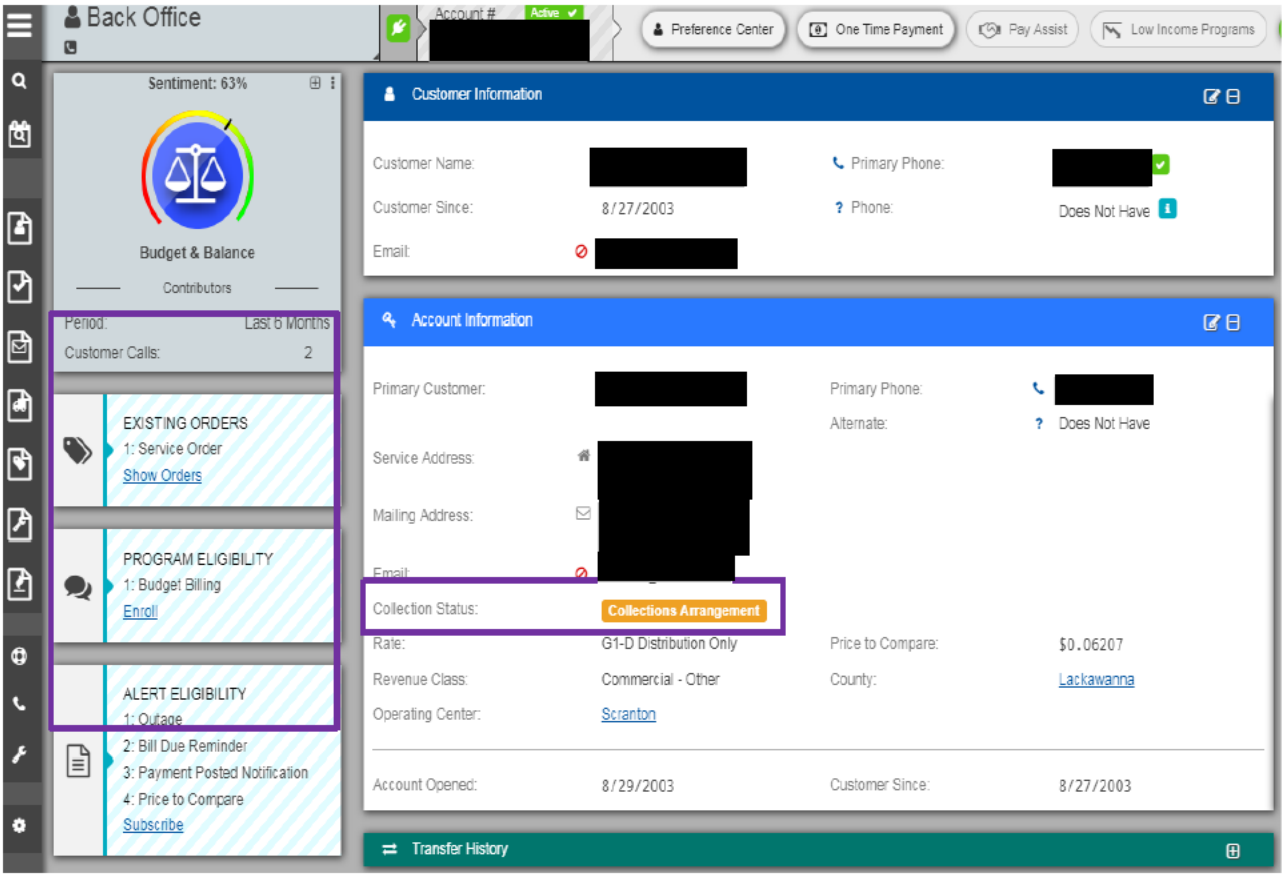


You can also enter the meter number, but use the account number if you have one, otherwise you will need to select the customer from the accounts listed under the meter number entered. The account number is the best and fastest way to get the specific customer's account profile your order was issued under.

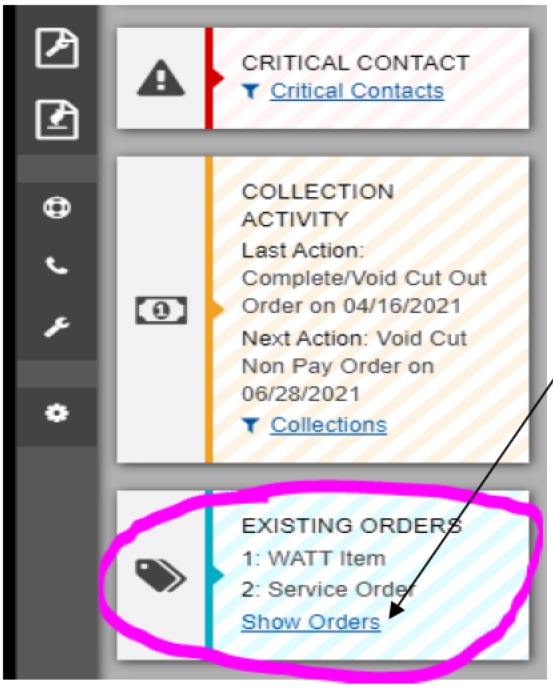


2. Click “Back Office”.





3. In the left panel, you’ll see a **Collection Activity highlight** if the customer is eligible for cut. This is a summary of recent and upcoming collection actions
   - Eligible cut will have *Next Action: Complete/Void Cut Out Order on….*
   - **If this date is not in the future – proceed with termination.**



4. To double check, review the **Collection Status**. If the status displayed is **"Past Due"**, the account is **ELIGIBLE FOR CUT**.
    - If the Collection Status displayed is Not in Collections, Payment Agreement or Collections Arrangement **and there is NO Collection Activity highlight on the left** – the account is **NOT ELIGIBLE FOR CUT.**

5. You can also check the service orders for other clues to help you determine if you should cut the service or not. Take notice of the **"Existing Orders"** Highlight, on the left side panel. (Shown below).

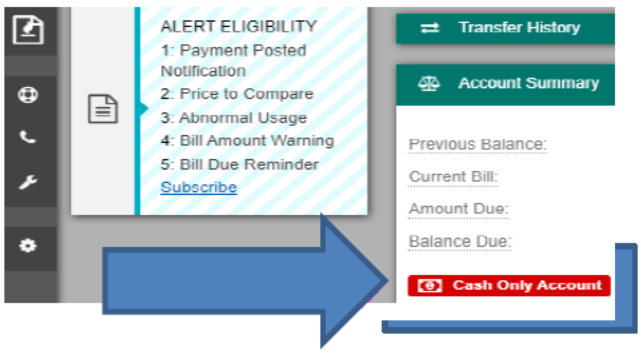
Click "Show Orders" to open and reveal what service orders are on the account, and if they are pending or completed.

- "Show Orders" when clicked, will open all service orders for you on the right side of the Intelligent Desktop screen. Sample shown below.

****Attention** for Large Power and "Dispatched" orders: ID may show both a pending "Cut In" *and* a pending "Cut Out Non-Pay" Order, this could indicate the cut order is no longer needed and could be a sign that the customer has paid. This is not always the case, but for the orders that are sent to Large Power and/or Dispatched, it will happen when a customer makes a payment on the website, thru the IVR or if a CSR has taken actions to stop collections. "Dispatched" orders do not update the same way they do when they are "Assigned" to a Service Technician. When using ID, until you are comfortable, only use this information from the "Orders" to confirm your decision, not to make your decision.**

Is my cut valid? Summary:

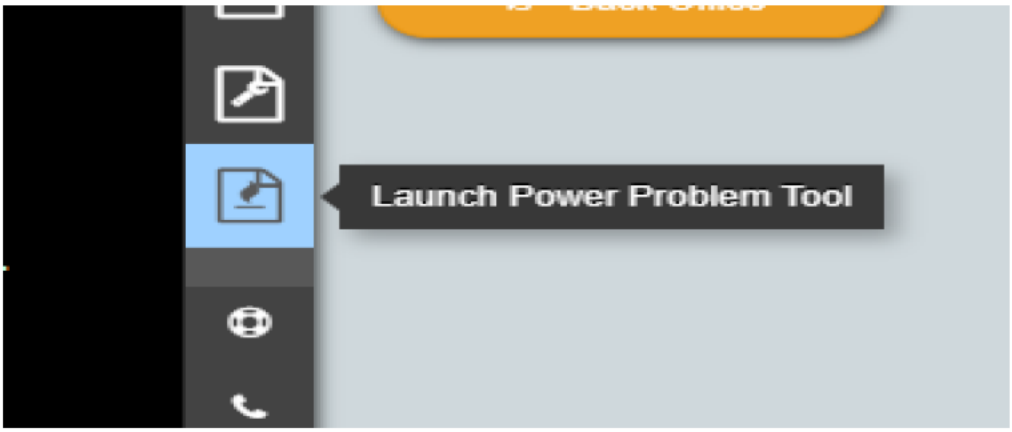
ELIGIBLE FOR CUT



- Collection Activity Highlight in the left panel in ID
- Collection Status = **Past Due**

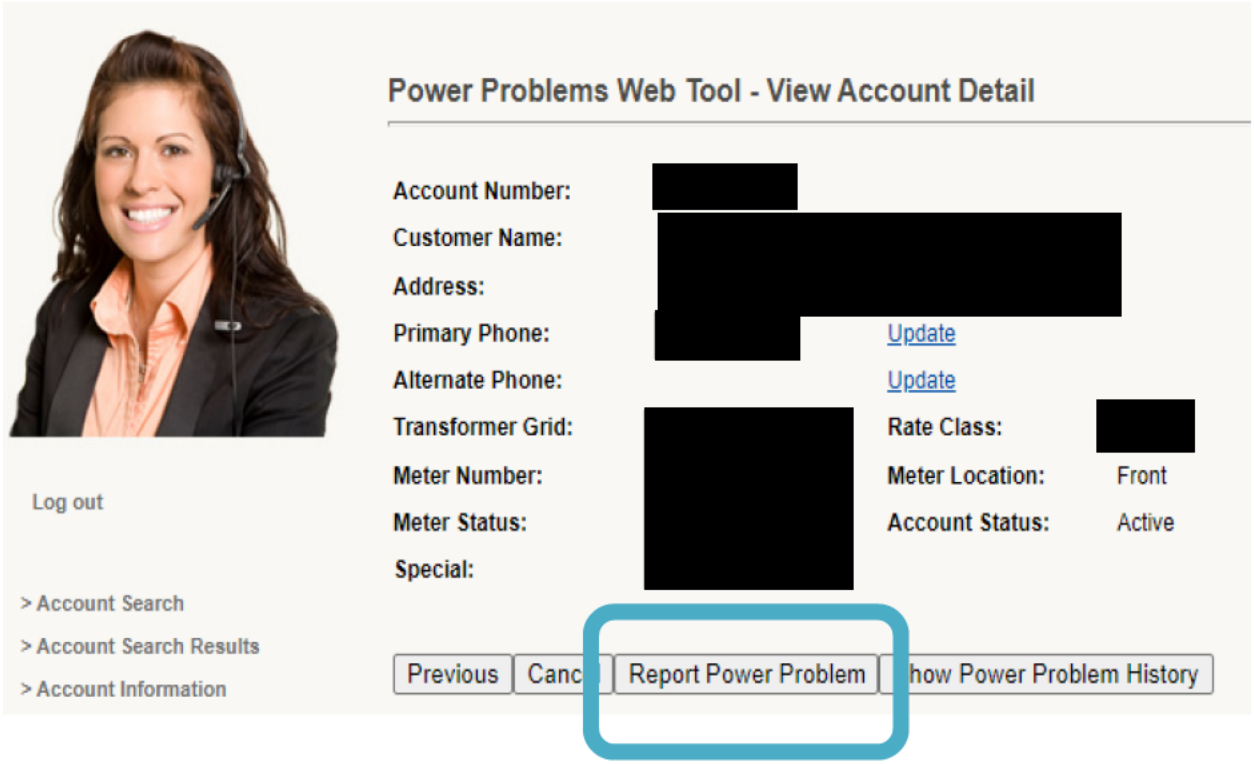
NOT ELIGIBLE FOR CUT

- NO Collection Activity Highlight in the left panel in ID
- Collection Status = **Not in Collections, Payment Agreement** or **Collections Arrangement**

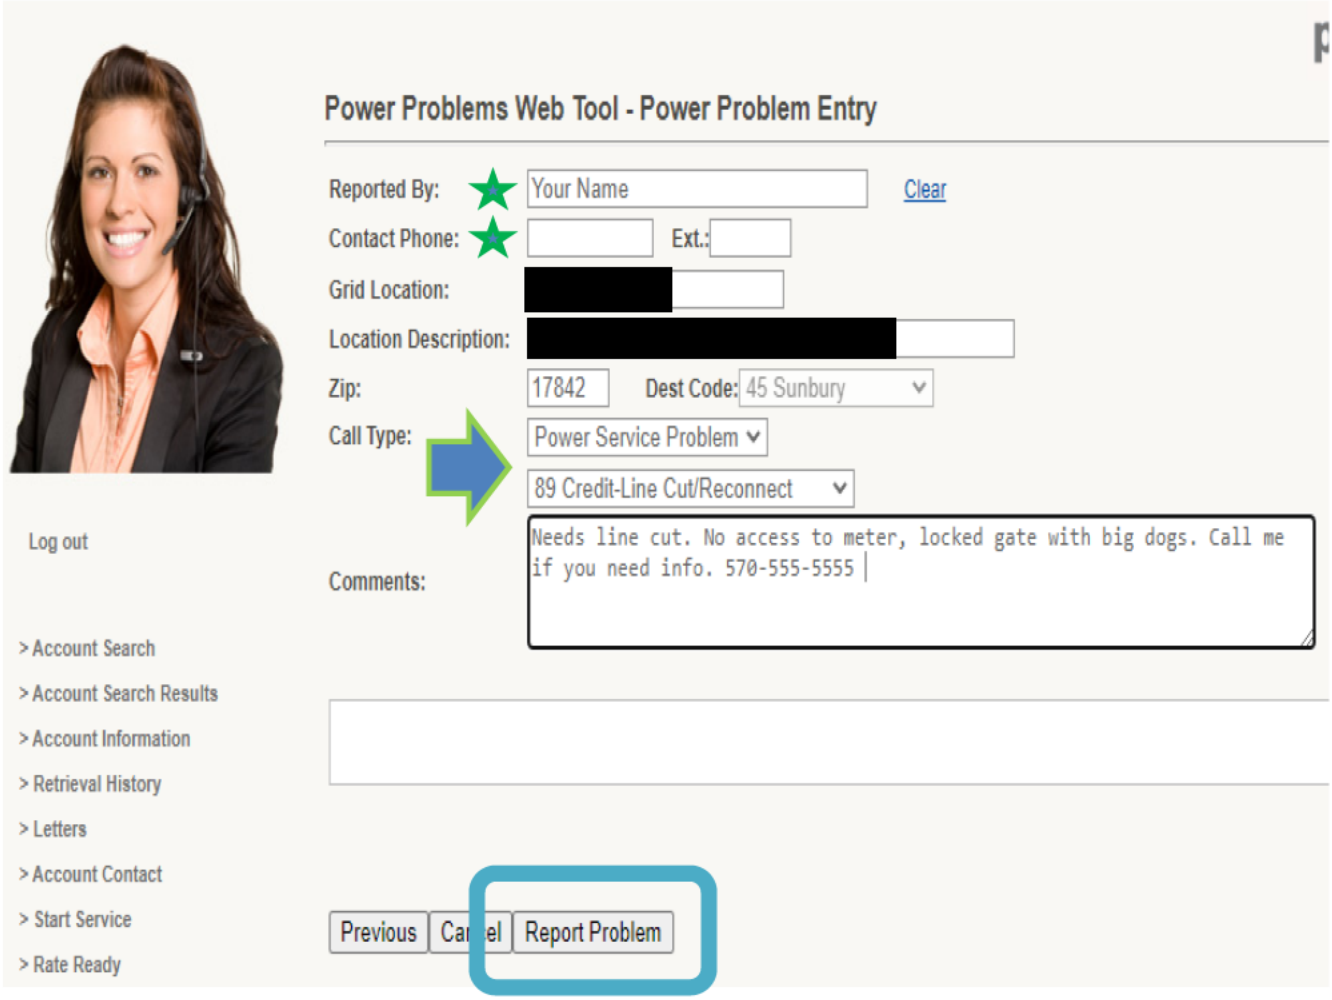


CASH ONLY. No Checks, No Credit Cards, No waiting for a customer that asked you to let them call and pay by phone before you cut the service.

Accounts that are restricted to only cash payments at an Authorized Bill Payment Center are marked "Cash Only Account" in **red** and appear in the "Account Summary" section. (See sample below). Identifying a Cash Only Account may help you in the field. Knowing before you arrive to a job that your customer is Cash Only will save time and unnecessary negotiating when you are approached by a customer asking for time to make a quick call to us. If the account is Cash Only, they cannot just make a simple call, they would need to leave the location to make a payment. If a customer asks you to allow them a moment to call and pay, you can politely tell the customer that you are sorry, but you must complete the order you came to do, but the good news is that once the required amount is paid, it will turn right back on for you (if a remote meter) or we will come back (if not a remote meter).



Referring an order to a line crew in Intelligent Desktop



1. Search for the customer's account with account # and click Search.
2. Click "Back Office"
3. Make sure the customer is still eligible for service termination.
4. If the account is eligible to cut and needs to be cut by a line crew due to no access or other reasons preventing a remote cut, click the "Launch Power Problem Tool" icon on the far left side of the ID window. (Shown below).

5. The "Power Problems Web Tool – View Account Detail" screen will pop up for you with your specific customer's account information prefilled.
6. Click "Report Power Problem".

7. On the "Power Problems Web Tool – Power Problem Entry" screen: When referring an order to a line crew, Enter YOUR NAME and YOUR PHONE NUMBER in the "Reported By" and "Contact Phone" fields since you are entering a collections referral for a line crew and not reporting a power outage.
8. Click the arrow in "Call Type" and choose "Power Service Problem".
9. Click the arrow in the text box under "Power Service Problem" and choose the very last option on the list: "89 Credit-Line Cut/Reconnect".
10. Fill in the "Comments" section with a summary of the situation preventing a remote block or manual block at the meter. Include any information the line crew may need and to call you if they have questions.
11. Once you have filled in the necessary information, click "Report Problem" and close out your order as you normally would when you refer to a line crew to cut the service.

Need Help??

Contacts for Revenue Operations:

Email Address: RevenueOperationsCollection@pplweb.com

Hotline number: 484 634-3676

Donna Webster Cell: 484 456-3956 Office Number: 484 634-3079

****Please email any requests to void an order. Include account/meter number and a summary of why the order should be voided and your phone number to call if we need more information or have other handling suggestions that may be a workable option/alternative****

*****Did you see something at a premise that you think someone should look at? Jumpers on a meter, evidence of something illegal, a sticker on the door from the Department of Health condemning the property: Snap a photo (or 2) of the situation and either email the photos and the account/meter number to Rev Ops or text the photos to Donna Webster's cell phone (484 456-3956) with the account/meter number, then call to do a review and get guidance. If no one is immediately available and it is not an immediate safety concern, allow time for a response. Skip the job and head to the next one, do not sit at a premise and wait for an answer for non-urgent issues. For anything URGENT or IMMEDIATE SAFETY CONCERNS: Take the appropriate action, then call someone, (a supervisor, safety team lead or Rev Ops). If you are not sure what you should do and you were not able to reach someone for direction, take the safest action you can to protect yourself, the customer, the public and property (property could be a customer's home and/or your company vehicle). Document (if you can do it safely) with photographs and in words (email or text) and send the information to your supervisor or the appropriate party for that specific situation.**

What about these situations??

You have a **Daycare** in your workload and it's a cut order. Although we do not cut a Daycare when there are children inside, that doesn't mean you should not go to the premise at all. We can cut a Daycare if it is closed, or if there are no children on site. Make sure you go to the premise, knock on the door and if someone is there and you can confirm the daycare currently has children inside, leave a 48-hour notice and tell the person at the daycare they need to call the 800 number to take care of the account balance. Then close out the order with what you had done using the UTC option if you did not cut the service.

You have a **hospital or Health Care Facility** in your workload. Although we do not cut Hospitals or HCFs for the safety of the patients inside, that doesn't mean you should not go to the premise at all. The premise may have been sold or closed permanently. If you can confirm the facility currently has patients inside, leave a 48-hour notice and tell the person at the facility they need to call the 800 number to take care of the account balance. Then close out the order with comments on what you had done using the UTC option. Not sure if the place is considered an HCF? Ask someone. Only facilities on the State Certified Health Care Facility list are exempt from terminations. Some places can be cut, check with Rev Ops if you are unsure, or if observe a valid reason we should not cut the service.

You observe a **Medical Condition** at a customer's home that you are supposed to cut: Do not cut someone that you can visually verify a serious condition is present that you have not seen or dealt with previously. Tell them to call the 800 number so they can get the information on how to provide a medical certification. If they tell you they did or they can't or anything that indicates to you that the medical certification may not be available or added to the account, call for guidance and make the best decision you can if you cannot reach someone.

Your safety is critical to ppl. If you are threatened: report the incident IMMEDIATELY thru the Customer Threats Database. CALL THE POLICE if you see a gun or weapon or if you have been struck by anyone or anything that was intentional and for the purpose of intimidating or harming you to prevent you from cutting the service. Follow the guidance on any field abuse flagged accounts.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of PPL Electric Utilities Corporation for Approval To Use The Remote Service Switch In Its Meters For Involuntary Service Terminations	: : : : :	Docket No. P-2016-2524581

JOINT PETITION FOR
APPROVAL OF SETTLEMENT

TO ADMINISTRATIVE LAW JUDGE DENNIS J. BUCKLEY:

I. INTRODUCTION

PPL Electric Utilities Corporation ("PPL Electric" or the "Company"), the Office of Consumer Advocate ("OCA"), and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), parties to the above-captioned proceeding (hereinafter, collectively the "Joint Petitioners"), hereby file this Joint Petition for Approval of Settlement ("Settlement") and respectfully request that the Pennsylvania Public Utility Commission ("Commission") approve the proposals set forth in PPL Electric's Petition to Use the Remote Service Switch in Its Meters for Involuntary Service Termination subject to the terms and conditions of the Settlement. The Office of Small Business Advocate ("OSBA"), the other party in this proceeding, has indicated that it does not oppose this Settlement.

This Settlement resolves all of the issues raised by all of the parties to the instant proceeding. In support of the Settlement, the Joint Petitioners state the following:

II. BACKGROUND

1. On June 30, 2014, PPL Electric filed its Smart Meter Plan ("SMP") with the Commission at Docket No. M-2014-2430781 in compliance with Act 129 of 2008 ("Act 129")

and Commission orders. In the SMP, the Company proposed to deploy Radio Frequency ("RF") Mesh meters throughout its service territory by 2019.

2. In its Order entered September 3, 2015, the Commission approved PPL Electric's SMP. *See Petition of PPL Electric Utilities Corporation for Approval of Its Smart Meter Technology Procurement and Installation Plan*, Docket No. M-2014-2430781 (Order Entered Sept. 3, 2015) ("*2015 Smart Meter Order*"). Therein, the Commission also required the Company to seek stakeholder input and file for Commission approval before implementing remote involuntary service termination. *2015 Smart Meter Order*, p. 69.

3. PPL Electric held a stakeholder meeting on October 28, 2015 with interested parties to discuss its proposed involuntary service termination plan, along with its communications plan and privacy plan. Representatives from the Commission, the OCA, the OSBA, PP&L Industrial Customer Alliance ("PPLICA"), and CAUSE-PA participated in the stakeholder meeting.

4. Prior to the stakeholder meeting, PPL Electric distributed white papers describing its proposed Communications Plan, Privacy Plan and Use of the Remote Switch for Involuntary Service Terminations. Moreover, the Company provided a presentation regarding its proposals at the stakeholder meeting and answered questions from participants.

5. On January 15, 2016, PPL Electric filed the above-captioned Petition with the Commission. In its Petition, PPL Electric requested Commission approval of PPL Electric's proposal to use the remote service switch for involuntary service terminations.

6. On February 4, 2016, OCA filed an Answer, Notice of Intervention, and Public Statement.

7. On February 11, 2016, CAUSE-PA filed a Petition to Intervene.

8. On March 7, 2016, OSBA filed a Public Statement, Verification, and Notice of Intervention.

9. As a result of settlement negotiations, the Joint Petitioners have agreed to a settlement that provides a reasonable resolution of the issues among them. The Joint Petitioners are in full agreement that the Settlement is in the public interest, is a reasonable resolution of their respective interests, and should be approved. The Settlement agreed to by the Joint Petitioners is set forth in the following Section III.

III. SETTLEMENT

10. The Joint Petitioners agree that PPL Electric's Petition to Use the Remote Service Switch in Its Meters for Involuntary Service Termination is approved except as modified below.

11. As a preliminary matter, the Joint Petitioners stipulate to the intervention of CAUSE-PA in this proceeding.

12. PPL Electric shall comply with all provisions of Chapter 14 of the Pennsylvania Public Utility Code (66 Pa. C.S. Chp. 14) and Chapter 56 of the Commission's regulations (52 Pa. Code Chp. 56) with respect to the application of remote connect and disconnect for involuntary service terminations.

13. PPL Electric will send an appropriately trained field representative to the customer's premises on the day that termination is scheduled to occur. The field representative will use reasonable efforts to make personal contact with a responsible adult occupant of the premises prior to the termination.

14. Appropriate training of the field representative will include at least: medical certificate procedures; relevant complaint procedures; general familiarity with Protection from Abuse ("PFA") Orders; and how to refer customers to PPL Electric's universal service programs.

In addition, the field representative will be trained to call PPL Electric staff for further guidance if presented with a PFA Order.

15. Where the field representative is not able to make personal contact prior to termination, the field representative shall leave a notice at the residence informing the customer that utility service is being disconnected and how the customer can effect reconnection. The notice shall include a contact number to PPL Electric staff where low-income and vulnerable customers can receive information on PPL Electric's Universal Service and Energy Conservation programs and related payment information.

16. Service shall not be terminated if the field representative becomes aware of a personal safety condition that warrants delay in service termination, including if the field representative is informed that the occupant is seriously ill or affected with a medical condition which will be aggravated by cessation of service and that a medical certificate will be procured pursuant to 52 Pa. Code § 56.112. The field representative shall be fully trained to direct low-income and vulnerable customers to the line to reach PPL Electric staff where the customer can receive information on all PPL Electric's Universal Service and Energy Conservation programs and related payment information.

17. Upon confirmation in PPL Electric's system that payment has been made, PPL Electric will reconnect the customer's service using the remote switch as quickly as possible.

18. PPL Electric's hours for disconnection and reconnection will be consistent with the Public Utility Code, the Commission's regulations and Commission directives. PPL Electric will reconnect service using the RF mesh remote switch from 7:00 a.m. to 10:00 p.m. seven days per week beginning when the Company uses the remote switch for involuntary service termination.

19. PPL Electric proposes a reduced restoration fee of $14.00 for residential and small commercial & industrial customers with an RF meter with a remote switch to reflect the decreased costs of reconnecting service. The reduced reconnection fee will be approved as part of this Settlement and as part of the Company's tariff compliance filing in this proceeding. A pro forma tariff is provided as **Appendix A**, and support for the $14.00 reconnection fee is provided as **Appendix B**.

20. Within 12 months of implementing remote disconnect for involuntary service termination, PPL Electric will provide information annually at its smart meter stakeholder meetings regarding remote connect/disconnect metrics that includes:

a. The number of remote disconnects for all customers;

b. The number of remote reconnects for all customers; and

c. The average time it took to process a reconnection using the remote switch for all customers from the time that the customer met all requirements for reconnection (when the Company's IT system is able to automatically determine this metric, which is currently estimated to be in July 2017).

21. Total costs associated with customer service terminations and reconnections are allocated to each customer class using the Company's cost of service study reflected in its most recent base rate proceeding. Cost savings, net of cost savings reflected in the reduced reconnection fee set forth in paragraph 19, from the use of the remote service connection/disconnection functionality of the smart meters will be tracked and flowed through the Company's smart meter surcharge by customer class pursuant to the requirements of the Commission's September 3, 2015 Order at Docket No. M-2014-2430781.

IV. SETTLEMENT CONDITIONS

22. The Settlement is conditioned upon the Commission's approval of the terms and conditions contained in this Settlement without modification. If the Commission modifies the Settlement, any Joint Petitioner may elect to withdraw from the Settlement and may proceed with litigation and, in such event, the Settlement shall be void and of no effect. Such election to withdraw must be made in writing, filed with the Secretary of the Commission and served upon all Joint Petitioners within five business days after the entry of an Order modifying the Settlement.

23. This Settlement is proposed by the Joint Petitioners to settle all of the issues in the instant proceeding. If the Commission does not approve the Settlement and the proceedings continue, the Joint Petitioners reserve their respective procedural rights to evidentiary hearings, submission of testimony and exhibits, cross-examination of witnesses, briefing, and argument of their respective positions. The Settlement is made without any admission against, or prejudice to, any position that any Joint Petitioner may adopt in the event of any subsequent litigation of these proceedings, or in any other proceeding.

24. The Joint Petitioners acknowledge that the Settlement reflects a compromise of competing positions and does not necessarily reflect any Joint Petitioner's position with respect to any issues raised in this proceeding. The terms and conditions of the Settlement are limited to the facts of this specific case and are the product of compromise for the sole purpose of settling this case. This Settlement is presented without prejudice to any position which any of the Joint Petitioners may have advanced and without prejudice to the position any of the parties may advance on the merits of the issues in future proceedings. This Settlement does not preclude the Joint Petitioners from taking other positions in other proceedings.

25. If the Commission adopts the Settlement without modification, the Joint Petitioners agree that they: (1) will not initiate or join in any challenge to the Settlement; (2) will not assert any positions in derogation to the Settlement; and (3) waive their right to appeal or to seek reconsideration, rehearing, reargument, or clarification of the Commission's order approving the Settlement.

V. THE SETTLEMENT IS IN THE PUBLIC INTEREST

26. Commission policy promotes settlements. *See* 52 Pa. Code § 5.231. Settlements reduce the time and expense the parties must expend litigating a case and, at the same time, conserve administrative resources. The Commission has indicated that settlement results are often preferable to those achieved at the conclusion of a fully litigated proceeding. *See id.* § 69.401. In order to accept a settlement, the Commission must first determine that the proposed terms and conditions are in the public interest. *Pa. PUC v. York Water Co.*, Docket No. R-00049165 (Order Entered Oct. 4, 2004); *Pa. PUC v. C.S. Water and Sewer Assocs.*, 74 Pa. P.U.C. 767 (1991).

27. This Settlement was achieved by the Joint Petitioners after an investigation of PPL Electric's filing, including informal discovery.

28. Approval of the Settlement will reduce the time and expenses that the active parties and the Commission must expend on the proceedings.

29. The Joint Petitioners will further explain the reasons that the Settlement is in the public interest in their Statements in Support, which are being separately filed by the Joint Petitioners.[1] In their respective Statements in Support, each Joint Petitioner explains why, in its

[1] OSBA has advised that it is separately filing a letter of non-opposition to the Settlement.

view, the Settlement is fair, just, and reasonable and reflects a reasonable compromise of the disputed issues in this proceeding.

VI. CONCLUSION

WHEREFORE, PPL Electric Utilities Corporation, the Office of Consumer Advocate, and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania respectfully request that the Pennsylvania Public Utility Commission approve this Joint Petition for Approval of Settlement and allow PPL Electric to file the tariff supplement attached hereto as **Appendix A** on not less than one-day's notice when PPL Electric is ready to implement the remote switch for involuntary service termination, which is estimated to be April 2017.

Respectfully submitted,

APPENDIX "A"

PPL Electric Utilities Corporation

RULE 10 - DISCONNECTION AND RECONNECTION OF SERVICE (CONTINUED) (C)

B. TERMINATION (Continued)

(g) The Company's authorized representatives cannot gain admittance or are refused admittance to the premises for the purpose of reading meters, making repairs, making inspections, or removing Company property, or the customer interferes with Company representatives in the performance of their duties, or the meters or other equipment of the Company are not accessible during reasonable hours. (C)

(h) The customer neglects or refuses to reimburse Company for repairs to or loss of Company's property used to supply service when such repairs are necessitated, or loss occasioned, by negligence on the part of customer.

(i) Failure to post a deposit, provide a guarantee, or establish credit associated with service provided by the Company.

(j) Failure to comply with the material terms of a settlement or amortization agreement.

(k) Fraud or material misrepresentation of identity for the purpose of obtaining utility service.

(l) Unauthorized use of the utility service delivered on or about the affected dwelling or other service location.

(3) The Company shall not terminate, or refuse to restore service to any premises when any occupant residing therein is certified by a physician, physician's assistant or nurse practitioner to be seriously ill or affected with a medical condition which will be aggravated by a cessation of service or failure to restore service.

(4) Except in emergencies, service to residential customers will not be terminated: on Saturday or Sunday; on a bank holiday or the day preceding a bank holiday; on a day, or a day preceding a day, when the Company's business offices are closed, excluding Saturdays; or on a holiday or the day preceding a holiday observed by the Pennsylvania Public Utility Commission.

(5) The customer may avoid termination under the above conditions by eliminating the cause for termination and fulfilling the appropriate conditions for reconnection under Rule 10C hereof prior to termination.

C. RECONNECTION

Whenever a service has been terminated under any of the above provisions, Company will require payment of a $~~30~~ 14 ~~($50 if done during other than the normal working hours of the physical forces reconnecting the service)~~ disconnection and reconnection charge and will, before reconnection, require customer to eliminate the cause of disconnection and fulfill any of the following conditions associated with service provided by the Company that are reasonably applicable:

(1) Establish credit, make a security deposit, or provide a written guarantee acceptable to Company.

(2) Correct any unsafe or nonstandard conditions in customer's service entrance facilities.

(3) Make full payment of, or arrange time payments for the charges for energy used but not metered and, all costs of Company's investigation and property damage associated therewith, plus the cost of measures considered necessary by the Company to prevent recurrence. These include but are not limited to: cost of tampering investigations, inspections, billing, and corrective action on unsafe equipment.

(4) Make payment of, or arrange for the payment of, all amounts currently due for services provided by the Company according to a settlement or amortization agreement.

APPENDIX “B

BUSINESS ACTIVITY	COST or MULTIPLIER	CALCULATION DETAILS	ASSUMPTIONS
Cost related to Customer Call Center (handling customer reconnect phone calls, etc.)	$ 8.88	Financial model	Data from PPL-EU Customer Service Data Analytics Group
Expected average # of phone calls to resolve customer reconnect concerns	1.5		By 2019 Call Center will be able to resolve customer issues in less than 2 calls per customer (on average)
Cost of handling phone calls (1.5 per occurrence)	$ 13.31	($8.88 * 1.5)	
Cost of truck roll at deployment completion - blended rate for remote switch customers only (blended rate = combined standard & after hours charges)	$ 19.66	Financial model	Calculations extracted from PPL-EU financial model
Expected # of remote meter service terminations	48,174	(50,000 * 0.035)	Based on assumed # of cuts to be 50K in 2019 with ~3.5% non-remote switch capable meters
Expected # of reconnects	33,722	(48,174 * 0.703)	Assume 70.3% of cuts to be reconnected (based on 2015 data)
Expected # of failures at 5% (network issues + meter/remote switch issues)	1,686	(33,722 * 0.05)	By 2019 new RF Mesh system will be operating at 95% efficiency
Expected # of truck rolls required - meter only (3.5%)	1,180	(1,686 * 0.70)	Assume 30% of failures are not meter related (network, etc.)
Cost of truck rolls (using rates from PPL-EU financial model)	$ 23,198.80	(1,180 * $19.66)	Expected # of truck rolls multiplied by the cost of truck roll
Cost of truck rolls averaged out for all reconnects	$ 0.69	($23,198.90 / 33,722)	Spread cost of truck rolls from remote switch failures over all reconnects for year
Cost of doing business for remote switch reconnects at time of deployment completion (2019+)	$ 14.00	($13.31 + $0.69)	Combination of call center cost plus truck roll cost for remote switch failures

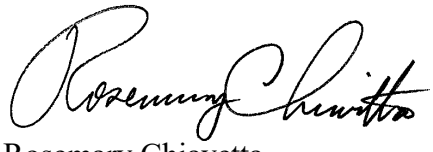
Corporation for Approval To Use	:	P-2016-2524581
The Remote Service Switch In Its Meters	:	
For Involuntary Service Terminations	:	

ORDER

BY THE COMMISSION:

We adopt as our action the Recommended Decision of Administrative Law Judge Dennis J. Buckley, dated December 7, 2016;

THEREFORE,



IT IS ORDERED:

1. That PPL Electric Utilities Corporation's Petition to Use the Remote Service Switch in Its Meters for Involuntary Service Termination subject to the terms and conditions of the proposed Settlement at Docket No. P-2016-2524581, be granted, without modification.

2. That PPL Electric Utilities Corporation be granted leave to file the tariff supplement attached to the Settlement as Appendix A effective upon at least one day's notice when PPL Electric Utilities Corporation is ready to implement the remote switch for involuntary service termination, which is estimated to be April 2017.

3. That upon the filing by PPL Electric Utilities Corporation and acceptance and approval by the Commission of the tariff supplement attached to the Settlement as Appendix A, this proceeding shall be marked closed.

REBUTTAL TESTIMONY

BARBARA R. ALEXANDER
BARBARA ALEXANDER CONSULTING LLC

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

January 23, 2026

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member manager of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. I submitted Direct Testimony on behalf of the OCA in this proceeding on December 22, 2025.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY AT THIS TIME?

A. I am submitting Rebuttal Testimony in response to the Direct Testimony of Frank Lacey on behalf of the Retail Energy Supply Association (RESA) (RESA Statement No. 1).

Q. PLEASE SUMMARIZE MR. LACEY'S TESTIMONY.

A. Mr. Lacey opposes PPL Electric's proposed revisions to its Supplier Tariff, particularly those that will impose additional charges to Electric Generation Suppliers (EGS) who submit enrollment and billing information to PPL Electric through Electronic Data Exchange (EDI) transactions, fees for testing compatibility and supplier credit and technical qualifications, and certain new requirements for billing EGS charges. At the same time, Mr. Lacey also proposes several reforms that PPL Electric should adopt instead of the Company's changes to its Supplier Tariff.

Q. WHAT ISSUES WILL YOU ADDRESS IN RESPONSE TO MR. LACEY'S DIRECT TESTIMONY?

A. I will address two issues. First, I will respond to Mr. Lacey's opposition to PPL Electric's proposed fees for EGS use of PPL's EDI and billing and collection systems that purchase

and collect EGS charges on the PPL bill. Second, I will respond to Mr. Lacey's proposed reforms that he would substitute for PPL Electric's changes to its Supplier Tariff.

Q. WITH REGARD TO THE FIRST ISSUE, HAVE YOU DONE AN ANALYSIS OF PPL ELECTRIC'S PROPOSED CHARGES TO DETERMINE IF THEY ARE APPROPRIATE?

A. No. I rely on PPL's documentation of the charges that the Company incurs for transactions on its EDI system.

Q. IF THE COMMISSION AGREES WITH THE REASONABLENESS OF THE COSTS THAT PPL ELECTRIC INCURS TO HANDLE THE EGS EDI TRANSACTIONS AND INVESTIGATIONS FOR SUPPLIER CREDIT WORTHINESS AND WHOLESALE MARKET COMPLIANCE, IS IT APPROPRIATE TO REQUIRE THE EGS TO PAY FOR THOSE COSTS?

A. Yes. I recognize that in the early years of the implementation of retail choice and customer shopping, that initial costs to establish the EDI systems to send information between the distribution companies and EGSs were included in rates paid by all residential and commercial customers. However, that should not require all ratepayers to pay higher rates to reflect the incremental costs for any or all EDI transactions for all time. This concern is particularly important in light of PPL Electric's documentation of the high volume of rejected EDI transactions submitted by EGSs, and the subsequent transaction costs that are currently imposed on all customers. Based on several years of tracking EDI rejected transactions that are submitted by EGSs, over 75% are due to EGS errors or a reflection of

EGS responsibility.[1] PPL Electric has justified the imposition of EDI transaction fees based on this documentation and correctly opines that the imposition of a fee that reflects the actual costs incurred by PPL Electric should incentivize EGSs to submit more accurate EDI transactions and will impose costs to those EGSs that are responsible for the excessive or redundant transactions.[2]

Q. IS THERE ANOTHER REASON TO SUPPORT PPL'S PROPOSALS TO CHARGE EGS FEES THAT REFLECT ACTUAL INCREMENTAL COSTS?

A. Yes. If the changes to the PPL Electric Supplier Tariff are not adopted, residential (and other customer classes) will see increased costs included in the proposed revenue requirement in this proceeding. PPL's proposed revenue requirement includes the imposition of these incremental costs in the Supplier Tariff on suppliers and not on the majority of residential customers who receive default service and do not shop with an EGS for generation supply service.

Q. DO YOU AGREE WITH MR. LACEY'S ASSERTION THAT THERE ARE BENEFITS TO ALL CUSTOMERS TO SUBSIDIZE RETAIL MARKET TRANSACTIONS, EVEN THOSE WHO DO NOT SHOP[3]?

A. No. There is no evidence to support this statement. I realize that retail choice is obligated to be offered in Pennsylvania. I do not suggest otherwise. But, there is no evidence that non-shopping customers benefit from retail choice since all customers paid for the initial

[1] PPL Electric Response to RESA-III-3, Attachment 1. The balance of these rejected EDI transactions are labeled as PPL Electric's responsibility and would not be billed to any EGS.
[2] PPL Electric Response to RESA-I-23.
[3] Mr. Lacey opines: "The availability of retail choice benefits all customers whether they elect to shop or not. In fact, the mere option of retail choice imposes a competitive market discipline on wholesale energy providers participating in PPL's default service that provides a direct and immediate benefit to non-shopping customers." RESA St. No. 1, page 25, lines 18-21.

implementation of retail choice, including the EDI system, all customers pay for the incremental costs of default service procurement, all customers pay for the collection costs associated with the billing and collection of EGS charges, and all customers pay for the education and outreach programs mandated by the Commission to support the option of retail choice. I am not aware of any evidence that the benefits associated with a minority of residential and small commercial customers who select an EGS, many of whom pay more than default service for the same generation supply product as I documented in my Direct Testimony, have resulted in benefits to non-shopping customers. On the contrary, if all the costs to implement and maintain retail choice for residential customers were eliminated from rates, all customers would see a benefit in the form of lower rates. There is no evidence that the existence of retail choice with all its associated costs has resulted in lower wholesale market prices or lower default service rates compared to a situation in which all residential customers are served by a competitively acquired generation supply service.

Q. PLEASE COMMENT ON MR. LACEY'S RESPONSE TO PPL ELECTRIC ON HIS CLAIM THAT AVAILABILITY OF RETAIL CHOICE BENEFITS ALL CUSTOMERS.

A. In response to PPL Electric's data request asking Mr. Lacey to document the basis for his claim, Mr. Lacey's response on behalf of RESA confirms my conclusion stated above. The one document or analysis he references in his response is a report published by Mr. John Hanger in 2025, *Pennsylvania's Continued Success: Competition Maintains Low Electric Prices For All Residents.* His response quotes the study's conclusion that PPL Electric's default service prices in 2024 were 20% lower than the utilities generation supply rate in 1996. That Report did allege that the restructuring of Pennsylvania's electric utility

industry and the use of competitive acquisition of default service in the wholesale market has resulted in lower prices for retail customers compared to regulated utility prices for generation supply service.[4] However, Mr. Hanger also compares the 1996 "utility monopoly supply charge" (inflation adjusted) to the lowest offer made by EGSs on the Commission's shopping web portal in 2024 and claims that this analysis documents customer savings as well. This aspect of Mr. Hanger's Report is seriously defective. It is not based on what customers actually pay for EGS service. EGSs sell their receivables to the electric distribution companies who bill and collect EGS charges. However, even Mr. Lacey does not quote Mr. Hanger's analysis in his response to PPL Electric because it conflicts with what customers are actually billed by EGSs as documented on numerous studies using actual customer pricing data compared to default service prices in default service and base rate proceedings in which I have participated on behalf of the OCA. Residential customers who enroll with EGSs have paid on average more than default serviced in all these studies. The benefits that Mr. Hanger and others allege to have resulted from competition for generation supply service in the wholesale market are separate from the operations of the retail market and could exist without any retail market for residential customers.

[4] "In the Duquesne, PECO, Penn Power and PPL utility service territories, customers who remained on the default utility price saw average monthly savings of $27.58 dollars or 34% percent when compared to the 1996 utility monopoly supply inflation-adjusted price. In the Met-Ed and Penelec service territories, the default utility supply costs are close to the inflation-adjusted 1996 prices. Only in the West Penn Power utility service territory, did customers see an increase of about $3 in utility costs compared to the 1996 inflation-adjusted costs." Hanger, page 5.

Q. MR. LACEY OBJECTS TO CONSIDERING PPL ELECTRIC'S PROPOSED CHANGES TO THE SUPPLIER TARIFF IN THIS PROCEEDING. PLEASE RESPOND.

A. PPL's proposals reflect costs associated with current EDI transactions and future IT related investments associated with retail choice that would otherwise be included in higher rates in this base rate case. It is reasonable and appropriate to consider these changes to the Supplier Tariff that impact base rates for all customers. Since this proceeding provides a lengthier process for discovery and litigation than the Default service proceedings that are limited to six months, Mr. Lacey and his clients benefit from the consideration of these changes in this proceeding.

Q. TURNING TO MR. LACEY'S REFORMS THAT HE RECOMMENDS BE CONSIDERED IN THIS PROCEEDING, WHAT IS YOUR RESPONSE?

A. I defer to PPL Electric to respond to several of Mr. Lacey's proposals that reflect changes to the current EDI system functionality.[5] The costs to implement those reforms would need to be documented and considered and, pursuant to my overall recommendation, charged to EGSs and not non-shopping customers. However, Mr. Lacey's proposal to "unbundle all of PPL's costs to serve customers and to allocate those costs appropriately to default service and distribution-only customers…"[6] should be rejected. This same proposal has been made by RESA and routinely rejected and/or not adopted in many default service proceedings.[7]

[5] E.g., Mr. Lacey's proposals to allow suppliers to access real time data and "self-serve" their access to customer information; establish a strict standard response time of 1 business day for supplier inquiries; add EDI functionality for supplier initiated rebill cancellations.
[6] RESA St. No. 1, pages 18-19.
[7] In addition to Mr. Lacey's inability to cite any Commission order or settlement of any default service proceeding

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. However, I reserve the right to supplement this rebuttal testimony if additional relevant information is received.

that would support this proposal, I note that Pennsylvania electric utilities are required to recover their actual costs incurred to procure and administer the default service supply portfolio in a fully reconcilable Section 1307(e) cost recovery mechanisms for each class. 66 Pa. C.S. §§ 1307(e), 2807(e)(3.9). There has been no change in the methodology to calculate this cost recovery mechanism that reflects Mr. Lacey's proposal after several decades of implementation of retail competition.

SURREBUTTAL TESTIMONY

BARBARA R. ALEXANDER
BARBARA ALEXANDER CONSULTING LLC

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

February 9, 2026

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member manager of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. I submitted Direct Testimony on behalf of the OCA in this proceeding on December 22, 2025, and Rebuttal Testimony on behalf of the OCA on January 23, 2026.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY AT THIS TIME?

A. I am submitting Surrebuttal Testimony in response to the Rebuttal Testimony of Lisa Norden on behalf of PPL Electric (PPL Statement No. 18-R) and Rebuttal Testimony of Frank Lacey on behalf of the Retail Energy Supply Association (RESA) (RESA Statement No. 1-R).

RESPONSE TO REBUTTAL TESTIMONY OF PPL ELECTRIC WITNESS LISA NORDEN

Q. DO YOU HAVE ANY CHANGES OR CORRECTIONS IN RESPONSE TO MS. NORDEN'S REBUTTAL TESTIMONY?

A. Yes. I have revised my discussion of the analysis of PPL Electric's payment arrangements with residential customers.

Q. DOES MS. NORDEN ON BEHALF OF PPL ELECTRIC ACCEPT ANY OF YOUR RECOMMENDATIONS WITH REGARD TO ENSURING REASONABLE SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE AS A CONDITION OF ANY RATE INCREASE IN THIS PROCEEDING?

A. With one exception that I identify below, she rejects all my recommendations. As a result, I will provide the following response to her stated reasons for opposing my recommendations.

Q. WITH REGARD TO PPL ELECTRIC'S CALL CENTER PERFORMANCE, DOES MS. NORDEN ACKNOWLEDGE THAT "MORE NEEDS TO BE DONE" TO IMPROVE PERFORMANCE?

A. Yes. Ms. Norden does not dispute the actual performance data I presented in my Direct Testimony. Rather, she describes the intent to improve performance with additional internal and external resources, enhancing self-service options, providing additional training and "increased focus on call monitoring and quality review."[1] She acknowledges that "more work needs to be done with regard to the Company's call abandonment rate and its calls answered within 30 seconds" and that PPL Electric "has a plan and well positioned to improve its performance in those areas…"[2]

Q. WHAAT IS YOUR RESPONSE?

A. Ms. Norden's Rebuttal testimony supports my recommendation. While PPL is acknowledging that improved performance is needed, her refusal to endorse any performance level as a condition of this rate increase is not reasonable. I continue to urge the Commission to take PPL Electric's performance into account in setting rates and to require the vague commitment to improve performance to be made explicit. Ratepayers should not have to rely on vague promises in return for higher rates in such a crucial area

[1] PPL St. No. 18-R, page 5, lines 14-19.
[2] Ibid., page 7, lines 19-20.

of performance that affects all customers who need to speak to a customer service representative.

Q. PLEASE RESPOND TO MS. NORDEN'S CLAIM THAT THE 2024 CUSTOMER SERVICE PERFORMANCE WAS NOT DISCUSSED IN HER TESTIMONY IN SUPPORT OF PPL'S RATE INCREASE BECAUSE THE COMMISSION'S 2024 CUSTOMER SERVICE PERFORMANCE REPORT WAS NOT YET PUBLISHED.[3]

A. The suggestion that PPL did not know its own internal performance at its call centers or other indicia of its customer service performance at the time of the filing of this rate increase proposal in September 2025 lacks credibility. PPL Electric knew, or should have known, its own internal 2024 and 2025 to date performance in all the performance areas reported to the Commission at the time of the preparation of its proposed rate increase. Nor did her Direct testimony reference the Commission's 2024 Management Audit that explicitly raised concerns about PPL Electric's performance in several areas, including the call center performance. Her testimony raises the concern that PPL Electric does not routinely monitor its own performance on a monthly basis. While PPL Electric may not have known how its own 2024 performance compared to other EDCs, the lack of any internal tracking, analysis, and affirmative action with respect to its own performance compared with either internal objectives or external norms should be taken into account when evaluating the proposed rates and rate of return in this proceeding.

[3] Ibid., page 6, page 20-21.

Q. MS. NORDEN CLAIMS THAT PPL ELECTRIC HOLDS ITS THIRD PARTY CALL CENTERS TO THE SAME COMPLIANCE STANDARDS AS ITS IN HOUSE EMPLOYEES.[4] DO YOU AGREE?

A. No. There is no evidence that PPL Electric's contracts with their third party call centers reflect any criteria relating to compliance with Pennsylvania's consumer protection requirements. The penalty provisions of the contracts relate solely to "minimize transfers," "first call resolution," and "AHT or Average Handle Time." I attach PPL's Response to OCA-XXX-2 as Exhibit BA-6.

Q. HAS PPL ELECTRIC IDENTIFIED ANY CONTRACTUAL PROVISION APPLICABLE TO ITS CALL CENTER CONTRACTORS THAT INCLUDE CRITERIA THAT ENSURES COMPLIANCE WITH CHAPTER 56 AND RELATED OBLIGATIONS?

A. No. When asked to provide documentation that its current contracts with third party call centers that requires the commitment stated by Ms. Norden in her Rebuttal Testimony ("The Company holds its third party call center staff to the same compliance standards as its in house employees"), the response identified a specific page in their contract provided in response to OCA-VII-40 CONFIDENTIAL Attachment 1, page 6, of 17. **BEGIN CONFIDENTIAL** [redacted] **END CONFIDENTIAL.** I attach the data request OCA-XXX-1 and

[4] Ibid., page 10, lines 16-17.

response with associated response that identified the contractual language in OCA-VII-40, page 6 of 17 as Exhibit BA-7. I do not agree that this contractual language obligates or describes how the contractors must comply with the Commission's regulations, particularly since the penalty provisions do not reflect any finding of violation as documented in my Exhibit BA-6.

Q. DID PPL ELECTRIC DOCUMENT HOW THE COMPANY HAS RESPONDED TO COMPLIANCE RELATED CUSTOMER TRANSACTIONS AT ITS THIRD PARTY CALL CENTERS?

A. Yes. PPL's documentation consists of a spreadsheet that lists BCS "infractions" that resulted from a transaction with one of their third party customer service agents. The only discipline recorded is "coaching."[5]

Q. DOES SHE AGREE TO INCLUDING PENALTY PROVISIONS IN ITS CALL CENTER CONTRACTS THAT ADDRESS COMPLIANCE ISSUES?

A. Ms. Norden claims that no additional penalty provisions can be implemented until the current contracts are up for renewal or renegotiation, however, she states that any such contract reforms are not necessary.[6] As a result, my recommendations continue to be valid and should be adopted.

Q. MS. NORDEN CONTINUES TO REJECT ANY REQUIREMENT THAT PPL ELECTRIC CONDUCT REGULAR AUDITS OR INVESTIGATIONS OF ITS CALL CENTER CONTRACTORS FOR COMPLIANCE. DO YOU AGREE?

[5] PPL Response to OCA-XXX-1 (b) and (c). See Exhibit BA-7.
[6] Ibid., page 11, lines 11-21.

A. No. The Company has not conducted any audit or investigation of its call centers as I documented in my Direct. In her Rebuttal, Ms. Norden rejects any requirement that PPL be required to conduct any audits or investigations of its call centers in this proceeding.[7]

Q. DOES MS. NORDEN PROVIDE ANY EVIDENCE IN RESPONSE TO YOUR DOCUMENTATION THAT THE TRAINING MATERIALS FOR FIELD REPRESENTATIVES WHO ATTEMPT PERSONAL CONTACT ARE DEFECTIVE?

A. No. She does not provide any evidence that disputes my testimony that the written training materials provided to field representatives who are required to attempt personal contact with the customer or responsible adult immediately prior to termination of service are lacking in key requirements. She states that field representatives are trained "orally" to attempt contact and knock on the door and that these representatives are orally informed and trained on the contents of the door knocker that contains a summary of customer rights.[8] It is unreasonable to claim that training materials are sufficient when they lack the key requirements of the Commission's regulations. Nonetheless, she does agree to "revise" these written training materials. I appreciate this agreement to my recommendation.

Q. MS. NORDEN REJECTS YOUR RECOMMENDATION OF ADDITIONAL INTERNAL REPORTING OF THE RESULTS OF ITS ATTEMPTS AT PERSONAL CONTACT PRIOR TO TERMINATION OF SERVICE. PLEASE RESPOND.

A. Ms. Norden states that, "…the record that termination occurred is a record that personal contact was attempted."[9] I strongly disagree. There are two actions at issue—the attempt

[7] Ibid., page 12, lines 4-5.
[8] Ibid., page 17, lines 1-19.
[9] Ibid., page 17, lines 18-19.

at personal contact and the results of that attempt and the actual termination itself. The fact that termination has occurred does not confirm that any attempt at personal contact has occurred or the results of that contact if it occurs. I continue to recommend that PPL Electric create a method to gather data on the experience at the customer's residence immediately prior to termination of service based on the explicit requirements of the Commission's regulations that an attempt at personal contact occur and the results of that contact when it is achieved.

Q. DO YOU AGREE WITH MS. NORDEN'S ALLEGATION THAT THE LACK OF CUSTOMER COMPLAINTS[10] ALLEGING THE FAILURE TO ATTEMPT CONTACT IMMEDIATELY PRIOR TO TERMINATION OF SERVICE IS RESPONSIVE TO MY CONCERNS?

A. No. Customers are not knowledgeable of the voluminous and detailed content of the Commission's regulations governing termination of service. The fact that customers have not complained about the failure to attempt contact at the termination of service is not dispositive as to whether the Company has properly trained its field representatives or implemented the regulations. I documented specific requirements that PPL Electric agreed to implement as a condition of its ability to use remote termination of service that Ms. Norden does not discuss or recognize.

Q. DOES MS. NORDEN MISINTERPRET YOUR RECOMMENDATIONS BY REFERENCING PERFORMANCE BASED REGULATION?

[10] Ibid., page 17, lines 20-21.

A. Yes. According to Ms. Norden, my proposals to adopt conditions to the Company's rate increase should be viewed as a proposal for "performance based rates."[11] However, that is not a proper characterization of my testimony. A proposal for "performance based rates" is typically a substitute for traditional base rate regulation by relying on a variety of performance criteria to govern rate changes. My recommendations are embedded in the traditional review of Pennsylvania's regulated utility's customer service and quality of service performance as a condition of a proposal to increase rates and earn a rate of return on investments. As I explained in my Direct Testimony, my approach is a reflection of the statutory obligation for rate case reviews to ensure "adequate service quality" as required by 66 Pa.C.S. Sec.1501.[12] My recommendations seek to connect rate increases to the Company's internal and external obligations to meet that statutory requirement. I make no proposal for an "alternative rate plan."

Q. PLEASE DISCUSS MS. NORDEN'S RESPONSE TO YOUR TESTIMONY CONCERNING THE EVALUATION OF THE PERFORMANCE OF PPL ELECTRIC'S PAYMENT ARRANGEMENTS.

A. Ms. Norden correctly points out an error in my testimony. I did not properly provide a citation to the data request that sought documentation of how PPL Electric tracks and evaluates the success/failure of its payment arrangement plans, PPL Electric Response to OCA-VII-20, which is attached as Exhibit LN-16.

[11] Ibid., page 14, lines 12-14.

[12] "Every public utility shall furnish and maintain adequate, efficient, safe, and reasonable service and facilities, and shall make all such repairs, changes, alterations, substitutions, extensions, and improvements in or to such service and facilities as shall be necessary or proper for the accommodation, convenience, and safety of its patrons, employees, and the public."

Q. DOES THE REVIEW OF THE CORRECT DATA RESPONSE CHANGE YOUR TESTIMONY AND RECOMMENDATION?

A. Yes. I acknowledge that the document provided in response to OCA-VII-20, Attachment 1 reflects a good faith analysis of payment arrangement performance. What I do not see, however, is any action undertaken by the Company in response to this analysis. The "failure" level is significant in several categories. This information could be very valuable in determining whether reforms or alternative approaches should be undertaken to achieve any level of increased success in meeting payment arrangement terms. I amend my original recommendation to reflect this analysis.

Q. PLEASE SUMMARIZE MS. NORDEN'S REJECTION OF YOUR PROPOSAL FOR ROOT CAUSE ANALYSIS OF COMPLAINTS.

A. Ms. Norden claims that a root cause analysis of complaints is not appropriate in every situation and points to the root cause analysis of its "2023 estimated billing event." She also states that more "routine areas" can be handled with "individual remedial training." Finally, she relies on the "comprehensive" training materials to "proactively address issues before they arise." [13]

Q. WHAT IS YOUR RESPONSE?

A. Ms. Norden does not understand the purpose of a more regular root cause analysis of customer complaints, particularly those in which there is documentation of infractions and potential violations by BCS. A proper root cause analysis does not start with assumptions about the cause and frequency of findings when evaluating customer complaints. A proper

[13] Ibid., page 15. Lines 5-15.

root cause analysis seeks to dive into the complaint data to find common themes, trends, and document underlying causes. Complaints are valuable tools to find whether the training materials are in fact being implemented in a uniform and proper manner. Furthermore, complaints can find problems and potential defects in either training or Company policy that are not known at the time of the conduct of the analysis. Ms. Norden appears to interpret the purpose of a root cause analysis is to find the answer to an "issue" that is already known. However, she misses the point of trying to find "issues" that are not known beforehand. I continue to recommend a more rigorous and more frequent root cause analysis of complaints as I have outlined in my direct testimony. I provide a recent set of best practices in conducting a root cause analysis of customer complaints:

The 'Five Whys' methodology[14]

The 'Five Whys' is a simple yet effective methodology for conducting a root cause analysis (RCA). It involves asking "why" five times to drill down to the root cause of an issue. The process works as follows:

Identify the problem or complaint

Ask "why" the problem occurred

Analyze the response and ask "why" again

Continue asking "why" until the root cause is identified (usually within five iterations)

Develop and implement solutions to address the root cause.

The 'Five Whys' methodology is a useful tool for RCA because it encourages a systematic and thorough approach to problem-solving. By asking "why" multiple times, teams can drill down to the underlying causes of a problem, rather than just treating its symptoms.
Exploring what a 'Good Practice' RCA process looks like

Organizations looking to implement good practice within their RCA process should start

[14] Effective Complaint Management: https://www.civica.com/en-us/insights/complaints-management-fca-review-good-practices/

by considering the following steps:

Establish a robust complaints management process: Develop a clear and transparent process for handling customer/service user complaints, including procedures for logging, investigating, and resolving complaints.

Define the scope of RCA: Determine which complaints or issues will be subject to RCA. This may include complaints that are repetitive, serious, or have significant business implications.

Gather data: Collect relevant data and information pertaining to the complaint or issue, including customer feedback, internal records, and external data sources.

Assemble a cross-functional team: Bring together a team of stakeholders from various departments, including customer service, operations, and quality assurance, to conduct the RCA.

Fairness: The RCA process should be fair and unbiased, with decisions made in the best interests of the customer.

Apply the Five Whys methodology: Use the 'Five Whys' methodology to drill down to the root cause of the issue. Ask "why" multiple times, analyzing each response and asking additional questions until the root cause is identified.

Analyze and prioritize solutions: Develop and prioritize solutions to address the root cause of the issue. Consider the feasibility, cost, and potential impact of each solution.

Implement and monitor solutions: Implement the agreed-upon solutions and monitor their effectiveness. Continuously review and refine the RCA process to ensure that it is effective and efficient.

Some 'Good practice' tips

To ensure that the RCA process is effective and efficient, organizations should consider the following:

Involve customers: Engage with customers throughout the RCA process to ensure that their concerns and feedback are heard and addressed.

Use data analytics: Leverage data analytics tools to identify patterns and trends in complaints data, and to inform the RCA process.

Foster a culture of transparency: Encourage a culture of transparency and openness, where employees feel empowered to report issues and concerns without fear of reprisal.

Continuously review and refine: Regularly review and refine the RCA process to ensure that it is effective, efficient, and aligned with business objectives.

Q. DOES MS. NORDEN CONFIRM THAT IT HAS ELIMINATED CAP CUSTOMERS FROM RETAIL SHOPPING WITH AN EGS?

A. Yes. However, I continue to recommend that the Company update and revise its training materials as provided in discovery in this proceeding to reflect its current policies and instructions to its customer service agents.

Q. YOU RECOMMENDED THAT PPL ELECTRIC SHOULD EXCLUDE "LOW INCOME" CUSTOMERS FROM RETAIL SHOPPING AND MS. NORDEN RESPONDED THAT SUCH AN EXANSION OF ITS IMPLEMENTATION OF RETAIL CHOICE WOULD REQUIRE A LEGISLATIVE DIRECTIVE. PLEASE COMMENT.

A. OCA-VII-12 asked PPL Electric as follows: "Has PPL Electric evaluated the price differential and bill impact between customers on the PTC and those served by an EGS? If so, provide such evaluation and results. If not, why not?" PPL's response provided two attachments showing the results for "residential shopping," "low income residential shopping," and "SCI shopping" for 2024 and 2025. I attach PPL's response to OCA-VII-12 and these two attachments as Exhibit BA-8. These materials did not define the term "low income." I assumed it reflected criteria in PPL's billing records. I do not know if this identification is limited to CAP customers or includes other non-CAP customers based on other criteria and Ms. Norden did not explain the basis for this category in her Rebuttal. Whatever the definition, the harmful results in terms of higher prices paid to EGSs compared to the PTC suggest further action to protect these vulnerable customers is

required. If the current consumer protections that are limited to CAP customers are insufficient to protect these "low income" customers from higher prices and higher bills with associated adverse collection actions, I recommend that PPL Electric take action to raise this issue before the Commission and the Pennsylvania Legislature. At a minimum, additional and more targeted customer communications can and should be undertaken to these "low income" residential customers who, as a result of this data response, can be identified by PPL Electric for such communications. This information on the results of "low income" residential customers presented in this proceeding should require renewed action to communicate the adverse impact of higher prices and bills to these vulnerable customers.

Q. DID PPL ELECTRIC MAKE A GOOD FAITH EFFORT TO CONDUCT THE COLLABORATIVE ON CUSTOMER COMMUNICATIONS CONCERNING RETAIL CHOICE AS REQUIRED IN THE MOST RECENT DEFAULT SERVICE PROCEEDING?

A. Yes. PPL Electric provided detailed information on the implementation of its consultation with stakeholders on these communications that occurred as a result of the most recent DSP settlement.[15]

Q. PLEASE RESPOND TO MS. NORDEN'S REJECTION OF YOUR RECOMMENDATION TO ENSURE THAT ANY PAYMENT TRANSACTION FEES CHARGED IN RATES REFLECT THE LOWEST COST AND MORE COMPETITIVE CONTRACT PRACTICES.

[15] PPL Electric Response to OCA-XXX-5.

A. Ms. Norden does not provide a reasonable basis for her objection to my recommendations. She states that Paymentus' "administrative fees" are embedded in the transaction fee[16] but fails to identify what those administrative fees are. Nor does she explain why a competitive bid to provide this service could not be undertaken to ensure that these costs are prudently incurred. Such a bidding process should require a transparent disclosure of administrative fees and actual costs to process payments. She states that PPL could handle this transaction internally but claims that that it has "no expertise or infrastructure" and that if PPL Electric provided this service, it would "cost more for equal or lesser quality of the same service" [17] However, PPL Electric is owned by a larger parent corporation, the PPL Corporation, and she does not acknowledge or recognize that the "shared services" provided by its parent might be able to provide this service in an efficient manner. I continue to support my recommendation.

RESPONSE TO REBUTTAL TESTIMONY OF RESA WITNESS FRANK LACEY

Q. DO YOU HAVE AN OVERALL RESPONSE TO MR. LACEY'S REBUTTAL TESTIMONY?

A. I have no changes to my statements and recommendations in my Rebuttal Testimony on issues raised by Mr. Lacey in his opposition to certain changes in PPL Electric's Supplier Tariff.

- With regard to Mr. Lacey's attempt to defend the overall higher prices charged to "low income" residential customers by accusing me of not recognizing those months in

[16] PPL Electric St. No. 18-R, page 44, lines 4-5.
[17] Ibid., page 44, lines 7-8.

which some customers saved compared to the PTC[18] I attach the actual results as Exhibit BA-7. In that data, it is clear that the few months in which some customers pay less than the PTC, the dollar amount of such savings are overwhelmed by the much larger higher charges by EGSs over a reasonable period of time. If EGSs promised to charge prices no higher than the PTC and itemized an additional charges based on specific customer services or benefits, a more realistic discussion of Mr. Lacey's claims could be had.

- With regard to Mr. Lacey's claim that price is not the only factor that impacts a customer's decision to choose an EGS[19], I am not aware of any valid data that supports the conclusion that residential customers generally or low income customers specifically have agreed to be charged a higher price than the PTC in return for unnamed and unidentified "reasons." Mr. Lacey does not provide any verifiable examples of whether the customers paying more than the PTC are doing so in return for some other product or service that is not included on the customer bills issued by PPL Electric or otherwise. Furthermore, Mr. Lacey ignores the common EGS practice of offering a low promotional rate for several months followed by fine print contract provisions that allow much higher prices to be charged after the promotional period.

- Mr. Lacey's claim that my emphasis on "higher prices" reflects a "doom and gloom" scenario and fails to provide "accurate information about competitive energy markets" is not defensible. Mr. Lacey creates hypothetical data to calculate hypothetical savings.[20] The Commission should not rely on a baseless argument. Furthermore, Mr.

[18] RESA St. No. 1-R, pages 3-4.
[19] RESA St. No. 1-R, page 9, lines 6-8. He claims, "…EGS contract terms may include other incentives and or pricing structures that provide value over the long term."
[20] Ibid., page 5, lines 5-13: "If low-income customers were encouraged to enter into EGS contracts and were able to find a one-year contract at or near the 10.77 8 cent level after the 10.77 cent rate went into effect, they would have

Lacey's repeated reliance on the Hanger Report to support his allegation that customers have saved in the retail market (as opposed to the calculations that compare older utility prices with competitively acquired default service in the wholesale market) should be rejected as I explained in my Direct testimony. The actual studies of actual billing data from every Pennsylvania EDC, including the PPL Electric data in my Exhibit BA-7, should be recognized as the reliable source of data on whether residential and low income customers have experienced savings when being served by an EGS over a reasonable time period.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS THAT THE COMMISSION SHOULD ORDER AS A CONDITION OF ANY RATE INCREASE TO PPL ELECTRIC.

A. The following summary reflects those included in my Direct testimony as amended in this Surrebuttal:

- PPL Electric's oversight of its numerous call center third party contractors and their varied locations in and outside of the United States is deficient. My first recommendation is that PPL Electric should review and update its vendor provided training materials to ensure that they reflect the most current Pennsylvania policies and PPL's own commitments in recent proceedings that I have documented in my testimony. I also recommend that PPL Electric be required to conduct a regular audit and evaluation of compliance with Chapter 56 for its call centers wherever they are located. This more formal audit or evaluation should not rely on incidents of complaints or solely based on monitoring calls but should seek to find and document actions and customer transactions that raise concerns or that reflect indicia of a system wide problem with training content or onsite oversight. Contracts should reflect provisions that allow PPL Electric to impose penalties based on the findings of these audits and external criteria, such as Bureau of Consumer Service (BCS) infractions and verified complaints. Additionally,

saved an average of $20 per month off of the higher default rate, or approximately $240 per year. PPL estimates that there are 347,822 low income customers in their service territory. If all of those customers were on cost-savings contracts, the total savings could be more than $83.4 million"

documentation associated with these audits and their findings should be available for discovery in a future base rate case or in the investigation of complaints. This recommendation is closely aligned with my recommendation for a more structured root cause analysis of customer complaints discussed in more detail below.

- PPL Electric's call center performance is below average and has significantly deteriorated since 2023. PPL Electric does not link meeting any call center performance standards to its request for a significant rate increase in this proceeding. While the Company has customer service performance goals, those goals reflect a below average performance and fail to include any objective for the abandonment rate. I recommend that as a condition of any rate increase adopted by the Commission, that PPL Electric be required to conform to the average performance of other Pennsylvania electric distribution companies (EDCs), namely answering 80% of the calls within 30 seconds and an abandonment rate of less than 9%, a performance that PPL met in 2023. Finally, PPL's monthly performance varies widely and should be supervised and managed to achieve a more regular and higher level of performance to avoid dramatic swings in customer experience.
- PPL Electric does not conduct regular root cause analysis of its customer complaints and BCS findings. I recommend that PPL Electric investigate customer complaints and BCS findings of "infractions," Second, I recommend that PPL Electric formally track the recommendations, document system-wide steps taken in response to those recommendations and evaluate on an ongoing basis whether or how the steps and implementation taken in response to the root cause evaluation have achieved their intended purpose. Any ongoing root cause analysis should include this organic feedback mechanism to determine if the root cause has been properly identified and the steps or implementation taken to respond to those findings have accomplished the intended results. Third, with regard to PPL's data showing the results of its payment arrangements that I acknowledge in this Surrebuttal Testimony, I recommend that PPL Electric evaluate the results of this analysis and take appropriate actions in response to the ongoing indicia of failure of various payment arrangement types.
- PPL Electric's proposal to eliminate transaction fees for the payment of customer bills should be approved. However, the amount that PPL Electric proposes to include in its revenue requirement to pay a third party contractor to process customer payments should be evaluated to ensure that those costs are the lowest possible and that reasonable efforts have been undertaken to ensure competitive based costs. I recommend that PPL Electric provide documentation that the fees that it seeks to include in rates are the lowest cost and that reflects a more recent analysis of handling these transactions in house (i.e., directly with the credit card companies) or by means of a more recent request for proposals. PPL Electric did not provide this justification of its costs in its Rebuttal Testimony. As a result, any such costs included in the revenue requirement in this

proceeding should be considered preliminary and subject to stricter review in PPL's next base rate case.

- Based on the materials I have reviewed, PPL Electric has not complied with its 2016 settlement of a proceeding to establish specific training materials and obligations of the Company's field technicians prior to the use of its metering system to remotely terminate service. I recommend that PPL Electric immediately revise and submit updated training materials and evidence of compliance with the training and operations of its field representatives with all the terms of this almost decade-old Settlement. Second, I recommend that PPL Electric implement a monthly "personal contact report" that contains information about the attempt of personal contact, whether such contact occurred, and whether termination occurred or was halted at that time and for what reason. Third, I recommend that PPL Electric develop a method of categorizing the reasons for when a hold is ordered so that PPL Electric can evaluate the potential for additional communications or other actions that might prevent the more expensive attempt to terminate service. In effect, my recommendation is to consider this information in future root cause analysis of key performance data.
- PPL Electric should consider providing the same consumer protections against higher electric generation supplier (EGS) charges for "low income" customers as identified in Exhibit BA-7 as it has committed to provide to its CAP or OnTrack low income customers. In light of the ongoing adverse bill impacts due to EGS charges that exceed the Price to Compare, I recommend that the Company undertake additional targeted outreach and education to its residential customers generally and particularly for its "low income" customers as identified in Exhibit BA-7 concerning high EGS charges and the impact of those charges on the customer's PPL Electric bill, payment plans, and collection actions.
- OCA Witness Matthew Hoyt will address PPL's response to the OCA's testimony concerning the PPL Electric's proposed electric vehicle pilot, including my recommendation for review of proposed customer education and marketing materials.

Q. DOES THIS COMPLETE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes.

Exhibit BA-6

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set XXX Data Requests of the
Office of Consumer Advocate (OCA)
Dated January 26, 2026
Docket No. R-2025-3057164

OCA XXX-2

Identify the penalties provisions in the current third party call center contracts and any documentation that reflects the performance that has triggered these provisions and any penalties imposed. In your response, provide the communications with the third party contractors by PPL Electric's supervisors or managers that identified and responded to such performance.

PPL Electric Response

- PPL Electric has penalties in the contract that can be invoked; however, due to operational controls and improved contact center performance, as noted in previous testimony, there has not been a need to invoke penalties. Thus, there is no documentation or communications with third party contractors regarding performance that triggered the imposition of penalties.

- PPL Electric's current contract with its third-party call center service provider contains a formal Performance Credit/Penalty Framework. The contract authorizes PPL Electric to apply up to a 5% penalty on the "Applicable Portion" of the vendor's monthly invoice if specific service metrics are not met.

- Contract penalty specifics are below:

Service Measurement	Penalty (Percentage)	Explanation
Minimize Transfers	2% of the Applicable Portion	Metric (as measured in a below) 15% or less as documented in procedures.
First Call Resolution	2% of the Applicable Portion	First Call Resolution below 85% for an account match within 7 days for the same call reason (for avoidance of doubt, FCR is measured across Service Provider as a whole, broken down by line of business, and not across geography). Applicable once FCR reporting becomes available and such reporting is mutually agreed upon by the Parties. At that time, the Parties will also negotiate grace period in which Service Provider must meet the metric.
AHT	1% of the Applicable Portion	Average Handle Time – monthly actual AHT must remain within 110% of the monthly AHT goal per queue. AHT will be set by mutual agreement each month (or if a new AHT is not set by mutual agreement, the prior month's AHT will remain in place).

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont, Massachusetts.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

A. I own the firm Fisher Sheehan & Colton, Public Finance and General Economics of Belmont, Massachusetts. In that capacity, I provide technical assistance to a variety of federal and state agencies, consumer organizations, and public utilities on rate and customer service issues involving water/sewer, natural gas and electric utilities.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of the Office of Consumer Advocate.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND.

A. I work primarily on low-income utility issues. This involves regulatory work on rate and customer service issues, as well as research into low-income usage, payment patterns, and affordability programs. At present, I am working on various projects in the states of Massachusetts, New Jersey, Maryland, Pennsylvania, Kentucky, Ohio, Michigan, Illinois, Wisconsin, and Minnesota. My clients include state agencies (*e.g.*, Pennsylvania Office of Consumer Advocate, Maryland Office of People's Counsel, Connecticut Office of Consumers Counsel), federal agencies (*e.g.*, the U.S. Department of Health and Human Services), community-based organizations (*e.g.*, Cleveland Legal Aid Society, Legal Action of Chicago, Sierra Club), and public and private utilities (*e.g.*, Toledo Water, Xcel Energy, BC Hydro). Examples of my work include assisting the Connecticut Office of Consumers Counsel (OCC) in the annual generic review of the low-income affordability initiatives of that state's utilities by the Public Utilities Regulatory Authority. I am also

assisting the Massachusetts Attorney General's Office (AGO) in the generic investigation by the Department of Public Utilities (DPU) into the design of low-income affordability programs. In addition to state-specific and utility-specific work, I engage in national work throughout the United States. For example, I have recently completed a project with the Natural Resources Defense Council to develop a tool by which to assess the financial impact of differing types of low-income bill assistance. A brief description of my professional background is provided in OCA Exhibit RDC-1.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A. After receiving my undergraduate degree in 1975 (Iowa State University), I obtained further training in both law and economics. I received my law degree in 1981 (University of Florida). I received my Master's Degree (Regulatory Economics) from the MacGregor School in 1993.

Q. HAVE YOU EVER PUBLISHED ON PUBLIC UTILITY REGULATORY ISSUES?

A. Yes. I have published three books and more than 80 articles in scholarly and trade journals, primarily on low-income utility and housing issues. I have published an equal number of technical reports for various clients on energy, water, telecommunications and other associated low-income utility issues. A summary of my publications is included in OCA Exhibit RDC-1.

Q. HAVE YOU EVER TESTIFIED BEFORE THIS OR OTHER UTILITY COMMISSIONS?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("PUC" or "Commission") on numerous occasions regarding utility issues affecting low-income customers and customer service. My testimony has specifically included testimony in various proceedings involving low-income program design and operation, along with various rate design issues as they affect low-income customers. I have also testified in regulatory proceedings in 43 states (other than Pennsylvania) and various Canadian provinces on a wide range of utility issues. A list of the jurisdictions in which I have testified is listed in OCA Exhibit RDC-1.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR DIRECT TESTIMONY.

A. The purpose of my Direct Testimony is to review the impact of PPL Electric Utilities' (PPL or Company) rates on low-income customers. More specifically, I will examine the following topics:

- The overall affordability of PPL's rates for current service;
- The importance of considering the affordability of PPL bills to low- and moderate-income households;
- How to enhance the identification of low-income customers and the enrollment of those customers into the Company's Customer Assistance Program (CAP);
- The need to enforce the regulatory exemption of low-income customers from paying cash security deposits;
- The reasonableness of expanding PPL's time-of-day rate availability to CAP participants;
- The reasonableness of PPL's proposals to modify CAP cost recovery;

- The reasonableness of using performance-based ratemaking to improve service to low-income customers; and

- The need to modify CAP cost responsibility for large load customers.

Q. PLEASE SUMMARIZE THE RECOMMENDATIONS YOU MAKE THROUGHOUT YOUR TESTIMONY WHICH FOLLOWS.

A. Based on the data and analysis I present throughout my testimony below, I recommend:

- Given the benefits of identifying its low-income customers, and the detriments of failing to identify those customers, PPL should be directed to accept the same documentation to establish "confirmed low-income" status (*i.e.*, "information that would reasonably place the customer in a low-income designation") as is required to be accepted to establish income-eligibility for deposit exemptions ("other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the public utility's customer assistance programs").

- A "confirmed low-income customer" should include any customer who, within the current or immediately preceding two LIHEAP program years has received a LIHEAP grant.

- PPL should modify its identification of CLI customers to allow a customer to retain their CLI status for twelve months after being removed from CAP due to a failure to recertify.

- Prior to the disconnection of a Confirmed Low-Income customer, PPL should adopt a procedure, developed in collaboration with its Universal Service Advisory Group (USAG), under which the Company will offer the Confirmed Low-Income customer the opportunity to apply for the Company's CAP and arrearage forgiveness program. If the customer expresses a desire to make such application, PPL should postpone the disconnection for a reasonable period of time to allow the application process to be completed.

- Before PPL enters into a deferred payment arrangement (DPA) with a customer which the Company either: (1) knows to be a Confirmed Low-Income customer; or (2) has generated information through the DPA process documenting that the customer is in the Tier 1 income range (at or below 150% federal poverty level (FPL)), it should be required to provide the customer a stand-alone Plain Language notice to that customer of the

customer's right to enter into CAP and an explanation of the advantages of CAP's arrearage forgiveness benefits. PPL should develop this Plain Language notice in collaboration with its USAG. PPL should enter into a payment arrangement with a CLI customer only with the informed consent that the customer desires to enter into a payment arrangement rather than applying for CAP along with its arrearage forgiveness provisions. As the Commission has explained about obtaining the informed consent of a customer with respect to the return of low-income deposits, as part of obtaining this informed consent, PPL should explain to the customer how enrolling in CAP, and participating in arrearage forgiveness, would impact the customer's monthly bill relative to entering into a payment arrangement.

- PPL should amend its tariff, and modify its implementing practices and procedures, to comply with the PUC regulation regarding low-income exemptions from deposits (see, 52 Pa. Code § 56.32(e)). It should strike the words ""who is confirmed to be eligible for a customer assistance program" from its tariff. In the alternative, the tariff should read: "The Company shall not require an applicant or customer to provide a cash deposit when the customer provides income documents or other information that he or she is eligible for state benefits based upon household income eligibility requirements that are consistent with those of the Company's customer assistance program." The Company should modify all policies and practices to be consistent with this new tariff language. When seeking a deposit from an applicant or new customer, PPL should affirmatively solicit whether the applicant or new customer can provide such information.

- PPL should refund any cash security deposit to a customer who is currently categorized as "Confirmed Low-Income." By definition, under the PUC's regulations, a Confirmed Low-Income customer is a customer who the Company has received information sufficient to give rise to a reasonable belief that the customer is low-income.

- Finally, the Company, within three months after a final order in this proceeding, should undertake a review of all customers from whom the Company currently holds deposits to determine whether they qualify for the exemption, and to make necessary refunds. The Company should report the results of this review to the Commission's Bureau of Consumer Services (BCS) as well as to its Universal Service Advisory Group.

- Just as the Commission has required other utilities to change their deposit refund practices and procedures, PPL should be directed to do the same. A

recognition that the Company's discretion on how to refund a cash security deposit is limited should be inserted into the PPL tariff. The return of customer deposits in the form of a bill credit or arrearage credit should only be made with the informed consent of the customer.

- PPL's proposal to move internal administrative wages and salaries out of base rates to instead be collected through the USR should be denied.

- PPL's proposal to establish a universal service offset of $0 is unreasonable. That proposal should be denied.

- The Commission should adopt a series of outcome metrics to measure the Company's performance with respect to its credit and collection outcomes in particular. Through these metrics, rather than focusing on what PPL is ***doing*** (*i.e.*, its activities), these metrics focus on an assessment of what the Company is ***accomplishing*** (*i.e.*, its outcomes, or results). The metrics to be used are those detailed in my testimony.

- Failure to achieve the proposed collection outcomes shall result in sanctions determined as follows: (1) a dollar amount equivalent to a 15 basis point ROE reduction for noncompliance with a single improvement goal; and (2) a dollar amount equivalent to a 25 basis point ROE reduction, or proportionately, for noncompliance with multiple improvement goals. The sanction does not result in a change to PPL's authorized ROE but is calculated to produce a revenue reduction that is equivalent to the specified ROE reduction. Any ROE penalty, as specified herein, would be calculated for the calendar year following a noncompliance event, whereby the specified ROE penalty will be applied to the equity rate base as approved in PPL's most recent base rate case and grossed-up for income taxes (revenue requirement). Any resulting penalty amount will be deferred as a regulatory liability to be refunded to customers in PPL's next base rate case.

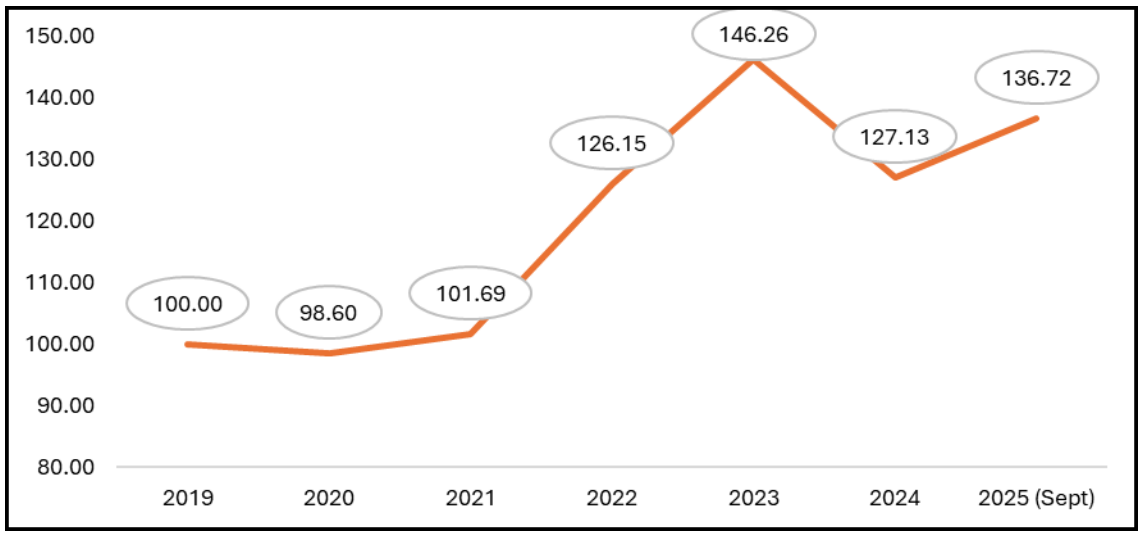
- PPL's proposed large load tariff should include a substantial commitment of funds to offset the increased universal service costs that will be caused by the introduction of large load customers. I recommend that, within six months after a final order in this proceeding, PPL submit for consideration by stakeholder group consisting of parties to this proceeding a proposal for a non-bypassable system benefits charge consisting of a flat upfront fee and an ongoing volumetric charge.

Part 1. The Affordability of PPL Bills for Current Service.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the affordability of PPL bills for current service. I consider bill affordability from three different perspectives. First, I examine the history of rate increases for PPL since 2019 and compare those increases to the changes in the income of low-income households during that same time period. Second, I examine bill affordability to low-income customers. Third, I examine bill affordability to more moderate-income customers.

A. PPL Rates Over Time.



Q. PLEASE DESCRIBE THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the impact of the changes in PPL's electric rates from 2019 through 2025.[1] I determined the average residential revenue per kWh by dividing the total residential revenue reported by PPL to the Energy Information Administration (Form 861) by the total residential sales.[2] I assign 2019 a base case value of 100. The changes from that base case value represent the rate by which the values increased or decreased. Creating an index such as this is a common way to measure changes in prices. It is, for example, the way that the U.S. Bureau of Labor Statistics presents the rate of inflation.

[1] By starting in 2019, I begin before COVID.

[2] I understand that PPL's distribution rates have not increased since 2016 since the Company has not had a distribution rate case since then.

Figure 1. Changes in PPL Electric Rates (2019 – 2025)

The data in the Figure above shows that increases in PPL electric rates have been substantial since 2020. While rates were relatively constant in the years 2019 and 2020, since 2020, there has been a sharp spike in PPL prices. PPL electric rates increased more than 40% from 2020 through 2023. While they dipped somewhat in 2024, they began to increase again in 2025. The price hikes proposed in this proceeding will increase prices even further.

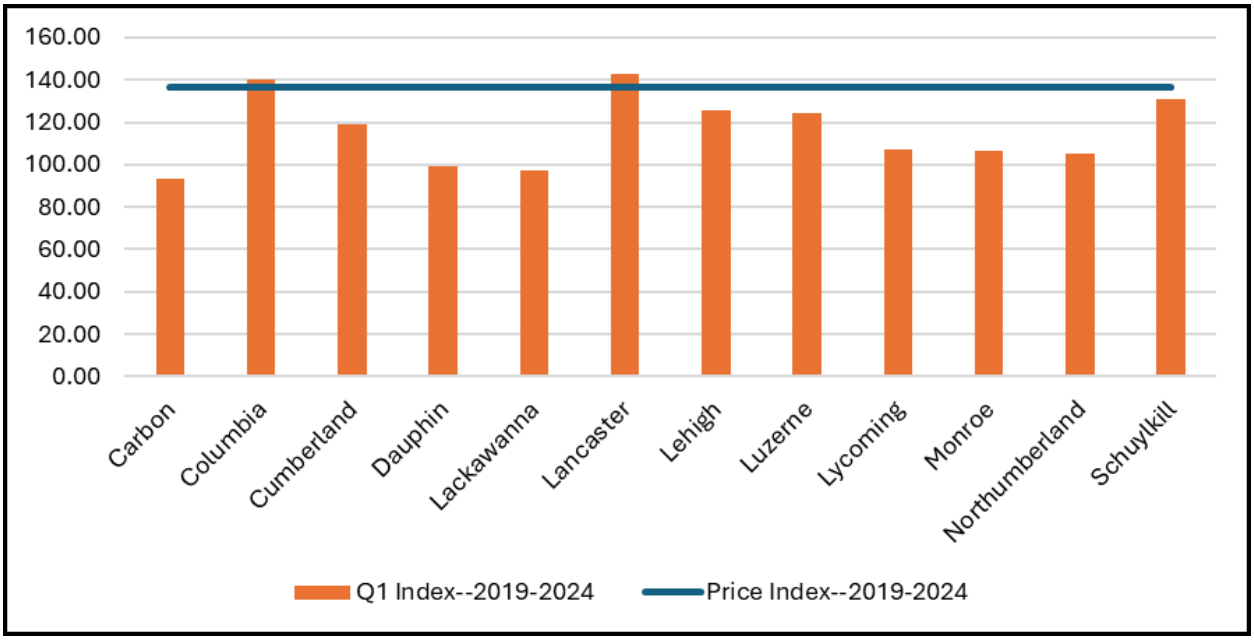
Q. HAVE YOU CONSIDERED, HOWEVER, THE FACT THAT PPL HAS NOT HAD A RATE CASE IN TEN YEARS?

A. Yes. My discussion above considers the extent to which the utility bill payment responsibility to PPL customers has increased over time. PPL customers do not receive separate bills for distribution, transmission, and generation service. Instead, the bills which they receive are for a unified service, nonpayment of any portion which would place their entire service in jeopardy. Even aside from this, however, I recognize that the Price to Compare (PTC) gets adjusted every six months based on generation charges,

which PPL has no control over. However, and it is a big however, the PTC also includes transmission charges. PPL is one of the few electric distribution companies in Pennsylvania that still own their transmission. PPL has been on an ambitious rebuilding project of almost all of their 230 kV lines in Pennsylvania at an estimated cost of $1 billion dollars. Because those projects are "local," PPL ratepayers are paying the bulk of those costs. Over about the last 10 years or so, PPL's transmission costs have increased substantially. The current high PTC price is directly related to decisions that PPL made about transmission spending.[3]

Q. HAVE YOU EXAMINED HOW THE INCREASE IN PPL PRICES COMPARES TO INCREASES IN THE INCOMES OF LOW-INCOME HOUSEHOLDS OVER TIME?

A. Yes. I compare the increase in PPL bills from 2019 through 2024 as reported by the Company in its Form 861 filed with the U.S. Energy Information Administration (EIA) to the changes in the average First Quintile Income[4] for selected counties served in whole or part by PPL.[5] As can be seen in Figure 2 below, in all but two of the twelve counties served by PPL for which data is reported, the growth in electric rates from 2019 through



[3] According to the PUC's annual rate comparison report, for a residential customer using 500 kWh of electricity, PPL's transmission costs have increased from $6.07 of a total bill of $79.11 (7.7%) in 2015 to $17.73 of a total bill of $93.67 (18.9%) in 2025. Pennsylvania PUC Rate Comparison Report (2015, 2025), available at https://www.puc.pa.gov/filing-resources/reports/rate-comparison-reports/.

[4] The Census Bureau rank orders all households by income from lowest to highest. It then divides that ranking into five equal part, each part of which is called a "quintile." The one-fifth of households with the lowest income is the "First Quintile" (Q1), sometimes known as the "lowest quintile." The one-fifth of households with the highest income is the "Fifth Quintile" (Q5).

[5] I use all PPL counties for which one-year data is reported for 2024 and before by the U.S. Census Bureau. American Community Survey, 1-year data, 2024 and 2019, Table B19081.

2024 has exceeded the growth in income for the lowest quintile of income. While electric rates increased by roughly 37% over that time frame, the *highest* growth in Q1 incomes was only 43% (Lancaster County). Of the 12 PPL counties, three had Q1 growth rates of less than 100% (with an index of less than 100 meaning that incomes had declined over the time period 2019 through 2024), while three more had a Q1 Index of more than 100 but less than 105 (meaning that Q1 incomes had increased, but had increased by less than 5%).

Figure 2. 2024 PPL Price Index Compared to Q1 Income Index for PPL Counties (2019 base = 100)

A comparison of the two Figures above reveals the extent to which short-term spikes in electric prices can have substantial affordability impacts. Figure 1 shows, for example, that PPL prices spiked beginning in 2022 (resulting in a Price Index of 146.26 in 2023), but declined back to an Index of 127.13 in 2024 before beginning to climb again in 2025. Figure 2 shows that even taking the 2024 price decline into account, increases in PPL's

electric prices outstrip increases in Q1 incomes for nearly every county. While the one-year decrease in 2024 PPL electricity prices reduces the PPL Price Index, the Q1 Income Index remains lower than the Price Index in 10 of the 12 counties for which data is available in that year.

B. The Unaffordability of PPL Bills to Low-Income Customers.

Q. HAVE YOU BEEN ABLE TO ASSESS THE DECLINE IN AFFORDABILITY IN DOLLAR TERMS FOR THE LOWEST INCOME PPL CUSTOMERS?

A. Yes. For each annual bill, by year, I determined what income would be required for that bill to represent an affordable burden (4%).[6] I compare the income required for bills to be affordable to the actual Q1 income to determine to what extent, if any, there is a deficit (*i.e.*, Q1 incomes are insufficiently high for bills to be affordable).[7] I use the income for four different counties (Lycoming, Lancaster, Northampton, Northumberland) to represent the PPL service territory. These four counties are reasonably representative of the counties which comprise the PPL service territory.

The Table shows that, for PPL electric bills, the income deficit (*i.e.*, the shortfall between the actual Q1 income and the income needed for a bill to be affordable at 4% of income) substantially increased from 2019 through 2025 in every PPL county studied. In Lancaster, the increase in the income deficit from 2019 to 2025 was somewhat less (from $19,611 to $22,983 (an increase of $3,372) while in both Northampton and

[6] I understand that for households with income of 50% of the Federal Poverty Level or less, the affordable burden is 2%. I use the higher 4% for purposes of this discussion.

[7] Because of data collection limitations associated with the Coronavirus health pandemic, the Census Bureau did not report 1-year data in 2020. Census data for 2024 has not yet been publicly released. For 2020 only, therefore, I use the 5-year average data. In all other years, I use the Census Bureau's 1-year data.

Northumberland the increase from 2019 to 2024 was nearly twice that amount (Northampton: $6,496; Northumberland: $6,598). The increase in the Q1 income deficit in Lycoming County was even greater from 2019 to 2024 ($6,903). In each county, given the income needed for a PPL bill to be affordable at a 4% burden in 2025 ($43,275), actual incomes would have needed to be between something more than two to substantially more than three times higher than they actually were in order for these customers to be able to afford their PPL bills (*e.g.*, actual 2024 income is $13,984 in Lycoming County compared to the $43,275 income needed for an affordable bill; actual 2024 income of $20,152 in Northampton County compared to $43,275 income needed for an affordable bill at 4% electric non-heating burden).

Table 1. Income Deficit Relative to Income Needed to Achieve Affordable PPL Bill

	2019	2020	2021	2022	2023	2024
Annual Q1: Lycoming	$13,337	$13,854	$14,239	$12,963	$14,121	$13,984
Annual Q1: Lancaster	$16,114	$16,219	$15,980	$17,893	$17,865	$20,292
Annual Q1: Northampton	$19,098	$18,773	$20,631	$17,233	$21,181	$20,152
Annual Q1: Northumberland	$13,012	$12,747	$15,380	$15,953	$14,064	$13,964
EIA PPL Bill	$1,429	$1,424	$1,481	$1,878	$1,910	$1,731
Income at which Bill Affordable	$35,725	$35,600	$37,025	$46,950	$47,750	$43,275
Income Deficit: Lycoming	$22,388	$21,746	$22,786	$33,987	$33,629	$29,291
Income Deficit: Lancaster	$19,611	$19,381	$21,045	$29,057	$29,885	$22,983
Income Deficit: Northampton	$16,627	$16,827	$16,394	$29,717	$26,569	$23,123
Income Deficit: Northumberland	$22,713	$22,853	$21,645	$30,997	$33,686	$29,311

Another way to examine this data is to consider the extent to which actual PPL bills exceed an affordable PPL bill (given a 4% burden and Q1 income each year). Actual PPL bills are calculated using total residential revenues by year reported on the EIA Form 861

divided by the average number of residential customers for each year from the Form 861. These actual billed amounts are compared to the Q1 income for each county multiplied by 4%. The difference is defined to be the "excess" PPL bill over an affordable bill.[8] The Table below shows that the PPL bills actually delivered in 2024 ranged from more than $900 ($919, $925) to nearly $1,200 ($1,172) in the four counties studies.

Table 2. Dollars by which PPL Bills Exceed Affordable Bills (Q1 Incomes) (2019 – 2024)

	2019	2020	2021	2022	2023	2024
EIA PPL Bill	$1,429	$1,424	$1,481	$1,878	$1,910	$1,731
Affordable Bill: Lycoming	$533	$554	$570	$519	$565	$559
Affordable Bill: Lancaster	$645	$649	$639	$716	$715	$812
Affordable Bill: Northampton	$764	$751	$825	$689	$847	$806
Affordable Bill: Northumberland	$520	$510	$615	$638	$563	$559
Excess over Affordable: Lycoming	$896	$870	$911	$1,359	$1,345	$1,172
Excess over Affordable: Lancaster	$784	$775	$842	$1,162	$1,195	$919
Excess over Affordable: Northampton	$665	$673	$656	$1,189	$1,063	$925
Excess over Affordable: Northumberland	$909	$914	$866	$1,240	$1,347	$1,172

Given that 2025 is not yet complete as of the time I write this testimony, 2025 annual bills are not yet available. Nonetheless, the 2025 PPL bill through September 2025 of $1,427 would have required an ***annual*** income of $35,670 to be affordable. Paying an

[8] While in theory, the "excess" could be a negative number (*i.e.*, actual bills are less than an affordable bill), in practice, this result was not found for PPL bills from 2019 to 2024.

annual bill would thus require a much higher income. Remember, also, that PPL Electric bills will again increase even more as a result of the rates proposed in this proceeding.

Q. HAVE YOU UNDERTAKEN ANY FURTHER EVALUATION OF THE AFFORDABILITY OF PPL'S BILLS TO LOW-INCOME CUSTOMERS OF THE COMPANY?

A. Yes. I have calculated bill burdens for PPL customers both at the rates which currently exist and at those rates which have been proposed in this proceeding. I disaggregate incomes into various ranges of income up to $60,000. I use $60,000 since that is the highest income level at which PPL bills, on average, appear to fall above the affordable level at proposed rates (using the Commission's 4% non-heating electric burdens for households with income over 50% FPL as my definition of "affordability"). The income ranges I use are those which are reported by the Census Bureau in its American Community Survey.[9] The data is set forth in Table 3 below. As that Table shows, PPL electric bills at the rates proposed in this proceeding are unaffordable for customers with income between $50,000 and $60,000 (burden of 4.5% at the $55,000 mid-point of that income range). Even PPL bills at existing rates, however, substantially exceed the limit of affordability (4.9%) at incomes between $45,000 and $50,000. The bill increase at the rates proposed in this proceeding push electric burdens further and further above the 4% demarcation of affordability.

[9] ACS, Table B19001. The next highest income range reported by the Census is $60,000 to $74,999.

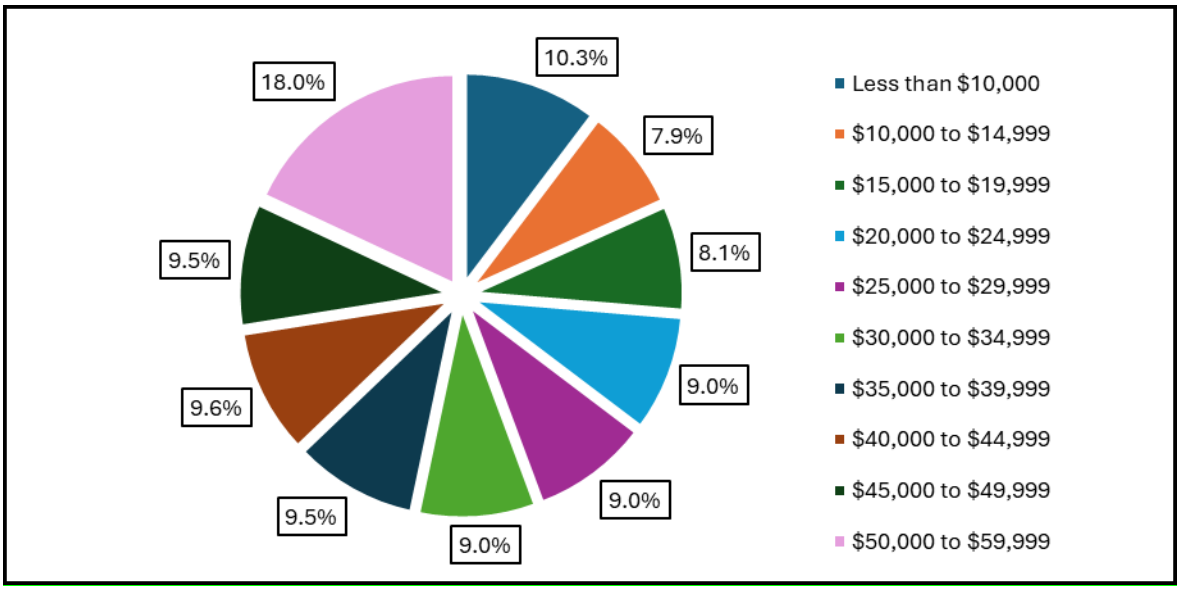
Table 3. PPL Bill Burdens by Income at Existing and Proposed Rates (shading simply to improve readability)	Income Mid-Point	Annual Bill at Existing Rates	Annual Bill at Proposed Rates
Bills at existing and proposed rates	---	$2,316[10]	$2,478[11]
Income Range			
Less than $10,000	$5,000	46.3%	49.6%
$10,000 - $14,999	$12,500	18.5%	19.8%
$15,000 - $19,999	$17,500	13.2%	14.2%
$20,000- $24,999	$22,500	10.3%	11.0%
$25,000 - $29,999	$27,500	8.4%	9.0%
$30,000 - $34,999	$32,500	7.1%	7.6%
$35,000 - $39,999	$37,500	6.2%	6.6%
$40,000 - $44,999	$42,500	5.4%	5.8%
$45,000 - $49,999	$47,500	4.9%	5.2%
$50,000 - $59,999	$55,000	4.2%	4.5%

It is not simply the income below which bills become unaffordable that is significant, however. When I examine the lower income levels, the depth of unaffordability (*i.e.*, the extent to which bills exceed an affordable burden) becomes particularly substantial. PPL bills, for example, impose twice the affordable burden (7.1% at existing rates; 7.6% at proposed rates) even at an annual income of $30,000 to $35,000, while bills range from

[10] OCA-IV-44(a) (median monthly bill of $193.03).

[11] OCA-IV-45(a) (median monthly bill of $206.51).

more than 3.5 times (14.2% at income of $15,000 to $20,000 at proposed rates) to more than twelve times (49.6%) the affordable burden when income falls to less than $10,000.



Q. WHY ARE THESE BURDENS AT DIFFERENT INCOME RANGES IMPORTANT FOR PURPOSES OF ASSESSING AFFORDABILITY?

A. Frequently, when utilities assess affordability, they purport to assess affordability at or below a prescribed income level. Their actual analysis, however, only considers the income *at* the identified income level, while seeming to forget those households who fall within the "or below" part of the income. In contrast, my discussion considers households at *or below* $60,000. In the zip codes identified by PPL as comprising its service territory, 38.3% of all households have income at or below $60,000.

Figure 3 below, however, documents the extent to which households with income at or below $60,000 fall *below* that maximum income level. The Figure shows, for example, that nearly one-of-five (10.3% + 7.9% = 18.2%) of all households with income at or below $60,000 in fact have income below $15,000. More than one-quarter (10.3% + 7.9% + 8.1% = 26.3%) of households with income less than $60,000 in PPL zip codes in

fact have income below $20,000. The energy burdens imposed by PPL bills at these income levels are significantly above an affordable burden.

Figure 3. Percent of Households with Annual Income <$60,000 by Income (PPL Counties)

Q. WHAT DO YOU CONCLUDE?

A. I find that PPL has significant bill affordability problems facing its low-income customers. Not only should this unaffordability be considered in assessing issues such as an appropriate return on equity and rate design, the specific remedies which I recommend below should be adopted to address the issue both from the perspective of delivering reasonably adequate service to the low-income customers and from the perspective of delivering least-cost service to all customers of the utility.

I further find and conclude that electricity prices have been increasing at rates faster than the incomes of low-income customers in the PPL service territory. To the extent that there is an affordability problem facing PPL, which I find to be true, that problem has been growing more and more substantial over time. PPL bills for the Company's low-

income customers are routinely, and substantially, unaffordable, and will become even more so given the rates proposed in this proceeding.

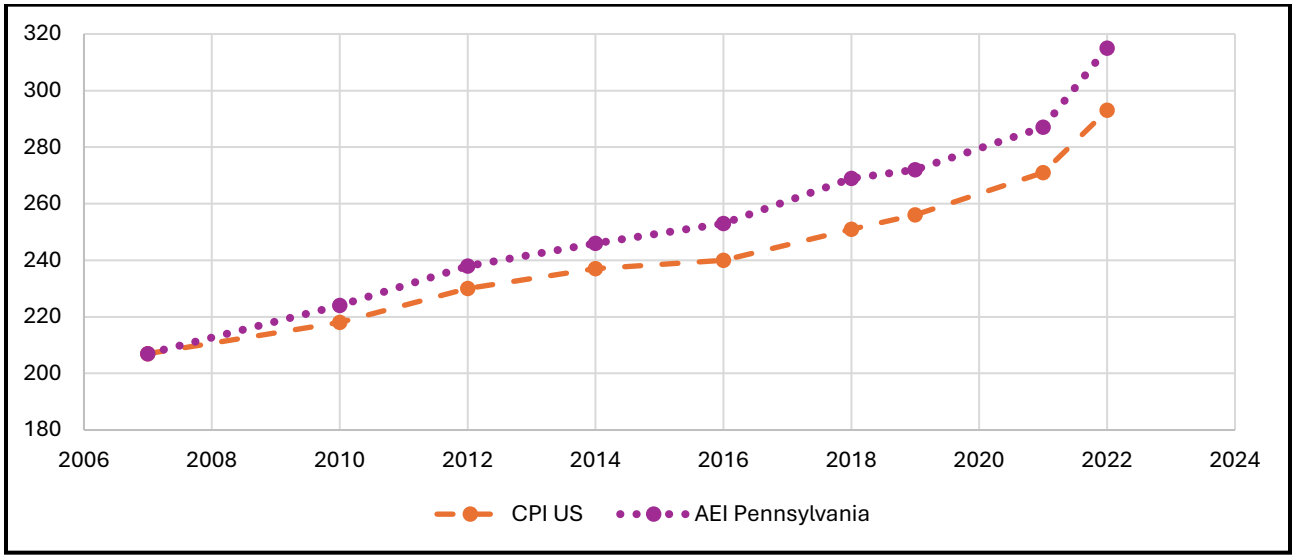
C. The Unaffordability of PPL Bills to More Moderate Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the ability-to-pay of more moderate income households using the ALICE Threshold. "ALICE" is the acronym used to describe Asset-Limited, Income-Constrained, Employed ("ALICE") households with income above the Federal Poverty Level but below the cost of basics included in the ALICE Household Survival Budget described below.

Q. PLEASE DESCRIBE THE TERMINOLOGY YOU USE IN USING THE ALICE DATA.

A. There are three basic terms that are used in presenting and assessing ALICE data for a particular geographic area:



- **The ALICE Survival Budget**. The ALICE Budget tracks the cost of household necessities that matter most to ALICE households: housing, child care, food, transportation, health care, and basic technology. According to United for ALICE, the United Way research arm which addresses the economic issues facing ALICE households, the ALICE Budget differs from the budget used by the U.S. Bureau of Labor Statistics (BLS) to calculate the Consumer Price Index (the traditional measure of inflation). The budget which BLS uses tracks over 200 goods and services. These include items that financially insecure households cannot afford on a regular basis (*e.g.*, full-service meals at restaurants, wine, major appliances, flights, and jewelry). In contrast, the ALICE Budget is limited to household essentials.[12]

- **The ALICE Essentials Index:** The ALICE Essentials Index is the rate of price increase for the limited market basket of household essentials: housing,

[12] ALICE Essentials Index, available at https://www.unitedforalice.org/essentials-index

child care, food, transportation, health care, and a smartphone plan. According to the 2025 ALICE report for Pennsylvania, the ALICE Essentials Index has consistently outpaced the broader CPI nationwide.[13] Nationally, the ALICE Essentials Index has outpaced the broader CPI nationwide since 2007. Between 2021 and 2023, the ALICE Essentials Index increased at an annual rate of 7.3% compared to 6.1% for CPI. The ALICE report for Pennsylvania reported that "in Pennsylvania, the ALICE Essentials Index also tended to increase faster than CPI. . ."

Figure 4. Growth in Pennsylvania ALICE Essentials Index vs. Growth in U.S. Consumer Price Index

The Pennsylvania ALICE Report found that "[w]hile wages have risen substantially in recent years, so have costs. And even in occupations where wages are growing faster than costs, wages started from such a low level that many workers are still not able to cover household essentials."[14]

- **<u>The ALICE Wage</u>:** The ALICE Wage is expressed on a monthly, annual and hourly basis. The Alice Wage represents the dollar amount needed to be earned that would exactly equal the household's ALICE Survival Budget. A wage lower than the ALICE Wage means the wage-earner can *<u>not</u>* meet the ALICE Survival Budget. A wage higher than the ALICE Wage means the wage-earner is meeting the ALICE Survival Budget with some additional

[13] The State of ALICE in Pennsylvania: Costs Over Time: The ALICE Essential Index, https://www.unitedforalice.org/costs-over-time/pennsylvania

[14] Id.

earning capacity left over. The ALICE Wage differs by household size and composition, as well as by the number of wage earners in the household.

Q. HAVE YOU EXAMINED THE WAGES NEEDED TO MEET THE ALICE SURVIVAL BUDGET IN THE COUNTIES SERVED BY PPL?

A. I have reviewed the ALICE Wage for a selection of PPL counties representing a diversity in geographic locations and urban/rural status. As I described above, the dollars needed for a household to meet the ALICE Survival Budget is known as the ALICE Wage. The ALICE Wage (*i.e.*, the income needed by household composition needed to meet the ALICE Survival Budget) for the PPL counties I examine is set forth in the Table below.

Table 4 demonstrates how the cost-of-living varies across Pennsylvania. For example:

- Both Lehigh and Northampton counties have noticeably higher ALICE wages than do the other PPL counties, followed closely by Carbon and Lancaster.
- In contrast, Clinton, Northumberland, Schuylkill, and Union counties have noticeably lower ALICE wages than do other counties.
- Two counties have ALICE wages (for a one-adult, one child family) of less than $40,000, while six counties have ALICE wages of more than $45,000.

It is evident from the data presented in the Table that the cost-of-living for these moderate income households, and thus the ability of these PPL customers to absorb the rate increase sought in this proceeding, varies widely across the PPL service territory.

Table 4. Annual Wage Needed to Meet ALICE Budget
(Selected PPL Counties)

	Single Adult	One Adult One Child	One Adult One Childcare	Two Adults	Two Adults Two Children	Two Adults Two Childcare
Carbon	$33,552	$47,688	$53,844	$48,120	$76,044	$88,980
Clinton	$26,940	$39,384	$44,364	$40,572	$65,556	$76,116
Columbia	$28,752	$43,236	$49,812	$43,524	$69,804	$83,628
Dauphin	$31,872	$46,704	$53,520	$46,752	$75,420	$91,176
Lackawanna	$29,412	$43,656	$49,704	$44,232	$70,752	$83,520
Lancaster	$33,060	$47,844	$53,964	$48,336	$76,848	$90,324
Lehigh	$34,668	$49,884	$56,820	$49,836	$79,944	$96,996
Luzerne	$29,412	$43,848	$50,400	$44,124	$71,148	$84,924
Lycoming	$29,652	$42,228	$47,160	$43,440	$68,172	$78,624
Montour	$28,452	$44,808	$54,072	$43,452	$71,700	$90,108
Northampton	$34,776	$50,340	$57,204	$50,352	$80,940	$97,824
Northumberland	$26,520	$38,532	$43,368	$39,792	$63,912	$73,932
Perry	$32,124	$47,100	$53,892	$47,196	$76,176	$91,824
Schuylkill	$27,996	$40,188	$46,728	$40,500	$67,128	$80,844
Snyder	$29,448	$40,584	$45,408	$41,844	$65,100	$75,036
Union	$28,512	$42,300	$47,040	$43,620	$67,284	$77,052
Wayne	$29,220	$43,512	$49,560	$44,076	$70,068	$82,836

Q. HOW DO THESE ALICE WAGES COMPARE TO WAGES THAT ARE COMMONLY AVAILABLE TO PPL CUSTOMERS?

A. ALICE research reports that "a key contributor to the number of ALICE households in Pennsylvania is the fundamental mismatch between the cost of living and what jobs pay."[15] Common occupations throughout Pennsylvania provide insufficient wages to

[15] The State of ALICE in Pennsylvania, ALICE in the Labor Force, https://www.unitedforalice.org/ALICE-in-the-labor-force/pennsylvania

allow a household to cover the ALICE Survival Budget. Included among those "common occupations" are, for example, retail salespersons, cashiers, customer service representatives, janitors and cleaners, waiters and waitresses, fast food and counter workers, and cooks (restaurants), amongst others.

Data on common occupations throughout Pennsylvania is set forth in the Table below. The median hourly wage for these occupations do not come close to covering the hourly wage needed to meet the ALICE Survival Budget. Indeed, of the 15 occupations listed, representing a total employment of more than 1.75 million workers, six had a median hourly wage (shaded in light grey) of less than $16.

Table 5. Selected Occupations, Employment, Wages, and Percentage Below ALICE Threshold (Pennsylvania, 2023)

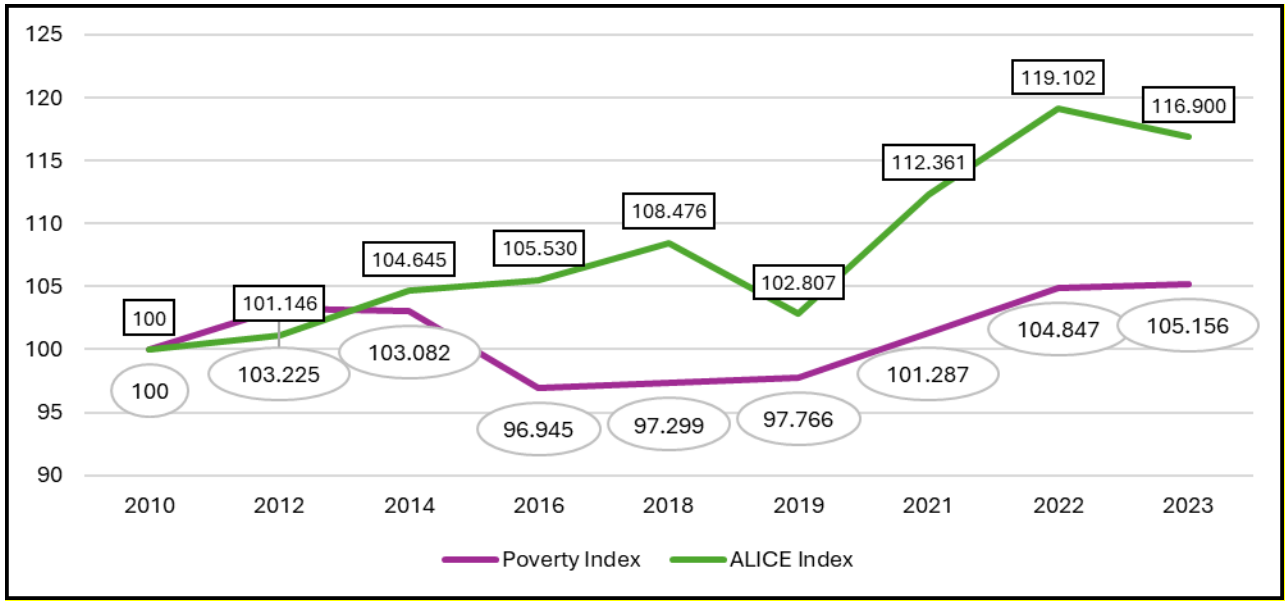
Occupation	Total Employment	Median Hourly Wage	% Below ALICE Threshold
Fast Food And Counter Workers	139,950	$13.36	40%
Personal Care Aides	213,020	$13.94	44%
Waiters And Waitresses	81,500	$14.28	36%
Cashiers	126,400	$14.40	42%
Retail Salespersons	134,160	$14.51	29%
Cooks	87,580	$15.35	42%
Janitors And Building Cleaners	112,580	$16.93	43%
Stockers And Order Fillers	104,930	$17.16	34%
Nursing Assistants	65,220	$18.53	44%
Laborers And Freight, Stock, and Material Movers	150,470	$18.84	33%
Office Clerks, General	122,170	$19.62	23%
Orderlies And Psychiatric Aides	69,910	$19.65	36%
Customer Service Representatives	112,850	$20.00	24%
Secretaries And Administrative Assistants, Except Legal, Medical, And Executive	81,320	$20.20	20%
Driver/Sales Workers And Truck Drivers	148,580	$20.93	27%

Q. HAVE YOU EXAMINED ANY SUBSET OF ALICE HOUSEHOLDS IN PARTICULAR?

A. Yes. Table 6 below documents what hourly wage would be required to meet the ALICE Survival Budget for *senior* households based on data up to 2023. As with the households discussed above, Lehigh and Northampton counties also have the highest ALICE Wages for both a household with a single senior person, and a household with two seniors. Carbon, Dauphin, Lancaster and Perry counties are also more expensive for seniors.

Table 6. Hourly Wage Needed to Meet ALICE Budget (seniors)
For Selected FPL Counties (2023)

	Single Senior	Two Seniors
Carbon	$38,340	$58,824
Clinton	$31,524	$50,772
Columbia	$33,240	$53,508
Dauphin	$36,756	$57,564
Lackawanna	$33,564	$53,520
Lancaster	$36,996	$57,276
Lehigh	$39,276	$60,168
Luzerne	$33,732	$53,772
Lycoming	$33,792	$52,740
Montour	$33,012	$53,556
Northampton	$39,312	$60,564
Northumberland	$31,284	$50,304
Perry	$36,408	$56,844
Schuylkill	$32,580	$50,616
Snyder	$33,492	$50,904
Union	$32,580	$52,740
Wayne	$33,468	$53,568



As can be seen in this data, in Pennsylvania counties served by PPL, the ALICE Wage for single seniors is higher than it is for single adult households overall (comparing Table 4 to Table 6). Otherwise, the ALICE Wage for a two-person senior household is roughly comparable to a two-person household (one adult/one child), but higher than for a household with two adults (and no children). This cost-of-living leaves many, if not most, seniors in the PPL service territory with inadequate income to meet their basic living expenses.

Q. DO YOU HAVE ANY FINAL OBSERVATIONS ABOUT THE ALICE DATA YOU HAVE REVIEWED?

A. While the number of persons in Pennsylvania with income falling below the FPL has remained relatively steady from 2010 through 2024, the number of persons with income falling below the ALICE Threshold has seen a steady increase. As Figure 5 below documents, the number of Pennsylvania residents with income below the ALICE Threshold has grown more than three times faster than the number of households with income below Poverty.[16]

[16] The State of ALICE in Pennsylvania: Trends in Financial Hardship, https://www.unitedforalice.org/trends-in-hardship/pennsylvania

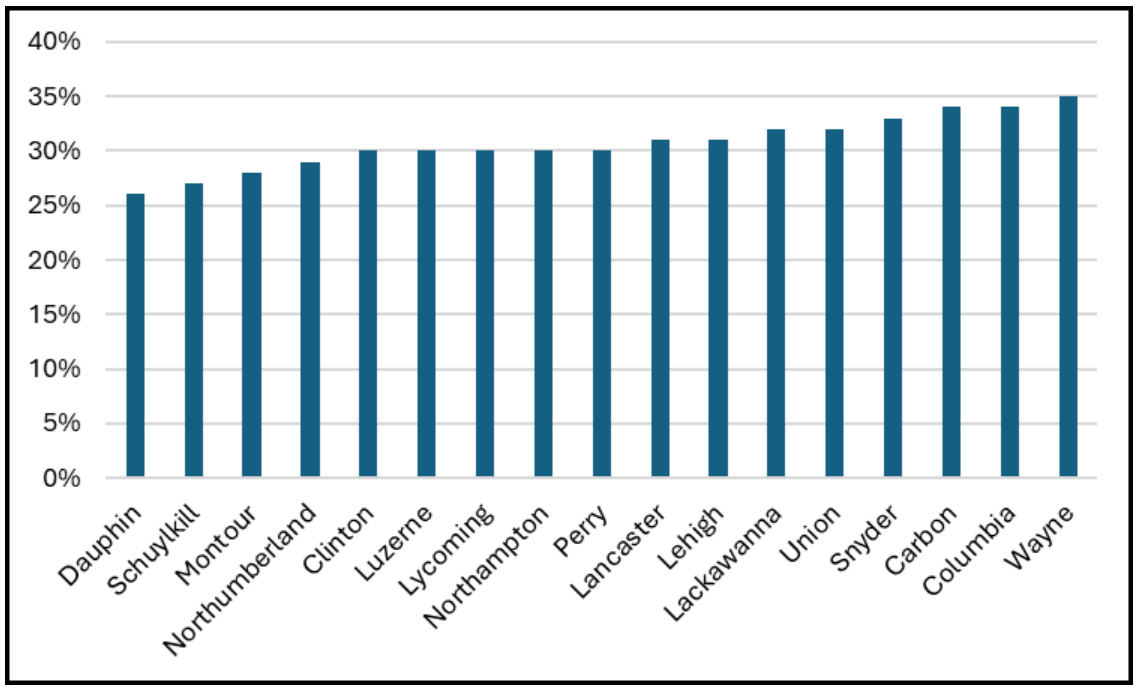


Figure 5. Index of No. of Persons Falling Below the FPL and Below ALICE Threshold (2010 = 100)

My final observation is simply that while the magnitude of the problem may differ from one part of the PPL service territory to another, there is no county served by PPL that escapes these identified hardships. Figure 6 below shows, for the counties I have been reviewing, the percentage of households with incomes falling below the ALICE Threshold (but above the Poverty Level) in 2023. In

only four counties does the percentage fall below 30%. In contrast, in three more counties, the percentage falls at either 34% or 35%.

Figure 6. Pct Households Falling Below ALICE Threshold / Above FPL by County (2023)

The ALICE data presented above provides two important insights into the affordability of PPL bills. First, the data demonstrates that there is a significant population living with incomes greater than the Federal Poverty Level, but less than that which is needed to meet basic living expenses. Second, the data demonstrates that the affordability of PPL bills could well depend in substantial part on the cost-of-living in different parts of the PPL service territory.

Part 2. The Importance of Considering the Affordability of PPL Bills to Low- and Moderate-Income Customers.

Q. PLEASE EXPLAIN THE IMPORTANCE OF TAKING SUCH A DETAILED LOOK AT THE UNAFFORDABILITY OF PPL BILLS TO PPL LOW- AND MODERATE INCOME CUSTOMERS.

A. It is important to undertake a detailed examination of the affordability of PPL electric service to low- and moderate-income households in the PPL service territory for several reasons. On the one hand, consideration of affordability is a critical task to undertake within the structure of a utility rate case. As bills become increasingly unaffordable, the payment difficulties of those customers who face unaffordability become increasingly substantial as well. I will demonstrate below how and where this conclusion has been documented time and again. One impact of the unaffordability is its impact on the operating costs (*e.g.*, collection costs, working capital, uncollectibles) that are then passed through to other ratepayers.

In addition, much of utility ratemaking involves a balancing of investor interests and customer interests. For example, establishing a Return on Equity (ROE) is fundamentally predicated on balancing customer and investor interests. It is necessary for the Commission to understand the customer interests in order to appropriately balance them against the competing investor interests. In deciding on the appropriate ROE and the reasonable mix of debt and equity securities, the obligation of the Commission is to balance consumer and investor interests. (*FPC v. Natural Gas Pipeline Co.*, 315 U.S. 575, 606 - 608; *see also Commonwealth ex rel. Stephens v. S. Cent. Bell Tel. Co.*, 545 S.W.2d 927, 930-931 (Ky. 1976)). Indeed, of the consumer issues that are important

drivers of the just and reasonable ROE determination, one of the most significant is the concern about affordability. If a sizable portion of customers cannot afford to pay the rates charged by PPL, the PUC can hardly be said to have approved just and reasonable rates. Such concerns should bear directly on the determination of the fair ROE. In addition, as a utility such as PPL adds more and more expensive plant, this increases rates, which may in turn put downward pressure on the just and reasonable ROE not for financial reasons, but because of affordability concerns.

The most fundamental response to unaffordability in the PPL service territory is to minimize the rate increases, if any, approved in this proceeding. Through such a minimization strategy, the Commission will address affordability for all customers, not merely for those who apply for (and are found eligible to receive) such energy assistance. Carefully balancing competing customer and investor interests in setting a return on equity, as noted above, while carefully reviewing the Company's proposed capital expenditures, and denying rate recovery for expenditures that are either unnecessary, not used and useful, or that are otherwise inappropriately proposed to be charged to ratepayers, is the first step (but only the first step) in addressing unaffordable bills.

Q. IS THERE A SECOND REASON TO UNDERTAKE A DETAILED EXAMINATION OF AFFORDABILITY IN THE PPL SERVICE TERRITORY?

A. Yes. There is often a tendency to downplay the impacts of utility rate increases in circumstances where the utility offers a bill affordability program (often coupled, as is the case with PPL, with arrearage forgiveness). One problem with that tendency arises when the bill affordability program reaches a small proportion of a utility's low-income population. Consider, for example, the Commission's discussion in its Columbia Gas

decision rendered on December 9, 2025. In that decision, the Commission stated: "As of December 2024, only 20,988 Columbia customers were enrolled in CAP, accounting for only 23% of the Company's estimated low income customers and 30% of its [Confirmed Low-Income] customers. Such statistics highlight that additional CAP screening is appropriate. Therefore, we emphasize the need for Columbia to improve CAP participation, especially when considering Columbia's proposed revenue increase in this proceeding."[17]

The Columbia Gas proceeding was not the first time the Commission had expressed such concerns. In addition, in deciding PGW's 2023 rate case, the Commission expressed concern about the failure of PGW to adequately enroll low-income customers into that Company's CAP. For purposes of reviewing the rate increases which PPL proposes in this proceeding, I note that the Commission said in its PGW Final Order:

> Additionally, we note how PGW lags other utilities in their identification, enrollment, and maintenance of low-income customers in programs that are designed to help low-income customers. Therefore, *we agree with the ALJs' recommendation that data and technology are key to low-income customer service* and we find the ALJs' recommended approach reasonable in the circumstances.[18]

These concerns recognize the needs of those low-income customers who have been left behind. Those who are left behind include customers who are income-eligible but who, for whatever reason, are not participating in PPL's Customer Assistance Program (CAP).

[17] Pennsylvania PUC vs. Columbia Gas Company, Docket No. R-2025-3053499, et al., at page 350 (December 4, 2025).

[18] Final Oder, Docket No. R-2023-3037933, at page 226, November 9, 2023 (emphasis added).

Given this history of Commission concern, it is important to assess the extent to which PPL has both: (1) identified its low-income population; and (2) enrolled its low-income customers into CAP where possible and appropriate.

Q. WHAT DO YOU FIND AS TO THE IDENTIFICATION OF LOW-INCOME PPL CUSTOMERS AND THE ENROLLMENT OF THOSE CUSTOMERS INTO CAP?

A. PPL has identified a relatively small proportion of the estimated number of low-income customers which it serves, and has enrolled an even smaller proportion of its low-income customers in its CAP. What this means is that, notwithstanding the Company's CAP, there is not merely a majority, but a large majority, of PPL's low-income customer base that is not participating in, and thus not protected by, the Company's bill affordability program. The data is set forth in the Table below.

Table 7. PPL Estimated Low-Income, Confirmed Low-Income Customers, and Monthly Average CAP Participation (2021 – 2023) [19]

	2021	2022	2023
Estimated low-income (LI)	337,091	398,427	315,028
Confirmed low-income (CLI)	198,684	199,360	205,451
Monthly average CAP participation	61,698	67,491	71,302
Pct Estimated LI that are CLI	58.9%	50.0%	65.2%
Pct Estimated LI in CAP	18.3%	16.9%	22.6%
Pct CLI in CAP	31.1%	33.9%	34.7%

[19] Pennsylvania PUC, Bureau of Consumer Services, 2023 annual report on Universal Service Programs and Collections Performance, available at , available at https://www.puc.pa.gov/media/3433/2023_universal_service_report-final_rev041525.pdf (hereafter 2023 BCS Report).

As the Commission found with both Columbia Gas and PGW, PPL enrolls a small fraction of the Company's low-income customer base into its CAP. In both 2021 and 2022, PPL enrolled fewer than one-in-five of its estimated low-income customer population into CAP, while in 2023, it enrolled fewer than one-in-four low-income customers. Indeed, the BCS data documents that, even once having identified its low-income customer population, PPL still enrolled only a fraction of those "Confirmed Low-Income" (CLI) customers into CAP. Only roughly one-in-three of PPL's CLI customers have the affordability of their service protected through participation in CAP.

Q. WHY IS THIS PPL FAILURE TO IDENTIFY THE COMPANY'S LOW-INCOME CUSTOMERS AND TO ENROLL THEM INTO CAP OF CONCERN?

A. The failure of PPL to identify its low-income customers and to enroll those customers into CAP presents both a statutory concern and a financial concern. The first concern is based on Pennsylvania statute. Pursuant to the Electricity Generation Customer Choice and Competition Act,[20] the General Assembly stated its intention to ensure that electric service remain universally available to all customers in the state. The Act contains provisions that require utilities to establish programs to maintain affordable electric service for low income customers.[21] The Act also requires the PUC to ensure that utilities appropriately fund their assistance programs.[22] To the extent that PPL fails to identify its low-income customer base and to enroll those low-income customers in CAP, the

[20] 2023 BCS Report, citing 66 Pa.C.S. §§ 2801-2815

[21] Id., citing, 66 Pa.C.S. § 2802(10)

[22] Id., citing 66 Pa.C.S. §2804(9)

Company is failing to meet the statutory objective of establishing programs to maintain affordable electric service. That failure was documented in detail in my discussion above. PPL's failure, however, is not simply a failure to maintain affordable electric service, it is a failure to maintain electric service at all to a substantial portion of the Company's low-income customer base.

The Company's failure to maintain service to low-income customers can be seen both in the absolute number of nonpayment disconnections to Confirmed Low-Income (CLI) customers and in the rate of nonpayment disconnections for CLI customers relative to the rate of nonpayment disconnections for residential customers as a whole. Table 8 presents the data. In 2021 and 2022, PPL disconnected service to more than 20,000 CLI customers. The three-year data shows that even though there was a dip in the rate of CLI nonpayment disconnections in 2023, there was a corresponding decline in overall residential disconnections. Nonetheless, in relative terms, in all three years, PPL disconnected its CLI customers at a rate three to four times higher than it disconnected residential customers as a whole. At the same time, the rate at which PPL was reconnecting its low-income customers declined noticeably from 2021 through 2023. By 2023, nearly one-in-three (29%) of CLI customers who had had their service disconnected for nonpayment did not subsequently have their service reconnected.

Table 8. Number and Rate of PPL Nonpayment Disconnections for Confirmed Low-Income (CLI) Customers, Rate of Residential Nonpayment Disconnections (2021 – 2023) [23]

	2021	2022	2023
No. of Confirmed Low-Income (CLI) Nonpayment Disconnections	20,182	21,583	10,357
Rate of CLI Nonpayment Disconnections[24]	10.3%	10.8%	5.0%
Rate of Residential Disconnections	2.5%	2.8%	1.4%
Rate of CLI Reconnection after Nonpayment Disconnection	77.0%	75.0%	71.0%

PPL cannot say that it was offering its low-income customers an opportunity to redress payment difficulties and to maintain service through deferred payment arrangements, let alone through successful payment arrangements. In 2023, fewer than one-in-five CLI customers in debt (18.1%) entered into payment arrangements. Both the number of CLI payment arrangements, and the percent of CLI customers in debt entering into a payment arrangement for PPL had declined sharply in 2023 relative to 2021.

Table 9. Percent of Confirmed Low-Income (CLI) Customers in Debt On Deferred Payment Arrangements and Not on Payment Arrangements, Percent of CLI Revenue in Debt on Payment Arrangement CLI Customers 2021 – 2023) [25]

	2021	2022	2023
Percent of CLI Customers in Debt on Payment Arrangement	35.2%	28.0%	18.1%
Percent of CLI Customers in Debt Not on Payment Arrangement	64.8%	72.0%	81.9%
Number of CLI Payment Arrangements	91,665	71,429	78,291

Moreover, a review of PPL data shows that the Company had an average of 39,287 payment agreements with CLI customers per month in 2024, while experiencing an average of 22,755 CLI payment agreement defaults in that time period. Similarly, PPL

[23] 2023 BCS Report

[24] According to the 2023 BCS Report, "the Termination Rate is calculated by dividing the number of service terminations by the number of residential customers. . ." 2023 BCS Report, at 14.

[25] 2023 BCS Report

had an average of 39,611 payment agreements with CLI customers per month in the first nine months of 2025, while having an average of 22,917 payment agreement defaults in that same time period of 2025.[26]

It cannot reasonably be asserted that PPL is effectively using its universal service programs, including enrollment in CAP, to help low-income customers "maintain electric service" as required by statute.

Q. IS THERE A FINANCIAL IMPACT TO PPL FROM ITS FAILURE TO ADEQUATELY IDENTIFY ITS LOW-INCOME CUSTOMERS AND ENROLL THEM INTO CAP?

A. Yes. PPL's failure to adequately identify the Company's low-income customers and enroll those customers into CAP results in adverse financial impacts to the Company and to its remaining ratepayers. I discussed above the increased rate of disconnections experienced by low-income customers not enrolled in CAP, along with the low rate at which PPL reconnects low-income customers after a nonpayment disconnection. When a customer has service disconnected, *not* followed by a reconnection, the dollars of arrears on the customer account at the time of disconnection will generally not be collected by the Company.[27] Table 10 shows the average arrears for CLI customers at the time of

[26] OCA-IV-17(CONFIDENTIAL). While the zip code specific data was deemed confidential by PPL, by agreement with OCA, aggregated data was not considered to fall within that claim of confidentiality.

[27] According to PPL's Chapter 14 collection data reported to the Commission, in 2023, the Company had a gross write-off of $60,458,291, with a recovery of $14,627,034, yielding a net write-off of $45,831,257. Collections Data for the Major Electric, Gas, and Water Companies, 2023 (updated April 17, 2025). Available at https://www.puc.pa.gov/media/3522/2023-master-residential-collections-data.pdf

disconnection. At a minimum, to the extent that these disconnected CLI customers are not being reconnected, PPL is losing this revenue to nonpayment.

Table 10. Average Arrears at Time of Disconnection: Confirmed Low-Income[28]

CREATED_YEAR_MO	CLI_ARREARS	CREATED_YEAR_MO	CLI_ARREARS
2022-09	$1,336.56	2024-04	$1,728.35
2022-10	$1,179.65	2024-05	$1,495.10
2022-11	$1,189.15	2024-06	$1,435.84
2022-12	$1,045.29	2024-07	$1,269.02
2023-01	$734.34	2024-08	$1,097.68
2023-02	Not applicable	2024-09	$1,065.74
2023-03	Not applicable	2024-10	$968.39
2023-04	Not applicable	2024-11	$984.31
2023-05	$376.00	2024-12	$604.10
2023-06	Not applicable	2025-01	$763.37
2023-07	$2,603.57	2025-02	$893.87
2023-08	$2,262.84	2025-03	$910.77
2023-09	$2,176.96	2025-04	$1,482.30
2023-10	$1,862.33	2025-05	$1,383.28
2023-11	$1,737.55	2025-06	$1,251.43
2023-12	$977.51	2025-07	$1,170.16
2024-01	$1,087.26	2025-08	$1,052.02
2024-02	$987.70	2025-09	$1,032.59
2024-03	$1,200.38		

Even beyond the disconnection of service for nonpayment, followed by a lack of reconnections, the failure to identify low-income customers and to enroll them in CAP is

[28] OCA-IV-23.

unnecessarily costing PPL (and its ratepayers) money through the arrears that low-income customers carry. Not only are proportionately more low-income customers in arrears, but, in addition, those that are in arrears are deeper in arrears. As a result, PPL is unnecessarily incurring working capital expenses. Given that working capital is a capital expense, it has an equity return associated with it. In turn, that equity return will have an additional tax impact associated with it.

There can be no question that PPL's low-income customers are not only disproportionately in arrears, but that they are also deeper in arrears. The data published in the most recent (2023, published in September 2024) BCS report on universal service programs and collections performance documents this observation. The data shows that the percentage of CLI accounts in arrears was more than twice the percentage of residential accounts in arrears. Moreover, the data shows that the average dollar level of CLI arrears has been from nearly 40% to nearly 60% higher than the average dollar level of arrears for residential customers as a whole. It should be noted, of course, that since low-income customers are a subset of residential customers as a whole, the higher amounts for low-income customers will pull the residential averages up. Accordingly, the difference between low-income customers and non-low-income customers would be even greater than the difference between low-income customers are residential customers as a whole.

Table 11. Percentage of Residential and Confirmed Low-Income (CLI) Residential in Arrears and Average Dollars of Arrears (2021 – 2023)			
	2021	2022	2023
% residential accounts in arrears	14.5%	15.4%	17.8%
% CLI accounts in arrears	32.6%	35.0%	40.5%
Average residential arrears	$696.17	$599.46	$798.17
Average CLI arrears	$1,105.75	$854.54	$1,085.68

Given the improved low-income payment patterns generated by enrollment of low-income customers in CAP, identifying low-income customers and enrolling those customers in CAP can reasonably be expected to have a positive financial impact on the utility.

Q. WHAT CHANGE, IF ANY, IN PAYMENT BEHAVIOR IS EXPERIENCED WHEN LOW-INCOME PPL CUSTOMERS ENROLL IN CAP?

A. BCS data documents the improved payment patterns that result from PPL identifying its low-income customers and enrolling those customers in CAP. The Table below documents that by enrolling low-income customers in CAP, the Company is taking a population which, in the absence of CAP, has from 33% to 40% of its accounts in arrears and turns them into a population which pays 90% or more of its billed revenue. By enrolling customers in CAP, PPL is taking a population 10% or more of which experienced a disconnection of service for nonpayment and turns them into a population which pays 90% or more of its billed revenue. By enrolling customers in CAP, PPL is taking a population which carried an *average* arrears of more than $1,000 in two of the past three years and turned them into a population which pays 90% or more of its billed revenue.

Table 12. Total CAP Dollars Billed and Total CAP Dollars Paid: PPL (2021 – 2023)

	2021		2022		2023	
	CAP Dollars Billed	CAP Dollars Paid	CAP Dollars Billed	CAP Dollars Paid	CAP Dollars Billed	CAP Dollars Paid
Billed and Paid	$68,171,727	$62,430,637	$72,634,952	$67,645,147	$85,743,139	$73,360,781
Pct CAP dollars paid by customers	91.6%		93.1%		85.6%[29]	

It should be noted that the "percent of CAP dollars paid by customers" does *not* include LIHEAP dollars.[30] To the extent that PPL CAP participants also receive LIHEAP, the percentage of CAP dollars billed that is paid becomes even higher.

This recent data reported to BCS by PPL is consistent with PPL's prior independent evaluation of its CAP program. PPL's own program evaluation found a substantial improvement in payment patterns occurring when low-income customers enroll in CAP. According to PPL's 2020 independent evaluation of its universal service programs, participation in PPL's CAP resulted in an improvement of the "payment coverage ratio" of 21% for PPL's non-heating customers and by 26% for PPL's heating customers. The "payment coverage ratio" is the percentage of bills for current service paid by (or on behalf of) customers. For example, a 98% "payment coverage ratio" means that CAP non-heating customers paid 98% of the dollars of bills which they received.

[29] The decline in 2023 is not due to the fact that less of the total bill was paid. Instead, it is due to the fact that in 2023, Congress made a historically high appropriation for LIHEAP, thus leaving less of low-income bills to be paid by the low-income customers themselves.

[30] 2023 BCS annual report, at 64 ("The total CAP billed amount in dollars is the annual total of all expected monthly CAP payments due to the utility. . .The total CAP dollars paid reflects the total cash payments made to the CAP customer's account but ***should not*** (emphasis in original) include any energy assistance grants (*e.g.*, LIHEAP, Hardship Fund, etc.)."

Table 13. Total Bill Payment Coverage Ratios Low-Income Customer Assistance Program (CAP) Participants: PPL[31]				
	Test Year Enrollees			Net Change Relative to Comparison Group[32]
	Pre-CAP	In CAP	Change	
PPL (non-htg) (2020)	84%	98%	15%	21%
PPL (heating) (2020)	83%	104%	21%	26%

Q. WHAT DO YOU CONCLUDE?

A. My testimony above should be read together in order to reach reasonable conclusions. The conclusions flow as follows: (1) bills to PPL low-income customers are substantially unaffordable. PPL bills consistently and significantly exceed an affordable percentage of income burden; (2) PPL has identified a relatively small proportion of its low-income customers and, of those low-income customers it has identified, PPL has enrolled an even smaller proportion into its CAP; (3) PPL's low-income non-CAP customers disproportionately lose their service to nonpayment disconnections and, even those who do not experience a disconnection, are in arrears more frequently and to a deeper extent than non-low-income customers; (4) few low-income PPL customers have entered into deferred payment arrangements through which to retire their arrears and, of those who have, a substantial percentage of those payment arrangements default; and (5) enrolling

[31] APPRISE, Inc. (January 2020). PPL Electric Utilities Universal Service Programs, Final Report, at 100, available at https://www.puc.pa.gov/pcdocs/1656535.pdf (accessed Apr. 27, 2023).

[32] The "net change" is calculated by subtracting the change in the CAP non-participants from the change in the CAP participants. For example, if the CAP participant payment coverage ratio increased by 20% but the CAP non-participant payment coverage ratio increased by 6% in the same time period, the "net change" of CAP participants would be 14% (20% - 6% = 14%). In contrast, if the CAP participant payment coverage ratio increased by 20% but the CAP non-participant payment coverage ratio *decreased* by 6% in the same time period, the "net change" of CAP participants would be 26% (20% - (-6%) = 26%).

customers in CAP results in substantial improvements in low-income payment patterns, transforming customers who were deeply in arrears and experiencing nonpayment disconnections into customers who are paying 90% or more of their billed revenue (even before taking the receipt of LIHEAP into account).

Based on this discussion, I conclude that identifying PPL's low-income customers and enrolling those customers into CAP will not only benefit the customers by helping those customers maintain their electric service, it will benefit PPL as a whole as well by enhancing revenues and reducing expenses.

Part 3. Enhancing PPL's Identification of its Low-Income Customers and Expanding Enrollment into CAP.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I explain how PPL should enhance its identification of low-income customers and its enrollment of those customers into CAP. In my prior sections, I detail the reasons *why* PPL should improve its performance. In this section of my testimony, I explain *how* PPL should improve its performance.

A. Identifying Low-Income Customers.

Q. DOES PPL APPROPRIATELY IDENTIFY ITS CUSTOMERS AS "LOW-INCOME" CUSTOMERS AS DEFINED BY PUC REGULATION?

A. No. The PUC defines "confirmed low-income customers" as being "Accounts where the [Electric Distribution Company] has obtained information that would reasonably place

the customer in a low-income designation."[33] Other PUC regulations provide helpful guidance in how this definition should be read. The Commission's definition, for example, should be read *in pari materia* with the Commission's regulation regarding when a customer is exempt from being required to pay a cash security deposit. In implementing the waiver of cash security deposits for low-income households, for example, PUC regulations provide that "An applicant is confirmed to be eligible for a customer assistance program by the public utility if the applicant provides income documents *or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the public utility's customer assistance programs*."[34] (emphasis added).

The regulation clearly states that information which the "applicant provides" may include not merely self-certification of the level of income, but, pursuant to the PUC regulation, certification of the *source* of income. For example, customers who receive SNAP (Supplemental Nutrition Assistance Program, formerly known as Food Stamps) assistance, Medicaid, Temporary Aid to Needy Families (TANF), free School Lunch, and other similar benefits will, by the very receipt of those benefits, be "reasonably place[d]. . .in a low-income designation."

In contrast, when asked how it identifies a customer as a "confirmed low-income" customer, the Company responded that "The Company accepts a verbal financial statement, receipt of LIHEAP, enrollment to OnTrack and/or a verified income financial

[33] *52 Pa. Code* § 54.72.

[34] *52 Pa. Code* § 56.32(e).

statement to confirm the customer's income eligibility."[35] What the Company accepts as establishing "confirmed low-income" status, in other words, is much narrower than what is required by regulation to establish that a customer is income-eligible to be exempt from a cash security deposit.

Consider the impact on the identification of low-income customers, for example, if PPL used only a documentation of the receipt of benefits through SNAP as "information that would reasonably place the customer in a low-income designation" and thus likely eligible for CAP enrollment. I have compared by zip code for each zip in PPL's service territory the number of Confirmed Low-Income customers identified to the number of SNAP recipients in that zip code.[36] I find that 104 PPL zip codes, had a SNAP participation rate greater than the number of Confirmed Low-Income customers for that zip code, with the aggregate excess reaching 33,290 households. Indeed, in 59 PPL zip codes, the number of CLI customers was exceeded by the number of SNAP recipients *with income less than 100% of FPL*, with the excess reaching 10,437 households. In multiple zip codes, the number of SNAP recipients substantially exceeded the number of CLI customers. In 41 PPL zip codes where the number of SNAP recipients exceeded the number of CLI customers by 200 or more, the aggregate number of SNAP recipients exceeded the aggregate number of CLI customers by 29,529 households. In the 17 PPL

[35] OCA-IV-18. See, also, CAUSE-PA-I-6 ("PPL Electric reports confirmed low-income customers using the following criteria (customer only needs to meet 1 criteria). 1. Customer received a LIHEAP grant within the rolling 12 months from the report month. 2. Active OnTrack participant in the month reported. 3. Customer self-reported level 1 (150% of poverty or below) income to the Company.")

[36] The Company asserted confidentiality for the individual zip code data, but agreed that data that was aggregated such that individual customers could not be possibly identified was appropriate.

zip codes where the number of SNAP recipients exceeded the number of CLI customers by 500 or more, the aggregate number of SNAP recipients exceeded the aggregate number of CLI customers by 21,312.[37] This difference is not surprising. Pennsylvania has one of the highest SNAP participation rates in the nation (ranking seventh amongst the states). According to the U.S. Department of Agriculture (USDA), an estimated 93% of those households eligible for SNAP in Pennsylvania received SNAP benefits.[38] PPL should use that high SNAP enrollment rate to help identify its low-income customer population.

Given the benefits of identifying its low-income customers, and the detriments of failing to identify those customers, PPL should be directed to accept the same documentation to establish "confirmed low-income" status (*i.e.*, "information that would reasonably place the customer in a low-income designation") as is required to be accepted to establish income-eligibility for deposit exemptions ("other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the public utility's customer assistance programs").

Q. DO YOU HAVE A SECOND RECOMMENDATION REGARDING PPL'S IDENTIFICATION OF CUSTOMERS AS "CONFIRMED LOW-INCOME" CUSTOMERS?

[37] The number of SNAP recipients, disaggregated by whether the household had income above or below FPL, is presented in the American Community Survey Table B22003.

[38] Reaching Those in Need: Estimates of State Supplemental Nutrition Assistance Program Participation Rates in 2022, available at https://fns-prod.azureedge.us/sites/default/files/resource-files/ear-snap-Reaching-Those-in-Need-2022.pdf

A. Yes. PPL requires customers to have received a LIHEAP grant "within the rolling 12 months of the report month" in order to be deemed a "Confirmed Low-Income customer."[39] Again, particularly when the definition of "Confirmed Low-Income" is read *in pari materia* with other PUC regulations, this requirement is much too narrow. Consider, for example, the PUC's CAP Policy Statement. When the PUC amended its CAP Policy Statement in 2019, it decided that "All other CAP households should recertify at least once every two (2) years."[40] It makes little sense that the receipt of LIHEAP in a given year would income-qualify that household for CAP for a minimum of two-years, but that the receipt of the same LIHEAP benefit would identify a customer as having provided information that "would reasonably place the customer in a low-income designation" for only twelve months. I conclude that a "confirmed low-income customer" should include any customer who, within the current or immediately preceding two LIHEAP program years, has received a LIHEAP grant.

Q. DO YOU HAVE A THIRD RECOMMENDATION REGARDING PPL'S IDENTIFICATION OF CONFIRMED LOW-INCOME CUSTOMERS?

A. Yes. One way that PPL establishes the "Confirmed Low-Income" status of a customer is if the customer is an active OnTrack (*i.e.*, CAP) participant.[41] PPL provides no grace period for a time subsequent to when they may default from OnTrack to when that customer loses their Confirmed Low-Income status. The problem with that approach is

[39] CAUSE-PA-I-6.

[40] 2019 Amendments to Policy Statement on Customer Assistance Program, 52 Pa. Code § 69.261–69.267, Docket M-2019-3012599, Final Policy Statement and Order, at 6, 65.

[41] OCA-IV-18.

the extent to which PPL's customers are removed from the Company's CAP due to a failure to recertify. The only reason for leaving CAP which PPL separately tracks is the failure to recertify.[42] And the number of low-income customers which are removed due to a failure to recertify is substantial. According to the Company, in the twelve months ending December 2024, PPL removed 23,573 CAP customers due to a failure to recertify.[43] During that same twelve-month period, PPL had an average CAP participation rate of only 74,564 customers.[44] PPL, in other words, is removing more than 30% of its CAP participants each year due to a failure to recertify. In removing these CAP participants, the Company is thus automatically excluding the customers not merely from receiving CAP benefits, but from being considered "Confirmed Low-Income" customers as well. I recommend that PPL modify its identification of CLI customers to allow a customer to retain their CLI status for twelve months after being removed from CAP due to a failure to recertify.[45] This is consistent with PPL's current Universal Service and Energy Conservation Plan (USECP) which allows a customer's income status to continue for up to twelve months after the customer leaves CAP. It is not reasonable for a customer's income-eligibility status to be allowed to continue after their removal from CAP, but to terminate their status as a CLI customer once they are no longer an "active" OnTrack participant.

---

[42] CAUSE-PA-I-16.

[43] Id.

[44] CAUSE-PA-I-29.

[45] PPL's performance in this respect is addressed by the outcome objective I recommend below concerning increases in month CAP participation. See, notes 103 - 104, *infra*, and accompanying text.

Q. HAS THE COMMISSION RECENTLY STATED THAT A NARROW READING OF ITS DEFINITION OF "CONFIRMED LOW-INCOME" IS INAPPROPRIATE?

A. Yes. In its Decision and Order in the 2023 PGW rate proceeding, OCA and CAUSE-PA challenged PGW's narrow definition of "confirmed low-income." The PUC upheld that challenge, holding that:

> . . .PGW's process for identifying low-income customers is flawed. PGW's reading of the confirmed low-income designation appears to limit the pool of Confirmed Low-Income Customers by only counting customers enrolled in CRP, receiving LIHEAP, and on low-income payment agreements. Section 62.2 of our Regulations defines the "Confirmed Low-Income Customers" designation in broader terms, as it provides examples of information that PGW may rely upon when making such designation, and not an exhaustive list. In other words, the enumeration of these examples of information in the regulation does not imply the exclusion of others if the information is obtained by the Company and would reasonably place the customer in a low-income designation.[46]

Appropriately and accurately identifying the Company's "confirmed low-income" customers is not only important from the perspective of CAP outreach, but also qualifies such customers for various fee waivers.

B. Expanding Enrollment of CLI Customers into CAP.

Q. DO YOU HAVE AN INITIAL RECOMMENDATION ON HOW PPL SHOULD EXPAND ITS ENROLLMENT IN CAP WITHIN ITS CONFIRMED LOW-INCOME CUSTOMER POPULATION?

[46] Pennsylvania PUC v. Philadelphia Gas Works, Docket R-2023-3037933, Opinion and Order, at 222 (November 9, 2023).

A. Yes. Remember that I established above the dramatic difference between the number of customers which PPL has enrolled in CAP and the number of customers which it has identified as being "Confirmed Low-Income" from 2021 through 2023. Most recently, PPL reports that it has a total of 248,659 Confirmed Low-Income customers, and a CAP enrollment of 72,324,[47] a CAP enrollment of less than 30%. At the same time PPL is enrolling fewer than one-of-three customers for whom it has information that would reasonably identify them as low-income, PPL has executed 57,253 nonpayment disconnections for Confirmed Low-Income customers (not including CAP) in 2024, while executing 37,131 nonpayment disconnections to CLI customers (not including CAP) in the first nine months of 2025.[48]

Q. WHY DO YOU ADDRESS THE DISCONNECTION OF SERVICE IN PARTICULAR?

A. There are several reasons why the disconnection of service should be considered in particular. First, in all the ways I have discussed in detail above, the disconnection of service has rate implications to all customers. Minimizing disconnections would minimize these adverse rate impacts. Second, as BCS notes in its most recent annual report on universal service programs and collection performance that "Termination of public utility service is the most serious consequence of customer nonpayment and is viewed as a last resort when customers fail to meet their payment obligations."[49] It is thus

[47] OCA-IV-4.

[48] OCA-IV-16 (CONFIDENTIAL). While the zip code specific data was deemed confidential by PPL, by agreement with OCA, aggregated data was not considered to fall within that claim of confidentiality.

[49] 2022 BCS Report, at 15.

appropriate to assess whether service terminations are, in fact, being used by PPL as a "last resort." Third, as BCS states: "Universal Service is a collective name applied to the policies, protections and services that *help low-income customers maintain electric and natural gas service*. . ." (emphasis added).[50] Given that "universal service" is intended to "help low-income customers maintain electric. . .service," it is appropriate to assess whether PPL is achieving that objective by avoiding nonpayment disconnects.

Q. WHAT DO YOU FIND?

A. The data above demonstrates that the current procedures which PPL uses to enroll Confirmed Low-Income customers –*i.e.*, those customers that the Company *knows* to be low-income—are not effectively working to help these customers enroll in CAP to retain utility service (*i.e.*, in the words of the Electricity Competition statute, to "help low-income customers maintain electric. . .service"). Notwithstanding the statutory goal for PPL's universal service program, tens of thousands of Confirmed Low-Income customers are having their service disconnected for nonpayment, and, as I discuss in detail above, 30% of those disconnected customers do not have their service reconnected.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that, prior to the disconnection of a Confirmed Low-Income customer, PPL adopt a procedure, developed in collaboration with its Universal Service Advisory Group (USAG), under which it will offer the Confirmed Low-Income customer the opportunity

[50] Id., at 3, citing Electricity Generation Customer Choice and Competition Act, 66 Pa. C.S. § 2803 and Natural Gas Choice Competition Act, 66 Pa. C.S. § 2202.

to apply for the Company's CAP and arrearage forgiveness program.[51] If the customer expresses a desire to make such application, PPL should postpone the disconnection for a reasonable period of time to allow the application process to be completed.

Q. WHAT IS THE SECOND ASPECT OF EXPANDED CAP ENROLLMENT YOU WISH TO ADDRESS?

A. A review of PPL data shows that the Company had an average of 39,287 payment agreements with CLI customers per month in 2024, while experiencing an average of 22,755 CLI payment agreement defaults in that time period. Similarly, PPL had an average of 39,611 payment agreements with CLI customers per month in the first nine months of 2025, while having an average of 22,917 payment agreement defaults in that same time period of 2025.[52]

Q. PLEASE THUS EXPLAIN YOUR NEXT RECOMMENDATION.

A. My next recommendation is that Confirmed Low-Income customers who are negotiating a deferred payment agreement (DPA) with the Company, as well as customers from whom the Company receives information placing them in an income tier of 0% to 150% FPL, should be provided a stand-alone written Plain Language notice informing those

[51] This recommendation easily supplements the settlement reached in Docket P-2016-2524581, Petition of PPL Electric Utilities Corporation for Approval to Use the Remote Service Switch in its Meters for Involuntary Service Termination, requiring PPL to "send an appropriately trained field representative to the customer's premises on the day that termination is scheduled to occur. The field representative will use reasonable efforts to make personal contact with a responsible adult occupant of the premises prior to the termination." See, Joint Petition for Approval of Settlement, para. 13, page 3 (August 5, 2016). In addition, this recommendation is not in derogation of the Direct Testimony of Barbara Alexander in this proceeding regarding PPL's non-compliance with that Settlement provision.

[52] OCA-IV-17(CONFIDENTIAL). While the zip code specific data was deemed confidential by PPL, by agreement with OCA, aggregated data was not considered to fall within that claim of confidentiality.

customers of their right, in the alternative, to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions). Through that opportunity, rather than needing to agree to retire their arrears over an extended period of time, the Confirmed Low-Income customer would be allowed to enroll in CAP (if income-qualified) and, upon making appropriate payments, receive a forgiveness of their underlying arrearages. This written communication would be provided to Confirmed Low-Income customers, those customers from whom PPL had previously received sufficient information to reasonably establish their low-income status.

Q. IS THERE A STATUTORY BASIS FOR IMPOSING THIS REQUIREMENT?

A. Yes. Pennsylvania statutes provide that:

> No public utility shall, directly or indirectly, by any device whatsoever, or in anywise, demand or receive from any person, corporation, or municipal corporation a greater or less rate for any service rendered or to be rendered by such public utility than that specified in the tariffs of such public utility applicable thereto. The rates specified in such tariffs shall be the lawful rates of such public utility until changed, as provided in this part. *Any public utility, having more than one rate applicable to service rendered to a patron, shall, after notice of service conditions, compute bills under the rate most advantageous to the patron*.[53]

(emphasis added). PPL should not, in other words, require a customer, known to be a Confirmed Low-Income customer, to pay off arrears through a payment arrangement which arrears would be subject to forgiveness under the Company's CAP. The Recommended Decision in the 2025 Columbia Gas rate proceeding agreed, stating that "Both CAUSE-PA and OCA propose that the Commission should require Columbia to

[53] 66 Pa. Stat. and Cons. Stat. Ann. § 1303 (West).

implement routine screening of its applicants and customers to determine eligibility for CAP and other universal service programs. . .We agree with both CAUSE-PA and OCA on this issue. Improved screening and referrals could help ensure households are receiving the most advantageous available rate and is a statutory requirement."[54]

Q. HAS THIS OR ANY SIMILAR ISSUE BEEN RECENTLY ADDRESSED BY THE COMMISSION?

A. Yes. In the April 4, 2024 decision regarding the Universal Service and Energy Conservation Plan (USECP) of Columbia Gas, the PUC considered whether Columbia could apply an existing deposit against a low-income customer's outstanding arrears before refunding the difference pursuant to statute and regulation. The PUC held that the Company could *not* do so, stating:

> Commission regulations also state that a public utility must "refund a deposit, along with any applicable interest, within 60 days upon determining that the customer or applicant from whom a deposit was collected is not subject to a deposit…." *See* 52 Pa. Code § 56.53(f). The regulations do not permit the public utility to apply a deposit to a delinquent account balance if it is determined the customer was not responsible for paying the deposit prior to accruing the balance.
>
> Accordingly, we direct Columbia to refund security deposits, with applicable interest, collected from customers who are income–eligible for CAP. Columbia may apply the security deposit to the account balance only with the customer's informed consent. As part of obtaining this informed consent, Columbia must explain to the customer how applying the security deposit to the account balance would impact the customer's monthly bill.[55]

[54] Pennsylvania PUC v. Columbia Gas of Pennsylvania, Docket R-2025-3053499, Recommended Decision, at page 549 (October 3, 2025).

[55] Columbia Gas of Pennsylvania, Inc. Universal Service and Energy Conservation Plan for 2024 - 2028 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2023-3039487, Order, at 31 (April, 2024). (hereafter 2024 Columbia USECP Order).

While that decision related to Columbia, the application of the legal principles would be the same. In a similar fashion, PPL should be allowed to require a Confirmed Low-Income customer to pay off arrears through a payment arrangement "only with the customer's informed consent." Moreover, as the PUC stated with respect to applying deposits against arrearage balances, "as part of obtaining this informed consent," the Company must explain to the customer how enrolling in CAP and making the customer's arrearage subject to arrearage forgiveness "would impact the customer's monthly bill."

Q. WHAT DO YOU FIND?

A. Offering a low-income customer a deferred payment arrangement, even a long-term deferred payment arrangement, is not a recipe for success if the reason the customer is in arrears in the first instance is that bills for current service are unaffordable. In those situations, all a deferred payment arrangement does is to begin with the unaffordable bill and ***add*** an additional installment payment through which to retire the arrears. In those instances, it should not be surprising that substantially more than half of Confirmed Low-Income payment arrangements default in any given year. The remedy for unpaid bills by low-income customers is not to place those customers on a deferred payment arrangement, but rather to enroll those customers in CAP (with its arrearage forgiveness provisions). Through that remedy, PPL would not merely address the unpaid bill, but would also address the underlying cause of the unpaid bill. Doing so would not only benefit the low-income customer, but would also benefit the Company and its remaining customers as well.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that before PPL enters into a DPA with a customer which the Company either: (1) knows to be a Confirmed Low-Income customer; or (2) has generated information through the DPA process documenting that the customer is in the Tier 1 income range (at or below 150% FPL), it should be required to provide the customer a stand-alone Plain Language notice to that customer of the customer's right to enter into CAP and an explanation of the advantages of CAP's arrearage forgiveness benefits. PPL should develop this Plain Language notice in collaboration with its USAG. PPL should enter into a payment arrangement with a CLI customer only with the informed consent that the customer desires to enter into a payment arrangement rather than applying for CAP along with its arrearage forgiveness provisions. As the Commission has explained about obtaining the informed consent of a customer with respect to the return of low-income deposits, as part of obtaining this informed consent, PPL should explain to the customer how enrolling in CAP, and participating in arrearage forgiveness, would impact the customer's monthly bill relative to entering into a payment arrangement.

Q. PLEASE EXPLAIN WHY YOUR RECOMMENDATIONS ARE DUPLICATIVE OF EACH OTHER?

A. My recommendations above are duplicative of each other because experience in multiple programs documents that more effective program outreach is associated with making multiple "touches" with the potential participant population. Through adoption of the recommendations I advance above, PPL increases the number of touches with its Confirmed Low-Income customers, and does so in different, yet interdependent, circumstances. The recommendations involve PPL telling its Confirmed Low-Income customers: (1) enrollment in CAP is an alternative to having your service disconnected

for nonpayment; (2) enrollment in CAP is an alternative to entering into an unaffordable deferred payment arrangement; and (3) enrollment in CAP is an alternative to continuing to carry arrears (with the costs and stresses that those arrears impose). The multiple touches through adoption of these recommendations can reasonably be expected to increase CAP enrollment without need to adopt modifications to PPL underlying universal service program. As I have discussed throughout my testimony, this improved enrollment not only benefits the low-income customers who choose to enroll in CAP, but will also benefit the Company and all remaining ratepayers by reducing costs and enhancing revenues.

Part 4. Low-Income Exemptions from Cash Security Deposits.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I explain how and why PPL should modify its tariff, along with its internal procedures, to ensure that income-eligible customers are exempted from the demand for cash security deposits pursuant to statute and regulations. I also recommend that PPL be directed to comply with recent PUC decisions on how existing cash security deposits should be returned to low-income customers when such return is merited.

Q. DOES PPL APPEAR TO FULLY COMPLY WITH PUC REGULATIONS REGARDING THE EXEMPTION OF LOW-INCOME CUSTOMERS FROM CASH DEPOSIT REQUIREMENTS?

A. No. PPL addresses security deposits in its residential tariff, by stating that “The Company may require deposits or guarantees satisfactory to the Company as security for the

payment of bills for service to be provided by the Company before it commences or continues to supply service. The need for a deposit or guarantee is based on the credit and other risks of the applicant or customer."[56] The tariff goes on to state: "Deposits, plus accrued interest, may be held until a timely payment history is established, and will be refunded to a residential customer under the following conditions:. . .(d) When a customer is *confirmed to be eligible for a customer assistance program*."[57]

In addition, when PPL was asked for its policies and practices regarding deposit exemptions, it stated that "Customers can request a waiver for the security deposit by submitting household income documentation from the past 30 days or full past 12 months to a partner agency. Documentation requirements are the same for a new applicant or existing customer when requesting a security deposit waiver."[58]

Q. IS THE PPL TARIFF AND DEPOSIT RETURN PROCEDURE CONSISTENT WITH THE REGULATORY DEPOSIT EXEMPTION FOR LOW-INCOME CUSTOMERS?

A. No. While the PPL deposit tariff uses language from the PUC regulations in defining when it will return a customer cash security deposit,[59] it uses only *part* of the language

[56] PPL Electric Exhibit GEO-1, Page 19 of 662, Rule 2.D ("Security Deposits"). The tariff has additional language unrelated to the topic I discuss here.

[57] Id. (emphasis added).

[58] OCA-IV-20.

[59] PUC regulations require that: "Notwithstanding subsection (a), a public utility may not require a cash deposit from an applicant who is, based upon household income, confirmed to be eligible for a customer assistance program. An applicant is confirmed to be eligible for a customer assistance program by the public utility if the applicant provides income documents or other information attesting to his or her eligibility for state benefits based on household income

from the regulation. The portion of the regulation quoted creates a much stricter test for the exemption from a cash security deposit than the regulation as a whole creates. While the PUC regulation uses the phrase "confirmed to be eligible for a customer assistance program," the regulation goes on further to ***define*** what that phrase means, a definition which PPL chooses to leave out of its tariff. More specifically, the regulation states that "An applicant is confirmed to be eligible for a customer assistance program by the public utility if the applicant provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program." In addition, aside from being applicable to "applicants," the Commission has further extended this prohibition to existing customers as well.[60]

As written, the PPL tariff and practices are inconsistent with the regulatory exemption of low-income customers from deposits in at least the following ways:

- A customer need not be a participant in PPL's CAP in order to be exempt from a cash security deposit. The customer need only provide income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program. As discussed in detail above, for example, a customer might provide documentation of the

eligibility requirement that are consistent with those of the public utility's Customer Assistance Program." 52 Pa. Code § 56.32(e).

[60] 52 Pa. Code § 56.41(B)(4).

receipt of SNAP benefits to fulfill this requirement, without ever enrolling in PPL's CAP.

- A customer need not *apply* for CAP to be qualified for the deposit exemption. The receipt of LIHEAP, for example, would demonstrate eligibility for state benefits based on income eligibility requirements that are consistent with those of PPL's CAP.
- A customer should not need to *request* the exemption from, or return of, a cash security deposit, whether through the utility or through a third party "partner agency." PPL, for example, would know which customers have received LIHEAP benefits without need for the customer requesting a deposit exemption. Moreover, not all LIHEAP recipients are also CAP participants.
- A customer need not provide "income documents" pursuant to the regulation, let alone attested income documentation. Instead, the regulation is quite explicit in stating that a customer may provide "income documents *or other information*" (*e.g.*, documentation of SNAP eligibility).
- A program providing state benefits to a customer need not have income qualifications *identical* to CAP income eligibility. Again, the regulation is quite specific in saying that the information qualifying a customer for a deposit exemption need only demonstrate income eligibility "based on household income eligibility requirement that are *consistent with* those of the public utility's Customer Assistance Program." Unemployment compensation, for example, may not have income requirements that are identical to CAP, but that are certainly "consistent with" CAP. If a customer

provides "other information" demonstrating that they are participants in, or eligible for, public assistance programs (such as SNAP, Medicaid, reduced school lunch programs), they are entitled to have their cash security deposit waived (or refunded if already posted).

Q. WHAT DO YOU RECOMMEND?

A. I recommend that PPL should amend its tariff, and modify its implementing practices and procedures, to comply with the PUC regulation. It should strike the words "who is confirmed to be eligible for a customer assistance program" from its tariff. In the alternative, the tariff should read: "The Company shall not require an applicant or customer to provide a cash deposit when the customer provides income documents or other information that he or she is eligible for state benefits based upon household income eligibility requirements that are consistent with those of the Company's customer assistance program." The Company should modify all policies and practices to be consistent with this new tariff language. When seeking a deposit from an applicant or new customer, PPL should affirmatively solicit whether the applicant or new customer can provide such information.

In addition, I recommend that PPL refund any cash security deposit to a customer who is currently categorized as "Confirmed Low-Income." By definition, under the PUC's regulations, a Confirmed Low-Income customer is a customer who the Company has received information sufficient to give rise to a reasonable belief that the customer is low-income.

Finally, the Company, within three months after a final order in this proceeding, should undertake a review of all customers from whom the Company currently holds deposits to determine whether they qualify for the exemption, and to make necessary refunds. The Company should report the results of this review to BCS as well as to its Universal Service Advisory Group.

Q. DO YOU HAVE A SECOND CONCERN REGARDING THE EXEMPTION OF LOW-INCOME CUSTOMERS FROM PPL DEPOSIT DEMANDS?

A. PPL has provided a description of the process for how funds are returned to customers. According to the Company, when returning a security deposit, "The deposit is first applied as a credit on the account when the deposit is returned."[61] Moreover, if a customer is entitled to a deposit waiver, including for low-income customers, PPL states that if the current bill is past due, "apply the excess credit (security deposit refund) to the current bill." Only if there is a "remaining excess credit" will the customer be asked if they want the credit to remain to pay future bills or whether they want it returned to them.[62]

The problem arises because the Commission has explicitly held this procedure to be unlawful. In the April 4, 2024 decision regarding the Universal Service and Energy Conservation Plan (USECP) of Columbia Gas, the PUC considered whether Columbia Gas could apply an existing deposit against a low-income customer's outstanding arrears

[61] CAUSE-PA-III-12, Attachment 9.

[62] CAUSE-PA-X-15, Attachment 1.

before refunding the difference pursuant to statute and regulation. The PUC held that the Company could *not* do so, stating:

> Commission regulations also state that a public utility must "refund a deposit, along with any applicable interest, within 60 days upon determining that the customer or applicant from whom a deposit was collected is not subject to a deposit…." *See* 52 Pa. Code § 56.53(f). The regulations do not permit the public utility to apply a deposit to a delinquent account balance if it is determined the customer was not responsible for paying the deposit prior to accruing the balance.
>
> Accordingly, we direct Columbia to refund security deposits, with applicable interest, collected from customers who are income–eligible for CAP. Columbia may apply the security deposit to the account balance only with the customer's informed consent. As part of obtaining this informed consent, Columbia must explain to the customer how applying the security deposit to the account balance would impact the customer's monthly bill.[63]

While that decision related to Columbia Gas, the application of the legal principles to PPL would be the same.

Q. WHAT DO YOU RECOMMEND?

A. Just as the Commission has required other utilities to change their deposit refund practices and procedures, PPL should be directed to do the same.[64] A recognition that the

[63] Columbia Gas of Pennsylvania, Inc. Universal Service and Energy Conservation Plan for 2024 - 2028 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2023-3039487, Order, at 31 (April, 2024). (hereafter 2024 Columbia USECP Order). See also, Philadelphia Gas Works Universal Service and Energy Conservation Plan for 2023-2027 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2021-3029323, Order on Reconsideration, at 17 – 18 (also appropriate to refund deposits directly to customer without seeking customer consent on whether to refund or to credit deposit toward bill).

[64] Columbia Gas of Pennsylvania, Inc. Universal Service and Energy Conservation Plan for 2024 - 2028 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2023-3039487, Order, at 31 (April, 2024). See also, Philadelphia Gas Works Universal Service and Energy Conservation Plan for 2023-2027 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2021-3029323, Order on Reconsideration, at 17 – 18 (also appropriate to refund deposits directly to customer without seeking customer consent on whether to refund or to credit deposit toward bill).

Company's discretion on how to refund a cash security deposit is limited should be inserted into the PPL tariff.

Part 5. CAP Cost Recovery.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony I address two proposals advanced by PPL with respect to universal service cost recovery. First, PPL proposes to switch the recovery of internal wages and salaries for universal service employees from base rates to the Universal Service Rider (USR).[65] PPL has 14 employees that perform universal service tasks.[66] PPL proposes to switch $1.4 million from base rates to the USR.[67] Second, PPL proposes to eliminate the $100 credit offset to CAP credits and arrearage forgiveness credits. Both of these proposals should be denied.

Q. PLEASE EXPLAIN WHY PPL'S PROPOSAL TO SWITCH THE RECOVERY OF UNIVERSAL SERVICE EMPLOYEE WAGES AND SALARIES FROM BASE RATES TO THE USR SHOULD BE DENIED.

A. Recovering internal administrative expenses for universal service programs through a universal service rider continues to be inappropriate for Pennsylvania utilities. The purpose of recovering costs through the USR is to ensure that PPL will receive full recovery of costs which are subject to substantial variation. In the light of such cost

[65] PPL Statement 18, Direct Testimony of Lisa Norden, at page 10.

[66] Id., at 11.

[67] Id., at 13.

variability, cost recovery through the USR allows PPL to reconcile its actual costs against its cost recovery. PPL's internal universal service salaries and wages are not subject to the variability which justifies their collection through the USR in order to provide such a reconciliation. When asked for the wages and salaries that would have been collected through the USR had such a policy been in effect for the current fiscal year and the past three fiscal years, PPL reported that the costs recovered through the Rider would have been very subject to very little variability: (1) $1,254,248 in 2022 – 2023; (2) $1,266,316 in 2023 - 2024; and (3) $1,346,555 in 2024 -2025.[68]

Q. DOES PPL PROPOSE TO INCREASE ITS SPENDING ON UNIVERSAL SERVICE WAGES AND SALARIES IN THE FUTURE?

A. Yes. PPL proposes to increase its wages and salaries to be recovered from ratepayers by 9% for the period ending June 2028 (to a total of $1.463 million) and by an additional 4% for the period ending June 2029 (to a total of $1.520 million).[69] This proposed increase, however, is not a reason to change a decades-long policy of requiring internal universal service administrative expenses to be recovered through base rates. Just because an expense is labelled a "universal service" expense does not mean that it should be allowed cost recovery without review, as would be the case if those administrative expenses are collected, subject only to a reconciliation, through the USR. As recently as the December 4, 2025 Commission decision in the Columbia Gas rate case, the Commission decided that expenditures by Columbia Gas on its "Energy Assistance Team" should be collected

[68] OCA-XI-1.

[69] OCA-XI-2.

through base rates rather than through the Company's universal service rider.[70] As I&E noted in that case, shifting the recovery of Columbia's proposed [Energy Assistance Team] costs from the Company's base rates to its Rider USP provides Columbia with a guaranteed recovery of EAT labor costs and eliminates the Commission's authority to review the reasonableness and prudency of these costs.[71]

The Company's proposal also gives PPL carte blanche authority to define what wages and salaries are devoted to "universal service" tasks. The breadth of the scope of tasks which PPL wishes to include as a "universal service" task is evidenced in the Direct Testimony of PPL witness Norden. She asserts that tasks that would be covered by the wages and salaries which PPL seeks to recover through the USR include conducting customer outreach, responding to customer inquiries, and "working with Information Technology ("IT") personnel to update the Company's IT systems to incorporate regulatory requirements."[72] The tasks covered by these internal wages and salaries, Witness Norden explains, also include "support[ing] daily/weekly account level work associated with LIHEAP."[73]

Tasks involving responding to customer inquiries, updating the Company's IT system, and supporting daily/weekly account level work associated with LIHEAP may all be

[70] Pennsylvania PUC vs. Columbia Gas of Pennsylvania, Docket R-2025-3053499, Opinion and Order, at 167 (December 4, 2025).

[71] Id., at 166.

[72] PPL Statement 18, at 10.

[73] Id., at 11.

important tasks undertaken by Company personnel. They are not, however, universal service costs that should be recovered through the USR. The USR is not a mechanism for PPL to use to recover costs imposed by federal and state agencies. Nor is the USR intended to be the catch-all through which the Company is to recover any cost which it chooses to define as a "universal service" administrative cost, including, for example, daily/weekly account level work regarding LIHEAP.

Finally, moving recovery of internal administrative costs from base rates to the USR eliminates any matching of offsetting cost reductions associated with those administrative costs. An increase in internal universal service program staffing, for example, could reasonably be associated with increased participation in the Company's CAP and/or Low-Income Usage Reduction Program (LIURP). In turn, that increased enrollment can be expected to result in enhanced revenues, as well as reduced credit and collection expenses, reduced bad debt, and reduced working capital expense. When the internal administrative expenses are recovered through base rates in a rate proceeding, the impact on ratepayers is the net impact of matching the increased internal administrative expenses against the decreased expenses in other areas of Company operations and enhanced revenues through improved collections.

What PPL's proposal would do, however, is to impose the increased burden on ratepayers of increased Company spending on internal universal administrative costs while denying ratepayers the benefits accruing from those increased expenditures. PPL seeks to keep both sides of the equation for itself: (1) collecting any increased spending from ratepayers; while at the same time (2) retaining any increased savings for itself. Instead of allowing PPL to recover its internal administrative costs as a single-item cost recovery

through the USR, the Commission should, as it did just this month in the Columbia Gas rate case, instead continue to require the Company to balance the impacts of any single expenditure item on *total* revenues and expenses such that ratepayers won't be over-charged.

Based on the discussion above, I conclude that PPL's proposal to move internal administrative wages and salaries out of base rates to instead be collected through the USR should be denied.

Q. HAVE YOU REVIEWED PPL'S PROPOSAL TO ELIMINATE THE EXISTING $100 OFFSET TO CAP CREDITS AND ARREARAGE FORGIVENESS CREDITS?

A. Yes. PPL witness Norden proposes to eliminate the existing $100 credit provided in the Company's tariffs to prevent the double-collection of costs such as working capital and bad debt. Without this credit, PPL will recover these costs twice: once in base rates and again through the USR. The Company's proposal to eliminate this credit should be denied.

Q. HAS THE COMPANY CARRIED ITS BURDEN OF PROOF TO DEMONSTRATE THAT THE OFFSET IS NOT NECESSARY TO PREVENT THE DOUBLE COLLECTION OF COSTS?

A. No. Remember that in proposing to eliminate the existing $100 offset, what PPL witness is effectively doing is proposing a *new* offset equal to $0. PPL has not carried its burden

of proof to demonstrate that an offset of $0 is appropriate. It is important to remember that PPL bears the burden of proof to justify its new offset proposal.[74]

There are inherent contradictions in the Company's stated justification for its proposed elimination of the $100 credit. According to Company witness Norden, "PPL Electric's proposal to eliminate this CAP recovery offset should be approved because it more appropriately reflects how the Company recovers its bad debt expense."[75] Her sole substantive basis for eliminating the credit is based on a brief discussion of bad debt.[76] I will thus focus my discussion on a review of bad debt.

Even the Company concedes, however, that the offset which it proposes to eliminate is not related exclusively to bad debt. When asked to identify what portion of the offset is attributable to bad debt, to working capital, to credit and collection costs, or to other cost

[74] Customer Assistance Programs: Funding Levels and Cost Recovery Mechanisms, Final Investigatory Order, at 38 - 39 (October 19,2006). ("Regarding arrearage forgiveness costs, it is not possible to make a definitive ruling as to the entire amount of these costs. There is some merit in reasoning that arrearage forgiveness amounts should not be recovered separately because these are amounts that, but for the existence of the CAP program, would be included within the utility's claim for uncollectible expenses. *The law requires "full recovery" of CAP costs, but not "double recovery."* At the same time, utilities should have the opportunity to demonstrate when they seek to establish a surcharge that arrearage forgiveness costs are not completely covered by uncollectible expenses. *The utilities should bear the burden of proving that allowing recovery of their claim for arrearage forgiveness costs will not give them double-recovery of these costs*.") (emphasis added).

[75] PPL Statement 18, at 14.

[76] Id., at 14 – 15. ("Specifically, when non-CAP customers fail to pay their bills, that bad debt expense is included in the Company's normalized claim for bad debt expense in a base rate case. When CAP customers have balances in arrears written off due to their participation in the program, PPL Electric recovers the written-off balances with other USECP costs through the USR. The Company does not include projections of bad debt expense from CAP customers in its base rates.")

attributes, PPL conceded that "the $100 universal service cost offset is not allocated to bad debt, working capital, credit and collection costs, or any other specific category."[77] Moreover, while the reasoning advanced by Ms. Norden in support of her proposal to eliminate the offset relates only to bad debt, in response to discovery, she admits that "the $100 credit is not used for bad debt expenses."[78]

When asked to identify the allocation of the offset between CAP credits and CAP arrearage forgiveness, she again acknowledged that there was no such allocation.[79] In fact, the offset which Ms. Norden proposes to eliminate has nothing to do with whether bad debt decreases as a result of CAP enrollment (*i.e.*, whether there is a "savings"). The offset is instead designed to prevent a double-recovery of costs.

Q. HAS THE COMMISSION RECOGNIZED THE POTENTIAL, IF NOT THE LIKELIHOOD, OF THE DOUBLE RECOVERY OF COSTS WITHOUT INCLUDING A UNIVERSAL COST OFFSET?

A. Yes.[80] Note that the Commission made the same distinction I now make, but which PPL witness Norden ignores. The distinction is between preventing the "double-recovery" of bad debt on the one hand, and accounting for reductions in bad debt (*i.e.*, "savings") on

---

[77] OCA-XI-5.

[78] OCA-XI-13.

[79] OCA-XI-6.

[80] Customer Assistance Programs: Funding Levels and Cost Recovery Mechanisms, Final Investigatory Order, at 25 (October 19,2006). ("we believe that the issue of savings resulting from CAPs should be addressed on a case-by-case basis when utilities establish their surcharges. The Commission will make a decision regarding CAP savings based upon the evidence in each case. We will not adopt a formula for cost savings.")

the other hand. The $100 credit which PPL now proposes to eliminate is not related to a projected reduction in bad debt expense and is thus not related to any estimate of "savings." The $100 offset is instead intended to "offset" the potential for the double recovery of costs.

Q. IS A UNIVERSAL SERVICE COST OFFSET COMMON IN PENNSYLVANIA UTILITY TARIFFS RELATING TO THE RECOVERY OF UNIVERSAL SERVICE COSTS THROUGH A RECONCILABLE SURCHARGE?

A. Yes. While the amount and structure of the offsets vary between Pennsylvania utilities, the tariffs setting forth universal service riders for virtually every utility operating a universal service program incorporates such an offset. Different energy (gas and electric) utilities have different cost recovery for similar discount programs. Of the PUC-regulated energy utilities, eleven of the twelve gas and electric utilities in Pennsylvania have offsets to one degree or another.

Universal Service Cost Offsets: Pennsylvania Gas and Electric Utilities (2025)

Natural gas utility	Offset amount	Electric utility	Offset amount
Columbia Gas	7.5%	Duquesne	10.43%
NFG	$35/participant	Met Ed	15%
PECO (gas)	27%	PECO (electric)	27%
UGI (gas)	9.2%	Penelec	14.7%
Peoples Gas	4.7%	PennPower	14.3%
		West Penn Power	13.5%

Witness Norden conceded that she was "not aware of the tariff and offset for other [electric distribution companies] or [natural gas companies]."[81]

Even though not regulated by the state PUC, the Philadelphia Water Department, a municipal water utility also adopted this principle applied to its arrearage forgiveness. The Philadelphia Water Department is rate regulated by the Philadelphia Water, Sewer, and Storm Water Rate Board ("Rate Board"). PWD offers an Arrearage Forgiveness Program. In litigating the cost recovery for that AFP, PWD (through its witness Black and Veatch) stated that: "The proposed AF-Factor is intended to allow the Water Department the ability to recover a ***portion*** of the costs (in dollars) of providing arrearage forgiveness to eligible TAP Customers." (emphasis added). Black and Veatch continued:

> At the time of the annual TAP-R reconciliation, [arrearage forgiveness] will be determined based upon the actual amount of arrears forgiven in accordance with Section 206.7 of the Water Department's regulations. The total amount of arrearage forgiveness included in determining the TAP-R surcharge rates will be adjusted by applying a proposed TAP Lost Revenue Adjustment Factor of 9%." The "lost revenue adjustment factor of 9%" is an acknowledgement of the fact that PWD would fail to collect 91% of the billed revenues included in the pre-program arrears even in the absence of the TAP arrearage forgiveness.

Ultimately, the Rate Board decided to exclude even the 9% recovery. The Hearing Officer decision, subsequently adopted by the Rate Board, found:

> I find that the Public Advocate has established that PWD's proposal to recover the TAP arrearage forgiveness costs through the TAP-R rider may overcharge customers. PWD is correct when it states (Main Brief at 56) that collection factors are "used to project future revenues from billings so as to provide sufficient revenues to support the utility. Collection factors are not intended to collect on prior unpaid bills or outstanding arrears." It is not

[81] OCA-XI-10.

> correct, however, when it asserts that without the TAP-R Rider, it would have no way to recover past due amounts associated with TAP customers. *The revenue requirement associated with these customers are already reflected in the cost of service, and thus base rates.*
>
> In concept, the PWD proposal to recover a portion of each dollar of arrearage forgiveness provided by the Department to eligible TAP customers through the TAP-R rider is appropriate. It failed, however, to rebut the Public Advocate's showing that the collection factors used in this proceeding to project anticipated revenue already 'take into account payments (and lack of payments) associated with accounts of both TAP and non-TAP customers.'[82]

Q. WHAT ABOUT THE PGW DECISION WHICH PPL WITNESS NORDEN RELIES UPON IN HER TESTIMONY?

A. As I note above, eleven of the twelve gas and electric utilities in Pennsylvania have universal service offsets to one degree or another. As noted by PPL witness Norden, PGW is the exception. The treatment of PGW, however, is not a good analogy for how PPL should be treated. As PGW stated time and again in its rate case, as a municipal utility, it operates on a cash flow basis. It has no investors and generates no "profit" (*i.e.*, return on equity) for those investors. PPL clearly is in a different situation as an investor-owned utility.

Q. GIVEN YOUR DISCUSSION ABOVE, PLEASE EXPLAIN THE BASIS FOR YOUR FINDING THAT PPL WILL DOUBLE-RECOVER COSTS IN THE ABSENCE OF A UNIVERSAL SERVICE COST OFFSET?

A. I first begin with the recognition that, without the existing offset, PPL collects 100% of its CAP credits and 100% of its CAP arrearage forgiveness credits through its USR. The

[82] Hearing Officer Report, at page 52 (May 18, 2021).

purpose of the reconcilable nature of the USR is to ensure that PPL collects all of its CAP credits and CAP arrearage forgiveness credits through the Rider.

The next question, therefore, is that given that 100% of the CAP credits and 100% of the CAP arrearage forgiveness credits are collected through the Rider, has some portion of those CAP credits and CAP arrearage forgiveness credits *previously* been included in the revenue requirement underlying base rates at a point in time before the customer enrolled in CAP. If the answer to that question is "yes," without providing an offset, PPL will collect that portion of CAP credits and CAP arrearage forgiveness credits twice: once through the revenue requirement underlying base rates and again through the universal service Rider.

What is *not* the question is whether CAP causes a reduction in write-offs, *i.e.*, whether there is a savings. That is simply not the issue. The *only* question is whether some portion of CAP credits and CAP arrearage forgiveness credits has been included in the revenue requirement underlying base rates.

The answer to that question is "yes." Accordingly, without adopting an offset (which has been adopted by 11 of Pennsylvania's 12 utilities) (with the sole exception being the utility which is a cash flow utility), there will be a double recovery of those costs.

Q. PLEASE PROVIDE THE DATA WHICH IDENTIFIES THE AMOUNT OF ARREARS WHICH LOW-INCOME CUSTOMERS BRING INTO CAP WHEN THEY FIRST ENROLL IN CAP.

A. OCA Exhibit RDC-2 presents the pre-program arrears that new enrollees bring into CAP at the time they enroll in CAP.[83] The Company's data demonstrates that between January 2023 and August 2025, PPL newly enrolled 70,562 CAP participants. Of these new enrollees, 48,630 (69%) brought preprogram arrears into CAP.

According to PPL's universal service filings with BCS,[84] in 2022, PPL provided $25,033,037 in arrearage forgiveness credits;[85] in 2023, PPL provided $18,644,050 in arrearage forgiveness credits;[86] and in 2024, PPL provided $27,511,596 in arrearage forgiveness credits.[87] Remember, that those credits are flowing to the vast majority of CAP participants. As I note above, from January 2021 through August 2025, seven-of-ten customers newly enrolling in CAP brough a pre-existing arrears with them into the program. According to BCS, the average annual arrearage forgiveness granted by PPL was $344 in 2021, $371 in 2022, and $261 in 2023. BCS has not yet published 2024 average annual arrearage forgiveness numbers.

Given PPL witness Norden's proposal to adopt an offset of $0, the question with respect to arrearage forgiveness, therefore, is, whether it is reasonable to find that ***none*** of those pre-existing arrears being brought into CAP were included in the Company's revenue requirement prior to the customer enrolling in CAP.

---

[83] OCA-XI-7. PPL defines a "new enrollee" as a customer who has not previously been enrolled in CAP. Id.

[84] PPL acknowledges that the PPL data published by BCS in the annual BCS report is accurate. OCA-XI-22.

[85] CAUSE-PA-I-29, Attachment 1.

[86] Id., Attachment 2.

[87] Id., Attachment 3.

Before addressing that question, I will first consider the data underlying CAP credits since the same analysis will appertain to both CAP credits and arrearage forgiveness credits.

Q. PLEASE EXPLAIN THE DATA YOU HAVE REVIEWED REGARDING CAP CREDITS.

A. I again begin with PPL's universal service filings with BCS. According to the PPL data filed with BCS, PPL provided $93,156,915 in CAP credits in 2024;[88] $105,772,638 in CAP credits in 2023;[89] and $83,472,178 in CAP credits in 2022.[90] On a per participant basis, according to the BCS annual report, PPL provided an average annual CAP credit of $905 in 2021; $1,237 in 2022; and $1,483 in 2023. BCS has not published average CAP credit numbers yet for 2024.

The question with respect to CAP credits is the same as with arrearage forgiveness. Given PPL witness Norden's proposal to adopt a universal service offset of $0, is it reasonable to find that *none* of the bills for current service were included in revenue requirement prior to the customer enrolling in CAP? In considering that question, remember that from January 2021 through August 2025, 70% of the customers who enrolled in CAP enrolled in CAP with a pre-existing arrears on their account at the time of enrollment.

[88] Id., Attachment 3.

[89] Id., Attachment 2.

[90] Id., Attachment 1.

Q. WHAT DO YOU KNOW ABOUT THE AGING OF ARREARS FOR LOW-INCOME CUSTOMERS NOT PARTICIPATING IN CAP?

A. Not only are substantial numbers of low-income customers in arrears, but there are substantial numbers of low-income customers with very old arrears. Exhibit RDC-3 presents monthly data on the aging of arrears for Confirmed Low-Income customers for the months of January 2023 through September 2025. Part 1 of Exhibit RDC-3 presents the aging of arrears by number of accounts in arrears, while part 2 of Exhibit RDC-3 presents the aging of arrears in terms of dollars of arrears. Note, for example, that in January, between 19,913 (January 2023) and 26,315 (January 2024) PPL low-income customers had a 180-day balance on their PPL bills. Similarly, in April, between 7,424 low-income accounts (April 2025) and 9,436 low-income accounts (April 2024) carried a 36-day balance. In July, between 28,368 (July 2025) and 46,249 (July 2023) low-income accounts were in arrears for 120-days.[91]

A similar result –that of substantial and ongoing very old low-income arrears—can be seen in the data on the aging of arrears by dollars. In April 2023, $35.984 million of low-income arrears were 120 days old or older, while in April 2024, $44.692 million were that old. In January 2023, $27.300 million in arrears were 120 days or older, while in January 2024, $46.081 million of low-income arrears were that old.

Q. HOW IS THIS DATA RELEVANT TO THE UNIVERSAL SERVICE OFFSET WHICH PPL PROPOSES TO SET AT $0?

[91] The numbers of accounts by aging bucket are not additive. An account owing both a 30 day arrears and a 60 day arrears would be counted in both groups.

A. Setting the cost offset at $0, as proposed by PPL witness Norden (when she proposes to eliminate any offset) would necessarily assume that even though 70% of new CAP enrollees since 2023 enrolled in CAP with a pre-existing arrears, *none* of those arrears resulted in a contribution to PPL's revenue requirement in the form of bad debt prior to the time customers enrolled in CAP. That is a clearly erroneous assumption.

OCA asked the Company to provide a complete copy of any and all internal Company policies regarding the percentage of bill, or dollar amount, that will be reserved for write-offs or uncollectibles based on either (1) the size of arrears in dollars; or (2) the age of arrears in months.[92] According to the Company's response, its write-off percentage increases as the age of the arrears increases. Moreover, the PPL response stated:

> On a monthly basis, Revenue Accounting retrieves the *past three years* of A/R balances and write-offs to calculate the percentages to be used in the A/R reserve calculation. The percentages used in the A/R reserve calculation are updated monthly. *Three years of data is utilized* to capture the most recent economic trends and volatility.[93]

The example that PPL provided shows the calculation of residential write-offs as shown in Table 10. The example shows both that the write-off increases as the age of the arrears increases and that the write-off percentages based on "three years of data" are substantial.

[92] OCA-XI-8.

[93] Id., Attachment 1 (emphasis added).

Table 14. Example of Calculation of Residential Write-off Percentages by Age of Arrears[94]

	Current	30 – 59	60 - 89	90 - 119	120 - 359	360+
W/O percentages	3.88%	9.73%	12.165%	14.246%	15.346%	/1/

/a/ "As part of the monthly process, the Revenue Accounting calculates the percentage of residential A/R over 360 days that was not paid or credited through OnTrack over a one-year look back period to determine the write-off percentage for over 360 day residential outstanding receivables."

As I noted above, the issue presented by the CAP offset is *not* whether CAP results in a reduction in the dollar amount or age of low-income arrears. Whether such a reduction occurs is not relevant to whether there should be an offset or what the level of that offset should be. The *only* issue presented by the offset is whether, prior to enrolling in CAP, some portion of the bills of low-income customers who will later enroll in CAP were included in revenue requirement. The data above clearly indicates that is the case.

Q. WHAT DO YOU KNOW ABOUT THE DISCONNECTIONS OF LOW-INCOME CUSTOMERS AND THE ARREARS AT THE TIME OF DISCONNECTION?

A. From January 2023 through September 2025, PPL disconnected a substantial number of low-income accounts. Exhibit RDC-4 documents that in that time period, PPL reports having disconnected 113,048 low-income accounts. Those accounts carried an aggregate of $155,591,002 in arrears at the time of disconnection, an average arrears of $1,376 at the time of disconnection. As I establish above, by 2023, nearly one-in-three (29%) of CLI customers who had service disconnected for nonpayment did not subsequently have their service reconnected.[95]

[94] Id.

[95] See, Table 8, supra.

The rate of disconnections for low-income customers, followed by the low rate of reconnections, relates to the issue of whether the Company's proposal to establish an offset of $0 is reasonable. The Company's proposal to set an offset of $0 assumes that the Company would have disconnected more than 113,000 accounts, owing nearly $156 million at the time of disconnection, while having that action results in no impact on the extent to which uncollectibles would have been included in PPL rates attributable to low-income customers. Remember that the Company's estimate of future uncollectibles is based on three years of historical data.

The relationship between the disconnection of service for nonpayment and uncollectibles is generally accepted, including being accepted by PPL. The PUC's BCS states that "write-offs are the last action on final-billed overdue accounts."[96] When asked, the Company specifically stated that it agreed with that BCS statement.[97] Indeed, while PPL states that it does not "include specific amounts" attributable to shutoffs and final bills in its projection of future write-offs,[98] the percentage of write-offs "is calculated based on actual write-offs which do include a number of final billed overdue accounts and arrears. . ."[99] Unless the statement that "actual write-offs. . .do include a number of final billed overdue accounts and arrears" excludes the 113,000 of low-income accounts that were disconnected for nonpayment, while owing $156 million in arrears, with 30% of those

[96] 2023 BCS annual report, at page 41.

[97] OCA-XI-18.

[98] OCA-XI-15. See also, EJA-II-5.

[99] OCA-XI-20.

accounts never being reconnected, a substantial dollar amount of low-income arrears for customers who will in the future become CAP participants will have already been included in PPL rates. To the extent that those dollars become future CAP credits and/or arrearage forgiveness credits, they will be double-collected if 100% of those credits are recovered through the USR with the application of a $0 offset.

Q. WHAT DO YOU CONCLUDE?

A. PPL's proposal to establish a universal service offset of $0 is unreasonable. That proposal should be denied.

Part 6. The Reasonableness of Using Performance-Based Ratemaking to Improve Service to Low-Income Customers

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I build on my discussion above demonstrating how PPL has failed to adequately address the impacts which increasing rates have on low- and moderate-income customers. As the Company's costs increase, PPL will need to seek higher rates to recover those costs. Accordingly, failing to address its affordability issues will have the impact of increasing rates which the Company will seek to impose on all customers. I propose that the Commission adopt a Performance-Based Ratemaking system to use to address this problem. Using performance metrics to incentivize particular desired behavior has long been accepted by PPL as a reasonable management technique.[100]

[100] EJA-III-17.

Q. PLEASE EXPLAIN THE NATURE AND ROLE OF CREATING "OUTCOME" METRICS BY WHICH TO MEASURE PPL PERFORMANCE ON AFFORDABILITY OUTCOMES.

A. I recommend that the Commission adopt a series of outcome metrics to measure the Company's performance with respect to its credit and collection outcomes in particular. Through these metrics, rather than focusing on what PPL is *doing* (*i.e.*, its activities), these metrics focus on an assessment of what the Company is *accomplishing* (*i.e.*, its outcomes, or results). Measuring "outcomes" is to be distinguished from measuring "activities." An "activity" is defined as the work performed that directly produces products or services. The "outcome" of a program is the accomplishment of program objectives attributable to program activities.

Performance measurement has been growing now for more than 30 years in both public and private programs. Perhaps the best-known application is the federal Government Performance and Results Act of 1993 (GRPA). GPRA was designed to address the same conceptual issues that PPL must address for its credit and collection activities: to grapple with how to best improve effectiveness and service quality while limiting costs. It shifts the focus from program activities to program results.

According to GPRA, "[t]he key concepts of this performance-based management are the need to define clear agency missions, set results-oriented goals, measure progress toward achievement of those goals, and use performance information to help make decisions and

strengthen accountability."[101] Utilities face the same sort of problems in measuring efficiency as do federal agencies. As James Hinchman, Acting Comptroller General observed when GPRA was first enacted, "[m]any agencies have a difficult time moving from measuring program activities to establishing results-oriented goals and performance measures."[102] Within this construct, I will focus *not* on measuring what PPL is or is not *doing*. I will instead focus on what PPL is or is not *accomplishing*.

Q. WHAT IS THE FIRST SPECIFIC METRIC THAT YOU RECOMMEND FOR PPL?

A. I recommend that the first outcome metric to be used should be an increase in the average monthly enrollment of PPL low-income customers in OnTrack. The Bureau of Consumer Services uses two different metrics to measure CAP participation. The first metric is "CAP Participation Rate." According to BCS, the CAP Participation Rate is a snap shot of CAP participation. It divides the CAP participation as of December 31 of each year by the number of Confirmed Low-Income customers of the utility.[103] The second metric is the Monthly Average CAP Participation. According to BCS, "the average number of CAP customers can provide a more accurate count of customers who participated in CAP during a calendar year."[104] In addition to providing a "more accurate count" (as BCS

[101] Hinchman (June 1997). Managing for Results: The Statutory Framework for Improving Federal Management and Effectiveness, at 1, GAO /T-GGD/AIMD-97-144, available at https://www.govinfo.gov/content/pkg/GAOREPORTS-T-GGD-AIMD-97-144/pdf/GAOREPORTS-T-GGD-AIMD-97-144.pdf

[102] Id., at 1.

[103] See, BCS 2023 Annual Report, at page 56.

[104] Id.

notes), using the Monthly Average CAP Participation allows and encourages PPL to increase its CAP participation by retaining CAP participants on the program once enrolled. The intended outcome is not to experience a short-term year-end increase in CAP enrollment, but is rather to increase CAP enrollment and to maintain that increase by allowing customers to successfully participate in the program.

By adopting this metric, the Company is required to take ownership in identifying the steps that are required to provide outreach to identify its low-income customers and to help those customers negotiate the processes required to enroll in the available assistance programs. It would be unreasonable to expect a 100% enrollment rate for identified low-income customers. There will always exist some sub-population of low-income customers who choose not to enroll in such programs. Establishing an outcome performance metric requires PPL to determine what barriers exist to enrollment. Rather than seeking to micro-manage the reasonableness of each action which PPL decides to adopt to address the lack of enrollment, use of an outcome performance metric reviews the *results* of the PPL activities. If those activities are not working, it remains within the province of the Company to determine what modifications need to be made in order to achieve the results (or outcomes).

More specifically, I recommend that the outcome measures to be adopted document a continuing improvement in the enrollment of low-income customers in CAP. The metric I recommend is for PPL to increase enrollment in OnTrack by five percent (5%) in program year one (1) compared to the prior program year of October 1, 2024-September 30, 2025 ("Base Year"); three percent (3%) in year two (2) compared to the prior program year of October 1, 2025-September 30, 2026; and two percent (2%) in year three

(3) compared to the prior program year of October 1, 2026-September 30, 2027. This recommendation would increase enrollment by ten percent (10%) over a three (3)-year period. These improvement metrics mirror the metrics recently adopted by the New Jersey Board of Public Utilities for that state's natural gas and electric utilities.

Q. WHAT IS THE SECOND OUTCOME METRIC YOU PROPOSE?

A. The second outcome metric I recommend involves a suite of four interrelated outcomes. One primary purpose of offering low-income assistance, identifying the customers who would qualify for that assistance, and then enrolling those identified low-income customers in the assistance programs for which they are eligible, is to improve the payment patterns of those low-income customers as bills are made affordable. While improved payment patterns are not the *exclusive* purpose of low-income bill payment assistance, they are *one* of the primary purposes of low-income assistance and protections. Given this purpose, the following outcome metrics are recommended by which to measure PPL collections performance:

- A reduction by 10% each year for three years in the absolute number of defaulted residential deferred payment arrangements. For purposes of this outcome, a "defaulted payment arrangement" is a payment arrangement from which the customer has been removed for nonpayment prior to completion of all of the payments required under the payment arrangement to retire the arrears made subject to the arrangement;

- A reduction by 10% each year for three years in the absolute number of residential nonpayment disconnections;

- A reduction by 10% each year for three years in the number of residential customers who have, since April 1 of a given year, had their service disconnected for nonpayment and who, as of December 1 of that year, remain in their home with service not yet reconnected.

- A reduction by 10% each year for three years in the money at-risk to the Company. The total money owed and at-risk is the sum of money owed by customers in arrears and the money owed by customers on deferred payment agreements.

Q. WHY IS IT IMPORTANT TO CONSIDER EACH OF THESE METRICS IN COMBINATION WITH EACH OTHER?

A. It is important to consider the metrics I identify above in combination with each other in order to avoid incentivizing unwanted behavior. For example, if one only considered the rate of involuntary disconnections for nonpayment, PPL could minimize the disconnections while simply allowing arrears to accrue to ever increasing levels. In contrast, PPL could minimize the level of arrears by disconnecting a high number of accounts when past-due balances were low. Similarly, the extent to which disconnections are avoided by having PPL enter into deferred payment agreements is only meaningful if those payment arrangements do not frequently result in a default. If payment arrangements default, they result merely in postponing collection activity, not avoiding such activity. Accordingly, in choosing which metrics to measure, it is important to consider how each metric interacts with, and affects, each other metric.

Q. PLEASE EXPLAIN THE RATIONALE BEHIND MEASURING THESE "PAYMENT PERFORMANCE" METRICS FROM A LOW-INCOME PERSPECTIVE.

A. Offering low-income bill payment assistance is intended to improve the affordability of PPL bills to low-income customers. Unless one adopts, which I do not, the belief that low-income customers systematically fail to make timely and complete payments because they choose not to do so, even if capable of doing so, improving the affordability of PPL

bills to low-income customers should improve the bill payment patterns of the low-income customers that have been assisted. The low-income assistance addresses the payment difficulties of low-income customers who do not pay because they cannot afford to pay. As I note above, the metrics I propose in this section do not involve a micro-management of the activities which PPL chooses to pursue. To maximize the effectiveness of its low-income assistance in improving payment patterns, for example, PPL could choose to target its outreach and enrollment to those low-income customers with the greatest payment difficulties with which to begin. PPL may choose to target its outreach and enrollment to those customers with the lowest incomes (and thus the greatest unaffordability problems). It may choose to couple payment assistance with energy efficiency investments. It may choose to couple outreach on utility-funded assistance with outreach on LIHEAP assistance. In any case, the management decisions regarding what PPL will *do* should be left to the Company, with regulatory oversight limited to what those decisions are *accomplishing*. If PPL decisions on activities are not generating the desired outcomes, it is left to the Company to decide what needs to be modified.

Q. PLEASE RESPOND TO THE OBSERVATION THAT THESE METRICS ARE NOT METRICS OVER WHICH PPL EXERCISES DIRECT CONTROL.

A. I agree that these metrics are not metrics over which PPL exercises direct control. That does not, however, mean that they are metrics over which PPL has no influence. Outcome measurements are not metrics by which to measure factors over which an entity has *direct* control. They are instead intended to establish quantifiable objectives which the Company strives to achieve. As I note above, the purpose of using outcome metrics is

to define clear agency missions, set results-oriented goals, measure progress toward achievement of those goals, and use performance information to help make decisions and strengthen accountability.

Q. WHAT SPECIFIC FINANCIAL IMPACT DO YOU PROPOSE BE IMPOSED SHOULD THE ABOVE PERFORMANCE METRICS NOT BE ACHIEVED?

A. Failure to achieve the proposed collection outcomes shall result in sanctions determined as follows: (1) a dollar amount equivalent to a 15 basis point ROE reduction for noncompliance with a single improvement goal; (2) a dollar amount equivalent to a 25 basis point ROE reduction, or proportionately, for noncompliance with multiple improvement goals. The sanction does not result in a change to PPL's authorized ROE but is calculated to produce a revenue reduction that is equivalent to the specified ROE reduction. Any ROE penalty, as specified herein, would be calculated for the calendar year following a noncompliance event, whereby the specified ROE penalty will be applied to the equity rate base as approved in PPL's most recent base rate case and grossed-up for income taxes (revenue requirement). Any resulting penalty amount will be deferred as a regulatory liability to be refunded to customers in PPL's next base rate case.

Q. WHY DO YOU PROVIDE NO POSITIVE INCENTIVE SHOULD PPL DO AN EXEMPLARY JOB OF ACHIEVING THE OBJECTIVES YOU IDENTIFY?

A. PPL already has a mechanism to use to seek a positive financial acknowledgement in the event the Company does an exemplary job of achieving the outcomes I have identified. It is not unusual for Pennsylvania utilities to seek an upward adjustment to their return on equity upon a showing of exemplary management. Such an approach provides investors with a financial benefit for exemplary management performance. In addition, the

Company provides incentive compensation for individual employees for achieving corporate goals. Accordingly, I propose no additional financial remuneration for meeting the outcome objectives I recommend. The impact of the recommendation I make is not to impose a one-way adjustment. Instead, the recommendation I made is needed to balance the potential for additional financial gain that already exist.

Q. PLEASE EXPLAIN WHY THE PROPOSED PERFORMANCE-BASED OUTCOMES METRICS SHOULD BE ADOPTED IN THIS RATE PROCEEDING.

A. Achieving the outcome metrics I have identified above has a variety of impacts on the utility. First, achieving the outcome metrics has an impact on PPL's cost-of-service. For example, to the extent that the needs of low-income customers are met (as measured by the recommended metrics):

- The number of business risks facing the Company is reduced. The risk of a spike in low-income nonpayment attributable to an increase in fuel prices is reduced. Similarly the risk of a spike in low-income nonpayment attributable to extreme weather, whether those extremes involve cold weather or hot weather, is also reduced. Reducing these risks helps enhance revenue as well as helps minimize costs.

- The rate of disconnections are reduced. Reducing the rate of disconnections not only reduces the costs associated with collection activities, but helps to preserve future revenue streams from customers who are not removed from the system.

- Both the dollar level of arrears and the age of arrears are reduced. This reduction will, by definition, reduce costs to the Company. Whether fewer dollars are in arrears, or whether dollars remain unpaid for fewer days, the Company will experience a reduced working capital requirement.

Second, by adequately meeting the needs of low-income customers, the Company improves the efficiency of its customer service operations. For example, by reducing the

collection resources that are directed toward trying to collect outstanding balances from customers who are *not* able to pay, reducing the rate of low-income nonpayment disconnections allows PPL to redirect those collection resources toward customers that *are* able to pay (because they can afford to pay). Moreover, the degree to which deferred payment arrangements are successfully completed is enhanced (thus enhancing revenue and decreasing expenses).

Third, the combined impacts of reduced costs, enhanced revenues, reduced risks, and more efficient operations, can all be viewed as an opportunity cost to the Company. To the extent that the Company reduces its costs and enhances its revenues, it earns a return that would have been foregone in the absence of an adequate treatment of low-income customers.

Part 7. The Need to Modify CAP Cost Responsibility for Large Load Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I explain why PPL's proposed large load tariff should include a substantial commitment of funds to offset the increased universal service costs that will be caused by the introduction of large load customers. My recommendation for the implementation of a two-step non-bypassable system benefits charge to be imposed on large load customers is not in contravention of, or in lieu of, any additional recommendation made in this proceeding by OCA witness Matthew Hoyt with respect to the implications of large load customers or the treatment of those customers by PPL tariffs and/or practices.

The distribution of the revenue generated by the non-bypassable system benefits charge will not necessarily be exclusively to PPL customers. My discussion below relates to why there should be such a system benefits charge included in PPL tariffs. I have been informed by counsel that the mechanism for aggregating those system benefits charge revenues amongst electric utilities, and equitably distributing those aggregated revenues to achieve the objective of mitigating the impacts of large load customers on universal service costs as I describe below, is subject to consideration by the Commission in a separate proceeding. That consideration, however, does not detract from the need for PPL to include the system benefits charge in its tariff in this proceeding.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. The recommendation I make is in response to the direct adverse impacts which large load customers will have not only on the affordability of electricity to PPL's low-income customer base, but also the direct adverse impacts which those large load customers will have on the cost to residential customers generally associated with the provision of universal service programs such as CAP (and the associated arrearage forgiveness provisions of CAP). There is, in other words, a direct causal relationship, determined on a but-for basis, between the introduction of large load customers and the need for the additional funding through the proposed two-step non-bypassable system benefit charge.[105] A December 2024 study for the Sierra Club by Synapse Energy found that, for

[105] The "but-for" causal relationship indicates that but-for the introduction of large load customers, the increased costs I identify below will not occur.

the PJM system as a whole, a cost adder of $0.05 per kWh would be needed in the short-term to offset the projected impacts on residential rates from data centers.[106]

Q. PLEASE EXPLAIN THE IMPACTS THAT WILL ARISE.

A. There is a generally recognized concern about the impacts which data centers are having on capacity costs in the PJM states. The most recent (3d Quarter, 2025) market monitoring assessment for PJM provides:

> Data center load growth is the primary reason for recent and expected capacity market conditions, including total forecast load growth, the tight supply and demand balance, and high prices. But for data center growth, both actual and forecast, the capacity market would not have seen the same tight supply demand conditions, the same high prices observed in the 2025/2026 [Base Residual Auction] and the 2026/2027 BRA, and the currently expected tight supply conditions and high prices for subsequent capacity auctions.
>
> Holding aside all the other issues associated with the 2026/2027 BRA, existing and forecast data center load by itself resulted in a significant increase in the 2026/2027 BRA revenues. Based on actual auction clearing prices and quantities and uplift MW, inclusion of existing and forecast data center load in the peak load forecast for 2026 resulted in a $7,271,197,971 or an 82.1 percent increase in capacity market revenues for the 2026/2027 RPM Base Residual Auction. Inclusion of existing and forecast data center load growth resulted in a combined total increase in capacity market revenues for the 2025/2026 BRA and the 2026/2027 BRA of $16,603,301,829. This total will continue to grow until the issues associated with the additions of large data center loads are addressed. The impact will increase significantly in the 2028/2029 BRA currently scheduled for June 2026, when the maximum and minimum prices defined by the Agreement are no longer effective.[107]

[106] Chavin, Sabine, et al. (December 2024). Risks of Rapid Data Center Growth in PJM, prepared for Sierra Club, Synapse Energy.

[107] Monitoring Analytics, LLC (2025). 2025 Quarterly State of the Market Report for PJM: January through September.

The Quarterly Monitoring Report for PJM concluded that: "Large data center load additions have already had a significant impact and will have additional significant impacts on other customers as a result of higher transmission costs, higher energy market prices and higher capacity market prices."[108] The Third Quarter Monitoring report found:

> The basic conclusion of Part A of the [Market Monitoring Unit's (MMU)] analysis of the 2026/2027 BRA is that data center load growth is the primary reason for recent and expected capacity market conditions, including total forecast load growth, the tight supply and demand balance, and high prices. But for data center growth, both actual and forecast, the PJM Capacity Market would not have seen the same tight supply demand conditions, the same high prices observed in the 2025/2026 BRA and 2026/2027 BRA or the currently expected tight supply conditions and high prices for subsequent capacity auctions.
>
> * * *
>
> It is misleading to assert that the capacity market results are simply just a reflection of supply and demand. The current conditions are not the result of organic load growth. The current conditions in the capacity market are almost entirely the result of large load additions from data centers, both actual historical and forecast.[109]

The impact on prices identified in the Third Quarter report came as no surprise. The Second Quarter Monitoring Report reported that:

> Large data center load additions have already had a significant impact and will have additional significant impacts on other customers as a result of required transmission upgrades and higher capacity market prices, regardless of the details of interconnection. Even if the capacity market design issues identified by the MMU were resolved, the market would still be tight. The

[108] Id., at 1 – 2.

[109] Id., at 328.

> current supply of capacity in PJM is not adequate to meet the demand from large data center loads and will not be adequate in the foreseeable future.[110]

The Monitoring Report stated: "The MMU concludes that the failure to recognize and address the role of large data center loads is a direct cause of higher prices and will continue to result in even higher prices unless the related issues are addressed."[111] It reported that: "But for data center growth, both actual and forecast, the PJM Capacity Market would not have seen the tight supply demand conditions, the high prices observed in the 2025/2026 BRA or the high prices expected for the 2026/2027 and subsequent capacity auctions. Holding aside all the other issues raised by the Market Monitor in parts A through F of this report, data center load by itself resulted in an increase in the 2025/2026 BRA revenues of. . .174.3 percent."[112]

Q. IS IT SIMPLY THE IMPACTS OF DATA CENTERS ON CAPACITY MARKETS THAT WILL RESULT IN INCREASED RATES TO RESIDENTIAL CUSTOMERS?

A. No. An additional impact on residential rates will occur as a result of the necessary investment in transmission infrastructure. As the Environmental and Energy Law Program at Harvard Law School explains that:

> ratepayers can pay more for power due to data center demand by focusing on FERC-regulated transmission costs. Federal law provides FERC with exclusive authority to set utilities' transmission revenue requirements and allocate a utility's transmission revenue requirement to multiple utilities.

---

[110] Monitoring Analytics, LLC (2025). 2025 Quarterly State of the Market Report for PJM: January through July, at 2.

[111] Id., at 302.

[112] Id., at 314.

> Under FERC's rules, costs of a new transmission line can be paid entirely by a single utility or shared among utilities if there is agreement that the new line benefits multiple utilities. When costs are shared, a region-specific formula approved by FERC divides costs roughly in proportion to the power system benefits each utility receives, such as lower market prices and improved reliability.
>
> Under either the single-utility or multi-utility approach, PUCs apply their own formula for dividing FERC-allocated transmission costs among ratepayer classes. These separate cost allocation schemes can allow data center energy costs to creep into other consumers' bills when new data centers trigger a need for transmission upgrades.[113]

The Harvard Law researchers then explained:

> Each state's PUC then allocates the costs assigned by PJM to ratepayer classes of each utility it regulates. In Maryland, across the state's three IOUs, an average of 66 percent of transmission costs are assigned to residential ratepayers. The larger of Virginia's two IOUs includes more than half of its transmission costs in residential rates. Thus, in both states, residential ratepayers are paying the majority of regional transmission costs that are tied to data center growth. From the public's perspective, this result appears to violate the cost causation principle. After all, residential ratepayers are not causing PJM to plan new transmission.[114]

Consider the impact on residential ratepayers. For example, in a recent proceeding in Virginia regarding the Amazon Plaza 500 application, the utility told the State Corporation Commission that the $23 million project would be paid for via the FERC-approved transmission tariff. In turn, however, the utility's existing state-approved tariff allows half of all costs assigned through the FERC-regulated tariff to be billed to

[113] Martin and Peskoe (March 2025). Extracting Profits from the Public: How Utility Ratepayers are Paying for Big Tech's Power, at 14, Environmental and Energy Law Program, Harvard Law School (internal citations omitted). [114] Id., at 16 (internal notes omitted).

residential ratepayers, with the remaining half billed to other existing ratepayers. As the Virginia Sierra Club noted, "the result is that existing tariffs force the public to foot the bill for transmission investment just for data centers."[115]

Q. PLEASE EXPLAIN THE SIGNIFICANCE OF THIS DATA FOR PURPOSES OF YOUR TESTIMONY TODAY.

A. As I note above, the purpose of my testimony today is not to explore or to discuss how, if at all, the PUC should develop consumer protections to address the rate issues I identify above. Those broader issues are addressed by OCA witness Matthew Hoyt. My purpose is narrower. I note that in the PPL service territory, when residential ratepayers bills increase as a result of the addition of large load customers, the impact on those residential ratepayers is greater than the specific impacts I identify above. Since PPL's CAP operates as a percentage of income program, and since, rightly or wrongly (wrongly in my opinion), 100% of the costs of the PPL CAP is allocated to residential ratepayers, when the rates to CAP customers increase because of the data center impacts identified above, the difference between the percentage of income bills and the bills which are inflated due to data center costs (the difference is known as "CAP Credits") will increase as well.

The impacts of large load customers on residential rates will increase universal service program costs in two additional ways as well. First, there will be customers whose bills (without the increase attributable to large load customers) would be affordable without being provided a CAP Credit. To the extent that the increase in residential rates

[115] Ann Bennett, Unconstrained Demand: Virginia's Data Center Extension and its Impacts, at page 50, Virginia Sierra Club. Available at https://img.vasierra.club/UnconstrainedDemand_SinglePage.pdf

attributable to large load customers pushes the bills of these customers above an affordable percentage of income burden, they *will* participate in CAP, and will receive CAP credits in the future which they have not received in the past. Those new CAP Credits will be passed on to other residential ratepayers as CAP costs recovered through the Universal Service Rider. Second, there will be customers whose bills may be sufficiently high to exceed their affordable burden but who choose, for whatever reason, not to participate in CAP at existing rates. The additional bills they will receive as a result of large load customers may well incent these customers to move from being CAP non-participants to being CAP participants. These customers, too, will thus receive CAP Credits in the future which they have not received in the past.

These increased CAP Credits I have identified will all be passed on to residential ratepayers. Residential ratepayers, in other words, will be hit twice due to increased bills caused by large load customers. First, they will be required to pay the direct costs associated with the large load customers. In addition, they will be required to pay the increased universal service costs caused by the increased residential bills associated with large load customers. To mitigate, if not eliminate, this impact, is the reason I recommend adoption of the two-step non-bypassable system benefit charge to be imposed on large load customers.

Q. HAS THE PENNSYLVANIA COMMISSION RECOGNIZED IN PRINCIPLE THE LEGITIMACY OF ADOPTING A SYSTEM BENEFIT CHARGE FOR LARGE LOAD CUSTOMERS?

A. Yes. The Commission's Tentative Order regarding a model tariff for large load customers stated that:

> We agree with CAUSE-PA and TURN that the addition of Large Load Customers has an impact on the rates all customers pay for electricity, especially in relation to capacity and transmission rates. As such, we have proposed a requirement that Large Load Customers contribute to the utility's hardship fund annually, with the minimum amount to be contributed based on the Large Load Customer's peak demand.[116]

The Commission stated that it sought further comments "on whether there should be a required contribution to a utility's low-income program and whether the utility's hardship fund is the appropriate program and whether the amounts proposed are appropriate."[117]

Consistent with the PUC's Tentative Order, my recommendation above is even more in line with the Statement of Commissioner Vice-Chairperson Barrow. She stated: "while I believe that enhancing hardship funding is beneficial, I also believe that directing money to offset the universal service charge currently paid by the residential class on a per-kwh basis is likely a more beneficial solution. The Commission should both increase funding for low-income Pennsylvanians while reducing the burdens on other residential ratepayers to support existing low-income programs."[118] I differ from Vice-Chairperson Barrow only in that the impact of large load customers will not be limited to ***existing*** "burdens on other residential ratepayers to support existing low-income programs."[119] For all the reasons I explain above, the introduction of large load customers will result in ***increased*** burdens on residential ratepayers to support those "existing low-income

[116] Interconnection Tariffs for Large Load Customers, Docket M-2025-3054271 (November 22, 2025).

[117] Id.

[118] Id., Statement of Vice-Chairperson Barrow.

[119] Id.

programs." Similarly, my recommendation is consistent with the request of Commissioner Zerfuss when she asked whether this proposal (*i.e.*, a hardship fund contribution) "is sufficient."[120] Commissioner Zerfuss asked for information on whether "the Commission should be considering a more comprehensive solution to assist Pennsylvania families, including having large load customers contribute to or share in the allocation of costs related to all utility universal service programs."[121] Based on my discussion above, the answer to that query is clearly that a hardship fund contribution is not "sufficient" and that large load customers should, indeed, share in the allocation of universal service costs in the way I recommend.

Q. DOES IMPOSING AN INITIAL FLAT FEE TO SUPPORT HARDSHIP GRANTS ADEQUATELY ADDRESS THE PROBLEMS YOU HAVE IDENTIFIED?

A. No. A proposal to impose a flat fee to support additional hardship grants is a recommendation that should be adopted. Such a flat fee should be an annual fee that is adjusted annually based on the percentage increase in electricity rates. Without this annual adjustment, the flat fee loses its purchasing power over time. The initial level of the annual flat fee should be established through the process I recommend above.

A flat fee to support hardship funds, however, is neither appropriate in principle nor adequate in practice to address the problems I document above. The problem I identify is not the increased susceptibility of low-income customers to the disconnection of service for nonpayment. The problems are neither limited to nonpayment disconnections nor

[120] Id., Statement of Commissioner Zerfuss.

[121] Id.

limited to low-income customers. Instead, the problems I identify are associated with the increased universal service costs that will be charged to all residential ratepayers as a result of large load customers. Those increased costs will be charged to low-income customers not participating in CAP; to moderate-income customers who have insufficient funds to pay their existing bills but who do not qualify for CAP; and to all other ratepayers as well. The availability of hardship grants does not address those impacts of large load customers.

Limiting the requirement of large load customers only to pay a contribution to hardship funds also effectively requires utilities to operate inefficiently. Hardship fund grants are provided to customers who have incurred arrears of a sufficiently large size and sufficient age that the customer is now facing a potential disconnection of service for nonpayment. It requires the customer to incur further costs (in the form of late payment charges) and requires the utility to incur credit and collection costs, along with the working capital costs associated with carrying those arrears over time prior to a potential nonpayment disconnection. The process can be analogized to health care: it is akin to requiring the patient to become sick, and then helping offset the costs of curing the patient, rather than seeking to keep the patient well from the beginning. In addition to being less effective, this process is more expensive as well.

In addition, requiring a flat fee to support larger, or additional, hardship grants fails in operation. While PPL's hardship grants serve an important function, that function is quite limited. The data which PPL reports to BCS each year indicates that in 2022, PPL distributed $1,459,918 in hardship grants to 2,691 customers (an average of $542); in 2023, PPL distributed $1,065,285 in hardship grants to 2,223 customers (an average of

$479); and in 2024, PPL distributed $1,131,518 in hardship grants to 3,101 customers (an average of $365).[122] In contrast, PPL's data reports that in 2024, alone, the Company disconnected service to 42,062 Confirmed Low-Income customers. The hardship fund, in other words, while important to those receiving grants, serves a very small proportion of the low-income population.

Finally, while the availability of hardship fund grants is an important resource, those grants also have substantial limitations. As noted above, in the past three years, PPL's average hardship fund grants have ranged from a low of $365 (2024) to a high of $542 (2022). At the same time, in the three years (2023 through 2025), the average arrears of a Confirmed Low-Income customer at the time of disconnection ranged up to more than $2,600 (July 2023). In April 2025, the average arrears at the time of disconnection was nearly $1,500 while the average arrears at the time of disconnection in May 2025 was nearly $1,400. In order for a hardship grant to be efficacious, in other words, a Confirmed Low-Income customer must necessarily find substantial supplementary financial resources to package with the hardship fund grant. Even if the hardship fund contribution required of large load customers allows PPL to increase its average grant level, rather than simply providing the same grant level to more customers, unless the sources of supplementary funds required of customers seeking a hardship grant also increase, the contributions required of large load customers will not have the impact which the Commission seeks.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

[122] CAUSE-PA-1-29, Attachments 1, 2, 3.

A. Yes, it does.

Exhibit RDC-5: PPL Response to OCA-XI-23

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set XI Data Requests of the
Office of Consumer Advocate (OCA)
Dated November 20, 2025
Docket No. R-2025-3057164

OCA XI-23	Please provide a detailed explanation of why OnTrack customers are excluded from the Company's time-of-use program.
PPL Electric Response	OnTrack customers are excluded from the Company's Time-of-Use ("TOU") program because of the way the OnTrack program is designed to provide affordability and bill stability for income-qualified customers. The TOU rate offers lower prices during off-peak periods (daytime, nighttime, weekends, and holidays) but higher prices during on-peak hours in the afternoon and early evening. Customers who do not successfully shift their usage away from these on-peak hours will pay more than the standard Price to Compare during those periods. For OnTrack participants, this presents a significant risk. Their monthly bills are based on a fixed payment amount and include shortfall credits to cover the difference between actual usage and the fixed payment. If an OnTrack customer were enrolled in TOU and did not shift usage, the higher on-peak charges could cause their actual billed amounts to exceed expectations, resulting in faster depletion of shortfall credits. To protect customers from this risk and maintain the affordability and predictability that OnTrack is intended to provide, the Company prohibits OnTrack customers from enrolling in the TOU rate.

VERIFICATION

I, Roger D. Colton, hereby state that the facts above set forth in my Direct Testimony, OCA Statement 8, are true and correct to the best of my knowledge, information, belief, and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: December 22, 2025

Signature: 

Roger D. Colton

Rebuttal Testimony of Roger Colton

on behalf of

Pennsylvania Office of Consumer Advocate

OCA Statement 8-R

Date Served: January 23, 2026

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont, Massachusetts.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED WRITTEN DIRECT TESTIMONY ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes, I am.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR REBUTTAL TESTIMONY.

A. The purpose of my Rebuttal Testimony is to respond to the Direct Testimony of John Costlow on behalf of the Sustainable Energy Fund (SEF). More specifically, I will respond to Mr. Costlow's testimony that low-income customers consistently have usage that is higher than non-low-income customers. To the extent that Mr. Costlow errs in, or substantially overstates, his conclusions, he also errs in concluding that a higher fixed monthly customer charge will benefit low-income customers.

Q. DOES MR. COSTLOW BEGIN HIS DIRECT TESTIMONY WITH A MISCHARACTERIZATION OF THE STATED RELATIONSHIP BETWEEN LOW-INCOME AND LOW-USE CUSTOMERS?

A. Yes. Mr. Costlow begins his discussion of the relationship between income and consumption by arguing that his past recommendations supporting smaller customer charges "assumes that low-use customers were synonymous with low-income ratepayers and that higher-use customers have higher incomes. . ."[1] He again defines the issue this

[1] Costlow Direct, at page 11.

way when he subsequently responds "no" to the question "Are low-use customers synonymous with low-income customers?"[2] In my 40+ years of experience in utility rate proceedings, I have never previously heard the argument that low-income customers are "synonymous" with low use customers. The question is never presented as to whether *all* low-income customers are low-use customers. The question is more nuanced than that. I would say that while there may be a number of high use low-income customers, generally, electric heating customers as acknowledged by Mr. Costlow, low-income customers are generally, and disproportionately, low-use customers.

Q. HOW DO YOU RESPOND TO MR. COSTLOW'S USE OF PPL DATA REGARDING THE USAGE OF THE COMPANY'S "CONFIRMED LOW-INCOME" CUSTOMERS?

A. Mr. Costlow cites PPL data regarding the mean (i.e., average) electric consumption of "confirmed low-income" customers in two months (January, February 2025). The use of that number simply does not demonstrate what Mr. Costlow claims it demonstrates. Mr. Costlow does not compare "low-income" customers to "non-low-income" customers. He instead compares "confirmed low-income" customers to "everyone else." The "everyone else," of course, includes all low-income customers that are not "confirmed low-income."

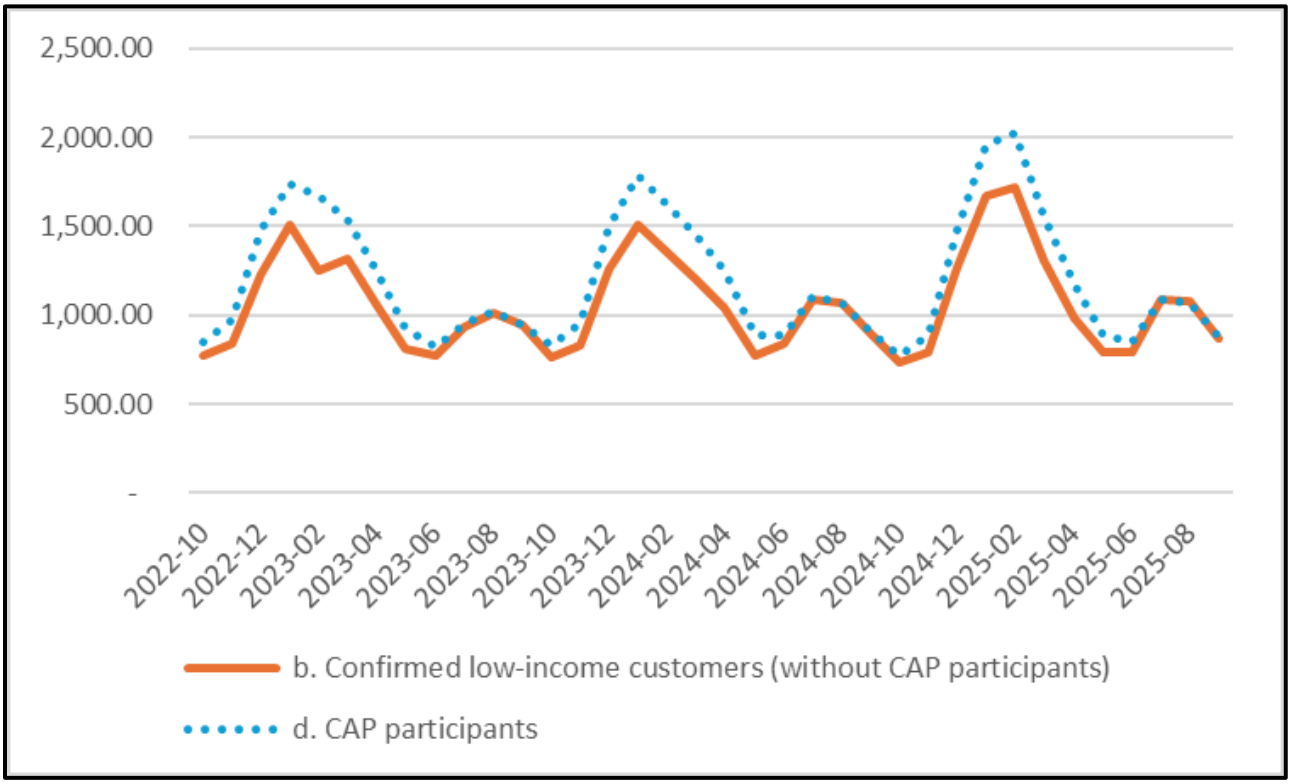
That distinction is of real significance. PPL uses enrollment in Low Income Home Energy Assistance Program (LIHEAP) as one of its primary mechanisms by which to identify its "Confirmed Low-Income" customers. Historically, however, LIHEAP recipients have been found to have substantially greater electricity consumption than low-

[2] Id., at page 16.

income customers generally. The 2014 LIHEAP Home Energy Notebook reports, for example, that LIHEAP recipients have electricity consumption that is 10% higher than the consumption of low-income households generally. More than 24,000 of the Company's Confirmed Low-Income customers were LIHEAP recipients.

PPL also uses income data it obtains in responding to nonpayment to establish Confirmed Low-Income status. That is significant because a 2023 analysis by the U.S. Department of Energy's Energy Information Administration (DOE/EIA) reported that:

> On average, households in the United States were billed $1.04 per square foot for energy usage across all energy sources in 2020. Those households identifying as energy insecure were billed $0.20 more per square foot than the national average and $0.26 more on average than households that did not experience energy insecurity. Household energy insecurity is the inability to adequately meet basic household energy needs and describes households who face challenges in purchasing the energy they need because of cost.[3]



While Mr. Costlow discusses the impact of factors such as urban/rural status on relative electricity consumption, he failed to consider the impact of energy insecurity. He did not talk about how the population of low-income customers he relies upon has, by the very reason they have been identified as "Confirmed Low-Income," energy consumption that is 27% higher than the remainder of the population. I discussed in detail in my Direct Testimony how low-income households overwhelmingly are disproportionately "energy insecure."

Finally, of the Company's Confirmed Low-Income customers, nearly 75,000 are identified as Confirmed Low-Income because they are customer assistance program

[3] https://www.eia.gov/todayinenergy/detail.php?id=56640#

(CAP) participants. The Company's CAP participants are primarily participating because their usage pushes their home electricity burdens to a point which exceeds an affordable level. If they did *not* have higher consumption (and thus higher burdens), they would not be participating in CAP. The PPL data confirms this observation. As can be seen, even accounting for the higher usage of energy insecure households (which tend to be low-income), CAP consumption is higher. Notice further that the degree to which CAP usage is higher than low-income customers who are not on CAP is highest in the winter months, two of which months Mr. Costlow chose to highlight.

Figure 1 Median Monthly Usage:
Confirmed Low-Income (without CAP) vs. CAP

Q. WHAT DO YOU CONCLUDE?

A. I find and conclude that Mr. Costlow's testimony focuses on generic factors which are associated with higher electricity consumption for residential customers overall, but

which ignores those factors which are used to identify the low-income population he chooses to discuss. The very factors which are used to identify Confirmed Low-Income customers makes that population non-representative of the low-income population as a whole when considering electricity consumption.

Q. HOW DO YOU RESPOND TO THE PPL DATA REGARDING THE USAGE OF THE COMPANY'S "CONFIRMED LOW-INCOME" CUSTOMERS?

A. Mr. Costlow cites PPL data regarding the mean (i.e., average) electric consumption of "confirmed low-income" customers in two months (January, February 2025). The use of that number simply does not demonstrate what Mr. Costlow claims it demonstrates. PPL data documents that, even if it cannot be said that ***all*** low-income customers are low use, which no-one asserts, and that all higher use customers are higher income, which no-one asserts, there are significant numbers of low-income low-use customers. Exhibit RDC-1R sets forth monthly bills for Confirmed Low-Income (CLI) customers for January and February 2025, the two months discussed by Mr. Costlow.[4] The Exhibit shows the number of Confirmed Low-Income customers by the level of bills in $100 increments. The Exhibit further shows the percentage of total Confirmed Low-Income customers who fall into each bill range (one column includes those reporting a $0 bill and another column excludes those reporting a $0 bill). The data clearly shows the prevalence of low bill (and thus presumably low use) low-income customers. More specifically, the data in Exhibit RDC-1R shows:

- 49,606 Confirmed Low-Income customers (27.3%) had January 2025 bills between $1 and $100;

[4] The data in Exhibit RDC-1R was obtained from PPL's response to OCA-IV-13.

- 83,376 Confirmed Low-Income customers (45.8%) had January 2025 bills between $1 and $200;

Similar results are evident for February 2025. Of the Confirmed Low-Income customers, 26.1% had bills of $1 to $100; 43.3% had bills of $1 to $200.

If one excludes the low-income customers reporting a $0 bill, the percentages are even higher. For January 2025, the data shows that 33.2% of Confirmed Low-Income customers had bills of $1 to $100; 55.8% had bills of $1 to $200. In February 2025, excluding customers for whom a $0 bill was reported, 32.1% had bills of $1 to $100; 53.3% had bills of $1 to $200.

When one examines the distribution of bills for Confirmed Low-Income customers, even setting aside the fact that the usage of Confirmed Low-Income customers will be higher than the usage for low-income customers generally, if one does not accept Mr. Costlow's characterization of the issue as being whether "low-income" and "low use" are, in his words, "synonymous," one-third of Confirmed Low-Income customers had mid-winter bills of less than $100 and more than one-half of Confirmed Low-Income customers had mid-winter bills of less than $200.

Q. HAVE YOU EXAMINED MR. COSTLOW'S DISCUSSION OF THE IMPACT OF THE RURAL STATUS OF PPL'S SERVICE TERRITORY?

A. Yes. Mr. Costlow argues that PPL has a "largely rural territory" where a "significant amount of customers utilize electric heat" and "low income users typically use more electricity than non-low income users."[5] He asserts that "electric heat customers are also

[5] Costlow Direct, at 10.

high use customers and there is a very high proportion of electric heat customers in PPL's territory because it is rural and customers lack access to natural gas as a heating source."[6]

Mr. Costlow relies on data provided by the Company on the geographic area served by PPL.[7] I do not question that PPL has some "largely rural territory" in its service territory. That does not mean, however, that most of the *people* in PPL's service territory live in rural areas. The United States Census Bureau reports population by "urban" and "rural" status of the geographic areas. I examined the Census data for the zip codes which PPL reports comprise its service territory.[8] Of the 505 PPL zip codes for which Census data is reported, the Census reports (2020) that 440 have a population living in a "rural" area while only 298 have a population living in an "urban" area.[9] However, while the largest number of geographic areas may be "rural," by far, the largest percentage of population in the PPL service territory is "urban." The Census reports that more than 70% of the population in the PPL zip codes live in urban areas.[10] Indeed, the Census reports that

[6] Id., at 11.

[7] OCA-IX-36 (defining rural, suburban, and urban areas by number of customers per mile). The response appears to reference the number of circuits, not the number of customers.

[8] PPL reported the number of residential customers, as well as the number of Confirmed Low-Income customers, by zip code. OCA-IV-04.

[9] Table P2, 2020 Decennial Census.

[10] The Census defines two types of "urban" areas. On the one hand, there are "urbanized areas", which contain 50,000 or more people. On the other hand, there are "urban clusters", which have at least 2,500 people but fewer than 50,000 residents. See, U.S. Census Bureau (October 2020). Understanding and Using American Community Survey Data, What Users of Data for Rural Areas Need to Know, at page 2. According to the Census Bureau, "The Census Bureau does not actually define "rural." Rather, rural areas include all geographic areas that are not classified as urban." (Id.)

only 12% of the population in PPL's zip codes live in areas that have no urban areas.[11] This distribution of population is reflected in the distribution of PPL customers. Only 14.1% of PPL's residential customers reside in zip codes that have no urban areas. There are even fewer Confirmed Low-Income customers in these zip codes (13.6% of Confirmed Low-Income customers reside in zip codes with no urban areas).[12]

Mr. Costlow does not define what he considers to be "a significant number" of customers who use electricity for space heating. According to the Census Bureau's most recent data (2023), however, far fewer customers use electricity for space heating than use non-electric fuels. In the PPL zip codes as a whole, only 31.8% of households use electricity for space heating.[13] That is fewer households who use electricity for space heating than who use natural gas for space heating (33.7%). Indeed, even if one accepts Mr. Costlow's comments about the lack of natural gas infrastructure in rural areas, that does not necessarily translate into the use of electricity for space heating. In PPL's zip codes, there are proportionately nearly as many customers who use propane, kerosene, or fuel oil for space heating (28.3%) as who use electricity (31.8%).

In fact, when I compared the percentage of households using electricity for space heating in the PPL zip codes with no urban areas to the four largest cities in Pennsylvania, I find that there is little difference. The lack of natural gas availability for space heating is more often replaced by bulk fuels than it is replaced by electricity in the PPL zip codes with no

[11] Table P2, 2020 Decennial Census.

[12] OCA-IV-04.

[13] American Community Survey, 5-year data, 2023, Table B25040.

urban areas. Table 1 below shows that, in the PPL zip codes with no urban areas, there is unquestionably fewer households that use "utility gas." However, the percentage of households using electricity in the PPL "no urban area" zip codes does not substantively differ from Philadelphia, Pittsburgh and Reading, and is actually less than Allentown. The real difference in space heating fuels lies in the sharp increase in the use of bulk fuels in the PPL "no urban area" zip codes. Even accepting Mr. Costlow's premise that natural gas does not serve rural areas, his conclusion that the result is higher electric use because of the predominant use of electricity is simply not supported by the data.

Table 1. Percentage of Households by Fuel Used for Space Heating (ACS B25040)

	Allentown	Philadelphia	Pittsburgh	Reading	PPL (no urban)
Utility Gas	44.4%	69.5%	75.4%	53.3%	4.7%
Electricity	39.4%	24.4%	26.3%	28.3%	31.1%
Bulk Fuels[14]	15.3%	4.6%	2.8%	17.1%	47.1%

Q. DO YOU HAVE ANY FINAL OBSERVATIONS ABOUT MR. COSTLOW'S TESTIMONY REGARDING RURAL AREAS?

A. Mr. Costlow justifies his assertion that low-income customers are high use customers by asserting the rural customers "tend to reside in single-family homes more often than those in urban areas."[15] He does not relate this residency in single-family homes to low-income customers in particular. What Mr. Costlow does *not* consider are the various factors

[14] I define "bulk fuels" to include LP gas, kerosene, and fuel oil.

[15] Costlow Direct, at page 16.

documenting why low-income customers will have lower consumption than non-low-income customers. There are multiple such factors.

While the Census Bureau does not directly report data on these factors by income, it is possible to use some reasonable surrogates for income. The surrogate I use is renter status. I do this because low-income households are overwhelmingly more likely to be renters than high income households are. The Table below compares the percentage of households who are renters at low-income ranges to the percentage of households who are renters at high-income ranges. The data documents that low-income households are from three to eight times more likely to be tenants than are high income households. As a result, I will consider factors affecting electricity use primarily by homeowner/renter status.

Table 2. Percentage of Households Who are Renters by Selected Income Ranges
(PPL "No-Urban" area zip codes)

Income Range	Pct who are Renters	Income Range	Pct who are Renters
Less than $5,000	34.7%	$75,000 - $99,999	12.7%
$5,000 - $9,999	35.4%	$100,000 - $149,999	9.4%
$10,000 - $14,999	40.0%	$150,000 or more	5.3%
$15,000 - $19,999	34.7%		
$20,000 - $24,999	32.8%		

Q. WHAT ARE THE FACTORS YOU CONSIDER THAT MR. COSTLOW DID NOT?

A. I have examined two particular factors that are found to affect electricity usage. The first factor I consider in assessing the electricity use of low-income customers compared to high income customers is household size. As household size increases, electricity

consumption increases as well.[16] In PPL's "no urban" zip codes, the average household size for renter households was 2.34 persons per household, compared to the average household size for homeowner households of 2.62 persons.[17] The smaller renter household size in the PPL no-urban zip codes would support a finding that low-income households have lower use rather than higher use.

The second factor I consider is the size of the housing unit. The Residential Energy Consumption Survey (RECS) documents that there is a significant reduction in electricity usage as the size of a housing unit declines.[18] While the Census Bureau does not report housing size in square feet, it is possible to review housing size by looking at the number of rooms. The Census data demonstrates that in PPL's "no urban" zip codes, the size of housing units occupied by renters is substantially smaller than the size of housing units occupied by homeowners. This result is seen on both ends of the continuum of size (as measured by the number of rooms). While fewer than 2% of homeowner units have three rooms or fewer, nearly 20% of renter homes do. While fewer than 10% of homeowner units have four rooms or fewer, nearly 40% of renter-occupied units do.

Table 3. Percent of Housing Units by Homeowner/Renter Status by Number of Rooms

Number of Rooms	Homeowner	Renter
1	0.2%	4.6%
2	0.2%	3.4%

[16] See generally, U.S. Department of Energy, Energy Information Administration (2020). Residential Energy Consumption Survey (RECS), Table CE5.3a.

[17] American Community Survey, 5-year data, 2023, Table B25010.

[18] See generally, U.S. Department of Energy, Energy Information Administration (2020). Residential Energy Consumption Survey (RECS), Table CE5.3a.

3	1.4%	10.0%
4	7.4%	19.9%
5	17.3%	21.4%
6	22.7%	15.2%
7 or more	50.9%	25.5%

These factors are in addition to my examination above about the prevalence of electric space heating in PPL's "no urban" zip codes. That discussion demonstrated that Mr. Costlow erred in concluding that because "no urban" zip codes do not have access to natural gas infrastructure, the residents of those geographic areas would use electricity for space heating.

Q. WHAT DO YOU CONCLUDE?

A. Based on the data and discussion above, I find and conclude that Mr. Costlow has not demonstrated that PPL's low-income households will be high use customers. He begins by using a population of customers whose high use of electricity is one of the essential components of being identified as "low-income" in the first instance. He then compares that high use population *not* to a non-low-income population, but rather to a population that includes the remaining low use low-income customers. His conclusions drawn from his use of the non-representative population leads him to erroneous conclusions. He continues by defining the prevalence of "rural" areas in terms of geographic space. While PPL may well have a substantial amount of rural areas when measured in terms of geographic space, it does not have a corresponding disproportionate number of customers who live in those rural areas. He next asserts that because rural areas do not have access to natural gas infrastructure, the households who live in those areas will use electricity for

space heating. In fact, looking at the "no urban" zip codes in the PPL service territory finds that households tend to replace natural gas heating with heating by bulk fuels (e.g., LPG, propane, fuel oil), not with electricity. The percentage of households who heat with electricity in PPL's "no urban" zip codes does not substantially differ from the percentage who heat with electricity in Pennsylvania's major urban centers. Finally, while Mr. Costlow correctly notes that there are more single family homes in rural areas than in non-rural areas, and concludes based on this one observation that electricity use will thus be higher, he fails to consider the other factors which affect electricity consumption that would lead to a contrary conclusion.

I find that Mr. Costlow's reasoning and data are flawed. His conclusions based upon this flawed analysis should be rejected.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

VERIFICATION

I, Roger D. Colton, hereby state that the facts above set forth in my Rebuttal Testimony, OCA St. 8R are true and correct to the best of my knowledge, information, belief, and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: January 23, 2026

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont, Massachusetts.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED WRITTEN DIRECT AND REBUTTAL TESTIMONY ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes, I am.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY.

A. The purpose of my Surrebuttal Testimony is to respond to the Rebuttal Testimony of the following witnesses:

- PP&L Industrial Alliance rebuttal witness Billie LaConte;
- Office of Small Business Advocate (OSBA) rebuttal witness Mark Ewen;
- IGS Solar rebuttal witness Kathleen Bolcar Rever;
- PPL Electric Utilities (PPL or Company) rebuttal witness Joseph Lookup;
- PPL rebuttal witness Bethany Johnson;
- PPL rebuttal witness Steven Wishart; and
- PPL rebuttal witness Lisa Norden.

Q. DO YOU OFFER ANY NEW RECOMMENDATIONS IN YOUR SURREBUTTAL TESTIMONY?

A. I offer no recommendation that has not previously been presented in Direct Testimony. The response I make to IGS rebuttal witness Bolcar Rever includes a recommendation that the proposal of CAUSE-PA witness Patrick Cicero that net metering customers should pay the universal service surcharge based on their gross volumetric usage of electricity be adopted.

Part 1. Response to PPLICA Rebuttal Witness Billie LaConte.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR SURREBUTTAL TESTIMONY.

A. In this section of my testimony, I respond to the Rebuttal Testimony of PPLICA rebuttal witness LaConte regarding the allocation of a portion of universal service costs to large load customers. Mr. LaConte argues that allocating some portion of universal service costs to large load customers "defeats the purpose of setting delivery rates to reflect cost."[1] He continues on to argue that:

> the assertion that large loads are impacting distribution delivery rates is false because large loads take service at transmission voltages. Any rate pressures that could result from connecting new very large loads to the system would be limited to energy costs and transmission rates. However, these costs are not at issue in this proceeding.[2]

Mr. LaConte's testimony ignores that recovery of PPL's CAP costs through the Universal Service Rider are at issue in this proceeding. As I explained in my Direct Testimony, the addition of AI data centers to PPL's distribution system and the regional power grid will directly increase residential consumers' total bills, including supply and transmission costs, and this will have the direct impact of increasing the overall costs of the CAP program by (1) increasing participant enrollments in CAP; and (2) increasing the amounts of the CAP Credits, which is the difference between the total bill and the amount deemed affordable for the customer to pay based on percentage of income.[3]

---

[11] PPLICA St. 1-R, at 14.

[2] Id.

[3] OCA St. 8, at 93 – 94.

Mr. LaConte, having ignored the cost-basis for allocating a portion of universal service costs to large load customers, recommends that no allocation of CAP costs to LP-6 customers be made. His assertion lacks merit should be rejected.

Part 2. Response to OSBA Rebuttal Witness Mark Ewen.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR SURREBUTTAL TESTIMONY.

A. In this section of my Surrebuttal Testimony, I respond to the Rebuttal Testimony of Mark Ewen to the extent he addresses my Direct Testimony. Overall, Mr. Ewen opposes the allocation of universal service costs to small business customers. He argues that "there is no causal relationship between PPL Electric's universal service costs and small business customers."[4] I disagree with that blanket assertion by Mr. Ewen.[5] There is a well-established relationship between low wages and the need for some residential customers to seek assistance through programs such as government aid and utility affordability programs.[6] This relationship has been documented throughout Pennsylvania as well.[7] Allowing small businesses to be exempt from paying universal service costs has the effect of allowing those small businesses to transfer their cost of doing business (e.g.,

[44] OSBA St. 1-R, at 7.

[5] In my Direct Testimony, I state: "since, rightly or wrongly (wrongly in my opinion), 100% of the costs of the PPL CAP is allocated to residential ratepayers. . ." OCA St. 8, at 93.

[6] Colton (March 2023). Inter-Class Allocation of Affordability Program Costs.

[7] United for Alice (2026). United For ALICE Wage Tool: Exploring the Impact of Wage Levels and Occupations on ALICE, available at https://www.unitedforalice.org/wage-tool

wages) to the utility rates of residential ratepayers in the form of universal service costs.[8] Moreover, Mr. Ewen's argument ignores the substantial economic benefit that small businesses derive from Pennsylvania's universal service programs. The annual dollar cost imposed on employers due to their employees' financial stress arising from an inability-to-pay for basic household necessities is nearly as high as the dollar cost imposed on employers from employee smoking, reaching more than $400 a year.[9]

Despite Mr. Ewen's erroneous statements regarding cost-causation and the generation of small business benefits by universal service programs, his Rebuttal Testimony does not oppose the specific proposal I recommend with respect to the allocation of universal service costs. My specific recommendation is to assign some responsibility for universal service costs to "large load" customers. Mr. Ewen's response was: "Vice Chair Barrow's October 23, 2025 statement explicitly indicates a link between large load additions and increased universal service costs. Other parties, including CAUSE-PA Witness Cicero and OCA Witness Colton, in this proceeding have identified a *cost basis* for allocating universal service costs to large load customers."[10] He goes on to state:

> OCA Witness Colton also quantifies the impact of large load customers on universal service costs but offers a proposal that is more consistent with the analysis, i.e., large load customers should pay for the increased costs for which they are responsible. In fairness, Witness Cicero accepts a scenario where only the LP-5 rate class (in

[8] Colton (November/December 2020). Even Though not "Participants" in Low-Income Rate Affordability Programs, Business and Industry Derive Substantial Financial Benefits from Such Programs through a Reduction in Employee Financial Stress, FSC Law and Economics Insights, available at http://fsconline.com/04_news/news.html

[9] Id.

[10] OSBA St. 1-R, at 7 (internal citations omitted) (emphasis in original).

addition to residential customers) contributes to universal service costs as a second-best outcome.[11]

As is thus evident, Mr. Ewen agrees that my recommendation to allocate a portion of universal costs has a cost basis; and that my recommendation is consistent with expressed Commission policy. He offers no objection to the specific recommendation I make with respect to the allocation of a portion of universal service costs to large load customers.

Part 3. Response to IGS Solar Rebuttal Witness Katheleen Bolcar Rever.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR SURREBUTTAL TESTIMONY.

A. In this section of my Surrebuttal Testimony, I respond to the Rebuttal Testimony of IGS Solar witness Kathleen Bolcar Rever when she opposes the recommendation that net metered customers pay the Universal Service Rider ("USR") based on their gross volumetric usage of electricity notwithstanding their self-generation.[12] Ms. Bolcar Rever recommends that the Commission reject the proposal advanced by CAUSE-PA witness Cicero. In contrast, I recommend that the arguments of Ms. Bolcar Rever be rejected and that Mr. Cicero's proposal be adopted.

I address Mr. Cicero's recommendation as though it is advancing what Ms. Bolcar Rever characterizes as her "first interpretation" of the universal service allocation proposal. She states that interpretation to be that "Mr. Cicero's proposal would be to charge the USR. . .

[11] Id., at 8 (internal citations omitted).

[12] IGS St. 1-R, at 3. While I do not directly address the related proposal that net metered customers also pay the Phase 4 Act 129 Compliance Rider, I observe that the empirical, policy, and legal basis for adopting the one recommendation would support adopting the other related recommendation as well.

on every kWh a customer uses, whether that kWh was supplied by the customer's solar system or the grid."[13] In opposition to this recommendation, Ms. Bolcar Rever asserts:

> Mr. Cicero does not explain why self-generated electricity that is used before it reaches the grid should be subject to charges that are based on electricity supplied (delivered) from the grid. Moreover, I am informed that the Commission does not have the authority to impose surcharges (or other fees) on self-generated electricity, as the self-generator is not a utility under PUC regulation and is not using electricity delivered by a utility under PUC regulation.[14]

I will address only this issue of the Commission's authority.[15] My failure to address the "implementation" issues which Ms. Bolcar Rever purports to raise should not be construed as an agreement with those arguments. The failure is merely an indication that those arguments are beyond the purview of my Surrebuttal Testimony.

Q. HOW DOES THE REBUTTAL TESTIMONY OF MS. BOLCAR REVER FAIL IN ITS DISCUSSION OF THE ALLOCATION OF UNIVERSAL SERVICE COSTS?

A. On this issue, the policy of the Commonwealth of Pennsylvania is quite clear in addressing the allocation of universal service costs. There is a statutory requirement in Pennsylvania that universal service costs "be funded in each electric distribution territory by *nonbypassable*, competitively neutral cost-recovery mechanisms that fully recover the costs of universal service and energy conservation services."[16] Ms. Bolcar Rever's

---

[13] Id., at 7.

[14] Id., at 9.

[15] PPL Rebuttal Witness Johnson raises a similar argument. (PPL St. 5-R, at 27). The following discussion applies to Ms. Johson's Rebuttal Testimony as well.

[16] 66 Pa. C.S. § 2804(9) (emphasis added).

argument that customers choosing to procure their electricity from a solar provider rather than from PPL is contrary to this policy. First, it would allow a customer to "bypass" payment of universal service costs through their selection of from whom they would procure their electricity supply. Second, it would impose universal service charges in a manner that is not "competitively neutral." Customers who choose to procure their electricity from PPL would pay the universal service charges, while customers who choose to use IGS Solar would not. To this extent, PPL would be placed at a competitive disadvantage.

Q. PLEASE ADDRESS THE ARGUMENT OF MS. BOLCAR REVER SEEKING TO ANALOGIZE THE GENERATION OF ELECTRICITY FROM SOLAR INSTALLATIONS TO INVESTMENTS IN ENERGY EFFICIENCY.

A. Ms. Bolcar Rever argues that Mr. Cicero "does not, for example, suggest that a residential customer who installs a high efficiency heat pump and reduces electric usage compared to the use of electric baseboard heating would nonetheless be charged these surcharges on the usage levels he or she previously experienced."[17] Her analogy, however, is not well-grounded. Reducing one's consumption through the investment in energy efficiency equipment is not "bypassing" the universal service charge any more than reducing one's consumption by reducing indoor heating to unsafe or unhealthy temperatures is "bypassing." A customer who has service disconnected for nonpayment, and remains off the system for four days, also will experience a reduced consumption. That reduced consumption, too, does not represent "bypassing" the universal service

[17] IGS St. 1-R, at 15.

charge. In contrast, a customer choosing to use solar-generated electricity through an IGS facility is choosing to purchase their electricity from someone other than PPL, thus avoiding PPL charges by their choice of provider. This would seem to be the exact nature of engaging in bypass, the result which the statute sought to prevent by requiring that universal service charges be "nonbypassable."

Part 4. Response to PPL Rebuttal Witness Joseph Lookup.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR SURREBUTTAL TESTIMONY.

A. In this section of my Surrebuttal Testimony, I will respond to the Rebuttal Testimony of PPL witness Joseph Lookup regarding the impact of large load customers on universal service costs.

Mr. Lookup makes the statement that "the new large load customers do not have *any* impact on distribution rates."[18] That assertion does not accurately reflect the bill impact on low income consumers from large load customers. Large load customers directly cause an increase in universal service costs. Again, as explained in my Direct Testimony and above, the addition of AI data centers to PPL's distribution system and the regional power grid will directly increase residential consumers' total bills, including supply and transmission costs, and this will have the direct impact of increasing the overall costs of the CAP program by (1) increasing participant enrollments in CAP; and (2) increasing the amounts of the CAP Credits.

[18] PPL St. 16, at 5 (emphasis added). See also, PPL St. 16, at 6 ("*none* of the costs to serve new large load customers are included in distribution rates").

Because PPL's CAP is a percentage of income program, where low-income bills are capped at an affordable percentage of income, every dollar of the total bill that exceeds the affordable percentage of income is passed through to other residential ratepayers through the Universal Service Rider. It does not matter whether that excess bill over an affordable percentage of income is attributable to supply costs, transmission costs, or distribution costs, or to something else; the excess bill will be passed through in distribution rates through PPL's Universal Service Rider.[19] The universal service charge does not distinguish between the nature of the underlying bill component. The only question is: what is the cost of the bill credits over an affordable percentage of income?

Q. HOW DOES THAT OBSERVATION APPLY TO PPL WITNESS LOOKUP'S REMAINING TESTIMONY?

A. PPL witness Lookup concedes that "the other parties have raised legitimate concerns regarding affordability impacts in the generation and capacity markets."[20] What he does not acknowledge is how those "affordability impacts" manifest themselves in distribution rates in the context of recovering universal costs (CAP credits).

Q. DOES PPL WITNESS LOOKUP ADDRESS THE NEED FOR LARGE LOAD CUSTOMERS TO HELP PAY INCREASED UNIVERSAL SERVICE CHARGES?

A. Yes. PPL witness Lookup testifies that PPL "does not object" to allocating $10 million of universal service charges to its proposed LP-6 class.[21] At the same time, however, he

[19] OCA St. 8, at 93 – 94.

[20] PPL St. 16-R, at 3.

[21] Id., at 25.

objects to my proposed mechanism for determining a nonbypassable universal service charge allocation.[22] He does not explain why the one proposal is acceptable while the other is "completely inappropriate." Contrary to what Mr. Lookup suggests, my recommendation does not "alleg[e]. . .that current cost allocation policies are inadequate to assign costs to new large load customers."[23] My recommendation is based on the observation that large load customers will directly cause an increase in universal service costs and that, accordingly, they should be responsible for paying that increase. Mr. Lookup proposed a flat liquidated amount (e.g., $10 million) to be charged to large load customers regardless of the number of such customers, the load served by such customers, or the magnitude of the resulting increase in universal service costs. In contrast, I recommend a process for determining the level of universal service costs to be allocated to large load customers. My recommended process is a better alternative than choosing a flat, static point-in-time dollar amount and allocating that dollar amount to large load customers.[24]

Part 5. Response to PPL Rebuttal Witness Bethany Johnson.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR SURREBUTTAL TESTIMONY.

[22] Id., at 26.

[23] Id.

[24] Similarly, PPL witness Johnson argues that, given that PPL has agreed to allocate $10 million of universal service charges to large load customers, my recommendation is "moot." (PPL St. 5, at 27). My recommendation, however, is an alternative to the $10 million allocation. PPL's agreement to one alternative does not make the other alternative "moot."

A. In this section of my testimony, I respond to the Rebuttal Testimony of PPL witness Bethany Johnson regarding adoption of performance-based incentives regarding universal service and credit and collections. Ms. Johnson opposes my recommendation. The reasons for her opposition should be rejected.[25]

Ms. Johnson's first ground for opposing my recommendation is that my recommendation ties penalties to the achievement of targets over which PPL has no "direct control."[26] Her disclaimer of PPL's "direct control" over the identified "targets" should be rejected. The outcome metrics which my recommended performance-based adjustments are tied include:

- An increase in CAP participation rates;[27]
- A reduction in the number of defaulted residential deferred payment arrangements;
- A reduction in the number of residential nonpayment disconnections;
- A reduction in the number of residential customers who have had their service disconnected for nonpayment in a year and who, as of December 1 of that year, remain in their home with service not yet reconnected.
- A reduction in the total money owed and at-risk (defined to be the sum of money owed by customers in arrears and the money owed by customers on deferred payment agreements).[28]

[25] Ms. Johnson's argument that Pennsylvania statutes allow performance adjustments to be made only if proposed by the Company is a legal argument that will be addressed by OCA in written briefs. I do not address that legal argument in testimony.

[26] PPL St. 5, at 25.

[27] OCA Statement 8, at 80.

[28] OCA St. 8, at 82 – 83.

At no point do I tie the proposed outcome metrics to a complete achievement of any outcome (i.e., the outcome metric is not 100% participation, or the complete elimination of disconnections, or the complete elimination of defaulted payment arrangements, or the complete elimination of money at risk). I instead recommend measurable *improvement* in these outcomes. PPL witness Johnson does not object to the reasonableness of the magnitude of the improvement I recommend. She instead objects to the concept of making measurable improvements in the outcome metrics.

While PPL might legitimately assert that it does not have "direct control" over whether it would achieve 100% participation, or a complete elimination of disconnects, or a complete elimination of payment arrangement defaults, or a complete elimination of money at-risk (as defined), it strains credulity for PPL to assert that it has *no* control over *improving* performance on these outcome metrics.

Q. UPON WHAT DO YOU BASE THE CONCLUSION THAT PPL HAS CONTROL OVER WHETHER IT CAN IMPROVE ITS PERFORMANCE?

A. The Commission has recognized the ability of utilities to control the outcome metrics I have identified. Consider:

- CAP enrollment: In my Direct Testimony, I discussed how the Commission directed both Columbia Gas and PGW to improve its enrollment of low-income customers in CAP.[29]

- Disconnections for nonpayment: The Commission's Bureau of Consumer Services (BCS) states: "termination of public utility service is the most serious consequence of customer non-payment and is viewed as a last resort when customers fail to meet their payment obligations. . . .Any significant increase in a termination rate could indicate a trend or pattern that the PUC may need

[29] OCA Statement 8, at 28 – 29.

to investigate."[30] Both the fact that utilities have options ("last resort") and the fact that the termination rate is subject to utility control (why else "investigate" if there is a "significant increase") are evident here.

- Defaulted payment plans: The BCS 2024 Annual Report states, for example: "A Payment-Troubled Customer is a customer who has failed to maintain one or more utility and/or PUC payment arrangements in a 1-year period. A Payment Arrangement is an arrangement in which a customer who admits liability for billed service is permitted to pay the unpaid balance in one or more payments. The public utilities have no restrictions on the number or terms of any payment arrangements they may choose to offer to payment-troubled customers."[31] Again, this BCS Report notes that a utility has options. It may allow a renegotiation of a payment arrangement; it may offer longer terms and/or smaller installment payments. It may direct customers to arrearage forgiveness rather than to a payment arrangement. It may be more aggressive in promoting access to energy assistance and/or hardship funds.

- Cold weather reconnections: The PUC requires surveys of customers who have been disconnected but not reconnected prior to cold weather.[32] Why engage in the survey if the utility has no control over the number of reconnections prior to the survey?

PPL witness Johnson errs when she asserts that the Company has no "direct control" over whether the Company can improve its performance on the outcomes metrics I identified. In making that assertion, her testimony does not even attempt to respond to OCA's response to her request for data demonstrating that the metrics were "actually achievable." OCA responded as follows: "Data for electric utilities reported by BCS in the annual BCS report on Universal Service Programs and Collections Performance, as

[30] BCS annual Report on Universal Service and Collections Performance, 2024, at 11, available at https://www.puc.pa.gov/filing-resources/reports/universal-service-programs-and-collections-performance-reports/

[31] Id., at 8.

[32] 52 Pa. Code §56.100(h)-(i), Cold Weather Survey results available at https://www.puc.pa.gov/media/3764/cws-initial-2025.pdf

well as data reported in the Commission's Cold Weather Survey, indicates that the outcome is reasonably achievable."[33]

Q. PLEASE RESPOND TO PPL WITNESS JOHNSON'S REBUTTAL TESTIMONY OPPOSING YOUR OBSERVATION THAT PERFORMANCE METRICS ARE COMMONLY USED BY PPL WITH RESPECT TO "CORPORATE GOALS."

A. PPL witness Johnson objects to the assertion that PPL frequently uses performance incentives to advance "corporate goals."[34] While she cites a footnote from my Direct Testimony in support of the frequent use of such performance incentives, she again chooses to ignore the discovery which PPL propounded, to which OCA responded.[35] The fact that performance goals are appropriate even if one has no "direct control" over whether customers make payments is evident in the employee incentives offered by PPL.[36]

Q. WHAT DO YOU CONCLUDE?

A. Ms. Johnson's opposition to the performance metrics I recommend should be rejected.

Part 6. Response to PPL Rebuttal Witness Steven Wishart.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR SURREBUTTAL TESTIMONY.

---

[33] OCA Response to PPL discovery, Set III, No. 5.

[34] PPL St. 5, at 25 – 26.

[35] OCA Response to PPL discovery, Set III, No. 8, subsections (a) through (g) (some of which were labelled "confidential" or "highly confidential").

[36] OCA Response to PPL discovery, Set III, No. 8 (subsections (a) through (g) (some of which were labelled "confidential" or "highly confidential").

A. In this section of my testimony, I respond to the Rebuttal Testimony of PPL witness Steven Wishart. I explain (1) the shortcomings of Mr. Wishart's testimony regarding affordability, (2) his error in discussing the relationship between low-income status and low-use status; and (3) his error in discussing the impact of large load customers on PJM markets. I finally note where Mr. Wishart erroneously attributes testimony to me that I did not present.

Q. PLEASE EXPLAIN THE FIRST ASPECT OF MR. WISHART'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND.

A. PPL witness Wishart's rebuttal testimony devotes considerable attention to asserting that electricity bills are not as unaffordable as I discussed in my Direct Testimony. I begin, however, by noting that Mr. Wishart does not directly attempt to rebut any of the substantive findings I presented in my Direct Testimony. He does not dispute that:

- PPL electric bills increased at a rate faster than First Quintile (Q1) incomes[37] increased from 2019 through 2024.[38]
- The deficit between actual Q1 incomes and the incomes required to have PPL bills be affordable has increased from 2019 through 2024.[39]
- The dollar amounts by which actual PPL bills exceed an affordable bill, given the PUC's definition of affordability, have increased from 2019 through 2024.[40]

[37] As I explained in my Direct Testimony, the Census Bureau rank orders all households from lowest income to higher income in a particular geographic area. It then divides that rank ordering into five equal parts, each part of which is called a "quintile." The "First Quintile" is the one-fifth of households with the lowest income.

[38] OCA St. 8, at pages 9 – 10.

[39] Id., at pages 11 – 12.

[40] Id., at pages 13 – 14.

- PPL bills are unaffordable for households with an annual income less than $60,000,[41] with a substantial number of households in the PPL service territory falling into these income ranges.[42]

Mr. Wishart argues, however, it is not electricity bills that are causing problems for households. He argues, among other things, (1) that "electric distribution charges account for a limited share of customer bills and have remained relatively stable over time," (2) that "long-term data show that electricity expenditures represent a relatively small portion of total household spending and have grown more slowly than other essential cost categories. . .," (3) that "long-term data show that the real inflation-adjusted cost of electricity in the United States has declined substantially over time," (4) that "electricity accounts for a modest portion of total household spending relative to housing, food, transportation, and health care," and (5) that "electricity costs have grown more slowly over time than many other essential household expense categories."[43]

What Mr. Wishart does *not* do is attempt to tie any of his observations into the statutory framework adopted for universal service by Pennsylvania statute. The Pennsylvania regulatory framework mandated by statute provides that "Universal Service is a collective name applied to the policies, protections and services that *help low-income customers maintain electric. . .service*. . ." (emphasis added).[44] According to BCS, "the goal in monitoring [universal service] programs is to ensure they increase the

[41] Id., at pages 14 – 15.

[42] Id., at pages 15 – 16.

[43] PPL St. 8-R, at pages 5 – 10.

[44] BCS annual Report on Universal Service Programs and Collections Performance, at page 2, citing Electricity Generation Customer Choice and Competition Act, 66 Pa. C.S. § 2803.

effectiveness of [electric distribution company]. . .collections while protecting the public's health and safety."[45] In the context of the collections aspect of this Pennsylvania statutory framework, Mr. Wishart's Rebuttal Testimony does not address:

- The rate of nonpayment disconnections for PPL's Confirmed Low-Income customers is four times higher than the rate of nonpayment disconnections for residential customers as a whole;[46]
- The rate of reconnections (after a nonpayment disconnection) for PPL's Confirmed Low-Income customers was only 71% in 2023 and has been declining;[47]
- The average arrears at the time of a nonpayment disconnection for PPL's Confirmed Low-Income customers has been in excess of $1,000.[48]
- The percentage of PPL's Confirmed Low-Income customers in arrears is two times higher than the percentage of PPL's residential customers in arrears, and is increasing;[49]
- The average dollar amount of arrears for PPL's Confirmed Low-Income customers is 40% higher than the average dollar amount of PPL's residential customers as a whole.[50]

Neither does Mr. Wishart's rebuttal testimony address the objective of "protecting public health and safety." While the Census Bureau does not publish data specific to utility

[45] Id., at 3.

[46] OCA St. 8, at page 33.

[47] Id., at page 33.

[48] Id., at page 35.

[49] Id., at 37.

[50] Id., at page 37.

service territories, unlike the national data relied upon by Mr. Wishart, the Census Bureau's Household Pulse Survey (HPS) publishes data specific to Pennsylvania.

In addition to my examination of energy burdens discussed above, I have also considered the "health and safety" aspects of unaffordability in Pennsylvania by reference to Pennsylvania data report in the Census Bureau's most recent PULSE Household Survey. At the time I write this Testimony, the most recent HPS data collection was for the period August 20, 2024 through September 16, 2024.

The Census Bureau's HPS documents that Pennsylvania households engage in dangerous efforts to reduce their energy bills when they find that they cannot afford to pay their bills (as I documented in my Direct Testimony and summarized above). Table 1 below shows that for Pennsylvania households with income less than $50,000, between roughly 30% and 50% reported reducing or forgoing expenses for basic household necessities (such as medicine or food) *in order to pay an energy bill* either in "almost every month" or in "some months." In contrast, from 88% to 96% of households with income over $75,000 reported "never" having to make such choices.

Table 1. Household reduced or forwent expenses for basic household necessities, such as medicine or food, in order to pay an energy bill (HPS, Housing Table 4)

	Almost every month	Some months	1 or two months	Never	Total
Less than $25,000	13.3%	26.3%	15.1%	44.1%	98.8%
$25,000 - $34,999	15.6%	12.4%	8.6%	63.4%	100.0%
$35,000 - $49,999	14.6%	15.7%	11.1%	58.5%	100.0%
$50,000 - $74,999	7.1%	20.4%	4.3%	68.3%	100.0%
$75,000 - $99,999	3.5%	14.4%	7.7%	74.3%	99.9%
$100,000 - $149,999	3.6%	7.2%	12.3%	77.0%	100.0%
$150,000 - $199,999	5.2%	3.1%	1.4%	90.3%	100.0%
$200,000 and above	1.9%	0.0%	5.4%	92.7%	100.0%

Household kept home at a temperature that felt unsafe or unhealthy

	Almost every month	Some months	1 or two months	Never	Total
Less than $25,000	8.7%	24.3%	11.3%	55.0%	99.3%
$25,000 - $34,999	9.2%	14.3%	6.3%	70.3%	100.0%
$35,000 - $49,999	4.9%	10.0%	5.2%	79.9%	100.0%
$50,000 - $74,999	4.7%	7.0%	4.3%	83.9%	100.0%
$75,000 - $99,999	1.0%	7.7%	2.8%	88.6%	100.0%
$100,000 - $149,999	8.0%	1.7%	2.6%	87.7%	100.0%
$150,000 - $199,999	1.0%	4.9%	2.3%	91.4%	99.6%
$200,000 and above	0.6%	2.7%	1.0%	95.7%	100.0%

Given this HPS survey data regarding adverse health and safety impacts of unaffordable energy, it is unreasonable for Mr. Wishart to assert in his Rebuttal Testimony that these health and safety problems should be dismissed by the Commission in this proceeding.

Q. PLEASE EXPLAIN THE NEXT ASPECTS OF MR. WISHART'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND.

A. Mr. Wishart argues in his Rebuttal Testimony that "Discovery responses in this proceeding demonstrate that low-income customers are not synonymous with low-usage customers. Data provided by PPL Electric in response to CAUSE-PA's discovery show that confirmed low-income customers, including CAP participants, generally use as much electricity as, and often more electricity than, the average residential customer, for both electric-heating and non-electric-heating households."[51] Mr. Wishart's argument is nearly identical to the Direct Testimony of Sustainable Energy Fund (SEF) witness John Costlow, even using the same language of whether "low use" and "low-income customers" are "synonymous."[52]

For all the reasons I discuss in detail in my Rebuttal Testimony to Mr. Costlow, Mr. Wishart's argument should be rejected as well. As I noted with respect to Mr. Costlow's testimony, "The question is never presented as to whether *all* low-income customers are low-use customers. The question is more nuanced than that. I would say that while there may be a number of high use low-income customers, generally, electric heating customers as acknowledged by Mr. Costlow, low-income customers are generally, and disproportionately, low-use customers."[53]

Q. PLEASE EXPLAIN THE NEXT ASPECT OF MR. WISHART'S TESTIMONY TO WHICH YOU WISH TO RESPOND.

---

[51] PPL St. 8-R, at pages 17 – 18.

[52] See, OCA St. 8-R, at 1 – 2. Mr. Wishart even cites the Direct Testimony of Costlow as support for his argument. PPL St. 8-R, at page 18.

[53] See, OCA St. 8-R, at page 2.

A. Mr. Wishart argues that recent capacity cost increases in the PJM auctions cannot be attributed to large load customers such as data centers. According to Mr. Wishart, "load forecasts project significant growth in future peak demand, those projections extend over a multi-decade horizon and are driven by a combination of factors, including electrification, economic growth, and population trends." He continues to assert that "PJM has also emphasized that current reliability and price pressures reflect the combined effects of generator retirements, delays in new resource entry, interconnection constraints, and market design features, rather than load growth alone."[54]

It is not clear why PPL witness Wishart referenced only the 2024 "Resource Adequacy Analysis and State of the Market Report" rather than also referencing PJM's August 2025 response to the 2024 State of the Market Report. In that response, PJM states: "This rapidly evolving resource mix, *coupled with significant increases in data center and other large loads* and increasing load forecast uncertainty, underscores the growing importance of robust market design." (emphasis added).[55] Whether or not "load growth alone" is having the impacts I cited in my Direct Testimony, load growth specifically associated with "significant increases in data center and other large loads" is the growth which was identified by both the Independent Market Monitor of PJM, as cited in my Direct Testimony, and PJM itself. Whether or not "load growth alone" is the sole contributor to the impacts I note in my Direct Testimony, Monitoring Analytics, the

[54] PPL St. 8-R, at page 32.

[55] PJM Response to the 2024 State of the Market Report (August 0025), at page 1, available at https://www.pjm.com/-/media/DotCom/library/reports-notices/state-of-the-market/20250811-pjm-response-to-the-2024-state-of-the-market-report.pdf

Independent Market Monitor of PJM, reported as recently as August 2025: "In summary, the current tight conditions in the PJM Capacity Market *are almost entirely the result of large data center load additions, both actual historical and forecast*. The current supply of capacity in PJM is not adequate to meet the demand from large data center loads and will not be adequate in the foreseeable future."[56] According to PJM's Independent Market Monitor in January 2026, forecasted data center and AI load accounted for $6.5 billion, or 40%, of the $16.4 billion in costs from PJM's December 2025 capacity auction for delivery year 2027/2028. Such load growth also has accounted for $21.3 billion, or 45%, of the record $47.2 billion in capacity costs in PJM's last three capacity auctions.[57] Accordingly, Mr. Wishart's testimony opposing my recommendation regarding how large load customers directly cause increased universal service costs should be rejected.

Q. DO YOU HAVE ANY FINAL RESPONSE TO MAKE TO THE REBUTTAL TESTIMONY OF PPL WITNESS WISHART?

A. Yes. In two instances, Mr. Wishart attributes recommendations and discussion to me that I did not make. These include:

- Mr. Wishart states that I criticize the Company's proposed residential customer charge (citing my testimony at OCA Statement 8, pages 87 – 98, and

[56] Marketing Analytics (August 27, 2025). Memo to PJM Pre-CIFP Workshop, "Issues for Large Additions, CIFP."("CIFP" refers to "Critical Issues Fast Path"), available at https://www.monitoringanalytics.com/reports/presentations/2025/IMM_CIFP_Large_Load_Additions_Comments_re_CIFP_scope_20250827.pdf See also, PJM (January 16, 2026). "Board Decisional Letter on Critical Issue Fast Path - Large Load Additions."

[57] Monitoring Analytics, LLC "Analysis of the 2027/2028 RPM Base Residual Auction – Part A" (January 5, 2026), available at https://www.monitoringanalytics.com/reports/Reports/2026/IMM_Analysis_of_the_20272028_RPM_Base_Residual_Auction_Part_A_20260105.pdf (last visited February 5, 2026).

particularly OCA St. 8, at pages 95 – 96). In fact, I did not offer testimony on PPL's proposed residential customer charge. The testimony Mr. Wishart cites is testimony regarding large load customers having nothing to do with PPL's rate design.

- Mr. Wishart further states that I opposed the PPL proposal regarding its RTS rate (citing my testimony at OCA Statement 8, at page 101 – 103). In fact, I did not offer testimony on PPL's proposals regarding its RTS rate. That is evident from the fact that my Direct Testimony ends at page 99. There are no pages 101 through 103 in my Direct Testimony.

Part 7. Response to PPL Rebuttal Witness Lisa Norden.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR SURREBUTTAL TESTIMONY.

A. In this section of my testimony, I respond to the Rebuttal Testimony of PPL witness Lisa Norden regarding customer service performance, low-income customer issues, and universal service programs. In brief, Ms. Norden's Rebuttal Testimony asserts that the Company has no customer service problems, is adequately addressing its low-income customer affordability problems, and that *every* proposal advanced to improve the performance of the Company's universal service programs in this proceeding should be rejected. I will address each of these issue areas in separate sections below.

A. Customer Service Performance.

Q. PLEASE RESPOND TO WITNESS NORDEN'S REBUTTAL TESTIMONY REGARDING THE FLEXIBILITY OF PAYMENT ARRANGEMENTS.

A. PPL witness Norden asserts two things as to the Company's offer of payment arrangements. First, she asserts that there is no need for additional flexibility given that, according to her, PPL already considers "ability-to-pay."[58] Second, she asserts that payment arrangements do not impede, but rather complement, OnTrack (i.e., CAP) applications.[59]

Her Rebuttal Testimony, however, does not address the fundamental problem I presented in my Direct Testimony. The data shows that the Company had an average of 39,287 payment agreements with Confirmed Low Income (CLI) customers per month in 2024, while experiencing an average of 22,755 CLI payment agreement *defaults* in that same time period. Similarly, PPL had an average of 39,611 payment agreements with CLI customers per month in the first nine months of 2025, while having an average of 22,917 payment agreement defaults in that same time period of 2025.[60] Nearly three-of-every-five payment arrangements PPL enters into, in other words, fail.

PPL witness Norden acknowledges that the Company does not consider the individual circumstances of customers in establishing payment arrangements.[61] Ms. Norden seeks to justify the Company's use of an "automated process" as being an "efficient" process.[62] It is important to remember, however, that this "efficient" process yields a high rate of

[58] PPL St. 18-R, at pages 19 – 20.

[59] Id., at 32.

[60] OCA St. 8, at 33 – 34.

[61] PPL St. 18-R, at 19 - 20.

[62] Id., at 20.

failed payment arrangements. Of the 20,672 payment-troubled CLI electric customers statewide in Pennsylvania in 2024, 18,641 of them (90.2%) were PPL customers. More than 90% of failed electric payment arrangements for CLI customers in Pennsylvania are PPL customers, even though only 47% of all CLI payment arrangements were PPL customers (80,027 of 171,603).[63] Remember, "payment-troubled" is defined by the Commission as a customer who defaulted on one or more payment arrangements in the last twelve months.[64]

Finally, Ms. Norden's argument that providing payment arrangements through an automated process is "efficient" does not respond to my Direct Testimony noting that entering into payment arrangements with CLI customers without first educating customers of their right to instead obtain arrearage forgiveness is in direct conflict with PPL's statutory responsibility to offer the most advantageous rate available.[65]

Q. WHAT IS THE SECOND PART OF WITNESS NORDEN'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Ms. Norden's Rebuttal Testimony argues that PPL's deposit exemption policies comply with PUC regulations.[66] She argues that PPL waives deposits for LIHEAP and OnTrack participants, and that customers can provide income information to the Company.[67] She

[63] 2024 BCS Annual Report, at page 10.

[64] 2024 Annual BCS Report, at page 8.

[65] OCA St. 8, at page 50.

[66] PPL St. 18-R, at page 33.

[67] Id., at page 33.

finally argues that obtaining the "informed consent" of customers before refunding deposits as a bill credit is not required by PUC regulation. She is wrong on all three counts.

A customer need not be a LIHEAP recipient or OnTrack participant to qualify for an exemption from posting a cash security deposit. Neither must a customer agree to provide actual household income to the utility to be exempt from deposits. As I discuss in my Direct Testimony, under the PUC's regulations, *all* a customer has to do is to provide information that shows the customer qualifies for a public benefit program with income qualifications that are "consistent with" CAP.[68] Showing actual participation in any number of public assistance programs, without requiring a disclosure of actual household income, satisfies that requirement. Finally, the PUC has held on numerous occasions that informed consent is, indeed, required by both the Commission's regulations and by statute, regarding deposit exemptions.[69]

Finally, PPL witness Norden asserts, without support or documentation of any sort, that waiving deposits for low-income customers would "increase the revenue requirement" of PPL.[70] If PPL disagrees with the scope of the statutory exemption, it should address those objections to the state legislature. Disagreeing with the scope of the statute, however, does not give PPL license to narrow the scope of the statutory exemption or to ignore the clear dictates of the statute (and implementing PUC regulation).

[68] OCA St. 8, at pages 55 – 58.

[69] Id., at page 60.

[70] PPL St. 18-R, at page 33.

B. Low-Income Customer Affordability.

Q. PLEASE RESPOND TO MS. NORDEN'S DISCUSSION OF ALICE DATA AND PENNSYLVANIA'S SELF-SUFFICIENCY INCOME.

A. PPL Rebuttal Witness Norden objects to setting "universal service eligibility" using either data from ALICE[71] or Pennsylvania's "self-sufficiency income."[72] However, no such proposals were made. My discussion demonstrates, and Ms. Norden does not dispute the substance of my Direct Testimony, that PPL's bill unaffordability is increasingly moving into more moderate income households. As a result, PPL is also increasingly experiencing payment difficulties that are reaching into more moderate income customers.

In making decisions in this case, the Commission is required to balance ratepayer and investor interests. As I explained in my Direct Testimony, whether those decisions involve the return on equity, or rate design, or revenue requirement, it is important for the Commission to consider the full range of the unaffordability of PPL rates. That consideration and balancing has nothing to do with setting Universal Service eligibility limits as Ms. Norden's testimony asserts. Ms. Norden opposes a proposal that was never made.

Q. WHAT IS THE NEXT PART OF MS. NORDEN'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

---

[71] "ALICE" is the acronym for Asset Limited, Income-Constrained, Employed (ALICE) households as identified by the United Way's study of poor and near-poor. See, OCA St. 8, at pages 18 – 20.

[72] Id., at page 29.

A. Ms. Norden argues that PPL's identification of "Confirmed Low-Income" customers complies with PUC regulations. She concedes, however, that the only way for a customer to be identified as "Confirmed Low-Income" is by enrolling in CAP, receiving LIHEAP, or self-certifying actual household income to the Company.[73] Clearly, limiting the identification to CAP or LHEAP participation is too limited and does not comply with the Commission's regulations.

The question is, therefore, whether requiring a customer to disclose actual household income to the Company in order to be identified as a "Confirmed Low-Income" customer complies with the PUC's regulation. The Commission's regulation requires the use of *any* information that would reasonably place the customer in low-income status to establish CLI status.[74] There could be any number of reasons why a customer could legitimately wish not to provide their actual household income to their public utility. One reason might be a desire to protect their personal privacy and a concern about the utility's ability or willingness to provide such privacy protection. Another might be a fear of losing control over who has access to their household income. Once disclosed to PPL, the household income cannot be "un-disclosed." For these same reasons, a household may wish not to disclose information on who is part of their household.

Providing information other than actual household income, would meet the regulatory requirement. Information showing participation in a public assistance program such as

[73] PPL St. 18-R, at page 30.

[74] 52 Pa. Code § 56.32(e).

SNAP, Medicaid, or TANF would comply with the regulation without requiring the disclosure of actual household income or the size and make-up of the household.

Ms. Norden argues, however, that the definition of what complies with the PUC regulation should be addressed in proceedings regarding the Company's Universal Service and Energy Conservation Plan (USECP).[75] Not all low-income issues, however, fall within the scope of a utility's USECP. Deposit exemptions do not. Qualification for cold weather protection does not. And neither does the scope of "Confirmed Low-Income." The scope of Confirmed Low-Income status has never been presented in utility USECPs. Ms. Norden's objections should be rejected.

Q. WHAT IS THE NEXT ASPECT OF MS. NORDEN'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Ms. Norden opposes any effort to increase the Company's participation in its CAP (known as OnTrack). She argues that the Company's CAP participation is already 35.4% of the eligible population.[76] She further argues, without documentation or support, that customers "may" apply for CAP, knowing that they are ineligible, simply to avoid the disconnection of service.[77]

Ms. Norden's belief that missing two-thirds of the eligible CAP population is commendable is misguided and should be dismissed. As I note in my Direct Testimony,

[75] PPL St. 18-R, at page 30.

[76] PPL St. 18-R, at page 28.

[77] PPL St. 18-R, at pages 31 – 32.

participation in SNAP in Pennsylvania in 2022 (the most recent data available) exceeded 90% of those eligible.[78]

Moreover, Ms. Norden's worry that there would be additional delay by giving households a chance to apply for OnTrack rings hollow. The aging of CLI arrears both in terms of dollars and in terms of numbers of accounts, shows the extended period over which PPL currently carries arrears.[79] A 30-day delay to allow customers an opportunity to apply for OnTrack will not substantially affect PPL, let alone impose any substantive harm.

Finally, Ms. Norden's "concern" that customers may repeatedly apply for OnTrack even though they have previously been found to be ineligible, simply using the process to avoid a nonpayment disconnection, has no foundation. The proposed 30-day delay is the *maximum* delay allowed. Even if a customer applies for OnTrack knowing they have previously been found to be ineligible, it would not take long to identify that customer and to reject the customer's application.

C. Universal Service Programs.

Q. WHAT IS THE NEXT PART OF MS. NORDEN'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Ms. Norden argues that there is no reason to disapprove the inclusion of PPL's internal universal service administrative costs through the Company's Universal Service Rider

[78] OCA St. 8, at page 43.

[79] Id., at Exhibit RDC-3 and Exhibit RDC-4.

(USR). She argues that the costs recovered through the USR are subject to audit when they are reconciled.[80]

That argument has two flaws. First, that argument does not respond to my objection to recovering internal administrative costs through the USR. By design, the USR reviews only one aspect of Company operations in the periodic reconciliation: whether the costs recovered are more or less than the actual costs incurred. Increasing internal administrative costs, however, would also have impacts on other aspects of PPL operations. It would decrease arrears and thus decrease working capital. It would decrease credit and collection expenses. It would prevent shutoffs and thus preserve Company revenue. As I discuss in my Direct Testimony,[81] the point of ratemaking is to include only the net costs of the Company's actions in rates after considering *all* of the resulting impacts on revenues and expenses. The Company's proposal isolates one cost – internal CAP administrative costs—and eliminates the review of total revenues and expenses. To isolate this single cost for special rate consideration should be denied.

Q. WHAT IS THE FINAL PART OF MS. NORDEN'S REBUTTAL TESTIMONY RELATING TO THE COMPANY'S UNIVERSAL SERVICE PROGRAMS TO WHICH YOU WISH TO RESPOND?

A. Ms. Norden argues that there should be no protections adopted to prevent the Company from double-recovering the arrearage forgiveness costs provided through its OnTrack program. Her argument confuses several unrelated issues. In fact, the very foundation of

[80] PPL St. 18-R, at 45 – 46.

[81] OCA St. 8, at pages 64 – 65.

her argument supports my recommendation that the claim for arrearage forgiveness cost recovery should be denied.

In assessing Ms. Norden's argument, it is first important to remember that the Commission has previously decided two important issues:

- The Company is entitled to recover its arrearage forgiveness costs, but it is not entitled to double-recover its arrearage forgiveness costs;[82] and
- The Company bears the burden of proof to demonstrate that no double recovery is occurring. It is *not* the burden of the OCA to prove to the contrary.[83]

Q. PLEASE EXPLAIN WHAT YOU MEAN BY YOUR OBSERVATION THAT MS. NORDEN CONFUSES UNRELATED ISSUES.

A. PPL witness Norden seeks to define the question as to whether or not PPL's bad debt recovery is accurate or not. She asserts that I "attempt to take one O&M expense and treat it differently from how all other costs are claimed in the FPFTY."[84] She also argues that I assume that "customer behavior will only occur in a way that results in PPL Electric double-recovering certain expenses."[85] According to Ms. Norden, the Company has met its burden in presenting its revenue requirement for the FPFTY."[86] She finally argues that the double recovery can only occur if there is a significant change in CAP

[82] OCA St. 8, at page 67.

[83] OCA St. 8, at page 66 – 67.

[84] PPL St. 18-R, at 48.

[85] Id.

[86] Id., at 49.

participation from what the Company projected in its FPFTY."[87] Each of these arguments fails to support a finding of no double recovery.

Q. HOW DO YOU RESPOND TO MS. NORDEN'S REBUTTAL TESTIMONY?

A. The first response to Ms. Norden's rebuttal testimony is to realize the fact that arrearage forgiveness credits *are* different from other operation and maintenance (O&M) expenses which PPL includes in its fully projected future test year (FPFTY). Arrearage forgiveness credits are recovered through a reconcilable rider, the USR. In the absence of an offset, PPL will recover 100% of its arrearage forgiveness credits *through the USR*. The question presented, therefore, is that, having recovered 100% of the arrearage forgiveness credits through the USR (in the absence of an offset), the Company should not be allowed to *also* include those dollars which will be recovered through the USR in a different part of its revenue requirement. If there is an overlap between the dollars which PPL includes in its revenue requirement and the dollars which PPL collects through its USR, there is a double recovery. The question is not whether the bad debt claim is "accurate" or not. The issue is whether certain dollars, having once been included in the claim of bad debt, can later *again* be recovered through the arrearage forgiveness credits included in the USR. As I note above, the Commission has previously explicitly held that it is the Company's burden of proof to demonstrate that no double-recovery is occurring.

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT MS. NORDEN'S REBUTTAL TESTIMONY DOES NOT MEET THAT BURDEN OF PROOF?

[87] Id., at 50.

A. I based my conclusion that Ms. Norden fails to meet PPL's burden of proof based on the facts that:

1. We know that PPL's OnTrack program has an arrearage forgiveness component to it;

2. We know that PPL's arrearage forgiveness program forgives preprogram arrears brought into OnTrack by program participants by providing arrearage forgiveness credits against OnTrack accounts;

3. We know that PPL is allowed to collect 100% of the arrearage forgiveness credits it provides through its Universal Service Rider, including periodic reconciliations to ensure that actual cost recovery is equal to estimated cost recovery;

4. We know that PPL provides arrearage forgiveness over a 24-month period;[88]

5. We know that PPL provided an average annual arrearage forgiveness credit of $344 in 2021; $371 in 2022; $261 in 2023; and $369 in 2024.[89]

6. We know that PPL provided $25,033,037 in arrearage forgiveness credits in 2022; $18,644,050 in arrearage forgiveness credits in 2023; and $27,511,596 in arrearage forgiveness credits in 2024.[90]

Given that PPL is allowed to collect 100% of its arrearage forgiveness credits (in the absence of an offset), the *only* way there is not a double-recovery of a portion of these arrearage forgiveness credits is if there is *no* overlap between: (1) the bad debt that PPL Electric includes in its revenue requirement; and (2) the pre-program arrears which

[88] PPL Electric Utilities Corporation Universal Service And Energy Conservation Plan (USECP) 2023-2027, (Revised March 13, 2023), available at https://www.puc.pa.gov/media/2407/ppl_further_revised_2023-27_usecp.pdf

[89] OCA St. 8, at 72, 2024 BCS annual Report on Universal Service Programs and Collection Performance, at 26 (2024 data, not available at the time of my Direct Testimony, has since been released by the Commission).

[90] OCA St. 8, at 72.

OnTrack participants bring into the program which become the arrearage forgiveness credits collected through the USR.

The arguments advanced by Ms. Norden do not address whether there is a double recovery of arrearage forgiveness costs because of an overlap between bad debt recovery as part of PPL's revenue requirement and arrearage forgiveness recovery through the Universal Service Rider:

- Whether PPL's bad debt increases, decreases or stays the same given CAP enrollment levels does not address whether there is such an overlap.
- Whether PPL has accurately calculated the bad debt which it has included in revenue requirement does not address whether there is such an overlap.
- Whether there is a change in CAP participation from what PPL projected in its FPFTY does not address whether there is such an overlap.

Again, the *facts* that have been established in this proceeding, include:

1. PPL's own internal policies, provided in response to discovery,[91] state that the dollar amount reserved for write-offs or uncollectibles is based on either (1) the size of arrears in dollars; or (2) the age of arrears in months.
2. On a monthly basis, Revenue Accounting retrieves the *past three years* of Accounts Receivable (A/R) balances and write-offs to calculate the percentages to be used in the A/R reserve calculation. The percentages used in the A/R reserve calculation are updated monthly.[92]
3. According to PPL's own documents, the write-off increases as the age of the arrears increases and the write-off percentages are based on "three years of data."

[91] OCA St. 8, at 75 (citing OCA-XI-8).

[92] Id. (citing OCA-XI-8, Attachment 1).

4. 70% of new CAP enrollees since 2023 enrolled in CAP with a pre-existing arrears.[93]

5. Not only are substantial numbers of low-income customers in arrears, but there are substantial numbers of low-income customers with very old arrears. According to PPL's own documentation, the write-offs increase with the age of arrears:

Example of Calculation of Residential Write-off (W/O) Percentages by Age of Arrears[94]

	Current	30 – 59	60 - 89	90 - 119	120 - 359	360+
W/O percentages	3.88%	9.73%	12.165%	14.246%	15.346%	/1/

/a/ "As part of the monthly process, the Revenue Accounting calculates the percentage of residential A/R over 360 days that was not paid or credited through OnTrack over a one-year look back period to determine the write-off percentage for over 360 day residential outstanding receivables."

Given these facts about the relationship between the age of arrears and PPL write-offs, facts relative to the age of Confirmed Low-Income arrears (without CAP) thus become relevant. The data was set forth in my direct testimony which presented monthly data on the aging of arrears for Confirmed Low-Income customers for the months of January 2023 through September 2025.[95] The data shows, for example:

- That in January, between 19,913 (January 2023) and 26,315 (January 2024) PPL low-income customers had a *180-day balance* on their PPL bills. In April, between 7,424 low-income accounts (April 2025) and 9,436 low-income accounts (April 2024) carried a *360-day balance*. In July, between 28,368 (July 2025) and 46,249 (July 2023) low-income accounts carried *a 120-day balance*.

- A similar result –that of substantial and ongoing very old low-income arrears— occurs with the aging of arrears when viewed in terms of dollars (rather than numbers of accounts). In April 2023, $35.984 million of low-income arrears were 120 days old or older, while in April 2024, $44.692 million were that old. In

[93] OCA St. 8, at 73.

[94] Id. (quoting OCA-XI-8, Attachment 1).

[95] OCA St. 8, Exhibit RDC-3.

January 2023, $27.300 million in arrears were 120 days or older, while in January 2024, $46.081 million of low-income arrears were that old.

None of the facts identified above were contested by Ms. Norden. Indeed, the data cited is data which PPL, itself, provided.

Q. WHAT DO YOU CONCLUDE?

A. Setting the cost offset at $0, as proposed by Ms. Norden, would necessarily assume that *both* of two things are true: (1) even though Company policy is that 15.346% of arrears over 120 days old are reserved for bad debt (with smaller percentages applied to debt less old), *none* of the $35 to $46 million of CLI debt that old were included in that calculation; and (2) even though between 28,000 and 46,000 CLI customers had debt 120 days old (July of previous years), *none* of the 70% of low-income customers who enrolled in CAP with a pre-program arrears were included in that CLI population with arrears. For there to be no double-recovery, *both* of these assertions must be true. Ms. Norden did not address, let alone demonstrate, the truthfulness of these statements.

D. Performance-Based Ratemaking.

Q. PLEASE RESPOND TO PPL REBUTTAL WITNESS NORDEN'S OPPOSITION TO YOUR PROPOSED PERFORMANCE-BASED RATEMAKING?

A. PPL Rebuttal Witness Norden advanced several arguments in opposition to my recommended performance-based metrics. I will address each in turn.

First, Ms. Norden argues that the Commission may only adopt performance metrics if the Company proposes them.[96] This argument is a legal argument that will be addressed by OCA attorneys in the appropriate written legal briefs.

Second, Ms. Norden argues that performance metrics should only be set by rulemaking.[97] Not all utilities necessarily merit a performance-based approach or necessarily evidence a need for the establishment of performance-based metrics. Indeed, precisely to the contrary, the need for performance-based metrics, which metrics should be considered, and where those metrics should be set, all require the type of evidentiary basis for individual utilities such as has been presented in this proceeding. Measuring performance on the operations I discuss for PPL should be done on a company-by-company basis. A rulemaking would not necessarily be appropriate and would certainly not be required.

Third, Ms. Norden questions the achievability of the proposed metrics given that PPL has no direct control over customer decision making.[98] This is the identical argument that was raised by Company Rebuttal Witness Johnson. I addressed that argument in my response to witness Johnson above.

[96] PPL St. 18-R, at page 35.

[97] Id., at 34 – 35.

[98] Id., at 36, 38.

Contrary to what Ms. Norden asserts, however, the BCS annual Report on Universal Service Programs and Collection Performance documents that the metrics I recommend are achievable. The BCS Report shows that a utility:

- Can indeed, reduce the number of customers not on payment arrangements by 10% in a year.[99]
- Can indeed reduce the number of defaulted payment agreements (i.e., payment-troubled customers) by 10% in a year;[100]

In achieving each of these metrics, PPL will help meet the metric involving money at risk. For example, reducing disconnections should reduce the total money at risk. Reducing the number of defaulted payment arrangements will both decrease nonpayment disconnections and reduce money at risk. Increasing enrollment in OnTrack will reduce disconnections and reduce the money at risk. Achieving each of the metrics reinforced the Company's ability to achieve the other metrics. Contrary to Ms. Norden's assertions that the metrics cannot be simultaneously achieved, the metrics have been purposefully designed to be self-reinforcing.

Q. DOES THIS COMPLETE YOUR SURREBUTTAL TESTIMONY.

A. Yes, it does.

[99] 2024 BCS Report, supra, at page 24.

Introduction……..1

Affordability of Rates……...2

Impact of Data Centers on Rates……..8

Impact of Data Centers on the Environment……..15

Quality of Service ……...…18

PPL Financial Health……...…20

Conclusion and Recommendations…….....…23

1. Introduction

Q. What is the purpose of your direct testimony?

A. The purpose of my direct testimony is to summarize the public input hearing testimony of PPL customers regarding the proposed rate increase and tariff changes, and to contribute relevant customer-focused information for the Commission's consideration.

Q. Were Public-Input Hearings held in this proceeding?

A. The Pennsylvania Public Utility Commission (PUC or Commission) conducted six Public Input Hearings to gather testimony from ratepayers to learn how the proposed increase would impact them. On Monday, December 8, 2025, a Public Input Hearings was held in-person at Scranton University Brennan Hall at 6:00 PM. On Tuesday, December 9, 2025, an in-person Public Input Hearing was held at the Catasauqua Municipal Building at 6:00 PM. On December 10, 2025, an in-person Public Input Hearing was held in Harrisburg, at the Keystone Building at 6:00 PM. On December 11, 2025, an in-person Public Input Hearing was held at the Manheim Township Public Library at 6:00 PM. Two additional telephonic calls were held on December 15th at 1:00 PM and 6:00 PM.

At the four in-person hearings and two telephonic hearings, over 100 unique consumers testified regarding the above issues. This summary focuses on testimony pertinent to the OCA's overall recommendations set forth in the OCA's direct testimony.

2. Affordability of Rates

Q. What concerns were raised about the affordability of the rate increase?

A. Approximately 48 consumers testified that PPL's proposed rate increase would materially harm affordability and place essential electric service out of reach for many households. Tr. 94-96, 101, 105, 107, 110-116, 148, 173-174, 176-177, 193, 211, 229, 235, 242, 243, 246, 251, 280, 282, 285, 335-336, 394-395, 422, 433-434, 468-469, 482, 496, 512, 513-514, 598, 600, 640, 668.

PPL customers testified that they are struggling with higher costs for necessities, and that an additional rate increase will place a substantial burden on household budgets.

Eddie Day Pashinski, the State Representative for Pennsylvania's 121st District (Wilkes-Barre) testified "I'm looking for fairness, balance, and something that is accessible so that people can afford. There is no way on God's green earth that a 25% rate increase is a reasonable increase. Customers are not receiving an increase in their salary of income at 10, 12, 15, or 20 percent. We use a couple of words affordability, accessibility and quality. If it is not affordable, it is not accessible. Therefore, quality does not matter." Tr. 94-96.

Jim Haddock, the State Representative for Pennsylvania's 18th District (Luzerne and Lackawanna counties) testified, "The 6.98 percent rate increase translates to 22 percent cost of the distribution costs for the average customer to their bill...Yeah, we're in tough times…The state of Pennsylvania had 336,000 disconnects in the first nine months of 2025. That's a 16 percent increase over the 2024 figures… So, disconnects, people cannot pay for it...and this rate increase is pounding the residential people of Pennsylvania…Of the

$356 million per year, $254 million would be born on the backs of residential customers… this is top-heavy for the largest customer number, which is the residential rate." Tr. 101.

Kyle Donaghue state Representative for the 113th district (Lackawanna County), testified, "there are people in my district who are already choosing between heat and food. People are sitting in the cold because they're terrified of what the next bill will look like. Utilities love to talk about resiliency. But what - what about the resilience of the people paying the bills? This rate hike is not reasonable; it's not justified and it's certainly not fair. It is a direct result of PPL's poor planning, cushion, corporate treatment, and willingness to push cost and zone forecasting failures onto everyday people of Pennsylvania." Tr. 107.

The Mayor of Scranton, Ms. Paige Cognetti, testified "Families cannot absorb anymore Utility rate increases. The cost of electricity, gas, water and sewer are climbing faster than the wages of the people who rely on these services." Tr.110. The Mayor of Scranton further testified, "Billions of households in our city spend 6 to 10 percent of their income on energy alone. That means there is less food to cover the bill. It means skipping medication. It means choosing between safety and affordability in the coldest months of the year." Tr.111.

Ms. Doyle testified "I don't want to have to choose between keeping the lights on and making sure I can't afford food. No one should have to make that decision. Right now,

I am concerned about the rising cost of electricity and what else homeowners will have to sacrifice." Tr. 115-116.

Mr. Jeff Smith testified that "the rate increase will have a domino economic effect on municipalities, school districts and cities." Tr. 148.

Representative Ms. Jeanne McNeill of the 133rd district (Leigh and Northampton counties), testified "there is an affordability crisis right now and a rate increase will only add to it." Tr. 173. Mr. Lamont McClure, a Northampton County executive, testified, "with rising prices in all phases of our life, the trip to a grocery store now brings anxiety." Tr. 176-177.

Witness Mr. Matt Haskell testified that his family is looking to move out of state because utility costs are becoming unaffordable. Tr. 224. Mr. Benjamin Roelloto echoed by Mr. Haskell stating, "I don't want to live here things are more expensive." Tr. 243.

Representative Madison serves the 104th Legislative District, (South Harrisburg, Steelton, Highspire, Swatara), one of the most impoverished districts in Pennsylvania. Mr. Madison testified that "many of his constituents are living in or at the poverty level and that increase in electricity rates could drive customers into homeless shelters." Tr. 280. He was also concerned about the impact on small businesses within his district since the prices of goods and services have already caused businesses to close, adding "an increase in electricity rates will further force the number of businesses into closure." Tr. 282.

Ms. Sarah DeSantis testified on behalf of Representative Justin Fleming of the 105th Legislative District, who serves Susquehanna Township, Pembroke Borough, Lower Paxton, and Dauphin County. In the testimony Ms. DeSantis provided on behalf of

Representative Fleming, it discussed how the representative grew up in poverty, making him very aware of the cost of living issued residents are facing. Tr. 285.

Ms. Nyla Jackson testified, "A rate hike of this percentage would create serious hardship for all forcing people to make unacceptable choices between paying for essential utilities and covering other important necessary necessities. Essential services like electricity are not optional." Tr. 335-336.

Senator Ms. Judy Schwank of the 11th district (Berks County) testified that "it is not merely a financial matter; it is about access to a necessity of life." She also testified "many customers are fearful in these difficult economic times…Electricity is not a luxury. It lights our homes, warms our meals and sustains our lives. The rate increase of this magnitude threatens to limit access to this vital utility. Based on the proposed increase, customers would receive what amounts to another monthly electricity bill…No rate increase can be considered reasonable." Tr. 468-469.

Ms. Mary Lee Dentz testified that the "working public does not get a 7 percent increase in their paychecks…However, PP&L wants to increase the residential rate by 7 percent, the industrial rate by 2.6 and the commercial rate by 3.3 percent. I don't feel that our increase is fair." Tr. 482.

Mrs. Venessa Lynch testified that "when electricity becomes unaffordable, health suffers…Families in older, inefficient homes, especially renters, may reduce air conditioning or heating during extreme temperatures, putting children, seniors, pregnant people and those with asthma or heart conditions at serious risk. High utility bills force

impossible choices. No parents should have to choose between keeping the lights on and buying groceries, filling a prescription or paying rent." Tr. 496.

Ms. Jennifer Engle testified as to her concerns regarding the rate impact on small businesses. She testified that "many small businesses are still recovering from recent economic challenges and higher energy costs could hinder their ability to stay open or expand." Ms. Engle also testified "it will definitely pass along higher costs to consumers, reduced employees and possibly even layoffs." Tr. 394-395.

Mr. Jere Swarr testified that "I'm also concerned about costs going up for the individual in our house, but they also go up for business. Churches, schools, libraries will all be hit with the whammies of the electric bill." Tr. 434.

Mr. Colby Wesner is a physician who works with Think Big Pediatric Cancer Fund, an organization that helps families manage medical costs. Mr. Wesner testified that "the most common need we see is assistance with electricity bills…The proposed PPL rate increase would further increase these families' financial strain and add to their anxiety and hardship during an already devastating time." Tr. 508.

Mr. David Young, Chief Executive Officer of Schuylkill Community Action testified that the proposed electric rate increase does not exist in a vacuum. Regarding residential customers, Mr. Young testified that "PPL's requested rate increase directly threatens ability to keep their homes heated in the winter, to cook and store healthy food and to maintain table housing without the constant food fear of shutoff notices and disconnection." He also testified that "lowering rates for data centers only incentivize more growth while shifting - shifting risk and expense onto households least able to absorb it. The PUC has both authority and responsibility to prevent this outcome. The Commission

has a clear opportunity to set a precedent that residential customers should not be forced to subsidize infrastructure and system costs created by data centers and the multinational corporations they serve. Those entities have the financial capacity to pay their fair share, and they should." Tr. 513-514.

Ms. Laura Heroux testified that "PPL should prioritize efficiency, responsible spending and equitable cost distribution rather than shifting financial pressure onto everyday customers. Residential customers are already facing significant financial strain due to inflation, higher housing costs, healthcare expenses and food prices…Electricity is not a luxury. It is a basic necessity required for heating, cooling, cooking and medical equipment. A rate increase would disproportionately harm low and fixed-income households, seniors and families with children, many of whom have little flexibility to absorb higher utility bills. For these customers, even modest increases can force difficult choices between paying for electricity and meeting other essential needs. Affordable and reliable electricity is essential for community stability, public health and economic resilience. Protecting residential customers from higher costs help - helps ensure that energy remains accessible to all, not just those who can afford rising bills." Tr. 598-600.

The Mayor of Wilkes-Barre, Mr. George Brown, testified that "the median household income for Wilkes-Barre residents, according to U.S. Census 1 Bureau, is $47,970." "Many of our elderly residents are on a fixed income. Wilkes-Barre City also has residents from low-income households who receive financial assistance from various social service agencies. I fear that this rate increase will push our financially insecure residents to face the choice between paying their electric bill or paying for their food or medicine cost. In addition to the impact that the rate increase will have on personal

finances, I fear that the rate increase on businesses will have a domino effect on the local economy." Tr. 640.

Mr. Anthony Cook, a small business owner who makes custom bicycle frames, testified that "I need electricity to run my business and I cannot pass on the increase in electricity rates onto my customers as they will not pay more for bicycle frames." "I'm losing sales every year because they cost more money, and I sell less. And I'm seeing my business fade away from me right in front of my own eyes. It's crushing my dreams." Tr.668.

3. Impact of Data Centers on Rates

Q. What concerns were expressed about the impact of data centers?

A. A significant portion of the public input testimony focused on the constructions of data centers and the significant demand they place on the electric grid. A total of 37 customers testified that data centers should be required to pay their fair share of the proposed rate increase. Tr 99-105, 119-121, 128, 131-133, 143, 193, 203, 208, 218, 240, 330, 335-336, 375-376, 381, 397, 413, 426, 428, 486, 490, 495-496, 521-522, 525, 551, 654.

Customers testified that the demand created by data centers is a primary driver of increased infrastructure costs. Accordingly, they asserted that such costs should be allocated to the data-center operators and not shifted onto residential ratepayers. Witnesses repeatedly stated that large corporate entities should bear their fair and proportionate share of the financial burden associated with the increased demand they create.

Mr. Jim Haddock, State Representative for the 18th District (Luzerne and Lackawanna counties) testified that, "given the tremendous amount of growth in Pennsylvania and around the country in data centers, we need a firm commitment from PPL that those data centers pay their fair price, and they take the burden of their responsibility of the costs onto the data centers. We also need PUC to require that the data centers pay their fare cost, not the people. This must be done through regulation with the PUC. The LP-5 must be scrutinized very heavily in this rate request." Tr. 100.

State Representative Haddock, testified, "This rate increase is totally out of line with the economic picture of Pennsylvania at the current time. It is unjustified because it predominantly rests on the backs of those 1.3 million residential payers. This is not fair that residential payers and small businesses are getting the second largest increase next to residential payers. And corporate payers are receiving the smallest increase. And data center class is receiving a reduction." Tr. 102.

Representative Mr. Kyle Donahue of the 113th district (Lackawanna County) testified that "Families are rationing, skipping, cutting, paying the next bill won't break them. And now PPL arrives at our door again, demanding more. Meanwhile, giant corporate users get a free ride. Let's be capable - let's be clear. PPL proposes no increase for its LP-5 rate class, the class that includes data centers. So, households, seniors, small businesses and working families must foot the bill while massive energy consuming corporate users are shielded. This is not equity. This is not fair. This is a deliberate - deliberate choice to place the burden on those least able to absorb it." Tr. 105.

Mr. Jordan Moran testified, "we need to act now before these data centers become the new Coal Baron's. We can't be the ones to foot the bill. The purpose of Utility Company is to provide a service not to seek investment enrichment with customer funds." Tr. 128.

Ms. Geralyn Esposito testified, that "PPL should go to the data centers and ask them to give you the money you need to supply them with the energy they need…If you have corporations that want to come in and will make profits on the back of every resident in my town, how can you not ask them to pay for their fair share?" Tr.119-120.

Mr. George Jendrey also testified that "large load customers should not only have to cover the incremental cost of interconnecting their facilities, but they should also cover the total impacts of the grid. Don't let the PP&L residential customers be roadkill in the race for AI. A flat job rate, higher utility rates is not what PA residents want or deserve." Tr.133.

Mr. Lawrence Zale also testified to the impact of data centers. He testified "who benefits from data centers? Apple, IBM, Amazon, and Microsoft. These companies are taking the stock market to record levels; they are flush with money. And PPL is asking residential customers to pay for data centers. Where is the logic in this?" Tr. 143.

Ms. Jones testified by asking the question: "if these corporations have so much money to build these data centers, why can they not finance them by yourself? Why do our electricity bills have to go up?" Tr. 251.

Ms. Sarah DeSantis, speaking on behalf of Representative Fleming of the 105th Legislative District, testified that "data centers should be held financially responsible for the rate increases directly attributable to their energy consumption and related infrastructure impacts." Ms. DeSantis emphasized that constituents within Representative

Fleming's district are concerned about subsidizing private corporations whose energy needs far exceed those of ordinary consumers and testified "We should not be allowing the wealthy owners of data centers a discount when our residents can't afford to keep their homes." Tr. 286-287.

Ms. Theresa Diffendal testified that "data centers won't bear the brunt of the cost of spiking electricity consumption as PPL proposes to lower rates from the customer class that most AI data centers fall under…Indeed, their proposal only benefits these data centers and incorporates none of the Public Utility Commission's provisions from the draft model tariff, which are meant to protect residents like me." Tr. 316.

Ms. Jennifer McDuffy testified that "PPL appears to be using outages allegedly caused by data centers as a need to increase rates. She further testified that while data centers are receiving tax breaks and lower rates, residential customers are being penalized." Tr. 325-326.

Reverend Kevin Long testified that "it's absurd that this proposal calls for the people who don't want these data centers to foot the bill to meet AI's unquenchable thirst for electricity. Too many Pennsylvanians are struggling to get by, and it requires a heart two sizes too small to suggest they should struggle more. At the very least, out-of-state corporations should have to pay their own way." Tr. 330.

Mr. Ron Bataoaro testified that "data centers, subsidized by billionaires, are taking money away from hard working families. Propping up these companies don't create value for anyone but themselves." Tr. 332-333.

Mr. Vatalaro testified that "supporting these corporate ventures does not create meaningful economic value for the broader community but instead shifts financial burdens onto those least able to absorb them." Tr. 332.

State Representative Ms. Nikki Rivera representing the 96th district, (Lancaster City, Manheim Township, East Petersburg Borough), also shares this concern, testifying "I'm a little concerned that residents pay more than our businesses, but I'm also especially concerned at what residents will pay per kilowatt hour when the data centers do come online." Tr. 367

Senator Mr. James Malone representing the 36th district, (Lancaster County), testified that "multi-billionaire tech companies need to cover the cost of using our infrastructure. It is unacceptable that families in Pennsylvania should pay even a dollar more a month to subsidize big tech. The PUC should prioritize families here, reject these rate increase proposals until we have some basic consumer protection in place. The model tariff for data centers and other large loop customers should be in place before PP&L can increase rates for everyone and spread-out costs being driven by a few large companies. This will help make sure families in my district are not stuck footing the bill for upgrades and infrastructure that big tech companies need as they pull energy from our grid." Tr. 372-373.

Ms. Bernadette Margel testified that "electricity cost represents more than 64% of her utility costs." Tr. 375. She also agreed with Senator Malone and Representative Rivera testifying, "if there's an additional benefit to those of us who are residential consumers, OK we'll pay our fair share. But don't throw everything into one big bucket and ask us all to

pay equitably when the data centers are the ones that seem to be driving a lot of this infrastructure increased need." Ms. Gail Hoffer echoed Ms. Margel's testimony. Tr. 376.

Senator Katie Muth of the 44th District (Berks County) testified: "I'm very concerned that this proposal is not about reliability or safety for households, but rather it is about protecting shareholder returns, and executive compensation and corporate expansion while shifting the financial burden onto regular people and small businesses who have no choice but to pay. In just four years, the price to compare has jumped from roughly 7.5 cents per kilowatt hour to nearly 13 cents, an increase of more than 70 percent even before accounting for the distribution rate hike now before this Commission. This proposal continues a dangerous and increasing - increasingly familiar pattern. Profits are privatized while costs are socialized." Tr. 473-476.

Ms. Tamela Trussell testified that "the tech companies receive state tax breaks and additional incentives for data center development. Residential customers do not receive such breaks." Tr. 521-522. Witness Ms. Theresa McCollum agreed with Ms. Trussell's statement regarding tax incentives. Tr.525. Ms. Jennifer McDuffie also testified that data centers won't pay sales tax for 15 years. Tr. 326.

Witness McCollum and Mr. Chirstopher Budusky both expressed concerns about the amount of electricity data centers will draw from the grid, possibly leading to future brown and black outs. Tr. 413, Tr. 525. Ms. Lynn Goldfarb also testified that she is worried about outages that could occur, like the Texas freeze, due to the demand data centers will bring. Tr. 381.

Ms. Engle testified that "data centers should be expected to make equitable financial contributions to the universal service programs which help disadvantaged

customers because data centers are already significantly increasing electric bills…They are increasing the cost of these programs while paying nothing towards them. Pay for all costs related to transmission and distribution upgrades necessary for their interconnection unless you can prove to the PUC that the upgrades benefit other customers in significant ways. If these data centers can spend $52,000,000,000 to buy sites, they can afford to pay the cost." Tr.397.

Mr. Favoroso testified that "I do not believe that the data centers that would benefit from this rate increases to residential customers add value to my life in any form and I do not want my money to subsidize these facilities. Subsidizing these operations of the data centers does not improve the quality, safety, or affordability of my electricity. This rate increase would not materially improve the quality of my life." Tr. 426.

Mr. Parrish also testified that, "make the data centers pay the full cost of their expansion." Tr 428.

Mr. Kenneth Kodama, who is a residential solar customer, testified as follows: "Residential customers shouldn't be subsidizing the increased demand caused by these data centers. The data centers should pay all costs related to transmission and distribution upgrades necessary for their interconnection and not be given a lower distribution rate than residential customers." Tr. 486.

Ms. Madison Mullen testified "the Commission needs to uphold their duty to regulate the predatory practices of companies such as PPL by rejecting this rate increase request, rejecting others like it, and continuing to support implementation of the large load tariffs or other policies that will ensure data centers pay their share of the chaos they are causing everywhere they pop up." Tr. 490.

Mr. Pedro Torress testified that "it's reasonable that since PP&L is doing well and tech giants are flush with investors, it's they who stand to profit the most from infrastructure upgrades would also bear the lion's share of its cost." Tr. 557.

Mr. Christian Krupsha testified that "we're being asked to subsidize the infrastructure for some of the most profitable companies in the world while those companies get a rate reduction. Last year, data centers caused about $460 million in transmission upgrades in PP&L territory. And if residential customers pay roughly a third of that cost across a million customers, that's like about $150 per customer that we've absorbed." Tr. 654.

4. **<u>Environmental Concerns caused by Data Centers</u>**

Q. What testimony was raised regarding environmental concerns caused by data centers?

A. Over the course of the six public input hearing, 5 witnesses testified to their concerns data centers will have on the environment. Tr. 193-194, 208, 243-244, 326, 396, 403, 474, 495, 496, 503, 520, 595, 660, 661.

Mr. Barry McMickle testified that "the demand for water to cool data centers is exasperating the water prices. Data center developers are increasingly tapping into freshwater resources. Eastern Pennsylvania had a very dry year last year and we should be very cautious before adding another stressor to that water supply." Tr.193-194.

Witness Ms. Connie Yaqub testified that, "I'm also someone who cares a lot about the environment, and I am concerned about the environmental impacts." Tr. 208.

Witness Mr. Benjamin Robilotto testified to concerns about the impact runoff from data centers will have on farmers, particularly the Amish community. Tr.243-244.

Ms. Jennifer McDuffy testified to her concern over the environmental impact that data centers will cause Middlesex Township. She testified, "I am concerned about converting permeable land into concrete and asphalt...Large data centers also require large amounts of water for cooling which will impact the local water resources." Ms. McDuffy stated that "she had attended a presentation in Virginia where residents reported turning on their faucets and not having water due to the large amount of water data centers consume." Tr. 326.

Ms. Jennifer Engle testified that "PPL states if all these centers come online, there will be a major energy shortfall in PPL territory in the next five to six years. PPL's parent company wants to build gas fired power plants specifically to supply data centers, an environmental and consumer cost nightmare." Tr. 396.

Ms. Tamara Shephard testified to her concerns regarding health issues data centers cause. She testified that "we have reliable data that shows that we people that must live near these data centers for any length of time, they have water supply issues to their home. They're showing increased spikes in miscarriages and dramatic increased rates of incredibly rare types of cancers." Tr. 403

Mr. Jay Parrish testified that "he is concerned about the pressure to produce more electricity quickly, which will lead to increased use of coal and gas both of which are thermal waste and methane producers that cause environmental issues." Tr. 427.

Senator Muth also expressed concerns about data centers, testifying that they "cause equipment damage, power disruptions, and safety hazards to the environment." Tr. 474.

Ms. Venessa Lynch who is a consultant for Mom's Clean Air Force, testified that "in June, PPL families saw generation cost increases of around 20 percent. Now, PPL is proposing a 20 percent distribution increase as well. Even worse, the data centers responsible for both hikes are being given cuts to their costs in the current proposal, which is directly opposite to the PUC's own judgment that data centers are absolutely impacting electricity distribution costs. Utility companies continue to seek higher profits and prioritize data centers at the expense of families. Proposed rate hikes would pull millions of dollars from working families' budgets even as costs for groceries, rent, childcare and healthcare keep climbing." Tr. 495-496.

Dr. Barbara Brandom testified, "costs of data center development to residents in Pennsylvania extend much further than electricity rate hikes to further include deterioration of air quality, and climate and exposure to constant noise, light and radiofrequency electromagnetic fields." Tr. 503.

Ms. Tamel Trussell testified that "the additions of these data centers and many others proposed in the Conodoguinet Creek watershed will exacerbate poor air quality, water quality and quantity. With increased 2.5 particulates, numerous hazardous chemicals including heavy metals, salts and PFAS, the residents will bear the brunt of the increase in water, wastewater and electric utility bills." Tr. 520.

Ms. Stacey Kimmel-Smith stated, "it feels fundamentally unfair to ask households already dealing with rising costs to finance infrastructure expansions that primarily serve

private corporations and AI ventures that may ultimately displace jobs rather than strengthen our regional economy." Tr. 595.

Mr. Nathan Eachus expressed his concerns over data centers testifying that "the public bears the cost through higher utility bills, degraded air quality, and reduced access to essential drinking water. The Commission must protect ratepayers, safeguard public health because these data centers are powered by methane and diesel running 24/7/365, poisoning our air, and demand full transparency from utilities, developers, and water suppliers before these speculative projects impose irreversible burdens on Pennsylvania communities." Tr. 660-661.

5. Quality of Customer Service provided by PPL

Q. What issues were raised regarding customer service provided by PPL?

A. Eight customers testified regarding their dissatisfaction with PPL's customer service, describing repeated delays in equipment replacement, insufficient vegetation management, unreliable electrical service, and persistent billing issues that have negatively impacted them. Tr. 182-185, 231, 303-304, 312, 338-339,541,586.

Ms. Kris Burek, a witness at the Catasauqua public input hearing testified that "on December 29, 2024, a drunk driving accident damaged a streetlight and residential property on Main Street. Tr.182. It took approximately ten months to repair the damage. This was only after the Borough Manager and Borough Secretary attempted to contact PPL eight to ten times. The issue was finally resolved after a formal complaint was filed with the Public

Utilities Commission. Currently there are four streetlights out on the main street in Catasauqua, presenting a real danger to residents." Tr.183. Ms. Burek also testified that "residents have had to add their own lights outside their homes for safety reasons due to the lack of operating street lighting." Tr.184. Ms. Burek further testified that "if PPL was an employee and you gave them a task to do and they didn't do it for 10 months until they were pushed to do it, would you give them a raise? I would not…Ratepayers are paying PPL more to power these additional outdoor lights, effectively paying a maintenance fee for inoperative street lighting." Tr. 185.

Witness Mr. Kyle Gardner testified to his frustration with PPL's lack of tree trimming, stating "all three years of living in Herbert and during the winter storms, anywhere I drive through, where it's PPL, trees just hanging on the wires. They just cut enough for the cars to get through, and they leave it there months at a time." Tr. 231.

Mr. Michael Brubaker also testified that "it was extremely expensive $150 thousand dollars, and a lengthy process in connecting to the grid." Tr. 300. Brett Reinford echoed Mr. Brubaker, noting that "connecting to the grid was expensive and very time-consuming." Tr. 312.

Ms. Cherice Burrus testified, asking PPL if the plan to install or already have a smart micro grid which uses renewable energy or solar, and wind as examples, and smart tech in place to locate potential grid failures. "My point on that is preventing outages is possible and not a reasonable reason to increase rates if those systems were in place." Tr. 303-304.

Ms. Terece Cyrus testified to her frustration with PPL customer service. Her bill continued to increase prompting her to reach out to PPL to determine the cause. Ms. Cyrus

testified that she feels her bills are being estimated, as usage continues to rise. "After numerous phone calls and extremely long wait times, a PPL customer service representative suggested she have her meter replaced." Tr. 340-341. Ms. Cyrus testified, "Ultimately, I was forced to enter the budget billing program for three years that expires on an annual basis. These budget billings do not explain the usage." Tr. 338-339.

Mr. Adrian Sanchez wanted to know if vegetation management was part of the increase. He testified, "in the cities there are trees hanging on the power lines." Tr. 400.

Mr. Francis Lawrence also testified "I was out of service for 75 hours in 2011. And if the trees were trimmed the way they were supposed to be under the vegetation management specs that PPL has, there would not have been an outage for that long of a time in my area." Tr. 541.

Mr. James Roberts testified that "PPL cannot be trusted to do something even when ordered by the Commission. He further referenced Docket Number M-2023-3038060 regarding the numerous billing issues customers experienced in 2023." Tr. 531.

Witness Mr. John Theisen also testified to concerns over tree trimming. He testified, "they should improve the efficiency of their work crews, such as the tree trimmers that we had in our area about a year and a half ago, who took an inordinate amount of time to finish the job." Tr. 586.

6. PPL Financial Health

Q. What comments were made regarding PPL's financial earnings?

A. Approximately 10 customers testified that PPL's claimed need for a rate increase was inconsistent with PPL's financial strength. Tr. 101-102, 142, 237, 316, 408-409, 479, 517, 585.

Representative Haddock testified, "PPL as a company is having a pretty good year financially. In 2025, they raised their dividend, and they continued all four quarters, including the quarter that's been announced. And it's been a modest 2 - 2 percent - 2 cent increase, taking it from 25 cents per dividend for stockholders to 27 cents. PPL is on decent times financially themselves." Tr. 101-102.

Senator Muth also testified, "I'm very concerned that this proposal is not about reliability or safety for households, but rather it is about protecting shareholder returns, and executive compensation and corporate expansion while shifting the financial burden onto regular people and small businesses who have no choice but to pay." Tr. 473.

Witness Mr. Lawrence Zale also testified that, "PPL's gross income of 1.2 billion in income and having had profits." He further testified, "they are not in debt." Tr. 142.

Mr. Scott Ettinger testified that "the CEO received a salary and bonus totaling $11.4 million dollars a year, which he characterized as an excessive level of compensation for the chief executive of a public utility company that provides an essential service used by the public. The CFO receives a total compensation package of $1.3 million dollars a year. That is a tremendous amount of money for just two people at the top of the organization." Tr. 237.

Ms. Theresa Diffendal testified, "this rate increase comes on the heels of an $880 million in reported earnings for PPL in 2024 with an 11 percent profit margin. An increase from 2023's reported earnings of $740 million." Tr. 316.

Ms. Stephanie Schultheisz testified that "PPL Corporation reported $711,000,000 in their third quarter earnings last year. This year they're reporting $994,000,000 for their third quarter. PPL's annual revenue has been increasing from the reports I've been reading, including a 36.64 percent increase in 2021, 5.192 percent increase in 2022, 1.8 percent increase in 2023, and 8.42 percent increase last year. If its customers have had to be creative enough to keep surviving in the economic realities of 2025 with less, I would hope PPL can use their actual growth and earnings to manage their business needs and growth effectively. Surely, if I can survive without meaningful adjustments to my pay for a decade, PPL can find a way to use their revenue without disrupting my survival by sucking my finances further dry." Tr. 408-409.

Senator Muth testified, "when residents see monopoly utilities posting strong financial performance while their bills skyrocket, they lose this - they lose faith that the system is fair or that regulators are acting independently of corporate influence. Approving this increase without correcting the underlying cost allocation problem will send a clear message to Pennsylvanians that corporate profits matter more than household affordability, livelihoods and people health." Tr. 479.

Ms. Margel testified that "the PPL proposal would increase their return to investors from about 3.9% to nearly 11%. That's a triple percentage. This needs to be reviewed and considered. Tr. 376. Witness Maggie Waggoner all agreed with Mrs. Margel's comments." Tr. 517.

Witness Mr. John Theisen testified that "PPL's total business has increased from $5.8 billion in 2021 to about $9 billion in 2025. Their net profits have risen from $739 million in 2023 to about 1.2 billion in 2025. The average annual return on PPL stock for

the last three years was 14.7 percent. And from 11/30/21 to 12/1/22 alone, PPL increased their price to compare by 82 percent. And as we all know, just last year, PPL got a 50 percent increase of 15 in their DSIC, generating an extra 37-and-a-half million dollars. All this seems to indicate that PPL is doing very well indeed and does not need an increase." Tr.585.

7. Conclusion and Recommendations

Q. Please summarize your conclusion and recommendations.

A. Customer testimony at the public input hearings strongly supports and reinforces the opposition to PPL's proposed rate increase. Witnesses highlighted that the service territory includes a large population of customers who are already highly or severely energy burdened, as well as many customers living on fixed incomes, making rates unaffordability. Testimony indicated that failure to adequately account for affordability risks worsening public health outcomes by increasing energy burdens and forcing customers to choose between essential needs such as food, heating, and medical care. Therefore, witnesses requested that the Commission consider the effects of increasing already unaffordable rates when rendering its decision in this proceeding.

PPL's customers urged the Commission to establish a fair and equitable rate classification for data centers, ensuring that the large corporations who are building them are paying for the increased need for infrastructure development. The public testimony consistently called for a rate that places the financial responsibility for increased grid demands on the entities causing those demands—in this case, data-center operators—rather

than on residential customers. The overarching concern expressed was the need for fairness, transparency, and a rate-making process that protects ordinary consumers from subsidizing large corporate energy users.

I recommend and urge the Commission to thoroughly review the public input hearing testimony regarding PPL's proposed rate increase. I also recommend the PPL address the concerns raised by customers in their rebuttal testimony. Customers' voices must be heard and taken into consideration when determining the final rate increase.

Q. Does this complete your Direct Testimony?

A. Yes

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
v.	:	Docket No. R-2025-3057164
PPL Electric Utilities Corporation	:	

VERIFICATION

I, LeeAnn M. Wise, hereby state that the facts above set forth in my Direct Testimony, OCA Statement 9, are true and correct to the best of my knowledge, information, belief, and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3057164

PPL Electric Utilities Corporation

Statement No. 16

Direct Testimony of Joseph Lookup

Topics: **Reliability Performance**
Storm Restoration and Planning
Large Load Interconnections

Dated: September 30, 2025

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Joseph Lookup, and my business address is 827 Hausman Road, Allentown, Pennsylvania 18104.

Q. By whom are you employed and in what capacity?

A. I am employed by PPL Services Corporation ("PPL Services") as Vice President – Transmission and Distribution Planning and Asset Management and provide services to PPL Electric Utilities Corporation ("PPL Electric" or the "Company").

Q. What are your responsibilities as Vice President – Transmission and Distribution Planning and Asset Management?

A. I oversee the Transmission Planning, Asset Strategy, Portfolio Management, Project Development, Real Estate, Project Management and Construction Management Groups. This includes responsibility for Transmission system reliability, investment strategy and project execution.

Q. Please describe your professional experience.

A. Prior to working at PPL Electric, I worked as a consultant providing engineering, project management, construction management services for utility, industrial, commercial, and educational clients. At PPL Electric, I have worked in Engineering, Project and Construction Management, and Asset Management in various engineering and project leadership, and management roles.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is as follows:

- To explain the Company's reliability performance and describe proposals aimed at improving reliability performance;
- To discuss trends that the Company is seeing with respect to storms and describe Company's plan for addressing storm restoration for more frequent and intense storms; and
- To describe how the Company is meeting the challenges associated with interconnecting new large load customers.

Q. Are you sponsoring any exhibits in this proceeding?

A. No.

II. RELIABILITY PERFORMANCE

Q. Please describe your assessment of the Company's electric system reliability.

A. The Company's system reliability is generally better than most national utility peers, based on comparisons using the Institute of Electrical and Electronics Engineers ("IEEE") Annual Reliability Benchmarking Survey as well as the Edison Electric Institute ("EEI") Reliability Survey. The 2024 IEEE survey reported on reliability for over 70 million customers represented by 73 operating companies. PPL Electric has been a top quartile IEEE System Average Interruption Frequency Index ("SAIFI") performer since 2014. PPL Electric's 2024 IEEE SAIFI value was 0.661, versus an

IEEE panel median of 1.45. Similarly, PPL Electric ranked 11th out of 80 utilities for IEEE SAIFI on the 2024 EEI survey.

The Customer Average Interruption Duration Index ("CAIDI"), or average duration of a customer interruption, is slightly underperforming the median of 124 minutes with a value of 136.6. However, the Company's customers experience fewer annual minutes without electric service than do peer utilities. The Company's System Average Interruption Duration Index ("SAIDI"), or total minutes an average customer is without service in a year, is better than most peers (90 annual minutes per customer in 2024 and 92 minutes in 2023, versus panel medians of 137 minutes in 2024 and 119 minutes in 2023.). For Customers Experiencing Multiple Interruptions ("CEMI"), on the 2024 EEI survey PPL Electric ranked 14th out of 55 companies reporting values for percentage of customers seeing 3 or more interruptions ("CEMI3+") in 2024.

Although PPL Electric has generally performed well compared to its peers, the Company recognizes that improvement is still needed in this area to improve the overall customer experience. This was highlighted in the Pennsylvania Public Utility Commission's ("PUC" or "Commission") Management and Operations Audit issued in June 2024, and actions are in place to improve the Company's CEMI, CAIDI and SAIDI metrics, in addition to ongoing plans around SAIFI and Momentary Average Interruption Frequency Index ("MAIFI"). In particular, the Company will continue to evaluate opportunities for new storm hardening programs or acceleration of existing mitigation programs and/or projects for reliability to minimize outages associated with increased storm activity (as explained further below).

Q. Does the Company consider other factors as it reviews the reliability of its electric distribution system in addition to SAIFI, CAIDI, and SAIFI?

A. Beyond SAIFI, SAIDI, and CAIDI, PPL Electric routinely considers other reliability measures such as CEMI, Worst Performing Circuits, Worst Performing Segments, Customers Experiencing Recent Interruptions ("CERI") at the 7-day, 30-day, and 90-day measures. Customers Experiencing Long Interruption Duration ("CELID") and MAIFI are also considered. PPL Electric also monitors the reliability and health of assets through asset monitoring, routine maintenance activities, voltage monitoring, and tracking and trending of equipment failures.

Q. Please describe your overall assessment of the effectiveness of management as a result of your reliability analysis.

A. PPL Electric's analysis of reliability performance supports the Company's view that it is being effective and well-managed with respect to reliability. Benchmarking through vehicles like IEEE and EEI shows that performance in a variety of reliability measures is better than most peers, which management believes reflects the efforts and investments that have been made over the years to build a smarter, more resilient electrical infrastructure. The Company is a leader in the use of new technology in the industry, primarily due to the established culture that empowers management and personnel to innovate and never settle for status quo. Management uses a broad suite of dashboards and key performance indicators ("KPIs") to understand the leading and lagging indicators of reliability performance. These metrics allow management to make investment and operational decisions that are designed to improve the overall customer

experience and help ensure the Company meets its first quartile operational goals. In addition, the Company prides itself on being a learning organization, always finding ways to improve processes or procedures and learning from the past.

PPL Electric's culture of innovation is evidenced by the industry innovation awards it has won, including the 2025 Smart Electric Power Alliance ("SEPA") Resilience Power Player Award for predictive failure technology that proactively identifies failing electrical components before they cause outages; the 2024 Thomas F. Farrell II Safety Leadership and Innovation Award presented to Bill Farber for outstanding safety leadership; and the 2023 Charles Steinmetz Top Innovator Award from Public Utilities Fortnightly, recognizing Sal Salet and his team for advancements in smart grid automation, downed power line detection, and renewable energy integration. These honors reflect the Company's commitment to pioneering solutions that enhance grid reliability, safety, and sustainability.

Q. What programs, policies, or actions has the Company specifically implemented to achieve a level of reliability that is indicative of the Company being well-managed?

A. The Company began its increased investment in aging infrastructure following the development of its 2009 Maintenance Optimization Strategy ("MOS") Report to stem the increase of failures and reliability issues due to an aging fleet. Much of the investment was made into the transmission system since then, primarily focused on rebuilding aging 69kV transmission lines, replacing wood poles with more resilient steel structures, and replacing aging substation assets. As a result of these investments, the

Company's transmission system has seen a 90% improvement to transmission SAIFI over the years 2012-2024.

The Company also invested in replacing aging infrastructure on the distribution system over that period, but only enough to maintain existing reliability levels. Many of the improvements to distribution SAIFI came because of the Company's Smart Grid program in 2015. That program enables the Company to automatically identify and isolate faults on the distribution system and then sectionalize and restore customers without human intervention, restoring customers often in seconds or minutes.

The Company has recently experienced its worst storm performance and worst SAIFI performance in recent history due to a record number of storms in 2024. The Company is confident that an increased investment in the distribution system is needed now to strengthen and harden its system to be more resilient to the increase in storm and weather-related events and to improve the overall customer experience.

Q. How does PPL Electric determine what are the right investments to make?

A. PPL Electric has a comprehensive governance process in place to guide its capital investment decisions. This process ensures that investments are aligned with both system and customer needs, regulatory requirements, and corporate objectives. There are three main components of this governance process as I will describe below.

Asset Management Process: The Transmission and Distribution Asset Management department is responsible for identifying work and developing associated costs for infrastructure investments. These investments, once approved by management, are included in the business plan and ultimately approved at the PPL

Corporation board level. The department also reviews projects periodically, considering factors such as need, prioritization, cost, schedule, and scope of work. Project reviews and authorizations are conducted monthly through the Transmission Accountability Meeting ("TAM") and Distribution Accountability Meeting ("DAM") processes.

Business Planning Process: PPL Electric prepares a five-year business plan annually, which is aligned with PPL Corporation's overall business plan. The business plan includes capital investments that have been approved through the Asset Management Process. This iterative process involves submitting the plan to PPL Corporation until it is approved by the Board of Directors. The business planning process is informed by system needs, customer interconnections, regulatory requirements, and customer service needs.

Governance and Approval: Projects included in the approved five-year business plan move on to the Governance and Approval process. The Governance and Approval process includes several stages, from planning and development, engineering, construction, in-service, and close-out. This structured approach ensures that all projects are thoroughly evaluated and approved at various levels, including Director and Vice President levels, in accordance with Delegation of Authority policies and procedures.

This governance framework ensures that PPL Electric's capital investments are strategically planned, thoroughly evaluated, and aligned with both internal and external requirements. Additional discussion of PPL Electric's governance process can be found in the direct testimony of PPL Electric witness Dennis Urban (PPL Electric St. No. 2).

Q. Are there other factors that affect the Company's reliability performance?

A. Yes. While the Company has robust reliability measures and programs in place, as discussed above, that does not mean it is immune to external factors which can have an impact upon system reliability. As mentioned above, the Company has seen a record number of storms in 2024 and one of the worst years in recent history for reliability. The increase in storms has caused an extensive amount of outages and damage primarily due to trees and vegetation falling into lines. Because of this trend, there is a strong need to harden the Company's system to withstand these events. The Company has developed design and construction standards that will allow us to harden its facilities, including stronger poles, insulated conductor, and underground facilities. Implementing these solutions now is necessary to improve the system's reliability and the overall customer experience. The Company also has a program to manage vegetation, as explained in the direct testimony of PPL Electric witness Nicole Howell (PPL Electric St. No. 17). Vegetation management factors heavily into the Company's system reliability, especially considering dealings with invasive species, such as the emerald ash borer and spongy moth.

Q. Please explain further the problems caused by invasive bug species.

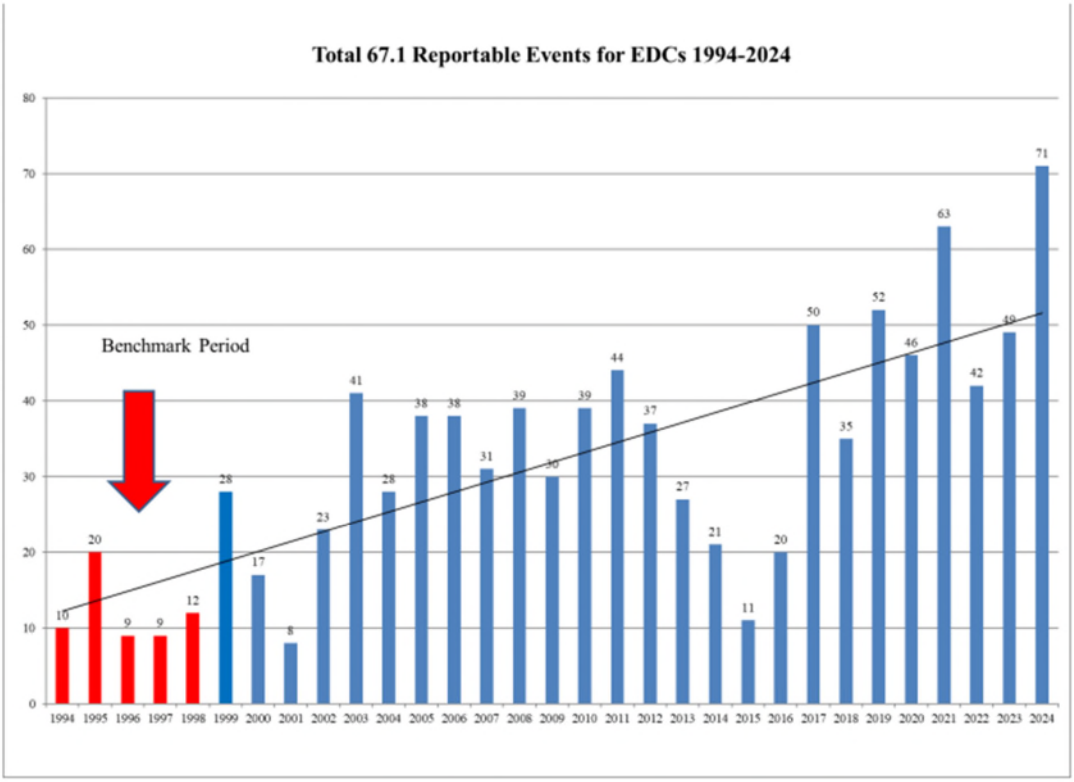
A. The invasive emerald ash borer and spongy moth are causing the mortality of Ash and Oak trees to rise across the Company's service territory. When these trees defoliate and die, they can fall on to Company infrastructure and cause outages. Approximately 30% of the trees that the Company removes are Ash Trees.

Q. Please describe the Company's proposal with regard to invasive bug species.

A. As discussed in the direct testimony of PPL Electric witness Nicole Howell (PPL Electric St. No. 17), the Company intends on increasing its vegetation management budget to proactively address invasive bug species. PPL Electric is also proposing a program to expand right-of-way ("ROW") rights to address off-ROW trees.

III. STORM RESTORATION AND PLANNING

Q. One of the three reasons for which the Company filed its last rate case in 2015 was because of the accelerated capital investments it was making to maintain and improve system reliability in the face of major storms. Briefly describe the Company's outlook on the frequency and severity of storms in 2015.



A. Concerns over storm hardening in the 2015 rate case stemmed from several recent major storms that the Company had experienced, namely Hurricane Irene in August 2011, the Halloween Snowstorm in October 2011, and Hurricane Sandy in October 2012. These storms prompted the Company to conduct a review of its system to determine how to reduce the impacts of major storms. From the Company's 2012 base rate proceeding to the Company's 2015 base rate proceeding, the Company had made efforts and undertaken initiatives to improve storm response and outage management. Part of this effort included the implementation of a Storm Damage Expense Rider ("SDER"). In the 2015 rate case, the Company proposed changes to the SDER which would, in part, address concerns regarding the unpredictable nature of storms.

Q. How has the Company's experience with the frequency and severity of storms changed since the 2015 rate case?

A. I would note that the frequency and severity of storms, as well as outages related to these more frequent and severe storms has increased for the Company and for Pennsylvania electric distribution companies ("EDCs") as a whole. In the Commission's most recent 2024 Pennsylvania Electric Reliability Report,[1] 2024 had the most reportable events for all EDCs in Pennsylvania since 1993. A copy of Table 4 from the 2024 Pennsylvania Electric Reliability report is reproduced below:

[1] https://www.puc.pa.gov/media/3565/24_electric-reliability-report_final.pdf,

Table 4 – Total 67.1 Reportable Events for EDCs 1994 through 2024

As seen above, EDCs across the Commonwealth experienced 71 reportable outage events in 2024, as compared to 49 events in 2023. Specific to PPL Electric, the Company experienced a significant number of storms, which resulted in 17 reported outage events in 2024. While it did not record a Major Event in 2024, it experienced 11 storms of 600 cases or higher, including six storms of over 1,000 cases.

However, reportable storms data does not tell the whole story. PPL Electric has experienced and expects to continue to experience increases in the number, severity and frequency of non-reportable storm events as well. In 2024, the Company experienced 20 non-reportable storm events, as compared to 31 in 2023 and its historic prior 10-year average of 17. In 2025, PPL Electric is on pace to be a record storm count year with 39

total storms (30 non-reportable) through September 14th, the most ever by this time of year. With respect to severity, PPL Electric notes that the trend in the average number of damage locations (cases) per PUC Reportable storm has been increasing by approximately 3% per year from 2016 to 2025. And, with respect to frequency, PPL Electric notes that it experienced an average of 40 total (reportable and non) storms per year from 2021-2024, versus and average of 23.6 for the 10 years prior to that period. Importantly, from an operational perspective, the costs incurred from non-reportable storms are of a similar nature as costs incurred from reportable storms and should be granted similar opportunities for cost recovery, as discussed further in the direct testimony of PPL Electric witness Katelyn Arnold (PPL Electric St. No. 13).

Essentially, 2024 presented one of the most challenging years for electric utilities, including PPL Electric, in history. The Company anticipates that these weather trends will continue, and that the number and frequency of severe storms will increase going forward, noting that 2025 is currently on pace to record the highest storm count in any single year.

Q. How has the Company's focus on storm response and proactive storm hardening evolved since the last rate case was filed?

A. Related to storm hardening, pursuant to its inspection and maintenance ("I&M") practices, PPL Electric recognizes that while it cannot control the frequency and severity of weather events it can implement proactive measures that prevent outages from occurring. In particular, PPL Electric has a specific focus on equipment performance,

and has four programs implemented under its I&M plan that are designed to improve equipment performance:

(1) Asset Health Management, which focuses on the use of data-driven failure probability models to optimize addressing aging infrastructure, the capturing of asset health and critically scores to refine its programs to deliver the most effective reliability impact per dollar invested, and the Company's Long-Term Infrastructure Improvement Plan ("LTIIP") that includes proactive installation of measures aimed at improving reliability and customer experience;

(2) Chronic Reliability Remediation, which most recently focuses upon the Company's 2024 initiative to "harden" its circuits including those most impacted by weather events given the increased number of storms that have been experience, and proactive circuit analysis that reviews every circuit on a four-year cycle to address operational and reliability characteristics for each circuit;

(3) Engineering Design Standards, which include the Company's Reliability Principles and Practices that ensure the Company plans, protects, and operates its electric distribution system under a consistent sent of principles to ensure system safety and reliability; and

(4) Smart Grid, which includes efforts by the Company since its last base rate case to enable it to react rapidly to changes occurring on the distribution system due to weather (or other) events.

PPL Electric also has robust vegetation management practices related to tree pruning, removal, re-clearing, and herbicide application inside of the ROW. PPL Electric also removes hazard trees outside of the ROW when possible. Additional information

regarding the Company's current and proposed enhanced vegetation management practices is provided by PPL Electric witness Nicole Howell (PPL Electric St. No. 17).

In summary, based upon the increased frequency and severity of weather events, the Company has enhanced its focus and its multi-faceted approach to both: (1) improve response and repair time to help ensure fewer customers are affected by storms outages for a shorter period; and (2) harden the distribution system to prevent weather-related outages from occurring in the first place.

Q. How is this additional focus on storm response and storm hardening measures driving the need for rate relief in this matter?

A. The Company's enhanced focus on storm response and storm hardening measures is one of the primary drivers of rate relief in this proceeding. Although the Company continues to ensure that it is allocating resources in an efficient manner (i.e., by ensuring that its portfolio of activities produces the best reliability result for a given expenditure), this involves additional expenditures in the form of both capital investments designed to improve system resilience and reliability, and O&M expenses designed to respond to storm events and improve how the system is maintained and decrease the risk of storms impacting existing facilities.

IV. LARGE LOAD INTERCONNECTIONS

Q. Please explain why the subject of data centers and other large load interconnections in the Company's service territory has emerged as an important issue.

A. Data centers and other large load customers are increasing in Pennsylvania. While these customers will provide the opportunity for significant economic development within the Company's service territory, they also represent a large load influx onto PPL Electric's system presenting new challenges. Pennsylvania is fast becoming an epicenter for data center innovation, and PPL Electric is seeing a significant portion of this growth in its service territory. Large load customers are attracted to the Company's modern and robust electric grid, and PPL Electric has an increasing number of data center projects in advanced development. The pipeline of projects exceeds the Company's current peak load of 7.8 GW. In practical terms, that means the Company is preparing to more than double its system demand in just 5–6 years—growth that took over a century to reach. This large-scale growth directly enhances the lives of PPL Electric's 1.5 million customers in eastern and central Pennsylvania. It drives down costs, improves grid reliability, and helps ensure that households and communities reap the rewards of robust infrastructure while supporting economic revitalization and job creation across the region. PPL Electric provides a robust transmission system that data centers need to operate efficiently, offering both high reliability and high capacity.

Q. What impact does the Company anticipate from the development of data centers and the resulting demand?

A. Data centers are driving substantial load growth at an unprecedented level. PPL Electric will need to make significant investments in the transmission system to interconnect these new customers. This will include investments that are paid for by the customer and investments that are paid for by the Company. With respect to investments that are put into rate base, the Company is mindful not to create stranded asset risk for other customers. Additionally, PPL Electric must account for the resource adequacy challenges created by this significant load growth. By carefully planning and executing these investments, PPL Electric aims to support the growth of new customers without compromising the service quality for existing customers.

Q. Does the Company have a planned response to the expected impact of data centers and other large load interconnections?

A. Yes, the Company is already implementing this plan through its existing electric service agreement ("ESA") process. Notably the current ESA includes minimum load guarantees (80% of contracted load until service commitment is satisfied), load ramp schedules, and security instruments to ensure that the customer pays enough in revenue to cover the cost of rate-based investments. Additionally, the agreement outlines early termination terms and conditions to protect both the Company and other customers from stranded cost risk. By adhering to these provisions, the Company aims to maintain a balanced and sustainable approach to managing the increased demand while mitigating stranded cost risk to other customers.

Q. Is PPL Electric proposing to adjust its tariff to address these issues as a part of this proceeding?

A Yes. The Company is proposing to revise its Rate Schedule LP-5 to mirror what it is currently requiring in its ESA with large customers. Under the proposed tariff language, any large load customer that requires upgrades that will be socialized through rates must provide adequate security that it will meet a revenue guarantee equal to the amount of costs placed into rates. As explained earlier, this involves minimum load guarantees for the term of the service commitment and security instruments covering the obligation in the event that the customer defaults.

Q. How has the Company handled such large load interconnection requests up to this point?

A. Under the Company's current retail tariff, service at or above 69 kV is provided under Rate Schedule LP-5, which generally requires the customer to pay for all interconnection costs. Historically, this approach has worked well, as the system upgrade facilities needed to interconnect the LP-5 customer only benefited the interconnecting customer, justifying the customer covering the cost. New large load customers have created the situation that they are necessitating upgrades that provide benefits to the entire grid. These include reliability benefits arising out of upgrading the networked bulk electric system. The Company has been extending service under its LP-5 rate schedule and including load commitment guarantee terms in the customer's ESA. The load commitment language in the ESA is similar to the Company's line extension

guarantee terms in Rule 3 of the tariff for lower voltage line extensions. In addition to the customer's contribution in aid of construction ("CIAC") obligation, the customer guarantees to take service in an amount that the customer will pay electric service rates equal to the upgrade costs that are socialized through transmission rates. This is designed to ensure that the investments to interconnect these customers are justified and that other customers will not be left paying for stranded assets.

Q. Has the Company's existing treatment of new large load interconnections in this manner been successful?

A. Yes. Although it is still early in the large load development trend, and there are not any current large load customers in service that are subject to the new ESA terms, the Company has not experienced any significant pushback to the ESA terms and has successfully executed ESAs with these terms for load additions in the pipeline.

Q. If the Company's use of its existing ESA process for new large load interconnections has been successful, why is the Company proposing to revise its Rate Schedule LP-5?

A. PPL Electric utilized its existing ESA process to try to meet the needs of the new large load customers. However, in the long term the Company wants to memorialize its large load interconnection terms in its tariff for transparency and consistency.

Q. How does the Company protect, or plan to protect, other customers from the risk that a planned large load may not materialize?

A. The proposed revisions to the LP-5 rate schedule require a customer to provide security in an amount that equals the costs being put into rates. In the event that the customer stops taking service prior to PPL Electric receiving revenue equal to the rate-based costs, the Company will draw down the security and apply those funds to reduce its plant in service amount. This has the effect of backing these costs out of rates, so that other customers do not pay for upgrades needed for load that did not materialize.

Q. Are there any benefits to other customers from interconnecting new large load customers?

A. Yes. First the upgrades to the bulk electric system will improve the reliability and resiliency of the transmission grid. In certain instances, these upgrades may create new transmission paths which will allow for additional generation to be brought online. Second, customers should see significant reductions in their transmission costs. PPL Electric recovers its costs for its transmission system through its Federal Energy Regulatory Commission ("FERC") formula rate. These costs are allocated to customers by the amount they contribute to the system peak. When these large loads are interconnected, they will represent a significant percentage of PPL Electric's system peak, and as a result lower the portion other customers are responsible for paying.

Q. Does this conclude your direct testimony?

A. Yes, it does.

REBUTTAL TESTIMONY OF
JOSEPH LOOKUP
ON BEHALF OF
PPL ELECTRIC UTILITIES CORPORATION

Topics: **Large Load Interconnection**
Reliability and Performance
Storm Restoration and Planning

Dated: January 23, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Joseph Lookup, and my business address is 827 Hausman Road, Allentown, Pennsylvania 18104.

Q. By whom are you employed and in what capacity?

A. I am employed by PPL Services Corporation ("PPL Services") as Vice President – Transmission and Distribution Planning and Asset Management and provide services to PPL Electric Utilities Corporation ("PPL Electric" or the "Company").

Q. Have you previously filed testimony in this matter?

A. Yes.

Q. What is the purpose of your rebuttal testimony?

A. In my rebuttal testimony, I respond to portions of the direct testimony submitted by the Pennsylvania Public Utility Commission's ("Commission" or "PUC") Bureau of Investigation and Enforcement ("I&E") Witnesses Walker and Tarr, Office of Consumer Advocate ("OCA") Witnesses Hoyt, Colton, and Wise, Office of Small Business Advocate ("OSBA") Witness Ewen, Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Havumaki, Energy Justice Advocates ("EJA") Witness Rábago, Environmental Intervenors ("EI") Witness Nelson, and PP&L Industrial Customer Alliance ("PPLICA") Witness LaConte. In particular, my rebuttal testimony

addresses issues pertaining to large load interconnections, the Company's electric service reliability and performance, and PPL Electric's storm restoration and planning.

Q. Are you sponsoring any exhibits or schedules as part of your rebuttal testimony?

A. Yes. Attached to my rebuttal testimony is PPL Electric Exhibit JL-1R [Answer to CAUSE-PA VIII-9 and CAUSE-PA VIII-9 Attachment 1].

II. LARGE LOAD INTERCONNECTION

Q. Do any of the parties provide comments or propose adjustments or recommendations related to the Company's reliability and performance?

A. Yes. OCA Witness Hoyt provides analysis, findings, and recommendations regarding large load interconnections. OCA Witness Colton also sets forth findings and recommendations regarding large load interconnections and affordability. OCA Witness Wise similarly offers testimony on the impacts of large load interconnections discussed during public input hearing held in this proceeding. Further, OSBA Witness Ewen provides testimony on the inclusion of new large load customers in the LP-5 rate class and on allocation of universal service charges to new large load customers. Meanwhile, CAUSE-PA Witness Havumaki offers recommendations regarding the Company's proposed treatment of new large load interconnections and its proposal to socialize transmission system costs associated with new large load customers. Additionally, EJA Witness Rábago provides recommendations on the Company's proposed LP-5 rate schedule revisions regarding cost allocation, and cost increases. Also, EI Witness Nelson makes recommendations regarding the Company's

proposed LP-5 rate schedule revisions. Lastly, PPLICA Witness LaConte likewise provides recommendations regarding the Company's proposed LP-5 rate schedule revisions.

Q. Do you have any initial thoughts on the other parties' positions regarding PPL Electric's large load tariff proposal?

A. Yes, I believe that the other parties are underestimating the potential for new large load customers to create a win-win situation for existing customers. These new customers will fund substantial investment in the Company's transmission system, which will make it more reliable and resilient for all customers. At the same time these new large load customers will shoulder a larger share of transmission costs meaning that existing customers will benefit from an improved grid at lower cost. In real numbers, the Company is anticipating that a residential customer with average monthly usage of 1,000 kWh will see their transmission costs go down by approximately $40/year with the first addition of 1 GW of load. If the Company interconnects the projected 20 GW of load it is anticipating, existing residential customers stand to see transmission costs be reduced by approximately $255/year. (*See* PPL Electric Exhibit JL-1R [Answer to CAUSE-PA VIII-9 and CAUSE-PA VIII-9 Attachment 1.) The other parties have raised legitimate concerns regarding affordability impacts in the generation and capacity markets. Although this proceeding is focused on distribution, the Company has carefully considered these recommendations and revised its proposal to address these issues.

Q. In preparing PPL Electric's large load tariff provisions did you consider the model tariff for large load interconnections proposed by the Commission?

A. I have reviewed and considered it and assisted in preparing the Company's comments submitted at Docket No. M-2025-3054271. However, the Company submitted its base rate case on September 30, 2025, prior to the PUC issuing its order on the model tariff on November 6, 2025. My responses to the other parties' witnesses will address many of the topics raised in the model tariff now that the Company has the benefit of having reviewed it.

Q. Do any of the other parties recommend creating a new rate class for large load customers?

A. Yes, OSBA Witness Ewen, CAUSE-PA Witness Havumaki, and PPLICA Witness LaConte all recommend creating a separate rate for new large load customers. (OSBA St. No. 1, pp. 4, 16; CAUSE-PA St. No. 2, p. 21; PPLICA St. No. 1, pp. 4, 13-15.) The reasoning provided is that new large load customers are fundamentally different than existing LP-5 customers, a new rate class will allow the Company to assign costs to the new large load customers and assign Universal Service costs to new large load customers.

Q. Why did the Company not propose a new rate schedule for large load customers?

A. The Company's rate schedules are for distribution rates. LP-5 customers take service at or above 69 kV. PPL Electric's tariff defines its distribution system as facilities operating at voltages below 69 kV. The LP-5 rate class only has a customer charge to cover certain fixed costs associated with providing retail service to these customers. The costs of the distribution

system facilities are not allocated to LP-5 customers because LP-5 customers do not use or benefit from the distribution system. Regardless of the size of the customer, all LP-5 customers are similarly situated for the purposes of *distribution* ratemaking.

Q. Would the Company consider creating a new large load rate class?

A. Yes, but it would not resolve all of the concerns that the other parties have. PPL Electric is not opposed to creating a rate class for customers with peak demands in excess of 100 MW. This would allow the Company to assign a portion of Universal Service costs to this rate class, which I will discuss in additional detail later. However, the fact remains that no costs from new large load customers will be allocated to other customers in their distribution rates with or without this new rate class. Additionally, it will not allow for the direct assignment of transmission costs to this new rate class. Transmission costs are allocated in accordance with the Company's Federal Energy Regulatory Commission ("FERC") Formula Rate, which is not affected by a customer's distribution rate classification.

Q. How do you respond to the other parties' concerns about the impact to affordability created by new large load customers?

A. PPL Electric is also mindful of keeping rates affordable for customers. However, the Company disagrees with the criticisms from the other parties. The new large load customers do not have any impact on distribution rates, as the interconnection system upgrade costs are recovered through transmission rates. Adding data centers and other large load customers to the PPL Electric system will reduce transmission rates for existing customers. This leaves the

impact to affordability being caused by generation and capacity costs which PPL Electric has no control over.

Q. Does everyone agree that new large load customers do not impact distribution rates?

A. No, specifically testimony at the Public Input Hearings, various customers and public officials alleged that data center development is the principal driver behind the Company filing this distribution base rate case. This is not true, and I will explain in greater detail below, none of the costs to serve new large load customers are included in distribution rates.

Q. Do they have similar concerns about transmission rates?

A. The other parties' concerns with the Company's projections of transmission rate reductions mostly involve challenging Company assumptions in its analysis. Specifically, they question the Company's assumptions about the amount of additional load and the cost to interconnect the new customers. I do not think these are fair criticisms as it is extremely likely that adding new large load customers will have a downward pressure on transmission rates. PPL Electric's transmission costs are allocated to customers based on their contribution to the Company's system peak. The current system peak is approximately 7.5 GW. It is safe to assume that adding a 1 GW large load customer will increase the system peak to 8.5 GW because the new large load customers are expected to have stable continuous operations. This will result in this one new customer being allocated approximately 12% of the Company's transmission revenue requirement. The percentage being allocated to large load customers will only increase as new customers are interconnected. It is true that the revenue requirement will

increase as upgrade costs are included in rate base. However, those increased costs will be far outpaced by large load customers being allocated a substantial portion of transmission rates which will have the effect of reducing transmission rates for other customers as I explained earlier.

Q. Can you explain the other parties' concerns about the impact of new large load customers on the generation and capacity markets?

A. Yes, the other parties explain that the generation markets are unable to add capacity to match the new large load additions. This has created a supply and demand challenge, where supply cannot meet demand, resulting in higher prices. PPL Electric agrees that new large load additions are contributing to increases in generation and capacity costs. In fact, the Company has advocated for legislative change to address the affordability challenges being created by the generation markets. However, PPL Electric is a transmission and distribution company and has no control over generation and capacity market costs as it operates in a restructured state. *See* 66 Pa. C.S. §§ 2801, *et al.* Using transmission and distribution rates to address concerns with generation markets runs afoul of cost of service principles and is bad public policy. The other parties have legitimate concerns about the design of the generation and capacity markets, but they should raise those concerns directly with the entities that are responsible for those markets, just as PPL Electric has been raising its concerns.

Q. Could the Company address generation and capacity costs issues with its default service plan?

A. Several of the parties point to the Company's increasing Price to Compare ("PTC") as evidence of the impact of new large load customers are having on affordability. PPL Electric has a Commission-approved Default Service Plan where it acquires generation supply for customers that do not shop. The costs of acquiring that default service are passed through directly to the customers using that service, and PPL Electric earns no mark-up or profit for providing Default Service. The increases in the PTC are a result of the same supply and demand dynamics I discussed above. The Company designed its Default Service Plan with affordability and rate stability in mind. There is nothing PPL Electric can do in its Default Service Plan to meaningfully address affordability until the underlying fundamentals of the generation and capacity markets are addressed.

Q. Did the other parties express any concerns about other customers being responsible for the costs to interconnect new large load customers?

A. Yes, and this was a theme of many of the parties' statements that addressed the proposed large load provisions. Specifically, OCA Witness Hoyt, OCA Witness Colton, OCA Witness Wise, CAUSE-PA Witness Havumaki, EJA Witness Rábago, EI Witness Nelson, PPLICA Witness LaConte, and OSBA Witness Ewen all addressed their concerns about costs to interconnect new large load customers being allocated to existing customers. (OCA St. 5, p. 42; OCA St. 8, pp. 88-93; OCA St. 9, pp. 8-15; CAUSE-PA St. No. 2, pp. 6-7; EJA St. No. 1 pp. 71-77; EI St. No. 1, pp. 10-21; PPLICA St. No. 1, pp. 11-12; OSBA St. No. 1, pp. 15-16.)

Q. Can you explain PPL Electric's policy on allocating costs associated with interconnecting new large load customers?

A. As an initial matter it is important to understand what costs are involved in interconnecting a new large load customer. The new large load customers that are being discussed by the other parties are LP-5 customers, or in other words, customers that are taking service at transmission voltage levels. Any costs associated with interconnecting these new large load customers that are socialized through rates will be recovered through the Company's FERC Formula Rate and consistent with cost allocation principles described below. Interconnecting new large load customers has almost no impact on distribution rates, which are the subject of this case.

When a new large load customer applies for service, the Company evaluates whether the required upgrades only benefit the new customer, or if the upgrades would provide broader grid benefits. Upgrades that only benefit the customer are directly charged to the customer through a Contribution in Aid of Construction ("CIAC") payment. Upgrades that provide broader grid benefits are recovered through the Company's FERC Formula Rate because all customers benefit from the additional reliability benefits the upgrade provides. The Company's policy is explained in greater detail in the Company's response to OCA VIII-9 and OCA VIII-9 Attachment 1. (*See* PPL Electric Exhibit JL-1R.)

Q. Do the other parties have any concerns with Company's current policy on cost allocation of interconnection costs for new large load customers?

A. Yes, their concerns are generally that new large load customers should pay for the entirety of upgrades through CIAC, and that PPL Electric has too much discretion in determining which costs are socialized under its current policy.

Q. Do you agree with their concerns?

A. No. PPL Electric is following FERC precedent in socializing network upgrades that benefit other customers. The other parties' recommendations are asking the PUC to exceed its jurisdictional authority and dictate the terms of transmission ratemaking. Likewise, I disagree that there is not appropriate oversight of PPL Electric's decision to socialize certain interconnection upgrade costs. The Company is subject to prudency and proper cost allocation challenges at FERC with respect to its transmission investments. None of the parties have provided any testimony as to why FERC's oversight of PPL Electric's transmission rates is inadequate. Regardless, the other parties cannot confer jurisdiction over transmission rates to the PUC simply because that would be their preference.

Q. How do you respond to the other parties' criticism that new large load customers are not paying their fair share?

A. I disagree with the criticism because it ignores how transmission costs are allocated. While a portion of upgrades costs that provide benefit to all customers will be recovered through transmission rates, the new large load customers will pay a significant portion of those

socialized upgrade costs. The Company's FERC Formula Rate is allocated to customers based on their contribution to the PPL Electric system peak. Because the new large load customers will have a high peak demand, they will also be allocated a significant portion of the Company's revenue requirement for its transmission rate. There has been much criticism that the LP-5 distribution customer charge is being reduced from $994.00 to $973.44. However, what is being ignored in that criticism is that the hypothetical 1 GW large load customer would be paying over $100 million a year in transmission rates under current rates. This will in turn lessen the amount of transmission costs to be recovered from other customers.

Q. Do you have a response to EJA Witness Rábago's contention that large load customers will put more costs on residential customers through the TSC (EJA St. No. 1, pp. 74-75)?

A. Yes, and it shows Mr. Rábago's lack of understanding of how PPL Electric's transmission rates work. The Company's TSC is to recover transmission costs from customers who take default service. However, the amount of costs recovered through the TSC is still based upon the customer class contribution to the PPL Electric system peak. With the addition of new large loads, the residential customer class will be responsible for a smaller percentage of the Company's transmission revenue requirement which will lower transmission costs for all existing customers, including the TSC for residential default service customers.

Q. How do you respond to the concern that the new large loads are speculative, and the load may not materialize?

A. The Company proposed a minimum load guarantee that will cover the cost of socialized upgrades to address any risk that load does not materialize as expected. The Electric Service Agreement ("ESA") makes sure that at a minimum the new large load customer will pay transmission rates equal to the cost of the socialized upgrade.

Q. Do the other parties have other concerns about the Company's minimum load guarantee proposal?

A. Yes, there is general concern that the new large loads will be able to peak shave to avoid paying transmission costs, that the minimum load guarantee security will not be used to insulate other customers from risk, and that the minimum load guarantee will not cover the entire cost of the socialized upgrades.

Q. Do you agree with the peak shaving concern?

A. No. The Company has designed its minimum load guarantee and standby charges to ensure that new large load customers are paying their fair share for the transmission system. During the guarantee period, the new large load customer will be paying 80% of their load ramp schedule regardless of actual usage. In practice, this will mean that the customer's peak demand value will be at least 80% of the agreed upon load ramp schedule. The Company will receive transmission revenue from the new large load customer until the guarantee obligation is satisfied even if the customer has no actual usage.

PPL Electric has also proposed new standby charges in Rule 6 of the tariff to ensure that customers with onsite generation are paying their fair share for reserve capacity. New large load customers will be paying for 30% of the nameplate capacity of their onsite generation to reserve capacity on the transmission system. I would note that, in my experience, new large load customers are not interested in peak shaving, and given the size of the loads, it would be impractical to reduce the entire amount of their load through peak shaving. However, assuming that the hypothetical 1 GW customer has onsite generation to serve its entire load, this customer would still be allocated transmission charges for 300 MW of peak demand. For reference, a 300 MW customer would be approximately six times larger than the Company's largest customer today. Again, this is a benefit with respect to all other customers' transmission rates.

Q. How will the Company utilize minimum load guarantee payments in the event of a customer default?

A. PPL Electric will credit the minimum load guarantee payments to transmission rate base, which will lower the amount of rate base and in turn reduce the amount that the Company is earning a rate of return on. OCA Witness Hoyt questions whether the Company would actually reduce the amount of rate base when it receives a minimum load guarantee payment. (OCA St. 5, pp. 42-43.) That has always been the Company's intent, and it is not opposed to further clarifying this in the Retail Tariff as part of the Company's compliance filing.

Q. How do you respond to the concern that the minimum load guarantee does not cover all of the costs of the upgrades?

A. Several of the witnesses allege that the minimum load guarantee only covers the cost of the initial upgrade, but not the entire revenue requirement over the life of the asset. This may be technically true, but the Company's proposal is still appropriate. The other parties assume that the new large load customer's transmission revenue will only cover the cost of the new upgrades. What is more likely is that once a new large load customer begins taking service it will continue to take service for decades. Given how the FERC Formula Rate is allocated, it is far more likely that the new large load customers will pay for the socialized upgrades several times over. In the event that the new large load customer terminates early, the minimum load guarantee will be used to lower rate base which will essentially have the effect of CIAC on rates. The other parties are overstating the likelihood of new large load customers ceasing to take service given the billions of dollars of investment these entities are making in their facilities. The new large load customers are a win-win for other existing customers because they will benefit from a more reliable transmission system and have lower transmission rates.

Q. Mr. Hoyt cites PECO's TSA as having provisions that are more protective to other customers. (OCA St. No. 5, pp. 43-44.) Do you agree with this conclusion?

A. No, and the protections that Mr. Hoyt describes are almost identical to PPL Electric's current ESA terms. PPL Electric has an 80% minimum load guarantee, termination payments, and a periodic review of whether the customer is meeting load commitments. I would note that the PECO agreement also contemplates socializing a portion of the interconnection upgrade,

which is why the agreement has termination payments.[1] Mr. Hoyt favorably references the PECO agreement in comparison to PPL Electric's agreement despite the two agreements being almost identical with respect to the terms and conditions to protect other customers from the large load customer load not materializing.

Q. How do you respond to the recommendation that new large load customers pay for the entire cost of the required upgrades through CIAC (CAUSE-PA St. No. 2, p. 12)?

A. I disagree with the recommendation. As a starting point, network upgrades, by their very nature, benefit all customers. They add to system reliability, increase transmission capacity and lower congestion, increase resiliency and operational flexibility, and expand capacity for new generation flow and interconnection, among other things. In recognition of these system-wide benefits, FERC has also long-favored charging network customers for costs of network facilities without an individualized benefit calculation, stating that "due to the integrated nature of the transmission network, network facilities benefit all network users," even if "the facilities were installed to meet a particular customer's request for service" and that "there is no need to identify further actual benefits in order to include the costs of network transmission facilities in transmission rates."[2]

[1] *See Transmission Security Agreement Between PECO Energy Company and Amazon Data Services, Inc.*, FERC Docket No. ER25-03492-000, pp. 3-4, 10-12 (Filed Sep. 23, 2025).

[2] *City of Anaheim, Cal.*, 113 FERC ¶ 61,091, at P 58 (2005), reh'g denied, 114 FERC ¶ 61,311 (2006)

Q. Have you considered the Commission's Model Tariff provision that would require a new large load customer to pay for upgrades through CIAC if they receive more than 50% of the benefit?

A. Yes, and I do not think it is a workable solution. The Commission's proposed "more than half the benefit of this line" provision, lacks the clarity and flexibility of PPL Electric's approach. It is unclear how electric distribution companies ("EDCs") are even to calculate and measure benefits of network upgrades to effectuate this provision. In transmission ratemaking, this is a highly contentious and litigated topic. Although complex tools have been developed to measure use of a transmission facility, they can only be implemented once the line is built and flows can be measured. Even then, they change in real time—to say nothing about changes over the decades of expected useful life of a transmission network facility. Finally, PPL Electric has serious concerns about the Commission's jurisdiction over this subject. Recovery of investment in transmission network upgrades is a ratemaking question. For transmission facilities, ratemaking is regulated by FERC, not by the Commission.

Q. Does EI Witness Nelson's recommendation resolve your concerns about the large load customers paying for the entire upgrade costs through CIAC?

A. No, if anything, Mr. Nelson's recommendation confuses the issue even more. Generally, Witness Nelson recommends that the customer pay for the upgrades through CIAC that will then be reimbursed to the customer as they take service. (EI St. No. 1, pp. 18-19.) This fundamentally misunderstands how CIAC works. CIAC is paid for upfront to cover the cost of the capital investment. Because the cost is paid for by the customer, there is no increase to

rate base. Under Mr. Nelson's recommendation, rate base would need to be increased as the CIAC was reimbursed to the customer. This defeats the entire purpose of having a customer pay CIAC. For this reason, and the other reasons provided in my rebuttal testimony, I reject Mr. Nelson's proposed redlines to the LP-5 rate schedule.

Q. Several of the witnesses raise concerns about the lack of transparency in the process to interconnect new large load customers, can you summarize their concerns?

A. Yes, OCA Witness Hoyt, EJA Witness Rábago, EI Witness Nelson, and PPLICA Witness LaConte all raise concerns about the transparency in the interconnection process. (OCA St, 5, pp. 5, 52; EJA St. No. 1, pp. 69-70, 73-74; EI St. No. 1, pp. 12-13; PPLICA St. No. 1, p. 10., 12-13.) They want the ESAs submitted for PUC review, a review of the allocation of interconnection costs, and a prohibition on charging new large load customers special rates. (OCA St. 5, pp. 8, 19; EJA St. No. 1, pp. 77-78; EI St. No. 1, pp. 5-6, 38-39; PPLICA St. No. 1, p. 13.)

Q. What is the Company's position with respect to submitting ESAs for review, including a review of the allocation of interconnection costs?

A. The Company is not opposed to submitting ESAs for information. However, the review should not include the ability for the Commission to review and reject the Company's allocation of interconnection costs between the customer and rates. As I discussed earlier, the determination of whether costs are properly included in transmission rates is a FERC

jurisdictional question. Any challenge of the Company's decision to include certain costs in transmission rates should be raised at FERC.

Q. Does the Company negotiate special rates with customers?

A. No, and all the ESAs with new large load customers state that the customer will be paying applicable tariff rates. The special terms are all for other customers' protection involving the minimum load guarantee and security provisions. PPL Electric cannot give any customer a preferential rate without receiving regulatory approval.

Q. Can you describe the other parties' concerns with the length of the term of the ESA?

A. Yes, there is general concern that the length of the ESA is not long enough, and that the minimum term should be between 10 and 20 years. The reasoning is that this will limit stranded asset risk on other customers. Additionally, they would like higher exit fees consistent with the Model Tariff proposal.

Q. Do you agree with these recommendations?

A. Not entirely. The Company's current proposal requires a minimum load guarantee until PPL Electric receives enough revenue to cover the cost of the initial cost of upgrades included in transmission rates. This accounts for the fact that utilities have an obligation to serve new load, and load growth is a legitimate need to address when upgrading its system. Covering the cost of the initial investment with a minimum load guarantee ensures that the investments in

serving new load are prudently made. This is consistent with how PPL Electric treats line extensions at lower voltages.

That being said, the Company is not opposed to having a minimum 10-year term for its large load ESAs. The minimum load guarantee would be 80% for the first five years, and 50% for the second five years. The customer would still provide security for the initial amount of socialized investment, however there would be an additional exit fee equal to the amount of the remaining minimum load guarantee. Proceeds from the exit fee would be used to reduce the Company's transmission revenue requirement. This proposal will result in new large load customers agreeing to take service in an amount that far exceeds the initial cost of upgrades placed into transmission rates.

Q. Do any of the parties raise concerns about the reliability impacts of interconnecting new large load customers?

A. Yes, OCA Witness Hoyt and CAUSE-PA Witness Havumaki raise concerns about reliability impacts from new large load interconnections. (OCA St. No. 5, pp. 44-50; CAUSE-PA St. No. 2, pp. 9-10.) There is passing mention of the impacts to the reliability of the transmission system, but the majority of their concern is about whether there will be enough generation capacity to serve the new load.

Q. Do you agree with their concerns?

A. With respect to the transmission system, the answer is no. The Company studies each interconnection application to ensure that the new customer can safely and reliably

interconnect to PPL Electric's grid. I do understand their concerns regarding generation resource adequacy associated with interconnecting these new loads. However, I disagree that PPL Electric distribution base rate case is the appropriate forum to address generation and capacity resource adequacy concerns. I am advised by counsel that PPL Electric has an obligation to serve all customers in a non-discriminatory manner. Additionally, the Competition Act requires EDCs to allow customers to have open access to competitive generation markets. Regardless of the merits of Mr. Hoyt and Mr. Havumaki's recommendation, the Company is without authority to turn customers away because of a lack of generation capacity. The appropriate venues to address these concerns are at FERC, and with the Pennsylvania General Assembly should the parties want to advocate for changes to the Competition Act.

Q. Would reliability concerns be resolved through Mr. Rábago's recommendation that the Company be required to use grid enhancing technologies (EJA St. No. 1, p. 79)?

A. Not entirely, and to be clear, PPL Electric is an industry leader in utilizing grid enhancing technologies. It was one of the first utilities to utilize dynamic line ratings ("DLR") on its transmission lines and has deployed this technology on 8 lines in Pennsylvania as of January 21, 2026. However, grid enhancing technologies seek to maximize existing assets. They cannot eliminate the need for new generation to meet current and projected load growth in PJM.. Additionally, grid enhancing technologies cannot eliminate having to build transmission facilities to interconnect and serve the new customers.

Q. Do you have any response to Mr. Rábago's recommendation that new large load customers be required to bring their own generation ("BYOG") and that a portion of it be renewables? (EJA St. No. 1, p. 79.)

A. I have the same concerns that I have with conditioning the interconnection of a new customer on PUC approval that there is adequate generation capacity to serve the customer. This recommendation is inconsistent with PPL Electric's obligation to provide non-discriminatory delivery service to all of its customers. It is not the EDC's role to assess the adequacy of generation resources available within PJM or to specify how any single customer sources its generation needs. Again, I would remind Mr. Rábago and other parties that the Competition Act of 1996 deregulated generation in Pennsylvania and set forth the obligations of EDCs to serve retail customers.

Q. Mr. Hoyt and Mr. Rábago recommend that new large load customers take service under a mandatory requirement that their load be interruptible. (OCA St. 5, p. 49; EJA St. No. 1, p. 79.) Do you agree?

A. No, and I come back to the Company's obligation to provide non-discriminatory service. I disagree that the Company has the authority to single out a type of customer based on their end use of the service and treat them differently. However, PPL Electric is willing to provide a voluntary interruptible option in its tariff that would allow the Company to curtail certain customers during times of system stress. To incent customers to choose this option, the Company would reduce the minimum load guarantee percentage to 60% for the first five years, and to 30% for the second five years under the ESA. A customer with interruptible

service would be less likely to create the ancillary costs that the other parties are concerned about which justifies the lower minimum load guarantee percentage.

Q. Did the other parties have any concerns about PPL Electric's load forecasting process?

A. Yes, Mr. Hoyt and Mr. Nelson criticized the Company's current load forecasting procedures. Generally, their concerns are that the Company is inflating its load projections by including projects at the Letter Of Authorization ("LOA") stage, not being transparent with its forecasts, and not performing enough diligence on whether the projects are duplicative. (OCA St. 5, pp. 50-51; EI St. No. 1, pp. 39-45.)

Q. Do you agree with this criticism?

A. No. The Company endeavors to be transparent with its load forecast so that those responsible for ensuring resource adequacy have information in time to take appropriate action. The other parties point out the risk of inflating a load forecast, but they fail to consider the risks of underestimating load growth. If the load does materialize and adequate market signals have not been sent for new generation to be built, the price shock for capacity will likely be similar to an overestimate. The Company's goal has always been to provide accurate load forecast information so that the market has enough time to respond to have generation ready to serve this new load.

Q. Does PJM reducing the Company's load forecast demonstrate that the process is flawed?

A. No, the Company is providing information to PJM, and it is PJM's discretion on how they want to use the information. Although PPL Electric is ultimately not responsible for ensuring resource adequacy, the Company is providing PJM with information to make informed decisions. I do not know why PJM reduced PPL Electric's load forecast or if it was advisable to do so, but it cannot be said that the Company was avoiding being transparent.

Q. Will Non-Disclosure Agreements ("NDAs") prevent the Company from sharing accurate load forecasts?

A. No. The Company is willing to share ESAs and load growth forecasts with its regulators with proper confidentiality protections in place. In fact, it has shared several ESAs during discovery in this case. These ESAs have also included customer load ramping schedules. The need for the NDAs is to protect the proprietary confidential information of our customers on the size and timing of the development of their projects. PPL Electric has nothing to hide.

Q. Does the Company oppose sharing load forecasts with the PUC?

A. No, and recent legislation has required EDCs to share load forecast information with the PUC. PPL Electric has no issue with sharing load forecast information with regulators and stakeholders broken down by new load under an ESA, under an LOA, and load that has made inquiries. In this way regulators and stakeholders will have adequate information to make decisions.

Q. Will this information include the more detailed information on the status of the new large load development such as site control and permitting?

A. PPL Electric is not opposed to sharing site control and permitting information to the extent that it has it from customers. This information would need to be shared confidentially as it contains proprietary information from customers.

Q. How do you respond to the allegation that the Company is inflating load growth projections because it financially benefits from it (EI St. No. 1, p. 40)?

A. I strongly disagree with this suggestion. It is generally true that load growth provides system upgrade opportunities for the Company. That does not mean that it is gaming the system by inflating its load forecasts. As I stated earlier, the Company is willing to provide a range of information on load forecasts so that regulators and stakeholders can make informed decisions. This voluntary transparency undercuts any argument that PPL Electric is manipulating load forecasts for financial benefit.

Q. Do other parties recommend that the Commission require new large load customers to contribute to PPL Electric's universal service costs?

A. Yes, OCA Witness Colton, OSBA Witness Ewen, and CAUSE-PA Witness Havumaki all recommend that new large load customers contribute to the Company's Universal Service Rider ("USR"). (OCA St. 8, p. 96; OSBA St. No. 1, pp. 17-19; CAUSE-PA St. No. 2, pp. 20, 25.) The reasoning provided is that, in their opinion, new large load customers will cause

affordability issues, which will increase the number of customers enrolling in universal service programs. Mr. Colton takes it one step further and recommends a non-bypassable systems benefit charge to assist customers who are not eligible for universal service programs. (OCA St. 8, pp. 6, 87-88.)

Q. Do you agree with the recommendations?

A. Not completely. The Company did not propose large load customers contributing to the USR because historically only residential customers paid for the USR. Under cost of service principles, residential customers were allocated the entire cost of the universal service programs because only residential customers can take advantage of those programs. However, the Commission has since indicated in the Model Tariff proceeding that allocating a portion of USR costs to large load customers is appropriate. The Company is not opposed to allocating $10 million of USR costs to the newly created LP-6 rate class. The Company agrees to establish an LP-6 rate class and allocate $10 million of the total projected USR costs to that rate class effective January 1, 2027. The Company will establish a customer charge to recover these costs from the LP-6 rate class. Further, the Company proposes to change the USR rate filing from once per year in January to three times per year in January, May, and September. This will provide an opportunity to update the LP-6 rate and spread the costs to newly connected LP-6 customers. The Company will provide a revised Universal Service Rider Tariff schedule in its compliance filing.

Q. Do you have a response to OSBA Witness Ewen's recommendation that large load customers make a one time "CIAC" payment towards universal service costs (OSBA St. No. 1, p. 18)?

A. Yes, and initially I disagree that the payment would be in the form of CIAC. CIAC payments are customer payments towards capital construction projects. This would be a one-time payment towards a customer assistance program. That being said, the Company's proposal of allocating $10 million to the new LP-6 class is a superior proposal, as it will provide continuous, stable funding to universal service program costs, rather than variable one-time payments that could cause USR rate volatility.

Q. Do you have any additional thoughts on Mr. Colton's non-bypassable charge recommendation?

A. Yes, I believe it is completely inappropriate. What Mr. Colton is alleging, without directly saying it, is that current cost allocation policies are inadequate to assign costs to new large load customers. I disagree with this suggestion that costs are allocated improperly, and new large load customers will not pay for their fair share of their use of the grid. However, if Mr. Colton wants to challenge cost allocation policies, then it is more appropriate to address these policies directly in the design of the rates impacted rather than creating a mechanism to sit on top of previously approved rates.

Q. Were there any recommendations regarding the Company's proposal to have the option to own, operate, and maintain LP-5 customer substations?

A. Yes, and they are opposed to the Company's proposal on the grounds that it creates the potential to allocate these costs to the other customers, and that there is the potential for abuse.

Q. How do you respond to these concerns?

A. These concerns are unfounded. PPL Electric's proposal involves directly assigning these costs to the customer taking service from the substation. There will be no recovery from other customers. This is the same type of direct assignment these witnesses have advocated for in the recovery of system upgrade costs for interconnections. The Company's proposal should be approved because there has not been any showing that it will involve any cross-subsidization with other customers.

Q. Did any of the parties raise concerns regarding PPL Corporation's joint venture with Blackstone?

A. Yes, OCA Witness Hoyt and EI Witness Nelson recommended additional protections regarding PPL Electric's dealings with the joint venture. They raised concerns about conflicts of interest, and the incentive to socialize costs to the benefit of the affiliate joint venture. (OCA St. 5, pp. 54-55; EI St. No. 1, pp. 47-49.)

Q. Are these concerns valid?

A. No. The Company has robust internal affiliate transaction protections as described in Bethany Johnson's rebuttal testimony (PPL Electric St. No. 5-R). Additionally, any affiliate agreement between PPL Electric and the joint venture would require PUC approval. That would be the time to evaluate the transaction rather than speculating on what a future transaction may look like and placing restrictions on it today. Finally, PPL Electric would be required to serve the joint venture under its Commission-approved tariff, which adds another layer of protection.

Q. Did any of the parties raise concerns about the environmental impacts of new large load customers?

A. Yes, several witnesses at the public input hearings and other parties expressed concerns about the environmental impacts of data centers. These concerns ranged from the impact on water resources, land use policy, and air and noise pollution concerns.

Q. Do you have a response regarding these environmental concerns?

A. Yes, in that there are more appropriate venues to address these concerns outside of an EDC's distribution base rate case. There are federal, state and local government agencies with jurisdiction over the environmental issues raised by the other parties. There is also a full regulatory and permitting regime designed to deal with the environmental impacts of industrial development. It is through those processes that these environmental concerns should be addressed, not in PPL Electric's base rate proceeding.

Q. Can you summarize the changes PPL Electric is willing to make to its large load provisions in its tariff in response to the other parties' testimony?

A. Yes, PPL Electric is willing to make the following changes:

- Create a new LP-6 rate class for customers with peak demands of 75 MW and above;
- 10 year minimum term for ESAs;
- Revise minimum load guarantee to 80% for first five years, 50% for second five years of initial term;
- Exit fee equal to the remaining minimum load guarantee obligation during the ESA term;
- PPL Electric will submit ESAs, CSAs, and a breakdown of the allocation of system upgrade costs to the PUC for transparency and information (not approval);
- Offer a voluntary interruptible option, which if chosen would reduce the minimum load guarantee to 60% for the first five years, and 30% for the second five years;
- PPL Electric will submit annual load forecasts to the PUC including a breakdown of requests of customers with ESAs, LOAs, and inquiries; and
- LP-6 rate class will be allocated $10 million of USR costs annually with the $10 million to be allocated amongst the class.

III. RELIABILITY AND PERFORMANCE

Q. Do any of the parties provide comments or propose adjustments or recommendations related to the Company's reliability and performance?

A. Yes. Mr. Tarr provides comments regarding wildfire preparedness. Also, Mr. Hoyt sets forth analysis, findings, and recommendations regarding the Company's reliability performance. Ms. Wise also offers testimony on the Company's reliability performance as discussed during the public input hearings held in this proceeding.

Q. Does Mr. Tarr make any claims with respect to the Company's wildfire preparedness?

A. Yes. Mr. Tarr claims that the Company "has not conduced community outreach to educate agencies, customers, and property owners about wildfires mitigation to reduce wildfire risk." (I&E St. No. 5, p. 6.) He recommends that the Company initiate outreach to inform communities about the risk of and preparing for wildfires so that local communities and first responders will be better informed at identifying wildfire hazards and mitigation priorities, and at taking action to reduce those risks. (I&E St. No. 5, p. 7.)

Q. Do you agree with this recommendation?

A. I agree that wildfire prevention is important. This is why PPL Electric has a wildfire prevention program that focuses on reducing ignition risk and ensuring public safety through proactive vegetation management and operational readiness. The Company maintains transmission and distribution rights-of-way using tree pruning, hazard tree removal, brush control, and herbicide application on a five-to-eight-year cycle, prioritizing high-risk areas. It

conducts wildfire mitigation drills that include modules on how to interact with first responders. Internal teams validate emergency protocols, including activation for Red Flag Warnings, and emphasize coordination across departments. These measures aim to minimize wildfire hazards without relying on Public Safety Power Shutoff programs during storm or fire events.

The Company is always looking for ways to improve, and it can take into consideration whether proactive communication with community partners will improve its wildfire response. PPL Electric has existing strong relationships with first responders in its service territory and routinely coordinates with them in responding to emergencies that involve the Company's facilities. During the Blue Mountain (2024) and Jim Thorpe (2025) wildfire events, PPL Electric proactively provided safety information to the surrounding communities and directly notified customers who were at risk of, or would be impacted by, temporary service interruptions. In addition, the Company has incorporated wildfire safety messaging into its rotating public-safety communications during high-risk seasons.

Q. Does Mr. Hoyt provide any testimony regarding the reliability of the Company's service?

A. Yes. Mr. Hoyt states that the Company "is not currently meeting most of the Commission-ordered targets for reliability, and its reliability scores for major metrics have [worsened] in recent years." (OCA St. 5, p. 62.) After excluding 2024 metrics that he acknowledges are attributable to major storms, he argues that the Company's reliability has worsened from

2015-present and that PPL Electric is not performing at the level of its peers. (*See* OCA St. 5, pp. 62-74.)

Q. Do you agree with Mr. Hoyt's testimony regarding the reliability of the Company's service?

A. No, I do not.

Q. Why not?

A. As an initial matter, I have three general points I want to raise regarding Mr. Hoyt's testimony, which provide important context regarding its reliability performance. First, Mr. Hoyt ignores the fact that PPL Electric generally performs well relative to its peers with respect to Institute of Electrical and Electronics Engineers ("IEEE") Annual Reliability Benchmarking Survey as well as the Edison Electric Institute ("EEI") Reliability Survey, each of which I discuss in detail in my direct testimony. (PPL Electric St. No. 16, pp. 2-5.) While he attempts to focus on year-to-year variances and patterns in the Company's System Average Interruption Frequency Index ("SAIFI"), System Average Interruption Duration Index ("SAIDI"), and Customer Average Interruption Duration Index ("CAIDI") scores relative to its peers, he does not actually offer any evidence that suggests PPL Electric does not perform better than its peers. (OCA St. 5, pp. 71-74.) This is because the evidence demonstrates that while PPL Electric's metrics may experience year-to-year variances that are comparable to its peers, each year it generally outperforms each peer with respect to each of IEEE and PUC SAIFI, SAIDI, and CAIDI.

Second, Mr. Hoyt concedes that storm frequency and severity is an external factor affecting the Company's reliability performance metrics, which the Company cannot control. He acknowledges but does not dispute the Company's evidence that "both reportable and non-reportable storm events have increased materially, with the Company experiencing an average of approximately 40 storm events per year in recent years, compared to a historical average of 23.6 events per year in the prior decade," (OCA St. 5, p. 75) and "agree[s] that severe weather and vegetation conditions can materially affect reliability outcomes, and that major storm activity can increase both the frequency and duration of outages." (OCA St. 5, p. 76.) In addition, Mr. Hoyt attempts to justify his review of the Company's reliability performance by, in part, excluding 2024 data in recognition of the fact that a record number of storms occurred during this period. The Company has seen, and continues to see, an increase in the frequency and severity of storms impacting its territory. Mr. Hoyt concedes this point by excluding 2024 data, which is only half of the picture. (*See* OCA St. 5, p. 70 (arguing trends in reliability performance are only "partially attributable" to 2024 storms).) The increased frequency and severity of storms experienced by the Company justify the need for rate relief and for the Company to increase its investments to strengthen and harden the system and to increase vegetation management efforts. Without such investments, the Company's reliability performance could continue to degrade.

Third, Mr. Hoyt ignores the fact that each of the Pennsylvania peers he compares PPL Electric to in his analysis, has sought and obtained at least one base rate increase since 2015, if not more. PPL Electric has not. While every utility's service territory and facilities differ, and each utility is best positioned to determine how to maintain and enhance the reliability of

its system, the fact that PPL Electric has maintained reasonable reliability performance metrics that generally outperform its peers since 2015 despite having not sought a base rate increase since that time, further demonstrates that the Company manages the reliability of its system well.

Q. Please respond to Mr. Hoyt's claim that the Company is not currently meeting most of its Commission-ordered reliability targets. (OCA St. No. 5, p. 74.)

A. PPL Electric has met the Commission's SAIFI goal 10 out of 11 times between 2015 and 2025. The Commission's SAIDI goal has been met 6 of 11 times, and the Commission's CAIDI goal 3 of 11 times. Table 1 below illustrates this concept.

Table 1. PPL Electric's Reliability Performance as Compared to the Commission's Reliability Performance Targets

YEAR	PUC NON STORM SAIFI	PUC STORM SAIFI	PUC TOTAL SAIFI	PUC NON STORM SAIDI	PUC STORM SAIDI	PUC TOTAL SAIDI	PUC NON STORM CAIDI	PUC STORM CAIDI	PUC TOTAL CAIDI	PUC SAIFI GOAL	IEE SAIDI GOAL	PUC CAIDI GOAL	PUC Major Events	PUC Storms	Total Storms

With recent high storm severity, along with automated systems preventing and converting outages to momentary interruptions, higher CAIDI values are not unexpected. During the benchmark period of 1994 to 1998, PPL Electric averaged 4.2 reportable events per year. From 2021 to 2025, under the same reporting standards, PPL Electric has averaged 13.8 reportable events per year, over triple the benchmark rate despite over one million customer interruptions avoided by automation during that time. Further, *prior* to the implementation of

automated restoration, every storm event of 1,000 or more cases was excludable as a PUC Major Event with one exception (a flooding event). *Since* automated restoration, only 1 of 13 storms of over 1,000 cases have been excludable, and that storm reached 2,796 cases.

The combination of triple the reportable storm volume and near impossibility of excluding storms as major events under the benchmarks established in the 1990s have made the Company's ability to achieve its PUC targets increasingly challenging.

Q. Please address OCA Witness Hoyt's claim that the Company has performed worse than Pennsylvania peers in recent years. (OCA St. No. 5, p. 74.)

A. Mr. Hoyt specifically only provides a detailed comparison of the Company's comparison to other Pennsylvania utilities using one metric: CAIDI including Major Event Days ("MED"). (OCA St. No. 5, p. 73.) However, if additional reliability performance metrics are evaluated in a manner similar to Witness Hoyt's evaluation of CAIDI, then the results provide a more complete image of the Company's consistent above-average reliability performance. Table 2 below shows PPL Electric's reliability performance using six different metrics:

- SAIDI with MEDs
- SAIFI with MEDs
- CAIDI with MEDs
- SAIDI without MEDs
- SAIFI without MEDs
- CAIDI without MEDs

In addition, Table 2 was developed using EIA form 861 data, i.e., the same data relied upon by Mr. Hoyt, pulled from the following peer companies of PPL Electric:

- Metropolitan Edison Co
- PECO Energy Co

- Pennsylvania Electric Co
- Pennsylvania Power Co
- UGI Utilities, Inc
- West Penn Power Company[3]

Using the six reliability metrics, as well as data from the years 2015 through 2024 enabled the Company to provide 60 points of comparison in Table 2. And, as shown below, PPL Electric ranks above average in 50 of the 60 comparisons (83.3%).

Table 2. Comparison of PPL Electric's Reliability Performance to Peer Utility Reliability Performance from 2015-2024

	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
SAIDI WITH MEDS	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Below Avg
SAIFI WITH MEDS	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg
CAIDI WITH MEDS	Above Avg	Below Avg	Below Avg	Below Avg	Above Avg	Above Avg	Below Avg	Above Avg	Above Avg	Below Avg
SAIDI WITHOUT MEDS	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg
SAIFI WITHOUT MEDS	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg
CAIDI WITHOUT MEDS	Below Avg	Above Avg	Above Avg	Above Avg	Above Avg	Above Avg	Below Avg	Above Avg	Below Avg	Below Avg

	COUNT	PCT
Above Avg	50	83.3%
Below Avg	10	16.7%

Moreover, Table 3 below provides a comparison of each peer utility's average performance across the ten-year period from 2015 to 2024. In each metric, the Company is ranked #1 or #2 in 5 out of 6 metrics and is above average in all 6 of the metrics.

Table 3. Comparison of PPL Electric's Average Reliability Performance to Peer Utility Average Reliability Performance from 2015-2024

	Average of SAIDI WITH MEDS	Average of SAIFI WITH MEDS	Average of CAIDI WITH MEDS	Average of SAIDI WITHOUT MEDS	Average of SAIFI WITHOUT MEDS	Average of CAIDI WITHOUT MEDS
Metropolitan Edison Co	396	1.58	236	173	1.28	135
PECO Energy Co	254	1.07	215	78	0.80	98
Pennsylvania Electric Co	340	1.93	174	213	1.63	131
Pennsylvania Power Co	290	1.36	206	129	1.08	120
PPL Electric Utilities Corp	191	0.90	201	80	0.67	119
UGI Utilities, Inc	138	0.85	152	104	0.76	131
West Penn Power Company	320	1.43	220	170	1.16	146
PPL Electric Rank	2	2	3	2	1	2

[3] Note that complete EIA form 861 data was not available for Duquesne Light Company or for Pike County Light & Power Company and, as such, data from those peer companies was not used to develop the comparison in Table 1.

See Table 4 below for additional information regarding Internal IEEE goals ("benchmarks") from 2015-2025:

YEAR	IEEE NON STORM SAIFI	IEEE STORM SAIFI	IEEE TOTAL SAIFI	IEEE NON STORM SAIDI	IEEE STORM SAIDI	IEEE TOTAL SAIDI	IEEE NON STORM CAIDI	IEEE STORM CAIDI	IEEE TOTAL CAIDI	IEEE SAIFI GOAL	IEE SAIDI GOAL	IEEE CAIDI GOAL	PUC Major Events	PUC Storms	Total Storms

Q. What is your response to Mr. Hoyt's claim that while some reliability targets were met, the Company "did not provide sufficient information for Mr. Hoyt to evaluate performance consistency over time" (OCA St. 5, p. 74)?

A. I disagree that Mr. Hoyt did not have enough information to evaluate PPL Electric's reliability performance over time. The data that I have relied on in my rebuttal testimony was available to Mr. Hoyt in utilities' quarterly reliability reports as well as the PUC's Annual Reliability Report.

Q. How do you respond to Mr. Hoyt's argument that PPL Electric's reliability outcomes have worsened over the past 10 years (OCA St. 5, p. 74)?

A. The Company acknowledges that there is room to improve its reliability performance, and to strengthen and harden the system against severe weather events. This is one of the primary drivers for rate relief in this case.

Q. Do you agree with Mr. Hoyt's further reporting and "accountability" requirements that he believes the Commission should impose as a condition of recovery of the Company's proposed reliability investments and its base rate increase (OCA St. 5, pp. 62-63, 76-77)?

A. Generally, I do not agree for several reasons.

First, it appears that Mr. Hoyt is advocating for the implementation of a form of performance-based rates, by recommending that the Company's investments be subject to a "heightened prudence review" and "potential disallowance" in its next rate case or an interim proceeding. (OCA St. 5, p. 77.) I am advised by counsel there are legal issues with his proposal that PPL Electric will fully address this issue in any briefs submitted in this proceeding.

Second, OCA Witness Hoyt appears to be attempting to establish a new standard for assessing the prudency of the Company's investments based upon the application of hindsight and review of specific investments' subsequent impacts on system reliability. Mr. Hoyt is trying to compare very specific, localized capital projects with system-wide reliability metrics, but those metrics operate on completely different scales. Because of that mismatch, his analysis does not show what he claims it does. From the Company's perspective, application of this analysis as a means of assessing prudency has little value and creates a host of other problematic issues. I am advised by counsel that PPL Electric will fully address this issue in any briefs submitted in this proceeding.

Third, the additional reliability reporting proposed by Mr. Hoyt exceeds that which the Commission already requires and PPL Electric already provides, and specifically seeks a level of granularity of information that would require significant amount of additional labor

cost and/or significant costs related to IT improvements or modifications/significant changes in the platforms PPL Electric uses to collect data. Mr. Hoyt provides no evidence of additional benefits that would outweigh or justify the incurrence of these additional costs to implement his recommendation.

Q. Does Mr. Hoyt make any other findings based on his evaluation of the Company's reliability?

A. Yes. Mr. Hoyt analyzed outage events and reliability metrics from 2015 onward, comparing them to the Company's capital investments in various work categories. Mr. Hoyt concluded that these investments show "mixed and uneven results," with the impact on reliability varying significantly depending on the type and timing of the investment. (OCA St. 5, pp. 62, 90-91.)

Q. Do you agree with Mr. Hoyt's review of the Company's capital investments and reliability performance and/or the conclusions he draws from his review?

A. No, I do not.

Q. Why not?

A. While I note that in some circumstances OCA Witness Hoyt does purport to draw favorable (and even strongly favorable) correlations between certain types of expenditures and reliability, there are several general reasons why I do not believe this analysis can be relied upon to draw conclusions regarding the relationship between annual levels of investment and reliability metrics.

First, I question whether this methodology is theoretically sound. Mr. Hoyt is attempting to correlate (a) annualized levels of investment related to specific types of projects that are implemented on specific parts of the PPL Electric system throughout the year, with (b) annual system-wide outage data and performance metrics. This is not an apples-to-apples comparison as PPL Electric's annual capital investments do not touch upon its entire system every year, whereas the metrics Mr. Hoyt reviews (i.e., SAIFI, SAIDI, CAIDI, MAIFI, and CEMI) are based upon the entire system's performance in a given year. A more appropriate comparison would be to conduct an analysis of the impacts of specific projects in each category to improve the reliability of service for the customers most directly impacted by those projects.

Second, Mr. Hoyt ignores variables that can impact the attempt to draw the correlations he advances. For example, the following variables can impact this correlation:

1. **Variation of Realized Project Reliability Impact:** As stated in the Company's response to Witness Hoyt's question regarding projects with delayed and non-delayed reliability benefits, a project's impact on annualized reliability is not consistent upon their completion.
2. **Safe Construction Methods:** Certain projects require scheduled outages to safely construct, thus reducing reliability in that timeframe.
3. **Unexpected Variations Investment Plan:** The Company must fluidly balance both proactive and reactive reliability projects to effectively maintain a safe and reliable transmission and distribution grid.

Third, Mr. Hoyt's analysis is inconsistent in its analysis of reliability performance. Depending upon the type of capital investment and O&M expenditure, Mr. Hoyt utilizes different reliability metrics and tries to draw broad conclusions about the category of investment. For example, with respect to vegetation management expenditures, Mr. Hoyt references "a very weak, negative association with most tree-related outage metrics" and focuses specifically on the number of customers interrupted in Figure 10, whereas with respect to the Company's infrastructure replacement program, he references a "strongly positively associated with reliability metric performance" and focuses specifically on duration of outages in minutes. (OCA St. 5, pp. 83-84.) These inconsistencies fail to capture the entirety of PPL Electric's reliability performance and do not take into account factors outside of the Company's control, like worsening storms and off-ROW trees.

Fourth, Mr. Hoyt is similarly inconsistent regarding the periods he uses to attempt to draw his conclusions, shifting between a focus on purported immediate versus one-year and two-year lag. For example, with respect to storm-hardening and reliability initiatives under the I&M Plan, Mr. Hoyt initially focuses on same-year correlations generally and specifically for Smart Grid investments but then shifts to two-year lagged on a general basis.

Q. Are there any other reasons why you do not believe that OCA Witness Hoyt's analysis should be relied upon as justification for his conclusions and recommendations related to the Company's reliability performance?

A. Yes. Mr. Hoyt himself admits that his analysis shows "mixed results" as it tries to draw relationships between categories of investment and reliability outcomes for different time

periods. The Company does not dispute that different types of investments will have different impacts upon reliability performance over different time periods. Consider, for example, a project that would have immediate benefit would be the Company's conversion of an existing single-phase line to a multi-phase line. This type of project would both make the existing conductor more resilient to outages as well as increasing the amount of vegetation clearance around the conductor itself, resulting in immediate removal of outage exposure for customers served through that segment. An example of a project that would have potentially delayed benefit would be a newly constructed three-phase tie line. In this example, customers would only see a benefit when either side of the tie sources experience an outage. It is due in part to these differences that the Company takes a comprehensive approach to maintaining and enhancing system reliability and seeks to diversify the work it performs on its system. For this reason, it seems that Mr. Hoyt is "chasing the data" rather than engaging in an analysis that could be used to meaningful evaluate or inform the Company's decision-making with respect to its reliability-based investments.

Q. Does OCA Witness Wise raise customer service-related concerns that stemmed from the Company's reliability performance?

A. Yes. Ms. Wise focused on customer service-related concerns and purported customer dissatisfaction with the reliability of the Company's service that were raised during testimony at the public input hearings. (OCA St. 9, pp. 18-19.)

Q. Could you please respond to Ms. Wise's summary regarding customer testimony at public input hearings regarding service reliability?

A. As a general matter, I understand that service outages, and in particular prolonged outages, can present frustration and challenges for PPL Electric's customers. The Company endeavors to be responsive to the concerns of its customers and prioritizes its reliability investments in a manner that balances the needs of specific customers with the needs of the system as a whole. With respect to the testimony regarding whether the Company has a smart grid or smart technology in place, I note that the Company regularly analyzes and implements such technology as a part of its Smart Grid program. Contrary to these concerns, the Company's Smart Grid investments allow it to react rapidly to changes occurring on the distribution system due to weather (or other) events, ultimately mitigating the impacts of outages.

IV. STORM RESTORATION AND PLANNING

Q. Do any of the parties provide comments or propose adjustments or recommendations related to storm restoration and planning?

A. Yes. I&E Witness Walker makes recommendations regarding the Company's Storm Damage Expense Rider ("SDER"), including the level of expenses that the Company be permitted to recover through the rider. (I&E St. No. 1, pp. 12-13.) He also argues that the Company's proactive investments in storm hardening undercut the need for the SDER. (I&E St. No. 1, p. 16.) OCA Witness Hoyt provides analysis related to storm hardening, damage, and response, as well as specific recommendations related to this category of work performed by the Company. (OCA St. 5, pp. 85-88, 94.)

Q. Do you agree with I&E Witness Walker's recommendations related to the Company's SDER?

A. No.

Q. Why not?

A. Initially, I note that other Company witnesses will address certain of Mr. Walker's points, i.e., Company witness Ms. Arnold (PPL Electric St. No. 13-R). With respect to Mr. Walker's claim that the Company's proposed level of expenses to be recovered through the SDER is unreasonable in light of its storm hardening investments,[4] Mr. Walker is incorrect because the SDER addresses reactive expenditures made in response to storms that damage PPL Electric facilities whereas the Company's storm hardening work are proactive expenditures made to mitigate the impacts of storms on the Company's facilities and service. These categories of expenditures serve different purposes, and while storm hardening work does mitigate the impacts of storms, it does not demonstrate that the Company's SDER is unreasonable or unnecessary. As mentioned previously, the Company has experienced increased frequency and severity of storms, a fact which Mr. Walker does not dispute. This experience justifies both the SDER and the Company's proposed level of storm hardening expenditures, especially because the SDER mechanism only includes for recovery actual, incremental (to base rates) storm costs.

[4] I&E St. No. 1, p. 16.

V. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

SURREBUTTAL TESTIMONY OF
JOSEPH LOOKUP
ON BEHALF OF
PPL ELECTRIC UTILITIES CORPORATION

Topics: **Large Load Interconnection**

Dated: February 9, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Joseph Lookup, and my business address is 827 Hausman Road, Allentown, Pennsylvania 18104.

Q. By whom are you employed and in what capacity?

A. I am employed by PPL Services Corporation ("PPL Services") as Vice President – Transmission and Distribution Planning and Asset Management and provide services to PPL Electric Utilities Corporation ("PPL Electric" or the "Company").

Q. Have you previously filed testimony in this matter?

A. Yes. I previously submitted direct testimony (PPL Electric St. No. 16) and rebuttal testimony (PPL Electric St. No. 16-R) on behalf of the Company.

Q. What is the purpose of your surrebuttal testimony?

A. In my surrebuttal testimony, I respond to portions of the rebuttal testimony submitted by the Office of Small Business Advocate ("OSBA") Witness Ewen and PP&L Industrial Customer Alliance ("PPLICA") Witness LaConte. In particular, my surrebuttal testimony addresses issues pertaining to large load interconnections.

Q. Are you sponsoring any exhibits or schedules as part of your surrebuttal testimony?

A. No.

II. LARGE LOAD INTERCONNECTION

Q. OSBA Witness Ewen disagrees with several other parties' position that all customers, including Small C&I customers, should contribute to PPL Electric's Universal Service Rider ("USR"), as he distinguishes between small business and large load customers with respect to this issue. (OSBA St. No. 1-R, pp. 6-8.) Do you have a response?

A. Yes, and generally the Company agrees with Mr. Ewen's position that USR costs are appropriately assigned to residential customers because those are the customers that can benefit from the programs. This is why the Company's original proposal continued this practice of only assigning USR costs to residential customers (and a small number of Small C&I customers taking service at residential rates).

However, in my rebuttal testimony I provided revisions to the Company's large load tariff provisions. Specifically, the Company is proposing to assign $10 million of USR costs to the newly created LP-6 rate class that includes customers with a peak demand over 100 MW. I recognize that Mr. Ewen did not have the benefit of seeing my rebuttal testimony when he submitted his rebuttal testimony, but I believe the revised proposal addresses his concerns of not allocating USR costs to Small C&I customers.

Q. Does PPLICA Witness LaConte have similar concerns to Mr. Ewen?

A. Yes, Ms. LaConte is more focused on existing LP-5 and LP-4 customers not contributing to the USR. (PPLICA St. No. 1R, pp. 11-15.) The revised proposal in my rebuttal testimony should address Ms. LaConte's concerns. The Company specifically designed the LP-6 rate

schedule to include customers with a peak demand of 100 MW and above, so that any existing customers of the Company would be excluded. The new LP-6 rate schedule will only consist of new large load customers.

Q. Ms. LaConte recommends that the Company create a new rate schedule for very large load customers. (PPLICA St. No 1R, p. 17.) Do you have a response?

A. Yes, and the revised proposal detailed in my rebuttal testimony addresses Ms. LaConte's concerns. It creates a new rate schedule that will not include any existing LP-5 customer and that contains provisions that are specific to new large load customers.

Q. Ms. LaConte further recommends that the Pennsylvania Public Utility Commission ("Commission" or "PUC") defer ruling on the Company's large load tariff proposal until there is a determination in the Commission's Interconnection and Tariffs for Large Load Customers proceeding at Docket No. M-2025-3054271. (PPLICA St. No 1R, p. 17.) Do you agree?

A. No, and I think it is appropriate for the Commission to rule on the Company's proposal in the current proceeding. As I discussed previously, the Company is proposing a new rate schedule that will not include any existing LP-5 customers. This appears to resolve the majority of Ms. LaConte's concerns. Additionally, the revised proposal in my rebuttal testimony takes into account many aspects of the PUC's proposed model tariff and the recommendations of the parties in this proceeding. This includes creating a separate rate class, requiring a 10-year agreement with minimum load guarantees, exit fees for early termination, and USR

contributions, and providing the Commission with customer agreements for transparency and informational purposes (but not for approval). Further, it is my understanding that the Commission's model tariff at Docket No. M-2025-3054271 will be a guideline and not mandatory. If the Company's proposal is adopted in this rate case, the approved tariff provisions will have the force of law rather than being just guidelines. There is no reason that the Company's large load tariff proposal cannot be approved in this proceeding given that the Company has addressed most of the concerns raised by the other parties and has moved closer to the model tariff.

III. CONCLUSION

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does.

REJOINDER TESTIMONY OF
JOSEPH LOOKUP
ON BEHALF OF
PPL ELECTRIC UTILITIES CORPORATION

Topics: **Rejoinder Regarding Large Load Interconnections**

Dated: February 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Joseph Lookup, and my business address is 827 Hausman Road, Allentown, Pennsylvania 18104.

Q. By whom are you employed and in what capacity?

A. I am employed by PPL Services Corporation ("PPL Services") as Vice President – Transmission and Distribution Planning and Asset Management and provide services to PPL Electric Utilities Corporation ("PPL Electric" or the "Company").

Q. Have you previously filed testimony in this matter?

A. Yes. I previously submitted direct testimony (PPL Electric St. No. 16), rebuttal testimony (PPL Electric St. No. 16-R) and surrebuttal testimony (PPL Electric St. No. 16-SR) on behalf of the Company.

Q. What is the purpose of your rejoinder testimony?

A. The purpose of my Rejoinder Testimony is to respond to the surrebuttal testimony of Office of Consumer Advocate ("OCA") Witness Hoyt (OCA Statement No. 5SR), the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Havumaki (CAUSE-PA Statement No. 2-SR), the Environmental Justice Advocates ("EJA") Witness Rábago (EJA Statement No. 1-SR), and the Environmental Intervenors ("EI")

Witness Nelson (EI Statement No. 1-SR), regarding the interconnection of large load customers to the Company's system.

Q. Have you prepared any exhibits in support of your rejoinder testimony?

A. Yes. I have prepared PPL Electric Exhibit JL-1RJ and HIGHLY CONFIDENTIAL PPL Electric Exhibit 2-RJ

II. Rejoinder Regarding Large Load Interconnection Issues

A. Scope of the Case

Q. Witnesses for OCA, CAUSE-PA, EJA, and EI continue to claim that the Commission can, and should, assert jurisdiction over various transmission functions and aspects of the transmission service provided by PPL Electric to large load interconnection that take service under LP-5 (or would take service under LP-6 if the Company's proposal is adopted). (*See, e.g.*, OCA St. 5SR, at pp. 7-8, CAUSE-PA St. 2-SR, at p. 6, EJA St. No. 1-SR, at pp. 32-33, and EI St. 1-SR, at pp. 3-7.) How does the Company respond?

A. These witnesses appear to believe that there is confusion or a regulatory gap that exists regarding how the Company is regulated by the Commission and the FERC with respect to the services provided to these customers. There is not, as explained in the rebuttal testimony of PPL Electric Witness Ms. Bethany Johnson. (PPL Electric St. No. 5-R, at pp. 3-14.) It is my understanding from counsel that PPL Electric will fully address the legal issues at play on this point in its briefs. However, I want to emphasize that PPL Electric is not suggesting that

any aspect of how it interconnects, and ultimately provides service to large load customers under LP-5 (or would do so under LP-6), is not subject to regulatory review and oversight. Rather, PPL Electric's position is that certain aspects of this service are appropriately regulated by the Commission, while others are appropriately regulated by the FERC. The Company recognizes that this issue is complex, and it is not suggesting that this complexity should serve to shield it from regulatory scrutiny. Rather, the Company's position is that asking the Commission or the FERC to intrude upon the spaces and issues that are currently, and appropriately, regulated by the other agency will do nothing but add to this complexity and create jurisdictional overlaps that are neither appropriate or necessary.

B. Large Load Customers' Impacts on Transmission Rates and Allocation of Transmission Costs Under Transmission Service Charge

Q. Do other parties' witnesses continue to misunderstand how large load interconnections impact transmission costs and rates, and how transmission costs are allocated and ultimately passed-through to PPL Electric's customers by way of its Transmission Service Charge ("TSC")? (OCA St. 5SR, at pp. 6, 10-15, CAUSE-PA St. 2-SR, at pp. 3-4, 6-7, EJA St. No. 1-SR, at pp. 34-37, and EI St. No. 1-SR, at pp. 3-23.)

A. While I believe that these issues were adequately explained in my rebuttal testimony (PPL Electric St. No. 16-R, at pp. 5-10) and the rebuttal testimony of PPL Electric Witness Ms. Bethany Johnson (PPL Electric St. No. 5-R, at pp. 3-14), it still appears that these parties either misunderstand these issues and, perhaps more importantly, how PPL Electric has currently structured its ESAs to ensure that (a) large load customers are held responsible for

the costs they cause the Company to incur to interconnect them, (b) large load customers are allocated their fair share of transmission network costs, and (c) how these protections provided in the ESAs both protect and benefit PPL Electric's existing distribution customers by favorably impacting the rates they pay for transmission service. I am providing the following, simplified explanation as to how PPL Electric has structured the ESAs to protect and benefit its existing customers, in order to remove any doubts or perceived lack of clarity on this point.

First, the Company has ensured that these customers bear direct, up-front responsibility for the costs they require PPL Electric to incur by requiring a CIAC payment in advance of construction for all upgrades that only benefit the new large load customer. By providing for such a requirement in the ESA, PPL Electric is ensuring that only costs related to facilities and equipment that benefit the transmission system as a whole (i.e., all customers including existing customers served by the transmission system) are ultimately included in its FERC Transmission Formula Rate. Critically, despite having been provided the detail to show the types of facilities and equipment that a large load customer bears direct responsibility for vs. the types of facilities and equipment that benefit the entire transmission system in discovery (see PPL Electric Response to OCA-VIII-9 and OCA-VIII-9 Attachment 1, as PPL Electric's OCA VIII-10 HIGHLY CONFIDENTIAL Attachment 1), none of OCA, CAUSE-PA, EJA or EI point to a single instance where, in their view, this determination was incorrectly made. Thus, it is clear that the ESAs, and PPL Electric's application of such ESAs to specific customers, appropriate establishes their cost

responsibility. Copies of these discovery responses are provided in PPL Electric Exhibit JL-1RJ. (PPL Electric Response to OCA-VIII-9 and OCA-VIII-9 Attachment 1) and HIGHLY CONFIDENTIAL PPL Electric Exhibit JL-2RJ (PPL Electric's OCA VIII-10 HIGHLY CONFIDENTIAL Attachment 1).

Second, the ESA also contains a minimum load guarantee, which functions as a further protection in addition to the direct assignment of costs incurred to interconnect the large load customer that benefit only that customer. This guarantee results in the customer paying a minimum amount of revenue, regardless of their actual use, sufficient to ensure that Company receives transmission revenues equal to amount of upgrade costs socialized in rates. PPL Electric revised its proposal to include a minimum load guarantee for a 10 year term which will result in large load customers guaranteeing transmission revenues well in excess of the upgrade costs that are placed into rates.

Third, the ESA also contains a minimum peak load contribution provision, which states that these customers' peak load contribution for purposes of the allocation of transmission costs under the 5 CP method is based upon the greater of (a) the minimum peak load contribution comprised of 80% in the first five years and 50% in the second five years of the anticipated maximum peak load contribution by this customer or (b) their actual maximum peak load contribution during the 5 Coincident Peaks (CP). In this regard, while the interconnection of these customers may "increase the size of the pie" (i.e., the Company's transmission revenue requirement set by its FERC formula rate), they do so in a way that requires them to be allocated such a substantially larger portion of that pie that it shrinks the

relative "slice of the pie" applicable to residential and small commercial and industrial customers (i.e., the percentage and dollar amount of the transmission revenue requirement allocated to these customer classes under pursuant to the TSC).

In sum, the Company has proposed protections that will allow for large load customer growth while ensuring that other customers are not paying to interconnect these new facilities. In fact, it is likely that customers will see transmission rates decrease because of the interconnection of new large load customers. It is for these reasons that the Company has stated that the interconnection of, and service to these customers, is a "win-win" for the Company, and its existing customers, with respect to the impacts of large load customer interconnections upon transmission rates. This is why the Company's project impacts upon transmission rates set forth in PPL Electric Exhibit JL-1R (CAUSE-VIII-9 Attachment 1) are reasonable, and anticipated to occur.

Q. On what basis does the Company project that these benefits are more likely to occur than any harms alleged by other parties? (*See* OCA St. 5SR, at pp. 11-14, CAUSE-PA St. 2-SR, at pp. 5-6, EJA St. No. 1-SR, at p. 31, and EI St. No. 1-SR, at pp. 9-15.)

A. These parties are essentially suggesting that the Company has no experience with interconnecting and maintaining service to customers with large loads over the long term. That is not the case; PPL Electric provides such service to a number of customers and, in many cases, has done so for decades. The Company acknowledges that the maximum load for each of these new large load interconnections being discussed in this proceeding is larger

than those other existing customers. However, in each case these customers are investing substantial sums of money in order to (a) bring their operations online, and (b) interconnect those operations with PPL Electric's system in order to obtain service. It is PPL Electric's experience that these customers are not interested in simply cancelling or abandoning these operations in a near- or mid-term window after they have made these investments. Rather, it is the Company's experience that they are long-term customers and partners, whose presence in its service territory provides substantial benefits.

C. Load Forecasts

Q. Do you have any response to OCA Witness Mr. Hoyt's reliance upon how Dominion prepares its load forecasts? (OCA St. 5SR, at pp. 24-25.)

A. I do not dispute that there may be different ways to prepare load forecasts, but this does not demonstrate the Company's methodology is unreasonable. In addition, I believe that only including customers in load forecasts after an ESA has been signed can create problems for grid planning from a timing perspective. Specifically, by delaying until an ESA is signed, the transmission owner delays the ability of the RTO to plan for and execute necessary transmission planning steps, and determine if adequate resources are available for such load. PPL Electric's approach, on the other hand, strikes a balance from a timing and planning perspective by providing this information to the RTO while discounting the load forecast based upon the progress of that load coming to fruition based upon whether the customer has executed a CSA and/or an ESA.

D. LP-6 Rate Class

Q. Do other parties oppose the implementation of a new LP-6 rate class in their surrebuttal testimony?

A. Yes. OCA Witness Hoyt (OCA St. 5SR, at pp. 22-26), (CAUSE-PA St. 2-SR, at pp. 6-7), EJA Witness Rabago (EJA St. No. 1-SR, at pp. 31-32), and EI Witness Nelson (EI St. No. 1-SR, at pp. 20-21) all oppose the implementation of a new LP-6 rate class in their surrebuttal testimony, or claim that a different MW thresh-old should be implemented.

Q. How do you respond?

A. I have two points that should be recognized. First, while certain of these parties claim that there is not enough time to analyze this issue when it is introduced in rebuttal, it was introduced in response to the specific concerns and recommendations raised by various parties with respect to the Company's updates to rate LP-5. PPL Electric has attempted to be responsive to the recommendations of other parties and, in part, based its LP-6 proposal upon the testimony they presented. A full record has been established on the Company's proposal and there is no reason that the Commission cannot render a decision in this proceeding.

Second, while these parties focus on the model tariff 50 MW threshold, none of them actually demonstrate that the 100 MW threshold is unreasonable. Critically, this threshold strikes an appropriate balance between capturing new large loads with a maximum load at a level that necessitates the additional protections and restrictions imposed upon this class. In

addition, while certain of these parties claim that this threshold allows for "gaming" between LP-5 and LP-6, none of them can point to how this gaming would occur in light of the minimum requirements contained in the applicable ESAs. The ESA process includes PPL Electric working with prospective to customers to understand their load needs. A 1,000 MW customer will not be able to hide 900 MW of load to qualify for LP-5. It is unreasonable to suggest that these large load customers will be able to "game" the system at the other parties suggest. Furthermore, I note these parties' concerns about gaming would apply regardless of the MW threshold utilized, absent appropriate protections already being in place. PPL Electric has those protections in place under the ESAs.

Q. OCA, EJA, and EI all assert that the Company's voluntary interruptible service option under the new LP-6 class is insufficient and/or that PPL Electric should instead require this load to be interruptible. (OCA St. 5SR, at pp. 20-22, EJA St. No. 1-SR, at pp. 39, and EI St. No. 1-SR, at pp. 26-28.) Why is their recommendation flawed?

A. This recommendation is flawed for two reasons, in addition to the reasons described in my rebuttal testimony. (PPL Electric St. 16-R, at pp. 21-22.)

First, these witnesses all appear to assume that PPL Electric does not already have protections in place to require curtailment of load when necessary to protect the grid. That is incorrect. PPL Electric has such protections in place in its distribution tariff (*see* Rule 4.G. and H.). Moreover, PJM also has controls in place, which the Company is obligated to follow, for emergency load reductions when necessary on the transmission system. These protections

are sufficient to address the need to curtail load if the grid requires, and are fundamentally different from requiring a customer to take interruptible service, which would allow the Company to interrupt service to a customer for economic reasons (in addition to these reliability reasons) that would justify a different rate for such customers based upon those economics.

Second, OCA Witness Mr. Hoyt's specific comparison to interruptible gas service is highly flawed. It ignores that such customers voluntarily choose to obtain such service. And it also omits the fact that these customers are required to have other specific requirements in place before they would even qualify to obtain such interruptible service in the first place (e.g., alternative fuel requirements, and the ability to transfer between fuel sources, sometimes manually).

III. CONCLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

Q.1. Provide a summary discussion of the rate change request, including specific reasons for each increase or decrease. Also provide a breakdown which identifies the revenue requirement value of the major items generating the requested rate change.

A.1. See Section A of Exhibit Fully Projected Future 1.

Q.2. Identify the proposed witnesses for all statements and schedules of revenues, expenses, taxes, property, valuation and the like.

A.2. See Testimony Book I and Testimony Book II.

Q.3. Provide a single page summary table showing, at present and at proposed rates, together with references to the filing information, the following as claimed for the fully adjusted test year:

Revenues
Operating Expenses
Operating Income
Rate Base
Rate of Return (produced)

A.3. Attachment I-A-3 provides the requested information.

PPL ELECTRIC UTILITIES CORPORATION

PUC Jurisdictional
Year Ended June 30, 2027
(Thousands of Dollars)

	AT PRESENT RATES		AT PROPOSED RATES	
	Amount	**Exhibit Fully Projected Future 1 Reference**	**Amount**	**Exhibit Fully Projected Future 1 Reference**
Revenue	$ 1,065,901	Sch. D-1, Col. (6), line 1	$ 1,422,173	Sch. D-1, Col. (8), line 1

Rate of Return	4.43%	Sch. C-1, Col. (2), line 14	8.56%	Sch. C-1, Col. (2), line 16

Q.4. Whenever a major generating plant is placed in operating service or removed from operating service the utility shall separately indicate the effect of the plant addition or removal from service upon rate base, revenue, expense, tax, income and revenue requirement as it affects the test year.

A.4. This filing requirement is not applicable to PPL Electric's current rate filing.

Q. 1. Provide a corporate history including the dates of original incorporation, subsequent mergers and acquisitions. Indicate all counties, cities and other governmental subdivisions to which service is provided, including service areas outside this Commonwealth, and the total number of customers or billed units in the areas served.

A. 1. PPL Electric Utilities Corporation ("PPL Electric") was founded in 1920 through consolidation of eight electric companies.[1] It presently serves a 10,000 square mile territory in 29 counties of central-eastern Pennsylvania. This territory contains extensive agricultural and industrial sections, as well as over 800 major communities, including the cities of Allentown, Bethlehem, Harrisburg, Lancaster, Scranton, Wilkes-Barre and Williamsport. PPL Electric serves approximately 1.5 million customers.

The requested corporate history, together with a map of PPL Electric's service territory and a list of all governmental subdivisions in which service is rendered, is provided in Attachment I-B-1.

[1] These Companies are listed at Page 1 of Attachment I-B-1.

HIGHLIGHTS OF CORPORATE HISTORY

1920 Pennsylvania Power & Light Company (PP&L) founded through consolidation of eight electric companies,[1] as a direct subsidiary of Lehigh Power Securities Corporation and an indirect subsidiary of Electric Bond and Share Company.

1923 Wilkes-Barre Electric Company merges with PP&L.

1925 PP&L acquires ownership of United Electric Company.

1929 PP&L acquires ownership of Harrisburg Light & Power Company.

1930 PP&L acquires 28 electric and gas companies which serve substantially all of Lancaster County.

1938 Conestoga Transmission Company and Lehighton Electric Light & Power Company merge with PP&L.

1939 Lehigh Power Securities Corporation is dissolved. PP&L becomes a subsidiary of National Power & Light Company, and remains an indirect subsidiary of Electric Bond and Share Company.

1945-1947 PP&L becomes independent as a result of a multi-step process (carried out under the Public Utility Holding Company Act of 1935) during which National Power & Light Company and Electric Bond and Share Company divest themselves of PP&L ownership, and PP&L stock is sold to the public.

1948 PP&L acquires Palmerton Lighting Company.

1951 PP&L divests itself of all gas properties, in accordance with decision to confine operations to the electric business.[2]

1955 Pennsylvania Water & Power Company merges with PP&L.
PP&L purchases one-third ownership of Safe Harbor Water Power Corporation.

1956 Scranton Electric Company merges with PP&L.

1980 Hershey Electric Company merges with PP&L.

1985 PP&L divests itself of all steam service provided to the City of Harrisburg.

1994 PP&L Resources, Inc. is incorporated as an energy and utility holding company.

---

[1] These companies were: Columbia and Montour Electric Company, The Harwood Electric Company, The Lehigh Valley Light & Power Company, Northern Central Gas Company, Northumberland County Gas & Electric Company, Pennsylvania Lighting Company, Pennsylvania Power & Light Company and the Schuylkill Gas & Electric Company.

[2] Except some listed steam service provided to the City of Harrisburg.

1995 PP&L Resources, Inc. becomes the parent company of PP&L.

1997 Name of the operating electric utility changed from Pennsylvania Power & Light Company to PP&L, Inc.

1998 PP&L Resources, Inc. acquired Penn Fuel Gas, Inc., which owned two gas utilities, PFG Gas, Inc. and North Penn Gas Company.

2000 Name of the operating electric utility changed from PP&L, Inc. to PPL Electric Utilities Corporation ("PPL Electric"), name of utility holding company changed from PP&L Resources, Inc. to PPL Corporation and name of the utility holding company for the two gas utilities changed from Penn Fuel Gas, Inc. to PPL Gas Utilities Corporation.

2000 On July 1, PPL Corporation and PPL Electric completed a corporate realignment in order to effectively separate PPL Electric's regulated transmission and distribution operations from its deregulated generation operations.

2001 PPL Corporation completed a strategic initiative to confirm the structural separation of PPL Electric from PPL Corporation's and PPL Electric's other affiliated companies. On August 16, PPL Electric filed its Articles of Division, including its Plan of Division, as filed with the Department of State of the Commonwealth of Pennsylvania and divided itself into two corporations, with PPL Electric surviving as one of the resulting corporations and Ninth Street and Hamilton Corporation being formed as a new Pennsylvania corporation.

2004 Effective December 31, the two gas utilities, PFG Gas, Inc. and North Penn Gas Company, merged up and into PPL Gas Utilities Corporation.

2004 PPL Electric formed a subsidiary special purpose entity, PPL Receivables Corporation ("PPL Receivables"), to which PPL Electric sold up to $150 million of accounts receivable.

2008 On October 1, PPL Corporation sold its natural gas distribution and propane subsidiaries, PPL Gas Utilities Corporation and Penn Fuel Propane, LLC, to UGI Utilities, Inc. After the sale, PPL Gas Utilities Corporation changed its name to UGI Central Penn Gas, Inc.

2016 Effective February 29, PPL Receivables merged up and into PPL Electric.

2022 Effective January 1, PPL Corporation contributed all of the outstanding shares of common stock of PPL Electric down two levels to its indirect wholly owned subsidiary PPL Energy Holdings, LLC ("PPL Energy Holdings"). This contribution resulted in PPL Electric becoming a direct wholly owned subsidiary of PPL Energy Holdings, which is a direct wholly owned subsidiary of PPL Subsidiary Holdings, LLC, which is a direct wholly owned subsidiary of PPL Corporation.

TERRITORY COVERED BY THIS TARIFF

BERKS COUNTY **(C)**
- Boroughs of Morgantown, New Morgan, Robesonia, Shillington, Sinking Spring, Wernersville, West Lawn, Womelsdorf, Wyomissing, and Wyomissing Hills.
- Townships of Caernarvon, Cumru, Heidelberg, Lower Heidelberg, South Heidelberg, and Spring.

BUCKS COUNTY
- Boroughs of Richlandtown, Sellersville, Silverdale, Telford, and Turmbauersville.
- Townships of East Rockhill, Haycock, Hilltown, Milford, Richland, Springfield, and West Rockhill.

CARBON COUNTY
- Boroughs of Beaver Meadows, Bowmanstown, East Side, Jim Thorpe, Lansford, Nesquehoning, Palmerton, Parryville, Summit Hill, and Weissport.
- Townships of Banks, East Penn, Franklin, Kidder, Lausanne, Lehigh, Lower Towamensing, Mahoning, Packer, Penn Forest, and Towamensing.

CHESTER COUNTY
- Boroughs of Atglen, Elverson, and Honey Brook.
- Townships of Honey Brook, West Nantmeal, and West Sadsbury.

CLINTON COUNTY
- City of Lock Haven.
- Boroughs of Avis, Flemington, Loganton, Mill Hall, Renovo, and South Renovo.
- Townships of Allison, Bald Eagle, Castanea, Chapman, Colebrook, Crawford, Dunnstable, Gallagher, Greene, Grugan, Logan, Noyes, Pine Creek, Wayne, and Woodward.

COLUMBIA COUNTY
- Town of Bloomsburg.
- Boroughs of Ashland, Benton, Berwick, Briar Creek, Centralia, Millville, Orangeville, and Stillwater.
- Townships of Beaver, Benton, Briar Creek, Catawissa, Cleveland, Conyngham, Fishing Creek, Franklin, Greenwood, Hemlock, Jackson, Locust, Madison, Main, Mifflin, Montour, Mount Pleasant, North Centre, Orange, Pine, Roaring Creek, Scott, South Centre, and Sugarloaf.

CUMBERLAND COUNTY
- Boroughs of Camp Hill, Carlisle, Lemoyne, Mechanicsburg, New Cumberland, Newville, Shiremanstown, West Fairview, and Wormleysburg.
- Townships of Dickinson, East Pennsboro, Hampden, Lower Allen, Middlesex, Monroe, North Middleton, North Newton, Penn, Silver Spring, South Middleton, South Newton, Upper Allen, and West Pennsboro.

DAUPHIN COUNTY
- City of Harrisburg.
- Boroughs of Berrysburg, Dauphin, Elizabethville, Gratz, Halifax, Highspire, Hummelstown, Lykens, Millersburg, Paxtang, Penbrook, Pillow, Steelton, and Williamstown.
- Townships of Derry, East Hanover, Halifax, Jackson,Jefferson, Lower Paxton, Lower Swatara, Lykens, Middle Paxton, Mifflin, Reed, Rush, South Hanover, Susquehanna, Swatara, Upper Paxton, Washington, Wayne, West Hanover, Wiconisco, and Williams.

JUNIATA COUNTY
- Boroughs of Mifflin, Mifflintown, Port Royal, and Thompsontown
- Townships of Delaware, Fayette, Fermanagh, Greenwood, Milford, Monroe, Susquehanna, Turbett, and Walker.

LACKAWANNA COUNTY
- Cities of Carbondale and Scranton.
- Boroughs of Archbald, Blakely (part), Clarks Green, Clarks Summit, Dalton, Dickson City, Dunmore, Jermyn, Jessup, Mayfield, Moosic, Moscow, Old Forge, Olyphant (part), Taylor, Throop, and Vandling.
- Townships of Abington, Benton, Carbondale, Clifton, Covington, Elmhurst, Fell, Glenburn, Greenfield, Jefferson, La Plume, Lehigh, Madison, Newton, North Abington, Ransom, Roaring Brook, Scott, South Abington, Spring Brook, and West Abington.

LANCASTER COUNTY
- City of Lancaster.
- Boroughs of Adamstown, (part), Akron, Christiana, Columbia, Denver, East Petersburg, Elizabethtown, Ephrata (part), Lititz, Manheim, Marietta, Millersville, Mount Joy, Mountville, New Holland, Quarryville, Strasburg, and Terre Hill.
- Townships of Bart, Brecknock, Caernarvon, Clay, Colerain, Conestoga, Conoy, Drumore, Earl, East Cocalico, East Donegal, East Drumore, East Earl, East Hempfield, East Lampeter, Eden, Elizabeth, Ephrata, Fulton, Lancaster, Leacock, Little Britain, Manheim, Manor, Martick, Mount Joy, Paradise, Penn, Pequea, Providence, Rapho, Sadsbury, Salisbury, Strasburg, Upper Leacock, Warwick, West Cocalico, West Donegal, West Earl, West Hempfield, and West Lampeter.

LEBANON COUNTY
- Borough of Richland.
- Townships of Heidelberg and Millcreek.

LEHIGH COUNTY
- Cities of Allentown and Bethlehem.
- Boroughs of Alburtis, Catasauqua, Coopersburg, Coplay, Emmaus, Fountain Hill, Macungie, and Slatington.
- Townships of Hanover, Heidelberg, Lower Macungie, Lower Milford, Lowhill, North Whitehall, Salisbury, South Whitehall, Upper Macungie, Upper Milford, Upper Saucon, Washington, and Whitehall.

LUZERNE COUNTY
- Cities of Hazleton, Pittston, and Wilkes-Barre.
- Boroughs of Ashley, Avoca, Bear Creek Village, Conyngham, Dupont, Duryea, Exeter, Freeland, Hughestown, Jeddo, Laflin, Laurel Run, Nescopeck, Nuangola, Penn Lake Park, West Hazleton, West Pittston, White Haven, and Yatesville.
- Townships of Bear Creek, Black Creek, Buck, Butler, Dennison, Dorrance, Exeter, Fairview, Foster, Hanover, Hazle, Hollenbach, Jenkins, Nescopeck, Pittston, Plains, Rice, Salem, Slocum, Sugarloaf, Wilkes-Barre, and Wright.

TERRITORY COVERED BY THIS TARIFF (CONTINUED)

LYCOMING COUNTY
City of Williamsport.
Boroughs of Duboistown, Hughesville, Jersey Shore, Montgomery, Montoursville, Muncy, Picture Rocks, Salladasburg, and South Williamsport.
Townships of Anthony, Armstrong, Bastress, Brady, Clinton, Eldred, Fairfield, Franklin, Hepburn, Jordan, Limestone, Loyalsock, Lycoming, Mifflin, Mill Creek, Moreland, Muncy, Muncy Creek, Nippenose, Old Lycoming, Penn, Piatt, Porter, Shrewbury, Susquehanna, Upper Fairfield, Washington, Watson, Wolf, and Woodward.

MONROE COUNTY
Boroughs of East Stroudsburg (part), Mount Pocono, and Stroudsburg (part).
Townships of Barrett, Chestnuthill, Coolbaugh, Eldred, Jackson, Paradise, Pocono, Polk, Price, Smithfield, Stroud, Tobyhanna, and Tunkhannock.

MONTGOMERY COUNTY
Boroughs of East Greenville, Pennsburg, Red Hill, Souderton, and Telford.
Townships of Franconia, Hatfield, and Upper Hanover.

MONTOUR COUNTY
Boroughs of Danville and Washingtonville.
Townships of Anthony, Cooper, Derry, Liberty, Limestone, Mahoning, Mayberry, Valley and West Hemlock.

NORTHAMPTON COUNTY
City of Bethlehem.
Boroughs of Freemansburg, Hellertown, Nazareth (part), North Catasauqua, Northampton, Pen Argyl (part), Stockerton, Tatamy, and Walnutport.
Townships of Allen, Bethlehem, Bushkill, East Allen, Forks, Hanover, Lehigh, Lower Mount Bethel, Lower Nazareth, Lower Saucon, Moore, Palmer, Plainfield, Upper Nazareth, Washington, and Williams.

NORTHUMBERLAND COUNTY
Cities of Shamokin and Sunbury.
Boroughs of Herndon, Kulpmont, Marion Heights, McEwensvillle, Milton, Mount Carmel, Northumberland, Riverside, Snydertown, and Turbotville.
Townships of Coal, Delaware, East Cameron, East Chillisquaque, Jackson, Jordon, Lewis, Little Mahanoy, Lower Augusta, Lower Mahanoy, Mount Carmel, Point, Ralpho, Rockefeller, Rush, Shamokin, Turbot, Upper Augusta, Upper Mahanoy, Washington, West Cameron, West Chillisquaque, and Zerbe.

PERRY COUNTY
Boroughs of New Bloomfield, Landisburg, Liverpool, Marysville, Millerstown, New Buffalo, and Newport.
Townships of Buffalo, Carroll, Centre, Greenwood, Howe, Juniata, Liverpool, Miller, Northeast Madison, Oliver, Penn, Rye, Saville, Southwest Madison, Spring, Tuscarora, Tyrone, Watts, and Wheatfield.

PIKE COUNTY
Townships of Blooming Grove, Greene, Lackawaxen, Palmyra, Porter, and Shohola.

SCHUYLKILL COUNTY
City of Pottsville.
Boroughs of Ashland, Auburn, Coaldale, Cressona, Deer Lake, Frackville, Gilberton, Girardville, Gordon, Landingville, Mahanoy City, McAdoo, Mechanicsville, Middleport, Minersville, Mount Carbon, New Philadelphia, New Ringgold, Orwigsburg, Palo Alto, Pine Grove, Port Carbon, Port Clinton, Ringtown, Shenandoah, Tamaqua, Tower City, and Tremont.
Townships of Barry, Blythe, Branch, Butler, Cass, Delano, East Brunswick, East Norwegian, East Union, Eldred, Foster, Frailey, Hegins, Hubley, Kline, Mahanoy, New Castle, North Manheim, North Union, Norwegian, Pine Grove, Porter, Reilly, Rush, Ryan, Schuylkill, South Manheim, Tremont, Union, Upper Mahantongo, Walker, Washington, Wayne, West Brunswick, West Mahanoy, and West Penn.

SNYDER COUNTY
Boroughs of Beavertown, Freeburg, McClure, Middleburg, Selinsgrove, and Shamokin Dam.
Townships of Adams, Beaver, Centre, Chapman, Franklin, Jackson, Middlecreek, Monroe, Penn, Perry, Spring, Union, Washington, West Beaver, and West Perry.

PPL Electric Utilities Corporation

Supplement No. 102
Electric Pa. P.U.C. No. 201
Fourth Revised Page No. 4B
Canceling Third Revised Page No. 4B

TERRITORY COVERED BY THIS TARIFF (CONTINUED)

SUSQUEHANNA COUNTY
Boroughs of Forest City and Union Dale.
Townships of Clifford and Herrick.

UNION COUNTY
Boroughs of Hartleton and New Berlin.
Townships of Gregg, Hartley, Kelly, Lewis, Limestone, Union, West Buffalo and White Deer.

WAYNE COUNTY
Boroughs of Bethany, Hawley, Honesdale, Prompton, and Waymart.
Townships of Berlin, Canaan, Cherry Ridge, Clinton, Damascus, Dreher, Dyberry, Lake, Lebanon, Lehigh, Mount Pleasant, Oregon, Palmyra, Paupack, Salem, South Canaan, Sterling, and Texas.

WYOMING COUNTY
Borough of Factoryville.
Townships of Clinton, Nicholson, Overfield, and Tunkhannock.

YORK COUNTY
Boroughs of East Prospect and Wrightsville.
Townships of Fairview, Hellam and Lower Windsor.

Q.2. Provide a description of the property of the utility and an explanation of the system's operation, and supply the following, using available projections if actual data is unavailable:

a) Schedule of generating capability showing for the test year, and for the two consecutive 12-month periods prior to the test year, net dependable capacity in KW by unit, plant capacity factor by unit, and total fuel consumption by type and cost for each unit, if available, or for each station, and operation and maintenance expenses by station.

b) A schedule showing for the test year and for the 12-month period immediately prior to the test year the scheduled and unscheduled outages - in excess of 48 hours - for each station, the equipment or unit involved, the date the outage occurred, duration of the outage, maintenance expenses incurred for each outage, if available, and amounts reimbursable from suppliers or insurance companies.

c) A schedule for each unit retired during the test year or subsequent to the end of the test year, which shows the unit's KW capacity, hours of operation during the test year, net output generated, cents/KWH of maintenance and fuel expenses, and date of retirement.

d) A schedule showing latest projections of capacity additions and retirements - costs and KW - and reserve capacity at the time of peak for at least 10 years beyond the test year, including the in-service dates - actual or expected - and AFDC cutoff dates - if different from in-service dates - for all new generating units coming on line during or subsequent to the test year, if claimed.

A.2. This filing requirement is not applicable to PPL Electric's current rate filing.

Q.3. Provide an overall system map, including and labeling all generating plants, transmission substations - indicate voltage, transmission system lines - indicate voltage, and all interconnection points with other electric utilities, power pools, and other like systems.

A.3. PPL Electric's overall system map includes Critical Energy Infrastructure Information and is not included.

Q.1. Provide a schedule showing the test year rate base and rates of return at original cost less accrued depreciation under present rates and under proposed rates. Claims made on this schedule should be cross-referenced to appropriate supporting schedules.

A.1. Schedule C-1 of Exhibits Future 1 and Fully Projected Future 1 provide the requested information.

Q.2. If the schedule provided in response to item 1, is based upon a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year.

A.2. Schedule C-1 of Exhibit Historic 1 provides the requested information.

Q.3. When a utility files a tariff stating a new rate based in whole or in part on the cost of construction, as defined in 66 Pa.C.S. § 1308(f) (relating to voluntary changes in rates), of an electric generating unit, the utility shall identify:

a) The total cost of the generating unit.

b) The following specific costs:

(1) The cost and quantity of each category of major equipment, such as switchgear, pumps or diesel generators and the like.

(2) The cost and quantity of each category of bulk materials, such as concrete, cable and structural steel and the like.

(3) Manual labor.

(4) Direct and indirect costs of architect/engineering services.

(5) Direct and indirect costs of subcontracts or other contracts involving major components or systems such as turbines, generators, nuclear steam supply systems, major structures and the like.

(6) Distributed costs.

c) A cost increase of $5 million or more, including AFUDC, over the original utility estimates provided under 66 Pa.C.S. § 515(a) (relating to construction cost of electric generating units) and its causes.

d) Compliance with subsections (a) and (b) will be identical in format and substance as that provided under 52 Pa. Code § 57.103 (relating to estimate of construction costs) for original cost estimates submitted under 66 Pa.C.S. § 515(a).

A.3. This filing requirement is not applicable to PPL Electric's current rate filing.

Q.1. If a claim is made for plant held for future use, supply the following:

a) A description of the plant or land site and its cost and any accumulated depreciation.
b) The expected date of use for each item claimed.
c) An explanation as to why it is necessary to acquire each item in advance of its date of use.
d) The data when each item was acquired.
e) The date when each item was placed in plant held for future use.

A.1. PPL Electric is not making a claim for plant held for future use in this filing.

Q.2. If a claim is made for construction work in progress, provide a supporting schedule which sets forth separately, revenue-producing and nonrevenue producing amounts, and include, for each category a summary of all work orders, amounts expended at the end of the test year and anticipated in-service dates. Indicate if the construction work in progress will result in insurance recoveries, reimbursements, or retirements of existing facilities. Describe in exact detail the necessity of each project claimed if not detailed on the summary page from the work order. Include final completion dates and estimated total amounts to be spent on each project.

A.2. PPL Electric is not making a claim for construction work in progress in this filing.

Q.3. If a claim is made for materials and supplies or fuel inventory provide a supporting schedule for each claim showing the latest actual 13 monthly balances and showing in the case of fuel inventory claims, the type of fuel, and location, as in station, and the quantity and price claimed.

A.3. The requested information for materials and supplies is provided in Schedule C-5 of Exhibits Historic 1, Future 1 and Fully Projected Future 1. There is no claim being made for fuel inventory.

Q.4. If a claim is made for cash working capital provide a supporting schedule setting forth the method and all detailed data utilized to determine the cash working capital requirement. If not provided in the support data provide a lead-lag study of working capital, completed no more than 6 months prior to the rate increase filing.

A.4. Attachment II-B-4 provides a copy of the working capital lead-lag study. Schedule C-4 of Exhibits Historic 1, Future 1 and Fully Projected Future 1 sets forth the method and detailed data utilized to determine the Company's claimed cash working capital requirements.

PPL Electric Utilities Corporation
Lag in Days in Payment of Operating Expenses
12 Months Ended June 30, 2025

	Lag in Days
Payroll Lag between the midpoint of the 14 day payroll period and pay day (payroll period ends on a Sunday and employees are paid on the following Friday).	12
Benefits Lag between the midpoint of the calendar month when services are provided through PPL Services Corp. and the payment on the 20th of the following month.	35
Affiliate Support Costs Lag between the midpoint of the calendar month when services are provided and the payment on the 20th of the following month.	35
Other Operating Expenses Lag between the receipt of services and materials and payment of invoices based on a review of selected invoices.	67

Q.5. If a claim is made for compensating bank balances, provide the following information:

a) Name and address of each bank.
b) Types of accounts with each bank—checking, savings, escrow, other services, and the like.
c) Average daily balance in each account.
d) Amount and percentage requirements for compensating bank balance at each bank.
e) Average daily compensating bank balance at each bank.
f) Documents from each bank explaining compensating bank balance requirements.
g) Interest earned on each type of account.
h) A calculation showing the average daily float for each bank.

A.5. PPL Electric has no requirements for compensating bank balances with its banks and has not made a claim for this item.

Q.6. Explain in detail by statement or exhibit the appropriateness of additional claims or the use of a method not previously mentioned, in the claimed rate base.

A.6. An explanation of PPL Electric's claim for any additional rate base items is set forth in Section C of Exhibits Future 1 and Fully Projected Future 1.

Q.1. Prepare a Statement of Income including:

a) The book, or budgeted, statement for the test year.
b) Adjustments to annualize and normalize under present rates, including an elimination of the effects on income of the energy cost rate and state tax adjustment surcharge.
c) The income statement under present rates after adjustment.
d) The adjustment for the revenue requested.
e) The income statement under requested rates after adjustment.

Each adjustment, including those relating to adjustment clauses, shall contain an explanation in sufficient clarifying detail to allow a reasonably informed person to understand the method and rationale of the adjustment.

A.1. The information requested in items a. through e. is set forth in Section D of Exhibits Future 1 and Fully Projected Future 1.

Q.2. If the schedule provided in item 1 is based upon budgeted data for a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year.

A.2. The information requested is set forth in Section D of Exhibit Historic 1.

D. Urban
S. Leskowsky

Q.1. Provide a schedule showing all revenues and expenses for the test year and for the 12-month period immediately prior to the test year, together with an explanation for major variances between test year revenues and expenses and those for the previous 12-month period. Revenues and expenses shall be summarized by the major account categories listed below. If budgeted data for a future test year is not readily available by these categories, an analysis of the data for the 12-month period immediately prior to the future test year or for the most recent available calendar year may serve as the basis for ratably allocating the budgeted data into the account categories.

A.1. Attachment II-D-1a provides the requested schedule of revenues and expenses by account categories. Attachment II-D-1b provides explanations for major variances.

PPL ELECTRIC UTILITIES CORPORATION
Operating Statements
For the 12 Months Ended June 30, 2025 and 2026

Significant increases or decreases (in thousands of dollars) are attributed to the following:

Account 400 - Operating Revenues - $168,656

Electric Revenue - $170,174 - Increase is primarily due to increased GSC rates. Additionally, DSIC and ACR rates increased, which were partially offset by lower TSC rates.

Other Electric Revenue - ($1,518) - Decrease primarily due to lower unbilled revenue, lower rent for electric property, and lower over/under adjustments related to cost recovery clauses and riders, offset by higher Transmission Owner revenue.

Accounts 401 & 402 - Operating and Maintenance Expenses - $29,858

Power Purchases - $103,405 - Increase is primarily due to higher energy and capcacity costs from acquisition contracts for POLR customers not using alternate suppliers.

Transmission Expenses - $32,735 - Increase is primarily due to higher NITS charges for POLR customers.

Distribution Expenses - ($83,808) - Decrease is primarily due to higher storm and vegetation management costs in HTY. In HTY, a one-time reclass of DER management program increased expense. FTY assumes expense efficiencies forecasted.

Customer Accounts Expenses - ($11,235) - Decrease is primarily due to lower expenses related to cut season costs and uncollectibles.

Customer Service & Informational Expenses - $35,261 - Increase is primarily due to higher USR expenses forecasted.

Administrative and General Expenses - ($44,394) - Decrease is primarily due to IT efficiencies assumed in FTY and expenses moved to regulatory asset during year end 2025 and reductions from from pension costs included in HTY not included in FTY or FPFTY and O&M efficiencies. These were offset by increases associated with hardware and software IT upgrades.

Account 407 - Regulatory Debits (Credits), net - $5,471 - Increase primarily due to amortization of storms.

Account 408.1 - Taxes Other Than Income Taxes - $12,939 - Increase is primarily due to higher gross receipts tax primarily resulting from a higher revenue base.

Account 409.1 - Federal Income Taxes - $15,566 - Increase is due primarily to the following items:

Higher Pre-Tax Book Income	82,329
Lower Book/Tax Timing Differences	(65,021)
Higher PA State Income Tax Expense Deduction	(2,052)
State Income Tax Adjustment for Prior Year	(1,188)
Higher Federal Taxable Income	14,068
Higher Federal Tax Expense @ 21%	2,955
Lower Federal Tax Credits	5,693
Annualized Effective Tax Rate Adjustment (APB28)	(303)
Lower Accrual for Potential Deficiency	(311)
Prior Period Tax Return Adjustments in historic period	7,532
Total Federal Income Tax Expense / (Benefit)	15,566

Account 409.1 - State Income Taxes - $5,009 - Increase is due primarily to the following items:

Higher Pre-Tax Book Income	82,329
Lower Book/Tax Timing Differences	(65,021)
Lower State Bonus Depreciation Deduction	16,348
Higher PA Taxable Income	33,656
Higher PA State Income Tax Expense	2,052
Prior Period Tax Return Adjustments in historic period	2,957
Total PA State Income Tax Expense / (Benefit)	5,009

Account 410.1 & 411.1 - Deferred Income Taxes - Federal - Net - $2,375 - Increase is due primarily to the following items:

Change in book/tax timing differences	$ 8,582
Estimated PA State Income Tax Rate Change Adjustments	(278)
Deficient Federal NOL Deferred Taxes	6
Prior Year Adjustments	(5,935)
	$ 2,375

Account 410.1 & 411.1 - Deferred Income Taxes - State - Net - ($3,228) - Decrease is due primarily to the following items:

Change in book/tax timing differences	$ (1,310)
Estimated PA State Income Tax Rate Change Adjustments	1,325
Prior Year Adjustments	(3,243)
	$ (3,228)

Account 419.0 Interest and Dividend Income - $3,179 -
Increase primarily due to interest income from affiliate.

Account 419.1 Allowance for Borrowed Funds used During Construction - $1,143 -
Increase primarily due to large transmission projects being constructed and being placed in service in outer years.

Account 427 - Interest on Long-term Debt - $31,752 - Increase is primarily due to proposed debt issuances.

PPL ELECTRIC UTILITIES CORPORATION
Operating Statements
For the 12 Months Ended June 30, 2026 and 2027

Significant increases or decreases (in thousands of dollars) are attributed to the following:

Account 400 - Operating Revenues - $61,295

Electric Revenue - ($3,245) - Decrease is primarily due to lower forecasted prices of certain rider mechanisms.

Other Electric Revenue - $64,540 - Increase primarily due to the Transmission Owner Revenue increases based on the FERC formula rates.

Accounts 401 & 402 - Operating and Maintenance Expenses - $84,604

Power Purchases - $4,006 - Increase is primarily due to an increase in projected load resulting in higher energy costs for POLR customers not using alternate suppliers.

Distribution Expenses - $56,199 - Increase is primarily due to higher vegetation spend and increase in inspection costs.

Customer Accounts Expenses - $6,413 - Increase is primarily due to the addition of resources and a slightly higher uncollectible forecast.

Customer Service & Informational Expenses - ($11,758) - Decrease is primarily due to lower USR expenses forecasted.

Administrative and General Expenses - $30,037 - Increase is primarily due to increases associated with IT upgrades.

Account 407 - Regulatory Debits (Credits), net - $3,442 - Increase primarily due to amortization of storms.

Account 409.1 - Federal Income Taxes - ($37,696) - Decrease is due primarily to the following items:

Lower Pre-Tax Book Income	(105,010)
Lower Book/Tax Timing Differences	(90,998)
Higher PA State Income Tax Expense Deduction	16,504
Lower Federal Taxable Income	(179,504)
Lower Federal Tax Expense @ 21%	(37,696)
Total Federal Income Tax Expense / (Benefit)	(37,696)

Account 409.1 - State Income Taxes - ($16,504) - Decrease is due primarily to the following items:

Lower Pre-Tax Book Income	(105,010)
Lower Book/Tax Timing Differences	(90,998)
Lower State Bonus Depreciation Deduction	(17,426)
Lower PA Taxable Income	(213,434)
Lower PA State Income Tax Expense	(16,504)
Total PA State Income Tax Expense / (Benefit)	(16,504)

Account 410.1 & 411.1 - Deferred Income Taxes - Federal - Net - $18,768 - Increase is due primarily to the following items:

Change in book/tax timing differences	$ 18,774
Deficient Federal NOL Deferred Taxes	(6)
	$ 18,768

Account 410.1 & 411.1 - Deferred Income Taxes - State - Net - $2,886 - Increase is due primarily to the following items:

Change in book/tax timing differences	$ 2,886
	$ 2,886

Account 419.0 Interest and Dividend Income - $4,118 -
Increase primarily due to interest income from affiliate.

Account 419.1 Allowance for Borrowed Funds used During Construction - $4,658 -
Increase primarily due to large Transmission projects being constructed and being placed in service in outer years.

Account 427 - Interest on Long-term Debt - $34,322 - Increase is primarily due to a proposed debt issuances.

Q.2. Provide a summary of test year adjustments which sets forth the effect of the adjustment upon the following: operating revenues, operating expenses, taxes other than income taxes, operating income before income taxes, State income tax, Federal income tax and income available for return. In addition, test year adjustments shall be presented on the basis of the major account categories set out at II-D-1.

A.2. Schedule D-2 of Exhibits Future 1 and Fully Projected Future 1 provides a summary, by major account categories, of test year adjustments claimed by PPL Electric.

Q.3. List and explain all nonrecurring or extraordinary expenses incurred in the test year and all expenses included in the test year which do not occur yearly but are of a nature that they do occur over an extended period of years, for example, nonyearly maintenance programs, and the like.

A.3 Test year expenses that are non-recurring, extraordinary or do not occur yearly, but over an extended period of years, are explained and adjusted in Section D of Exhibits Future 1 and Fully Projected Future 1.

The following items have been identified as one-time or non-recurring items that occurred during the Historic Test Year:

- DER projects impairment – Dr. $21 million to various FERC account 58X accounts.
- Office relocation and related costs – Dr. $2 million to FERC account 421.
- Strategic corporate initiatives – Dr. $1 million to FERC account 426 and an additional $1 million to other various O&M accounts.
- AFUDC Catch up – Cr. $1.756 million to FERC account 419; Cr. $73 thousand to FERC Account 432.
- Stores adjustment – Cr. $645 thousand to FERC account 923.

These items are reflected in the amounts on Exhibit Historic D-1 column 1. They are not expected to recur.

Q.4. As a separate item, list extraordinary property losses related to property previously included in cost of service when the gain or loss on this property has occurred or is likely to occur in the future test year. The proposed ratemaking treatment of extraordinary gains and losses must also be disclosed. Sufficient supporting data must be provided.

A.4. PPL Electric does not expect to incur any extraordinary gains or losses in the Future Test Year or Fully Projected Future Test Year which are related to property previously included in its allowed cost of providing service.

Q.5. Provide the amount of accumulated reserve for uncollectible accounts, method and rate of accrual, amounts accrued and amounts written off in each of the last 3 calendar years.

A.5. The provision for uncollectible accounts for any year is determined by reviewing the projected annual revenue, current reserve balance, current receivable status, receivable trends, write-off trends and the projected impact of future collection initiatives on the quality of receivables.

Attachment II-D-5 presents the accumulated provision for uncollectible accounts and the amounts written off for the years ended June 30, 2023, 2024 and 2025.

PPL ELECTRIC UTILITIES CORPORATION

Accumulated Provision for Uncollectible Accounts

(Thousands of dollars)

	Customers		Other	Property Damage	Total
Balance June 30, 2022	$ 31,154		$ 1,754	$ 2,919	$ 35,827
Provision	36,122		2,116	3,411	41,649
Amounts Written Off	(25,295)	(a)	(2,229)	(3,325)	(30,849)
Balance June 30, 2023	41,981		1,641	3,005	46,627
Provision	45,576		(438)	3,312	48,450
Amounts Written Off	(46,794)	(a)	(88)	(3,468)	(50,350)
Balance June 30, 2024	40,763		1,115	2,849	44,727
Provision	42,207		299	4,359	46,865
Amounts Written Off	(43,533)	(a)	(31)	(4,605)	(48,169)
Balance June 30, 2025	$ 39,437		$ 1,383	$ 2,603	$ 43,423

(a) Amounts written off are net of POR discounts. For fiscal years ending June 2023, 2024 and 2025 the POR discounts were $16,788, $17,765 and $17,749, respectively.

Q.6. Supply detailed calculations to support the total claim for rate case expense, including supporting data for outside service rendered. Provide the items comprising the estimated rate case expense claim for the current rate case.

A.6. Schedule D-6 of Exhibits Historic 1, Future 1, and Fully Projected Future 1 set forth PPL Electric's claim for rate case expense. This includes expenses related to printing and office supplies, advertising, outside legal counsel, and external witness support.

Q.7. Submit schedules for the test year and for the 12-month period immediately prior to the test year showing by major components, if included in claimed test year expenses, the expenses incurred in each of the following expense categories.

a) Miscellaneous general expenses, including account 930.
b) Outside service expenses.
c) Regulatory commission expenses.
d) Advertising expenses, including advertising engaged in by trade associations whenever the utility has claimed a contribution to the trade association as a ratemaking claim - provide explanation of types and purposes of such advertising.
e) Research and development expenses - provide a listing of major projects.
f) Charitable and civic contributions, by recipient and amount.

Explain major variances between the test year expenses and those expenses for the prior 12-month period.

A.7. See the following attachments for the requested data and an explanation of the major variances:

a) Attachment II-D-7a - Miscellaneous general expenses, including Account 930
b) Attachment II-D-7b - Outside service expenses
c) Attachment II-D-7c - Regulatory commission expenses
d) Attachment II-D-7d - Advertising expenses
e) Attachment II-D-7e - Research and development expenses
f) Attachment II-D-7f - Charitable and civic contributions

PPL ELECTRIC UTILITIES CORPORATION

Miscellaneous General Expenses - Account 930.2
Years ended June 30,
(Thousands of Dollars)

Line No.	Expense	2026	2025	Increase (Decrease)
1	Environmental remediation expense	$ 400	$ -	$ 400
2	Commitment and Credit Facility Fees	-	1,305	(1,305)
3	Board of Directors	1,156	1,017	139
4	Communications	30	78	(48)
5	Membership Dues	1,468	969	499
6	Investor Relations	62	68	(7)
7	Research and Development	579	326	253
8	Miscellaneous and O&M Efficiencies	(16,692)	97	(16,789)
9	**TOTAL**	**$ (12,997)**	**$ 3,860**	**$ (16,857)**

There were no environmental remediation during HTY 2025. Credit Facility Fees are currently not forecasted as part of the budgeting process. Increase in Membership dues are associated with Energy Association of PA and Edison Electric dues budgeted to 930.2. Increase in Research and Development consistent with IT upgrade spend. Decrease in Miscellaneous is associated with O&M efficiencies assumed in forecast.

Line No.	Expense	2027	2026	Increase (Decrease)
1	Environmental remediation expense	$ 400	$ 400	$ -
2	Commitment and Credit Facility Fees	-	-	-

3	Other Charitables	1,223	2,061	(838)
4	**TOTAL**	**$ 2,023**	**$ 2,705**	**$ (682)**

Increase in Operation Help related to timing of monthly spend. Decrease in Other results from differences in reporting process for actuals and budgeting process.

Line No.	Recipient	2027	2026	Increase (Decrease)
1	Operation Help	$ 690	$ 800	$ (110)
3	Other Charitables	1,200	1,223	(23)
4	**TOTAL**	**$ 1,890**	**$ 2,023**	**$ (133)**

Decrease in Operation Help related to timing of monthly spend.

Note: Charitable and civic contributions are charged to 'Other income and (deductions),' Account 426.1, and not to operating expense. Therefore, contributions of this type are not reflected in customer rates.

A majority of the charitable contributions represent an allocation of the PPL charitable program.

Q.8. Provide an analysis by function of charges by affiliates, for the test year and the 12-month period immediately prior to the test year, for services rendered included in the operating expenses of the filing company. Explain the nature of the service and the basis on which charges or allocations are made, including a copy of applicable contract. Also, explain major variances between the charges for the test year and the corresponding charges for the prior 12-month period.

A.8. PPL Services Corporation ("PPL Services"), formed on July 1, 2000, as the result of PPL Corporation realignment, provides various administrative and general services for PPL Electric and the other affiliates of PPL Corporation. Charging for these services is governed by the Comprehensive Utility Goods and Services Agreement dated April 22, 2024. Attachment II-D-8a provides a copy of the currently effective Cost Allocation Manual, Attachment II-D-8b provides a copy of the Comprehensive Utility Goods and Services Agreement, and Attachment II-D-8c an updated list of Subsidiaries and Affiliates of PPL Corporation.

Services are provided in two basic forms - Direct Support and Indirect and Other Support. Direct Support is defined as a distinct product or service that can be readily identified as being incurred for a specific affiliate, or group of affiliates, accounted for, and monitored as direct support. Any allocation of Direct Support to a specific affiliate is based on product/service unit pricing, or specific and identifiable cost accumulation and transfer. Indirect Support represents general and administrative support and depreciation/amortization charges that generally benefit all PPL Corporation subsidiaries and, therefore, cannot be readily identified as being incurred for a specific affiliate. Allocation of indirect support is based on a multi-factor allocation guideline recommended by the PUC and described in Attachment II-D-8d. Other Support includes mostly minor charges from other affiliates.

Listed below are departments/affiliates that provide services to PPL Electric.

PPL Services:

- Auditing & Corporate Compliance – Provides assessments, consultative services, and investigations, in addition to oversight of various compliance services for all affiliated entities. Direct support costs are allocated based on the number of operating segments, number of controls or number of employees.
- Business & Economic Development – Plans for future growth by identifying new opportunities and forming partnerships. Direct support costs are allocated based on the number of customers.

- Chairman – Provides executive oversight of PPL Corporation and its affiliates. Direct support costs are allocated based on the number of operating segments.

- Chief Operating Officer – Provides oversight of PPL Corporation's regulated utility operations, including corporate emergency management and chief customer officer. Direct support costs are allocated based on the number of operating segments and number of employees.

- Corporate Safety, Training and Operational Excellence - Provides training and technical services such as e-learning development and maintenance, in addition to safety support and operational excellence. Direct support costs are allocated based on the number of employees or operating segments.

- Customer Service – Provides support for automated meters and corporate customer billing. Direct support costs are allocated based on the number of meters and number of customers.

- Customer Service Innovation & Delivery – Provides support to Information Technology Department for customer service Information Services consolidation and customer transformation to develop common customer platforms. Direct support costs are allocated based on the number of customers.

- Engineering & Construction – Provides oversight of enterprise-wide engineering and construction services for generation, electricity and gas transmission and distribution, energy supply analysis and environmental compliance. Direct support costs are allocated based on total utility plant assets and number of operating segments.

- Facilities Management - Maintains all PPL Corporation physical facilities, including buildings, office equipment and general property. Direct support costs are allocated based on number of operating segments or number of employees.

- Financial Department – Provides corporate accounting, tax, financing, financial planning, receipts and disbursements, pension plan services, risk management oversight and credit and insurance services and investor relations services. Direct support costs are allocated based on number of employees, number of operating segments, revenue, total utility plant assets, number of network users, insurance policies or book enterprise value.

- Human Resource – Provides strategic corporate human resource functions, including succession planning, talent development, recruiting, executive compensation, performance management, strategic workforce planning, employee and labor relations, compensation and benefit

administration, diversity initiatives, and HR systems. Direct support costs are allocated based on number of employees or number of plan participants.

- Information Technology – Provides information technology services, including operations and systems support, data/analytics, design, engineering, platform architecture, project management, cybersecurity risk management, corporate security, R&D, governance and training Direct support costs are allocated based on number of network users, number of customers, number of meters, number of employees, number of operating segments or total utility plant assets.

- Office of General Counsel – Provides legal services. Direct support costs are allocated based on number of operating segments.

- Public Affairs – Provides government relations and lobbying services and directs community and economic development activities and provides internal and external communications services. Direct support costs are allocated based on rate base, number of customers, number of items processed or number of employees.

- Regulatory Affairs - Supports the organization performing regulatory functions in support of rate design and management and maintaining regulatory relationships and load analysis to help support revenue and metering activities. Direct support costs are allocated based on number of customers.

- Supply Chain - Provides maintenance and analysis of the supplier base and performs supplier selection and material management services – acquisition and handling. Direct support costs are allocated based on total spend ratio.

- Transmission Services – Provides transmission and substation asset management, project development, interconnections, transmission system operations, vegetation management and NERC & FERC compliance. Direct support costs are allocated based on total utility plant assets.

- Utility Communications Support – Provide communications support that is utility customer and employee specific, as well as market research and ACT 129 communications. Direct support costs are allocated based on number of customers. This department transitioned to PPL Electric Utilities effective January 2025.

See Attachment II-D-8e for a summary of charges to operating expenses and explanations of major variances.

PPL Corporation
Cost Allocation Manual

Executive Summary

PPL is comprised of various companies that utilize shared resources from both an operational and financial perspective. This relationship leads to a more efficient and productive final product for all stakeholders, but also requires costs to be reasonably allocated between companies in accordance with various accounting boards and regulators. Also, in order to adequately control costs and determine profitability of the companies, it is necessary to allocate to them costs incurred for their benefit as if they were stand-alone companies outside of the PPL family of companies.

The goal and purpose of this manual is to accumulate and document cost allocation and transfer pricing policies, including both those for proper accounting and cost management purposes. This manual will also be used as a cost allocation manual for the allocation of costs among PPL companies as well as documentation to support policies and procedures to any internal or external parties that review our allocation methodologies.

PPL Corporation
Cost Allocation Manual

Chapter 1 – Introduction and Goal of Manual

In 1995, PP&L Resources was formed as an exempt holding company as defined under the Holding Company Act and was comprised of Pennsylvania Power & Light Co. and affiliates Power Markets Development Company and Spectrum. In July 2000, PP&L Resources was reorganized under the name PPL Corporation. In November 2010, PPL acquired E.ON U.S., LLC, a company with utility operations in Kentucky, Tennessee, and Virginia operating as LG&E and KU. As a result of the acquisition, PPL became a multi-state electric utility holding company subject to the FERC requirements contained in PUHCA 2005. In 2021, PPL formed PPL Rhode Island Holdings, which acquired NECO in May 2022.

PUHCA 2005 states that centralized service companies must maintain and make available to the FERC their books, accounts, and other records in the specific manner and preserve them for the required periods as the FERC prescribes in Title 18 Code of Federal Regulations Part 368 of the FERC Uniform System of Accounts. These records must be in sufficient detail to permit examination, audit, and verification, as necessary and appropriate for the protection of utility customers with respect to jurisdictional rates.

PPL affiliate companies provide certain goods and services to each other. PPL Services generally provides shared services on behalf of its affiliates. LKS employees provide both operational and shared service functions for LKE affiliates, principally LG&E and KU. These represent functions provided on behalf of both LG&E and KU as opposed to functions that serve only one utility. For example, all employees of LG&E and KU's transmission function are employees of LKS, whereas generation plant employees are generally employed by the utility which owns the plant. Goods and services provided by PPL Services are not duplicative of goods and services provided by LKS.

The purpose of this CAM is to document the methods, policies, and procedures that PPL affiliates will follow in providing certain goods and performing certain services for affiliate companies and in receiving charges for goods and services from affiliated companies and then allocating those charges to affiliates. In developing this CAM the overriding goal was to protect investors and consumers by ensuring the methods, policies and procedures contained in this CAM were PUHCA 2005 compliant so that affiliate costs are fully segregated, and fairly and rationally allocated among the affiliate companies.

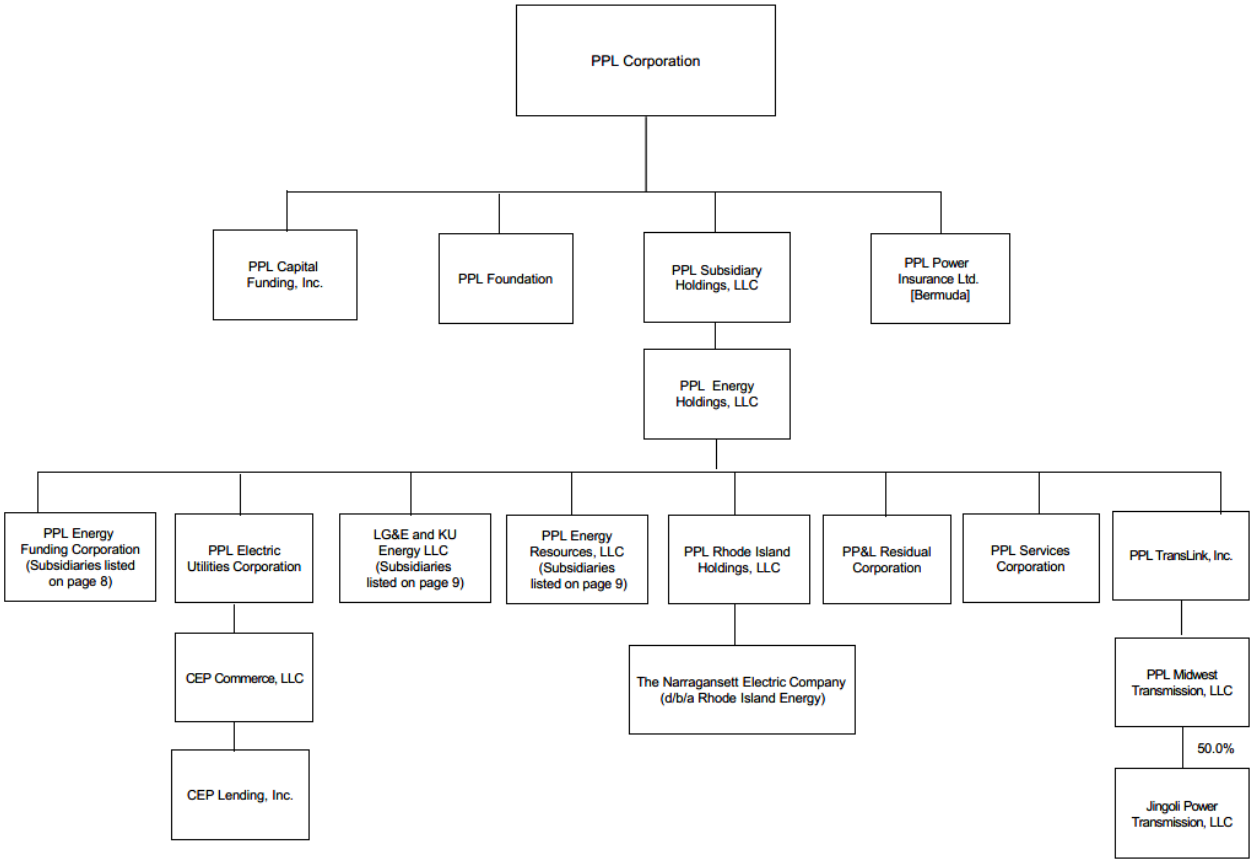
Periodic changes to the CAM may be necessary due to future management decisions, changes in the law, interpretations by state or federal regulatory bodies, changes in structure or activities of affiliates, or other internal procedures.

GOAL OF THE MANUAL

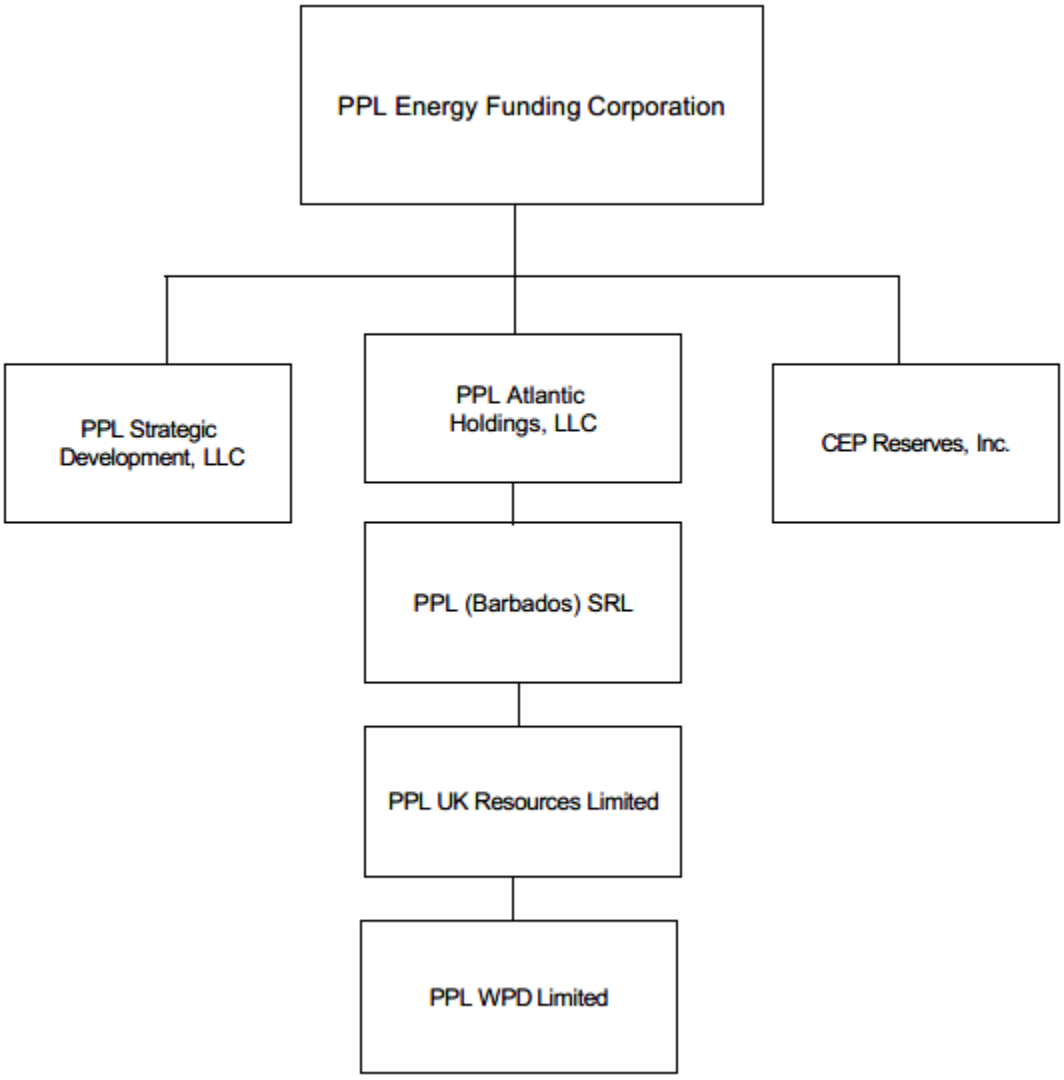
To accumulate cost allocation and transfer pricing policies, including those for cost management purposes, which will provide PPL's regulated and non-regulated businesses with a common and consistent framework and method to follow and document cost allocation methodologies.

GUIDING PRINCIPLES OF THE MANUAL

- When reasonably possible, costs will be allocated on a direct basis.
- Allocations will not result in the subsidization of non-regulated affiliates by the regulated business.
- Goods and services will be charged at fully distributed cost (also referred to as fully allocated cost) which shall include, as appropriate, compensation for use of capital thereof, fairly and equitably allocated, and, to the extent applicable, in accordance with the asymmetric pricing requirements in 18 CFR § 35.44.
- This CAM's allocation of costs is guided by the NARUC *Guidelines for Cost Allocations and Affiliate Transactions* (attached as Appendix A).
- As long as all regulatory guidelines are met, allocations will be fair and equitable to the shareholders and customers.
- Allocation documentation will be made available to business lines, affiliates, internal and external auditors, and jurisdictional regulatory commissions as needed.



OTHER RELATED INFORMATION



As stated above, this manual is intended to document the cost allocation and transfer pricing practices and procedures for all PPL companies. This manual should be used in conjunction with any existing corporate policies and procedures.

Chapter 3 – Transactions with Affiliates

LKS and PPL Services were formed as service companies to provide services for affiliated companies. PPL affiliates may enter into the Comprehensive Goods and Services Agreement, which establishes the general terms and conditions for providing those goods and services. The goods and services provided under the Comprehensive Goods and Services Agreement are described in this chapter.

LKS and PPL Services employees may provide services to regulated and non-regulated entities. The provisions included in the Comprehensive Goods and Services Agreement govern transactions among PPL affiliates and their regulated and non-regulated affiliates.

Description of Goods and Services

Goods provided by LKS and PPL Services to Affiliates, purchased by LKS and PPL Services from Affiliates, or purchased for Affiliates from third parties include goods for the construction, ownership, operation, or maintenance of Affiliates' facilities and their respective energy systems, or for other services that may be necessary for safe, reliable, and cost-effective operation.

Centralized services provided by affiliates include, but are not limited to: Corporate Audit Services, Corporate Operations & Integration, Corporate Security, Enterprise Security, Financial, Human Resources, Information Technology, Office of General Counsel, Public Affairs, Supply Chain, and Corporate. These centralized services are described further in the chart below.

Employees from each department are provided cost collecting numbers allowing them to affirmatively report and record time for specific projects as well as specific business lines and operating companies they are supporting where appropriate. Remaining department costs are then allocated based on one of the prescribed methods listed below.

The "Assignment Method" in the chart reflects the means for allocating the cost of a particular service within the "Department/Activity" listed when the service is being performed concurrently for more than one affiliate and there is no practical means to directly assign the costs of that service to the affiliates benefiting from that service. Each Department/Activity does, however, directly assign costs for goods and services provided to affiliates where work is being performed for a single affiliate or where it is otherwise practical. For example, the Audit Services department will directly assign costs incurred to perform an internal audit to the affiliate being audited. However, if a given audit applies to more than one affiliate, it is allocated using the Number of Operating Segments Ratio to the entities within the scope of that audit. By way of example, a gas compliance audit would be allocated to the operating segments with gas operations. See Chapter 4 for a detailed description of these cost assignment methods and ratios.

Department/Activity	Description	Assignment Method
Accounting Services	Provide accounting and reporting in conformity with U.S. Generally Accepted Accounting Principles (GAAP) and the FERC Uniform System of Accounts (USofA), including closing the books, consolidations, financial system support, accounting research, interpretation and promulgation of accounting and internal control procedures.	Directly Attributable - Number of Employees Ratio, Number of Operating Segments Ratio, Revenue Ratio, Total Utility Plant Assets Ratio; Indirectly Attributable
Administrative Support	Administrative support provided across multiple functions and areas where a single allocation ratio or blend of allocation ratios is not feasible.	Indirectly Attributable
Annual Meeting/Proxy	Legal services and Corporate Communications costs to manage the annual meeting and printing of the Proxy and Annual Report.	Directly Attributable – Number of Operating Segments Ratio
Audit/PCAOB Fees	Corporate audit or PCAOB fees incurred.	Directly Attributable – Book Enterprise Value Ratio
Auditing	Provide internal audit services for the company.	Directly Attributable – Number of Operating Segments Ratio, Number of Controls Ratio
Billing	Billing for miscellaneous transactions.	Directly Attributable – Number of Items Processed Ratio
Board Services	Board member fees and expenses.	Directly Attributable – Number of Operating Segments Ratio
Budgeting	Provide services related to managing, coordinating and reporting for the budgeting process.	Directly Attributable - Generation Ratio, Number of Customers Ratio, Number of Network Users Ratio, Transmission Ratio; Indirectly Attributable

Department/Activity	Description	Assignment Method
Business Services	Provide environmental, logistics, and transportation services.	Directly Attributable - Number of Employees Ratio, Generation Ratio, Total Utility Plant Assets Ratio, Vehicle Cost Allocation Ratio; Indirectly Attributable
Cash Management	Manage the daily financing and short-term liquidity needs for the company.	Directly Attributable – Number of Operating Segments Ratio
Communications	Provide all administrative and management support for external and internal communication services.	Directly Attributable – Number of Customers Ratio, Number of Employees Ratio
Community Relations	Provide community relations functions, including sponsorships.	Directly Attributable - Number of Customers Ratio, Number of Items Processed Ratio
Corporate Compliance Office	Provide various compliance services for all affiliated entities including compliance assessment and risk management, code of conduct, anti-fraud, ethics, helpline management and Critical Infrastructure Protection ("CIP") Compliance.	Directly Attributable – Number of Employees Ratio
Corporate Performance	Provides benchmarking and other corporate performance analytics.	Indirectly Attributable
Corporate Security	Provide corporate security services.	Directly Attributable – Number of Employees Ratio; Indirectly Attributable
Customer Services	Provide call center, billing, business analysis, economic development, energy efficiency, field services, metering, remittance processing, and marketing services, and training for customer service employees.	Directly Attributable – Number of Customers Ratio, Number of Items Processed Ratio, Number of Meters Ratio

Department/Activity	Description	Assignment Method
Cyber Security Risk Management	Services associated with setting cybersecurity strategy, providing security risk management governance and oversight of security controls in the first line of defense, and support and facilitation of risk management activities across the enterprise. This function includes services associated with risk quantification and executive metrics, global cybersecurity policies, cyber hunting/active defense, assessing security posture/maturity, and real time visibility and monitoring of subsidiary cyber hygiene.	Directly Attributable – Number of Network Users Ratio
Cybersecurity	Provide IT Services related to Cyber Risk and Compliance, Identity and Access Management, Security Architecture, Security Operations, Risk Mitigation and Management, Prevention and Detection Systems. This service includes developing and administering security policies and procedures, awareness & training, vulnerability management, and incident response, as well as production support and maintenance of existing systems and implementation and management of IT processes to ensure stability and existing systems and infrastructure. This function includes development, implementation and on-going activities for the NERC Critical Infrastructure Protection ("CIP") Program.	Directly Attributable – Number of Network Users Ratio

Department/Activity	Description	Assignment Method
Depreciation	Depreciation recorded over the estimated useful life of property owned by PPL Services.	Indirectly Attributable
Distribution	Provide operation, maintenance, and construction of distribution lines and substations. Provide distribution asset management, engineering, electric reliability analysis, vegetation management, network trouble/dispatch, and restoration coordination.	Directly Attributable - Number of Customers Ratio, Total Utility Plant Assets Ratio; Indirectly Attributable
Emergency Management/Business Continuity	Provide services related to administration and coordination of disaster recovery/business continuity plans.	Directly Attributable – Number of Employees Ratio
Energy Supply and Analysis	Provide energy marketing, generation planning, load forecasting and market forecasting.	Directly Attributable - Generation Ratio
Executive Services	Provide services related to the compensation, travel and security of company executives.	Directly Attributable – Number of Employees Ratio
Facilities	Support operations and maintenance activities for company facilities. Provide facilities leadership support expenses not specifically identified to a building or project. Provide production mail services for customer bills and large mailings. Provide document services and mail delivery. Provide real estate and right-of-way services. Charge for use of facility space.	Directly Attributable – Facilities Ratio, Generation Ratio, Number of Employees Ratio, Number of Customers Ratio, Number of Operating Segments Ratio, Square Footage Ratio, Transmission Ratio; Indirectly Attributable
Financial Planning	Provide services related to managing, coordinating and reporting for the forecasting process.	Directly Attributable – Number of Operating Segments Ratio; Indirectly Attributable

Department/Activity	Description	Assignment Method
Fuel Procurement	Procure coal, natural gas, oil, and other bulk materials for generation facilities, and ensure compliance with price and quality provisions of fuel contracts.	Directly Attributable - Contract Ratio
Generation	Provide centralized, fleet-wide technical expertise, generation asset management, project engineering for major generation construction, and system laboratory services.	Directly Attributable - Generation Ratio, Total Utility Plant Assets Ratio
Human Capital Management	Provide human resources, compensation and benefit services.	Directly Attributable – Number of Employees Ratio
Insurance Services	Support the procurement of insurance policies for the company.	Directly Attributable – Generation Ratio, Insurance Policies Ratio, Number of Employees Ratio, Number of Operating Segments Ratio, Plan Assets Ratio, Revenue Ratio, Statement of Values Ratio, Total Utility Plant Assets Ratio, Transmission Ratio; Indirectly Attributable
Investor Relations	Provide support for handling the company's shareholders and investors meetings and questions.	Directly Attributable – Book Enterprise Value Ratio
IT Services	Provide IT services including operations and systems support, data/analytics, design, engineering, platform architecture, project management, governance, and training.	Directly Attributable – Number of Customers Ratio, Number of Meters Ratio, Network Users Ratio, Total Utility Plant Assets Ratio
Legal Services	Provide legal services.	Directly Attributable – Number of Operating Segments Ratio; Indirectly Attributable

Department/Activity	Description	Assignment Method
Office of the Chief Financial Officer	Executive responsibility for financial services.	Directly Attributable – Number of Operating Segments Ratio
Office of the Chief Human Resources Officer	Provide executive oversight of human resources functions.	Directly Attributable – Number of Employees Ratio
Office of the Chief Legal Officer	Executive responsibility for legal services and compliance services.	Directly Attributable – Number of Operating Segments Ratio
Office of the Chief Operating Officer	Provide executive oversight of the operations of PPL and its affiliates.	Directly Attributable – Number of Operating Segments Ratio
Office of the President	Provide executive oversight of PPL and its affiliates.	Directly Attributable – Number of Operating Segments Ratio
Payroll	Provide services relating to payroll, time reporting and employee expenses.	Directly Attributable – Number of Employees Ratio
Pension and Other Benefit Plans	Provide services for company pension and other benefit plans.	Directly Attributable – Plan Assets Ratio, Number of Plan Participants Ratio
PPL Services Corporate	Non-support group specific PPL Services' costs, including allocated costs, stock and ICA compensation, as well as high-level benefits adjustments.	Directly Attributable - Number of Operating Segments Ratio
Public Affairs	Provide government relations and lobbying services.	Directly Attributable - Rate Base Ratio; Indirectly Attributable
Regulatory Affairs	Provides services for compliance with regulatory requirements of state commissions, FERC and other regulatory agencies. As part of this function, the group is responsible for the preparation, review, technical oversight and guidance of the development, content, and structure of cost of service and revenue requirement studies.	Directly Attributable - Number of Customers Ratio; Indirectly Attributable

Department/Activity	Description	Assignment Method
Risk Strategy	Manage and assess risk within the organizations including liability risks, claims, security, environmental and safety.	Indirectly Attributable
Safety and Technical Training	Provide safety governance and technical training to company operations areas.	Directly Attributable - Number of Employees Ratio, Generation Ratio, Number of Operating Segments Ratio, Total Utility Plant Assets Ratio, Transmission Ratio; Indirectly Attributable
Stock Based Compensation	Provide services relating to the establishment and oversight of stock-based compensation to employees.	Directly Attributable – Number of Employees Ratio
Supply Chain	Provide maintenance and analysis of the supplier base and performing supplier selection activities including contract negotiations and ongoing compliance. Provide order management and general field support services for system maintenance, developing and monitoring of key performance metrics, supplying day to day variance and reconciliation reporting services and performing supplier certification services. Identify qualified minority and women owned businesses that are able to participate in competitive bidding opportunities.	Directly Attributable – Total Spend Ratio
Sustainability	Provide oversight of corporate sustainability initiatives for all operating companies.	Directly Attributable – Book Enterprise Value
Tax Services	Prepare consolidated and subsidiary federal, state and local income tax returns; current and deferred tax accounting; utility gross	Indirectly Attributable

Department/Activity	Description	Assignment Method
	receipts tax; sales/use tax; project development. Provide corporate income tax compliance, budgeting and forecasting, including tax legislation.	
Transmission	Provide operation, maintenance, and construction of transmission lines and substations. Provide transmission control center services and balancing services. Ensure compliance with all applicable regulatory standards. Provide transmission system reliability planning. Manage transmission tariffs and agreements with outside parties for use of the transmission system.	Directly Attributable - Total Utility Plant Assets Ratio, Transmission Ratio
Treasury Services	Provide support for the company's investing and financing activities, cash management, and credit services.	Directly Attributable – Book Enterprise Value Ratio, Number of Operating Segments Ratio; Indirectly Attributable
Utility Research & Development	Develop and manage an enterprise-wise R&D strategy focused on generation, electric and gas delivery.	Directly Attributable – Number of Operating Segments Ratio
Vendor Servicing	Process payments to vendors for the company.	Directly Attributable – Number of Items Processed Ratio

PPL Corporation
Cost Allocation Manual

Chapter 4 – Cost Assignment Methods

The cost of goods and services provided by PPL affiliates will be directly assigned, distributed, or allocated by activity, project/sub-project, FERC account, customer segment, program, work order, or another appropriate basis. The primary basis for charges to affiliates is the direct charge method.

> ***Directly Assignable*** – Expenses incurred for activities and services exclusively for the benefit of one affiliate.

The methodologies listed below pertain to all other costs which are not directly assigned but which make up the fully distributed cost of providing the service.

> ***Directly Attributable*** – Expenses incurred for activities and services that benefit more than one affiliate and which can be apportioned using direct measures of costs causation.
>
> ***Indirectly Attributable*** – Expenses incurred for activities and services that benefit more than one affiliate and which can be apportioned using general measures of cost causation.
>
> ***Unattributable*** – Expenses or portions thereof incurred for activities and services that have been determined as not appropriate for apportionment.

Assignment Methods

PPL affiliates will allocate the costs of goods and services among the affiliated companies using one of several methods that most accurately distributes the costs. The method of cost allocation varies based on the department rendering the goods or service. Any of the methods may be adjusted for any known and reasonably quantifiable events, or at such time as may be required due to significant changes in the business. Rates are generally determined annually, semi-annually or monthly (based upon actual usage).

The assignment methods used by PPL affiliates are as follows:

Book Enterprise Value Ratio – This ratio is calculated based on book enterprise value. The ratio is calculated on an annual basis.

Contract Ratio – This ratio is based on the sum of the physical amount (i.e., tons of coal, mmbtu of natural gas) of the contract for coal and natural gas fuel burned for the immediately preceding twelve consecutive calendar months, the numerator of which is for an operating company and the denominator of which is for all operating companies. This ratio is calculated on an annual basis.

Departmental Charge Ratio – A specific department ratio based upon various factors. The departmental charge ratio typically applies to directly attributable costs such as departmental administrative, support, or material and supply costs, or a combination thereof, that benefit more

than one affiliate and that require allocation using general measures of cost causation. Methods for assignment are department-specific depending on the type of service performed and are documented and monitored by the Budget Analysts for each department. The numerator and denominator vary by department. The ratio is based upon various factors such as labor hours, labor dollars, departmental or entity headcount, capital expenditures, operations and maintenance costs, retail energy sales, charitable contributions, generating plant sites, average allocation of direct reports, net book value of utility plant, total line of business assets, electric capital expenditures, substation assets and transformer assets. The Departmental Charge Ratio may only be used with appropriate prior approval and where other applicable ratios would not result in the fair assignment of costs. These ratios are calculated on an annual basis.

Facilities Ratio – This ratio is based on a two-tiered approach with one tier based on the number of employees by department or line of business and the other tier based on the applicable department or line of business ratio. The numerator for the number of employees is the number of employees by department or line of business at the facility and the denominator is the total employees at the facility. This ratio is calculated on an annual basis.

Generation Ratio – This ratio is based on the annual forecast of megawatt hours, the numerator of which is for an operating company and the denominator of which is for all operating companies. This ratio is calculated on an annual basis.

Insurance Policies Ratio – This ratio is based upon a composite percentage of individual insurance policies. This ratio is calculated on an annual basis.

Number of Controls Ratio – This ratio is based on the number of SOX controls for each operating segment, then by the number of SEC registrants within the operating segment. The ratio is calculated on an annual basis.

Number of Customers Ratio – This ratio is based on the number of retail electric and/or gas customers at year-end for the preceding year. This ratio is updated on an annual basis.

Number of Employees Ratio – This ratio is based on the number of employees benefiting from the performance of a service. This ratio is calculated on an annual basis.

Number of Items Processed Ratio – This ratio is based on the number of items processed. This ratio is updated on a monthly basis, based upon actual usage.

Number of Meters Ratio – This ratio is based on number of meters for each affiliate. This ratio is calculated on an annual basis.

Number of Network Users Ratio – This ratio is calculated using two steps. The first step is based upon the number of operational network users at each company at year-end for the preceding year. The second step allocates operational support group network users by number of customers. The result of each step is then added together. This ratio is updated on an annual basis.

Number of Operating Segments Ratio – This ratio is based on the number of applicable operating segments covered by PPL. For services provided by LKS, the operating segments are limited to LG&E and KU. This ratio is calculated on an annual basis.

Number of Plan Participants Ratio – This ratio is based upon the number of participants in the pension plan. This ratio is updated semi-annually.

Ownership Percentages – This ratio is based on the contractual ownership percentages of jointly-owned generating units, information technology, facilities and other capital projects. This ratio is updated as a result of a new jointly-owned capital project and is based on the benefit to the respective company. The numerator is the specific company's forecasted usage. The denominator is the total forecasted usage of all respective companies.

Plan Assets Ratio – This ratio is based upon the split of plan assets in the pension. This ratio is updated semi-annually.

Rate Base Ratio – This ratio is based upon applicable rate base per entity at year-end for the preceding year. This ratio is updated on an annual basis.

Revenue Ratio – This ratio is based on the sum of the revenue for the immediately preceding twelve consecutive calendar months, the numerator of which is for an operating company and the denominator of which is for all operating companies. This ratio is calculated on an annual basis.

Square Footage Ratio - This ratio is based on the square footage in a facility occupied by an operating segment. This ratio is updated on a monthly basis.

Statement of Values Ratio – This ratio is based on the insured value of property for each affiliate. This ratio is updated on an annual basis.

Total Assets Ratio – This ratio is based upon the total assets at year-end for the preceding year. This ratio is updated on an annual basis.

Total Spend Ratio – This ratio is based upon total O&M and capital spend per entity at year-end for the preceding year. This ratio is updated on an annual basis.

Total Utility Plant Assets Ratio – This ratio is based on the total utility plant assets at year-end for the preceding year, the numerator of which is for an operating company and the denominator of which is for all operating companies. In the event of joint ownership of a specific asset, ownership percentages are utilized to assign costs. This ratio is calculated on an annual basis.

Transmission Ratio –The Transmission Coordination Agreement ("TCA") provides "the contractual basis for the coordinated planning, operation, and maintenance of the combined" LG&E and KU transmission system. Pursuant to the terms of the TCA, LG&E/KU "operate their transmission systems as a single control area." The TCA establishes cost and revenue allocations between LG&E and KU. The Transmission Ratio is based upon Schedule A (Allocation of Operating Expenses of the Transmission System Operator) of the TCA. Transmission System Operator Company allocation percentages are calculated during June of each year to be effective July 1st of each year using the previous year's summation of the Transmission Peak Demands as found in FERC Form 1 for KU and LG&E, page 400, line 17(b).

Vehicle Cost Allocation Ratio – Based on the costs associated with providing and operating

transportation fleet for all affiliated companies including developing fleet policy, administering regulatory compliance programs, managing repair and maintenance of vehicles and procuring vehicles. Such rates are applied based on the specific equipment employment and the measured usage of services by the various company entities. This ratio is calculated monthly based on the actual transportation charges from the previous month. The numerator is the department labor charged to a specific company. The denominator is the total labor costs for the specific department. The ratio is then multiplied by the total transportation costs to determine the amount charged to each company.

Indirect Cost Allocation Methodology and Procedures

PPL and its affiliates use a three-factor methodology to allocate indirect costs. In order to ensure consistency of cost allocation across affiliates and avoid subsidization of any affiliate, it is important that all affiliates use the same three-factor methodology to allocate indirect costs. The three-factor methodology provides the most relevant proxy of cost causation because, unlike directly attributable costs, a single primary cost driver could not be identified for such indirect costs.

The three-factor allocation methodology results in a reasonable allocation of indirect costs to all subsidiaries of PPL. Because these subsidiaries are involved in several businesses, they may have disproportionate amounts of invested capital, operation and maintenance expenses and employees, when compared to other PPL subsidiaries, causing disproportionate allocations by relying only on one factor. Through the three-factor allocation methodology, all subsidiaries that comprise a material proportion of PPL, as measured by either invested capital, operation and maintenance expenses, or employees, will receive an equitable proportion of the indirect cost allocation.

CALCULATION OF THE MULTI – FACTOR INDIRECT COST ALLOCATION

1. The first factor calculates each subsidiary’s proportion of invested capital relative to its affiliates. For this calculation, invested capital includes all of the following components of invested capital for subsidiaries (Short Term Debt, Long Term Debt Due in One Year, Long Term Debt, Minority Interest, Company Obligated Preferred Stock, Preferred Stock, and Common Equity) that are added together and allocated by each subsidiary's relative Invested Capital as compared to its affiliates.

2. The second and third factors calculate each subsidiary’s proportion of operation and maintenance expenses and number of employees relative to its affiliates. For these factors, the methodology generally is the same as for Invested Capital. Each subsidiary's data is summed and allocated by each subsidiary’s relative operation and maintenance and employee data as compared to its affiliates.

3. Each of the three factors is assigned equal weight to avoid any preference for one factor and, therefore, the sum of the three was divided by three to obtain the average multi-factor allocation % for each subsidiary. For simplicity, and to reduce immaterial allocations, subsidiaries with a multi-factor average allocation rate of less than 1% are identified and do not receive an allocation from PPL Services.

EXCLUDING THE ALLOCATION OF CERTAIN INDIRECT COSTS TO AFFILIATES THAT DO NOT BENEFIT FROM THOSE COSTS

Each year, Support Groups analyze their indirect costs to determine which PPL subsidiaries do not receive a significant portion of their services. If these services and related costs are significant, the Support Groups isolate them from other indirect costs to ensure that the PPL subsidiaries that do not receive a benefit from the costs are not allocated costs applicable to those services. Support Groups identify either specific costs to be excluded or an appropriate percentage of services that should be excluded based on the operation and the expenses incurred.

Cost Assignment Procedures

Actual charges benefiting one affiliate are recorded directly on the books of that affiliate. Actual charges benefiting multiple affiliates are allocated via direct attribution or indirect attribution, as discussed further in the preceding portion of this chapter.

Allocation methods are developed and assigned by Finance and Accounting personnel based on the primary measure of cost causation for each area. Directly attributable allocation methods are based on closely correlated measures of cost causation, whereas indirectly attributable allocation methods are based on general measures of cost causation. If an existing direct method is not appropriate, a new method may be requested and approved.

Allocation rates for each method are calculated and reviewed at least annually, or more frequently for material changes to the organizational structure or business environment. Allocation methods and rates are set up and maintained in the financial system. Both the initial set up and subsequent changes are reviewed. Charge codes are set up in the financial system and associated with the allocation methods and rates. The charge codes are communicated to the employees in each area for charging time and expenses. Review of employee time entry and employee expenses includes review of the charge codes being utilized. The charges are accumulated in the charge code set up on the source (provider) affiliate and are distributed to the target (receiver) affiliates via system allocation.

Service company costs are budgeted by each support group. In order to add costs to one's budget in a service company, it is necessary to identify which affiliate(s) benefit(s) from the service provided. The support group will work to determine the appropriate allocation method. Budgeted costs are assigned to a cost code and allocation rates are added to the system for each cost code. Rates are reviewed across support groups to ensure the same rates are utilized for similar costs. The allocation is included in the budget system and all service company costs are allocated from the providing/supplying support group to the receiving/consuming affiliate.

Affiliates make available monthly billing information to their affiliates that reflects information necessary to identify the costs charged and services rendered for that period. Affiliates review the allocations monthly for accuracy and reasonableness and discuss any issues with the affiliate on a timely basis. In addition, as an overriding control, affiliates perform monthly analyses of expense variances. These processes serve as incremental controls over the reasonableness of charges to affiliates using the methodologies described above.

PPL Corporation
Cost Allocation Manual

Chapter 5 – A Description of Assets, Services, and Products Provided by the Regulated Entity to Non-Affiliates

In addition to delivering electric service to customers, the regulated entities also may provide products and services to some other non-affiliates (individuals, companies, or organizations outside the PPL family of companies). A significant portion of these functions and services pertain to repairing "pole hits," extending power lines, and relocating customers' services that generally correspond to the regulated business. Another example of services provided by the regulated entities includes interconnection services provided for independent power producers. These functions and services are billed to non-affiliates at the fully loaded cost.

Rent Charges

Certain regulated entities may charge rent to occupants of its buildings. Rent charges include the costs to maintain and service the buildings as well as utility services associated with the buildings, such as electricity, water and sewer. These general costs are allocated and billed to the occupants of the building space. Specific tenant services provided are billed to the recipient of the service. Finally, a rent adder is applied to all rent bills. The rent adder is based on a market study of building rent rates within the regulated entity's service area and is used to adjust the rent charges from cost to market rates.

PPL Corporation
Cost Allocation Manual

Chapter 6 – Time Distribution and Asset Transfer Policies

PPL affiliates utilize project/task combinations which are set up to equate to goods and services. Departments may set up multiple projects/sub-projects that map to goods and services, or there may be a one-to-one relationship. On a monthly basis, each support group will review its costs and allocate the costs directly or indirectly, as appropriate. Regardless of the method of reporting, charges related to specific services reside on the company receiving the service and therefore can be identified for billing purposes. This ensures that:

1. Separation of costs among PPL affiliates will be maintained;
2. Intercompany transactions and related billings are structured so that non-regulated activities are not subsidized by regulated affiliates and regulated affiliates do not subsidize other regulated affiliates; and
3. Adequate audit trails exist on the books and records.

BILLING POLICIES

Billings for transactions among PPL affiliates are issued on a timely basis with documentation sufficient to provide the receiving party with enough detail to understand the nature of the billing, the relevant components, and other information as required by affiliates. Financial settlements for transactions are made within 30 days. Interest charges, which are based on market rates for similar maturities of similarly rated entities as of the date of the loan, may apply. LKS or PPL Services may act as payment and billing agent on behalf of PPL affiliates.

TIME DISTRIBUTION

PPL and its affiliates have two methods of distribution to record employee salaries and wages while providing goods and services for the affiliated entities: positive time reporting and exception time reporting. Each department's job activities will dictate the time reporting method used.

Positive Time Reporting

Positive time reporting requires an employee to track all chargeable hours every day. Each department or project manager is responsible for ensuring employees charge the appropriate time codes for the services performed. This form of time reporting is documented in the timekeeping systems, which upon completion, is approved by the employee's immediate supervisor.

Exception Time Reporting

Exception time reporting requires an employee to be assigned a task profile with default accounting. An employee who is an exception time reporter is only required to report overtime, variations to regular time (i.e., vacation, sick) and variations to default projects. These allocation percentages shall be reviewed on an annual basis, or when an employee's tasks and

responsibilities change, to update to actual allocation percentages when needed.

ASSET TRANSFERS

Asset transfers follow the asymmetric pricing requirements in 18 CFR § 35.44. Settlement of liabilities will be treated in the same manner.

PPL Corporation
Cost Allocation Manual

Chapter 7 – State CAM Requirements

Kentucky

LKE is providing information set out in the five sub-paragraphs of KRS 278.2205(2). Much of the information is provided in this CAM or in LG&E's and KU's annual filing reports to the KPSC or the VSCC.

(A) A list of regulated and nonregulated divisions within the utility.
   i. This requirement is not applicable to LG&E and KU. LG&E and KU do not contain nonregulated divisions.

(B) A list of all regulated and nonregulated affiliates of the utility to which the utility provides services or products and where the affiliates provide nonregulated activities as defined in KRS 278.010(21).
   i. Chapter 2 of this CAM provides a list of the affiliates within the LKE holding company structure.

(C) A list of services and products provided by the utility, an identification of each as regulated or nonregulated, and the cost allocation method generally applicable to each category.
   i. LG&E

Service/Product	Regulated/Nonregulated	Cost Allocation Method
Electric Power	Regulated	Power System Supply Agreement[1]
Electric Transmission	Regulated	Transmission Coordination Agreement[2]
Electric Distribution	Regulated	Direct Assignment
Gas Transmission	Regulated	Direct Assignment
Gas Distribution	Regulated	Direct Assignment
Pole Setting/Replacement	Regulated	Direct Assignment
Gas and Electric Line Extensions	Regulated	Direct Assignment
Gas and Electric Line Relocations	Regulated	Direct Assignment
Preliminary Cell Site work	Regulated	Direct Assignment
Rental of space on power poles to third parties	Regulated	Direct Assignment
Installation and removal of cameras from power poles for third parties	Regulated	Direct Assignment
Temporarily turning power off/on for third parties	Regulated	Direct Assignment

[1] Filed with the KPSC in Case Number 2020-00350, Filing Requirement Tab 51 16(7)(u)(1).
[2] Filed with the KPSC in Case Number 2020-00350.

Service/Product	Regulated/Nonregulated	Cost Allocation Method
Providing stand-by power services for large events for third parties	Regulated	Direct Assignment
Rubber goods testing for third parties	Regulated	Direct Assignment
Rental of facilities to third parties	Regulated	Direct Assignment
Occasional sale of parts/equipment to third parties	Nonregulated	Direct Assignment
Industrial coal services	Nonregulated	Direct Assignment
Trimble County 1 working capital charges	Nonregulated	Direct Assignment
Trimble County 1 service fee	Nonregulated	Direct Assignment

ii. KU

Service/Product	Regulated/Nonregulated	Cost Allocation Method
Electric Power	Regulated	Power System Supply Agreement[3]
Electric Transmission	Regulated	Transmission Coordination Agreement[4]
Electric Distribution	Regulated	Direct Assignment
Pole Setting/Replacement	Regulated	Direct Assignment
Electric Line Extensions	Regulated	Direct Assignment
Electric Line Relocations	Regulated	Direct Assignment
Preliminary Cell Site work	Regulated	Direct Assignment

(D) A list of incidental, nonregulated activities that are subject to the provisions of KRS 278.2203(4).

[3] Filed with the KPSC in Case Number 2020-00349, Filing Requirement Tab 51 16(7)(u)(1).
[4] Filed with the KPSC in Case Number 2020-00349.

i. LG&E and KU report their incidental and nonregulated activities as part of annual filings to the KPSC.

(E) A description of the nature of transactions between the utility and the affiliate.

i. This CAM provides a description of the nature of transactions between the utilities and its affiliates.

(F) For each USofA account and subaccount, a report that identifies whether the account contains costs attributable to regulated operations and nonregulated operations. The report shall also identify whether the costs are joint costs that cannot be directly identified. A description of the methodology used to apportion each of these costs shall be included and the allocation methodology shall be consistent with the provisions of KRS 278.2203.

i. LG&E and KU maintain their books and records in accordance with the FERC Uniform System of Accounts. The FERC USofA designates specific accounts where nonregulated transactions are to be recorded. Costs related to LG&E's and KU's nonregulated activities are charged to various 415, 416, and 417 accounts, in accordance with the FERC USofA requirements. The remaining transactions on LG&E's and KU's books are related to regulated utility operations. The methodology of apportioning costs is described in Chapter 3 of this CAM.

Virginia

Prior approval of affiliate transactions is required by Chapter 4 of Title 56 of the Code of Virginia. KU will seek prior approval from the Virginia State Corporation Commission for changes to services agreement(s) and this CAM.

Pennsylvania

Prior approval of affiliated interest agreements is required by Section 2102 of the Public Utility Code, 66 Pa.C.S. § 2102. PPLEU will seek appropriate prior approval of affiliated interest agreements from the Pennsylvania Public Utility Commission.

Rhode Island

The following statutes and rules apply to relationships between utilities and affiliates: Rhode Island General Laws § 39-3-27, Rhode Island General Laws § 39-3-28, Rhode Island General Laws § 39-3-29, Rhode Island General Laws § 39-3-30, Rhode Island General Laws § 39-3-32, 810 RICR-00-00-5.8.A.5 and 810 RICR-00-00-5.8.A.18.

COMPREHENSIVE UTILITY GOODS AND SERVICES AGREEMENT

This Comprehensive Utility Goods and Services Agreement (this "Agreement") is entered into as of the 22nd day of April 2024, by and among PPL Corporation ("PPL"), a Pennsylvania corporation, Kentucky Utilities Company ("KU-ODP"), a public utility organized under Virginia and Kentucky law and doing business in Virginia as "Old Dominion Power Company;" Louisville Gas and Electric Company ("LG&E"), a public utility organized under Kentucky law; PPL Electric Utilities Corporation ("PPL Electric"), a public utility organized under Pennsylvania law; The Narragansett Electric Company d/b/a Rhode Island Energy ("NECO"), a public utility organized under Rhode Island law; LG&E and KU Energy LLC ("LKE"), a Kentucky limited liability company; LG&E and KU Services Company ("LK Services"), a Kentucky corporation; PPL Services Corporation ("PPL Services"), a Delaware corporation; and all other affiliated interests of PPL (together with PPL, KU-ODP, LG&E, PPL Electric, NECO, LKE, LK Services and PPL Services, the "Affiliates" and each separately, an "Affiliate").

WHEREAS, PPL is a United States regulated parent holding company that owns directly or indirectly KU-ODP, LG&E, PPL Electric, NECO, LKE, LK Services, PPL Services and other Affiliates;

WHEREAS, KU-ODP, LG&E, PPL Electric, and NECO (collectively, the "Utilities") are public service companies providing electric or gas service, or both, to customers;

WHEREAS, LK Services and PPL Services (collectively, the "Services Companies") desire to provide goods and services to Affiliates or purchase goods and services from or for Affiliates for the construction, ownership, operation, or maintenance of their facilities and their respective energy systems, or for other services that may be necessary for safe, reliable, and cost-effective operation;

WHEREAS, PPL and Affiliates believe that it is in their interest to provide for an arrangement whereby they may, from time to time and at their option, agree to purchase goods and administrative, management, supervisory, construction, engineering, accounting, legal, financial, or similar services, including third-party goods and services, from Affiliates;

WHEREAS, the procurement of such goods and services, at the sole election of each Utility, may result in purchasing and operational efficiencies, or is otherwise administratively necessary, and is in the public interest and the interest of such Utility;

WHEREAS, certain Affiliates desire an arrangement whereby other Affiliates may act as payment and billing agent for them; and

NOW, THEREFORE, in consideration of the mutual covenants contained herein and other valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto, intending to be legally bound, hereby agree as follows:

1. GOODS AND SERVICES. Affiliates will supply requested goods and administrative, management, supervisory, construction, engineering, accounting, legal, financial, operating, or similar services to Affiliates. Such services and goods are and will be provided to the receiving Affiliate only at its request.

2. THIRD PARTY GOODS AND SERVICES. Affiliates may procure certain goods and services needed by the receiving Affiliate from third-party vendors. Such third-party goods and services will be provided to the receiving Affiliate only at the request of the receiving Affiliate. The providing Affiliate will invoice the receiving Affiliate or its payment and billing agent, at cost, for its portion of the costs of purchases of such third-party goods and services.

3. PERSONNEL. Affiliates may provide Affiliates services by utilizing the services of their, or their affiliates', executives, accountants, financial advisers, technical advisers, attorneys, and other professional persons with the necessary qualifications.

If necessary, the providing Affiliate, after consultation with and consent by the receiving Affiliate, may also arrange for the services of nonaffiliated experts, consultants, and attorneys in connection with the performance of any of the services supplied under this Agreement.

4. COMPENSATION AND ALLOCATION. As and to the extent required by law, Affiliates provide and will provide such goods and services in accordance with the methods, allocations and requirements of the Cost Allocation Manual approved by or on file with, as required by, the applicable state regulatory commission.

5. TERMINATION AND MODIFICATION. Any party to this Agreement may terminate this Agreement, with respect to itself, by providing 60 days written notice of such termination to the remaining parties.

This Agreement is subject to termination or modification at any time to the extent its performance may conflict with the provisions of the Federal Power Act or the Public Utility Holding Company Act of 2005, as amended, or with any rule, regulation, or order of the Federal Energy Regulatory Commission or state regulatory commission adopted before or after the making of this Agreement.

This Agreement shall be subject to the approval of any state commission or other state regulatory body whose approval, by the laws of said state, is required.

6. NEW AFFILIATES. If at any time after this agreement becomes effective a person, firm, corporation or association, or their lessees, trustees, or receivers becomes an affiliate of PPL, the parties hereto agree that such new affiliate may become a party to this Agreement by executing a duplicate copy of this Agreement.

7. BILLING AND PAYMENT. Unless otherwise agreed, payment for services provided by any of the parties to this Agreement shall be by making remittance of the amount billed or by making appropriate accounting entries on the books of the appropriate parties. Billing will be made on a monthly basis, with the bill to be rendered by the 25th of the month for services rendered in the prior month, and remittance or accounting entries completed within 30 days of billing. Any amount remaining unpaid after 30 days following receipt of the bill shall bear interest thereon from the date of the bill at annual rate of A1/P1 30-day Commercial Paper. At the request of an Affiliate, LK Services or PPL Services may act as the Affiliate's payment and billing agent. Payment and billing services, include, but are not limited to, sending or receiving invoices, receiving or disbursing payment, and making appropriate accounting entries.

8. NOTICE. Where written notice is required by this Agreement, all notices, consents, certificates, or other communications hereunder shall be in writing and shall be deemed given when mailed by United States registered or certified mail, postage prepaid, return receipt requested, addressed as follows:

To KU-ODP:

9. MODIFICATION. No amendment, change, or modification of this Agreement shall be valid unless made in writing and signed by all parties hereto.

10. ENTIRE AGREEMENT. This Agreement, together with the Cost Allocation Manual referenced in Paragraph 4 constitutes the entire understanding and agreement of the parties with respect to its subject matter, and upon effectiveness of this Agreement pursuant to Paragraph 15, any and all prior agreements, understandings, or representations with respect to this subject matter are hereby terminated and canceled in their entirety and are of no further force and effect.

11. WAIVER. No waiver by any party hereto of a breach of any provision of this Agreement shall constitute a waiver of any preceding or succeeding breach of the same or any other provision hereof.

12. ASSIGNMENT. This Agreement shall inure to the benefit and shall be binding upon the parties and their respective successors and assigns. No assignment of this Agreement or any party's rights, interests, or obligations hereunder may be made without the other party's consent, which shall not be unreasonably withheld, delayed, or conditioned.

13. SEVERABILITY. If any provision or provisions of this Agreement shall be held by a court of competent jurisdiction to be invalid, illegal, or unenforceable, the validity, legality, and enforceability of the remaining provisions shall in no way be affected or impaired thereby.

14. COUNTERPARTS. This Agreement may be executed in one or more counterparts, all of which taken together shall be deemed one and the same instrument and may be executed for purposes of requesting regulatory approval of the Agreement or complying with any regulatory approval of the Agreement.

15. EFFECTIVE DATE. This Agreement shall become effective upon all necessary regulatory approvals.

IN WITNESS WHEREOF, the parties have caused this Agreement to be duly executed as of this 25th day of April 2024.

INDIRECT COST ALLOCATION METHODOLOGY AND PROCEDURES

In May 2002, the PUC issued its Focused Management and Operations Audit Report on PPL Electric and PPL Gas Utilities Corporation's utility subsidiaries. As part of that report, the PUC recommended a change to the PPL Corporation (PPL) method of allocating indirect costs from PPL Service Company (Service Co.) and PPL. The allocation method used through December 31, 2002 was a single factor allocation method using Invested Capital to determine the portion of indirect costs to be allocated to subsidiaries of PPL. Additionally, this method also determined if any of the indirect costs should not be allocated to a particular subsidiary or subsidiaries if the subsidiary or subsidiaries did not receive a benefit from the processes incurring those costs. The PUC, however, indicated that a single factor indirect cost allocation method was not appropriate, although the PUC did agree that excluding certain subsidiaries from certain indirect cost allocations was appropriate.

In its audit, the PUC recommended that support costs be allocated using a three-factor methodology. The PUC recommended that the three-factor methodology should contain an employee or payroll factor, an asset or investment factor, and an operation and maintenance expense factor. Effective January 2003, PPL accepted the PUC's recommended three-factor method.

The three-factor allocation methodology results in a reasonable allocation of indirect costs to all subsidiaries of PPL. Because these subsidiaries are involved in several businesses, they may have disproportionate amounts of invested capital, operation and maintenance expenses and employees, when compared to other PPL subsidiaries. Through the three-factor allocation methodology, all subsidiaries that comprise a material proportion of PPL, as measured by either invested capital, operation and maintenance expenses, or employees, will receive an equitable proportion of the indirect cost allocation.

CALCULATION OF THE MULTI – FACTOR INDIRECT COST ALLOCATION

1. The first factor calculates each subsidiary's proportion of invested capital relative to its affiliates. For this calculation, invested capital includes all of the following components of invested capital for subsidiaries (Short Term Debt, Long Term Debt Due in One Year, Long Term Debt, Minority Interest, Company Obligated Preferred Stock, Preferred Stock, and Common Equity) that are added together and allocated by each subsidiary's relative Invested Capital as compared to its affiliates.

2. The second and third factors calculate each subsidiary's proportion of operation and maintenance expenses and number of employees relative to its affiliates. For these factors, the methodology generally is the same as for Invested Capital. Each

subsidiary's data is summed and allocated by each subsidiary's relative operation and maintenance and employee data as compared to its affiliates.

3. PPL determined that each of the three factors was equal in importance and, therefore, the sum of the three was divided by three to obtain the average multi-factor allocation % for each subsidiary. For simplicity, and to reduce immaterial allocations, subsidiaries with a multi-factor average allocation rate of less than 1% are identified and do not receive an allocation.

Total Support	220,705	221,478	(773)

(1) This includes charges allocated by PPL Services to PPL Electric as operating expense. Charges may have been reclassified by PPL Electric.

(2) Other support includes Operations Aggregator, PPL Services and Depreciation

Explanations of major changes are:

Chief Operating Officer - Decrease is due to reduction in outside services costs.

Corporate Facilities- Increase in costs related to support of Pennsylvania buildings and non-capitalized projects.

Corporate Audit & Compliance - Increase due to higher employee expenses, new compliance software and services for compliance initiatives.

CS Innovation Delivery - Increase due to being a new support group as of April 2025.

Engineering and Construction- Newly created support group as of August 2024 that had unfilled newly created positions. Employees also transferred from Transmission Services Corp or from the utilities. Increase in Engineering & Construction direct support primarily due to open headcount resulted in lower labor costs during the Historic Test Year. The Future Test Year is fully staffed.

Information Services- IT increase is due to implementing the OnePPL Strategy and strategic initiatives.

Transmission Services Corp - Decrease primarily due to the move of employees to Engineering and Construction.

Utilities Communications Support - The employees in this support group moved to the utility in January 2025.

(1) This includes charges allocated by PPL Services to PPL Electric as operating expense. Charges may have been reclassified by PPL Electric.

(2) Other support includes Operations Aggregator, PPL Services and Depreciation

Explanations of major changes are:

Engineering and Construction- Increase in Engineering & Construction direct support primarily due to new positions created and annual labor increases.

Information Services- Increase related to higher outside managed services cost and higher O&M support and subscriptions for cloud fees and software costs.

Q.9. Prepare a detailed schedule for test year showing types of social and service organization memberships paid for, the cost thereof, the accounting treatment and whether included in claimed test year expenses.

A.9. PPL Electric does not include membership dues for social and service organizations in test year expenses. These types of expenses are recorded in Account 426.

Q.10. Provide the following payroll and employee benefit data—regular and overtime—separately for the test year and for the 12-month period immediately prior to the test year:

a) The average and year-end number of employees and the unadjusted annual payroll expense and employee benefit expense associated with union personnel.
b) The average and year-end number of employees and the unadjusted annual payroll expense and employee benefit expense associated with nonunion personnel.
c) The average and year-end number of employees and the unadjusted annual payroll expense and employee benefit expense associated with management employees, if different than b.
d) A summary of the wage rate, salary and employee benefit changes granted or to be granted during the year.
e) The claimed test year payroll expense and employee benefit expense.
f) The percentage of payroll expense and employee benefit expense applicable to operation and maintenance expenses and the basis thereof.

A.10. The requested data is provided in Attachment II-D-10.

PPL ELECTRIC UTILITIES CORPORATION

Payroll and Employee Benefit Data

(Years ended June 30)

		Years Ended June 30, 2027 ($000)	2026 ($000)	2025 ($000)
a.	Union Personnel			
	Average Number of Employees	989	980	921
	Year-end Number of Employees	983	973	935
	Payroll Costs			
	Normal	$ 101,693	$ 102,726	$ 114,553
	Overtime	$ 31,693	$ 28,269	$ 29,136
	Benefit Costs	$ 34,450	$ 19,465	$ 15,842
b.	Non-Union Personnel			
	Average Number of Employees	494	492	475
	Year-end Number of Employees	494	492	472
	Payroll Costs			
	Normal	$ 97,388	$ 96,858	$ 64,237
	Overtime	$ 1,758	$ 1,654	$ 17,301
	Benefit Costs	$ 17,209	$ 9,770	$ 8,523

Note: Benefit costs allocated based on Average Number of Employees because costs are generally the same for both Union and Non-Union personnel.

c. N/A

		Years Ended June 30, 2027 ($000)	2026 ($000)	2025 ($000)
d.	Wage Rate			
	Union			
	Rate	3.0%	3.0%	3.00%
	Annual Effect	$ 3,885	$ 3,815	4,185
	Non-Union			
	Rate	3.0%	3.0%	3.00%
	Annual Effect	$ 2,888	$ 2,869	2,375

Benefit Changes - Benefits basically remain unchanged, other than the cost of providing them to employees.

e.	Claimed for Test Year			
	Payroll Expense	$ 71,214	$ 77,802	74,309
	Benefit Expense	$ 18,172	$ 13,038	7,934
f.	Percent Applicable to O&M			
	Payroll Expense	29.7%	32.7%	33.0%
	Benefit Expense	35.2%	44.6%	32.6%

The charge to expense is based on activities performed or expected to be performed during the applicable years.

Q.11. Describe costs relative to leasing equipment, including computer rentals, and office space, including terms and conditions of the leases. State method for calculating monthly or annual payments.

A.11. PPL Electric had numerous short-term leases for rental of miscellaneous equipment from several vendors. During the period of July 2024 to June 2025, these payments amounted to $1,414,704. During that same period, PPL Electric also paid an additional approximately $907,032 for office space leases.

The calculation of monthly or annual payments varies according to the specific vendor agreement.

Q.12. Submit a statement of past and anticipated changes, since the previous rate case, in major accounting procedures, explain any differences between the basis or procedure used in allocations of revenues, expenses, depreciation and taxes in the current rate case and that used in the prior rate cases, and list all internal and independent audit reports for the most recent 2 year period.

A.12. Attachment II-D-12a provides a list of major accounting changes since PPL Electric's most recent base rate case from 2015.

In 2016, PPL Electric changed its methodology used in calculating the estimated accounts receivable uncollectible reserve balance. The new methodology incorporates information from a current year look-back analysis.

In 2019, PPL Electric adopted the use of the current expected credit loss (CECL) model for the measurement of credit losses on financial instruments, including accounts receivable. The CECL model requires an entity to measure credit losses using historical information, current information and reasonable and supportable forecasts of future events, rather than the incurred loss impairment model required under previous accounting guidance.

In 2025, PPL Electric implemented the requirements of FERC Order No. 898, requiring changes in the financial presentation of certain operation and maintenance expenses and property, plant, and equipment within the FERC Uniform System of Accounts.

Attachment II-D-12b provides a list of Internal Audits performed for PPL Electric for the period of July 1, 2023 through June 30, 2025.

Attachment II-D-12c provides a list of Third-Party Audits performed for PPL Electric for the period of July 1, 2023 through June 30, 2025.

ASU / Topic	Title	Effective Date	Summary	Accounting Impact
2014-08	Reporting of Discontinued Operations	1/1/2015	Changed the criteria for determining what should be classified as a discontinued operation and also changed the related presentation and disclosure requirements.	No impact for EU (Disc Ops not reported at EU since 2015)
2014-09	Accounting for Revenue from Contracts with Customers	1/1/2018	Established a comprehensive new model for the recognition of revenue from contracts with customers based on the core principle that revenue should be recognized to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services.	No change to accounting revenue recognition. Increased disclosure requirements regarding revenue contracts with customers.
2014-15	Reporting Uncertainties of an Entity's Ability to Continue as a Going Concern	12/31/2016	Requires management to assess, for each interim and annual period, whether there are conditions or events that raise substantial doubt about an entity's ability to continue as a going concern.	No significant impact
2014-16	Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share Is More Akin to Debt or to Equity	1/1/2016	Clarified how current accounting guidance should be interpreted when evaluating the economic characteristics and risks of a host contract of a hybrid financial instrument issued in the form of a share. This guidance did not change the current criteria for determining whether separation of an embedded derivative feature from a hybrid financial instrument is required.	No significant impact
2015-01	Income Statement Presentation of Extraordinary and Unusual Items	1/1/2016	Eliminated the concept of extraordinary items, which required an entity to separately classify, present in the income statement and disclose material events and transactions that were both unusual and occured infrequently.	No significant impact
2016-02	Accounting for Leases	1/1/2019	Requires lessees to recognize a right-of-use asset and a lease liability for virtually all of their leases (other than leases that meet the definition of a short-term lease). For income statement purposes, the FASB retained a dual model for lessees, requiring leases to be classified as either operating or finance. Operating leases will result in straight-line expense (similar to current operating leases) while finance leases will result in a front-loaded expense pattern (similar to current capital leases). Classification will be based on criteria that are largely similar to those applied in current lease accounting, but without explicit bright lines.	No significant impact as EU does not have material leases. Guidance resulted in no changes in presentation of financial statements on a regulatory basis.
2016-13	Accounting for Financial Instrument Credit Losses	1/1/2020	Requires the use of a current expected credit loss (CECL) model for the measurement of credit losses on financial instruments within the scope of this guidance, which includes accounts receivable. The CECL model requires an entity to measure credit losses using historical information, current information and reasonable and supportable forecasts of future events, rather than the incurred loss impairment model required under current GAAP.	Cumulative effect adjustment of approximately $2 million. No significant impact to on going accounting.
2017-04	Simplifying the Test for Goodwill Impairment	1/1/2020	Simplified the test for goodwill impairment by eliminating the second step of the quantitative test. The second step of the quantitative test required a calculation of the implied fair value of goodwill, which is determined in the same manner as the amount of goodwill in a business combination. Under this new guidance, an entity compares the estimated fair value of a reporting unit with its carrying value and recognize an impairment charge for the amount the carrying amount exceeds the fair value of the reporting unit.	No significant impact as the EU registrant does not have goodwill.

ASU / Topic	Title	Effective Date	Summary	Accounting Impact
2017-07	Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost	1/1/2018	Changed the income statement presentation of net periodic benefit cost. This new guidance requires the service cost component to be disaggregated from other components of net benefit cost and presented in the same income statement line items as other employee compensation costs arising from services rendered during the period. The other components of net periodic benefits are presented separately from the line items that include the service cost and outside of any subtotal of operating income. Prospectively, the guidance limits the capitalization to the service cost component of net periodic benefit costs.	Presentation of non-service costs within Other Income (Expense) which were historically presented in "Other operation and maintenance." EU non-service costs or credits that would have been capitalized under previous guidance are now recognized as a regulatory asset or regulatory liability, as applicable, in accordance with regulatory approvals under US GAAP. Guidance resulted in no changes in presentation of financial statements on a regulatory basis.
2017-12	Improvements to Accounting for Hedging Activities	1/1/2019	Reduced complexity when applying hedge accounting as well as improved transparency about an entity's risk management activities.	No signifcant impact.
2018-15	Accounting for Implementation Costs in a Cloud Computing Service Arrangement	1/1/2020	Requires a customer in a cloud computing hosting arrangement that is a service contract to capitalize implementation costs consistent with internal-use software guidance for non-service arrangements.	Changed classification of SAAS agreements from PPE to Prepaids under US GAAP. (Prospective only). Guidance resulted in no changes in presentation of financial statements on a regulatory basis.
2023-07	Improvements to Reportable Segment Disclosures	12/31/2024	Improved reportable segment disclosure requirements, primarily through enhanced disclosures about segment expenses. The standard also requires public entities to disclose the title and position of the Chief Operating Decision Maker (CODM) and explain how the CODM uses the reported measure(s) of segment profit or loss in assessing segment performance and deciding how to allocate resources.	Increased annual and interim disclosures.

FERC Order/ Guidance	Title	Effective Date	Summary	Accounting Impact
Order No. 898	Accounting and Reporting Treatment of Certain Renewable Energy Assets	1/1/2025	Created new functional accounts for certain renewable and software plant and expenses.	Required changes in the financial presentation of certain operation and maintenance expenses and property, plant, and equipment within the FERC Uniform System of Accounts.
AI20-3-000	Accounting for Pipeline Testing Costs Incurred to Comply with New Federal Safety Standards	1/1/2020	Permits the capitalization of required testing related to PHMSA regulations.	PPL Electric has no gas operations and this guidance is not applicable.
AI20-2-000	Accounting for Cumulative-Effect Adjustments to Retained Earnings Related to the Implementation of FASB's Accounting Standard on Credit Losses	1/1/2020	Provides instruction for the implemtation of ASU 2016-13 described above.	Cumulative effect adjustment of approximately $2 million. No significant impact to on going accounting.
AI20-1-000	Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement that is a Service Contract.	1/1/2020	Provides instruction for the implemtation of ASU 2018-15 described above.	Guidance resulted in no changes in presentation of financial statements on a regulatory basis.
AI19-1-000	Accounting and Financial Reporting for Leases	1/1/2019	Provides instruction for the implemtation of ASU 2016-02 described above.	Guidance resulted in no changes in presentation of financial statements on a regulatory basis.
AI18-1-000	Accounting and Financial Reporting for Pensions and Post-retirement Benefits other than Pensions	1/1/2018	Provides instruction for the impelmentation of ASU 2017-07 described above.	Guidance resulted in no changes in presentation of financial statements on a regulatory basis.

Whitepaper Ref	Title	Fiscal Year	Summary	Accounting Impact
PA 16-01	Accounts Receivable Uncollectible Reserve Adjustment	2016	PPL Electric changed its methodology used in calculating the estimated accounts receivable uncollectible reserve balance. The new methodoly incoporates information from a current year look-back analysis.	At the time of implementation (11/2016) the uncollectible reserve increased $8 million.

Listing of Internal Audits Performed for PPL Electric Utilities Corporation (July 1, 2023 through June 30, 2025)

Request for Internal Audit Reports in Support of PPL Electric's 2025 Rate Case Filing

Below is a listing of internal audit reports for PPL Electric Utilities between July 1, 2023 and June 30, 2025. This listing does not include investigations / independent fact gathering reviews and FERC/NERC-related audits.

2023

The following is a list of completed PPL Electric internal audit reports from July 1, 2023, through December 31, 2023 (list also includes audits in part relating to assessing support services provided to PPL Electric):

- Application Security (70029148-23)
- PPL Corporate Cost Allocations (70030466-23)
- Firewall Rule Sets (70029146-23)
- Safety Trend Analysis of CDL Management (70030349-23)
- Required Trainings (70031226-23)
- Fraud Risk Assessment (70030967-23)
- Threat Hunting Program (70030348-23)
- Enterprise Cloud Security Standard Review (70028051-23)
- Third-Party Risk Management (70030906-23)
- Officer and Employee Expense 2023 Review (746043-23)
- Cloud Access Security Broker (70036150-23)
- On Track Continuous Auditing Review (70031246-23)
- Data Classification (70036766-23)

2024

The following is a list of completed PPL Electric internal audit reports audits for 2024 (list also includes audits in part relating to assessing support services provided to PPL Electric):

- Related Party Data Gathering Process Assessment (70038538-24)
- Financial Statement Special Item Review (70037666-24)
- Review of Security Incident and Event Management (Corp Environment) (70037227-24)
- OSHA Required Training (70038288-24)
- Regulatory Rate Riders (70038147-24)
- Proxy - Executive Compensation Tables (70038148-24)
- Supply Chain Vendor Cyber Controls (70038677-24)
- Data Management & Governance (70038507-24)
- Privileged Accounts Classification and Controls (70038410-24)
- IT Governance Program (70039146-24)
- Exempt Employee Overtime Analysis (70038894-24)
- Contractor Access (70039555-24)
- Revocation of Access Process (70039166-24)
- Company Vehicle Usage (70039574-24)
- Dev Ops Process (70039128-24)

- Assistance with NIST CSF Readiness Assessment (70039227-24)
- SEC Cybersecurity Risk Management, Strategy, Governance, and Incident Disclosure (70040550-24)
- Inventory Analysis (70039286-24)
- Harmonization of DOA and ALM Processes (70040746-24)
- Security Operations Center Review (70040868-24)
- Generative AI Governance (70040747-24)
- Early Fault Detection Project Assessment (746039-002-24)
- Review of EU Billing Statistics (70038306-24)
- Time Ticket Approval Review (70039767-24)
- Network Outage Change Management (746039-003-24)
- Physical Security Policies and Procedures (70040914-24)
- DER Program Review (746039-004-24)
- Officer and Employee Expense 2024 Review (746043-24)
- Energy Efficiency Programs (70041733-24)
